paraffin wax [MATER] A solid, crystalline hydrocarbon mixture derived from the paraffin distillate portion of crude petroleum; used in paper coating, candles, creams, emollients, and lipsticks. Also known as ceresin wax; paraffin.

paraform *See* paraformaldehyde.

paraformaldehyde [ORG CHEM] $(HCHO)_n$ Polymer of formaldehyde where n is greater than 6; white, alkali-soluble solid, insoluble in alcohol, ether, and water; used as a disinfectant, fumigant, and fungicide, and to make resins. Also known as paraform.

paraganglion [ANAT] Any of various isolated chromaffin bodies associated with structures such as the abdominal aorta, heart, kidney, and gonads. Also known as chromaffin body.

paragastric [ANAT] Located near the stomach. [INV ZOO] A cavity in Porifera into which radial canals open, and which opens to the outside through the cloaca.

paragenesis [MINERAL] **1.** The association and order of crystallization of minerals in a rock or vein. **2.** The effect of one mineral on the development of another. Also known as mineral sequence; paragenetic sequence.

paragenetic mineralogy [MINERAL] The study of mineral paragenesis, usually accompanying the analysis of the general geologic structures within and around the ore body.

paragenetic sequence *See* paragenesis.

parageosyncline [GEOL] An epeirogenic geosynclinal basin located within a craton or stable area.

paragglutination [IMMUNOL] Agglutination of colon bacteria with the serum of a patient infected, or recovering from an infection, with dysentery bacilli.

paraglomerate [GEOL] A conglomerate which contains more matrix than gravel-sized fragments and was deposited by subaqueous turbidity flows and glacier ice rather than normal aqueous flow. Also known as conglomeratic mudstone.

paragnath [INV ZOO] **1.** One of the paired leaflike lobes of the metastoma situated behind the mandibles in most crustaceans. **2.** One of the paired lobes of the hypopharynx in certain insects. **3.** One of the small, sharp and hard jaws of certain annelids.

paragneiss [GEOL] A gneiss showing a sedimentary parentage.

paragon [LAP] A perfect diamond whose mass is equal to or greater than 100 carats (20 grams).

paragonimiasis [MED] Presence of the fluke *Paragonimus westermani* in the lungs or other tissues of humans.

paragonite [MINERAL] $NaAl_2(AlSi_3)O_{10}(OH)_2$ A yellowish or greenish mica species that contains sodium and usually occurs in metamorphic rock. Also known as soda mica.

paragranuloma [MED] The least aggressive form of Hodgkin's disease.

parahelium [ATOM PHYS] Those states of helium in which the spins of the two electrons are antiparallel, in contrast to orthohelium. Also spelled parhelium.

parahilgardite [MINERAL] $Ca_8(B_6O_{11})_3Cl \cdot 4H_2O$ A triclinic mineral composed of hydrous borate and chloride of calcium; it is dimorphous with hilgardite.

parahopeite [MINERAL] $Zn_3(PO_4)_2 \cdot 4H_2O$ A colorless mineral composed of hydrous phosphate of zinc, occurring in tabular triclinic crystals; it is dimorphous with hopeite.

parahydrogen [ATOM PHYS] Those states of hydrogen molecules in which the spins of the two nuclei are antiparallel.

parainfluenza [MED] A viral condition similar to or resulting from influenza. [MICROBIO] An organism exhibiting growth characteristics of *Hemophilus influenzae*.

parakeet [VERT ZOO] Any of various small, slender species of parrots with long tails in the family Psittacidae.

parakeratosis [PATH] Incomplete keratinization of epidermal cells characterized by retention of nuclei of cells attaining the level of the stratum corneum.

paralalia [MED] Disturbance of the faculty of speech, characterized by distortion of sounds, or the habitual substitution of one sound for another.

paralaurionite [MINERAL] PbCl(OH) A white mineral composed of basic lead chloride; it is dimorphous with laurionite.

paraldehyde [ORG CHEM] $C_6H_{12}O_3$ Acetaldehyde polymer; colorless, flammable, toxic liquid, miscible with most organic solvents, soluble in water; melts at 12.6°C, boils at 124.5°C; used as a chemical intermediate, in medicine, and as a solvent. Also known as *para*-acetaldehyde; paracetaldehyde.

paraldol [ORG CHEM] $(CH_3CHOHCH_2CHO)_2$ Water-soluble, white crystals, boiling at 90-100°C; used as a chemical intermediate, to make resins, and in cadmium plating baths.

paralexia [MED] Transposition or substitution of words or syllables in reading.

paralgesia [MED] **1.** Paresthesia characterized by pain. **2.** Any perverted and disagreeable cutaneous sensation, as of formication, cold, or burning.

paraliageosyncline [GEOL] A geosyncline developing along a present-day continental margin, such as the Gulf Coast geosyncline.

paralic [GEOL] Pertaining to deposits laid down on the landward side of a coast.

paralic coal basin [GEOL] Coal deposits formed along the margin of the sea.

paralic swamp *See* marine swamp.

paralimnion [HYD] The littoral part of a lake, extending from the margin to the deepest limit of rooted vegetation.

parallactic angle *See* position angle.

parallactic displacement [ASTRON] The apparent changes in the position of a star due to changes in the position of the earth as it moves around the sun. Also known as parallactic shift.

parallactic ellipse [ASTRON] An annual apparent elliptical course of a celestial body on the celestial sphere about its mean position; caused by the elliptical orbital motion of the earth.

parallactic equation [ASTRON] An inequality in the moon's motion caused by the sun's perturbing effect on the moon being greater in that half of the moon's apparent orbit around the earth when at new moon rather than at full moon. Also known as parallactic inequality.

parallactic inequality *See* parallactic equation.

parallactic motion [ASTRON] An apparent motion of stars away from the point in the celestial sphere toward which the sun is moving.

parallactic orbit [ASTRON] The apparent orbit of a star as it appears to move once around in the sky each year; the motion is caused by the earth's orbital motion around the sun.

parallactic shift *See* parallactic displacement.

parallax [OPTICS] The change in the apparent relative orientations of objects when viewed from different positions.

parallax age *See* age of parallax inequality.

parallax correction [NAV] In celestial navigation, that sextant altitude correction made necessary because of the difference between the apparent direction from a point on the surface of the earth to a celestial body and the apparent direction from the center of the earth to the same body.

parallax error [OPTICS] Error in reading an instrument employing a scale and pointer because the observer's eye and pointer are not in a line perpendicular to the plane of the scale.

parallax in altitude [NAV] Geocentric parallax of a celestial body at any altitude; the term is used to distinguish the parallax at the given altitude from the horizontal parallax, when the body is in the horizon.

parallax inequality [OCEANOGR] The variation in the range of tide or in the speed of tidal currents due to the continual change in the distance of the moon from the earth.

parallax-second *See* parsec.

parallel [COMPUT SCI] Simultaneous transmission of, storage of, or logical operations on the parts of a word, character, or other subdivision of a word in a computer, using separate facilities for the various parts. [ELEC] Connected to the same pair of terminals. Also known as multiple; shunt. [GEOD] A circle on the surface of the earth, parallel to the plane of the equator and connecting all points of equal latitude. Also known

as circle of longitude; parallel of latitude. [MATH] **1.** Lines are parallel in a euclidean space if they lie in a common plane and do not intersect. **2.** Planes are parallel in a euclidean three-dimensional space if they do not intersect. **3.** A circle parallel to the primary great circle of a sphere or spheroid. [PHYS] Of two or more displacements or other vectors, having the same direction.

parallel access [COMPUT SCI] Transferral of information to or from a storage device in which all elements in a unit of information are transferred simultaneously. Also known as simultaneous access.

parallel addition [COMPUT SCI] A method of addition by a computer in which all the corresponding pairs of digits of the addends are processed at the same time during one cycle, and one or more subsequent cycles are used for propagation and adjustment of any carries that may have been generated.

parallel algorithm [COMPUT SCI] An algorithm in which several computations are carried on simultaneously.

parallel axis theorem [MECH] A theorem which states that the moment of inertia of a body about any given axis is the moment of inertia about a parallel axis through the center of mass, plus the moment of inertia that the body would have about the given axis if all the mass of the body were located at the center of mass. Also known as Steiner's theorem.

parallel baffle muffler [DES ENG] A muffler constructed of a series of ducts placed side by side in which the duct cross section is a narrow but long rectangle.

parallel buffer [ELECTR] Electronic device (magnetic core or flip-flop) used to temporarily store digital data in parallel, as opposed to series storage.

parallel by character [COMPUT SCI] The handling of all the characters of a machine word simultaneously in separate lines, channels, or storage cells.

parallel circuit [ELEC] An electric circuit in which the elements, branches (having elements in series), or components are connected between two points, with one of the two ends of each component connected to each point.

parallel compensation *See* feedback compensation.

parallel computation [COMPUT SCI] The simultaneous computation of several parts of a problem.

parallel computer [COMPUT SCI] **1.** A computer that can carry out more than one logic or arithmetic operation at one time. **2.** *See* parallel digital computer.

parallel course computer *See* course-line computer.

parallel cut [ENG] A group of parallel holes, not all charged with explosive, to create the initial cavity to which the loaded holes break in blasting a development round. Also known as burn cut.

parallel digital computer [COMPUT SCI] Computer in which the digits are handled in parallel; mixed serial and parallel machines are frequently called serial or parallel, according to the way arithmetic processes are performed; an example of a parallel digital computer is one which handles decimal digits in parallel, although it might handle the bits constituting a digit either serially or in parallel.

parallel dot character printer *See* line dot matrix.

parallel drainage pattern [HYD] A drainage pattern characterized by regularly spaced streams flowing parallel to one another over a large area.

parallel drum [DES ENG] A cylindrical form of drum on which the haulage or winding rope is coiled.

parallel element-processing ensemble [COMPUT SCI] A powerful electronic computer used by the U.S. Army to simulate tracking and discrimination of reentry vehicles as part of the ballistic missile defense research program. Abbreviated PEPE.

parallel entry [MIN ENG] An intake airway parallel to the haulageway.

parallelepiped [MATH] A polyhedron all of whose faces are parallelograms.

parallel evolution [EVOL] Evolution of similar characteristics in different groups of organisms.

parallel extinction [OPTICS] Nearly total absorption of light that is propagating in an anisotropic crystal in a direction parallel to crystal outlines or traces of cleavage planes.

parallel feed [COMPUT SCI] *See* sideways feed. [ELECTR] Application of a direct-current voltage to the plate or grid of a tube in parallel with an alternating-current circuit, so that the direct-current and the alternating-current components flow in separate paths. Also known as shunt feed.

parallel firing [ENG] A method of connecting together a number of detonators which are to be fired electrically in one blast.

parallel fold *See* concentric fold.

parallel growth *See* parallel intergrowth.

parallel impedance [ELEC] One of two or more impedances that are connected to the same pair of terminals.

paralleling reactor [ELECTROMAG] Reactor for correcting the division of load between parallel-connected transformers which have unequal impedance voltages.

parallel intergrowth [CRYSTAL] Intergrowth of two or more crystals in such a way that one or more axes in each crystal are approximately parallel. Also known as parallel growth.

parallel laminate [MATER] A laminate in which all the layers of material are set approximately parallel with respect to a particular characteristic, such as the grain or the direction of tension.

parallel linkage [MECH ENG] A linkage system in which reciprocating motion is amplified.

parallel middle body *See* dead flat.

parallel motion protractor [GRAPHICS] An instrument consisting essentially of a protractor and one or more arms attached to a parallel motion device, so that the movement of the arms is everywhere parallel; the protractor can be rotated and set at any position so that it can be oriented to a chart. Also known as drafting machine.

parallel muscle [ANAT] Any muscle having the long fibers arranged parallel to each other.

parallel of altitude [ASTRON] A circle on the celestial sphere parallel to the horizon connecting all points of equal altitude. Also known as almucantar; altitude circle.

parallel of declination [ASTRON] A small circle of the celestial sphere parallel to the celestial equator. Also known as celestial parallel; circle of equal declination.

parallel of latitude [ASTRON] *See* circle of longitude. [GEOD] *See* parallel.

parallelogram [MATH] A four-sided polygon with each pair of opposite sides parallel.

parallel operation [COMPUT SCI] Performance of several actions, usually of a similar nature, by a computer system simultaneously through provision of individual similar or identical devices. [ELECTR] The connecting together of the outputs of two or more batteries or other power supplies so that the sum of their output currents flows to a common load.

parallelotope [MATH] A parallelepiped with sides in proportion of 1, ½, and ¼.

parallel padding [ELEC] Method of parallel operation for two or more power supplies in which their current limiting or automatic crossover output characteristic is employed so that each supply regulates a portion of the total current, each parallel supply adding to the total and padding the output only when the load current demand exceeds the capability, or limit setting, of the first supply.

parallel perspective [GRAPHICS] A perspective such that the faces and edges of represented objects are either perpendicular or parallel to the plane of the picture. Also known as one-point perspective.

parallel-plate capacitor [ELEC] A capacitor consisting of two parallel metal plates, with a dielectric filling the space between them.

parallel-plate laser [OPTICS] A laser which has two small parallel plates facing each other at a distance which is large compared with their diameters; one of them reflects light and the other is partially reflecting, so that light can bounce back and forth between the plates enough to build up a strong pulse.

parallel-plate waveguide [ELECTROMAG] Pair of parallel conducting planes used for propagating uniform circularly cylindrical waves having their axes normal to the plane.

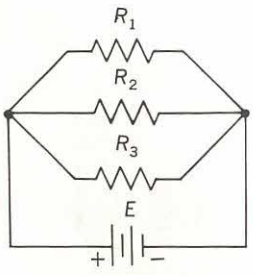
parallel processor *See* multiprocessor.

parallel programming [COMPUT SCI] A method for performing simultaneously the normally sequential steps of a computer program, using two or more processors. [ELECTR] Method of parallel operation for two or more power supplies in which their feedback terminals (voltage control terminals) are also paralleled; these terminals are often connected to a separate programming source.

parallel radio tap [COMMUN] A telephone tapping procedure in which a battery-powered miniature radio transmitter is bridged across the target pair.

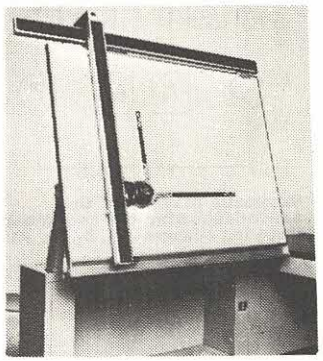
parallel rectifier [ELECTR] One of two or more rectifiers that are connected to the same pair of terminals, generally in series

PARALLEL CIRCUIT



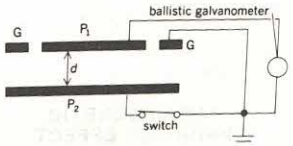
Schematic diagram of a simple parallel circuit in which the resistors, R_1, R_2, and R_3, are connected in parallel between terminals of battery which supplies voltage E.

PARALLEL MOTION PROTRACTOR



Parallel motion protractor using vertical and horizontal bars. *(Keuffel and Esser Co.)*

PARALLEL-PLATE CAPACITOR



Cross section of parallel-plate capacitor with all parts of capacitor at ground potential. P_1 and P_2 are the parallel plates; G is the guard ring, used to reduce edge effects; d is the distance between plates. Distance between guard ring and plate P_1 is exaggerated.

with small resistors or inductors, when greater current is desired than can be obtained with a single rectifier.

parallel reliability [SYS ENG] Property of a system composed of functionally parallel elements in such a way that if one of the elements fails, the parallel units will continue to carry out the system function.

parallel representation [COMPUT SCI] The simultaneous appearance of the different bits of a digital variable on parallel bus lines.

parallel resonance Also known as antiresonance. [ELEC] **1.** The frequency at which the inductive and capacitive reactances of a parallel resonant circuit are equal. **2.** The frequency at which the parallel impedance of a parallel resonant circuit is a maximum. **3.** The frequency at which the parallel impedance of a parallel resonant circuit has a power factor of unity.

parallel resonant circuit [ELEC] A circuit in which an alternating-current voltage is applied across a capacitor and a coil in parallel. Also known as antiresonant circuit.

parallel resonant interstage [ELECTR] A coupling between two amplifier stages achieved by means of a parallel-tuned LC circuit.

parallel ripple mark [GEOL] A ripple mark characterized by a relatively straight crest and an asymmetric profile.

parallel roads [GEOL] A series of horizontal beaches or wave-cut terraces occurring parallel to each other at different levels on each side of a glacial valley.

parallel-rod oscillator [ELECTR] Ultra-high-frequency oscillator circuit in which parallel rods or wires of required length and dimensions form the tank circuits.

parallel rulers [GRAPHICS] An instrument for transferring a line parallel to itself; in its most common form it consists essentially of two parallel bars or rulers connected in such manner that when one is held in place, the other may be moved, remaining parallel to its original position.

parallel running [COMPUT SCI] **1.** The running of a newly developed system in a data-processing area in conjunction with the continued operation of the current system. **2.** The final step in the debugging of a system; this step follows a system test.

parallels [ENG] **1.** Spacers located between steam plate and press platen of the mold to prevent bending of the middle section. **2.** Spacers or pressure pods located between steam plates of a mold to regulate height and prevent crushing of mold parts.

parallel sailing [NAV] A method of converting departure into difference of longitude, or vice versa, when the true course is 090° or 270°.

parallel search storage [COMPUT SCI] A device for very rapid search of a volume of stored data to permit finding a specific item.

parallel series [ELEC] Circuit in which two or more parts are connected together in parallel to form parallel circuits, and in which these circuits are then connected together in series so that both methods of connection appear. [ENG] *See* multiple series.

parallel shot [ENG] In seismic prospecting, a test shot which is made with all the amplifiers connected in parallel and activated by a single geophone so that lead, lag, polarity, and phasing in the amplifier-to-oscillograph circuits can be checked.

parallel-slit interferometer [OPTICS] A type of stellar interferometer consisting of a screen with two narrow, parallel slits whose separation is adjustable, placed over the objective of a refracting telescope.

parallel sphere [ASTRON] The celestial sphere as it appears to an observer at the pole, where celestial bodies appear to move parallel to the horizon.

parallel storage [COMPUT SCI] A storage device in which words (or characters or digits) can be read in or out simultaneously.

parallel texture [PETR] A rock texture characterized by tabular-to-prismatic crystals oriented parallel to a plane or line.

parallel-T network [ELEC] A network used in capacitance measurements at radio frequencies, having two sets of three impedances, each in the form of the letter T, with the arms of the two Ts joined to common terminals, and the source and detector each connected between two of these terminals. Also known as twin-T network.

parallel transfer [COMPUT SCI] Simultaneous transfer of all bits in a storage location constituting a character or word.

parallel transmission [COMPUT SCI] The transmission of characters of a word over different lines, usually simultaneously; opposed to serial transmission.

parallel-tuned circuit [ELEC] A circuit with two parallel branches, one having an inductance and a resistance in series, the other a capacitance and a resistance in series.

parallel twin [CRYSTAL] A twinned crystal whose twin axis is parallel to the composition surface.

parallel-veined [BOT] Of a leaf, having the veins parallel, or nearly parallel, to each other.

parallel wire method [MIN ENG] An electrical prospecting method employing equipotential lines or curves in searching for ore bodies.

parallel wires [ELEC] Two conductors which are parallel to each other; often used in transmission lines.

parallochthon [GEOL] Rocks that were brought from intermediate distances and deposited near an allochthonous mass during transit.

paralutein cells [HISTOL] Epithelioid cells of the corpus luteum.

paralysis [MED] Complete or partial loss of motor or sensory function.

paralysis agitans *See* parkinsonism.

paralytic secretion [PHYSIO] Glandular secretion occurring in a denervated gland.

paralytic spinal poliomyelitis [MED] An acute inflammatory virus disease chiefly involving the anterior horns of the gray matter of the spinal cord.

paramagnetic [ELECTROMAG] Exhibiting paramagnetism.

paramagnetic alloy [MET] An alloy whose permeability is slightly greater than that of vacuum and is independent of the magnetic field strength, such as intermetallic compounds of nickel and titanium.

paramagnetic amplifier *See* maser.

paramagnetic analytical methods [ANALY CHEM] Analysis of fluid mixtures by measurement of the paramagnetic (versus diamagnetic) susceptibilities of materials when exposed to a magnetic field.

paramagnetic cooling *See* adiabatic demagnetization.

paramagnetic crystal [ELECTROMAG] A crystal whose permeability is slightly greater than that of vacuum and is independent of the magnetic field strength.

paramagnetic Faraday effect [OPTICS] The Faraday effect observed in paramagnetic salts at frequencies near an absorption line of the salt which is split due to splitting of the lower energy level.

paramagnetic iron [MET] Iron which has been transformed from a ferromagnetic to a paramagnetic substance by application of a pressure somewhat greater than 10^5 bars (10^{10} newtons per square meter).

paramagnetic material [ELECTROMAG] A material within which an applied magnetic field is increased by the alignment of electron orbits.

paramagnetic relaxation [ELECTROMAG] The approach of a system, which displays paramagnetism because of electronic magnetic moments of atoms or ions, to an equilibrium or steady-state condition over a period of time, following a change in the magnetic field.

paramagnetic resonance *See* electron paramagnetic resonance.

paramagnetic salt [ELECTROMAG] A salt whose permeability is slightly greater than that of vacuum and is independent of magnetic field strength; used in adiabatic demagnetization.

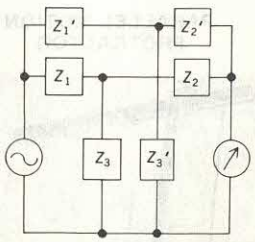
paramagnetic spectra [SPECT] Spectra associated with the coupling of the electronic magnetic moments of atoms or ions in paramagnetic substances, or in paramagnetic centers of diamagnetic substances, to the surrounding liquid or crystal environment, generally at microwave frequencies.

paramagnetic susceptibility [ELECTROMAG] The susceptibility of a paramagnetic substance, which is a positive number and is, in general, much smaller than unity.

paramagnetism [ELECTROMAG] A property exhibited by substances which, when placed in a magnetic field, are magnetized parallel to the field to an extent proportional to the field (except at very low temperatures or in extremely large magnetic fields).

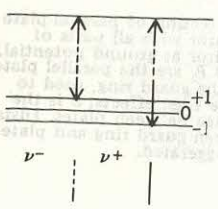
Parameciidae [INV ZOO] A family of ciliated protozoans in the order Holotrichia; the body has differentiated anterior and posterior ends and is bounded by a hard but elastic pellicle.

PARALLEL-T NETWORK



Schematic drawing of the network showing the two sets of three impedances: Z_1, Z_2, Z_3, and Z_1', Z_2', Z_3'.

PARAMAGNETIC FARADAY EFFECT



Schematic energy level diagram of ions of a paramagnetic salt. The lengths of the arrows are proportional to the frequencies of absorption lines for right-handed (ν^+) and left-handed (ν^-) circularly polarized light.

paramecium [INV ZOO] A single-celled protozoan belonging to the family Parameciidae.

Paramecium [INV ZOO] The genus of protozoans composing the family Parameciidae.

paramedical [MED] Having a supplementary or secondary relation to medicine.

paramelaconite [MINERAL] A black tetragonal mineral composed of cupric and cuprous oxides, occurring in pyramidal crystals.

Paramelina [VERT ZOO] An order of marsupials that includes the bandicoots in some systems of classification.

paramere [BIOL] One half of a bilaterally symmetrical animal or somite. [INV ZOO] Any of several paired structures of an insect, especially those on the ninth abdominal segment.

paramesonephric duct [EMBRYO] An embryonic genital duct; in the female, it is the anlage of the oviducts, uterus, and vagina; in the male, it degenerates, leaving the appendix testes. Also known as Müllerian duct.

parameter [CRYSTAL] Any of the axial lengths or interaxial angles that define a unit cell. [ELEC] **1.** The resistance, capacitance, inductance, or impedance of a circuit element. **2.** The value of a transistor or tube characteristic. [MATH] An arbitrary constant or variable so appearing in a mathematical expression that changing it gives various cases of the phenomenon represented. [PHYS] A quantity which is constant under a given set of conditions, but may be different under other conditions.

parameter card [COMPUT SCI] A punched card containing the values of parameters needed for a program.

parameterization [SCI TECH] The representation, in a dynamic model, of physical effects in terms of admittedly oversimplified parameters, rather than realistically requiring such effects to be consequences of the dynamics of the system.

parameter tags [COMPUT SCI] Constants that are used by several computer programs.

parameter word [COMPUT SCI] A word in a computer storage containing one or more parameters that specify the action of a routine or subroutine.

paramethadione [PHARM] $C_7H_{11}NO_3$ An anticonvulsant primarily useful in the treatment of petit mal epilepsy.

parametric acoustic array [ACOUS] A device for generating very sharp beams of sound devoid of side lobes, consisting of a source of well-collimated high-frequency sound modulated at the frequency of the sound which is to be generated.

parametric amplifier [ELECTR] A highly sensitive ultrahigh-frequency or microwave amplifier having as its basic element an electron tube or solid-state device whose reactance can be varied periodically by an alternating-current voltage at a pumping frequency. Also known as mavar; paramp; reactance amplifier. [OPTICS] A device consisting of an optically nonlinear crystal in which an optical or infrared beam draws power from a laser beam at a higher frequency and is amplified.

parametric converter [ELECTR] Inverting or noninverting parametric device used to convert an input signal at one frequency into an output signal at a different frequency.

parametric curves [MATH] On a surface determined by equations $x = f(u,v)$, $y = g(u,v)$, and $z = h(u,v)$, these are families of curves obtained by setting the parameters u and v equal to various constants.

parametric device [ELECTR] Electronic device whose operation depends essentially upon the time variation of a characteristic parameter usually understood to be a reactance.

parametric down-converter [ELECTR] Parametric converter in which the output signal is at a lower frequency than the input signal.

parametric equation [MATH] An equation where coordinates of points appear dependent on parameters such as the parametric equation of a curve or a surface.

parametric excitation [ENG] The method of exciting and maintaining oscillation in either an electrical or mechanical dynamic system, in which excitation results from a periodic variation in an energy storage element in a system such as a capacitor, inductor, or spring constant.

parametric generation [OPTICS] A process in which a single electromagnetic wave propagating in a nonlinear medium is converted to two lower-frequency waves, the sum of whose frequencies equals the frequency of the original wave.

parametric hydrology [HYD] That branch of hydrology dealing with the development and analysis of relationships among the physical parameters involved in hydrologic events and the use of these relationships to generate, or synthesize, hydrologic events.

parametric latitude *See* reduced latitude.

parametric mixing [OPTICS] In a medium possessing optical nonlinearities, the mixing of electromagnetic waves to form waves with frequencies linearly related to the frequency of incident radiation.

parametric oscillator [ELECTR] An oscillator in which the reactance parameter of an energy-storage device is varied to obtain oscillation. [OPTICS] A device consisting of an optically nonlinear crystal surrounded by a pair of mirrors to which is applied a relatively high-frequency laser beam and a relatively low-frequency signal, resulting in a low-frequency output whose frequency can be varied, usually by varying the indices of refraction.

parametric phase-locked oscillator *See* parametron.

parametric up-converter [ELECTR] Parametric converter in which the output signal is at a higher frequency than the input signal.

parametrized voice response system [ENG ACOUS] A voice response system which first extracts informative parameters from human speech, such as natural resonant frequencies (formants) of the speaker's vocal tract and the fundamental frequency (pitch) of the voice, and which later reconstructs speech from such stored parameters.

parametron [ELECTR] A resonant circuit in which either the inductance or capacitance is made to vary periodically at one-half the driving frequency; used as a digital computer element, in which the oscillation represents a binary digit. Also known as parametric phase-locked oscillator; phase-locked oscillator; phase-locked subharmonic oscillator.

paramo [ECOL] A biological community, essentially a grassland, covering extensive high areas in equatorial mountains of the Western Hemisphere.

paramorph [MINERAL] A mineral exhibiting paramorphism.

paramorphism [MINERAL] The property of a mineral whose internal structure has changed without change in composition or external form. Formerly known as allomorphism.

paramp *See* parametric amplifier.

paramutation [GEN] A mutation in which one member of a heterozygous pair of alleles permanently changes its partner allele.

paramylum [BIOCHEM] A reserve, starchlike carbohydrate of various protozoans and algae.

paramyosin [BIOCHEM] A type of fibrous protein found in the adductor muscles of bivalves and thought to form the core of a filament with myosin molecules at the surface.

paramyotonia congenita [MED] A heredofamilial condition characterized by recurrent muscular stiffness and weakness (myotonia) on exposure to cold, as well as on mechanical irritation; transmitted as an autosomal dominant and considered to be a variety of the hyperkalemic form of periodic paralysis. Also known as Eulenburg's disease; myotonia congenita intermittens.

paramyxovirus [VIROL] A subgroup of myxoviruses, including the viruses of mumps, measles, parainfluenza, and Newcastle disease; all are ribonucleic acid–containing viruses and possess an ether-sensitive lipoprotein envelope.

Paranaplasma [MICROBIO] A genus of the family Anaplasmataceae; organisms form inclusions with appendages in red blood cells of cattle.

paranasal sinus [ANAT] Any of the paired sinus cavities of the human face; includes the frontal, ethmoid, and sphenoid sinuses.

paranephritis [MED] **1.** Inflammation of the adrenal gland. **2.** Inflammation of the connective tissue adjacent to the kidney.

paranesthesia [MED] Anesthesia of the body below the waist.

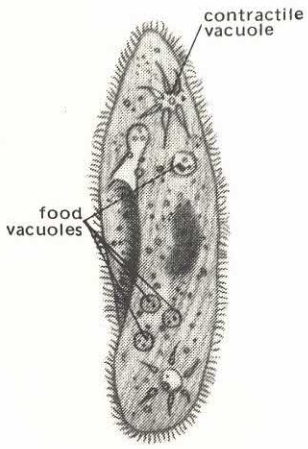
paranitraniline red *See* para red.

paranoia [PSYCH] A rare form of paranoid psychosis characterized by the slow development of a complex, internally logical system of persecutory or grandiose delusions.

paranoid personality [PSYCH] An individual characterized by the tendency to be hypersensitive, rigid, extremely self-important, and jealous, to project hostile feelings so that he easily becomes suspicious of others and is quick to blame them or attribute evil motives to them.

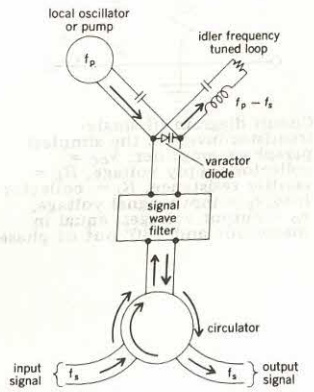
paranoid schizophrenia [PSYCH] A form of schizophrenia in which delusions of persecution or grandeur (or both), halluci-

PARAMECIUM



A paramecium. Two contractile vacuoles and numerous food vacuoles are shown.

PARAMETRIC AMPLIFIER



Schematic of negative-resistance-type parametric amplifier that used a varactor diode as the variable reactor. f_p = pumping frequency. Input signal, with frequency f_s, is reflected back down transmission line with increased power. Wave at idler frequency $f_p - f_s$ is not utilized outside the amplifier.

nations, and ideas of reference predominate and sometimes are systematized.

paranoid state [PSYCH] Any of various psychotic disorders in which the patient exhibits persistent delusions, usually of persecution or grandeur.

paranosmia [MED] A deviation in odor sensitivity involving change in odor quality.

paranthelion [ASTRON] A refraction phenomenon similar to a parhelion, but occurring generally at a distance of 120° (occasionally 90° and 140°) from the sun, on the parhelic circle. Also known as mock sun.

paranthropophytia [ECOL] Discrepant control of regions or areas due to immediate and continuous or periodic interference, as by certain cultivation practices.

Paranyrocidae [PALEON] An extinct family of birds in the order Anseriformes, restricted to the Miocene of South Dakota.

Paraonidae [INV ZOO] A family of small, slender polychaete annelids belonging to the Sedenteria.

paraoxon [ORG CHEM] $C_{10}H_{14}NO_6P$ A reddish-yellow oil, used by veterinarians as an insecticide. Also known as *O,O*-diethyl-*ortho*-*para*-nitrophenyl phosphate.

paraoxypropiophenone *See* *para*-hydroxypropiophenone.

parapack [ENG] A package or bundle with a parachute attached for dropping from an aircraft.

Paraparchitacea [PALEON] A superfamily of extinct ostracods in the suborder Kloedenellocopina including nonsulcate, nondimorphic forms.

paraparesis [MED] Partial paralysis of the lower extremities.

parapatric [ECOL] Referring to populations or species that occupy nonoverlapping but adjacent geographical areas without interbreeding.

parapertussis [MED] An acute bacterial respiratory infection similar to mild pertussis and caused by *Bordetella pertussis*.

parapet [ARCH] A low retaining wall at the edge of a roof, bridge, porch, or other structure. [ORD] An elevation of earth or material which is thrown up in front of a trench or emplacement to protect the occupants from fire and observation, and over which fire may be delivered.

paraphase amplifier [ELECTR] An amplifier that provides two equal output signals 180° out of phase.

paraphimosis [MED] **1.** Retraction and constriction, especially of the prepuce behind the glans penis. Also known as Spanish collar. **2.** Retraction of the eyelid behind the eyeball.

paraphysis [BOT] A sterile filament borne among the sporogenous or gametogenous organs in many cryptogams. [VERT ZOO] A median evagination of the roof of the telencephalon of some lower vertebrates.

paraplasm *See* hyaloplasm.

paraplegia [MED] Paralysis of the lower limbs.

parapodium [INV ZOO] **1.** One of the short, paired processes on the sides of the body segments in certain annelids. **2.** A lateral expansion of the foot in gastropod mollusks.

parapolar cell [INV ZOO] Either of the first two trunk cells in the development of certain Mesozoa.

parapositronium [PARTIC PHYS] The state of positronium in which the positron and electron have antiparallel spins.

parapsychology [PSYCH] The study of the phenomena of extrasensory perception and psychokinesis.

paraquat [ORG CHEM] $[CH_3(C_5H_4N)_2CH_3]\cdot 2CH_3SO_4$ A yellow, water-soluble solid, used as an herbicide.

pararammelsbergite [MINERAL] $NiAs_2$ A tin white, orthorhombic or pseudoorthorhombic mineral consisting of nickel diarsenide; occurrence is usually in massive form.

para red [ORG CHEM] $C_{10}H_6(OH)NNC_6H_4NO_2$ Red pigment derived from the coupling of β-naphthol with diazotized paranitroaniline. Also known as paranitraniline red.

pararipple [GEOL] A large, symmetric ripple whose surface slopes gently and which shows no assortment of grains.

pararosaniline [ORG CHEM] $HOC(C_6H_4NH_2)_3$ Red to colorless crystals, melting at 205°C; soluble in ethanol, in the hydrochloride salt; used as a dye.

pararosolic acid *See* aurin.

Parasaleniidae [INV ZOO] A family of echinacean echinoderms in the order Echinoida composed of oblong forms with trigeminate ambulacral plates.

paraschist [PETR] A schist derived from sedimentary rocks.

paraselene [ASTRON] A weakly colored lunar halo identical in form and optical origin to the solar parhelion; paraselenae are observed less frequently than are parhelia, because of the moon's comparatively weak luminosity. Also known as mock moon.

paraselenic circle [ASTRON] A halo phenomenon consisting of a horizontal circle passing through the moon, corresponding to the parhelic circle through the sun, and produced by reflection of moonlight from ice crystals.

Paraselloidea [INV ZOO] A group of the Asellota that contains forms in which the first pleopods of the male are coupled along the midline, and are lacking in the female.

Paraseminotidae [PALEON] A family of Lower Triassic fishes in the order Palaeonisciformes.

parasexual cycle [GEN] A series of events leading to genetic recombination in vegetative or somatic cells; it was first described in filamentous fungi; there are three essential steps: heterokaryosis; fusion of unlike haploid nuclei in the heterokaryon to yield heterozygous diploid nuclei; and recombination and segregation at mitosis by two independent processes, mitotic crossing-over and loss of chromosomes.

parasheet [AERO ENG] A simple form of parachute in which the canopy is a single piece of material or two or more pieces sewed together; it may have any geometrical form, such as square or hexagonal, and the hem may be gathered to assist in the development of a crown when the parasheet is opened.

parasite [BIOL] An organism that lives in or on another organism of different species from which it derives nutrients and shelter. [ELEC] Current in a circuit, due to some unintentional cause, such as inequalities of temperature or of composition; particularly troublesome in electrical measurements.

parasite drag [FL MECH] The portion of the total drag of an aircraft exclusive of the induced drag of the wings.

parasitemia [MED] The presence of parasites in the blood.

parasitic [ELECTR] An undesired and energy-wasting signal current, capacitance, or other parameter of an electronic circuit.

Parasitica [INV ZOO] A group of hymenopteran insects that includes four superfamilies of the Apocrita: Ichneumonoidea, Chalcidoidea, Cynipoidea, and Proctotrupoidea; some are phytophagous, while others are parasites of other insects.

parasitic absorption *See* parasitic capture.

parasitic antenna *See* parasitic element.

parasitic capture [NUCLEO] Any absorption of a neutron that does not result in a fission or the production of a desired element. Also known as parasitic absorption.

parasitic castration [BIOL] Destruction of the reproductive organs by parasites.

parasitic cone *See* adventive cone.

parasitic current [ELEC] An eddy current in a piece of electrical machinery; gives rise to energy losses.

parasitic element [ELECTROMAG] An antenna element that serves as part of a directional antenna array but has no direct connection to the receiver or transmitter and reflects or reradiates the energy that reaches it, in a phase relationship such as to give the desired radiation pattern. Also known as parasitic antenna; parasitic reflector; passive element.

parasitic oscillation [ELECTR] An undesired self-sustaining oscillation or a self-generated transient impulse in an oscillator or amplifier circuit, generally at a frequency above or below the correct operating frequency.

parasitic reflector *See* parasitic element.

parasitic stomatitis *See* thrush.

parasitic suppressor [ELECTR] A suppressor, usually in the form of a coil and resistor in parallel, inserted in a circuit to suppress parasitic high-frequency oscillations.

parasitism [ECOL] A symbiotic relationship in which the host is harmed, but not killed immediately, and the species feeding on it is benefited.

parasitoidism [BIOL] Systematic feeding by an insect larva on living host tissues so that the host will live until completion of larval development.

parasitology [BIOL] A branch of biology which deals with those organisms, plant or animal, which have become dependent on other living creatures.

parasitophobia [PSYCH] An abnormal fear of parasites.

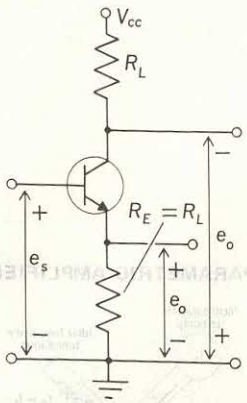
parasphenoid [VERT ZOO] A bone in the base of the skull of many vertebrates.

parastacidae [INV ZOO] A family of crayfishes assigned to the Nephropoidea.

parastate [ATOM PHYS] A state of a diatomic molecule in which the spins of the nuclei are antiparallel.

parastratigraphic unit *See* operational unit.

PARAPHASE AMPLIFIER



Circuit diagram of single-transistor-inverter, the simplest paraphase amplifier. V_{cc} = collector supply voltage, R_E = emitter resistance, R_L = collector load, e_s = input signal voltage, e_o = output voltages, equal in magnitude and 180° out of phase.

parastratotype [GEOL] Another section in the original locality where a stratotype was defined.
parastratigraphy [GEOL] **1.** Supplemental stratigraphy based on fossils other than those governing the prevalent orthostratigraphy. **2.** Stratigraphy based on operational units.
parastyle [VERT ZOO] A small cusp anterior to the paracone of an upper molar.
Parasuchia [PALEON] The equivalent name for Phytosauria.
parasympathetic [ANAT] Of or pertaining to the craniosacral division of the autonomic nervous system.
parasympathetic nervous system [ANAT] The craniosacral portion of the autonomic nervous system, consisting of preganglionic nerve fibers in certain sacral and cranial nerves, outlying ganglia, and postganglionic fibers.
parasympatholytic [PHARM] Blocking the action of parasympathetic nerve fibers.
parasympathomimetic [PHARM] Of drugs, having an effect similar to that produced when the parasympathetic nerves are stimulated.
paratacamite [MINERAL] $Cu_2(OH)_3Cl$ Rhombohedral mineral composed of basic copper chloride; it is dimorphous with tacamite.
parataxic distortion [PSYCH] A perceptual or judgmental distortion of interpersonal relations resulting from the observer's need to pattern his responses on previous experiences and thus defend himself against anxiety.
parathelioma *See* interstitial endometrosis.
parathene [MATER] Any of a group of high-grade hydrocarbons that are extracted from lubricating oil stocks by the solvent process or refining.
parathion [ORG CHEM] $(C_2H_5O)_2PSOC_6H_4NO_2$ Poisonous, deep-brown to yellow liquid boiling at 157–162°C; soluble in most organic solvents; used as an insecticide and acaricide. Also known as *O*,*O*-diethyl-*ortho*-*para*-nitrophenyl phosphorothioate.
parathormone [BIOCHEM] A polypeptide hormone that functions in regulating calcium and phosphate metabolism. Also known as parathyroid hormone.
Parathuramminacea [PALEON] An extinct superfamily of foraminiferans in the suborder Fusulinina, with a test having a globular or tubular chamber and a simple, undifferentiated wall.
parathyroidectomy [MED] Excision of a parathyroid gland.
parathyroid gland [ANAT] A paired endocrine organ located within, on, or near the thyroid gland in the neck region of all vertebrates except fishes.
parathyroid hormone *See* parathormone.
paratill [GEOL] A till formed by ice-rafting in a marine or lacustrine environment; includes deposits from ice floes and icebergs.
para toner [MATER] Water-insoluble red pigment made from β-naphthol and paranitroaniline; used in paints, in printing, and to make para lakes.
paratrachoma *See* inclusion conjunctivitis.
paratrichosis [MED] A condition in which the hair is either imperfect in growth or develops in abnormal places.
paratroch [INV ZOO] The ciliated band encircling the anus in certain trichophore larvae.
paratroops *See* parachute troops.
paratuberculosis *See* Johne's disease.
paratype [SYST] A specimen other than the holotype which is before the author at the time of original description and which is designated as such or is clearly indicated as being one of the specimens upon which the original description was based.
paratyphoid fever [MED] A bacterial disease of man resembling typhoid fever and caused by *Salmonella paratyphi*.
parauterine organ [INV ZOO] In certain tapeworms, a pouchlike sac which receives and retains the embryos.
parautochthonous [GEOL] Pertaining to a mobilized part of an autochthonous granite moved higher in the crust or into a tectonic area of lower pressure and characterized by variable and diffuse contacts with country rocks. [PETR] Pertaining to a rock that is intermediate in tectonic character between autochthonous and allochthonous.
paravane [ENG] A torpedo-shaped device with sawlike teeth along its forward end, towed with a wire rope underwater from either side of the bow of a ship to cut the cables of anchored mines. Also known as otter.
paravauxite [MINERAL] $FeAl_2(PO_4)_2(OH)_2 \cdot 8H_2O$ A colorless mineral composed of hydrous basic iron aluminum phosphate; contains more water than vauxite.
parawollastonite [MINERAL] $CaSiO_3$ A monoclinic mineral composed of silicate of calcium; it is dimorphous with wollastonite.
paraxial [SCI TECH] Lying near the axis.
paraxial rays [OPTICS] Rays which are close enough to the opical axis of a system, and thus whose directions are sufficiently close to being parallel to it, so that sines of angles between the rays and the optical axis may be replaced by the angles themselves in calculations.
paraxial trajectory [ELEC] A trajectory of a charged particle in an axially symmetric electric or magnetic field in which both the distance of the particle from the axis of symmetry and the angle between this axis and the tangent to the trajectory are small for all points on the trajectory.
paraxonic [VERT ZOO] Pertaining to a state or condition wherein the axis of the foot lies between the third and fourth digits.
Parazoa [INV ZOO] A name proposed for a subkingdom of animals which includes the sponges (Porifera).
parcel method [METEOROL] A method of testing for instability in which a displacement is made from a steady state under the assumption that only the parcel or parcels displaced are affected, the environment remaining unchanged.
parchment [MATER] **1.** The skin of a goat or sheep that has been treated so that it can be used to write upon. **2.** A drawing or written text on this material.
parchment paper [MATER] Paper that has been manufactured so that its appearance resembles parchment.
paregoric [PHARM] Camphorated opium tincture, a preparation of opium, camphor, benzoic acid, anise oil, glycerin, and diluted alcohol; used mainly as an antiperistaltic.
Pareiasauridae [PALEON] A family of large, heavy-boned terrestrial reptiles of the late Permian, assigned to the order Cotylosauria.
parenchyma [BOT] A tissue of higher plants consisting of living cells with thin walls that are agents of photosynthesis and storage; abundant in leaves, roots, and the pulp of fruit, and found also in leaves and stems. [HISTOL] The specialized epithelial portion of an organ, as contrasted with the supporting connective tissue and nutritive framework.
parenchymal jaundice [MED] Any of various forms of jaundice in which the disease is due in part to damaged liver cells.
parenchymella *See* diploblastula.
parenchymula [INV ZOO] The flagellate larva of calcinean sponges in which there is a cavity filled with gelatinous connective tissue.
parent [NUC PHYS] A radionuclide that upon disintegration yields a specified nuclide, the daughter, either directly, or indirectly as a later member of a radioactive series.
parental magma [GEOL] The naturally occurring mobile rock material from which a particular igneous rock solidified or from which another magma was derived.
parent compound [CHEM] A chemical compound that is the basis for one or more derivatives; for example, ethane is the parent compound for ethyl alcohol and ethyl acetate.
parenteral [MED] Outside the intestine; not via the alimentary tract.
parent figure [PSYCH] A person who represents essential but not necessarily ideal attributes of a father or mother and who is the object of the attitudes and responses of an individual in a parent-child relationship.
parenthesis-free notation *See* Polish notation.
parent material [GEOL] The unconsolidated mineral or organic material from which the true soil develops.
parent name [CHEM] That part of a chemical compound's name from which the name of a derivative comes; for example, ethane is the parent name for ethanol.
parent of a state [QUANT MECH] If an n-electron state is written as a sum of products of 1-electron states and $(n-1)$-electron states, the $(n-1)$-electron states are called the parents of the n-electron states.
parent rock [GEOL] **1.** The rock mass from which parent material is derived. **2.** *See* source rock.
paresis [MED] **1.** A slight paralysis. **2.** Incomplete loss of muscular power. **3.** Weakness of a limb.
paresthesia [MED] Tingling, crawling, or burning sensation of the skin.
Pareulepidae [INV ZOO] A monogeneric family of errantian polychaete annelids.
parfocal eyepieces [OPTICS] Eyepieces whose lower focal

points lie in the same plane, so that they can be interchanged without changing the focus of the instrument with which they are used.

parging [CIV ENG] A thin coating of mortar or plaster on a brick or stone surface.

parhelic circle [ASTRON] A halo consisting of a faint white circle passing through the sun and running parallel to the horizon for as much as 360° of azimuth. Also known as mock sun ring.

parhelion [ASTRON] Either of two colored luminous spots that appear at points 22° (or somewhat more) on both sides of the sun and at the same elevation as the sun; the solar counterpart of the lunar paraselene. Also known as mock sun; sun dog.

parhelium *See* parahelium.

Parian cement [MATER] Gypsum plaster containing borax, which dries to a hard finish.

parietal [ANAT] Of or situated on the wall of an organ or other body structure. [BOT] Of a plant part, having a peripheral location or orientation; in particular, attached to the main wall of an ovary.

parietal block *See* intraventricular heart block.

parietal bone [ANAT] The bone that forms the side and roof of the cranium.

parietal cell [HISTOL] One of the peripheral, hydrochloric acid–secreting cells in the gastric fundic glands. Also known as acid cell; delomorphous cell; oxyntic cell.

Parietales [BOT] An order of plants in the Englerian system; families are placed in the order Violales in other systems.

parietal lobe [ANAT] The cerebral lobe of the brain above the lateral cerebral sulcus and behind the central sulcus.

parietal peritoneum [ANAT] The portion of the peritoneum lining the interior of the body wall.

parietal pleura [ANAT] The pleura lining the inner surface of the thoracic cavity.

parinol [ORG CHEM] $C_{18}H_{12}Cl_2NO$ A white to pale yellow solid with a melting point of 169–170°C; used as a fungicide to control powdery mildew on flowers, nonbearing apple trees, and grape vines. Also known as α,α-bis(*para*-chlorophenyl)-3-pyridine methanol.

parisite [MINERAL] $(Ce,La)_2Ca(CO_3)_3F_2$ A brownish-yellow secondary mineral composed of a carbonate and a fluoride of calcium, cerium, and lanthanum.

parison [ENG] A hollow plastic tube from which a bottle or other hollow object is blow-molded.

parison swell [ENG] In blow molding, the ratio of the cross-sectional area of the parison to that of the die opening.

parity [COMPUT SCI] The use of a self-checking code in a computer employing binary digits in which the total number of 1's or 0's in each permissible code expression is always even or always odd. [MATH] Two integers have the same parity if they are both even or both odd. [QUANT MECH] A physical property of a wave function which specifies its behavior under an inversion, that is, under simultaneous reflection of all three spatial coordinates through the origin; if the wave function is unchanged by inversion, its parity is 1 (or even); if the function is changed only in sign, its parity is −1 (or odd). Also known as space reflection symmetry.

parity bit [COMMUN] An additional nondata bit that is attached to a set of data bits to check their validity; it is set so that the sum of one-bits in the augmented set is always odd or always even.

parity check *See* odd-even check.

parity conservation *See* conservation of parity.

parity error [COMPUT SCI] A machine error in which an odd number of bits are accidentally changed, so that the error can be detected by a parity check.

parity selection rules [QUANT MECH] Rules which specify whether or not a change in parity occurs during a given type of transition of an atom, molecule, or nucleus; for example, the Laporte selection rule, or the rule that there is no parity change in an allowed β-decay transition of a nucleus.

parity transformation [COMMUN] A change in value of a transmitted character denoting the number of one-bits. [PHYS] *See* inversion.

parker *See* rep.

parkerite [MINERAL] $Ni_3(Bi,Pb)_2S_2$ A bright-bronze mineral composed of nickel bismuth lead sulfide.

parkerizing [MET] Trade name for a process for the production of phosphate coating on steel articles by immersion in an aqueous solution of manganese or zinc acid with phosphate.

PARROT

A parrot, with short hooked beak.

Parker-Washburn boundary [SOLID STATE] A surface which separates two regions in a solid in which the crystal axes point in different directions, and which is made up of a single array of dislocations.

Parkes process [MET] A process for recovering precious metals from lead by stirring about 2% zinc into the melt to form zinc compounds with gold and silver which can then be skimmed off the surface.

parking apron [CIV ENG] A hard-surfaced area used for parking aircraft.

parking lot [CIV ENG] An outdoor lot for parking automobiles.

parking orbit [AERO ENG] A temporary earth orbit during which the space vehicle is checked out and its trajectory carefully measured to determine the amount and time of increase in velocity required to send it into a final orbit or into space in the desired direction.

Parkinje effect *See* Purkinje effect.

parkinsonism [MED] A clinical state characterized by tremor at a rate of three to eight tremors per second, with "pill-rolling" movements of the thumb common, muscular rigidity, dyskinesia, hypokinesia, and reduction in number of spontaneous and autonomic movements; produces a masked facies, disturbances of posture, gait, balance, speech, swallowing, and muscular strength. Also known as paralysis agitans; Parkinson's disease.

Parkinson's disease *See* parkinsonism.

parkland *See* temperate woodland; tropical woodland.

parkway [CIV ENG] A broad landscaped expressway which is not open to commercial vehicles.

Parmeliaceae [BOT] The foliose shield lichens, a family of the order Lecanorales.

Parnidae [INV ZOO] The equivalent name for Dryopidae.

parogenetic [GEOL] Formed previously to the enclosing rock; especially said of a concretion formed in a different (older) rock from its present (younger) host.

paromomycin [MICROBIO] A broad-spectrum antibiotic produced by *Streptomyces rimosus forma paromomycinus*; it is effective in the treatment of intestinal amebiasis in humans.

paronychia [MED] A suppurative inflammation about the margin of a nail.

paronychium *See* perionychium.

parotid duct [ANAT] The duct of the parotid gland. Also known as Stensen's duct.

parotidectomy [MED] Excision of a parotid gland.

parotid gland [ANAT] The salivary gland in front of and below the external ear; the largest salivary gland in humans; a compound racemose serous gland that communicates with the mouth by Steno's duct.

parotitis [MED] Inflammation of the parotid glands.

parovarian cyst [MED] A cyst of mesonephric origin arising between the layers of the mesosalpinx, adjacent to the ovary.

parovarium *See* epoophoron.

paroxypropione *See para*-hydroxypropiophenone.

paroxysm [MED] **1.** A sudden attack, or the periodic crisis in the progress of a disease. **2.** A spasm, convulsion, or seizure. **3.** A burst of electrical activity during electroencephalography in the form of spikes, or spikes and waves, which indicates cerebral dysrhythmia or epileptic discharges. [PSYCH] A sudden, uncontrollable emotional outburst.

paroxysmal eruption *See* Vulcanian eruption.

parquet flooring [BUILD] Wood flooring made of strips laid in a pattern to form designs.

parrot [VERT ZOO] Any member of the avian family Psittacidae, distinguished by the short, stout, strongly hooked beak.

Parry arcs [OPTICS] A class of halos appearing as faintly colored arcs above and below the sun; these refraction phenomena are produced by ice crystals which exhibit a preferred orientation, and are correspondingly more unusual than those associated with randomly oriented crystals.

pars anterior [ANAT] The major secretory portion of the anterior lobe of the adenohypophysis. Also known as pars distalis.

pars distalis *See* pars anterior.

parsec [ASTRON] The distance at which a star would have a parallax equal to 1 second of arc; 1 parsec equals 3.258 light-years or 3.08572×10^{13} kilometers. Derived from parallax-second.

parsettensite [MINERAL] $Mn_5Si_6O_{13}(OH)_8$ Copper-red mineral composed of hydrous silicate of manganese.

Parseval's equation [MATH] The equation which states that the square of the length of a vector in an inner product space is equal to the sum of the squares of the inner products of the vector with each member of a complete orthonormal base for the space. Also known as Parseval's identity; Parseval's relation.

Parseval's identity *See* Parseval's equation.

Parseval's relation *See* Parseval's equation.

Parseval's theorem [MATH] A theorem that gives the integral of a product of two functions, $f(x)$ and $F(x)$, in terms of their respective Fourier coefficients; if the coefficients are defined by

$$a_n = (1/\pi) \int_0^{2\pi} f(x) \cos nx dx,$$

$$b_n = (1/\pi) \int_0^{2\pi} f(x) \sin nx dx,$$

and similarly for $F(x)$, the relationship is

$$\int_0^{2\pi} f(x) F(x) dx = \pi[\tfrac{1}{2} a_0 A_0 + \sum_{n=1}^{\infty} (a_n A_n + b_n B_n)].$$

Parshall flume [ENG] A calibrated device for measuring the flow of liquids in open conduits by measuring the upper and lower beads at a specified distance from an obstructing sill.

parsing [COMPUT SCI] A process whereby phrases in a string of characters in a computer language are associated with the component names of the grammar that generated the string.

pars intermedia [ANAT] The intermediate lobe of the adenohypophysis.

parsley [BOT] *Petroselinum crispum*. A biennial herb of European origin belonging to the order Umbellales; grown for its edible foliage.

parsley oil [MATER] Colorless or pale-greenish-yellow liquid with parsley aroma; soluble in alcohol, ether, and chloroform; distilled from parsley seeds; used in medicine.

pars nervosa [ANAT] The inferior subdivision of the neurohypophysis. Also known as pars neuralis.

pars neuralis *See* pars nervosa.

parsnip [BOT] *Pastinaca sativa*. A biennial herb of Mediterranean origin belonging to the order Umbellales; grown for its edible thickened taproot.

parsonsite [MINERAL] $Pb_2(UO_2)(PO_4)_2 \cdot 2H_2O$ A pale-yellow to brownish mineral composed of hydrous lead uranyl phosphate, occurring as a powder.

Parsons-stage steam turbine [MECH ENG] A reaction-type steam-turbine stage in which the pressure drop occurs partially across the stationary nozzles and partly across the rotating blades.

pars tuberalis [ANAT] A pair of processes that grow forward or upward along the stalk of the adenohypophysis.

part [ENG] An element of a subassembly, not normally useful by itself and not amenable to further disassembly for maintenance purposes.

parthenita [INV ZOO] A stage, such as the sporocyst, redia, or cercaria, in the development of a fluke which reproduces parthenogenetically.

parthenocarpy [BOT] Production of fruit without fertilization.

parthenogenesis [INV ZOO] A special type of sexual reproduction in which an egg develops without entrance of a sperm; common among rotifers, aphids, thrips, ants, bees, and wasps.

parthenomerogony [EMBRYO] Development of a nucleated fragment of an unfertilized egg following parthenogenetic stimulation.

partial [ACOUS] Also known as partial tone. **1.** A simple sinusoidal physical component of a complex tone. **2.** A sound sensation component that is distinguishable as a simple tone, cannot be further analyzed by the ear, and contributes to the character of the complex sound; the frequency of a partial may be higher or lower than the basic frequency and may be an integral multiple or submultiple of the basic frequency.

partial bulkhead [NAV ARCH] A partition wall that does not extend across a compartment; used to strengthen the structure.

partial carry [COMPUT SCI] A word composed of the carries generated at each position when adding many digits in parallel.

partial cleavage [EMBRYO] Cleavage in which only part of the egg divides into blastomeres.

partial coherence [PHYS] Property of two waves whose relative phase undergoes random fluctuations which are not, however, sufficient to make the wave completely incoherent.

partial common battery [COMMUN] Type of telephone system in which the talking battery is supplied by each individual telephone, and the signaling and supervisory battery is supplied by the switchboard.

partial condensation [CHEM ENG] The cooling (or pressurization) of a saturated vapor until a part of it is condensed out as liquid.

partial correlation coefficient [STAT] A measure of the strength of association between a dependent variable and one independent variable when the effect of all other independent variables is removed; equal to the square root of the partial coefficient of determination.

partial derivative [MATH] A derivative of a function of several variables taken with respect to one variable while holding the others fixed.

partial differential equation [MATH] An equation that involves more than one independent variable and partial derivatives with respect to to those variables.

partial dislocation [CRYSTAL] The line at the edge of an extended dislocation where a slip through a fraction of a lattice constant has occurred.

partial-duration series [GEOPHYS] A series composed of all events during the period of record which exceed some set criterion; for example, all floods above a selected base, or all daily rainfalls greater than a specified amount.

partial eclipse [ASTRON] An eclipse in which only part of the source of light is obscured.

partial fractions [MATH] A collection of fractions which when added are a given fraction whose numerator and denominator are usually polynomials; the partial fractions are usually constants or linear polynomials divided by factors of the denominator of the given fraction.

partial function [COMPUT SCI] A partial function from a set A to a set B is a correspondence between some subset of A and B which associates with each element of the subset of A a unique element of B.

partial node [PHYS] That part (a point, line, or surface) of a standing wave where some characteristic of the wave field has a minimum amplitude other than zero.

partially ordered set [MATH] A set on which a partial order is defined.

partial molal quantity [PHYS CHEM] The molal concentration of one component of a mixture of components as related to total molal concentration for all components in the mixture.

partial molar volume [PHYS CHEM] That portion of the volume of a solution or mixture related to the molar content of one of the components within the solution or mixture.

partial obscuration [METEOROL] In United States weather observing practice, the designation for sky cover when part (0.1 to 0.9) of the sky is completely hidden by surface-based obscuring phenomena.

partial ordering *See* ordering.

partial pediment [GEOL] **1.** A broadly planate, gravel-capped, interstream bench or terrace. **2.** A broad, planate erosion surface which is formed by the coalescence of contemporaneous, valley-restricted benches developed at the same elevation in proximate valleys, and which would produce a pediment if uninterrupted planation were to continue at this level.

partial penetration [ORD] Penetration obtained when a projectile fails to pass through the target far enough for either the projectile itself or light from its penetration to be seen from the back of the target.

partial pluton [GEOL] That part of a composite intrusion representing a single intrusive episode.

partial potential temperature [METEOROL] The temperature that the dry-air component of an air parcel would attain if its actual partial pressure were changed to 1000 millibars (10^5 newtons per square meter).

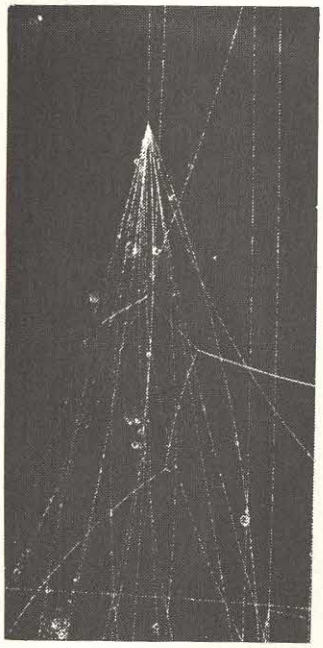
partial pressure [PHYS] The pressure that would be exerted by one component of a mixture of gases if it were present alone in a container.

partial pressure maintenance [PETRO ENG] The partial replacement of produced gas in an oil reservoir by gas injection to maintain a portion of the initial reservoir pressure.

partial-read pulse [ELECTR] Current pulse that is applied to a magnetic memory to select a specific magnetic cell for reading.

partial-select output [ELECTR] The voltage response produced by applying partial-read or partial-write pulses to an unselected magnetic cell.

PARTICLE TRACK



Photograph of particle tracks consisting of trails of bubbles in a liquid-hydrogen bubble chamber, produced by negative pions with momentum 16 GeV/c, where c is the speed of light. *(CERN)*

partial sum [MATH] A partial sum of an infinite series is the sum of its first n-terms for some n.

partial thermoremanent magnetization [GEOPHYS] The thermoremanent magnetization acquired by cooling in an ambient field over only a restricted temperature interval, as opposed to the entire temperature range from Curie point to room temperature. Abbreviated PTRM.

partial tide [OCEANOGR] One of the harmonic components composing the tide at any point. Also known as tidal component; tidal constituent.

partial tone *See* partial.

participation crude *See* buy-back crude.

particle [MECH] *See* material particle. [PARTIC PHYS] *See* elementary particle. [PHYS] **1.** Any very small part of matter, such as a molecule, atom, or electron. Also known as fundamental particle. **2.** Any relatively small subdivision of matter, ranging in diameter from a few angstroms (as with gas molecules) to a few millimeters (as with large raindrops).

particle accelerator [NUCLEO] A device which accelerates electrically charged atomic or subatomic particles, such as electrons, protons, or ions, to high energies. Also known as accelerator; atom smasher.

particle beam [PHYS] A concentrated, nearly unidirectional flow of particles.

particle board [MATER] Construction board made with wood particles impregnated with low-molecular-weight resin and then cured.

particle counting [ANALY CHEM] Microscopic or photomicrographic technique for the visual counting of the numbers of particles in a known quantity of a solid-liquid suspension.

particle detector [NUCLEO] A device used to indicate the presence of fast-moving charged atomic or nuclear particles by observation of the electrical disturbance created by a particle as it passes through the device. Also known as radiation detector.

particle diameter [GEOL] The diameter of a sedimentary particle considered as a sphere.

particle dynamics [MECH] The study of the dependence of the motion of a single material particle on the external forces acting upon it, particularly electromagnetic and gravitational forces.

particle electrophoresis [PHYS CHEM] Electrophoresis in which the particles undergoing analysis are of sufficient size to be viewed either with the naked eye or with the assistance of an optical microscope.

particle emission [NUC PHYS] The ejection of a particle other than a photon from a nucleus, in contrast to gamma emission.

particle energy [MECH] For a particle in a potential, the sum of the particle's kinetic energy and potential energy. [RELAT] For a relativistic particle the sum of the particle's potential energy, kinetic energy, and rest energy; the last is equal to the product of the particle's rest mass and the square of the speed of light.

particle-induced x-ray emission [ANALY CHEM] A method of trace analysis in which a beam of ions is directed at a thin foil on which the sample to be analyzed has been deposited, and the energy spectrum of the resulting x-rays is measured.

particle lens [PHYS] An electric or magnetic field, or a combination thereof, which acts upon an electron beam in a manner analogous to that in which an optical lens acts upon a light beam.

particle mechanics [MECH] The study of the motion of a single material particle.

particle multiplet *See* isospin multiplet.

particle-oriented paper [MATER] A chart paper that has a magnetic coating which is produced by combining microscopic magnetic flakes with oil to form droplets and then forming these particles into an emulsion that can be applied to the surface of ordinary bond paper or to a clear plastic substrate; the magnetic field of a small-diameter recording head rotates the magnetic flakes so that they absorb or scatter incident light to give a visible dark trace that can also be read magnetically.

particle physics [PHYS] The branch of physics concerned with understanding the properties and behavior of elementary particles, especially through study of collisions or decays involving energies of hundreds of Mev (million electron volts) or more. Also known as high-energy physics.

particle properties [PARTIC PHYS] The various quantities which characterize the behavior of an elementary particle, such as mass, charge, baryon number, spin, parity, hypercharge, and isospin.

particle-scattering factor [ANALY CHEM] Factor in light-scattering equations used to compensate for the loss in scattered light intensity caused by destructive interference during the analysis of macromolecular compounds.

particle size [GEOL] The general dimensions of the particles or mineral grains in a rock or sediment based on the premise that the particles are spheres; commonly measured by sieving, by calculating setting velocities, or by determining areas of microscopic images. [MET] The average and controlling lineal dimension of an individual particle of metal powder as determined by suitable screens or other methods of analysis.

particle-size analysis [ENG] Determination of the proportion of particles of a specified size in a granular or powder sample. [GEOL] A determination of the distribution of particles in a series of size classes of a soil, sediment, or rock. Also known as size analysis; size-frequency analysis.

particle-size distribution [ENG] The percentages of each fraction into which a granular or powder sample is classified, with respect to particle size, by number or weight.

particle spectrum *See* mass spectrum.

particle-thickness technique [PHYS CHEM] Microscopic technique for visual measurement of the thickness of a fine particle (in the 3–100 micrometer range).

particle track [PHYS] Any visible phenomenon along the path of an ionizing particle, such as a trail of bubbles, water droplets, or sparks in a bubble chamber, cloud chamber, or spark chamber respectively, or of altered material in an emulsion or in glass.

particle velocity [ACOUS] The instantaneous velocity of a given infinitesimal part of a medium, with reference to the medium as a whole, due to the passage of a sound wave. [OCEANOGR] In ocean wave studies, the instantaneous velocity of a water particle undergoing orbital motion.

parti-colored buoy [NAV] A buoy whose visible surface is painted more than one color.

particulate composite [MATER] A composite material composed of particles embedded in a matrix.

particulate mass analyzer [ENG] A unit which measures dust concentrations in emissions from furnaces, kilns, cupolas, and scrubbers.

particulate matter [PHYS] Matter in the form of small liquid or solid particles.

particulates [MATER] Fine solid particles which remain individually dispersed in gases and stack emissions.

parting [GEOL] **1.** A bed or bank of waste material dividing mineral veins or beds. **2.** A soft, thin sedimentary layer following a surface of separation between thicker strata of different lithology. **3.** A surface along which a hard rock can be readily separated or is naturally divided into layers. [MET] **1.** Recovery of gold (or occasionally another metal) from its alloys by a corrosion process. **2.** Zone of separation between cope and drag portions of mold or flask in sand casting. **3.** In sand molding, a composition to facilitate removal of the pattern. **4.** A shearing operation to produce two or more parts from a stamping. [MINERAL] Fracturing a mineral along planes weakened by deformation or twinning.

parting agent *See* release agent.

parting cast [GEOL] A sand-filled tension crack produced by creep along the sea floor.

parting compound [MET] A material, such as silica or graphite, used to facilitate the separation of the cope and drag parting surfaces.

parting line [MET] **1.** The line along which a mold is separated. **2.** A line or seam on a casting corresponding to the joint of mold parts.

parting lineation [GEOL] A small-scale primary sedimentary structure made up of a series of parallel ridges and grooves formed parallel to the current. Also known as current lineation.

parting plane lineation [GEOL] A parting lineation on a laminated surface, consisting of subparallel, linear, shallow grooves and ridges of low relief, generally less than 1 millimeter.

parting sand [MET] Fine, dry sand applied to the faces of a sand mold to allow disassembly.

parting-step lineation [GEOL] A parting lineation characterized by subparallel, steplike ridges where the parting surface cuts across several adjacent laminae.

parting stop [BUILD] A thin strip of wood that separates the sashes in a double-hung window.

partition [BUILD] An interior wall having a height of one story or less, which divides a structure into sections. [COMPUT SCI] **1.** A reserved portion of a computer memory, sometimes used for the execution of a single computer program. **2.** One of a number of fixed portions into which a computer memory is divided in certain multiprogramming systems. [IND ENG] A slotted sheet of paperboard that can be assembled with similar sheets to form cells for holding goods during shipment.

partition chromatography [ANALY CHEM] Chromatographic procedure in which the stationary phase is a high-boiling liquid spread as a thin film on an inert support, and the mobile phase is a vaporous mixture of the components to be separated in an inert carrier gas.

partition coefficient [ANALY CHEM] In the equilibrium distribution of a solute between two liquid phases, the constant ratio of the solute's concentration in the upper phase to its concentration in the lower phase. Symbolized K.

partitioned data set [COMPUT SCI] A single data set, divided internally into a directory and one or more sequentially organized subsections called members, residing on a direct access for each device, and commonly used for storage or program libraries.

partition function [STAT MECH] **1.** The integral, over the phase space of a system, of the exponential of $(-E/kT)$, where E is the energy of the system, k is Boltzmann's constant, and T is the temperature; from this function all the thermodynamic properties of the system can be derived. **2.** In quantum statistical mechanics, the sum over allowed states of the exponential of $(-E/kT)$. Also known as sum of states; sum over states.

partition noise [ELECTR] Noise that arises in an electron tube when the electron beam is divided between two or more electrodes, as between screen grid and anode in a pentode.

partition of an integer [MATH] Any collection of positive integers whose sum is the given integer.

partition of a positive integer [MATH] Any sum of positive integers equaling the integer.

partition of a set [MATH] A finite collection of disjoint sets whose union is the given set.

partition of unity [MATH] On a topological space X, this is a covering by open sets U_α with continuous functions f_α from X to $[0,1]$, where each f_α is zero on all but a finite number of the U_α, and the sum of all these f_α at any point equals 1.

partiversal [GEOL] Pertaining to formations that dip in different directions roughly as far as a semicircle.

partly cloudy [METEOROL] **1.** The character of a day's weather when the average cloudiness, as determined from frequent observations, has been from 0.1 to 0.5 for the 24-hour period. **2.** In popular usage, the state of the weather when clouds are conspicuously present, but do not completely dull the day or the sky at any moment.

parton [PARTIC PHYS] One of the very singular (or hard), small charged particles of which hadrons are proposed to be constructed, according to a theory developed to account for the scattering of very-high-energy electrons from protons at large angles and with large momentum transfers.

part operation [COMPUT SCI] The part in an instruction that specifies the kind of arithmetical or logical operation to be performed, but not the address of the operands.

partridge [VERT ZOO] Any of the game birds comprising the genera *Alectoris* and *Perdix* in the family Phasianidae.

partridgeite *See* bixbyite.

partridgewood *See* acapau.

parts kit [ENG] A group of parts, not all having the same basic name, used for repair or replacement of the worn broken parts of an item; it may include instruction sheets and material, such as sandpaper, tape, cement, and gaskets.

parts list [ENG] One or more printed sheets showing a manufacturer's parts or assemblies of an end item by illustration or a numerical listing of part numbers and names; it does not outline any assembly, maintenance, or operating instructions, and it may or may not have a price list cover sheet.

parturient [MED] **1.** In labor; giving birth. **2.** Of or pertaining to parturition.

parturifacient [MED] **1.** Inducing labor. **2.** An agent that induces labor.

parturiometer [MED] An instrument to determine the progress of labor by measuring the expulsive force of the uterus.

parturition [MED] The process of giving birth.

party line [COMMUN] A subscriber line arranged to serve more than one station, with discriminatory ringing for each station.

party-line bus [COMPUT SCI] Parallel input/output bus lines to which are wired all external devices, connected to a processor register by suitable logic.

party-line carrier system [COMMUN] A single-frequency carrier telephone system in which the carrier energy is transmitted directly to all other carrier terminals of the same channel.

party wall [BUILD] A wall providing joint service between two buildings.

parulis [MED] A subperiosteal abscess arising from dental structures.

parvafacies [GEOL] A body of rock constituting the part of any magnafacies that occurs between designated time-stratigraphic planes or key beds traced across the magnafacies.

parvovirus [VIROL] The equivalent name for picodnavirus.

parylene [ORG CHEM] Polyparaxylylene, used in ultrathin plastic films for capacitor dielectrics, and as a pore-free coating.

parylene capacitor [ELEC] A highly stable fixed capacitor using parylene film as the dielectric; it can be operated at temperatures up to 170°C, as well as at cryogenic temperatures.

PAS *See para*-aminosalicylic acid; photoacoustic spectroscopy.

pascal [MECH] A unit of pressure equal to the pressure resulting from a force of 1 newton acting uniformly over an area of 1 square meter. Symbolized Pa. Also known as torr.

PASCAL [COMPUT SCI] A procedure-oriented programming language whose highly structured design facilitates the rapid location and correction of coding errors.

Pascal rules [PHYS CHEM] Rules which give the diamagnetic susceptiblity of a complex molecule in terms of the sum of the susceptibilities of its constituent atoms, and a correction factor which depends on the type of bonds linking the atoms.

Pascal's law [FL MECH] The law that a confined fluid transmits externally applied pressure uniformly in all directions, without change in magnitude.

Pascal's limacon *See* limacon.

Pascal's theorem [MATH] The theorem that when one inscribes a simple hexagon in a conic, the three pairs of opposite sides meet in collinear points.

Pascal's triangle [MATH] A triangular array of the binomial coefficients, bordered by ones, where the sum of two adjacent entries from a row equals the entry in the next row directly below. Also known as binomial array.

Paschen-Back effect [SPECT] An effect on spectral lines obtained when the light source is placed in a very strong magnetic field; the anomalous Zeeman effect obtained with weaker fields changes over to what is, in a first approximation, the normal Zeeman effect.

Paschen bodies [PATH] Accumulations of the elementary bodies of smallpox.

Paschen-Runge mounting [SPECT] A diffraction grating mounting in which the slit and grating are fixed, and photographic plates are clamped to a fixed track running along the corresponding Rowland circle.

Paschen series [SPECT] A series of lines in the infrared spectrum of atomic hydrogen whose wave numbers are given by $R_H[(1/9) - (1/n^2)]$, where R_H is the Rydberg constant for hydrogen, and n is any integer greater than 3.

Paschen's law [ELECTR] The law that the sparking potential between two parallel plate electrodes in a gas is a function of the product of the gas density and the distance between the electrodes. Also known as Paschen's rule.

Paschen's rule *See* Paschen's law.

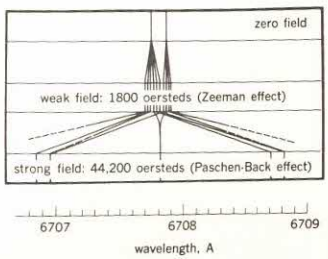
pascoite [MINERAL] $Ca_2V_6O_{17}\cdot 11H_2O$ A dark-red-orange to yellow-orange mineral composed of hydrous vanadate of calcium.

Pasiphae [ASTRON] A small satellite of Jupiter with a diameter of about 35 miles (56 kilometers), orbiting with retrograde motion at a mean distance of about 1.46×10^7 miles (2.35×10^7 kilometers). Also known as Jupiter VIII.

pasmo [PL PATH] A destructive fungus disease of flax caused by *Mycosphaerella linorum*.

pass [AERO ENG] **1.** A single circuit of the earth made by a satellite; it starts at the time the satellite crosses the equator from the Southern Hemisphere into the Northern Hemisphere. **2.** The period of time in which a satellite is within telemetry range of a data acquisition station. [COMPUT SCI] A complete cycle of reading, processing, and writing in a computer. [GEOGR] **1.** A natural break, depression, or other low place providing a passage through high terrain, such as a mountain

PASCHEN-BACK EFFECT



Zeeman and Paschen-Back effects of red lithium doublet, whose natural separation is 0.175 angstrom.

range **2.** A navigable channel leading to a harbor or river. **3.** A narrow opening through a barrier reef, atoll, or sand bar. [MECH ENG] **1.** The number of times that combustion gases are exposed to heat transfer surfaces in boilers (that is, single-pass, double-pass, and so on). **2.** In metal rolling, the passage in one direction of metal deformed between rolls. **3.** In metal cutting, transit of a metal cutting tool past the workpiece with a fixed tool setting. [MET] **1.** Passage of a metal bar between rolls. **2.** Open space between two grooved rolls through which metal is processed. **3.** Weld metal deposited in one trip along the axis of a weld. [MIN ENG] **1.** A mine opening through which coal or ore is delivered from a higher to a lower level. **2.** A passage left in old workings for workers to travel as they move from one level to another. **3.** A treatment of the whole ore sample in a sample divider. **4.** A passage of an excavation or grading machine. **5.** In surface mining, a complete excavator cycle in removing overburden.

passage [GEOGR] A navigable channel, especially one through reefs or islands. [NAV] A transit from one place to another; one leg of a voyage.

passage bed [GEOL] A stratum marking a transition from rocks of one geological system to those of another.

passageway [SCI TECH] A way that permits passage between two places or points.

Passalidae [INV ZOO] The peg beetles, a family of tropical coleopteran insects in the superfamily Scarabaeoidea.

passband [ELECTR] A frequency band in which the attenuation of a filter is essentially zero.

pass-by [ENG] The double-track part of any single-track system of rail transport. [MIN ENG] A passage around the working part of a shaft.

pass element [ELECTR] Controlled variable resistance device, either a vacuum tube or power transistor, in series with the source of direct-current power; the pass element is driven by the amplified error signal to increase its resistance when the output needs to be lowered or to decrease its resistance when the output must be raised.

passenger car [ENG] **1.** A railroad car in which passengers are carried. **2.** An automobile for carrying as many as nine passengers.

passenger ship [NAV ARCH] A ship used primarily to carry passengers.

Passeres [VERT ZOO] The equivalent name for Oscines.

Passeriformes [VERT ZOO] A large order of perching birds comprising two major divisions: Suboscines and Oscines.

Passifloraceae [BOT] A family of dicotyledonous, often climbing plants in the order Violales; flowers are polypetalous and hypogynous with a corona, and seeds are arillate with an oily endosperm.

passiflorin *See* harman.

passing point [MIN ENG] The point at which two vehicles, such as coal cars or mine elevators, pass each other while going in opposite directions.

passing track [ENG] A sidetrack with switches at both ends.

passivation [ELECTR] Growth of an oxide layer on the surface of a semiconductor to provide electrical stability by isolating the transistor surface from electrical and chemical conditions in the environment; this reduces reverse-current leakage, increases breakdown voltage, and raises power dissipation rating. [MET] To render passive; to reduce the reactivity of a chemically active metal surface by electrochemical polarization or by immersion in a passivating solution.

passivation potential [PHYS CHEM] The potential corresponding to the critical anodic current density of an electrode which behaves in an active-passive manner.

passive-active cell [MET] An electrochemical corrosion cell established between passive and active areas on a metal surface.

passive-aggressive personality [PSYCH] A personality disorder characterized by the passive expression of hostility and aggressiveness, as by stubbornness, pouting, or inefficiency.

passive anaphylaxis [IMMUNOL] Anaphylaxis elicited by temporary sensitization with antibodies followed by injection of the corresponding sensitizing antigen.

passive AND gate [ELECTR] *See* AND gate. [ENG] A fluidic device which achieves an output signal, by stream interaction, only when both of two control signals appear simultaneously.

passive antenna [ELECTROMAG] An antenna which influences the directivity of an antenna system but is not directly connected to a transmitter or receiver.

passive antiroll system [NAV ARCH] A system of antiroll tanks connected by a channel that is sized so that the flow of the liquid is out of phase with the roll of the ship.

passive armor [ORD] A protective device against shaped charge ammunition; designed to absorb the energy of a shaped charge.

passive communications satellite [AERO ENG] A satellite that reflects communications signals between stations, without providing amplification; an example is the Echo satellite. Also known as passive satellite.

passive component *See* passive element.

passive congestion [MED] An increased content of blood in an organ or other body part due to impaired return of venous blood.

passive corner reflector [ELECTROMAG] A corner reflector that is energized by a distant transmitting antenna; used chiefly to improve the reflection of radar signals from objects that would not otherwise be good radar targets.

passive cutaneous anaphylaxis [IMMUNOL] The vascular reaction at the site of intradermally injected antibody when, 3 hours later, the specific antigen, usually mixed with Evans blue dye, is injected intravenously.

passive-dependent personality [PSYCH] A character disorder marked by a behavioral pattern characterized by a lack of self-confidence, indecisiveness, and a tendency to cling to and seek support from others.

passive detection [ORD] The detection of a target or other object by means that do not reveal the position of the detecting instrument.

passive device [COMPUT SCI] A unit of a computer which cannot itself initiate a request for communication with another device, but which honors such a request from another device.

passive double reflector [ELECTROMAG] A combination of two passive reflectors positioned to bend a microwave beam over the top of a mountain or ridge, generally without appreciably changing the general direction of the beam.

passive earth pressure [CIV ENG] The maximum value of lateral earth pressure exerted by soil on a structure, occurring when the soil is compressed sufficiently to cause its internal shearing resistance along a potential failure surface to be completely mobilized.

passive electronic countermeasures [ELECTR] Electronic countermeasures that do not radiate energy, including reconnaissance or surveillance equipment that detects and analyzes electromagnetic radiation from radar and communications transmitters, and devices such as chaff which return spurious echoes to enemy radar.

passive element [ELEC] An element of an electric circuit that is not a source of energy, such as a resistor, inductor, or capacitor. Also known as passive component. [ELECTROMAG] *See* parasitic element.

passive filter [ELEC] An electric filter composed of passive elements, such as resistors, inductors, or capacitors, without any active elements, such as vacuum tubes or transistors.

passive fold [GEOL] A fold in which the mechanism of folding, either flow or slip, crosses the boundaries of the strata at random.

passive front *See* inactive front.

passive glacier [HYD] A glacier with sluggish movement, generally occurring in a continental environment at a high latitude, where both accumulation and ablation are minimal.

passive guidance [NAV] Guidance of a vehicle by preset or inertial devices, without reliance on external signals or observations.

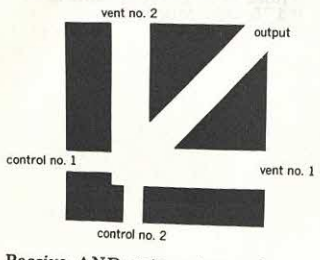
passive homing [NAV] The homing of an aircraft or spacecraft wherein the craft directs itself toward its destination by receiving radio emission from a base station without the necessity of initiating the transmission by sending an interrogating signal from the craft.

passive immunity [IMMUNOL] **1.** Immunity acquired by injection of antibodies in another individual or in an animal. **2.** Immunity acquired by the fetus by the transfer of maternal antibodies through the placenta.

passive jamming [ELECTR] Use of confusion reflectors to return spurious and confusing signals to enemy radars. Also known as mechanical jamming.

passive junction [ELECTROMAG] A waveguide junction that does not have a source of energy.

PASSIVE AND GATE



Passive AND gate, a type of fluidic element. When only one control signal appears it attaches to opposite wall and vents, producing no output. Output is achieved when both controls appear simultaneously.

passive metal [MET] A metal on which a surface film forms by natural process or by immersion in a passivating solution, making the metal resistant to corrosion.
passive method [CIV ENG] A construction method in permafrost areas in which the frozen ground near the structure is not disturbed or altered, and the foundations are provided with additional insulation to prevent thawing of the underlying ground.
passive network [ELEC] A network that has no source of energy.
passive permafrost [GEOL] Permafrost that will not refreeze under present climatic conditions after being disturbed or destroyed. Also known as fossil permafrost.
passive radar [ENG] A technique for detecting objects at a distance by picking up the microwave electromagnetic energy that is both radiated and reflected by all bodies.
passive reflector [ELECTROMAG] A flat reflector used to change the direction of a microwave or radar beam; often used on microwave relay towers to permit placement of the transmitter, repeater, and receiver equipment on the ground, rather than at the tops of towers. Also known as plane reflector.
passive satellite *See* passive communications satellite.
passive sonar [ENG] Sonar that uses only underwater listening equipment, with no transmission of location-revealing pulses.
passive system [ELECTR] Electronic system which emits no energy, and does not give away its position or existence.
passive transducer [ELECTR] A transducer containing no internal source of power.
passivity [CHEM] A state of chemical inactivity, especially of a metal that is relatively resistant to corrosion due to loss of chemical activity. [MET] The property of a metal that has been made passive.
pass point [GRAPHICS] A point whose horizontal or vertical position is determined from photographs by photogrammetric methods and which is intended for use as a supplemental control point in the orientation of other photographs.
paste [ELEC] In batteries, the medium in the form of a paste or jelly, containing an electrolyte; it is positioned adjacent to the negative electrode of a dry cell; in an electrolytic cell, the paste serves as one of the conducting plates. [MATER] An adhesive mixture with a characteristic plastic consistency, a high order of yield value, and a low bond strength; for example, a paste prepared by heating a starch and water mixture, then cooling the hydrolyzed product. [MET] Finely divided particles of ferromagnetic material in paste form used in the wet method of magnetic particle inspection.
pasteboard [MATER] A type of thin cardboard made from gluing together two or more sheets of paper.
pasted-plate storage battery *See* Faure storage battery.
paste ink [MATER] A pastelike mixture of pigment or dye with oil and other additives, such as resins, driers, tackifiers, and adhesives; used in paper and textile printing and ballpoint pens.
pastel [MATER] A chalk or crayon made of a finely ground pigment and a minimum of nongreasy binder, such as gum tragacanth or methylcellulose; since pastels are blended on the painting itself, a larger assortment of shades and tints is required than with oil or other color mediums.
pastel fixative [MATER] A thin varnish material for the simple and even application to drawings; only enough fixative should be used to keep the pastel particles from falling off the paper.
paste mixer [ENG] Device for the blending together of solid particles and a liquid, with the final formation of a single paste phase. [FOOD ENG] *See* melangeur.
paste resin [MATER] Solventless, fluid or semisolid mixture of powdered resin and plasticizer.
paste solder [MET] Finely powdered solder metal combined with a flux.
paste-up *See* mechanical.
Pasteur-Chamberland filter [MICROBIO] A porcelain filter with small pores used in filtration sterilization.
Pasteur effect [MICROBIO] Inhibition of fermentation by supplying an abundance of oxygen to replace anerobic conditions.
Pasteurella [MICROBIO] A genus of gram-negative, ovoid or rod-shaped bacteria of uncertain affiliation; distinguished by bipolar straining; parasites on mammals, including humans, and birds.
pasteurellosis *See* hemorrhagic septicemia.
Pasteuria [MICROBIO] A genus of budding bacteria; cells are spherical to pear-shaped; reproduce by budding at the rounded end.
Pasteuriaceae [MICROBIO] Formerly a family of stalked bacteria in the order Hyphomicrobiales.
pasteurization [FOOD ENG] The application of heat for a specified time to a liquid food or beverage to enhance its keeping properties by destroying harmful microorganisms.
pasteurizer [ENG] An apparatus used for pasteurization of fluids.
Pasteur's salt solution [ANALY CHEM] Laboratory reagent consisting of potassium phosphate and calcium phosphate, magnesium sulfate, and ammonium tartrate in distilled water.
past of an event [RELAT] All events from which a signal could be emitted that could reach the event in question by traveling at speeds less than or equal to the speed of light.
patagium [VERT ZOO] **1.** A membrane or fold of skin extending between the forelimbs and hindlimbs of flying squirrels, flying lizards, and other arboreal animals. **2.** A membrane or fold of skin on a bird's wing anterior to the humeral and radioulnar bones.
patch [COMPUT SCI] **1.** To modify a program or routine by inserting a machine language correction in an object deck, or by inserting it directly into the computer through the console. **2.** The section of coding inserted in this way. [ELEC] A temporary connection between jacks or other terminations on a patch board.
patch board [ELEC] A board or panel having a number of jacks at which circuits are terminated; patch cords are plugged into the jacks to connect various circuits temporarily as required in broadcast, communication, and computer work.
patch bolt [DES ENG] A bolt with a countersunk head having a square knob that twists off when the bolt is screwed in tightly; used to repair boilers and steel ship hulls.
patch budding [BOT] Budding in which a small rectangular patch of bark bearing the scion (a bud) is fitted into a corresponding opening in the bark of the stock.
patch cord [ELEC] A cord equipped with plugs at each end, used to connect two jacks on a patch board.
patchouli oil [MATER] A brownish essential oil with strong camphor aroma; soluble in ether, chloroform, alcohol, and oils; derived from dried leaves of the patchouli (*Pogostemon patchouly*); main components are patchouli alcohol, eugenol, and cinnamic aldehyde; used to perfume toiletries.
patch panel *See* control panel; panel.
patch reef [GEOL] **1.** A small, irregular organic reef with a flat top forming a part of a reef complex. **2.** A small, thick, isolated lens of limestone or dolomite surrounded by rocks of different facies. **3.** *See* reef patch.
patch test [IMMUNOL] A test in which material is applied and left in contact with intact skin surfaces for 48 hours in order to demonstrate tissue sensitivity.
patella [ANAT] A sesamoid bone in front of the knee, developed in the tendon of the quadriceps femoris muscle. Also known as kneecap.
Patellacea [PALEON] An extinct superfamily of gastropod mollusks in the order Aspidobranchia which developed a cap-shaped shell and were specialized for clinging to rock.
Patellidae [INV ZOO] The true limpets, a family of gastropod mollusks in the order Archeogastropoda.
patent [IND ENG] A certificate of grant by a government of an exclusive right with respect to an invention for a limited period of time. Also known as letters patent. [MED] Open; exposed.
patent base [GRAPHICS] In letterpress technology, a metal base with slots that is used to hold unmounted electrotypes.
patented claim [MIN ENG] A mining claim to which a patent has been secured from the government by compliance with the laws relating to such claims.
patent foramen ovale [MED] Persistence, usually functional, of the fetal foramen ovale after birth.
patenting [MET] A process used in the production of high-strength steel wire containing 0.35–0.85% carbon, in which the wire is heated to above the transformation temperature, then quenched in molten lead or molten salt, or cooled in air.
patent leveling *See* stretcher leveling.
patent log [NAV] Any mechanical log; for example, an instrument that is dragged from the stem of a vessel to measure the speed or the distance traveled.

patent medicine [PHARM] A medicine, generally trademarked, whose composition is incompletely disclosed.

Patera process [MET] A method used in the 19th century for extracting silver from ore: the ore was roasted with sodium chloride, a solution of sodium thiosulfate was then added to leach out the silver chloride, and sodium sulfide precipitated the silver as silver sulfide.

Paterinida [PALEON] A small extinct order of inarticulated brachiopods, characterized by a thin shell of calcium phosphate and convex valves.

paternity test [IMMUNOL] Identification of the blood groups of a mother, her child, and a putative father in order to establish the probability of paternity or nonpaternity; actually, only nonpaternity can be established.

paternoite *See* kaliborite.

paternoster lake [HYD] One of a linear chain or series of small circular lakes, usually at different levels, which occupy rock basins in a glacial valley and are separated by morainal dams or riegels, but connected by streams, rapids, or waterfalls to resemble a rosary or string of beads. Also known as beaded lake; rock-basin lake; step lake.

Paterson-Kelly syndrome *See* Plummer-Vinson syndrome.

path [COMPUT SCI] The logical sequence of instructions followed by a computer in carrying out a routine. [MATH] **1.** In a topological space, a path is a continuous curve joining two points. **2.** In graph theory, a walk whose vertices are all distinct. Also known as simple path. **3.** *See* walk. [NAV] A line connecting a series of points and constituting a proposed or traveled route.

path attenuation [COMMUN] Power loss between transmitter and receiver, due to any cause.

path coefficient [COMMUN] The ratio of the power transmitted over some designated path to that transmitted over the most direct path.

pathergy [IMMUNOL] Either a subnormal response to an allergen or an unusually intense one in which the individual becomes sensitive not only to the specific substance but to others.

pathogen [MED] A disease-producing agent; usually refers to living organisms.

pathogenesis [MED] The origin and course of development of disease.

pathogenic [MED] **1.** Producing or capable of producing disease. **2.** Pertaining to pathogenesis.

pathognomonic [MED] Characteristic of a given disease, enabling it to be distinguished from other diseases.

pathologic anatomy [PATH] The study of structural changes caused by disease. Also known as morbid anatomy.

pathologist [MED] A person who specializes in the study and practice of pathology.

pathology [MED] The study of the causes, nature, and effects of diseases and other abnormalities.

pathophobia [PSYCH] Exaggerated dread of death.

pathopsychology [PSYCH] The branch of science dealing with mental processes, particularly as manifested by abnormal cognitive, perceptual, and intellectual functioning, during the course of mental disorders.

pathotoxin [PL PATH] A chemical of biological origin, other than an enzyme, that plays an important causal role in a plant disease.

path plotting [ELECTROMAG] In laying out a microwave system, the plotting of the path followed by the microwave beam on a profile chart which indicates the earth's curvature.

Patientia [ASTRON] An asteroid with a diameter of about 235 kilometers, mean distance from the sun of 3.061 astronomical units, and C-type surface composition.

patina [GEOL] A thin, colored film produced on a rock surface by weathering. [MET] The greenish product, usually basic copper sulfate, formed on copper and copper-rich alloys as a result of prolonged atmospheric corrosion.

patio process [MET] A crude chemical method of reducing silver from its ores, followed by amalgamation in low heaps with the aid of salt and copper sulfate.

Patroclus group *See* pure Trojan group.

patronite [MINERAL] A black vanadium sulfide mineral; mined as a vanadium ore in Minasragra, Peru.

pattern [AERO ENG] The flight path flown by an aircraft, or prescribed to be flown, as in making an approach to a landing. [ENG] A form designed and used as a model for making things. [GRAPHICS] A design or form. [ORD] The distribution of a series of shots fired from one gun or a battery of guns under conditions as nearly identical as possible, the points of impact of the projectiles being dispersed about a point called the center of impact.

pattern analysis [COMPUT SCI] The phase of pattern recognition that consists of using whatever is known about the problem at hand to guide the gathering of data about the patterns and pattern classes, and then applying techniques of data analysis to help uncover the structure present in the data.

pattern bombing [ORD] A method of bombing in which the bombs are made to strike the target in a certain pattern.

pattern card [TEXT] A perforated card used in jacquard weaving.

pattern chain [TEXT] A device on a loom or knitting machine that controls the pattern in the material.

patterned ground [GEOL] Any of several well-defined, generally symmetrical forms, such as circles, polygons, and steps, that are characteristic of surficial material subject to intensive frost action.

pattern flood [PETRO ENG] Waterflood of a petroleum reservoir in which there is an areal pattern of injection wells located so as to sweep oil from the area toward the bores of producing wells.

pattern generator [ELECTR] A signal generator used to generate a test signal that can be fed into a television receiver to produce on the screen a pattern of lines having usefulness for servicing purposes.

pattern harmonization [ORD] The adjusting of a fighter aircraft's fixed guns so that they will produce the largest uniform pattern of lethal density possible at a given range.

pattern recognition [COMPUT SCI] The automatic identification of figures, characters, shapes, forms, and patterns without active human participation in the decision process.

pattern-sensitive fault [COMPUT SCI] A fault that appears only in response to one pattern or sequence of data, or certain patterns or sequences.

pattern shooting [ENG] In seismic prospecting, firing of explosive charges arranged in geometric pattern.

Patterson function [SOLID STATE] A function of three spatial coordinates, constructed in the Patterson-Harker method, which has peaks at all vectors between two atoms in a crystal, the heights of the peaks being approximately proportional to the product of the atomic numbers of the corresponding atoms.

Patterson-Harker method [SOLID STATE] A method of analyzing the structure of a crystal from x-ray diffraction results; a Fourier series involving squares of the absolute values of the structure factors, which are directly observable, is used to construct a vectorial representation of interatomic distances in the crystal (Patterson map).

Patterson map [SOLID STATE] A contour chart of the Patterson function.

Patterson projection [SOLID STATE] A projection of the Patterson function on a section through a crystal.

Patterson vectors [SOLID STATE] In analysis of crystal structure, the vectors of peaks relative to the origin in a Patterson function or Patterson projection.

Pattinson process [MET] A method for separating silver from its alloys rich in lead by slow cooling of the melt so that silver-poor lead crystals separate out and are removed.

patulin [PHARM] $C_7H_6O_4$ An antibiotic derived from several fungi (*Aspergillus, Penicillium* species); crystalline compound soluble in water and most organic solvents; melting point is 111°C; used as an antimicrobial agent; also appears to be a potent carcinogenic mycotoxin. Also known as clavacin; clavatin; claviformin; expansine; mycoin C_3; penicidin.

paua *See* abalone.

Paucituberculata [VERT ZOO] An order of marsupial mammals in some systems of classification, including the opossum, rats, and polydolopids.

Paul-Bunnell test *See* heterophile agglutination test.

Pauli anomalous moment term [QUANT MECH] An additional term inserted in the Dirac equation to provide for a g-value of the particle different from 2.

Pauli electron correlation [QUANT MECH] Correlation in space of electrons as a result of the Pauli exclusion principle.

Pauli exclusion principle *See* exclusion principle.

Pauli-Fermi principle [QUANT MECH] The principle that each level of a quantized system can include one, two, or no electrons; if there are two electrons, they must have spins in opposite directions.

PATULIN

Structural formula.

Pauli g-permanence rule [ATOM PHYS] For given L, S, and M_J in LS coupling, the sum, over J, of the weak-field g-factors is equal to the sum of the strong-field factors.

Pauli g-sum rule [ATOM PHYS] For all the states arising from a given electron configuration, the sum of the g-factors for levels with the same J value is a constant, independent of the coupling scheme.

paulin [MATER] A fabricated textile item generally used as a weather protection cover for various items or materials during storage or transit.

paulingite [MINERAL] An isometric zeolite mineral consisting of an aluminosilicate of potassium, calcium, and sodium.

Pauling rule [SOLID STATE] A rule governing the number of ions of opposite charge in the neighborhood of a given ion in an ionic crystal, in accordance with the requirement of local electrical neutrality of the structure.

Pauli spin matrices [QUANT MECH] Three anticommuting matrices, each having two rows and two columns, which represent the components of the electron spin operator:

$$\sigma_x = \begin{pmatrix} 0 & 1 \\ 1 & 0 \end{pmatrix}, \sigma_y = \begin{pmatrix} 0 & -i \\ i & 0 \end{pmatrix}, \sigma_z = \begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix}.$$

Pauli spin space [QUANT MECH] A two-dimensional vector space over the complex numbers, whose vectors describe orientations of the electron spin.

Pauli spin susceptibility [SOLID STATE] The susceptibility of free electrons in a metal due to the tendency of their spins to align with a magnetic field.

Pauli-Weisskopf equation [QUANT MECH] The equation resulting from second quantization of the Klein-Gordon equation.

paulopost *See* deuteric.

paunch [ANAT] In colloquial usage, the cavity of the abdomen and its contents. [VERT ZOO] *See* rumen.

paurometabolous metamorphosis [INV ZOO] A simple, gradual, direct metamorphosis in which immature forms resemble the adult except in size and are referred to as nymphs.

Pauropoda [INV ZOO] A class of the Myriapoda distinguished by bifurcate antennae, 12 trunk segments with 9 pairs of functional legs, and the lack of eyes, spiracles, tracheae, and a circulatory system.

Paussidae [INV ZOO] The flat-horned beetles, a family of coleopteran insects in the suborder Adephaga.

pavement [BUILD] A hard floor of concrete, brick, tiles, or other material. [CIV ENG] A paved surface. [GEOL] A bare rock surface that suggests a paved road surface or other pavement in smoothness, hardness, horizontality, surface extent, or close packing of units.

pavement light [CIV ENG] A window built into the surface of a pavement to admit daylight to a space below ground level.

paver [MECH ENG] Any of several machines which, moving along the road, carry and lay paving material.

pavilion [LAP] The portion of a faceted gemstone below the girdle. Also known as base.

pavilion facet [LAP] A main facet on the pavilion of any fashioned gemstone.

paving brick [MATER] A vitrified clay brick used in the construction of pavements.

paving-brick clay [MATER] Impure shale or fire clay with good tensile strength and plasticity; used to make paving bricks.

Pavlov's pouch [PHYSIO] A small portion of stomach, completely separated from the main stomach, but retaining its vagal nerve branches, which communicates with the exterior; used in the long-term investigation of gastric secretion, and particularly in the study of conditioned reflexes.

Pavo [ASTRON] A southern constellation; right ascension 20 hours, declination 65°S. Also known as Peacock.

pavonite [MINERAL] $AgBi_3S_5$ A mineral composed of silver bismuth sulfide.

Pavy's solution [ANALY CHEM] Laboratory reagent used to determine the concentration of sugars in solution by color titration; contains copper sulfate, sodium potassium tartrate, sodium hydroxide, and ammonia in water solution.

paw [VERT ZOO] The foot of an animal, especially a quadruped having claws.

pawdite [PETR] A dark-colored, fine-grained, granular hypabyssal rock composed of magnetite, titanite, biotite, hornblende, calcic plagioclase, and traces of quartz.

pawl [MECH ENG] The driving link or holding link of a ratchet mechanism, permits motion in one direction only.

PAX *See* private automatic exchange.

paxilla [INV ZOO] A pillarlike spine in certain starfishes that sometimes has a flattened summit covered with spinules.

Paxillosida [INV ZOO] An order of the Asteroidea in some systems of classification, equivalent to the Paxillosina.

Paxillosina [INV ZOO] A suborder of the Phanerozonida with pointed tube feet which lack suckers, and with paxillae covering the upper body surface.

pay dirt [MIN ENG] Profitable mineral-rich earth or ore.

paying [NAV ARCH] **1.** Filling the seams between planks with pitch, marine glue, or other material after the calking has been inserted. **2.** Slackening away on rope or chain.

pay load [AERO ENG] That which an aircraft, rocket, or the like carries over and above what is necessary for the operation of the vehicle in its flight. [MIN ENG] The weight of coal, ore, or mineral handled, as distinct from dirt, stone, or gangue.

pay load–mass ratio [AERO ENG] Of a rocket, the ratio of the effective propellant mass to the initial vehicle mass.

payoff matrix [MATH] A matrix arising from certain two-person games which gives the amount gained by a player.

pay ore [MIN ENG] Ore which can be mined, concentrated, or smelted at current cost of exploitation profitably at ruling market value of products.

payout time [IND ENG] A measurement of profitability or liquidity of an investment, being the time required to recover the original investment in depreciable facilities from profit and depreciation; usually, but not always, calculated after income taxes.

pay sand [PETRO ENG] That portion of an oil or gas sand in which the oil or gas is found in commercial quantity.

pay streak [MIN ENG] A layer of oil, ore, or other mineral that can be mined profitably.

pay television *See* subscription television.

pay zone [PETRO ENG] The reservoir rock in which oil and gas are found in exploitable quantities.

Pb *See* lead.

P band [COMMUN] A band of radio frequencies extending from 225 to 390 megahertz, corresponding to wavelengths of 133.3 to 76.9 centimeters.

PBI *See* protein-bound iodine.

Pb-I-Pb junction *See* lead-I-lead junction.

PBI test *See* protein-bound iodine test.

P blood group [IMMUNOL] A system of immunologically distinct, genetically determined erythrocyte antigens first defined by their reaction with anti-P, and immune rabbit antiserum, and later broadened to include related antigens.

PBX *See* private branch exchange.

PC *See* phosphocreatine.

p chart [IND ENG] A chart of the fraction defective, either observed in the sample or in some production period.

PCM *See* pulse-code modulation.

PCNB *See* pentachloronitrobenzene.

PCP *See* primary control program.

PCPBS *See* fenson.

PCSB *See* pulse-coded scanning beam.

P Cygni star [ASTRON] An explosive variable star of spectral type B, with broad emission lines and strong absorption of violet light.

Pd *See* palladium.

PD *See* potential difference.

PDA *See* postacceleration.

P display *See* plan position indicator.

pdl-ft *See* foot-poundal.

PDM *See* pulse-duration modulation.

PDMS *See* plasma desorption mass spectrometry.

PDR *See* precision depth recorder.

4PDT *See* four-pole double-throw.

pea [BOT] **1.** *Pisum sativum*. The garden pea, an annual leafy leguminous vine cultivated for its smooth or wrinkled, round edible seeds which are borne in dehiscent pods. **2.** Any of several related or similar cultivated plants.

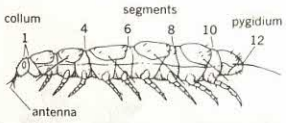
peach [BOT] *Prunus persica*. A low, spreading, freely branching tree of the order Rosales, cultivated in less rigorous parts of the temperate zone for its edible fruit, a juicy drupe with a single large seed, a pulpy yellow or white mesocarp, and a thin firm epicarp.

peachblossom ore *See* erythrite.

peach kernel oil *See* persic oil.

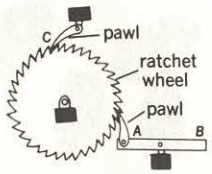
pea coal [GEOL] A size of anthracite that will pass through a

PAUROPODA



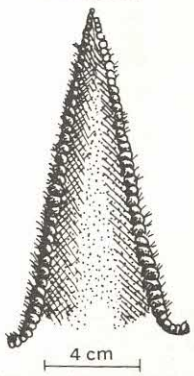
Pauropus silvaticus Tiegs, fully extended adult, enlarged, showing the 9 pairs of legs and the 12 trunk segments indicated by number.

PAWL



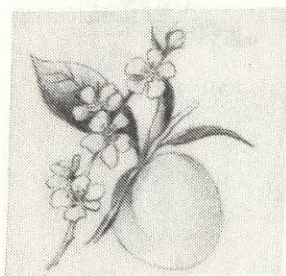
Pawls with a ratchet wheel. Driving pawl at A, forced upward by lever B, engages teeth of ratchet wheel and rotates it counterclockwise. Holding pawl C prevents clockwise rotation of the wheel.

PAXILLA



Arm of a starfish, *Persephonaster neozelanicus*, showing modified spines covering the surface.

PEACH



Flowers and fruit of Chinese peach.

$^{13}/_{16}$-inch (20.6-millimeter) round mesh but not through a $^{9}/_{16}$-inch (14.3-millimeter) round mesh.

Peacock *See* Pavo.

peacock blue [ORG CHEM] $HSO_3C_6H_4COH[C_6H_4N(C_2H_5)\text{-}CH_2C_6H_4SO_3Na]_2$ Blue pigment used in inks for multicolor printing.

peacock copper *See* peacock ore.

peacock ore [MINERAL] A copper mineral, such as bornite, having an iridescent tarnished surface upon exposure to air. Also known as peacock copper.

peak [GEOL] **1.** The conical or pointed top of a hill or mountain. **2.** An individual mountain or hill taken as a whole, used especially when it is isolated or has a pointed, conspicuous summit. [METEOROL] The point of intersection of the cold and warm fronts of a mature extra-tropical cyclone. [SCI TECH] The maximum instantaneous value of a quantity.

peak amplitude [PHYS] The maximum amplitude of an alternating quantity, measured from its zero value.

peak attenuation [COMMUN] The diminution of response to a modulated wave experienced on modulation crests.

peak cathode current [ELECTR] **1.** Maximum instantaneous value of a periodically recurring cathode current. **2.** Highest instantaneous value of a randomly recurring pulse of cathode current. **3.** Highest instantaneous value of a nonrecurrent pulse of cathode current occurring under fault conditions.

peak clipper *See* limiter.

peak clipping *See* limiting.

peak detector [ELECTR] A detector whose output voltage approximates the true peak value of an applied signal; the detector tracks the signal in its sample mode and preserves the highest input signal in its hold mode.

peak distortion [COMMUN] Largest total distortion of telegraph signals noted during a period of observation.

peaked roof [ARCH] A roof that rises to a point or ridge.

peak enthalpimetry [ANALY CHEM] A thermochemical analytical procedure applicable to biochemical and chemical analyses; the salient feature is rapid mixing of a reagent stream with an isothermal solvent stream into which discrete samples are intermittently injected; peak enthalpograms result which exhibit the response characteristics of genuine differential detectors.

peak envelope power [ELECTR] Of a radio transmitter, the average power supplied to the antenna transmission line by a transmitter during one radio-frequency cycle at the highest crest of the modulation envelope, taken under conditions of normal operation.

peaker [ELECTR] A small fixed or adjustable inductance used to resonate with stray and distributed capacitances in a broad-band amplifier to increase the gain at the higher frequencies.

peak factor *See* crest factor.

peak forward voltage [ELECTR] The maximum instantaneous voltage applied to an electronic device in the direction of lesser resistance to current flow.

peak gust [METEOROL] After United States weather observing practice, the highest instantaneous wind speed recorded at a station during a specified period, usually the 24-hour observational day; therefore, a peak gust need not be a true gust of wind.

peaking circuit [ELECTR] A circuit used to improve the high-frequency response of a broad-band amplifier; in shunt peaking, a small coil is placed in series with the anode load; in series peaking, the coil is placed in series with the grid of the following stage.

peaking network [ELECTR] Type of interstage coupling network in which an inductance is effectively in series (series-peaking network), or in shunt (shunt-peaking network), with the parasitic capacitance to increase the amplification at the upper end of the frequency range.

peaking transformer [ELEC] A transformer in which the number of ampere-turns in the primary is high enough to produce many times the normal flux density values in the core; the flux changes rapidly from one direction of saturation to the other twice per cycle, inducing a highly peaked voltage pulse in a secondary winding.

peak inverse anode voltage [ELECTR] Maximum instantaneous anode voltage in the direction opposite to that in which the tube or other device is designed to pass current.

peak inverse voltage [ELECTR] Maximum instantaneous anode-to-cathode voltage in the reverse direction which is actually applied to the diode in an operating circuit.

peakless pumping [MIN ENG] Spreading the pumping load over the entire day in a mine.

peak limiter *See* limiter.

peak load [ELEC] The maximum instantaneous load or the maximum average load over a designated interval of time. Also known as peak power. [ENG] The maximum quantity of a specified material to be carried by a conveyor per minute in a specified period of time.

peak overpressure [ORD] The highest overpressure resulting from a blast wave; peak overpressures near the fireball of an atomic explosion are very high but drop off rapidly as the blast wave travels along the ground outward from ground zero.

peak plain [GEOL] A high-level plain formed by a series of summits of approximately the same elevation, often described as an uplifted and fully dissected peneplain. Also known as summit plain.

peak power [ELEC] *See* peak load. [ELECTROMAG] The maximum instantaneous power of a transmitted radar pulse.

peak pressure [ORD] The maximum pressure reached in the bore of a weapon during the burning of the propellant.

peak signal level [ELECTR] Expression of the maximum instantaneous signal power or voltage as measured at any point in a facsimile transmission system; this includes auxiliary signals.

peak tank [NAV ARCH] A tank which is at the bow or stern end of a ship and is low in the ship, usually kept empty and dry but sometimes used to carry potable water.

peak-to-peak amplitude [PHYS] Amplitude of an alternating quantity measured from positive peak to negative peak.

peak-to-valley ratio [COMMUN] The ratio of the largest amplitude of a modulated wave to its smallest value.

peak value [ELEC] The maximum instantaneous value of a varying current, voltage, or power during the time interval under consideration. Also known as crest value.

peak width [ANALY CHEM] In a gas chromatogram (plot of eluent rise and fall versus time), the width of the base (time duration) of a symmetrical peak (rise and fall) of eluent.

peak zone [PALEON] An informal biostratigraphic zone consisting of a body of strata characterized by the exceptional abundance of some taxon (or taxa) or representing the maximum development of some taxon.

Peano's postulates [MATH] The five axioms by which the natural numbers may be formally defined; they state that (1) there is a natural number 1; (2) every natural number n has a successor n^+; (3) no natural number has 1 as its successor; (4) every set of natural numbers which contains 1 and the successor of every member of the set contains all the natural numbers; (5) if $n^+ = m^+$, then $n = m$.

peanut [BOT] *Arachis hypogaea*. A low, branching, self-pollinated annual legume cultivated for its edible seed, which is a one-loculed legume formed beneath the soil in a pod.

peanut oil [MATER] A yellow to greenish-yellow fatty oil obtained from peanuts; soluble in ether, chloroform, benzine, and carbon disulfide; main components are glycerides of oleic and linoleic acids; used as an edible substitute for olive oil, and in soaps and medicine. Also known as arachis oil; earth-nut oil; katchung oil.

pea ore [MINERAL] A variety of pisolitic limonite or bean ore occurring in small, rounded grains or masses about the size of a pea.

pear [BOT] Any of several tree species of the genus *Pyrus* in the order Rosales, cultivated for their fruit, a pome that is wider at the apical end and has stone cells throughout the flesh.

pearceite [MINERAL] $Ag_{16}As_2S_{11}$ A black mineral composed of sulfide of arsenic and silver.

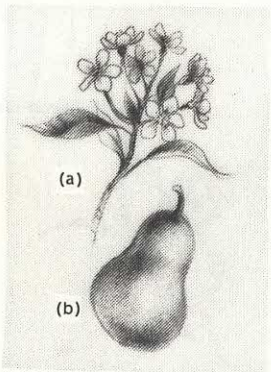
pearl [MATER] A dense, more or less round, white or light-colored concretion having various degrees of luster formed within or beneath the mantle of various mollusks by deposition of thin concentric layers of nacre about a foreign particle. [PATH] **1.** Rounded masses of concentrically arranged squamous epithelial cells, seen in some carcinomas. **2.** Mucous casts of the bronchi or bronchioles found in the sputum of asthmatic persons.

pearl ash [MATER] An impure substance derived from potash following partial purification from wood ash.

pearl essence [MATER] A brilliant, translucent, lustrous material obtained from fish scales; used in pearl lacquers and to make artificial pearls. Also known as pearl white.

pearl hardening [INORG CHEM] Commercial name for a crystallized grade of calcium sulfate; used as a paper filler.

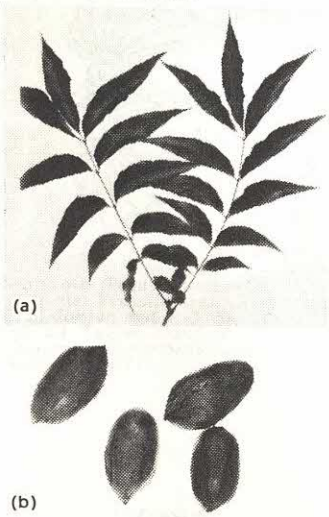
PEAR



Pear (*Pyrus communis*). (*a*) Flower cluster. (*b*) Fruit.

pearlite [GEOL] *See* perlite. [MET] A lamellar aggregate of ferrite (almost pure iron) and cementite (Fe_3C) often occurring in carbon steels and in cast iron.
Pearl-Reed curve *See* logistic curve.
pearl sinter *See* siliceous sinter.
pearl spar [MINERAL] A crystalline carbonate having a pearly luster; an example is ankerite.
pearlstone *See* perlite.
pearl white *See* pearl essence.
pearly *See* nacreous.
pearly tumor *See* cholesteatoma.
pear-shape cut [LAP] A variation of the brilliant cut, generally having 58 facets, and a pear-shaped girdle outline.
Pearson Type I distribution *See* beta distribution.
pea-soup fog [METEOROL] Any particularly dense fog.
peat [GEOL] A dark-brown or black residuum produced by the partial decomposition and disintegration of mosses, sedges, trees, and other plants that grow in marshes and other wet places.
peat ball [ECOL] A lake ball containing an abundance of peaty fragments.
peat bed *See* peat bog.
peat bog [GEOL] A bog in which peat has formed under conditions of acidity. Also known as peat bed; peat moor.
peat breccia [GEOL] Peat that has been broken up and then redeposited in water. Also known as peat slime.
peat coal [GEOL] A coal transitional between peat and lignite. [MATER] Artifically carbonized peat that is used as a fuel.
peat flow [ECOL] A mudflow of peat produced in a peat bog by a bog burst.
peat formation [GEOCHEM] Decomposition of vegetation in stagnant water with small amounts of oxygen, under conditions intermediate between those of putrefaction and those of moldering.
peat moor *See* peat bog.
peat moss [ECOL] Moss, especially sphagnum moss, from which peat has been produced.
peat-sapropel [GEOL] A product of the degradation of organic matter that is transitional between peat and sapropel. Also known as sapropel-peat.
peat slime *See* peat breccia.
peat soil [GEOL] Soil containing a large amount of peat; it is rich in humus and gives an acid reaction.
peat tar [MATER] A peat distillate containing 2–6% tar.
peat wax [MATER] A hard, waxy material extracted from peat; it is similar to, and a substitute for, montan wax.
Peaucellier linkage [MECH ENG] A mechanical linkage to convert circular motion exactly into straight-line motion.
peau de soie [TEXT] Soft silk satin-textured fabric having a slight luster and faintly showing fine ribs in the filling.
pebble [GEOL] A clast, larger than a granule and smaller than a cobble having a diameter in the range of 4–64 millimeters. Also known as pebblestone. [MINERAL] *See* rock crystal.
pebble armor [GEOL] A desert armor made up of rounded pebbles.
pebble bed [GEOL] Any pebble conglomerate, especially one in which the pebbles weather conspicuously and become loose. Also known as popple rock.
pebble-bed reactor [NUCLEO] A nuclear reactor in which the fuel consists of small spheres or pellets stacked in the core; the reaction rate is controlled by coolant flow and by loading and unloading pellets.
pebble coal [GEOL] Coal that is transitional between peat and brown coal.
pebble conglomerate [PETR] A consolidated rock consisting mainly of pebbles.
pebble dike [GEOL] **1.** A clastic dike composed largely of pebbles. **2.** A tabular body containing sedimentary fragments in an igneous matrix.
pebble heater [CHEM ENG] Gas-heating device (for air, hydrogen, methane, and steam) in which heat is transferred to the gas via a countercurrent movement of preheated pebbles.
pebble mill [MECH ENG] A solids size-reduction device with a cylindrical or conical shell rotating on a horizontal axis, and with a grinding medium such as balls of flint, steel, or porcelain.
pebble peat [GEOL] Peat that is formed in a semiarid climate by the accumulation of moss and algae, no more than ¼ inch (6 millimeters) in thickness, under the surface pebbles of well-drained soils.
pebble phosphate [GEOL] A secondary phosphorite of either residual or transported origin, consisting of pebbles or concretions of phosphatic material.
pebbles [MATER] Grinding media for pebble mills, usually balls of hard flint or hard burned white porcelain.
pebblestone *See* pebble.
pebble-weave [TEX] Of a material, having an irregular texture produced by weaving with shrunken and twisted yarn.
pebbling *See* orange peel.
pebbly mudstone [GEOL] A delicately laminated till-like conglomeratic mudstone.
pebbly sand [GEOL] An unconsolidated sedimentary deposit containing at least 75% sand and up to a maximum of 25% pebbles.
pebbly sandstone [GEOL] A sandstone that contains 10–20% pebbles.
pébrine [INV ZOO] A contagious protozoan disease of silkworms and other caterpillars caused by *Nosema bombycis*.
pebulate [ORG CHEM] $C_{10}IH_{21}NOS$ An amber to yellow liquid, used to control weeds in preemergence sugarbeets, tobacco, and tomatoes. Also known as *S*-propyl butylethylthiocarbamate.
pecan [BOT] *Carya illinoensis*. A large deciduous hickory tree in the order Fagales which produces an edible, oblong, thin-shelled nut.
peccary [VERT ZOO] Either of two species of small piglike mammals in the genus *Tayassu*, composing the family Tayassuidae.
peck [MECH] Abbreviated pk. **1.** A unit of volume used in the United States for measurement of solid substances, equal to 8 dry quarts, or ¼ bushel, or 537.605 cubic inches, or 0.00880976754172 cubic meter. **2.** A unit of volume used in the United Kingdom for measurement of solid and liquid substances, although usually the former, equal to 2 gallons, or approximately 0.00909218 cubic meter.
pecker [COMPUT SCI] The part of a paper tape reader that senses holes in the tape.
pecking order [PSYCH] A social hierarchy of prestige, dominance, or authority. [VERT ZOO] A hierarchy of social dominance within a flock of poultry where each bird is allowed to peck another lower in the scale and must submit to pecking by one of higher rank.
Peclet number [CHEM ENG] Dimensionless group used to determine the chemical reaction similitude for the scale-up from pilot-plant data to commercial-sized units; incorporates heat capacity, density, fluid velocity, and other pertinent physical parameters.
Pecora [VERT ZOO] An infraorder of the Artiodactyla; includes those ruminants with a reduced ulna and usually with antlers, horns, or deciduous horns.
pecten [ZOO] Any of various comblike structures possessed by animals.
Pectenidae [INV ZOO] A family of bivalve mollusks in the order Anisomyaria; contains the scallops.
pectic acid [BIOCHEM] A complex acid, partially demethylated, obtained from the pectin of fruits.
pectin [BIOCHEM] A purified carbohydrate obtained from the inner portion of the rind of citrus fruits, or from apple pomace; consists chiefly of partially methoxylated polygalacturonic acids.
Pectinariidae [INV ZOO] The cone worms, a family of polychaete annelids belonging to the Sedentaria.
pectinase [BIOCHEM] An enzyme that catalyzes the transformation of pectin into sugars and galacturonic acid.
pectinesterase [BIOCHEM] An enzyme that catalyzes the hydrolytic breakdown of pectins to pectic acids.
pectineus [ANAT] A muscle arising from the pubis and inserted on the femur.
Pectinibranchia [INV ZOO] An order of gastropod mollusks which contains many families of snails; respiration is by means of ctenidia, the nervous system is not concentrated, and sexes are separate.
Pectobothridia [INV ZOO] A subclass of parasitic worms in the class Trematoda, characterized by caudal hooks or hard posterior suckers or both.
pectolite [MINERAL] $NaCa_2Si_3O_8(OH)$ A colorless, white, or gray inosilicate, crystallizing in the monoclinic sys-

PECAN

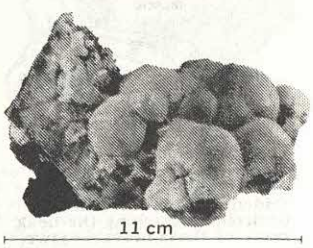


Pecan. *(a)* Leaves and fruit. *(b)* Hulled nuts.

PECTINIBRANCHIA

Shell of the snail *Orthonema*, from the Pennsylvanian-Permian. *(From R. R. Shrock and W. H. Twenhofel, Principles of Invertebrate Paleontology, 2d ed., McGraw-Hill, 1953)*

PECTOLITE



Globular masses of needlelike pectolite crystals with calcite at left, found in Paterson, New Jersey. *(American Museum of Natural History Specimen)*

tem and having a vitreous to silky luster; hardness is 5 on Mohs scale, and specific gravity is 2.75.

pectoral fin [VERT ZOO] One of the pair of fins of fishes corresponding to forelimbs of a quadruped.

pectoral girdle [ANAT] The system of bones supporting the upper or anterior limbs in vertebrates. Also known as shoulder girdle.

pectoralis major [ANAT] The large muscle connecting the anterior aspect of the chest with the shoulder and upper arm.

pectoralis minor [ANAT] The small, deep muscle connecting the third to fifth ribs with the scapula.

peculiar part [ORD] A part of ordnance for which the design is controlled by a single manufacturer, and the use is restricted to items produced by a single manufacturer.

peculiar star [ASTRON] A star that does not fit into a standard spectral classification.

peculiar velocity [ASTRON] Superposed on the systematic rotation of the galaxy are individual motions of the stars; each star moves in a somewhat elliptical orbit and therefore shows a velocity of its own (peculiar velocity) to the local standard of rest, the standard moving in a circular orbit around the galactic center.

ped [GEOL] A naturally formed unit of soil structure.

pedal [BIOL] Of or pertaining to the foot. [DES ENG] A lever operated by foot.

pedal disk [INV ZOO] The broad, flat base of many sea anemones, used for attachment to a substrate.

pedalfer [GEOL] A soil in which there is an accumulation of sesquioxides; it is characteristic of a humid region.

pedal ganglion [INV ZOO] One of the paired ganglia supplying nerves to the foot muscles in most mollusks.

pedal gland *See* foot gland.

pedality [GEOL] The physical nature of a soil as expressed by the features of its constituent peds.

pedate [BIOL] **1.** Having toelike parts. **2.** Having a foot. **3.** Having tube feet.

pedestal [CIV ENG] **1.** The support for a column. **2.** A metal support carrying one end of a bridge truss or girder and transmitting any load to the top of a pier or abutment. [ELECTR] *See* blanking level. [ENG] A supporting part or the base of an upright structure, such as a radar antenna. [GEOL] A relatively slender column of rock supporting a wider rock mass and formed by undercutting as a result of wind abrasion or differential weathering. Also known as rock pedestal.

pedestal boulder [GEOL] A rock mass supported on a rock pedestal. Also known as pedestal rock.

pedestal level *See* blanking level.

pedestal pile [CIV ENG] A concrete pile with a bulbous enlargement at the bottom.

pedestal rock *See* pedestal boulder.

pedestal sight [ORD] In an aircraft gunnery system, a sight mounted on a pedestal for remote control of the guns.

pedial class [CRYSTAL] That class in the triclinic system which has no symmetry.

pediatrician [MED] A physician who specializes in pediatrics.

pediatrics [MED] The branch of medicine that deals with the growth and development of the child through adolescence, and with the care, treatment, and prevention of diseases, injuries, and defects of children.

pedicel [BOT] **1.** The stem of a fruiting or sporebearing organ. **2.** The stem of a single flower. [ZOO] A short stalk in an animal body.

pedicellaria [INV ZOO] In echinoids and starfishes, any of various small grasping organs in the form of a beak carried on a stalk.

pedicellate [BIOL] Having a pedicel.

Pedicellinea [INV ZOO] The single order of the class Calyssozoa, including all entoproct bryozoans.

pedicle [ANAT] A slender process acting as a foot or stalk (as the base of a tumor), or the basal portion of an organ that is continuous with other structures.

pediculophobia [PSYCH] Abnormal fear of pediculosis.

pediculosis [MED] Infestation with lice, especially of the genus *Pediculus*.

pedigree [GEN] The ancestral line of an individual.

pedigree mud [MATER] A high-chemical-content drilling mud that includes barium sulfate, caustic soda, soda ash, sodium bicarbonate, and phosphates.

Pedilidae [INV ZOO] The false ant-loving flower beetles, a family of coleopteran insects in the superfamily Tenebrionoidea.

pediment [ARCH] A triangular face forming the gable of a two-pitched roof. [GEOL] A piedmont slope formed from a combination of processes which are mainly erosional; the surface is chiefly bare rock but may have a covering veneer of alluvium or gravel. Also known as conoplain; piedmont interstream flat.

pedimentation [GEOL] The actions or processes by which pediments are formed.

pediment gap [GEOL] A broad opening formed by the enlargement of a pediment pass.

pediment pass [GEOL] A flat, narrow tongue that extends from a pediment on one side of a mountain to join a pediment on the other side.

Pedinidae [INV ZOO] The single family of the order Pedinoida.

Pedinoida [INV ZOO] An order of Diadematacea making up those forms of echinoderms which possess solid spines and a rigid test.

Pediococcus [MICROBIO] A genus of bacteria in the family Streptococcaceae; cells occur in pairs or tetrads; ferment glucose with production of inactive lactic acid (homofermentative).

pediocratic [GEOL] Pertaining to a period of time in which there is little diastrophism.

pedion [CRYSTAL] A crystal form with only one face; member of the asymmetric class of the triclinic system.

Pedionomidae [VERT ZOO] A family of quaillike birds in the order Gruiformes.

Pedipalpida [INV ZOO] Former order of the Arachnida; these animals are now placed in the orders Uropygi and Amblypygi.

pedipalpus [INV ZOO] One of the second pair of appendages of an arachnid.

pediplain [GEOL] A rock-cut erosion surface formed in a desert by the coalescence of two or more pediments. Also known as desert peneplain; desert plain; panfan.

pediplanation [GEOL] The actions or processes by which pediplanes are formed.

pediplane [GEOL] Any planate erosion surface formed in the piedmont area of a desert, either bare or covered with a veneer of alluvium.

pedocal [GEOL] A soil containing a concentration of carbonates, usually calcium carbonate; it is characteristic of arid or semiarid regions.

pedodontics [MED] The branch of dentistry concerned with the care of children's teeth.

pedogenesis *See* soil genesis.

pedogenics [GEOL] The study of the origin and development of soil.

pedogeochemical survey [GEOCHEM] A geochemical prospecting survey in which the materials sampled are soil and till.

pedogeography [GEOL] The study of the geographic distribution of soils.

pedography [GEOL] The systematic description of soils; an aspect of soil science.

pedolith [GEOL] A surface formation that has undergone one or more pedogenic processes.

pedologic age [GEOL] The relative maturity of a soil profile.

pedologic unit [GEOL] A soil considered without regard to its stratigraphic relations.

pedology [GEOL] *See* soil science. [MED] The science of the study of the physiological as well as the psychological aspects of childhood.

pedometer [ENG] **1.** An instrument for measuring and weighing a newborn child. **2.** An instrument that registers the number of footsteps in walking.

Pedomicrobium [MICROBIO] A genus of prosthecate bacteria; cells are pear-, bean-, or rod-shaped or oval; reproduction is by budding at hyphal tips or directly on mother cells; iron or manganese oxides are deposited on mother cells or hyphae.

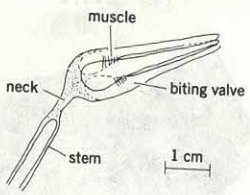
pedon [GEOL] The smallest unit or volume of soil that represents or exemplifies all the horizons of a soil profile; it is usually a horizontal, hexagonal area of about 1 square meter, or possibly larger.

pedophilia [PSYCH] Love of children by adults for sexual purposes.

pedophobia [PSYCH] An abnormal fear or dislike of children.

pedorelic [GEOL] Referring to a soil feature that is derived from a preexisting soil horizon.

PEDICELLARIA



Tridentate type of echinoid pedicellaria showing the beak made of three movable jaws.

pedosphere [GEOL] That shell or layer of the earth in which soil-forming processes occur.

pedotubule [GEOL] A soil feature consisting of skeleton grains, or skeleton grains plus plasma, and having a tubular external form (either single tubes or branching systems of tubes) characterized by relatively sharp boundaries and relatively uniform cross-sectional size and shape (circular or elliptical).

peduncle [ANAT] A band of white fibers joining different portions of the brain. [BOT] **1.** A flower-bearing stalk. **2.** A stalk supporting the fruiting body of certain thallophytes. [INV ZOO] The stalk supporting the whole or a large part of the body of certain crinoids, brachiopods, and barnacles.

pedunculate [BIOL] **1.** Having or growing on a peduncle. **2.** Being attached to a peduncle.

peekaboo system *See* Batten system.

peel-back [ENG] The separation of two bonded materials, one or both of which are flexible, by stripping or pulling the flexible material from the mating surface at a 90 or 180° angle to the plane in which it is adhered.

peeling [MATER] Stripping or detaching a rubber coating from a metal, cloth, or other material.

peel-off time [ENG] In seismic prospecting, the time correction applied to observed data to adjust them to a depressed reference datum.

peel test [ENG] A test to ascertain the adhesive strength of bonded strips of metals by peeling or pulling the metal strips back and recording the adherence values.

peel thrust [GEOL] A sedimentary sheet peeled off a sedimentary sequence, usually along a bedding plane.

peen [DES ENG] The end of a hammer head with a hemispherical, wedge, or other shape; used to bend, indent, or cut.

peening [MET] Surface-hardening a piece of metal by hammering or by bombarding with hard shot.

peepdoor [MECH ENG] A small door in a furnace with a glass opening through which combustion may be observed.

peephole masks [COMPUT SCI] In character recognition, a set of characters (each character residing in the character reader in the form of strategically placed points) which theoretically render all input characters as being unique regardless of their style.

peep sight [ORD] A rear gunsight having a small hole in which the front sight is centered in aiming; distinguished from an open sight.

peep slot [ORD] A vision slot in a combat vehicle which can readily be opened or closed from within.

peesweep storm [METEOROL] An early-spring storm in Scotland and England.

peg [ENG] **1.** A small pointed or tapered piece, often cylindrical, used to pin down or fasten parts. **2.** A projection used to hang or support objects. [MET] *See* plug.

Pegasidae [VERT ZOO] The single family of the order Pegasiformes.

Pegasiformes [VERT ZOO] The sea moths or sea dragons, a small order of actinopterygian fishes; the anterior of the body is encased in bone, and the nasal bones are enlarged to form a rostrum that projects well forward of the mouth.

Pegasus [ASTRON] A northern constellation; right ascension 22 hours, declination 20°N. Also known as Winged Horse.

peg count meter [ENG] A meter or register that counts the number of trunks tested, the number of circuits passed busy, the number of test failures, or the number of repeat tests completed.

pegging rammer [MET] A rod with an oblong piece of iron at its end; used to compact sand in a mold.

peg graft [BOT] A graft made by driving a scion of leafless dormant wood with wedge-shaped base into an opening in the stock and sealing with wax or other material.

pegmatite [PETR] Any extremely coarse-grained, igneous rock with interlocking crystals; pegmatites are relatively small, are relatively light colored, and range widely in composition, but most are of granitic composition; they are principal sources for feldspar, mica, gemstones, and rare elements. Also known as giant granite; granite pegmatite.

pegmatitic stage [GEOL] A stage in the normal sequence of crystallization of magma containing volatiles when the residual fluid is sufficiently enriched in volatile materials to permit the formation of coarse-grained rocks, that is pegmatites.

pegmatitization [GEOL] Formation of or replacement by a pegmatite.

pegmatoid [PETR] An igneous rock that has the coarse-grained texture of a pegmatite but that lacks graphic intergrowths or typically granitic composition.

pegmatolite *See* orthoclase.

peg model [GEOL] Three-dimensional model used to illustrate and study stratigraphic and structural conditions of subsurface geology; consists of a flat platform onto which vertical pegs of varying heights are mounted to represent the contours of various strata.

Peierls-Nabarro force [SOLID STATE] The force required to displace a dislocation along its slip plane.

Peirce stroke relationship *See* NOR.

Peisidicidae [INV ZOO] A monogeneric family of polychaete annelids belonging to the Errantia.

Peking man [PALEON] *Sinanthropus pekinensis*. An extinct human type; the braincase was thick, with a massive basal and occipital torus structure and heavy browridges.

pekovskite [MINERAL] $CaTiO_3$ Lustrous, yellowish to gray-black, isometric or orthorhombic crystals with a hardness of 5.5; decomposes in hot sulfuric acid.

pel *See* pixel.

pelagic [GEOL] Pertaining to regions of a lake at depths of 10–20 meters or more, characterized by deposits of mud or ooze and by the absence of vegetation. Also known as eupelagic. [OCEANOGR] Pertaining to water of the open portion of an ocean, above the abyssal zone and beyond the outer limits of the littoral zone.

pelagic limestone [GEOL] A fine-textured limestone formed in relatively deep water by the concentration of calcareous tests of pelagic Foraminifera.

pelagism *See* seasickness.

pelagochthonous [GEOL] Referring to coal derived from a submerged forest or from driftwood.

pelagosite [GEOL] A superficial calcareous crust a few millimeters thick, generally white, gray, or brownish with a pearly luster, formed in the intertidal zone by ocean spray and evaporation, and composed of calcium carbonate with higher contents of magnesium carbonate, strontium carbonate, calcium sulfate, and silica than are found in normal limy sediments.

pelargonic acid [ORG CHEM] $CH_3(CH_2)_7CO_2H$ A colorless or yellowish oil, boiling at 254°C; soluble in ether and alcohol, insoluble in water; used as a chemical intermediate and flotation agent, in lacquers, pharmaceuticals, synthetic flavors and aromas, and plastics. Also known as *n*-nonanoic acid; *n*-nonoic acid; *n*-nonylic acid.

pelargonic alcohol *See* *n*-nonyl alcohol.

pelargonidin [BIOCHEM] An anthocyanidin pigment obtained by hydrolysis of pelargonin in the form of its red-brown crystalline chloride, $C_{15}H_{11}ClO_5$.

pelargonin [BIOCHEM] An anthocyanin obtained from the dried petals of red pelargoniums or blue cornflowers in the form of its red crystalline chloride, $C_{27}H_{31}ClO_{15}$.

peldon [PETR] A very hard, smooth, compact sandstone with conchoidal fracture, occurring in coal measures.

Pelean cloud *See* nuée ardente.

Pel-Ebstein fever [MED] A relapsing fever characteristic of Hodgkin's disease.

Pelecanidae [VERT ZOO] The pelicans, a family of aquatic birds in the order Pelecaniformes.

Pelecaniformes [VERT ZOO] An order of aquatic, fish-eating birds characterized by having all four toes joined by webs.

Pelecanoididae [VERT ZOO] The diving petrels, a family of oceanic birds in the order Procellariiformes.

Pelecinidae [INV ZOO] The pelecinid wasps, a monospecific family of hymenopteran insects in the superfamily Proctotrupoidea.

p electron [ATOM PHYS] In the approximation that each electron has a definite central-field wave function, an atomic electron that has an orbital angular momentum quantum number of unity.

Pelecypoda [INV ZOO] The equivalent name for Bivalvia.

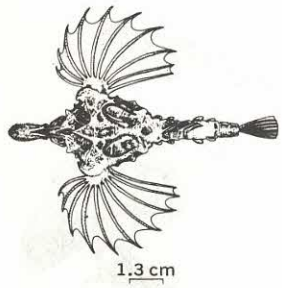
pelelith [GEOL] Vesicular or pumiceous lava in the throat of a volcano.

Pele's hair [GEOL] A spun volcanic glass formed naturally by blowing out during quiet fountaining of fluid lava. Also known as capillary ejecta; filiform lapilli; lauoho o pele.

Pele's tears [GEOL] Volcanic glass in the form of small, solidified drops which precede pendants of Pele's hair.

Pelger anomaly [MED] A hereditary anomaly of granulocytes in the peripheral blood with no more than one or two nuclear lobes and unusually coarse nuclear chromatin.

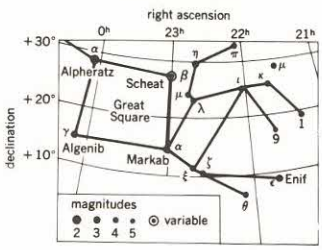
PEGASIFORMES



1.3 cm

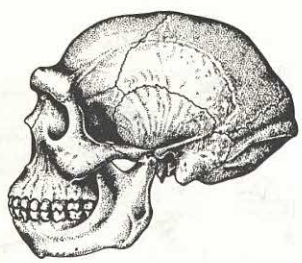
Sea moth (*Pegasus draconis*), of the order Pegasiformes. (*After D. S. Jordan and J. O. Snyder, vol. 24, Leland Stanford University Contributions to Biology, 1901*)

PEGASUS



Line pattern of the constellation Pegasus. The grid lines represent the coordinates of the sky. The apparent brightness, or magnitude, of the stars is shown by the sizes of the dots, graded by appropriate numbers.

PEKING MAN



Reconstruction of female *Homo erectus pekinensis* skull, showing the heavy browridges. (*After F. Weidenreich, from M. F. Ashley Montagu, An Introduction to Physcial Anthropology, 2d ed., Charles C. Thomas, 1951*)

PELICAN

Great white pelican *(Pelicanus erythrorhynchos).*

pelican [VERT ZOO] Any of several species of birds composing the family Pelecanidae, distinguished by the extremely large bill which has a distensible pouch under the lower mandible.

pelican hook [NAV ARCH] A hinged hook shaped like a pelican's beak, held closed by a ring that can be instantaneously released; used to secure chain, cable, or cargo gear on a ship.

pelite [GEOL] A sediment or sedimentary rock, such as mudstone, composed of fine, clay- or mud-size particles. Also spelled pelyte.

pelitic [GEOL] Pertaining to, characteristic of, or derived from pelite.

pelitic hornfels [PETR] A fine-grained metamorphic rock derived from pelite.

pelitic schist [PETR] A foliated crystalline metamorphic rock derived from pelite.

pellagra [MED] A disease caused by nicotinic acid deficiency characterized by skin lesions, inflammation of the soft tissues of the mouth, diarrhea, and central nervous system disorders.

Pell equation [MATH] The diophantine equation $x^2 - Dy^2 = 1$, with D a positive integer that is not a perfect square.

pellet [AGR] A small, cylindrical, compressed mass of livestock feed. [GEOL] A fine-grained, sand-size, spherical to elliptical aggregate of clay-sized calcareous material, devoid of internal structure, and contained in the body of a well-sorted carbonate rock. [ORD] A small stone or metal ball used as a missile in firearms. [PHARM] A small pill. [SCI TECH] A small spherical or cylindrical body. [VERT ZOO] A mass of undigestible material regurgitated by a carnivorous bird.

pellet cooler [CHEM ENG] Gas-cooled, gravity-bed device for the cooling and drying of extruded pellets and briquets.

pelletierine [PHARM] $C_5H_{10}N(CH_2)_2CHO$ An alkaloid obtained as a liquid from the root of the pomegranate; boiling point is 195°C; soluble in water, alcohol, and ether; used in medicine. Also known as β-2-(piperidyl propionaldehyde).

pelleting [ENG] Method of accelerating solidification of cast explosive charges by blending precast pellets of the explosives into the molten charge.

pelletization [MIN ENG] Forming aggregates of about 1/2 inch (13 millimeter) diameter from finely divided ore or coal.

pellet mill [MECH ENG] Device for injecting particulate, granular or pasty feed into holes of a roller, then compacting the feed into a continuous solid rod to be cut off by a knife at the periphery of the roller.

pelletron [NUCLEO] A type of electrostatic accelerator that utilizes a charging system consisting of steel cylinders joined by links of solid insulating material such as nylon to form a chain; the metal cylinders are charged as they leave a pulley at ground potential, and the charge is removed as they pass over a pulley in the high-potential terminal.

pellet technique *See* potassium bromide–disk technique.

pellicle [CYTOL] A plasma membrane. [INV ZOO] A thin protective membrane, as on certain protozoans.

pellicularia disease [PL PATH] A fungus disease of coffee and other tropical plants caused by *Pellicularia koleroga* and characterized by leaf spots.

pellicular resins [ANAL CHEM] Glass spheres coated with a thin layer of ion-exchange resin, used in liquid chromatography.

pellicular water [HYD] Films of groundwater adhering to particles or cavities above the water table.

pell-mell structure [GEOL] A sedimentary structure characterized by absence of bedding in a coarse deposit of waterworn material; it may occur where deposition is too rapid for sorting or where slumping has destroyed the layered arrangement.

pellodite *See* pelodite.

pellotine [ORG CHEM] $C_{13}H_{19}O_3N$ A colorless, crystalline alkaloid, derived from the dried cactus pellote, *Lophophora williamsi* (Mexico), slightly soluble in water; used as a hypnotic.

Pelmatozoa [INV ZOO] A division of the Echinodermata made up of those forms which are anchored to the substrate during at least part of their life history.

pelmicrite [GEOL] A limestone containing less than 25% each of intraclasts and ooliths, having a volume ratio of pellets to fossils greater than 3 to 1, and with the micrite matrix more abundant than the sparry-calcite cement.

Pelobatidae [VERT ZOO] A family of frogs in the suborder Anomocoela, including the spadefoot toads.

Pelodictyon [MICROBIO] A genus of bacteria in the family Chlorobiaceae; cells are rod-shaped to ovoid and arranged in netlike aggregates, are nonmotile, contain gas vacuoles, and are free-living.

pelodite [GEOL] A lithified glacial rock flour which is composed of glacial pebbles in a silt or clay matrix and which was formed by redeposition of the fine fraction of a till. Also spelled pellodite.

Pelodytidae [VERT ZOO] A family of frogs in the suborder Anomocoela.

pelogloea [GEOL] Marine detrital slime from settled plankton.

Pelogonidae [INV ZOO] The equivalent name for Ochteridae.

Pelomedusidae [VERT ZOO] The side-necked or hidden-necked turtles, a family of the order Chelonia.

Pelonema [MICROBIO] A genus of bacteria in the family Pelonemataceae; cells have a smooth, delicate wall and usually contain gas vacuoles.

Pelonemataceae [MICROBIO] A family of gliding bacteria of uncertain affiliation; straight, flexuous, or spiral, unbranched filaments containing colorless, cylindrical cells.

Pelopidae [INV ZOO] A family of oribatid mites, order Sarcoptiformes.

Peloploca [MICROBIO] A genus of bacteria in the family Pelonemataceae; filaments are uniform, are bound together to form bundles, and are with or without a sheath; cells have delicate walls; gas vacuoles may be present.

Peloplocaceae [MICROBIO] Formerly a family in the order Chlamydobacteriales; long, unbranched trichomes in a delicate sheath.

Peloridiidae [INV ZOO] The single family of the homopteran series Coleorrhyncha.

pelorus [NAV] A compass card suitably mounted and provided with vanes to permit observation of the true or relative bearings; it may not include a magnetic compass, in which case reference must be made to a local compass to give true or magnetic bearings.

pelorus card [NAV] The part of a pelorus on which the direction graduations are placed, usually in the form of a thin disk or annulus graduated in degrees, clockwise from 0° at the reference direction to 360°.

Pelosigma [MICROBIO] A genus of bacteria of uncertain affiliation; cells are slender, S-shaped filaments with a slight spiral twist; usually arranged in flat groups of four or multiples thereof.

pelotherapy [MED] Therapeutic treatment with earth or mud.

pelouse *See* meadow.

pelphyte [GEOL] A lake-bottom deposit consisting mainly of fine, nonfibrous plant remains.

pelsparite [PETR] A limestone containing less than 25% each of intraclasts and ooliths, having a volume ratio of pellets to fossils greater than 3 to 1, and with the sparry-calcite cement more abundant than the micrite matrix.

peltate [BOT] Of leaves, having the petiole attached to the lower surface instead of the base.

Peltier coefficient [PHYS] The ratio of the rate at which heat is evolved or absorbed at a junction of two metals in the Peltier effect to the current passing through the junction.

Peltier effect [PHYS] Heat is evolved or absorbed at the junction of two dissimilar metals carrying a small current, depending upon the direction of the current.

Pelton turbine *See* Pelton wheel.

Pelton wheel [MECH ENG] An impulse hydraulic turbine in which pressure of the water supply is converted into velocity by a few stationary nozzles, and the water jets then impinge on the buckets mounted on the rim of a wheel; usually limited to high head installations, exceeding 500 feet (150 meters). Also known as Pelton turbine.

pelvic cavity *See* pelvis.

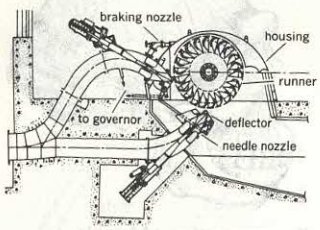
pelvic fin [VERT ZOO] One of the pair of fins of fishes corresponding to the hindlimbs of a quadruped.

pelvic girdle [ANAT] The system of bones supporting the lower limbs, or the hindlimbs, of vertebrates.

pelvic index [ANAT] The ratio of the anteroposterior diameter to the transverse diameter of the pelvis.

pelvis [ANAT] **1.** The main, basin-shaped cavity of the kidney into which urine is discharged by nephrons. **2.** The basin-shaped structure formed by the hipbones together with the sacrum and coccyx, or caudal vertebrae. **3.** The cavity of the bony pelvis. Also known as pelvic cavity.

PELTON WHEEL



Cross section of a Pelton type of hydraulic-turbine installation.

pelviscope [MED] An endoscope for examination of the pelvic organs of the female.

Pelycosauria [PALEON] An extinct order of primitive, mammallike reptiles of the subclass Synapsida, characterized by a temporal fossa that lies low on the side of the skull.

pelyte *See* pelite.

pemphigus [MED] An acute or chronic disease of the skin characterized by the appearance of bullae, which develop in crops or in continuous succession.

pemphigus contageosus [MED] A vesicular dermatitis endemic in tropical areas, chiefly affecting the armpits and groin.

pen [ENG] **1.** A small place for confinement, storage, or protection. **2.** A device for writing with ink.

Penaeidea [INV ZOO] A primitive section of the Decapoda in the suborder Natantia; in these forms, the pleurae of the first abdominal somite overlap those of the second, the third legs are chelate, and the gills are dendrobranchiate.

penalty function [MATH] A function used in treating maxima and minima problems subject to constraints.

pencatite [PETR] A recrystallized limestone containing periclase or brucite and calcite in approximately equal molecular proportions.

pencil [ENG] An implement for writing or making marks with a solid substance; the three basic kinds are graphite, carbon, and colored. [MATH] A family of geometric objects which share a common property.

pencil beam [ELECTROMAG] A beam of radiant energy concentrated in an approximately conical or cylindrical portion of space of relatively small diameter; this type of beam is used for many revolving navigational lights and radar beams.

pencil beam antenna [ELECTROMAG] Unidirectional antenna designed so that cross sections of the major lobe formed by planes perpendicular to the direction of maximum radiation are approximately circular.

pencil cave [ENG] A driller's term for hard, closely jointed shale that caves into a well in pencil-shaped fragments.

pencil cleavage [GEOL] Cleavage in which fracture produces long, slender pieces of rock.

pencil follower [COMPUT SCI] A device for converting graphic images to digital form; the information to be analyzed appears on a reading table where a reading pencil is made to follow the trace, and a mechanism beneath the table surface transmits position signals from the pencil to an electronic console for conversion to digital form.

pencil gneiss [GEOL] A gneiss that splits into thin, rodlike quartz-feldspar crystal aggregates.

pencil ore [GEOL] Hard, fibrous masses of hematite that can be broken up into splinters.

pencil stone *See* pyrophyllite.

pencil tube [ELECTR] A small tube designed especially for operation in the ultra-high-frequency band; used as an oscillator or radio-frequency amplifier.

pendant *See* roof pendant.

pendant atomizer *See* hanging-drop atomizer.

pendant cloud *See* tuba.

pendant-drop melt extraction [MET] Melt extraction in which the molten metal is produced by heating the end of a rod above a disk.

pendant-drop method [PHYS] Method for the measurement of liquid surface tension by the elongation of a hanging drop of the liquid.

pendant post [BUILD] A post on a solid support and set against a wall to support a collar beam or other part of a roof.

pendeloque [LAP] A modification of the round brilliant cut, with an outline resembling that of the pear-shape cut, but with the small end longer and more pointed.

pendent terrace [GEOL] A connecting ribbon of sand that joins an isolated point of rock with a neighboring coast.

pendular ring [PETRO ENG] Distribution of two nonmiscible liquids in a porous system; the pendular ring is a state of reservoir saturation in which the wetting phase is not continuous and the nonwetting phase is in contact with some of the solid surface.

pendular water [HYD] Capillary water ringing the contact points of adjacent rock or soil particles in the zone of aeration.

pendulous gyroscope [MECH] A gyroscope whose axis of rotation is constrained by a suitable weight to remain horizontal; it is the basis of one type of gyrocompass.

pendulum [PHYS] A rigid body mounted on a fixed horizontal axis, about which it is free to rotate under the influence of gravity. Also known as gravity pendulum.

pendulum anemometer [ENG] A pressure-plate anemometer consisting of a plate which is free to swing about a horizontal axis in its own plane above its center of gravity; the angular deflection of the plate is a function of the wind speed; this instrument is not used for station measurements because of the false reading which results when the frequency of the wind gusts and the natural frequency of the swinging plate coincide.

pendulum clock [HOROL] A clock having a swinging pendulum as the means for producing a regularly recurring action.

pendulum day [PHYS] The time required for the plane of a freely suspended (Foucault) pendulum to complete an apparent rotation about the local vertical.

pendulum level [ENG] A leveling instrument in which the line of sight is automatically kept horizontal by a built-in pendulum device (such as a horizontal arm and a plumb line at right angles to the arm).

pendulum press [MECH ENG] A punch press actuated by a swinging treadle operated by the foot.

pendulum saw [MECH ENG] A circular saw that swings in a vertical arc for crosscuts.

pendulum scale [ENG] Weight-measurement device in which the load is balanced by the movement of one or more pendulums from vertical (zero weight) to horizontal (maximum weight).

pendulum seismograph [ENG] A seismograph that measures the relative motion between the ground and a loosely coupled inertial mass; in some instruments, optical magnification is used whereas others exploit electromagnetic transducers, photocells, galvanometers, and electronic amplifiers to achieve higher magnification.

pendulum sextant [NAV] A sextant provided with a pendulum to indicate the horizontal.

penecontemporaneous [GEOL] Of a geologic process or the structure or mineral that is formed by the process, occurring immediately following deposition but before consolidation of the enclosing rock.

peneplain *See* base-leveled plain.

peneplanation [GEOL] The actions or processes by which peneplains are formed.

penesaline [ECOL] Referring to an environment intermediate between normal marine and saline, characterized by evaporitic carbonates often interbedded with gypsum or anhydrite, and by a salinity high enough to be toxic to normal marine organisms.

penetrance [GEN] The proportion of individuals carrying a dominant gene in the heterozygous condition or a recessive gene in the homozygous condition in which the specific phenotypic effect is apparent. Also known as gene penetrance.

penetrant [INV ZOO] A large barbed nematocyst that pierces the body of the prey and injects a paralyzing agent. [MATER] A liquid with low surface tension, usually containing a dye or fluorescent chemical; when flowed over a metal surface, it is used to determine the existence and extent of cracks and other discontinuities.

penetrating oil [MATER] Low-viscosity oil that can penetrate between closely fitted parts, such as the leaves of springs and screw threads; used to loosen rusted parts.

penetrating shower [NUC PHYS] A cosmic-ray shower, consisting mainly of muons, that can penetrate 15 to 20 centimeters of lead.

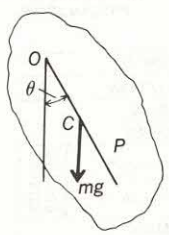
penetration [AERO ENG] That phase of the letdown from high altitude to a specified approach altitude. [MET] **1.** The distance from the original surface of the base metal to that point at which weld fusion ends. **2.** A surface defect on a casting caused by molten metal filling voids in the sand mold. [ORD] Distance to which a projectile sinks into a target.

penetration ballistics [MECH] A branch of terminal ballistics concerned with the motion and behavior of a missile during and after penetrating a target.

penetration depth [CRYO] The depth beneath the surface of superconductor in a magnetic field at which the magnetic field strength has fallen to $1/e$ of its value at the surface. [ELEC] In induction heating, the thickness of a layer, extending inward from a conductor's surface, whose resistance to direct current equals the resistance of the whole conductor to alternating current of a given frequency. [ENG] The greatest depth in an ultrasonic test piece at which indications can be measured.

penetration frequency *See* critical frequency.

PENDULUM

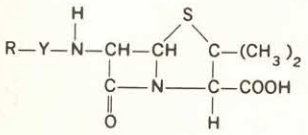


Schematic diagram of a pendulum. O = axis about which pendulum rotates, C = center of mass, and P = center of oscillation. Line OC makes instantaneous angle θ with the vertical. Gravitational force on pendulum is equivalent to downward force at C with magnitude mg, where m is pendulum mass, g is acceleration of gravity.

PENICILLAMINE

Structural formula.

PENICILLIN



Basic structural formula for penicillin showing the β-lactam-thiazolide ring system common to all penicillins; proper combination of substituents at R and Y results in any one of nine penicillins.

PENNSYLVANIAN

PRECAMBRIAN		
CAMBRIAN		PALEOZOIC
ORDOVICIAN		
SILURIAN		
DEVONIAN		
Mississippian	CARBONIFEROUS	
Pennsylvanian		
PERMIAN		
TRIASSIC		MESOZOIC
JURASSIC		
CRETACEOUS		
TERTIARY		CENOZOIC
QUATERNARY		

Chart showing position of the Pennsylvanian in relation to the periods and eras of geologic time.

penetration funnel [GEOL] An impact crater, generally funnel-shaped, formed by a small meteorite striking the earth at a relatively low velocity and containing nearly all the impacting mass within it.

penetration gland [INV ZOO] A gland at the anterior end of certain cercariae that secretes a histolytic substance.

penetration hardness *See* indentation hardness.

penetration log [ENG] A record of the speed with which a drill penetrates a bore, including such factors as hole size, bit size, mud pressure, rotation speed, and force on the bit; used to determine the thickness of coal and dirt bands in the bore.

penetration macadam [MATER] A paving material consisting of crushed stone in two sizes bound together by asphalt or tar.

penetration number [ENG] The consistency of greases, waxes, petrolatum, and asphalt or other bituminous materials expressed as the distance that a standard needle penetrates the sample under specified ASTM test conditions.

penetration of fractures [PETRO ENG] The depth to which artificially produced fractures penetrate the fractured reservoir formation.

penetration phosphors [ELECTR] A system for creating color cathode-ray-tube displays, in which phosphors of two different colors are placed on the screen of a cathode-ray tube in separate layers, and a high-energy beam penetrates the first layer and excites the second, while a low-energy beam is stopped by the first layer and excites it.

penetration probability [QUANT MECH] The probability that a particle will pass through a potential barrier, that is, through a finite region in which the particle's potential energy is greater than its total energy. Also known as transmission coefficient.

penetration range *See* night visual range.

penetration rate [MECH ENG] The actual rate of penetration of drilling tools.

penetration speed [MECH ENG] The speed at which a drill can cut through rock or other material.

penetration test [ENG] A test to determine the relative values of density of noncohesive sand or silt at the bottom of boreholes.

penetration twin *See* interpenetration twin.

penetrative [GEOL] Referring to a texture of deformation that is uniformly distributed in a rock, without notable discontinuities; for example, slaty cleavage.

penetrometer [ENG] **1.** An instrument that measures the penetrating power of a beam of x-rays or other penetrating radiation. **2.** An instrument used to determine the consistency of a material by measurement of the depth to which a standard needle penetrates into it under standard conditions.

Penex process [CHEM ENG] A continuous, nonregenerative petroleum-refinery process for isomerization of C_5 or C_6 fractions in the presence of hydrogen and a platinum catalyst.

penfieldite [MINERAL] $Pb_2(OH)Cl_3$ A white hexagonal mineral composed of basic chloride of lead, occurring in hexagonal prisms.

penguin [VERT ZOO] Any member of the avian order Sphenisciformes; structurally modified wings do not fold and they function like flippers, the tail is short, feet are short and webbed, and the legs are set far back on the body.

penicidin *See* patulin.

penicillamine [PHARM] $C_5H_{11}NO_2S$ The most characteristic degradation product of penicillin-type antibiotics; used as a chelating agent, as a drug to reduce cystine excretion in cystinurea, and in the treatment of rheumatoid arthritis. Also known as α-amino-β-methyl-β-mercaptobutyric acid; β,β-dimethylcysteine (DMC); β-mercaptovaline; β-thiovaline.

penicillate [BIOL] Having a tuft of fine hairs.

penicillin [MICROBIO] **1.** The collective name for salts of a series of antibiotic organic acids produced by a number of *Penicillium* and *Aspergillus* species; active against most gram-positive bacteria and some gram-negative cocci. **2.** *See* benzyl penicillin sodium.

penicillin V *See* phenoxymethylpenicillin.

penicillinase [BIOCHEM] A bacterial enzyme that hydrolyzes and inactivates penicillin.

penicillin G_1 potassium *See* benzyl penicillin potassium.

Penicillium [MYCOL] A genus of fungi in the family Moniliaceae characterized by erect branching conidiophores having terminal tufts of club-shaped cells from which conidia are formed.

Penicillium chrysogenum [MYCOL] A penicillin-producing fungus.

Penicillium griseofulvum [MYCOL] The fungus that produces griseofulvin.

Penicillium notatum [MYCOL] A penicillin-producing fungus.

penicin *See* 6-aminopenicillanic acid.

Peniculina [INV ZOO] A suborder of the Hymenostomatida.

penikkavaarite [PETR] An intrusive rock composed chiefly of augite, barkevikite, and green hornblende in a feldspathic groundmass.

penin *See* 6-aminopenicillanic acid.

peninsula [GEOGR] A body of land extending into water from the mainland, sometimes almost entirely separated from the mainland except for an isthmus.

penis [ANAT] The male organ of copulation in humans and certain other vertebrates. Also known as phallus.

penis envy [PSYCH] The envy of the young female child for the penis which she does not possess, or which she thinks she has lost.

penitent *See* nieve penitente.

penitent ice [HYD] A jagged spike or pillar of compacted firn caused by differential melting and evaporation; necessary for this formation are air temperature near freezing, dew point much below freezing, and strong insolation.

penitent snow [HYD] A jagged spike or pillar of compacted snow caused by differential melting and evaporation.

penna *See* contour feather.

Pennales [BOT] An order of diatoms (Bacillariophyceae) in which the form is often circular, and the markings on the valves are radial.

pennant [METEOROL] A means of representing wind speed in the plotting of a synoptic chart; it is a triangular flag, drawn pointing toward lower pressure from a wind-direction shaft.

pennantite [MINERAL] $Mn_9Al_6Si_5O_{20}(OH)_{16}$ Orange mineral composed of basic manganese aluminum silicate; member of the chlorite group; it is isomorphous with thuringite.

pennate [BIOL] **1.** Wing-shaped. **2.** Having wings. **3.** Having feathers.

Pennatulacea [INV ZOO] The sea pens, an order of the subclass Alcyonaria; individuals lack stolons and live with their bases embedded in the soft substratum of the sea.

Pennellidae [INV ZOO] A family of copepod crustaceans in the suborder Caligoida; skin-penetrating external parasites of various marine fishes and whales.

penniculus [ANAT] A tuft of arterioles in the spleen. [BIOL] A brush-shaped structure.

Penning gage *See* Philips ionization gage.

Penning ionization [ATOM PHYS] The ionization of gas atoms or molecules in collisions with metastable atoms.

Penning ion source [NUCLEO] A source of positively charged heavy ions used in accelerators, consisting of an anode chamber with cathodes at each end, into which the desired element is introduced; an arc discharge is generated in the chamber, creating a plasma, and electrons confined by the cathodes and an axial magnetic field make many ionizing collisions with the gas in the chamber.

penninite [MINERAL] $(Mg,Fe,Al)_6(Si,Al)_4O_{11}(OH)_8$ An emerald-green, olive-green, pale-green, or bluish mineral of the chlorite group crystallizing in the monoclinic system, with a hardness of 2–2.5 on Mohs scale, and specific gravity of 2.6–2.85.

Pennsylvania-base crude [MATER] A type of crude petroleum produced in Pennsylvania, New York, West Virginia, and parts of Ohio; contains a high percentage of paraffin-base lube-oil stock.

Pennsylvanian [GEOL] A division of late Paleozoic geologic time, extending from 320 to 280 million years ago, varyingly considered to rank as an independent period or as an epoch of the Carboniferous period; named for outcrops of coal-bearing rock formations in Pennsylvania.

Pennsylvania truss [CIV ENG] A truss characterized by subdivided panels, curved top chords on through trusses, and curved bottom chords on deck spans; used on long bridge spans.

pennyroyal oil [MATER] An essential oil distilled from the dried leaves and tops of the small pennyroyal plants *Hedeoma pulegioides* or *Mentha pulegium;* used as a counterirritant in liniments, in insect repellents, and for the production of menthanol.

pennyweight [MECH] A unit of mass equal to 1/20 troy ounce

or to 1.55517384 grams; the term is employed in the United States and in England for the valuation of silver, gold, and jewels. Abbreviated dwt; pwt.

Penokean *See* Animikean.

pen recorder [ENG] A device in which the varying inputs (electrical, pneumatic, mechanical) are marked by a signal-controlled pen onto a continuous recorder chart (circular or roll chart).

penroseite [MINERAL] $(Ni,Co,Cu)Se_2$ A lead gray, isometric mineral consisting of a selenide of nickel, copper, and cobalt; occurs in reniform masses.

Pensky-Martens closed tester [CHEM ENG] Device to determine the ASTM flash point of fuel oils and cutback asphalts and other viscous materials and suspensions of solids.

penstock [CIV ENG] A valve or sluice gate for regulating water or sewage flow. [ENG] A closed water conduit controlled by valves and located between the intake and the turbine in a hydroelectric plant.

pentabasic [CHEM] A description of a molecule that has five hydrogen atoms that may be replaced by metals or bases.

pentaborane [INORG CHEM] B_5H_9 Flammable liquid boiling at 48°C; ignites spontaneously in air; proposed as high-energy fuel for aircraft and missiles.

pentachloride [CHEM] A molecule containing five atoms of chlorine in its structure.

pentachloroethane [ORG CHEM] $CHCl_2CCl_3$ Colorless, water-insoluble liquid, boiling at 159°C; used as a solvent to degrease metals. Also known as pentalin.

pentachloronitrobenzene [ORG CHEM] $C_6Cl_5NO_2$ Cream-colored crystals with a melting point of 142–145°C; slightly soluble in alcohols; used as a fungicide and herbicide. Abbreviated PCNB. Also known as quintozene; terrachlor.

pentachlorophenol [ORG CHEM] C_6Cl_5OH A toxic white powder, decomposing at 310°C, melting at 190°C; soluble in alcohol, acetone, ether, and benzene; used as a fungicide, bactericide, algicide, herbicide, and chemical intermediate.

pentacite [MATER] Alkyd resin in which pentaerythritol is the polyhydric alcohol; used in coatings and printing inks.

pentacosane [ORG CHEM] $C_{25}H_{52}$ A water-insoluble hydrocarbon derived from beeswax.

pentacrinoid [INV ZOO] The larva of a feather star.

pentactinal [ZOO] Having five rays or branches.

pentacula [INV ZOO] The five-tentacled stage in the life history of echinoderms.

pentacyanium bis(methyl sulfate) [PHARM] $C_{29}H_{45}N_3O_8S_2$ A water-soluble, crystalline compound obtained from ethanol solution, and melting at 173–175°C; used in medicine in the dichloride form as an antihypertensive agent.

pentad [CLIMATOL] A period of 5 consecutive days, often preferred to the week for climatological purposes since it is an exact factor of the 365-day year.

pentadactyl [VERT ZOO] Having five digits on the hand or foot.

pentadecalactone *See* pentadecanolide.

pentadecane [ORG CHEM] $C_{15}H_{32}$ A colorless, water-insoluble liquid, boiling at 270.5°C; soluble in alcohol; used as a chemical intermediate.

pentadecanolide [ORG CHEM] $C_{15}H_{28}O_2$ A colorless liquid with a musky odor extracted from angelica oil; soluble in 90% ethyl alcohol in equal volume; used in perfumes. Also known as 15-hydroxypentadecanoic acid lactone; pentadecalactone.

pentadelphous [BOT] Having the stamens in five sets with the filaments more or less united within each set.

pentadentate ligand [INORG CHEM] A chelating agent having five groups capable of attachment to a metal ion. Also known as quinquidentate ligand.

pentadiene [ORG CHEM] C_5H_8 Any of several straight-chain liquid diolefins: 1,2-$CH_2{=}C{=}CHCH_3$, a colorless liquid boiling at 45°C, also known as ethylallene; 1,3-$CH_3{=}CH{=}CHCH_3$, a colorless liquid boiling at 43°C, also known as α-methyl bivinyl, piperylene; 1,4-$(CH_2{=}CH)_2CH$, a colorless liquid boiling at 26°C.

pentaerythritol [ORG CHEM] $(CH_2OH)_4C$ A white crystalline solid, melting at 261-262°C; moderately soluble in cold water, freely soluble in hot water; used to make the explosive pentaerythritol tetranitrate (PETN) and in the manufacture of alkyol resins and other coating compounds. Also known as tetramethylolmethane.

pentaerythritol tetranitrate [ORG CHEM] $C(CH_2ONO_2)_4$ A white crystalline compound, melting at 139°C; explodes at 205–215°C; soluble in acetone, insoluble in water; used in medicines and explosives. Also known as penthrite; PETN.

pentaerythritol tetrastearate [ORG CHEM] $C(CH_2OOC{-}C_{17}H_{35})_4$ A hard, ivory-colored wax with a softening point of 67°C; used in polishes and textile finishes.

pentafluoride [CHEM] A chemical compound onto which five fluoride atoms are bonded.

pentagon [MATH] A polygon with five sides.

pentagonal dodecahedron *See* pyritohedron.

pentagonal prism [MATH] A prism with two pentagonal sides, parallel and congruent.

pentagrid *See* heptode.

pentahydrite [MINERAL] $MgSO_4{\cdot}5H_2O$ A triclinic mineral composed of hydrous magnesium sulfate; it is isostructural with chalcanthite.

pentahydroxycyclohexane *See* quercitol.

pentahydroxyhexoic acid *See* galactonic acid.

pentalin *See* pentachloroethane.

pentalogy [MED] Five symptoms or defects which together characterize a disease or syndrome.

pentalogy of Fallot [MED] A syndrome consisting of the tetralogy of Fallot plus an interatrial septal defect.

Pentamerida [PALEON] An extinct order of articulate brachiopods.

Pentameridina [PALEON] A suborder of extinct brachiopods in the order Pentamerida; dental plates associated with the brachiophores were well developed, and their bases enclosed the dorsal adductor muscle field.

pentamerous [BOT] Having each whorl of the flower consisting of five members, or a multiple of five.

pentamethine *See* dicarbocyanine.

Δ^1-pentamethylene *See* cyclopentene.

pentamethylene glycol *See* 1,5-pentanediol.

pentanamide *See* valeramide.

pentandrous [BOT] Having five stamens.

***n*-pentane** [ORG CHEM] $CH_3(CH_2)_3CH_3$ A colorless, flammable, water-insoluble hydrocarbon liquid, freezing at −130°C, boiling at 36°C; soluble in hydrocarbons and ethers; used as a chemical intermediate, solvent, and anesthetic.

pentane candle [OPTICS] A unit of luminous intensity equal to one-tenth of the luminous intensity of a standard pentane lamp, and approximately equal to 1 candela.

1,5-pentanediol [ORG CHEM] $HOCH_2(CH_2)_3CH_2OH$ Colorless, water-miscible liquid boiling at 242.5°C; used as a hydraulic fluid, lube-oil additive, and antifreeze, and in manufacture of polyester and polyurethane resins. Also known as pentamethylene glycol.

2,3-pentanedione *See* acetyl propionyl.

2,4-pentanedione *See* acetylacetone.

pentane insolubles [ANALY CHEM] Insoluble matter that can be separated from used lubricating oil in solution in *n*-pentane; may include resinous bitumens produced from the oxidation of oil and fuel; used in an ASTM test.

pentane lamp [ENG] A pentane-burning lamp formerly used as a standard for photometry.

pentanethiol *See* amyl mercaptan.

***n*-pentanoic acid** *See* valeric acid.

pentanol [ORG CHEM] $C_5H_{11}OH$ A toxic organic alcohol; 1-pentanol is *n*-amyl alcohol, primary; 2-pentanol is methylpropylcarbinol; 3-pentanol is diethylcarbinol; *tert*-pentanol is *tert*-amyl alcohol; pentanols are used in pharmaceuticals, as chemical intermediates, and as solvents.

pentanone [ORG CHEM] Either of two isomeric ketones derived from pentane: $CH_3COC_3H_7$ is a flammable, colorless, clear liquid, a mixture of methyl propyl and diethyl ketones; insoluble in water, soluble in ether and alcohol; used as a solvent; also known as ethyl acetone, methyl propyl ketone (MPK), 2-pentanone. $C_2H_5COC_2H_5$ is a colorless, flammable liquid with acetone aroma, boiling at 101°C; soluble in alcohol and ether; used in medicine and organic synthesis; also known as diethyl ketone, 3-pentanone, propione.

2-pentanone *See* pentanone.

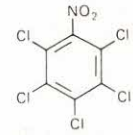
3-pentanone *See* pentanone.

pentaquine [PHARM] $C_{18}H_{27}N_3O$ An antimalarial drug generally given with quinine; used as the phosphate salt.

pentasodium triphosphate *See* sodium tripolyphosphate.

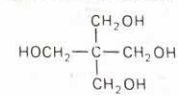
Pentastomida [INV ZOO] A class of bloodsucking parasitic

PENTACHLORONITROBENZENE



Structural formula.

PENTAERYTHRITOL



Structural formula.

arthropods; the adult is vermiform, and there are two pairs of hooklike, retractile claws on the cephalothorax.

pentastyle [ARCH] Having five columns across the front.

Pentatomidae [INV ZOO] The true stink bugs, a family of hemipteran insects in the superfamily Pentatomoidea.

Pentatomoidea [INV ZOO] A subfamily of the hemipteran group Pentatomorpha distinguished by marginal trichobothria and by antennae which are usually five-segmented.

Pentatomorpha [INV ZOO] A large group of hemipteran insects in the subdivision Geocorisae in which the eggs are nonoperculate, a median spermatheca is present, accessory salivary glands are tubular, and the abdomen has trichobothria.

pentavalent [CHEM] An atom or radical that exhibits a valency of 5.

pentene [ORG CHEM] C_5H_{12} Colorless, flammable liquids derived from natural gasoline; isomeric forms are α-*n*-amylene and β-*n*-amylene.

penthouse [BUILD] **1.** An enclosed space built on a flat roof to cover a stairway, elevator, or other equipment. **2.** A dwelling built on top of the main roof. **3.** A sloping shed or roof attached to a wall or building.

penthrite *See* pentaerythritol tetranitrate.

pentice [MIN ENG] **1.** A rock pillar left, or a heavy timber bulkhead placed, in the bottom of a deep shaft of two or more compartments; the shaft is then further sunk through the pentice. **2.** In shaft sinking, a solid rock pillar left in the bottom of the shaft for overhead protection of miners while the shaft is being extended by sinking.

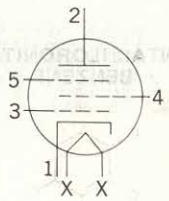
2-pentine *See* pentyne.

pentlandite [MINERAL] $(Fe,Ni)_9S_8$ A yellowish-bronze mineral having a metallic luster and crystallizing in the isometric system; hardness is 3.5–4 on Mohs scale, and specific gravity is 4.6–5.0; the major ore of nickel.

pentobarbital sodium [PHARM] $C_{11}H_{17}N_2NaO_3$ A short- to intermediate-acting barbiturate; used as a hypnotic and sedative drug. Also known as sodium pentobarbitone.

pentode [ELECTR] A five-electrode electron tube containing an anode, a cathode, a control electrode, and two additional electrodes that are ordinarily grids.

PENTODE



Circuit symbol for a pentode; the five electrodes are indicated by number. X's indicate leads to heater for indirectly heated cathode.

pentode transistor [ELECTR] Point-contact transistor with four-point-contact electrodes; the body serves as a base with three emitters and one collector.

pentoglycerine *See* trimethylolethane.

pentolinium tartrate [PHARM] $C_{23}H_{42}N_2O_{12}$ A white to cream-colored powder, soluble in water; used in medicine.

pentolite [MATER] A high explosive composed of pentaerythritol and trinitrotoluene.

pentosan [BIOCHEM] A hemicellulose present in cereal, straws, brans, and other woody plant tissues; yields five-carbon-atom sugars.

pentose [BIOCHEM] Any one of a class of carbohydrates containing five atoms of carbon.

pentose phosphate pathway [BIOCHEM] A pathway by which glucose is metabolized or transformed in plants and microorganisms; glucose-6-phosphate is oxidized to 6-phosphogluconic acid, which then undergoes oxidative decarboxylation to form ribulose-5-phosphate, which is ultimately transformed to fructose-6-phosphate.

pentosuria [MED] The presence of pentose in the urine.

pentoxide [INORG CHEM] A compound that is binary and has five atoms of oxygen; for example, phosphorus pentoxide, P_2O_5.

***para*-pentoxyphenol** *See para*-pentyloxyphenol.

pentyl *See* amyl.

pentylamine *See n*-amylamine.

pentylenetetrazol [PHARM] $C_6H_{10}N_4$ A central nervous system stimulant used as an analeptic.

pentylformic acid *See* caproic acid.

***para*-pentyloxyphenol** [ORG CHEM] $C_{11}H_{16}O_2$ Compound melting at 49–50°C; used as a bactericide. Also known as *para*-amoxyphenol; hydroquinone monopentyl ether; *para*-pentoxyphenol.

pentyne [ORG CHEM] C_5H_8 Either of two normal isometric acetylene hydrocarbons: $HC{\equiv}C(CH_2)_2CH_3$, colorless liquid boiling at 40°C, also known as pentine, propylacetylene; $CH_3C{\equiv}CC_2H_5$, liquid boiling at 56°C, also known as ethylmethylacetylene, 2-pentine.

penumbra [ASTRON] The outer, relatively light part of a sunspot. [OPTICS] That portion of a shadow illuminated by only part of a radiating source.

PEPPERMINT

Flowering peppermint *(Mentha piperita)* branch and two separate leaves showing the characteristic shape.

penumbral eclipse *See* lunar appulse.

Penutian [GEOL] A North American stage of geologic time: lower Eocene (above Bulitian, below Ulatasian).

PEPE *See* parallel element-processing ensemble.

peperite [GEOL] A breccialike material in marine sedimentary rock, considered to be either a mixture of lava with sediment, or shallow intrusions of magma into wet sediment.

pepo [BOT] A fleshy indehiscent berry with many seeds and a hard rind; characteristic of the Cucurbitaceae.

pepper [BOT] Any of several warm-season perennials of the genus *Capsicum* in the order Polemoniales, especially *C. annum* which is cultivated for its fruit, a many-seeded berry with a thickened integument. [FOOD ENG] Any of various spices and condiments obtained from the fruits of plants of the genus *Piper*.

peppermint [BOT] Any of various aromatic herbs of the genus *Mentha* in the family Labiatae, especially *M. piperita*.

peppermint camphor *See* menthol.

peppermint oil *See* oil of peppermint.

pepper sludge [MATER] Fine particles of sludge produced during the acid treatment of lubricating oils and other petroleum products.

PeP reaction *See* proton-electron-proton reaction.

pepsin [BIOCHEM] A proteolytic enzyme found in the gastric juice of mammals, birds, reptiles, and fishes.

pepsinogen [BIOCHEM] The precursor of pepsin, found in the stomach mucosa.

peptic [PHYSIO] **1.** Of or pertaining to pepsin. **2.** Of or pertaining to digestion.

peptic ulcer [MED] An ulcer involving the mucosa, submucosa, and muscular layer on the lower esophagus, stomach, or duodenum, due in part at least to the action of acid-pepsin gastric juice.

peptidase [BIOCHEM] An enzyme that catalyzes the hydrolysis of peptides to amino acids.

peptide [BIOCHEM] A compound of two or more amino acids joined by peptide bonds.

peptide bond [ORG CHEM] A bond in which the carboxyl group of one amino acid is condensed with the amino group of another to form a —CO·NH— linkage. Also known as peptide linkage.

peptide linkage *See* peptide bond.

peptide synthetase [BIOCHEM] A ribosomal synthetase that catalyzes the formation of peptide bonds during protein synthesis.

peptization [CHEM] **1.** Aggregation in which a hydrophobic colloidal sol is stabilized by the addition of electrolytes (peptizing agents) which are adsorbed on the particle surfaces. **2.** Liquefaction of a substance by trace amounts of another substance.

peptized fuel [MATER] Thickened flamethrower fuel to which water or other chemical is added before mixing, to reduce mixing time and to increase storage stability.

Peptococcaceae [MICROBIO] A family of gram-positive cocci; organisms can use either amino acids or carbohydrates for growth and energy.

Peptococcus [MICROBIO] A genus of bacteria in the family Peptococcaceae; cells occur singly, in pairs, in tetrads, or in irregular clusters; can use amino acids as the sole source of energy.

peptone [BIOCHEM] A water-soluble mixture of proteoses and amino acids derived from albumin, meat, or milk; used as a nutrient and to prepare nutrient media for bacteriology.

Peptostreptococcus [MICROBIO] A genus of bacteria in the family Peptococcaceae; spherical to ovoid cells occur in pairs or chains; ferment carbohydrates and often pyruvate.

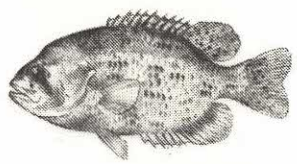
per- [CHEM] Chemical prefix meaning: **1.** Complete, as in hydrogen peroxide. **2.** Extreme, or the presence of the peroxy (—O—O—) group. **3.** Exhaustive (complete) substitution, as in perchloroethylene.

Peracarida [INV ZOO] A superorder of the Eumalacostraca; these crustaceans have the first thoracic segment united with the head, the cephalothorax usually larger than the abdomen, and some thoracic segments free from the carapace.

peracetic acid [ORG CHEM] CH_3COOOH A toxic, colorless liquid with strong aroma; boils at 105°C; explodes at 110°C; miscible with water, alcohol, glycerin, and ether; used as an oxidizer, bleach, catalyst, bactericide, fungicide, epoxy-resin precursor, and chemical intermediate. Also known as peroxyacetic acid.

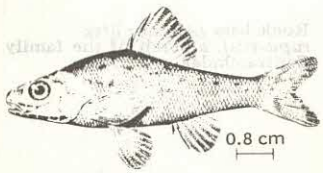
peracid [CHEM] Acid containing the peroxy (—O—O—) group, such as peracetic acid or perchloric acid.
peralcohol [ORG CHEM] Chemical compound containing the peroxy group (—O—O—), such as peracetic acid and perchromic acid.
peralkaline [PETR] Of igneous rock, having a molecular proportion of aluminum lower than that of sodium oxide and potassium oxide combined.
peraluminous [PETR] Of igneous rock, having a molecular proportion of aluminum oxide greater than that of sodium oxide and potassium oxide combined.
Peramelidae [VERT ZOO] The bandicoots, a family of insectivorous mammals in the order Marsupialia.
P-E ratio *See* precipitation-evaporation ratio.
perazine [PHARM] $C_{20}H_{25}N_3S$ A crystalline compound, melting at 51–53°C; used in medicine as a tranquilizer. Also known as *N*-methylpiperazinyl-*N'*-propylphenothiazine.
perbenzoic acid [ORG CHEM] $C_6H_5CO_2OH$ A crystalline compound forming leaflets from benzene solution, melting at 41–45°C, freely soluble in organic solvents; used in analysis of unsaturated compounds and to change ethylinic compounds into oxides. Also known as benzylhydroperoxide; peroxybenzoic acid.
perbituminous [GEOL] Referring to bituminous coal containing more than 5.8% hydrogen, analyzed on a dry, ash-free basis.
percale [TEXT] A plain-weave, medium-weight fabric made of cotton or cotton and polyester.
percaline [TEXT] Fine cotton with a glossy or moiré surface.
perceived noise decibel [ACOUS] A unit of perceived noise level. Abbreviated PNdB.
perceived noise level [ACOUS] In perceived noise decibels, the noise level numerically equal to the sound pressure level, in decibels, of a band of random noise of width one-third to one octave centered on a frequency of 1000 hertz which is judged by listeners to be equally noisy.
percent [MATH] A quantitative term whereby *n*-percent of a number is *n* one-hundredths of the number. Symbolized %.
percentage [MATH] The result obtained by taking a given percent of a given quantity.
percentage depletion [PETRO ENG] Oil- or gas-reservoir depletion allowance calculated on the basis of unit sales and initial depletable leasehold cost.
percentage differential relay [ELECTR] Differential relay which functions when the difference between two quantities of the same nature exceeds a fixed percentage of the smaller quantity. Also known as biased relay; ratio-balance relay; ratio-differential relay.
percentage extraction [MIN ENG] The proportion of a coal seam or other ores which is removed from a mine.
percentage log [ENG] A sample log in which the percentage of each type of rock (except obvious cavings) present in each sample of cuttings is estimated and plotted.
percentage map [PETRO ENG] Contoured map in which the percentage of one component (such as sand) is compared with the total unit (such as sand plus shale).
percentage modulation *See* percent modulation.
percentage ripple [ELECTR] Ratio of the effective value of the ripple voltage to the average value of the total voltage, expressed as a percentage.
percentage subsidence [MIN ENG] The measured amount of subsidence expressed as a percentage of the thickness of coal extracted.
percentage support [MIN ENG] The percentage of the total wall area which will actually be covered by supports.
percent compaction [ENG] The ratio, expressed as a percentage, of dry unit weight of a soil to maximum unit weight obtained in a laboratory compaction test.
percent defective [IND ENG] The ratio of defective pieces per lot or sample, expressed as a percentage.
percent distortion [COMMUN] The ratio of the amplitude of a harmonic component to the fundamental component multiplied by 100.
percentile [STAT] A value in the range of a set of data which separates the range into two groups so that a given percentage of the measures lies below this value.
percent make [ELECTR] **1.** In pulse testing, the length of time a circuit stands closed compared to the length of the test signal. **2.** Percentage of time during a pulse period that telephone dial pulse springs are making contact.
percent modulation [COMMUN] The modulation factor expressed as a percentage. Also known as percentage modulation.
percept [PSYCH] A mental image of something perceived.
perception [PHYSIO] Recognition in response to sensory stimuli; the act or process by which the memory of certain qualities of an object is associated with other qualities impressing the senses, thereby making possible recognition of the object.
perceptron [COMPUT SCI] A pattern recognition machine, based on an analogy to the human nervous system, capable of learning by means of a feedback system which reinforces correct answers and discourages wrong ones.
perch [MECH] Also known as pole; rod. **1.** A unit of length, equal to 5.5 yards, or 16.5 feet, or 5.0292 meters. **2.** A unit of area, equal to 30.25 square yards, or 272.25 square feet, or 25.29285264 square meters. [NAV] A staff placed on top of a buoy, rock, or shoal as a mark for navigators; a ball or cage is sometimes placed at the top of the perch, as an identifying mark. [VERT ZOO] **1.** Any member of the family Percidae. **2.** The common name for a number of unrelated species of fish belonging to the Centrarchidae, Anabantoidei, and Percopsiformes.
perched aquifer [HYD] An aquifer that is separated from another water-bearing stratum by an impermeable layer.
perched block [GEOL] A large, detached rock fragment presumed to have been transported and deposited by a glacier, and perched in a conspicuous and precarious position on the side of a hill. Also known as balanced rock; perched boulder; perched rock.
perched boulder *See* perched block.
perched groundwater *See* perched water.
perched lake [HYD] A perennial lake whose surface level lies at a considerably higher elevation than those of other bodies of water, including aquifers, directly or closely associated with the lake.
perched rock *See* perched block.
perched spring [HYD] A spring that arises from a body of perched water.
perched stream [HYD] A stream whose surface level is above that of the water table and that is separated from underlying groundwater by an impermeable bed in the zone of aeration.
perched water [HYD] Groundwater that is unconfined and separated from an underlying main body of groundwater by an unsaturated zone. Also known as perched groundwater.
perched water table [HYD] The water table or upper surface of a body of perched water. Also known as apparent water table.
perching bed [GEOL] A body of rock, generally stratiform, that supports a body of perched water.
perchlorate [INORG CHEM] A salt of perchloric acid containing the ClO_4^- radical; for example, potassium perchlorate, $KClO_4$.
perchloric acid [INORG CHEM] $HClO_4$ Strongly oxidizing, corrosive, colorless, hygroscopic liquid, boiling at 16°C (8 mmHg, or 1067 newtons per square meter); soluble in water; unstable in pure form, but stable when diluted in water; used in medicine, electrolytic baths, electropolishing, explosives, and analytical chemistry, and as a chemical intermediate. Also known as Fraude's reagent.
perchlorobenzene *See* hexachlorobenzene.
perchloroethane *See* hexachloroethane.
perchloroethylene [ORG CHEM] CCl_2CCl_2 Stable, colorless liquid, boiling at 121°C; nonflammable and nonexplosive, with low toxicity; used as a dry-cleaning and industrial solvent, in pharmaceuticals and medicine, and for metal cleaning. Also known as tetrachloroethylene.
perchloromethyl mercaptan [ORG CHEM] $ClSCCl_3$ Poisonous, yellow oil with disagreeable aroma; decomposes at 148°C; used as a chemical intermediate, granary fumigant, and military poison gas.
perchloryl fluoride [INORG CHEM] $ClFO_3$ A colorless gas with a sweet odor; boiling point is −46.8°C and melting point is −146°C; used as an oxidant in rocket fuels.
Percidae [VERT ZOO] A family of fresh-water actinopterygian fishes in the suborder Percoidei; comprises the true perches.
Perciformes [VERT ZOO] The typical spiny-rayed fishes, comprising the largest order of vertebrates; characterized by fin spines, a swim bladder without a duct, usually ctenoid scales, and 17 or fewer caudal fin rays.

PERCH



Rock bass (*Ambloplites rupestris*), a perch of the family Centrarchidae.

PERCOPSIFORMES



Sand roller *(Percopsis transmontana). (After D. S. Jordan and B. W. Evermann, The Fishes of North and Middle America, U.S. Nat. Mus. Bull. no. 47, 1900)*

PERFOLIATE

Shape of a perfoliate leaf.

Percoidei [VERT ZOO] A large, typical suborder of the order Perciformes; includes over 50% of the species in this order.

percolation [COMPUT SCI] The transfer of needed data back from secondary storage devices to main storage. [HYD] Gravity flow of groundwater through the pore spaces in rock or soil. [MIN ENG] Gentle movement of a solvent through an ore bed in order to extract a mineral. [SCI TECH] Slow movement of a liquid through a porous material.

percolation filtration [CHEM ENG] A continuous petroleum-refinery process in which lubricating oils and waxes are percolated through a clay bed to improve color, odor, and stability.

percolation leaching [MIN ENG] The selective removal of a mineral by causing a suitable solvent to seep into and through a mass or pile of material containing the desired soluble mineral.

percolation limit [SOLID STATE] In a disordered crystalline alloy having one constituent with a magnetic moment, the concentration of the magnetic element above which the spin-glass phase is replaced by the ferromagnetic state.

percolation test [CIV ENG] A test to determine the suitability of a soil for the installation of a domestic sewage-disposal system, in which a hole is dug and filled with water and the rate of water-level decline is measured.

percolation zone [HYD] The area on a glacier or ice sheet where a limited amount of surface melting occurs, but the meltwater refreezes in the same snow layer and the snow layer is not completely soaked or brought up to the melting temperature.

Percomorphi [VERT ZOO] An equivalent, ordinal name for the Perciformes.

Percopsidae [VERT ZOO] A family of fishes in the order Percopsiformes.

Percopsiformes [VERT ZOO] A small order of actinopterygian fishes characterized by single, ray-supported dorsal and anal fins and a subabdominal pelvic fin with three to eight soft rays.

percussion [MED] The act of striking or firmly tapping the surface of the body with a finger or a small hammer to elicit sounds, or vibratory sensations, of diagnostic value. [ORD] Setting off an explosive charge by a sharp blow, as of a gun hammer.

percussion bit [MECH ENG] A rock-drilling tool with chisellike cutting edges, which when driven by impacts against a rock surface drills a hole by a chipping action.

percussion drill [MECH ENG] A drilling machine usually using compressed air to drive a piston that delivers a series of impacts to the shank end of a drill rod or steel and attached bit.

percussion drilling [MECH ENG] A drilling method in which hammer blows are transmitted by the drill rods to the drill bit.

percussion figure [CRYSTAL] Radiating lines on a crystal section produced by a sharp blow.

percussion fire [ORD] Fire with fuses set to burst on impact.

percussion firing mechanism [ORD] Any firing mechanism which fires the primer by percussion.

percussion hammer firing mechanism [ORD] Firing mechanism in which a hammer, actuated by a pull of a lanyard, strikes the firing pin and fires the weapon.

percussion mark [GEOL] A small, crescent-shaped scar produced on a hard, dense pebble by a blow.

percussion powder [MATER] Powder so composed as to ignite by a slight percussion.

percussion side-wall sampling [PETRO ENG] A method of side-wall core sampling from wellbores in softer reservoir formations.

percussion table *See* concussion table.

percussion welding [MET] Resistance welding with arc heat and simultaneously applied pressure from a hammerlike blow.

percylite [MINERAL] $PbCuCl_2(OH)_2$ Mineral made up of a basic chloride of copper and lead and occurring as cubic blue crystals, with a hardness of 2.5.

pereletok [GEOL] A frozen layer of ground, at the base of the active layer, which may persist for one or several years. Also known as intergelisol.

perennial [BOT] A plant that lives for an indefinite period, dying back seasonally and producing new growth from a perennating part.

perennial lake [HYD] A lake that retains water in its basin throughout the year and is not usually subject to extreme water-level fluctuations.

perennial spring [HYD] A spring that flows continuously, as opposed to an intermittent spring or a periodic spring.

perennial stream [HYD] A stream which contains water at all times except during extreme drought.

perezone [GEOL] A zone in which sediments accumulate along coastal lowlands; includes lagoons and brackish-water bays.

perfect cosmological principle [ASTRON] The assumption that the universe is homogeneous and isotropic, and does not change with time.

perfect cube [MATH] A number or polynomial which is the exact cube of another number or polynomial.

perfect crystal [CRYSTAL] A crystal without lattice defects; it is an unattained ideal or standard.

perfect dielectric *See* ideal dielectric.

perfect flower [BOT] A flower having both stamens and pistils.

perfect fluid *See* inviscid fluid.

perfect fractionation path [PHYS CHEM] On a phase diagram, a line or a path representing a crystallization sequence in which any crystal that has been formed remains inert, that is, its composition is not altered.

perfect gas *See* ideal gas.

perfectly diffuse radiator [OPTICS] A body that emits radiant energy in accordance with Lambert's law.

perfecting press [GRAPHICS] A printing press that is able to print both sides of the paper at once.

perfect lubrication [ENG] A complete, unbroken film of liquid formed over each of two metal surfaces moving relatively to one another with no contact.

perfectly diffuse reflector [OPTICS] A body that reflects radiant energy in such a manner that the reflected energy may be treated as if it were being emitted (radiated) in accordance with Lambert's law.

perfectly inelastic collision [PHYS] A collision in which as much translational kinetic energy is converted into internal energy of the colliding systems as is consistent with the conservation of momentum. Also known as completely inelastic collision.

perfectly mobile component [PHYS CHEM] A component whose quantity in a system is determined by its externally imposed chemical potential rather than by its initial quantity in the system. Also known as boundary value component.

perfect number [MATH] An integer which equals the sum of all its factors other than itself.

perfect prognostic [METEOROL] The observed pressure pattern at the verifying time of a forecast of some element other than pressure; used in objective forecast studies in which a forecast of the element is based on a simultaneous relation between this element and the pressure pattern plus a forecast of the pressure pattern at some future time.

perfect set [MATH] A set in a topological space which equals its set of accumulation points.

perfect solution [PHYS CHEM] A solution that is ideal throughout its entire compositional range.

perfect square [MATH] A number or polynomial which is the exact square of another number or polynomial.

perfect vacuum *See* absolute vacuum.

perfemic rock [GEOL] An igneous rock in which the ratio of salic to femic minerals is less than 1:7.

perfluorochemical [ORG CHEM] A hydrocarbon in which all the hydrogen atoms have been replaced by fluorine.

perfluorocyclobutane *See* octafluorocyclobutane.

perfluoroethylene *See* tetrafluoroethylene.

perfluoropropane *See* octafluoropropane.

perfoliate [BOT] Pertaining to the form of a leaf having its base united around the stem. [INV ZOO] Pertaining to the form of certain insect antennae having the terminal joints expanded and flattened to form plates which encircle the stalk.

perforate [SCI TECH] To pierce or puncture; particularly, to make a line or series of holes for such purposes as identification, decoration, or easy separation.

perforated crust [HYD] A type of snow crust containing pits and hollows produced by ablation.

perforated film [GRAPHICS] Roll film containing perforations on one or both sides.

perforated metal [MATER] Sheet metal with round, square, diamond, or rectangular perforations; used for screens and for construction.

perforated-pipe distributor [CHEM ENG] Liquid distribu-

tion device consisting of a length of piping or tubing with holes at spaced intervals along the length; used in spray columns, liquid-vapor contactors, and spray driers. Also known as a sparger.

perforated plate [CHEM ENG] Flat plate with series of holes used to control fluid distribution, as in a perforated-plate (distillation) column.

perforated-plate column [CHEM ENG] Distillation column in which vapor-liquid contact is provided by perforated plates instead of bubble-cap trays.

perforated-plate distributor [CHEM ENG] **1.** A perforated plate or screen used to even out liquid-flow fluctuations through flow channels. **2.** A perforated plate as used in a distillation column or liquid-liquid extraction column.

perforated-plate extractor [CHEM ENG] A liquid-liquid extraction vessel in which perforated plates are used to bring about contact between the two or more liquid phases.

perforating [PETRO ENG] Special oil-well downhole procedure to make holes in tubing walls and surrounding cement; used to allow formation oil or gas to enter the wellbore tubing, or to allow water to be forced out into the formation to cause fracturing (hydraulic fracturing).

perforation [ORD] Passage of a missile completely through an object. [SCI TECH] Any hole made by boring, punching, or piercing.

perforation deposit [GEOL] An isolated kame consisting of material that accumulated in a vertical shaft which pierced a glacier and afforded no outlet for water at the bottom.

perforation rate [COMPUT SCI] The rate at which characters, rows, or words are punched in a paper tape.

perforations [GRAPHICS] Small rectangular sprocket holes along the edge of film. [PETRO ENG] Downwell holes made in well tubing, usually by shot-and-explosive or shaped-charge techniques; used for oil or gas production from desired horizons, or for injection of acidizing or fracturing fluids into the formation at predetermined depths.

perforator [COMMUN] In telegraph practice, a device for punching code signals in paper tape for application to a tape transmitter.

perforatorium *See* acrosome.

performance bond [ENG] A bond that guarantees performance of a contract.

performance characteristic [ENG] A characteristic of a piece of equipment, determined during its test or during its operation.

performance chart [ENG] A graph used in evaluating the performance of any device, for example, the performance of an electrical or electronic device, such as a graph of anode voltage versus anode current for a magnetron.

performance curves [ENG] Graphical representations showing the abilities of rotating equipment at various operating conditions; for example, the performance curve for a compressor would include rotor speed for various intake and outlet pressures versus gas flow rate adjusted for temperature, density, viscosity, head, and other factors.

performance data [ENG] Data on the manner in which a given substance or piece of equipment performs during actual use.

performance evaluation [IND ENG] The analysis in terms of initial objectives and estimates, and usually made on site, of accomplishments using an automatic data-processing system, to provide information on operating experience and to identify corrective actions required, if any.

performance index [IND ENG] The ratio of standard hours to the hours of work actually used; a ratio exceeding 1.00 (or 100%) indicates standard output is being exceeded.

performance number [ENG] One of a series of numbers (constituting the PN, or performance-number, scale) used to convert fuel antiknock values in terms of a reference fuel into an index which is an indication of relative engine performance; used mostly to rate aviation gasolines with octane values greater than 100.

performance rating *See* effort rating.

performance sampling [IND ENG] A technique in work measurement used to determine the leveling factor to be applied to an operator or a group of operators by short, randomly spaced observations of the performance index.

perfume base [MATER] Any natural or synthetic material used by perfumers as a starting point for perfume manufacture.

perfume oil [MATER] Any volatile oil distilled or extracted from the leaves, flowers, gums, or woods of plant life (but occasionally of animal origin) and used in making perfume; examples are linalyl acetate (from citral), crab apple, wisteria, lavender, and attar of rose.

perfusion [PHYSIO] The pumping of a fluid through a tissue or organ by way of an artery.

pergelation [HYD] The act or process of forming permafrost.

pergelic [GEOL] Referring to a soil temperature regime in which the mean annual temperature is less than 0°C and there is permafrost.

pergelisol table *See* permafrost table.

Pergidae [INV ZOO] A small family of hymenopteran insects in the superfamily Tenthredinoidea.

perhumid climate [CLIMATOL] As defined by C. W. Thornthwaite in his climatic classification, a type of climate which has humidity index values of +100 and above; this is his wettest type of climate (designated A), and compares closely to the "wet climate" which heads his 1931 grouping of humidity provinces.

perhydro- [ORG CHEM] Prefix designating a completely saturated aromatic compound, as for decalin ($C_{10}H_{18}$), also known as perhydronaphthalene.

perhydrous coal [GEOL] Coal that contains more than 6% hydrogen, analyzed on a dry, ash-free basis.

perianal [ANAT] Situated or occurring around the anus.

perianth [BOT] The calyx and corolla considered together.

periapical cyst *See* radicular cyst.

periappendicitis [MED] Inflammation of the tissue around the vermiform process, or of the serosal region of the vermiform appendix.

periapsis [ASTRON] The orbital point nearest the center of attraction of an orbiting body.

periarteritis [MED] Inflammation of the outer coat of an artery and of the periarterial tissues.

periarteritis nodosa *See* polyarteritis nodosa.

periastron [ASTRON] The coordinates and time when the two stars of a binary star system are nearest to each other in their orbits.

periblast [EMBRYO] The nucleated layer of cytoplasm that surrounds the blastodisk of an egg undergoing discoidal cleavage.

periblastula [EMBRYO] The blastula of a centrolecithal egg, formed by superficial segmentation.

periblem [BOT] A layer of primary meristem which produces the cortical cells.

periblinite [GEOL] A variety of provitrinite consisting of cortical tissue.

pericardial [ANAT] **1.** Of or pertaining to the pericardium. **2.** Located around the heart.

pericardial cavity [ANAT] A potential space between the inner layer of the pericardium and the epicardium of the heart.

pericardial fluid [PHYSIO] The fluid in the pericardial cavity.

pericardial organ [INV ZOO] One of the neurohemal organs associated with the pericardial cavity in crustaceans.

pericarditis [MED] Inflammation of the pericardium.

pericardium [ANAT] The membranous sac that envelops the heart; it contains 5–20 grams of clear serous fluid.

pericarp [BOT] The wall of a fruit, developed by ripening and modification of the ovarian wall.

pericenter [PHYS] That point on any orbit nearest to the center of attraction.

pericentric inversion [GEN] A type of chromosome aberration in which chromosome material involving both arms of the chromosome is inverted, thus spanning the centromere.

pericholangitis [MED] Inflammation of the tissues around the bile ducts or the interlobular bile capillaries.

perichondrium [ANAT] The fibrous connective tissue covering cartilage, except at joints.

periclase [MINERAL] MgO Native magnesia; a mineral occurring in granular forms or isometric crystals, with hardness of 6 on Mohs scale, and specific gravity of 3.67–3.90. Also known as periclasite.

periclasite *See* periclase.

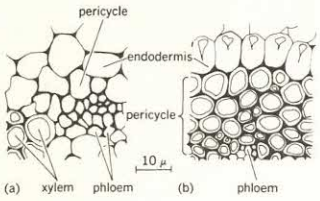
periclinal [GEOL] Referring to strata and structures that dip radially outward from, or inward toward, a center, forming a dome or a basin.

periclinal chimera [GEN] A plant carrying a mixture of cells of two distinct species.

PERICENTRIC INVERSION

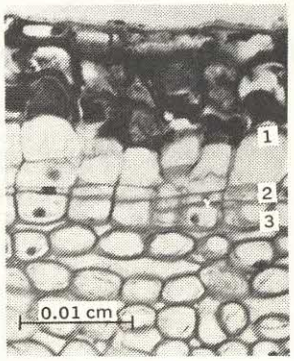
Schematic drawing of a pericentric inversion in a chromosome; the white dot is the chromomere.

PERICYCLE



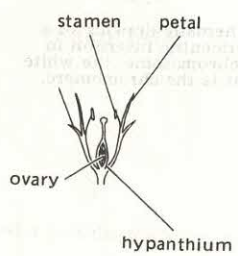
Pericycles. *(a)* Part of transection of root of *Actaea alba* Mill, including xylem and phloem. Pericycle thin-walled and one cell in radial dimension. *(b)* Part of transection of root of *Smilax herbacea* L., including phloem. Pericycle thick-walled and four or five cells in radial dimension (brace).

PERIDERM



Cross section of the stem periderm of *Sambucus nigra*: (1) phellem; (2) phellogen; (3) phelloderm.

PERIGYNOUS



Perigynous arrangement of flower parts on the receptacle.

pericline [GEOL] A fold characterized by central orientation of the dip of the beds. [MINERAL] A variety of albite elongated, and often twinned, along the *b*-axis.

pericline ripple mark [GEOL] A ripple mark arranged in an orthogonal pattern either parallel to or transverse to the current direction and having a wavelength up to 80 centimeters and amplitude up to 30 centimeters.

pericline twin law [CRYSTAL] A parallel twin law in triclinic feldspars, in which the *b*-axis is the twinning axis and the composition surface is a rhombic section.

pericolitis [MED] Inflammation of the peritoneum or tissues around the colon.

pericondensed polycyclic [ORG CHEM] Referring to an aromatic compound in which three or more rings share common carbon atoms.

pericoronitis [MED] Inflammation of the tissue surrounding the coronal portion of the tooth, usually a partially erupted third molar.

pericranium [ANAT] The periosteum on the outer surface of the cranial bones.

pericronus [ASTRON] The nearest point of a satellite in its orbit about Saturn. Also known as perisaturnium.

pericycle [BOT] The outer boundary of the stele of plants; may not be present as a distinct layer of cells.

pericystium [ANAT] The tissues surrounding a bladder. [MED] The vascular wall of a cyst.

pericyte [HISTOL] A mesenchymal cell found around a capillary; it may or may not be contractile.

periderm [BOT] A group of secondary tissues forming a protective layer which replaces the epidermis of many plant stems, roots, and other parts; composed of cork cambium, phelloderm, and cork. [EMBRYO] The superficial transient layer of epithelial cells of the embryonic epidermis.

peridium [BOT] The outer investment of the sporophore of many fungi.

peridot [MINERAL] **1.** A gem variety of olivine that is transparent to translucent and pale-, clear-, or yellowish-green in color. **2.** A variety of tourmaline approaching olivine in color.

peridotite [PETR] A dark-colored, ultrabasic phaneritic igneous rock composed largely of olivine, with smaller amounts of pyroxene or hornblende.

peridotite shell *See* upper mantle.

peridynamic loudspeaker [ENG ACOUS] Box-type loudspeaker baffle designed to give good bass response by minimizing acoustic standing.

perifollicular [HISTOL] Surrounding a follicle.

perigean range [OCEANOGR] The average range of tide at the time of perigean tides, when the moon is near perigee; the perigean range is greater than the mean range.

perigean tidal currents [OCEANOGR] Tidal currents of increased speed occurring at the time of perigean tides.

perigean tide [OCEANOGR] Tide of increased range occurring when the moon is near perigee.

perigee [ASTRON] The point in the orbit of the moon or other satellite when it is nearest the earth.

perigee-to-perigee period *See* anomalistic period.

perigenic [GEOL] Referring to a rock constituent or mineral formed at the same time as the rock it is part of, but not formed at the specific location it now occupies in the rock.

periglacial [GEOL] Of or pertaining to the outer perimeter of a glacier, particularly to the fringe areas immediately surrounding the great continental glaciers of the geologic ice ages, with respect to environment, topography, areas, processes, and conditions influenced by the low temperature of the ice.

periglacial climate [CLIMATOL] The climate which is characteristic of the regions immediately bordering the outer perimeter of an ice cap or continental glacier; the principal climatic feature is the high frequency of very cold and dry winds off the ice area; it is also thought that these regions offer ideal conditions for the maintenance of a belt of intense cyclonic activity.

perigonium [BOT] The perianth of a liverwort. [INV ZOO] The sac containing the generative bodies in the gonophore of a hydroid.

perigynium [BOT] A fleshy cup- or tubelike structure surrounding the archegonium of various bryophytes.

perigynous [BOT] Bearing the floral organs on the rim of an expanded saucer- or cup-shaped receptacle or hypanthium.

perihelion [ASTRON] That orbital point nearest the sun when the sun is the center of attraction.

perihepatitis [MED] Inflammation of the peritoneum and tissues surrounding the liver.

peri-infarction block *See* intraventricular heart block.

perijove [ASTRON] The nearest point of a satellite in its orbit about Jupiter.

perikaryon [CYTOL] **1.** The body of a nerve cell, containing the nucleus. **2.** A cytoplasmic mass surrounding a nucleus.

Perilampidae [INV ZOO] A family of hymenopteran insects in the superfamily Chalcidoidea.

perilla oil [MATER] A light-yellow drying oil derived from seeds of mints of the genus *Perilla*; soluble in alcohol, benzene, carbon disulfide, ether, and chloroform; used as a substitute for linseed oil, as an edible oil, and in manufacture of varnishes and artificial leather.

perilymph [PHYSIO] The fluid separating the membranous from the osseous labyrinth of the internal ear.

perimagmatic [GEOL] Referring to a hydrothermal mineral deposit located near its magmatic source.

perimeter [MATH] The total length of a closed curve; for example, the perimeter of a polygon is the total length of its sides.

perimeter blasting [MIN ENG] A method of blasting in tunnels, drifts, and raises, designed to minimize overbreak and leave clean-cut solid walls; the outside holes are loaded with very light continuous explosive charges and fired simultaneously, so that they shear from one hole to the other.

perimeter of airway [MIN ENG] In mine ventilation, the linear distance in feet of the airway perimeter rubbing surface at right angles to the direction of the airstream.

perimetrium [ANAT] The serous covering of the uterus.

perimysium [ANAT] The connective tissue sheath enveloping a muscle or a bundle of muscle fibers.

perineum [ANAT] **1.** The portion of the body included in the outlet of the pelvis, bounded in front by the pubic arch, behind by the coccyx and sacrotuberous ligaments, and at the sides by the tuberosities of the ischium. **2.** The region between the anus and the scrotum in the male, between the anus and the posterior commissure of the vulva in the female.

perineural [ANAT] Situated around nervous tissue or a nerve.

perineural fibroblastoma *See* neurofibroma.

perineural fibroma *See* neurofibroma.

perinuclear [ANAT] Surrounding the eye.

period [CHEM] A family of elements with consecutive atomic numbers in the periodic table and with closely related properties; for example, chromium through copper. [GEOL] A unit of geologic time constituting a subdivision of an era; the fundamental unit of the standard geologic time scale. [NUCLEO] The time required for exponentially rising or falling neutron flux in a nuclear reactor to change by a factor of e (2.71828). [PHYS] The duration of a single repetition of a cyclic phenomenon.

periodate [INORG CHEM] A salt of periodic acid, HIO_4, for example, potassium periodate, KIO_4.

periodic [SCI TECH] Repeating itself identically at regular intervals.

periodic acid [INORG CHEM] $HIO_4 \cdot 2H_2O$ Water- and alcohol-soluble white crystals; loses water at 100°C; used as an oxidant.

periodic antenna [ELECTROMAG] An antenna in which the input impedance varies as the frequency is altered.

periodic current [OCEANOGR] Current produced by the tidal influence of moon and sun or by any other oscillatory forcing function.

periodic damping [PHYS] Damping which is less than critical damping.

periodic disease *See* familial Mediterranean fever.

periodic duty [ELEC] Intermittent duty in which the load conditions are regularly recurrent.

periodic field focusing [ELECTR] Focusing of an electron beam where the electrons follow a trochoidal path and the focusing field interacts with them at selected points.

periodic function [MATH] A function $f(x)$ of a real or complex variable is periodic with period T if $f(x + T) = f(x)$ for every value of x.

periodicity [MATH] The property of periodic functions.

periodic kiln [ENG] A kiln in which the cycle of setting ware in the kiln, heating up, "soaking" or holding at peak temperature for some time, cooling, and removing or "drawing" the ware is repeated for each batch.

periodic lattice *See* lattice.

periodic law [CHEM] The law that the properties of the chemical elements and their compounds are a periodic function of their atomic weights.

periodic line [ELEC] Line consisting of successive and identical sections, similarly oriented, the electrical properties of each section not being uniform throughout; the periodicity is in space and not in time; an example of a periodic line is the loaded line with loading coils uniformly spaced.

periodic motion [MECH] Any motion that repeats itself identically at regular intervals.

periodic peritonitis *See* familial Mediterranean fever.

periodic perturbation [ASTRON] Small deviations from the computed orbit of a planet or satellite; the deviations extend through cycles that generally do not exceed a century. [MATH] A perturbation which is periodic as a function.

periodic quantity [PHYS] Oscillating quantity, the values of which recur for equal increments of the independent variable.

periodic spring [HYD] A spring that ebbs and flows periodically, apparently due to natural siphon action.

periodic table [CHEM] A table of the elements, written in sequence in the order of atomic number or atomic weight and arranged in horizontal rows (periods) and vertical columns (groups) to illustrate the occurrence of similarities in the properties of the elements as a periodic function of the sequence.

periodic wave [PHYS] A wave whose displacement has a periodic variation with time or distance, or both.

period-luminosity relation [ASTRON] Relation between the periods of Cepheid variable stars and their absolute magnitude; the absolutely brighter the star, the longer the period.

period of a variable star [ASTRON] The average time interval for a variable star to complete a cycle of its variations.

period of vibration [PHYS] The time for one complete cycle of a vibration.

periodontal [ANAT] **1.** Surrounding a tooth. **2.** Of or pertaining to the periodontium.

periodontitis [MED] Inflammation of the periodontium.

periodontium [ANAT] The tissues surrounding a tooth.

periodontoclasia [MED] Any periodontal disease that results in the destruction of the periodontium.

periodontosis [MED] A degenerative disturbance of the periodontium, characterized by degeneration of connective-tissue elements of the periodontal ligament and by bone resorption.

perionychium [ANAT] The border of epidermis surrounding an entire nail. Also known as paronychium.

periosteum [ANAT] The fibrous membrane enveloping bones, except at joints and the points of tendonous and ligamentous attachment.

periostitis [MED] Inflammation of the periosteum.

periostracum [INV ZOO] A protective layer of chitin covering the outer portion of the shell in many mollusks, especially fresh-water forms.

periotic [ANAT] **1.** Situated about the ear. **2.** Of or pertaining to the parts immediately about the internal ear.

peripediment [GEOL] The segment of a pediplane extending across the younger rocks or alluvium of a basin which is always beyond but adjacent to the segment developed on the older upland rocks.

peripheral [ANAT] Pertaining to or located at or near the surface of a body or an organ. [SCI TECH] Remote from the center; marginal; on the periphery.

peripheral buffer [COMPUT SCI] A device acting as a temporary storage when transmission occurs between two devices operating at different transmission speeds.

peripheral control unit [COMPUT SCI] A device which connects a unit of peripheral equipment with the central processing unit of a computer and which interprets and responds to instructions from the central processing unit.

peripheral depression *See* ring depression.

peripheral equipment [COMPUT SCI] Equipment that works in conjunction with a computer but is not part of the computer itself, such as a card or paper-tape reader or punch, magnetic-tape handler, or line printer.

peripheral faults [GEOL] Arcuate faults bounding an elevated or depressed area such as a diapir.

peripheral initiation [ORD] Simultaneous initiation of detonation around the entire periphery of a cylindrical explosive charge; it may be accomplished from point initiation by inserting a disk of inert material, of proper dimensions, in the explosive column.

peripheral interface channel [COMPUT SCI] A path along which information can flow between a unit of peripheral equipment and the central processing unit of a computer.

peripheral-limited [COMPUT SCI] Property of a computer system whose processing time is determined by the speed of its peripheral equipment rather than by the speed of its central processing unit. Also known as I/O-bound.

peripheral milling [MET] Removing metal from a surface parallel to the axis of a milling cutter.

peripheral nervous system [ANAT] The autonomic nervous system, the cranial nerves, and the spinal nerves including their associated sensory receptors.

peripheral processor [COMPUT SCI] Auxiliary computer performing specific operations under control of the master computer.

peripheral sink *See* rim syncline.

peripheral speed *See* cutting speed.

peripheral stream [HYD] A stream that flows parallel to the edge of a glacier, usually just beyond the moraine.

peripheral support computer [COMPUT SCI] A computer (on-line or off-line) used primarily for card-to-tape, tape-to-card, and tape-to-printer conversions, control of on-line devices, sorting, merging, and other similar auxiliary operations in support of a large automatic data-processing complex, and compatible with the larger computer to the extent that no required data interchange involves any necessity for conversion.

peripheral transfer [COMPUT SCI] The transmission of data between two units of peripheral equipment or between a peripheral unit and the central processing unit of a computer.

peripheral units *See* peripheral equipment.

peripheral vision [PHYSIO] The act of seeing images that fall upon parts of the retina outside the macula lutea. Also known as indirect vision.

periphery [MATH] The bounding curve of a surface or the surface of a solid.

periphlebitis [MED] Inflammation of the tissues around a vein or of the adventitia of a vein.

periphyton [ECOL] Sessile biotal components of a fresh-water ecosystem.

periplast [CYTOL] **1.** A cell membrane. **2.** A pellicle covering ectoplasm. [HISTOL] The stroma of an animal organ. [INV ZOO] The ectoplasm of a flagellate.

periproct [INV ZOO] The area surrounding the anus of echinoids.

Periptychidae [PALEON] A family of extinct herbivorous mammals in the order Condylarthra distinguished by specialized, fluted teeth.

Peripylina [INV ZOO] An equivalent name for Porulosida.

perisarc [INV ZOO] The outer integument of a hydroid.

perisaturnium *See* pericronus.

Periscelidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

Perischoechinoidea [INV ZOO] A subclass of principally extinct echinoderms belonging to the Echinoidea and lacking stability in the number of columns of plates that make up the ambulacra and interambulacra.

periscope [OPTICS] An optical instrument used to provide a raised line of vision where it may not be practical or possible, as in entrenchments, tanks, or submarines; the raised line of vision is obtained by the use of mirrors or prisms within the structure of the item; it may have single or dual optical systems.

periscopic sextant [NAV] **1.** A sextant designed to be mounted inside an aircraft, with a tube extending vertically upward through the skin of the aircraft. **2.** A sextant designed to be used in conjunction with the periscope of a submarine.

periscopic sight [ORD] Gunsight made in the form of a periscope, permitting a gunner to see over an obstacle.

perisperm [BOT] In a seed, the nutritive tissue that is derived from the nucellus and deposited on the outside of the embryo sac.

Perissodactyla [VERT ZOO] An order of exclusively herbivorous mammals distinguished by an odd number of toes and mesaxonic feet, that is, with the axis going through the third toe.

peristalsis [PHYSIO] The rhythmic progressive wave of muscular contraction in tubes, such as the intestine, provided with both longitudinal and transverse muscular fibers.

peristaltic charge-coupled device [ELECTR] A high-speed charge-transfer integrated circuit in which the movement

of the charges is similar to the peristaltic contractions and dilations of the digestive system.

peristerite [MINERAL] A gem variety of albite (An_2–An_{24}) that resembles moonstone and has a blue or bluish-white luster characterized by sharp internal reflections of blue, green, and yellow.

peristome [BOT] The fringe around the opening of a moss capsule. [INV ZOO] The area surrounding the mouth of various invertebrates.

peristyle [ARCH] A surrounding series of columns; the space enclosed by such columns.

peritectic [PHYS CHEM] An isothermal reversible reaction in which a liquid phase reacts with a solid phase during cooling to produce a second solid phase.

peritectic point [PHYS CHEM] In a binary two-phase heteroazeotropic system at constant pressure, that point up to which the boiling point has remained constant until one of the phases has boiled away.

peritectoid [PHYS CHEM] An isothermal reversible reaction in which a solid phase on cooling reacts with another solid phase to form a third solid phase.

perithecium [MYCOL] A spherical, cylindrical, or oval ascocarp which usually opens by a terminal slit or pore.

peritoneal cavity [ANAT] The potential space between the visceral and parietal layers of the peritoneum.

peritoneoscope [MED] A long, slender endoscope equipped with sheath, obturator, biopsy forceps, a sphygmomanometer bulb and tubing, scissors, and a syringe; introduced into the peritoneal cavity through a small incision in the abdominal wall permitting visualization of the gas-inflated peritoneal cavity.

peritoneoscopy *See* laparoscopy.

peritoneum [ANAT] The serous membrane enveloping the abdominal viscera and lining the abdominal cavity.

peritonitis [MED] Inflammation of the peritoneum.

peritonsillar abscess [MED] An abscess forming in acute tonsillitis around one or both tonsils.

Peritrichia [INV ZOO] A specialized subclass of the class Ciliatea comprising both sessile and mobile forms.

Peritrichida [INV ZOO] The single order of the protozoan subclass Peritrichia.

peritrichous [INV ZOO] Of certain protozoans, having spirally arranged cilia around the oral disk. [MICROBIO] Of bacteria, having a uniform distribution of flagella on the body surface.

perityphlitis [MED] Inflammation of the peritoneum surrounding the cecum and vermiform appendix.

perivitelline space [CYTOL] In mammalian ova, the space formed between the ovum and the zona pellucida at the time of maturation, into which the polar bodies are given off.

Perkins' reaction [ORG CHEM] The formation of unsaturated cinnamic-type acids by the condensation of aromatic aldehydes (Ar) with fatty acids in the presence of acetic anhydride; for example, $ArCHO + CH_3COONa \rightarrow ArCH{=}CHCOONa + H_2O$.

perlèche [MED] An inflammatory condition occurring at the angles of the mouth with resultant fissuring.

perlite [GEOL] A rhyolitic glass with abundant spherical or convolute cracks that cause it to break into small pearllike masses or pebbles, usually less than a centimeter across; it is commonly gray or green with a pearly luster and has the composition of rhyolite. Also known as pearlite; pearlstone.

perlitic [PETR] **1.** Of the texture of a glassy igneous rock, exhibiting small spheruloids formed from cracks due to contraction during cooling. **2.** Pertaining to or characteristic of perlite.

perlucidus [METEOROL] A cloud variety, usually of the species stratiformis, in which distinct spaces between its elements permit the sun, moon, blue sky, or higher clouds to be seen.

perm [PETRO ENG] A unit indicating the degree of permeability of a porous reservoir structure; the unit is expressed as bbl day^{-1} ft^{-2} psi^{-1} ft cp or ft^3 day^{-1} ft^{-2} psi^{-1} ft cp.

permafil [MATER] Polymerizable mixture that cures without any evaporation.

permafrost [GEOL] Perennially frozen ground, occurring wherever the temperature remains below 0°C for several years, whether the ground is actually consolidated by ice or not and regardless of the nature of the rock and soil particles of which the earth is composed.

permafrost drilling [ENG] Boreholes drilled in subsoil and rocks in which the contained water is permanently frozen.

permafrost island [GEOL] A small, shallow, isolated patch of permafrost surrounded by unfrozen ground.

permafrost line [GEOL] A line on a map representing the border of the arctic permafrost.

permafrost table [GEOL] The upper limit of permafrost. Also known as pergelisol table.

permalloy [MET] A trade name for any of several highly magnetically permeable iron-base alloys containing about 45–80% nickel.

permanent anode [MET] A very-corrosion-resistant anode, made of a material such as a carbon, aluminum, or lead alloy, or 14.5% silicon iron; used in cathodic protection against corrosion.

permanent aurora *See* airglow.

permanent axis [MECH] The axis of the greatest moment of inertia of a rigid body, about which it can rotate in equilibrium.

permanent benchmark [ENG] A readily identifiable, relatively permanent, recoverable benchmark that is intended to maintain its elevation without change over a long period of time with reference to an adopted datum, and is located where disturbing influences are believed to be negligible.

permanent-completion packer [PETRO ENG] A packer able to withstand large pressure differentials to allow for its permanent installation in a producing well.

permanent current [OCEANOGR] A current which continues with relatively little periodic or seasonal change.

permanent echo [ELECTROMAG] A signal reflected from an object that is fixed with respect to a radar site.

permanent emplacement *See* fixed emplacement.

permanent extinction [GEOL] The extinction of a lake by destruction of the lake basin, because of such processes as deposition of sediments, erosion of the basin rim, filling with vegetation, or catastrophic events.

permanent finish [TEXT] Any one of a number of fabric treatments used to improve glaze, hand, or performance of fabrics; generally effective for the life of the fabric in normal use.

permanent gas [THERMO] A gas at a pressure and temperature far from its liquid state.

permanent hardness [CHEM] The hardness of water persisting after boiling.

permanent ice foot [HYD] An ice foot that does not melt completely in summer.

permanent ink [MATER] Ink that contains up to 1% dissolved iron to prevent fading or washing away when dried.

permanent magnet [ELECTROMAG] A piece of hardened steel or other magnetic material that has been strongly magnetized and retains its magnetism indefinitely. Abbreviated PM.

permanent-magnet dynamic loudspeaker *See* permanent-magnet loudspeaker.

permanent-magnet focusing [ELECTR] Focusing of the electron beam in a television picture tube by means of the magnetic field produced by one or more permanent magnets mounted around the neck of the tube.

permanent-magnet loudspeaker [ENG ACOUS] A moving-conductor loudspeaker in which the steady magnetic field is produced by a permanent magnet. Also known as permanent-magnet dynamic loudspeaker.

permanent-magnet moving-coil instrument [ENG] An ammeter or other electrical instrument in which a small coil of wire, supported on jeweled bearings between the poles of a permanent magnet, rotates when current is carried to it through spiral springs which also exert a restoring torque on the coil; the position of the coil is indicated by an attached pointer.

permanent-magnet moving-iron instrument [ENG] A meter that depends for its operation on a movable iron vane that aligns itself in the resultant magnetic field of a permanent magnet and adjacent current-carrying coil.

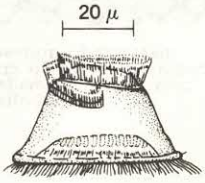
permanent-magnet stepper motor [ELEC] A stepper motor in which the rotor is a powerful permanent magnet and each stator coil is energized independently in sequence; the rotor aligns itself with the stator coil that is energized.

permanent mold [MET] A reusable metal mold for the production of many castings of the same kind.

permanent monument [MIN ENG] A monument of a lasting character for marking a mining claim; it may be a mountain, hill, or ridge.

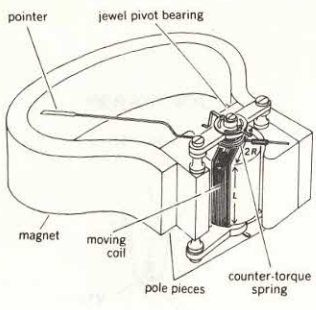
permanent press *See* durable press.

PERITRICHIA



Trichodina, a mobile peritrich.

PERMANENT-MAGNET MOVING-COIL INSTRUMENT



Mechanism of a permanent-magnet moving-coil instrument. L = length of active conductors, R = radius of action of these conductors. *(Weston Instruments, Division of Sangamo Weston, Inc.)*

permanent-press resin [ORG CHEM] A thermosetting resin, based on chemicals such as formaldehyde and maleic anhydride, which is used to impart crease resistance to textiles and fibers. Also known as durable-press resin.

permanent pump [MIN ENG] A pump on which the mine depends for the final disposal of its drainage.

permanent set [MECH] Permanent plastic deformation of a structure or a test piece after removal of the applied load. Also known as set.

permanent-split capacitor motor [ELEC] A capacitor motor in which the starting capacitor and the auxiliary winding remain in the circuit for both starting and running. Abbreviated PSC motor. Also known as capacitor start-run motor.

permanent starch [MATER] An emulsion of polyvinyl acetate used for starching clothing and textiles; it is not removed by washing.

permanent storage [COMPUT SCI] A means of storing data for rapid retrieval by a computer; does not permit changing the stored data.

permanent teeth [ANAT] The second set of teeth of a mammal, following the milk teeth; in humans, the set of 32 teeth consists of 8 incisors, 4 canines, 8 premolars, and 12 molars.

permanent thermocline *See* main thermocline.

permanent water [HYD] A source of water that remains constant throughout the year.

permanent wave [FL MECH] A wave (in a fluid) which moves with no change in streamline pattern, and which, therefore, is a stationary wave relative to a coordinate system moving with the wave.

permanganate [INORG CHEM] A purple salt of permanganic acid containing the MnO_4^- radical; used as an oxidizing agent and a disinfectant.

permanganic acid [INORG CHEM] $HMnO_4$ An unstable acid that exists only in dilute solutions; decomposes to manganese dioxide and oxygen.

Permasyn motor [ELEC] A synchronous motor which has permanent magnets embedded in the squirrel-cage rotor to provide an equivalent direct-current field.

permatron [ELECTR] Thermionic gas-discharge diode in which the start of conduction is controlled by an external magnetic field.

permeability [ELECTROMAG] A factor, characteristic of a material, that is proportional to the magnetic induction produced in a material divided by the magnetic field strength; it is a tensor when these quantities are not parallel. [FL MECH] **1.** The ability of a membrane or other material to permit a substance to pass through it. **2.** Quantitatively, the amount of substance which passes through the material under given conditions. [GEOL] The capacity of a porous rock, soil, or sediment for transmitting a fluid without damage to the structure of the medium. Also known as perviousness. [NAV ARCH] The percentage of a given space in a ship that can be occupied by water.

permeability alloy [MET] An iron-nickel alloy having greater magnetic susceptibility than iron.

permeability-block method [PETRO ENG] Calculation method for oil recovery from water-drive oil fields in which there are variable-permeability distributions.

permeability coefficient [FL MECH] The rate of water flow in gallons per day through a cross section of 1 square foot under a unit hydraulic gradient, at the prevailing temperature or at 60°F (16°C). Also known as coefficient of permeability; hydraulic conductivity; Meinzer unit.

permeability number [ENG] A numbered value assigned to molding materials indicating the relative ease of passage of gases through them.

permeability profile [PETRO ENG] A graphical plot of porous reservoir permeability versus distance down the wellbore.

permeability trap [GEOL] An oil trap formed by lateral variation within a reservoir bed which seals the contained hydrocarbons through a change of permeability.

permeability tuning [ELEC] Process of tuning a resonant circuit by varying the permeability of an inductor; it is usually accomplished by varying the amount of magnetic core material of the inductor by slug movement.

permeable bed [GEOL] A porous reservoir formation through which hydrocarbon fluids (oil or gas) or water (waterflood or interstitial) can flow.

permeable membrane [CHEM] A thin sheet or membrane of material through which selected liquid or gas molecules or ions will pass, either through capillary pores in the membrane or by ion exchange; used in dialysis, electrodialysis, and reverse osmosis.

permeameter [ENG] **1.** Device for measurement of the average size or surface area of small particles; consists of a powder bed of known dimension and degree of packing through which the particles are forced; pressure drop and rate of flow are related to particle size, and pressure drop is related to surface area. **2.** A device for measuring the coefficient of permeability by measuring the flow of fluid through a sample across which there is a pressure drop produced by gravity. **3.** An instrument for measuring the magnetic flux or flux density produced in a test specimen of ferromagnetic material by a given magnetic intensity, to permit computation of the magnetic permeability of the material.

permeametry [ANALY CHEM] Determination of the average size of fine particles in a fluid (gas or liquid) by passing the mixture through a powder bed of known dimensions and recording the pressure drop and flow rate through the bed.

permeance [ELECTROMAG] A characteristic of a portion of a magnetic circuit, equal to magnetic flux divided by magnetomotive force; the reciprocal of reluctance. Symbolized P.

permease [BIOCHEM] Any of a group of enzymes which mediate the phenomenon of active transport.

permeation [CHEM] The movement of atoms, molecules, or ions into or through a porous or permeable substance (such as zeolite or a membrane).

permeation gneiss [PETR] A gneiss formed as a result of or modified by the passage of geochemically mobile materials through or into solid rock.

permeator [CHEM ENG] A membrane assembly that performs an ion-exchange function, for example, desalting in a membrane water-desalting process.

Permendur [MET] A magnetic alloy which is composed of equal parts of iron and cobalt and has an extremely high permeability when saturated.

permenorm alloy [MET] An alloy containing 50% nickel and 50% iron; used as magnet core material and in magnetic amplifiers.

Permian [GEOL] The last period of geologic time in the Paleozoic era, from 280 to 225 million years ago.

per mille [SCI TECH] Per thousand or 10^{-3}. Symbolized ‰.

permineralization [GEOL] A fossilization process whereby additional minerals are deposited in the pore spaces of originally hard animal parts.

permissible [MIN ENG] Said of equipment completely assembled and conforming in every respect with the design formally approved by the U.S. Bureau of Mines for use in gassy and dusty mines.

permissible dose [NUCLEO] The amount of radiation that may be safely received by an individual within a specified period. Formerly known as tolerance dose.

permissible explosive [MATER] An explosive approved by the U.S. Bureau of Mines as safe for blasting in gassy and dusty mines.

permissible lamp [MIN ENG] A lamp that meets the standards of the U.S. Bureau of Mines.

permissible length [NAV ARCH] The floodable length of a ship times the factor of subdivision.

permissible machine [MIN ENG] A machine, such as a drill, mining machine, loading machine, conveyor, or locomotive, that meets the standards of the U.S. Bureau of Mines.

permissible velocity [CIV ENG] The highest velocity at which water is permitted to pass through a structure or conduit without excessive damage.

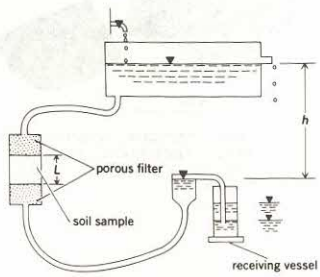
permissive cell [MOL BIO] A cell in which viral genome replication can occur after integration of the genome into one or more chromosomes of the cell.

permissive stop [CIV ENG] A railway signal indicating the train must stop but can proceed slowly and cautiously after a specified interval, usually 1 minute.

permittivity [ELEC] The dielectric constant multiplied by the permittivity of empty space, where the permittivity of empty space (ϵ_0) is a constant appearing in Coulomb's law, having the value of 1 in centimeter-gram-second electrostatic units, and of 8.854×10^{-12} farad/meter in rationalized meter-kilogram-second units. Symbolized ϵ.

Permo-Carboniferous [GEOL] **1.** The Permian and Carboniferous periods considered as one unit. **2.** The Permian and Pennsylvanian periods considered as a single unit. **3.** The rock

PERMEAMETER



Constant-head permeameter (def. 2). Head water level, h, is kept constant. Water percolates through soil sample of thickness L. Porous filters hold soil in place. The tail water level is kept constant by overflow. Volume of discharge is measured in receiving vessel. *(From G. P. Tschebotarioff, Soil Mechanics, Foundations and Earth Structures, McGraw-Hill, 1951)*

PERMIAN

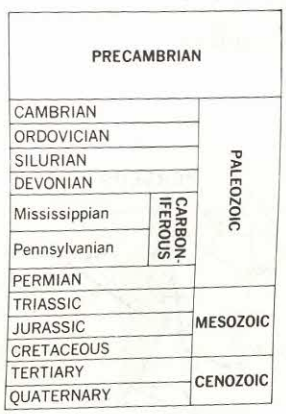


Chart showing position of Permian period in relation to other periods and to the eras of geologic time.

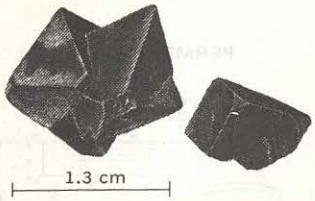
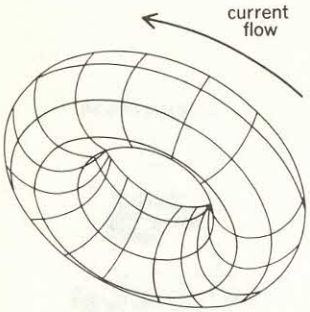
PEROVSKITE



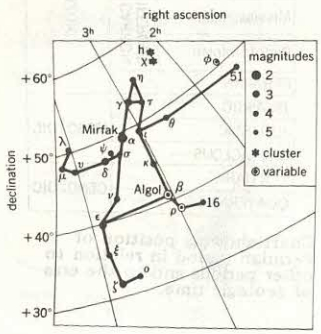
Perovskite crystals, Magnet Cove, Arkansas. *(Specimens from Department of Geology, Bryn Mawr College)*

PERPETUAL MOTION MACHINE OF THE THIRD KIND



If a direct current is caused to flow in a superconducting ring, this current will continue to flow undiminished in time without application of any external force.

PERSEUS



Line pattern of the constellation Perseus. The grid lines in the chart represent the coordinates of the sky. The apparent brightness, or magnitude, of the stars is shown by the size of the dots, which are graded by appropriate numbers as indicated.

unit, or the period of geologic time, transitional between the Upper Pennsylvanian and the Lower Permian periods.

perm-plug method [PETRO ENG] Laboratory method of measuring the permeability of reservoir core samples (or plugs) by the measurement of airflow through the sample at several flow rates.

permselective membrane [PHYS CHEM] An ion-exchange material that allows ions of one electrical sign to enter and pass through.

permutation [MATH] A function which rearranges a finite number of symbols; more precisely, a one-to-one function of a finite set onto itself.

permutation group [MATH] The group whose elements are permutations of some set of symbols where the product of two permutations is the permutation arising from successive application of the two.

permutation modulation [COMMUN] Proposed method of transmitting digital information by means of band-limited signals in the presence of additive white gaussian noise; pulse-code modulation and pulse-position modulation are considered simple special cases of permutation modulation.

permutation table [COMMUN] In computers, a table designed for the systematic construction of code groups; it may also be used to correct garbles in groups of code text.

permutation tensor *See* determinant tensor.

pernetti [ENG] **1.** Small iron pins or tripods that support ware while it is being fired in a kiln. **2.** The marks left on baked pottery by these supporting pins.

pernicious anemia [MED] A megaloblastic macrocytic anemia resulting from lack of vitamin B_{12}, secondary to gastric atrophy and loss of intrinsic factor necessary for vitamin B_{12} absorption, and accompanied by degeneration of the posterior and lateral columns of the spinal cord.

pernicious malaria *See* falciparum malaria.

perniosis [MED] Any dermatitis resulting from chilblain.

Perognathinae [VERT ZOO] A subfamily of the rodent family Heteromyidae, including the pocket and kangaroo mice.

peronine [PHARM] $C_{17}H_{17}NO(OH)OC_7H_7 \cdot HCl$ A white, crystalline powder having a bitter taste; soluble in boiling water; used in medicine. Also known as morphine benzyl ether hydrochloride.

Peronosporales [MYCOL] An order of aquatic and terrestrial phycomycetous fungi with a hyphal thallus and zoospores with two flagella.

Perothopidae [INV ZOO] A small family of coleopteran insects in the superfamily Elateroidea found only in the United States.

perovskite [MINERAL] $Ca[TiO_3]$ A natural, yellow, brownish-yellow, reddish, brown, or black mineral and a structure type which includes no less than 150 synthetic compounds; the crystal structure is ideally cubic, it occurs as rounded cubes modified by the octahedral and dodecahedral forms, luster is subadamantine to submetallic, hardness is 5.5 on Mohs scale, and specific gravity is 4.0.

peroxidase [BIOCHEM] An enzyme that catlyzes reactions in which hydrogen peroxide is an electron acceptor.

peroxide [CHEM] **1.** A compound containing the peroxy (—O—O—) group, as in hydrogen peroxide. **2.** *See* hydrogen peroxide.

peroxide number [ANALY CHEM] Measure of millimoles of peroxide (or milliequivalents of oxygen) taken up by 1000 grams of fat or oil; used to measure rancidity. Also known as peroxide value.

peroxide value *See* peroxide number.

peroxyacetic acid *See* peracetic acid.

peroxybenzoic acid *See* perbenzoic acid.

peroxydol *See* sodium perborate.

peroxymonosulfuric acid *See* Caro's acid.

perpendicular [MATH] Geometric objects are perpendicular if they intersect in an angle of 90°.

perpendicular axis theorem [MECH] A theorem which states that the sum of the moments of inertia of a plane lamina about any two perpendicular axes in the plane of the lamina is equal to the moment of inertia about an axis through their intersection perpendicular to the lamina.

perpendiculars [NAV ARCH] Vertical lines through the intersections of the fore and aft ends of a ship with the design waterline.

perpendicular slip [GEOL] The component of a fault slip measured at right angles to the trace of the fault on any intersecting surface.

perpendicular slope [GEOL] A very steep slope or precipitous face, as on a mountain.

perpendicular throw [GEOL] The distance between two points which were formerly adjacent in a faulted bed, vein, or other surface, measured at right angles to the surface.

perpetual calendar [ASTRON] A table or mechanical device used to determine the day of the week corresponding to any given date over a period of many years.

perpetual frost climate [CLIMATOL] The climate of the ice cap regions of the world; thus, it requires temperatures sufficiently cold so that the annual accumulation of snow and ice is never exceeded by ablation. Also known as ice-cap climate.

perpetual motion machine of the first kind [PHYS] A mechanism which, once set in motion, continues to do useful work without an input of energy, or which produces more energy than is absorbed in its operation; it violates the principle of conservation of energy.

perpetual motion machine of the second kind [PHYS] A device that extracts heat from a source and then converts this heat completely into other forms of energy; it violates the second law of thermodynamics.

perpetual motion machine of the third kind [PHYS] A device which has a component that can continue moving forever; an example is a superconductor.

Perret phase [GEOL] That stage of a volcanic eruption that is characterized by the emission of much high-energy gas that may significantly enlarge the volcanic conduit.

Perron-Frobenius theorem [MATH] If M is a matrix with positive entries, then its largest eigenvalue λ is positive and simple; moreover, there exist vectors v and w with positive components such that $vM = \lambda v$ and $Mw = \lambda w$, if the inner product of v with w is 1, then the limit of $\lambda - n$ times the i,jth entry of M^n as n goes to infinity is the product of the ith component of w and the jth component of v.

Perron-Frobenius theory [MATH] The study of positive matrices and their eigenvalues; in particular, application of the Perron-Frobenius theorem.

perry [METEOROL] In England, a sudden, heavy fall of rain; a squall, sometimes referred to as "half a gale."

perryite [MINERAL] $(Ni,Fe)_5(Si,P)_2$ A mineral found only in meteorites.

persalic rock [GEOL] An igneous rock in which the ratio of salic to femic minerals is greater than 7:1.

Perseids [ASTRON] A meteor shower whose radiant lies in the constellation Perseus; it reaches a maximum about August 12.

Perseus [ASTRON] A northern constellation; right ascension 3 hours; declination 45°N.

Pershing [ORD] Name given to a U.S. Army tactical ballistic missile, using a solid propellant and with a range capability of 600 miles (970 kilometers); successor to the Redstone.

Persian ammoniac *See* ammoniac.

Persian melon [BOT] A variety of muskmelon (*Cucumis melo*) in the order Violales; the fruit is globular and without sutures, and has dark-green skin, thin abundant netting, and firm, thick, orange flesh.

Persian red [INORG CHEM] Red pigment made from basic lead chromate or ferric oxide.

persic oil [MATER] A pale-yellow to red fatty oil; soluble in ether, chloroform, and carbon disulfide; taste and aroma are similar to almond oil; the oil is expressed from blanched seeds of peaches or apricots; used as a flavoring, in medicine, and as a nutrient similar to olive and almond oils. Also known as apricot kernel oil; peach kernel oil.

persilicic *See* silicic.

persistence [ELECTR] A measure of the length of time that the screen of a cathode-ray tube remains luminescent after excitation is removed; ranges from 1 for short persistence to 7 for long persistence. [METEOROL] With respect to the long-term nature of the wind at a given location, the ratio of the magnitude of the mean wind vector to the average speed of the wind without regard to direction. Also known as constancy; steadiness.

persistence forecast [METEOROL] A forecast that the future weather condition will be the same as the present condition; often used as a standard of comparison in measuring the degree of skill of forecasts prepared by other methods.

persistence of vision [PHYSIO] The ability of the eye to

retain the impression of an image for a short time after the image has disappeared.

persistent [BOT] Of a leaf, withering but remaining attached to the plant during the winter.

persistent current [CRYO] **1.** A magnetically induced electric current that flows undiminished in a superconducting material or circuit. **2.** A superfluid current that flows undiminished around a closed path.

persistent-image device [ELECTR] An optoelectronic amplifier capable of retaining an image for a definite length of time.

persistent war gas [MATER] War gas that is normally effective in the open at the point of dispersion for more than 10 minutes.

persistron [ELECTR] A device in which electroluminescence and photoconductivity are used in a single panel capable of producing a steady or persistent display with pulsed signal input.

personal computer [COMPUT SCI] A computer for home or personal use.

personal equation [SCI TECH] A systematic observational error due to the characteristics of the observer; the uncertainty in a reading made by an observer may be ascertained by a statistical analysis of the observer's readings.

personal identification code [COMPUT SCI] A special number up to six characters in length on a strip of magnetic tape embedded in a plastic card which identifies a user accessing a special-purpose computer. Abbreviated PIC.

personality disorder [PSYCH] Any of various disorders characterized by abnormal behavior rather than by neurotic, psychotic, or mental disturbances.

personal locator beacon [NAV] A locator beacon capable of providing homing signals to help search-and-rescue operations.

personal probability [STAT] A number between 0 and 1 assigned to an event based upon personal views concerning whether the event will occur or not; it is obtained by deciding whether one would accept a bet on the event at odds given by this number. Also known as subjective probability.

personnel carrier [ORD] A motor vehicle, sometimes armored, used for transportation of troops and their equipment.

personnel monitoring [NUCLEO] Determination of the degree of radioactive contamination on individuals, using standard survey meters, and determination of the dose received by means of dosimeters.

Persoz's reagent [MATER] Chemical reagent used to detect the presence of silk with wool (only silk dissolves); consists of zinc chloride and zinc oxide in water.

perspective [GRAPHICS] The technique representing a figure or the space relationships of natural objects, on either a plane or curved surface, by means of projecting lines emanating from a single point, which may be infinity.

perspective axis *See* axis of homology.

perspective center [GRAPHICS] The point of origin or termination of bundles of rays or projecting lines directed to a point object, for a photographic image or drawing, respectively.

perspective chart [MAP] A chart on a perspective projection.

perspective plane [GRAPHICS] Any plane containing the perspective center.

perspective projection [GRAPHICS] A projection of points by straight lines drawn through them from some given point to an intersection with the plane of projection.

perspiration [PHYSIO] **1.** The secretion of sweat. **2.** *See* sweat.

Pers sunshine recorder [ENG] A type of sunshine recorder in which the time scale is supplied by the motion of the sun.

persuader [ELECTR] Element of storage tube which directs secondary emission to electron multiplier dynodes.

persulfate [INORG CHEM] Salt derived from persulfuric acid and containing the radical $S_2O_8^{--}$; made by electrolysis of sulfate solutions.

persulfuric acid [INORG CHEM] $H_2S_2O_8$ Acid formed in lead-cell batteries by electrolyzing sulfuric acid; strong oxidizing agent.

PERT [SYS ENG] A management control tool for defining, integrating, and interrelating what must be done to accomplish a desired objective on time; a computer is used to compare current progress against planned objectives and give management the information needed for planning and decision making. Derived from program evaluation and review technique.

perthite [GEOL] A parallel to subparallel intergrowth of potassium and sodium feldspar; the potassium-rich phase is usually the host from which the sodium-rich phase evolves.

perthitic [GEOL] Of a texture produced by perthite, exhibiting sodium feldspar as small strings, blebs, films, or irregular veinlets in a host of potassium feldspar.

perthosite [PETR] A light-colored syenite composed almost entirely of perthite, with less than 3% mafic minerals.

pertinency factor [COMPUT SCI] In information retrieval, the ratio obtained in dividing the total number of relevant documents retrieved by the total number of documents retrieved.

perturbation [ASTRON] A deviation of an astronomical body from its computed orbit because of the attraction of another body or bodies. [MATH] A function which produces a small change in the values of some given function. [PHYS] Any effect which makes a small modification in a physical system, especially in case the equations of motion could be solved exactly in the absence of this effect.

perturbation equation [PHYS] Any equation governing the behavior of a perturbation; often this will be a linear differential equation.

perturbation motion [PHYS] The motion of a disturbance (usually but not necessarily assumed infinitesimal), as opposed to the motion of the system on which the perturbation is superimposed.

perturbation quantity [PHYS] Any characteristic of a system which may be assumed to be a perturbation from an established value.

perturbation theory [MATH] The study of the solutions of differential and partial differential equations from the viewpoint of perturbation of solutions. [PHYS] The theory of obtaining approximate solutions to the equations of motion of a physical system when these equations differ by a small amount from equations which can be solved exactly.

pertussis [MED] An infectious inflammatory bacterial disease of the air passages, caused by *Hemophilus pertussis* and characterized by explosive coughing ending in a whooping inspiration. Also known as whooping cough.

Peru balsam [MATER] A dark, viscous liquid with bitter taste and pleasant aroma; soluble in alcohol, ether, acetone, chloroform, benzene, and glacial acetic acid; derived from the tropical American tree *Myroxylon pereirae;* main components are esters of cinnamic and benzoic acids; used in perfumery, medicine, and chocolate manufacture. Also known as balsam of Peru; black balsam; China oil; Chinese oil; Indian balsam; Peruvian balsam.

Peru Current [OCEANOGR] The cold ocean current flowing north along the coasts of Chile and Peru. Also known as Humboldt Current.

Peru saltpeter *See* soda niter.

Peruvian balsam *See* Peru balsam.

perveance [ELECTR] The space-charge-limited cathode current of a diode divided by the 3/2 power of the anode voltage.

perviousness *See* permeability.

pessary [MED] An appliance of varied form placed in the vagina for uterine support or contraception. [PHARM] Any suppository or other form of medication placed in the vagina for therapeutic purposes.

pessulus [VERT ZOO] A bar composed of cartilage or bone that crosses the windpipe of a bird at its division into bronchi.

pesticide [MATER] A chemical agent that destroys pests. Also known as biocide.

pestilence [MED] **1.** Any epidemic contagious disease. **2.** Infection with the plague organism *Pasteurella pestis*.

peta- [SCI TECH] A prefix that represents 10^{15}. Abbreviated P.

petal [BOT] One of the sterile, leaf-shaped flower parts that make up the corolla.

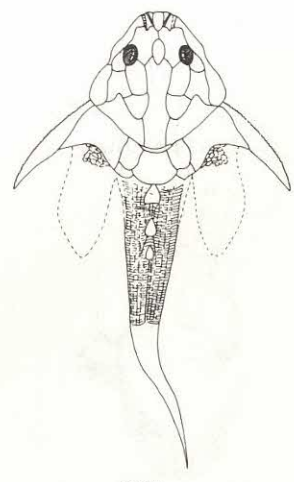
Petalichthyida [PALEON] A small order of extinct dorsoventrally flattened fishes belonging to the class Placodermi; the external armor is in two shields of large plates.

petaling [ORD] Condition of armor plate where the metal around the penetration is forced into a leaflike or petal form.

petalite [MINERAL] $LiAlSi_4O_{10}$ A white, gray, or colorless monoclinic mineral composed of silicate of lithium and aluminum, occurring in foliated masses or as crystals.

Petalodontidae [PALEON] A family of extinct cartilaginous fishes in the order Bradyodonti distinguished by teeth with deep roots and flattened diamond-shaped crowns.

PETALICHTHYIDA



Lunaspis broilii from the Lower Devonian of Germany; restoration in dorsal aspect. *(After Walter Gross)*

Petaluridae [INV ZOO] A family of dragonflies in the suborder Anisoptera.
petasma [INV ZOO] A modified endopodite of the first abdominal appendage in a male decapod crustacean.
petechiae [MED] Hemorrhages the size of the head of a pin.
peter out [ENG] To fail gradually in size, quantity, or quality; for example, a mine may be said to have petered out.
Petersen coil *See* arc-suppression coil.
Petersen grab [ENG] A bottom sampler consisting of two hinged semicylindrical buckets held apart by a cocking device which is released when the grab hits the ocean floor.
Peters' formula [STAT] An approximate formula for the probable error in the value of a quantity determined from several equally careful, independent measurements of the value of the quantity.
petiole [BOT] The stem which supports the blade of a leaf.
petitgrain oil [MATER] A yellowish oil extracted from the leaves and twigs of the bitter orange tree; soluble in 70% alcohol, ether, and chloroform; used in perfumes for soaps and skin cream, and for flavoring.
petit mal [MED] A generalized epileptic seizure of the absence type, that is, characterized by different degrees of impaired consciousness.
PETN *See* pentaerythritol tetranitrate.
petrel [VERT ZOO] A sea bird of the families Procellariidae and Hydrobatidae, generally small to medium-sized with long wings and dark plumage with white areas near the rump.
petri dish [MICROBIO] A shallow glass or plastic dish with a loosely fitting overlapping cover used for bacterial plate cultures and plant and animal tissue cultures.
petrifaction [GEOL] A fossilization process whereby inorganic matter dissolved in water replaces the original organic materials, converting them to a stony substance.
petrified wood *See* silicified wood.
Petriidae [INV ZOO] A small family of coleopteran insects in the superfamily Tenebrionoidea.
petrochemicals [ORG CHEM] Chemicals made from feedstocks derived from petroleum or natural gas; examples are ethylene, butadiene, most large-scale plastics and resins, and petrochemical sulfur. Also known as petroleum chemicals.
petrochemistry [GEOCHEM] An aspect of geochemistry that deals with the study of the chemical composition of rocks.
[ORG CHEM] The chemistry and reactions of materials derived from petroleum, natural gas, or asphalt deposits.
petrofabric *See* fabric.
petrofabric analysis *See* structural petrology.
petrofabric diagram *See* fabric diagram.
petrofabrics *See* structural petrology.
petrofacies *See* petrographic facies.
petrogenesis [PETR] That branch of petrology dealing with the origin of rocks, particularly igneous rocks. Also known as petrogeny.
petrogenic grid [PETR] A diagram whose coordinates are parameters of the rock-forming environment on which equilibrium curves are plotted indicating the limits of the stability fields of specific minerals and mineral assemblages.
petrogeny *See* petrogenesis.
petrogeometry *See* structural petrology.
petrographer [GEOL] An individual who does petrography.
petrographic facies [GEOL] Facies distinguished principally by composition and appearance. Also known as petrofacies.
petrographic microscope [OPTICS] A polarizing microscope used for analysis of petrographic thin sections.
petrographic period [GEOL] The extension in time of a rock association.
petrographic province [GEOL] A broad area in which similar igneous rocks are formed during the same period of igneous activity. Also known as comagmatic region; igneous province; magma province.
petrography [GEOL] The branch of geology that deals with the description and systematic classification of rocks, especially by means of microscopic examination.
petrol *See* gasoline.
petrolatum [MATER] A smooth, semisolid blend of mineral oil with waxes crystallized from the residual type of petroleum lubricating oil; the wax molecules contain 30–70 carbon atoms and are straight chains with a few branches or naphthene rings; used as a lubricant, as a carrier in polishes and cosmetics, and as a rust preventive.
petroleum [GEOL] A naturally occurring complex liquid hydrocarbon which after distillation yields combustible fuels, petrochemicals, and lubricants; can be gaseous (natural gas), liquid (crude oil, crude petroleum), solid (asphalt, tar, bitumen), or a combination of states.
petroleum asphalt [MATER] Asphalt recovered or made from petroleum.
petroleum benzin [MATER] Colorless, volatile, flammable, toxic petroleum distillate with boiling range of 35–80°C; a special grade is ligroin (petroleum ether; boiling range 20–135°C), used as an extractive solvent, especially for drugs. Also known as benzin; benzine (archaic usage).
petroleum chemicals *See* petrochemicals.
petroleum coke [MATER] A carbonaceous solid material made by the destructive heating of high-molecular-weight petroleum-refining residues.
petroleum engineer [PETRO ENG] An engineer whose primary objective is to find and produce oil or gas from petroleum reserves.
petroleum engineering [ENG] The application of almost all types of engineering to the drilling for and production of oil, gas, and liquefiable hydrocarbons.
petroleum ether [MATER] A volatile fraction of petroleum consisting chiefly of pentanes and hexanes. Also known as ligroin.
petroleum geology [GEOL] The branch of economic geology dealing with the origin, occurrence, movement, accumulation, and exploration of hydrocarbon fuels.
petroleum isomerization process [CHEM ENG] A fixed-bed, vapor-phase petroleum-refinery process using a precious-metal catalyst and external hydrogen; feedstocks include natural gas, pentane, and hexane cuts; the product is high-octane blending stock.
petroleum microbiology [MICROBIO] Those aspects of microbiological science and engineering of interest to the petroleum industry, including the role of microbes in petroleum formation, and the exploration, production, manufacturing, storage, and food synthesis from petroleum.
petroleum processing [CHEM ENG] The recovery and processing of various usable fractions from the complex crude oils; usable fractions include gasoline, kerosine, diesel oil, fuel oil, and asphalt. Also known as petroleum refining.
petroleum products [MATER] Materials derived from petroleum, natural gas, or asphalt deposits; includes gasolines, diesel and heating fuels, liquefied petroleum gases (LPG and bugas), lubricants, waxes, greases, petroleum coke, petrochemicals, and (from sour crudes and natural gases) sulfur.
petroleum refining *See* petroleum processing.
petroleum secondary engineering [PETRO ENG] The process of removing oil from its native reservoirs by the use of supplemental energies after the natural energies causing oil production have been depleted.
petroleum seep *See* oil seep.
petroleum sulfonates [MATER] Sulfonated petroleum products made as by-products of SO_3 treatment of white oil or lube-stock; used as lube-oil additives, textile-processing emulsifiers, and rust preventives.
petroleum tailings *See* wax tailings.
petroleum tar [MATER] A viscous, black or dark-brown product of petroleum refining; yields substantial quantity of solid residue when partly evaporated or fractionally distilled.
petroleum trap [GEOL] Stable underground formation (geological or physical) of such nature as to trap and hold liquid or gaseous hydrocarbons; usually consists of sand or porous rock surrounded by impervious rock or clay formations.
petroleum wax [MATER] A wax occurring naturally in various fractions of crude petroleum; there are two groups: paraffin wax and microcrystalline wax.
petroliferous [GEOL] Containing petroleum.
petrologen *See* kerogen.
petrologist [GEOL] An individual who studies petrology.
petrology [GEOL] The branch of geology concerned with the origin, occurrence, structure, and history of rocks, principally igneous and metamorphic rock.
petromict [GEOL] Of a sediment, composed of metastable rock fragments.
petromorph [GEOL] A speleothem or cave formation that is exposed to the surface by erosion of the limestone in which the cave was formed.
petromorphology *See* structural petrology.

Petromyzonida [VERT ZOO] The lampreys, an order of eellike, jawless vertebrates (Agnatha) distinguished by a single, dorsal nasal opening, and the mouth surrounded by an oral disk and provided with a rasping tongue.

Petromyzontiformes [VERT ZOO] The equivalent name for Petromyzonida.

petrophysics [GEOL] Study of the physical properties of reservoir rocks.

petrosal nerve [ANAT] Any of several small nerves passing through the petrous part of the temporal bone and usually attached to the geniculate ganglion.

petrosal process [ANAT] A sharp process of the sphenoid bone located below the notch for the passage of the abducens nerve, which articulates with the apex of the petrous portion of the temporal bone and forms the medial boundary of the foramen lacerum.

Petrosaviaceae [BOT] A small family of monocotyledonous plants in the order Triuridales characterized by perfect flowers, three carpels, and numerous seeds.

petrotectonics [GEOL] Extension of the field of structural petrology to include analysis of the movements that produced the rock's fabric. Also known as tectonic analysis.

petrous [MATER] Referring to a material whose hardness resembles that of stone.

Petterson-Nansen water bottle *See* Nansen bottle.

petticoat insulator [ELEC] Insulator having an outward-flaring lower part that is hollow inside to increase the length of the surface leakage path and keep part of the path dry at all times.

Pettit truss [CIV ENG] A bridge truss in which the panel is subdivided by a short diagonal and a short vertical member, both intersecting the main diagonal at its midpoint.

petzite [MINERAL] Ag_3AuTe_2 A steel-gray to iron-black mineral consisting of a silver gold telluride; hardness is 2.5–3 on Moh's scale, and specific gravity is 8.7–9.0.

Petzval condition [OPTICS] The condition whereby an optical system will eliminate the aberration of curvature of field only if the Petzval curvature vanishes.

Petzval curvature [OPTICS] The axial curvature of the image of a plane object produced by an optical system, equal to the sum over all the optical surfaces in the system of $R(1/n' - 1/n)$, where R is the curvature of the surface, and n and n' are the refractive indices before and after the surface. Also known as Petzval sum.

Petzval lens [OPTICS] A photographic objective which consists of four lenses ordered in two pairs widely separated from each other, with the first pair cemented together and the second usually having a small air space.

Petzval sum *See* Petzval curvature.

Petzval surface [OPTICS] A paraboloidal surface on which point images of point objects are formed by a doublet lens whose separation is such that astigmatism is eliminated.

peuroseite [MINERAL] $(Ni,Cu,Pb)Se_2$ A gray mineral composed of nickel copper lead selenide, occurring in columnar masses.

pewter [MET] An alloy that typically contained tin as the principal component and some antimony and copper; older produced pewter typically contains lead along with the other components.

Peyer's patches [HISTOL] Aggregates of lymph nodules beneath the epithelium of the ileum.

Peyronie's disease [MED] Scarring of the shaft of the penis; may interfere with normal erections.

pezograph *See* regmaglypt.

pf *See* power factor.

pF *See* picofarad.

Pfaffian differential equation [MATH] The first-order linear total differential equation $P(x,y,z)dx + Q(x,y,z)dy + R(x,y,z)dz = 0$, where the functions P, Q, and R are continuously differentiable.

PFE *See* photoferroelectric effect.

Pfeiffer's bacillus *See* Hemophilus influenzae.

Pfeiffer's disease *See* infectious mononucleosis.

PFM *See* pulse-frequency modulation.

Pfund series [SPECT] A series of lines in the infrared spectrum of atomic hydrogen whose wave numbers are given by $R_H[(1/25) - (1/n^2)]$, where R_H is the Rydberg constant for hydrogen, and n is any integer greater than 5.

PGA *See* folic acid.

PGR *See* precision depth recorder.

pH [CHEM] A term used to describe the hydrogen-ion activity of a system; it is equal to $-\log a_{H^+}$; here a_{H^+} is the activity of the hydrogen ion; in dilute solution, activity is essentially equal to concentration and pH is defined as $-\log_{10}[H^+]$, where $[H^+]$ is hydrogen-ion concentration in moles per liter; a solution of pH 0 to 7 is acid, pH of 7 is neutral, pH over 7 to 14 is alkaline.

phacella *See* gastric filament.

phacellite *See* kaliophilite.

phacolith [GEOL] A minor, concordant, lens-shaped, and usually granitic intrusion into folded sedimentary strata.

Phaenocephalidae [INV ZOO] A monospecific family of coleopteran insects in the superfamily Cucujoidea, found only in Japan.

Phaenothontidae [VERT ZOO] The tropic birds, a family of fish-eating aquatic forms in the order Pelecaniformes.

Phaeocoleosporae [MYCOL] A spore group of the Fungi Imperfecti with dark filiform spores.

Phaeodictyosporae [MYCOL] A spore group of the Fungi Imperfecti with dark muriform spores.

Phaeodidymae [MYCOL] A spore group of the Fungi Imperfecti with dark two-celled spores.

Phaeodorina [INV ZOO] The equivalent name for Tripylina.

Phaeohelicosporae [MYCOL] A spore group of the Fungi Imperfecti with dark, spirally coiled, septate spores.

Phaephragmiae [MYCOL] A spore group of the Fungi Imperfecti with dark three- to many-celled spores.

Phaeophyta [BOT] The brown algae, constituting a division of plants; the plant body is multicellular, varying from a simple filamentous form to a complex, sometimes branched body having a basal attachment.

Phaeosporae [MYCOL] A spore group of Fungi Imperfecti characterized by dark one-celled, nonfiliform spores.

Phaeostaurosporae [MYCOL] A spore group of the Fungi Imperfecti with dark star-shaped or forked spores.

phage *See* bacteriophage.

phage cross [VIROL] Multiple infection of a single bacterium by phages that differ at one or more genetic sites, leading to the production of recombinant progeny phage.

phagocyte [CYTOL] An ameboid cell that engulfs foreign material.

phagocytic vacuole *See* food vacuole.

phagocytin [BIOCHEM] A type of bactericidal agent present within phagocytic cells.

phagocytosis [CYTOL] A specialized form of macropinocytosis in which cells engulf large solid objects such as bacteria and deliver the internalized objects to special digesting vacuoles; exists in certain cell types, such as macrophages and neutrophils.

phagolysosome [CYTOL] An intracellular vesicle formed by fusion of a lysosome with a phagosome.

phagosome [CYTOL] A closed intracellular vesicle containing material captured by phagocytosis.

phagotroph [INV ZOO] An organism that ingests nutrients by phagocytosis.

Phalacridae [INV ZOO] The shining flower beetles, a family of coleopteran insects in the superfamily Cucujoidea.

Phalacrocoracidae [VERT ZOO] The cormorants, a family of aquatic birds in the order Pelecaniformes.

Phalaenidae [INV ZOO] The equivalent name for Noctuidae.

Phalangeridae [VERT ZOO] A family of marsupial mammals in which the marsupium is well developed and opens anteriorly, the hindfeet are syndactylous, and the hallux is opposable and lacks a claw.

Phalangida [INV ZOO] An order of the class Arachnida characterized by an unsegmented cephalothorax broadly joined to a segmented abdomen, paired chelate chelicerae, and paired palpi.

phalanx [ANAT] One of the bones of the fingers or toes.

Phalaropodidae [VERT ZOO] The phalaropes, a family of migratory shore birds characterized by lobate toes and by reversal of the sex roles with respect to dimorphism and care of the young.

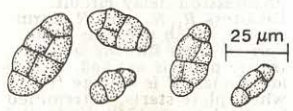
Phallostethidae [VERT ZOO] A family of actinopterygian fishes in the order Atheriniformes.

Phallostethiformes [VERT ZOO] An equivalent name for Atheriniformes.

phallotoxin [BIOCHEM] One of a group of toxic peptides produced by the mushroom *Amanita phalloides*.

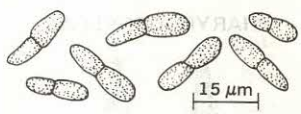
phallus [ANAT] *See* penis. [EMBRYO] An undifferentiated embryonic structure derived from the genital tubercle that differentiates into the penis in males and the clitoris in females.

PHAEODICTYOSPORAE



Characteristic dark muriform spores of *Stemphylium*, a member of the Phaeodictyosporae.

PHAEODIDYMAE

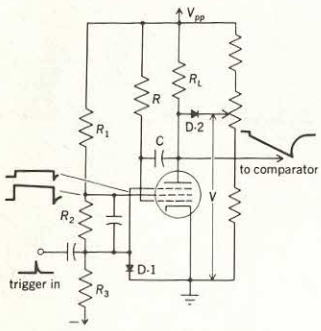


Characteristic spores of *Diplodia* in the Phaeodidymae.

PHALANGERIDAE

Hindfoot of *Trichosurus*, representing the five-toed, syndactylous condition (digits II and III are bound in one web of skin).

PHANTASTRON

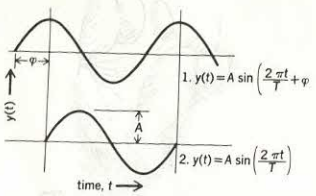


Circuit diagram of screen-coupled phantastron delay circuit. Resistors R_1, R_2, and R_3 form divider which prevents plate current from flowing before trigger pulse is applied. D-1, D-2 are diodes. V is voltage from which plate starts, determined by divider to which diode D-2 is connected. R_L = load resistor, V_{pp} = plate supply voltage.

PHARYNGOBDELLAE

Dorsal and ventral view of *Erpobdella punctato*, a jawless leech common in lakes and streams in the Northern Hemisphere.

PHASE ANGLE



An illustration of the meaning of phase for a sinusoidal wave, $y(t)$. The difference in phase between waves 1 and 2 is φ and is called the phase angle. For each wave, A is the amplitude and T is the period.

phanerite [PETR] An igneous rock having phaneritic texture.
phaneritic [PETR] Of the texture of an igneous rock, being visibly crystalline. Also known as coarse-grained; phanerocrystalline; phenocrystalline.
phanerocryst *See* phenocryst.
phanerocrystalline *See* phaneritic.
phanerophyte [ECOL] A perennial tree or shrub with dormant buds borne on aerial shoots.
Phanerorhynchidae [PALEON] A family of extinct chondrostean fishes in the order Palaeonisciformes having vertical jaw suspension.
Phanerozoic [GEOL] The part of geologic time for which there is abundant evidence of life, especially higher forms, in the corresponding rock, essentially post-Precambrian.
Phanerozonida [INV ZOO] An order of the Asteroidea in which the body margins are defined by two conspicuous series of plates and in which pentamerous symmetry is generally constant.
Phanodermatidae [INV ZOO] A family of free-living nematodes in the superfamily Enoploidea.
phanotron [ELECTR] A hot-filament diode rectifier tube utilizing an arc discharge in mercury vapor or an inert gas, usually xenon.
phantastran [ELECTR] A solid-state phantastron.
phantastron [ELECTR] A monostable pentode circuit used to generate sharp pulses at an adjustable and accurately timed interval after receipt of a triggering signal.
phantom [GEOL] A bed or member that is absent from a specific stratigraphic section but is usually present in a characteristic position in a sequence of similar geologic age. [NUCLEO] A volume of material approximating as closely as possible the density and effective atomic number of living tissue, used in biological experiments involving radiation. [PETR] *See* ghost.
phantom bottom [OCEANOGR] A false bottom indicated by an echo sounder, some distance above the actual bottom; such an indication, quite common in the deeper parts of the ocean, is due to large quantities of small organisms.
phantom circuit [COMMUN] A communication circuit derived from two other communication circuits or from one other circuit and ground, with no additional wire lines.
phantom-circuit loading coil [ELEC] Loading coil for introducing a desired amount of inductance into a phantom circuit, and a minimum amount of inductance into its constituent circuits.
phantom-circuit repeating coil [ELEC] Repeating coil used at a terminal of a phantom circuit, in the terminal circuit extending from the midpoints of the associated side-circuit repeating coils.
phantom crystal [CRYSTAL] A crystal containing an earlier stage of crystallization outlined by dust, minute inclusions, or bubbles. Also known as ghost crystal.
phantom group [ELEC] **1.** Group of four open-wire conductors suitable for the derivation of a phantom circuit. **2.** Three circuits which are derived from simplexing two physical circuits to form a phantom circuit.
phantom horizon [GEOL] In seismic reflection prospecting, a line constructed so that it is parallel to the nearest actual dip segment at all points along a profile.
phantom repeating coil [ELEC] A side-circuit repeating coil or a phantom-circuit repeating coil when discrimination between these two types is not necessary.
phantom signals [ELECTR] Signals appearing on the screen of a cathode-ray-tube indicator, the cause of which cannot readily be determined and which may be caused by circuit fault, interference, propagation anomalies, jamming, and so on.
phantom target *See* echo box.
Pharetronida [INV ZOO] An order of calcareous sponges in the subclass Calcinea characterized by a leuconoid structure.
pharmaceutical chemistry [CHEM ENG] The chemistry of drugs and of medicinal and pharmaceutical products.
pharmacodynamics [PHARM] The science that deals with the actions of drugs.
pharmacogenetics [GEN] The science of genetically determined variations in drug responses.
pharmacognosy [PHARM] The science of crude drugs.
pharmacokinetics [PHARM] The study of the way that drugs move through the body after they are swallowed or injected.
pharmacolite [MINERAL] $CaH(AsO_4)\cdot 2H_2O$ A white to grayish monoclinic mineral composed of hydrous acid arsenate of calcium, occurring in fibrous form.
pharmacologic pyrogen [PHARM] A naturally occurring pharmacologic agent, such as serotonin or a catecholamine that controls body temperature; it can cause fever when injected under experimental conditions.
pharmacology [CHEM] The science dealing with the nature and properties of drugs, particularly their actions.
pharmacophobia [PSYCH] Abnormal fear of medicine.
pharmacopoeia [PHARM] A book containing a selected list of medicinal substances and their dosage forms, providing also a description and the standards for purity and strength for each.
pharmacosiderite [MINERAL] $Fe_3(AsO_4)_2(OH)_3\cdot 5H_2O$ Green or yellowish-green mineral composed of a hydrous basic iron arsenate and commonly found in cubic crystals. Also known as cube ore.
pharmacotherapy [MED] The treatment of disease by means of drugs.
pharmacy [MED] **1.** The art and science of the preparation and dispensation of drugs. **2.** A place where drugs are dispensed.
pharyngeal aponeurosis [ANAT] The fibrous submucous layer of the pharynx.
pharyngeal bursa [EMBRYO] A small pit caudal to the pharyngeal tonsil, resulting from the ingrowth of epithelium along the course of the degenerating tip of the notochord of the vertebrate embryo.
pharyngeal cleft [EMBRYO] One of the paired open clefts on the sides of the embryonic pharynx between successive visceral arches in vertebrates.
pharyngeal plexus [ANAT] **1.** A nerve plexus innervating the pharynx. **2.** A plexus of veins situated at the side of the pharynx.
pharyngeal pouch [EMBRYO] One of the five paired saculations in the lateral aspect of the pharynx in vertebrate embryos. Also known as visceral pouch.
pharyngeal tonsil *See* adenoid.
pharyngeal tooth [VERT ZOO] A tooth developed on the pharyngeal bone in many fishes.
pharyngitis [MED] Inflammation of the pharynx.
Pharyngobdellae [INV ZOO] A family of leeches in the order Arhynchobdellae distinguished by the lack of jaws.
pharyngology [MED] The science of the pharyngeal mechanism, functions, and diseases.
pharyngoscope [MED] An instrument for examining the pharynx.
pharynx [ANAT] A chamber at the oral end of the vertebrate alimentary canal, leading to the esophagus.
phase [ASTRON] One of the cyclically repeating appearances of the moon or other orbiting body as seen from earth. [CHEM] Portion of a physical system (liquid, gas, solid) that is homogeneous throughout, has definable boundaries, and can be separated physically from other phases. [MATH] An additive constant in the argument of a trigonometric function. [MET] A constituent of an alloy that is physically distinct and is homogeneous in chemical composition. [PHYS] **1.** The fractional part of a period through which the time variable of a periodic quantity (alternating electric current, vibration) has moved, as measured at any point in time from an arbitrary time origin; usually expressed in terms of angular measure, with one period being equal to 360° or 2π radians. **2.** For a sinusoidally varying quantity, the phase (first definition) with the time origin located at the last point at which the quantity passed through a zero position from a negative to a positive direction. **3.** The argument of the trigonometric function describing the space and time variation of a sinusoidal disturbance, $y = A \cos[(2\pi/6)(x - vt)]$, where x and t are the space and time coordinates, v is the velocity of propagation, and 6 is the wavelength. [THERMO] The type of state of a system, such as solid, liquid, or gas.
phase advancer [ELEC] Phase modifier which supplies leading reactive volt-amperes to the system to which it is connected; may be either synchronous or asynchronous.
phase age *See* age of phase inequality.
phase-alternation line system [COMMUN] A color television system used in Europe, in which the phase of the color subcarrier is changed from scanning line to scanning line, requiring transmission of a line switching signal as well as a color burst. Abbreviated PAL system.
phase angle [PHYS] The difference between the phase of a

sinusoidally varying quantity and the phase of a second quantity which varies sinusoidally at the same frequency. Also known as phase difference.

phase-angle meter *See* phase meter.

phase-balance relay [ELEC] Relay which functions by reason of a difference between two quantities associated with different phases of a polyphase circuit.

phase behavior [PETRO ENG] The equilibrium relationships between water, liquid hydrocarbons, and dissolved or free gas, either in reservoirs or as liquids and gases are separated above ground in gas-oil separator systems.

phase boundary [PHYS] The interface between two or more separate phases, such as liquid-gas, liquid-solid, gas-solid, or, for immiscible materials, liquid-liquid or solid-solid.

phase change [PHYS] **1.** The metamorphosis of a material or mixture from one phase to another, such as gas to liquid, solid to gas. **2.** *See* phase shift.

phase-change coefficient *See* phase constant.

phase coherence [PHYS] The existence of a statistical or time coherence between the phases of two or more waves.

phase comparator [COMPUT SCI] A comparator that accepts two radio-frequency input signals of the same frequency and provides two video outputs which are proportional, respectively, to the sine and cosine of the phase difference between the two inputs.

phase-comparison relaying [ELEC] A method of detecting faults in an electric power system in which signals are transmitted from each of two terminals every half cycle so that a continuous signal is received at an intermediate point if there is no fault between the terminals, while a periodic signal is received if there is a fault.

phase conductor [ELEC] In a polyphase circuit, any conductor other than the neutral conductor.

phase conjugate system [OPTICS] An adaptive optics system in which the wavefront to be corrected is measured directly, using either a geometric or interferometric test.

phase constant [ELECTROMAG] A rating for a line or medium through which a plane wave of a given frequency is being transmitted; it is the imaginary part of the propagation constant, and is the space rate of decrease of phase of a field component (or of the voltage or current) in the direction of propagation, in radians per unit length. Also known as phase-change coefficient; wavelength constant.

phase-contrast microscope [OPTICS] A compound microscope that has an annular diaphragm in the front focal plane of the substage condenser and a phase plate at the rear focal plane of the objective, to make visible differences in phase or optical path in transparent or reflecting media.

phase control [ELECTR] **1.** A control that changes the phase angle at which the alternating-current line voltage fires a thyratron, ignitron, or other controllable gas tube. Also known as phase-shift control. **2.** *See* hue control.

phase converter [ELEC] A converter that changes the number of phases in an alternating-current power source without changing the frequency.

phase-correcting network *See* phase equalizer.

phase correction [COMMUN] Process of keeping synchronous telegraph mechanisms in substantially correct phase relationship.

phase crossover [CONT SYS] A point on the plot of the loop ratio at which it has a phase angle of 180°.

phased array [ELECTROMAG] An array of dipoles on a radar antenna in which the signal feeding each dipole is varied so that antenna beams can be formed in space and scanned very rapidly in azimuth and elevation.

phase delay [COMMUN] Ratio of the total phase shift (radians) of a sinusoidal signal in transmission through a system or transducer, to the frequency (radians/second) of the signal.

phase detector [ELECTR] A circuit that provides a direct-current output voltage which is related to the phase difference between an oscillator signal and a reference signal, for use in controlling the oscillator to keep it in synchronism with the reference signal. Also known as phase discriminator.

phase deviation [COMMUN] The peak difference between the instantaneous angle of a modulated wave and the angle of the sine-wave carrier.

phase diagram [MET] *See* constitution diagram. [PHYS CHEM] A graphical representation of the equilibrium relationships between phases (such as vapor-liquid, liquid-solid) of a chemical compound, mixture of compounds, or solution. [THERMO] **1.** A graph showing the pressures at which phase transitions between different states of a pure compound occur, as a function of temperature. **2.** A graph showing the temperatures at which transitions between different phases of a binary system occur, as a function of the relative concentrations of its components.

phase difference *See* phase angle.

phase discriminator *See* phase detector.

phase distortion [COMMUN] **1.** The distortion which occurs in an instrument when the relative phases of the input signal differ from those of the output signal. **2.** *See* phase-frequency distortion.

phase encoding [COMPUT SCI] A method of recording data on magnetic tape in which a logical 1 is defined as the transition from one magnetic polarity to another positioned at the center of the bit cell, and 0 is defined as the transition in the opposite direction, also at the center of the cell.

phase equalizer [ELECTR] A network designed to compensate for phase-frequency distortion within a specified frequency band. Also known as phase-correcting network.

phase equilibria [PHYS CHEM] The equilibrium relationships between phases (such as vapor, liquid, solid) of a chemical compound or mixture under various conditions of temperature, pressure, and composition.

phase excursion [COMMUN] In angle modulation, the difference between the instantaneous angle of the modulated wave and the angle of the carrier.

phase factor [ELEC] *See* power factor. [SOLID STATE] The argument (phase) of a structure factor; it cannot be directly observed.

phase-frequency distortion [COMMUN] Distortion occurring because phase shift is not proportional to frequency over the frequency range required for transmission. Also known as phase distortion.

phase front [PHYS] A surface of constant phase (or phase angle) of a propagating wave disturbance.

phase generator [ELECTR] An instrument that accepts single-phase input signals over a given frequency range, or generates its own signal, and provides continuous shifting of the phase of this signal by one or more calibrated dials.

phase inequality [OCEANOGR] Variations in the tide or tidal currents associated with changes in the phase of the moon.

phase integral *See* action.

phase integral method *See* Wentzel-Kramers-Brillouin method.

phase inversion [ELECTR] Production of a phase difference of 180° between two similar wave shapes of the same frequency.

phase inverter [ELECTR] A circuit or device that changes the phase of a signal by 180°, as required for feeding a push-pull amplifier stage without using a coupling transformer, or for changing the polarity of a pulse; a triode is commonly used as a phase inverter. Also known as inverter.

phase jitter [ELECTR] Jitter that undesirably shortens or lengthens pulses intermittently during data processing or transmission.

phase lag [OCEANOGR] Angular retardation of the maximum of a constituent of the observed tide behind the corresponding maximum of the same constituent of the hypothetical equilibrium tide. Also known as tidal epoch. [PHYS] *See* lag angle.

phase lead *See* lead angle.

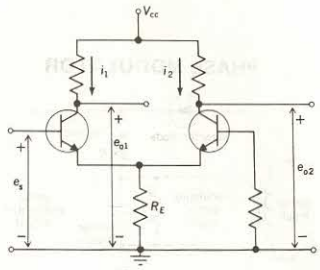
phase localizer [NAV] A localizer used by aircraft for landing guidance in which the on-course line is defined by the phase reversal of the emission from the side-band antenna system; phase is determined by comparison with a carrier signal which is transmitted for this purpose.

phase lock [ELECTR] Technique of making the phase of an oscillator signal follow exactly the phase of a reference signal by comparing the phases between the two signals and using the resultant difference signal to adjust the frequency of the reference oscillator.

phase-locked communication [COMMUN] A system in which oscillators at the receiver and transmitter are locked in phase, and intelligence is conveyed by phase shifts of the modulating signal.

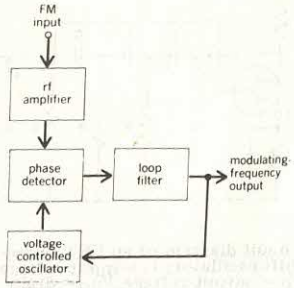
phase-locked loop [ELECTR] A circuit that consists essentially of a phase detector which compares the frequency of a voltage-controlled oscillator with that of an incoming carrier signal or reference-frequency generator; the output of the phase detector, after passing through a loop filter, is fed back to the

PHASE INVERTER



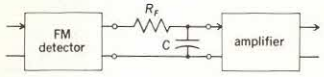
Circuit diagram for an emitter-coupled phase inverter. V_{CC} = collector supply voltage, e_S = input signal voltage. When emitter resistance R_E is much larger than impedance seen looking into the emitter of each transistor, current i_1 equals i_2, and output voltages e_{O1} and e_{O2} are equal and opposite, and therefore 180° out of phase.

PHASE-LOCKED LOOP



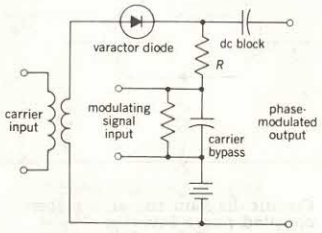
Basic configuration of phase-locked loop.

PHASE-MODULATION DETECTOR



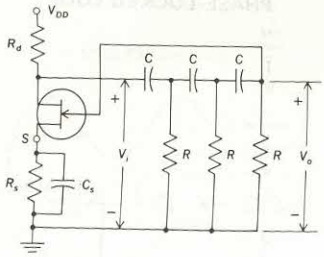
A resistance-capacitance filter used to convert a frequency-modulation detector into a phase-modulation detector.

PHASE MODULATOR



Circuit diagram for a simple phase modulator.

PHASE-SHIFT OSCILLATOR



Circuit diagram of an FET phase-shift oscillator; V_i = input voltage, V_o = output voltage, V_{DD} = drain supply voltage, R_d = drain resistor, S = source, R_s = source resistor, C_s = source capacitor.

voltage-controlled oscillator to keep it exactly in phase with the incoming or reference frequency. Abbreviated PLL.

phase-locked oscillator *See* parametron.

phase-locked subharmonic oscillator *See* parametron.

phase-locked system [ENG] A radar system, having a stable local oscillator, in which information regarding the target is gained by measuring the phase shift of the echo.

phase magnet [COMMUN] Magnetically operated latch used to phase a facsimile transmitter or recorder. Also known as trip magnet.

phase margin [CONT SYS] The difference between 180° and the phase of the loop ratio of a stable system at the gain-crossover frequency.

phase matching [OPTICS] A condition in which the polarization wave produced by two or more beams of incident radiation in a nonlinear medium has the same phase velocity as a freely propagating wave of the same frequency; the amplitude of the polarization wave is then greatly enhanced.

phase meter [ENG] An instrument for the measurement of electrical phase angles. Also known as phase-angle meter.

phase modifier [ELEC] Machine whose chief purpose is to supply leading or lagging reactive volt-amperes to the system to which it is connected; may be either synchronous or asynchronous.

phase modulation [COMMUN] A special kind of modulation in which the linearly increasing angle of a sine wave has added to it a phase angle that is proportional to the instantaneous value of the modulating wave (message to be communicated). Abbreviated PM.

phase-modulation detector [ELECTR] A device which recovers or detects the modulating signal from a phase-modulated carrier.

phase-modulation transmitter [ELECTR] A radio transmitter used to broadcast a phase-modulated signal.

phase modulator [ELECTR] An electronic circuit that causes the phase angle of a modulated wave to vary (with respect to an unmodulated carrier) in accordance with a modulating signal.

phase plane analysis [CONT SYS] A method of analyzing systems in which one plots the time derivative of the system's position (or some other quantity characterizing the system) as a function of position for various values of initial conditions.

phase plate [OPTICS] In a polarizing microscope, a plate of doubly refracting material that changes the relative phase of the polarized light's components.

phase portrait [CONT SYS] A graph showing the time derivative of a system's position (or some other quantity characterizing the system) as a function of position for various values of initial conditions.

phase quadrature *See* quadrature.

phaser [COMMUN] Facsimile device for adjusting equipment so the recorded elemental area bears the same relation to the record sheet as the corresponding transmitted elemental area bears to the subject copy in the direction of the scanning line. [ELECTROMAG] Microwave ferrite phase shifter employing a longitudinal magnetic field along one or more rods of ferrite in a waveguide.

phase resonance [PHYS] The frequency at which the angular phase difference between the fundamental components of an oscillation and of the applied agency is 90° ($\pi/2$ radians). Also known as velocity resonance.

phase response [ELECTR] A graph of the phase shift of a network as a function of frequency.

phase reversal [PHYS] A change of 180°, or one half-cycle, in phase.

phase reversal modulation [COMMUN] Form of pulse modulation in which reversal of signal phase serves to distinguish between the two binary states used in data transmission.

phase-rotation relay *See* phase-sequence relay.

phase-sequence relay [ELEC] Relay which functions according to the order in which the phase voltages successively reach their maximum positive values. Also known as phase-rotation relay.

phase shift [ELECTR] The phase angle between the input and output signals of a network or system. [PHYS] **1.** A change in the phase of a periodic quantity. Also known as phase change. **2.** A change in the phase angle between two periodic quantities. [QUANT MECH] For a partial wave of a particle scattered by a spherically symmetric potential, the phase shift is the difference between the phase of the wave function far from the scatterer and the corresponding phase of a free particle.

phase-shift circuit [ELECTR] A network that provides a voltage component which is shifted in phase with respect to a reference voltage.

phase-shift control *See* phase control.

phase-shift discriminator [ELECTR] A discriminator that uses two similarly connected diodes, fed by a transformer that is tuned to the center frequency; when the frequency-modulated or phase-modulated input signal swings away from this center frequency, one diode receives a stronger signal than the other; the net output of the diodes is then proportional to the frequency displacement. Also known as Foster-Seeley discriminator.

phase shifter [ELEC] A device used to change the phase relation between two alternating-current values.

phase-shifting transformer [ELEC] A transformer which produces a difference in phase angle between two circuits.

phase-shift keying [COMMUN] A form of phase modulation in which the modulating function shifts the instantaneous phase of the modulated wave between predetermined discrete values. Abbreviated PSK.

phase-shift mutation *See* frameshift mutation.

phase-shift oscillator [ELECTR] An oscillator in which a network having a phase shift of 180° per stage is connected between the output and the input of an amplifier.

phase solubility [PHYS CHEM] The different solubilities of a sample's solid constituents (phases) in a selected solvent.

phase-solubility analysis [ANALY CHEM] Solvent technique used to determine the amount and number of components in a solid substance; the weight of sample added to the solvent is plotted against the weight of sample dissolved, with breakpoints in the curve occurring with each progressive saturation of the solvent with respect to each of the components; can be combined with extraction and recrystallization procedures.

phase space [MATH] In a dynamical system or transformation group, this is the topological space whose points are being moved about by the given transformations. [STAT MECH] For a system with n degrees of freedom, a euclidean space with $2n$ dimensions, one dimension for each of the generalized coordinates and one for each of the corresponding momenta.

phase speed *See* phase velocity.

phase splitter [ELECTR] A circuit that takes a single input signal voltage and produces two output signal voltages 180° apart in phase.

phase stability [NUCLEO] A principle governing the stability of motion of particles in a synchrotron; the charged particle must be accelerated in each cycle at a time slightly earlier than the peak value of the accelerating potential.

phase titration [ANALY CHEM] Analysis of a binary mixture of miscible liquids by titrating with a third liquid that is miscible with only one of the components, using the ternary phase diagram to determine the end point.

phase transformation [ELEC] A change of polyphase power from three-phase to six-phase, from three-phase to twelve-phase, and so forth, by use of transformers. [PHYS] *See* phase transition.

phase transition [PHYS] A change of a substance from one phase to another. Also known as phase transformation.

phase undervoltage relay [ELEC] Relay which functions by reason of the reduction of one phase voltage in a polyphase circuit.

phase velocity [PHYS] The velocity of a point that moves with a wave at constant phase. Also known as celerity; phase speed; wave celerity; wave speed; wave velocity.

Phasianidae [VERT ZOO] A family of game birds in the order Galliformes; typically, members are ground feeders, have bare tarsi and copious plumage, and lack feathers around the nostrils.

phasing *See* framing.

phasing line [ELECTR] That portion of the length of scanning line set aside for the phasing signal in a television or facsimile system.

phasing signal [ELECTR] A signal used to adjust the picture position along the scanning line in a facsimile system.

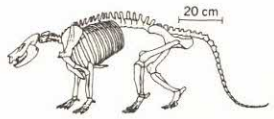
phasitron [ELECTR] An electron tube used to frequency-modulate a radio-frequency carrier; internal electrodes are designed to produce a rotating disk-shaped corrugated sheet of electrons; audio input is applied to a coil surrounding the glass envelope of the tube, to produce a varying axial magnetic field that gives the desired phase or frequency modulation of the rf carrier input to the tube.

phasmajector *See* monoscope.
phasmid [INV ZOO] One of a pair of lateral caudal pores which function as chemoreceptors in certain nematodes.
Phasmidae [INV ZOO] A family of the insect order Orthoptera including the walking sticks and leaf insects.
Phasmidea [INV ZOO] An equivalent name for Secernentea.
Phasmidia [INV ZOO] An equivalent name for Secernentea.
phasor [PHYS] **1.** A rotating line used to represent a sinusoidally varying quantity; the length of the line represents the magnitude of the quantity, and its angle with the x-axis at any instant represents the phase. **2.** Any quantity (such as impedance or admittance) which is a complex number. [SOLID STATE] A low-energy collective excitation of the conduction electrons in a metal, corresponding to a slowly varying phase modulation of a charge-density wave.
phasotron *See* cyclotron.
pheasant [VERT ZOO] Any of various large sedentary game birds with long tails in the family Phasianidae; sexual dimorphism is typical of the group.
pH electrode [ANALY CHEM] Membrane-type glass electrode used as the hydrogen-ion sensor of most pH meters; the pH-response electrode surface is a thin membrane made of a special glass.
α-phellandrene [ORG CHEM] $C_{10}H_{16}$ A colorless oil soluble in ether; boiling point of *d*-optical isomer is 66–68°C, of *l*-optical isomer is 58–59°C; used in flavoring and perfumes.
phellem [BOT] Cork; the outer tissue layer of the periderm.
phelloderm [BOT] Layers of parenchymatous cells formed as inward derivatives of the phellogen.
phellogen [BOT] The meristematic portion of the periderm, consisting of one layer of cells that initiate formation of the cork and secondary cortex tissue.
phenacaine hydrochloride [PHARM] White crystals with a slight bitter taste and a melting point of 190°C; soluble in boiling water, chloroform, and alcohol; used in medicine.
phenacemide [PHARM] $C_6H_5CH_2CONHCONH_2$ A white to cream-colored, crystalline solid with a melting point of 212–216°C; soluble in chloroform, benzene, ether, and alcohol; used in medicine. Also known as phenylacetylurea.
phenacetin *See* acetophenetidin.
phenacite *See* phenakite.
Phenacodontidae [PALEON] An extinct family of large herbivorous mammals in the order Condylarthra.
phenacyl chloride *See* chloroacetophenone.
phenakite [MINERAL] Be_2SiO_4 A colorless, white, wine-yellow, pink, blue, or brown glassy mineral that crystallizes in the rhombohedral system; used as a minor gemstone. Also spelled phenacite.
phenanthrene [ORG CHEM] $C_{14}H_{10}$ A colorless, crystalline hydrocarbon; melts at about 100°C; the nucleus is produced by the degradation of certain alkaloids; used in the synthesis of dyes and drugs.
phenanthroline [ORG CHEM] $C_{12}H_8N_2$ Any of three nitrogen bases related to phenanthrene; the ortho form is an oxidation-reduction indicator, turning faint blue when oxidized.
phenanthroline indicator [ANALY CHEM] A sensitive, red-colored specific reagent for iron. Also known as bathophenanthroline; 4, 7-diphenyl-1,10-phenanthroline.
phenarsazine chloride [ORG CHEM] $C_{12}H_9AsClN$ A yellow, crystalline compound obtained as a precipitate from carbon tetrachloride solutions; it sublimes readily, and is slightly soluble in xylene, benzene, and carbon tetrachloride; used as a war gas. Also known as adamsite; 10-chloro-5,10-dihydrophenarsazine.
phenazine [ORG CHEM] $C_6H_4N_2C_6H_4$ Yellow crystals, melting at 170°C; slightly soluble in water, soluble in alcohol and ether; used as chemical intermediate and to make dyes. Also known as azophenylene.
phencapton [ORG CHEM] $C_{11}H_{15}Cl_2PS_3$ An amber oil that decomposes on boiling; insoluble in water; used as a miticide. Also known as *O*,*O*-diethyl *S*-(2,5-dichlorophenylthiomethyl)phosphorodithioate.
phenethyl acetate [ORG CHEM] $C_6H_5CH_2CH_2OOCCH_3$ A colorless liquid with a peachlike odor and a boiling point of 226°C; soluble in alcohol, ether, and fixed oils; used in perfumes. Also known as phenylethyl acetate.
phenethyl alcohol [ORG CHEM] $C_8H_{10}O$ A liquid with a floral odor found in many natural essential oils; soluble in 50% alcohol; used in perfumes and flavors, and in medicine as an antibacterial agent in diseases of the eye. Also known as benzyl carbinol; 2-phenylethanol; β-phenylethyl alcohol.
***sec*-phenethyl alcohol** *See* α-methylbenzyl alcohol.
phenethyl isobutyrate [ORG CHEM] $(CH_3)2CHCOOC_2H_4C_6H_5$ A colorless liquid, soluble in alcohol and ether; used in perfumes and flavoring. Also known as phenylethyl isobutyrate.
phenetidine [ORG CHEM] $NH_2C_6H_4OC_2H_5$ Either of two toxic, oily liquids that darken when exposed to light and air; soluble in alcohol, insoluble in water; the ortho form boils at 228–230°C, is used to make dyes, and is also known at 2-aminophenetole; the para form boils at 253–255°C, is used to make dyes and in pharmaceuticals, and is also known as 4-aminophenetole.
Phengodidae [INV ZOO] The fire beetles, a New World family of coleopteran insects in the superfamily Cantharoidea.
phengophobia [PSYCH] An abnormal fear of daylight.
phenicochroite *See* phoenicochroite.
phenindione [PHARM] $C_{15}H_{10}O_2$ Pale yellow crystals, soluble in alcohol, ether, acetone, and benzene; used as an anticoagulant. Also known as 2-phenyl-1,3-indanedione.
pheniramine maleate [PHARM] $C_{16}H_{20}N_2 \cdot C_4H_4O_4$ A white, crystalline powder with a melting point of 104–108°C; soluble in alcohol and water; used as an antihistamine. Also known as prophenpyridamine maleate.
phenmedipham [ORG CHEM] $C_{16}H_{16}O_4N_2$ A colorless solid that melts at 143–144°C; used in an emulsifiable concentrate form as a preemergent herbicide for weeds in beet crops. Also known as *meta*-methylcarbanilate; methyl-*meta*-hydroxycarbanilate.
phenobarbital [PHARM] $C_{12}H_{12}N_2O_3$ A crystalline compound, 5-ethyl-5-phenylbarbituric acid, with a slightly bitter taste, melting at 174–178°C; soluble in water, alcohol, chloroform, and ether; used in medicine as a long-acting sedative, anticonvulsant, and hypnotic. Also known as phenobarbitone; phenylethylmalonylurea.
phenobarbitone *See* phenobarbital.
phenoclastic rock [PETR] A nonuniformly sized clastic rock containing phenoclasts.
phenoclasts [PETR] The larger, conspicuous fragments in a sediment or sedimentary rock, such as cobbles in a conglomerate.
phenocoll hydrochloride [PHARM] $C_2H_5OC_6H_4NHCOCH_2NH_2 \cdot HCl$ A white, crystalline powder with a melting point of 95°C; soluble in warm alcohol and in water; used in medicine. Also known as aminoacetophenetidide hydrochloride; glycocoll-*para*-phenetidine hydrochloride.
phenocopy [GEN] The nonhereditary alteration of a phenotype to a form imitating a mutant trait; caused by external conditions during development.
phenocryst [PETR] A large, conspicuous crystal in a porphyritic rock. Also known as phanerocryst.
phenocrystalline *See* phaneritic.
phenogenetics [GEN] The study of the phenotypic effects of the genetic material. Also known as physiological genetics.
phenol [ORG CHEM] **1.** C_6H_5OH White, poisonous, corrosive crystals with sharp, burning taste; melts at 43°C, boils at 182°C; soluble in alcohol, water, ether, carbon disulfide, and other solvents; used to make resins and weed killers, and as a solvent and chemical intermediate. Also known as carbolic acid; phenylic acid. **2.** A chemical compound based on the substitution product of phenol, for example, ethylphenol ($C_2H_4C_4H_5OH$), the ethyl substitute of phenol.
phenolate process [CHEM ENG] A process which employs sodium phenolate to remove hydrogen sulfide from gas.
phenol coefficient [ANALY CHEM] Number scale for comparison of antiseptics, using the efficacy of phenol as unity.
phenol-coefficient method [CHEM] A method for evaluating water-miscible disinfectants in which a test organism is added to a series of dilutions of the disinfectant; the phenol coefficient is the number obtained by dividing the greatest dilution of the disinfectant killing the test organism by the greatest dilution of phenol showing the same result.
β-phenoldiazine *See* phthalazine.
phenol extraction [CHEM ENG] Petroleum-refinery solvent-extraction process using phenol as the solvent to remove aromatic, unsaturated and naphthenic constituents from lubricating-oil stocks.
phenol-formaldehyde resin [ORG CHEM] Thermosetting resin made by the reaction of phenol and formaldehyde; has

PHASMIDAE

Walking stick (*Diapheromera femorata*). (*From Illinois Natural History Survey*)

PHENACODONTIDAE



Skeleton of *Ectoconus*, an early Paleocene phenacodont condylarth. (*After G. G. Simpson*)

good strength and chemical resistance and low cost; used as a molding material for mechanical and electrical parts. Originally known as Bakelite.

phenol-furfural resin [ORG CHEM] A phenolic resin characterized by the ability to be fabricated by injection molding since it hardens after curing conditions are reached.

phenolic laminate [MATER] Canvas, linen, kraft paper, glass fiber, or other substrate impregnated with 30% or more of thermosetting phenolic resin and cured; used for structural, mechanical, and electrical purposes.

phenolic plastic [MATER] A thermosetting plastic material available in many combinations of phenol and formaldehyde, often with added fillers to provide a broad range of physical, electrical, chemical, and molding properties.

phenology [CLIMATOL] The science which treats of periodic biological phenomena with relation to climate, especially seasonal changes; from a climatologic viewpoint, these phenomena serve as bases for the interpretation of local seasons and the climatic zones, and are considered to integrate the effects of a number of bioclimatic factors.

phenolphthalein [ORG CHEM] $(C_6H_4OH)_2COC_6H_4CO$ Pale-yellow crystals; soluble in alcohol, ether, and alkalies, insoluble in water; used as an acid-base indicator (carmine-colored to alkalies, colorless to acids) for titrations, as a laxative and dye, and in medicine.

phenol process [CHEM ENG] A single-solvent petroleum-refining process in which phenol is the selective solvent.

phenol red *See* phenolsulfonphthalein.

phenolsulfonephthalein [ORG CHEM] $C_{19}H_{14}O_5S$ A bright-red, crystalline compound, soluble in water, alcohol, and acetone; used as a pH indicator, and to test for kidney function in dogs. Also known as phenol red.

phenolsulfonic acid [ORG CHEM] $C_6H_5SO_3H$ Water- and alcohol-soluble mixture of *ortho-* and *para*-phenolsulfonic acids; yellowish liquid that turns brown when exposed to air; used as a chemical intermediate and in water analysis. Also known as sulfocarbolic acid.

phenomenal gem [LAP] A gemstone exhibiting an optical phenomenon, such as asterism, chatoyancy, or play of color.

phenoplast [PETR] A large rock fragment in a rudaceous rock that was plastic at the time of its incorporation into the matrix.

phenothiazine [ORG CHEM] $C_{12}H_9N$ A yellow, crystalline compound, forming rhomboid leaflets or diamond-shaped plates, obtained from toluene or butanol solution; soluble in hot acetic acid, benzene, and ether; used as an insecticide and in pharmaceutical manufacture. Also known as dibenzothiazine; thiophenylamine.

phenotole [ORG CHEM] $C_6H_5OC_2H_5$ Combustible, colorless liquid, boiling at 172°C; soluble in alcohol and ether, insoluble in water.

phenotype [GEN] The observable characters of an organism.

phenotypic lag [GEN] Delay in the expression of a newly acquired character.

phenoxyacetic acid [ORG CHEM] $C_6H_5OCH_2COOH$ A light tan powder with a melting point of 98°C; soluble in ether, water, carbon disulfide, methanol, and glacial acetic acid; used in the manufacture of pharmaceuticals, pesticides, fungicides, and dyes.

phenoxybenzamine hydrochloride [ORG CHEM] $C_{18}H_{22}ONCl \cdot HCl$ White crystals, slightly soluble in water, melting at 139°C; used in medicine.

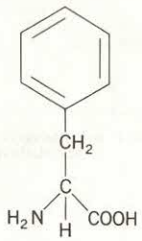
2-phenoxyethanol [ORG CHEM] $C_6H_5OCH_2CH_2OH$ An oily liquid with a faint aromatic odor; melting point is 14°C; soluble in water; used in perfumes as a fixative, in organic synthesis, as an insect repellent, and as a topical anesthetic. Also known as ethylene glycol monophenyl ether; β-hydroxyethylphenyl ether; 1-hydroxy-2-phenoxyethane.

phenoxymethylpenicillin [PHARM] $C_{16}H_{18}N_2O_5S$ A white, crystalline powder, soluble in alcohol and acetone; used as an oral antibiotic. Also known as penicillin V.

phenoxypropanediol [ORG CHEM] $C_9H_{12}O_3$ A white, crystalline solid with a melting point of 53°C; soluble in water, alcohol, glycerin, and carbon tetrachloride; used in medicine and as a plasticizer.

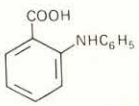
phenoxy resin [ORG CHEM] A high-molecular-weight thermoplastic polyether resin based on bisphenol-A and epichlorohydrin with bisphenol-A terminal groups; used for injection molding, extrusion, coatings, and adhesives.

PHENYLALANINE



Structural formula.

N-PHENYLANTHRANILIC ACID



Structural formula.

phenthoate [ORG CHEM] $C_{12}H_{17}O_4PS_2$ A reddish yellow liquid; melting point is 17.5°C; used to control pests on rice, cotton, vegetables, and fruit, and to control mosquitoes. Also known as *O,O*-dimethyl-*S*-(α-ethoxycarbonylbenzyl)phosphorodithioate.

phentolamine hydrochloride [ORG CHEM] $C_{17}H_{19}ON_3 \cdot HCl$ White, water-soluble crystals, melting at 240°C; a sympatholytic; used in medicine.

phentriazophos [ORG CHEM] $C_{12}H_{15}N_3O_3PS$ A pale yellow liquid that decomposes before boiling; used as an insecticide, miticide, and nematicide for vegetable and food crops. Also known as 1-phenyl-3-(*O,O*-diethylthionophosphoryl)-1,2,4-triazole; triazophos.

phenyl [ORG CHEM] $C_6H_5—$ A functional group consisting of a benzene ring from which a hydrogen has been removed.

phenylacetaldehyde [ORG CHEM] C_8H_8O A colorless liquid with a boiling point of 193–194°C; soluble in ether and fixed oils; used in perfumes and flavoring. Also known as α-toluic aldehyde.

***N*-phenylacetamide** *See* acetanilide.

phenylacetic acid [ORG CHEM] $C_8H_8O_2$ White crystals with a boiling point of 262°C; soluble in alcohol and ether; used in perfumes, medicine, and flavoring and in the manufacture of penicillin. Also known as α-toluic acid.

phenylacetonitrile *See* benzyl cyanide.

phenylacetylurea *See* phenacemide.

phenylacrolein *See* cinnamaldehyde.

β-phenylacrylic acid *See* cinnamic acid.

phenylacrylyl chloride *See* cinnamoyl chloride.

phenylalanine [BIOCHEM] $C_9H_{11}O_2N$ An essential amino acid, obtained in the levo form by hydrolysis of proteins (as lactalbumin); converted to tyrosine in the normal body. Also known as α-aminohydrocinnamic acid; α-amino-β-phenylpropionic acid; β-phenylalanine.

β-phenylalanine *See* phenylalanine.

phenylallylic alcohol *See* cinnamic alcohol.

phenylaniline *See* diphenylamine.

***N*-phenylanthranilic acid** [ORG CHEM] $(C_6H_5NH)C_6H_4COOH$ A crystalline compound, soluble in hot alcohol; decomposes at 183–184°C; used to detect vanadium in steel. Also known as 2-anilinobenzoic acid; diphenylamine-2-carboxylic acid.

phenylbenzene *See* biphenyl.

2-phenyl-3,1-benzoxazinone-(4) [ORG CHEM] $C_{14}H_9NO_2$ A white solid with a melting point of 123–124°C; solubility in water is 5–6 parts per million at 20°C; used as a postemergence herbicide. Also known as bentranil.

phenyl benzoyl carbinol *See* benzoin.

phenylbutazone [ORG CHEM] $C_{19}H_{20}O_2N_2$ White or light-yellow powder with aromatic aroma and bitter taste; melts at 107°C; slightly soluble in water, soluble in acetone; used in medicine as an analgesic and antipyretic. Also known as butazolidine; 4-butyl-1,2-diphenyl-3,5-pyrazolindinedione.

phenylchloroform *See* benzotrichloride.

phenyl cyanide *See* benzonitrile.

phenylcyclohexane [ORG CHEM] $C_{12}H_{16}$ A colorless, oily liquid with a boiling point of 237.5°C; soluble in alcohol, benzene, castor oil, carbon tetrachloride, xylene, and hexane; used as a high-boiling solvent and a penetrating agent. Also known as cyclohexylbenzene.

phenyldichloroarsine [ORG CHEM] $C_6H_5AsCl_2$ A liquid which becomes a microcrystalline mass at −20°C (melting point) and decomposes in water; soluble in alcohol, ether, and benzene; used as a poison gas.

phenyl 5,6-dichloro-2-trifluoromethyl-1-benzimidazole carboxylate *See* fenazaflor.

1-phenyl-3-(*O,O*-diethylthionophosphoryl)-1,2,4-triazole *See* phentriazophos.

phenyl diglycol carbonate [ORG CHEM] $C_{18}H_{18}O_7$ A colorless solid with a melting point of 40°C; soluble in organic solvents; used as a plasticizer.

3-phenyl-1,1-dimethylurea *See* fenuron.

3-phenyl-1,1-dimethylurea trichloroacetate *See* fenuron-TCA.

phenylene blue *See* indamine.

phenylenediamine [ORG CHEM] $C_6H_4(NH_2)_2$ Also known as diaminobenzene. Any of three toxic isomeric crystalline compounds that are diamino derivatives of benzene; the ortho form, toxic colorless crystals melting at 102–104°C and soluble in alcohol, ether, water, and chloroform, is used to

manufacture dyes, in photographic developers, and as a chemical intermediate, and is also known as *ortho*-diaminobenzene, orthamine; the meta form, colorless crystals unstable in air, melting at 63°C, and soluble in alcohol, ether, and water, is used to manufacture dyes, in textile dyeing, and as a nitrous acid detector; the para form, white to purple crystals melting at 147°C, soluble in alcohol and ether, and irritating to the skin, is used to manufacture dyes, in chemical analysis, and in photographic developers, and is also known as *para*-diaminobenzene.

phenylephrine [PHARM] $C_9H_{13}NO_2$ A sympathomimetic amine, used in its hydrochloride salt form as a vasoconstrictor.

2-phenylethanol *See* phenethyl alcohol.

phenyl ether *See* diphenyl oxide.

phenylethyl acetate *See* phenethyl acetate.

β-phenylethyl alcohol *See* phenethyl alcohol.

phenylethyl carbinol *See* phenylpropyl alcohol.

phenylethylene *See* styrene.

phenylethyl isobutyrate *See* phenethyl isobutyrate.

phenylethylmalonylurea *See* phenobarbital.

phenyl fluoride *See* fluorobenzene.

***N*-phenylglycine** [ORG CHEM] $C_6H_5NHCH_2COOH$ A crystalline compound, moderately soluble in water, melting at 127–128°C; used in dye manufacture (indigo). Also known as anilinoacetic acid.

phenylglycolic acid *See* mandelic acid.

phenylglyoxylonitriloxime *O,O*-diethyl phosphorothioate [ORG CHEM] $(H_5C_2O)_2PSONCCNC_6H_5$ A yellow liquid with a boiling point of 102°C at 0.01 mmHg (1.333 newtons per square meter); solubility in water is 7 parts per million at 20°C; used as an insecticide for stored products. Also known as phoxim.

phenylhydrazine [ORG CHEM] $C_6H_5NHNH_2$ Poisonous, oily liquid, boiling at 244°C; soluble in alcohol, ether, chloroform, and benzene, slightly soluble in water; used in analytical chemistry to detect sugars and aldehydes, and as a chemical intermediate. Also known as hydrazinobenzene.

α-phenylhydroxyacetic acid *See* mandelic acid.

2-phenyl-1,3-indanedione *See* phenindione.

phenyl isothiocyanate *See* phenyl mustard oil.

phenyl ketone *See* benzophenone.

phenylketonuria [MED] A hereditary disorder of metabolism, transmitted as an autosomal recessive, in which there is a lack of the enzyme phenylalanine hydroxylase, resulting in excess amounts of phenylalanine in the blood and of excess phenylpyruvic and other acids in the urine. Abbreviated PKU. Also known as phenylpyruvic oligophrenia.

phenyl mercaptan *See* thiophenol.

phenylmercuric acetate [ORG CHEM] $C_8H_8O_2Hg$ White to cream-colored prisms with a melting point of 148–150°C; soluble in alcohol, benzene, and glacial acetic acid; used as an antiseptic, fungicide, herbicide, and mildewcide.

phenylmercuric chloride [ORG CHEM] C_6H_5HgCl White crystals with a melting point of 251°C; soluble in benzene and ether; used as an antiseptic and fungicide.

phenylmercuric hydroxide [ORG CHEM] C_6H_5HgOH White to cream-colored crystals with a melting point of 197–205°C; soluble in acetic acid and alcohol; used as a fungicide, germicide, and alcohol denaturant.

phenylmercuric oleate [ORG CHEM] $C_{41}H_{21}O_2Hg$ A white, crystalline powder with a melting point of 45°C; soluble in organic solvents; used in paints as a mildewproofing agent, and as a fungicide.

phenylmercuric propionate [ORG CHEM] $C_9H_{10}O_2Hg$ A white, waxlike powder with a melting point of 65–70°C; used in paints as a fungicide and bactericide.

phenylmercuriethanolammonium acetate [ORG CHEM] $C_{10}H_{15}O_3NHg$ A white, water-soluble, crystalline solid; used as an insecticide and fungicide.

phenylmethane *See* toluene.

phenylmethanol *See* benzyl alcohol.

phenylmethyl acetate *See* benzyl acetate.

phenylmethylcarbinol *See* α-methylbenzyl alcohol.

phenylmethylcarbinyl acetate *See* α-methylbenzyl acetate.

phenyl methyl ketone *See* acetophenone.

***N*-phenylmorpholine** [ORG CHEM] $C_{10}H_{13}NO$ A white, water-soluble solid with a melting point of 57°C; used in the manufacture of dyestuffs, corrosion inhibitors, and photographic developers, and as an insecticide.

phenyl mustard oil [ORG CHEM] C_6H_5NCS A pale yellow or colorless liquid with a boiling point of 221°C; soluble in alcohol and ether; used in medicine. Also known as phenyl isothiocyanate; phenylthiocarbonimide; thiocarbanil.

α-phenyl phenacyl *See* desyl.

phenylphenol [ORG CHEM] $C_6H_5C_6H_4OH$ Almost white crystals, soluble in alcohol, insoluble in water; the ortho form, melting at 56–58°C, is used to manufacture dyes, as germicide and fungicide, and in the rubber industry, and is also known as 2-hydroxybiphenyl, *ortho*-xenol; the para form, melting at 164–165°C, is used to manufacture dyes, resins, and rubber chemicals, and as a fungicide, and is also known as *para*-hydroxydiphenyl, *para*-xenol.

phenylphosphoric acid *See* benzenephosphoric acid.

***N*-phenylpiperazine** [ORG CHEM] $C_{10}H_{14}N_2$ A pale yellow oil with a boiling point of 286.5°C; soluble in alcohol and ether; used for pharmaceuticals and in the manufacture of synthetic fibers.

phenylpropane *See* propyl benzene.

1-phenyl-1-propanol [ORG CHEM] $C_6H_5CH(OH)CH_2CH_3$ An oily liquid that has a weak esterlike odor; miscible with methanol, ethanol, ether, benzene, and toluene; used in industry as a heat transfer medium, in the manufacture of perfumes, and as a choleretic in medicine. Also known as ω-ethylbenzyl alcohol; ethyl phenyl carbinol; α-hydroxypropylbenzene; 1-phenylpropyl alcohol.

3-phenyl-1-propanol *See* phenylpropyl alcohol.

phenylpropanolamine hydrochloride [PHARM] $C_9H_{13}ON{\cdot}HCl$ A white, crystalline powder with a melting point of 198–199°C; soluble in alcohol and water; used in medicine.

3-phenylpropenal *See* cinnamic aldehyde.

3-phenyl-2-propen-1-ol *See* cinnamic alcohol.

3-phenylpropionaldehyde *See* phenylpropyl aldehyde.

3-phenylpropionic acid *See* hydrocinnamic acid.

phenylpropyl alcohol [ORG CHEM] $C_9H_{12}O$ A colorless liquid with a floral odor and a boiling point of 219°C; soluble in 70% alcohol; used in perfumes and flavoring. Also known as hydrocinnamic alcohol; phenylethyl carbinol; 3-phenyl-1-propanol.

1-phenylpropyl alcohol *See* 1-phenyl-1-propanol.

phenylpropyl aldehyde [ORG CHEM] $C_9H_{10}O$ A colorless liquid with a floral odor; soluble in 50% alcohol; used in perfumes and flavoring. Also known as hydrocinnamic aldehyde; 3-phenylpropionaldehyde.

1-phenyl-3-pyrazolidinone [ORG CHEM] $C_9H_{10}N_2O$ A crystalline compound soluble in dilute aqueous solutions of acids and alkalies; melting point is 121°C; used as a high-contrast photographic developer. Also known as 1-phenyl-3-pyrazolidone.

1-phenyl-3-pyrazolidone *See* 1-phenyl-3-pyrazolidinone.

phenylpyruvic acid [BIOCHEM] $C_6H_5CH_2{\cdot}CO{\cdot}COOH$ A keto acid, occurring as a metabolic product of phenylalanine.

phenylpyruvic oligophrenia *See* phenylketonuria.

***N*-phenylsalicylamide** *See* salicylanilide.

phenyl salicylate *See* salol.

phenylthiocarbamide *See* phenylthiourea.

phenylthiocarbonimide *See* phenyl mustard oil.

phenylthiourea [ORG CHEM] $C_6H_5NHCSNH_2$ A crystalline compound that has either a bitter taste or is tasteless, depending on the heredity of the taster; used in human genetics studies. Also known as phenylthiocarbamide.

phenyl *ortho*-tolyl ketone *See ortho*-phenyl tolyl ketone.

***ortho*-phenyl tolyl ketone** [ORG CHEM] $CH_3C_6H_4CO{-}C_6H_5$ An oily liquid with a boiling point of 309–311°C; soluble in alcohol, oils, and organic solvents; used as a fixative in perfumery. Also known as 2-methyl-benzophenone; phenyl *ortho*-tolyl ketone.

phenytoin [PHARM] $C_{15}H_{12}N_2O_2$ A powder with a melting point of 295–298°C; used as an anticonvulsant and antiepileptic in humans. Also known as diphenylhydantoin.

pheochromoblast [HISTOL] A precursor of a pheochromocyte.

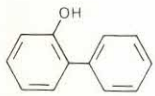
pheochromocytoma [MED] A tumor of the sympathetic nervous system composed principally of chromaffin cells; found most often in the adrenal medulla.

pheromone [PHYSIO] Any substance secreted by an animal which influences the behavior of other individuals of the same species.

phialospore [MYCOL] One of a chain of spores produced successively on phialides.

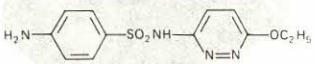
phi grade scale [GEOL] A logarithmic transformation of the

PHENYLPHENOL



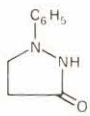
Structural formula.

1-PHENYL-1-PROPANOL



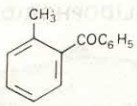
Structural formula.

1-PHENYL-3-PYRAZOLIDINONE



Structural formula.

ORTHO-PHENYL TOLYL KETONE



Structural formula.

PHLOGOPITE

Sheets of phlogopite from Otty Lake, Canada. *(Specimen from Department of Geology, Bryn Mawr College)*

Wentworth grade scale in which the diameter value of the particle is replaced by the negative logarithm to the base 2 of the particle diameter (in millimeters).

Philadelphia chromosome [PATH] An abnormally small G-group chromosome found in the hematopoietic cells of most patients with chronic granulocytic leukemia.

Philippine fowl disease *See* Newcastle disease.

Philips Hot-air engine [MECH ENG] A compact hot-air engine that is a Philips Research Lab (Holland) design; it uses only one cylinder and piston, and operates at 3000 revolutions per minute, with hot-chamber temperature of 1200°F (650°C), maximum pressure of 50 atmospheres (5.07 megapascals), and mean effective pressure of 14 atmospheres (1.42 megapascals).

Philips ionization gage [ELECTR] An ionization gage in which a high voltage is applied between two electrodes, and a strong magnetic field deflects the resulting electron stream, increasing the length of the electron path and thus increasing the chance for ionizing collisions of electrons with gas molecules. Abbreviated pig. Also known as cold-cathode ionization gage; Penning gage.

philipstadite [MINERAL] $Ca_2(Fe,Mg)_5(Si,Al)_8O_{22}(OH)_2$ Monoclinic mineral composed of basic silicate of calcium, iron, magnesium, and aluminum; member of the amphibole group.

phillipsite [MINERAL] $(K_2,Na_2CA)Al_2Si_4O_{12}\cdot H_2O$ A white or reddish zeolite mineral crystallizing in the orthorhombic system; occurs in complex fibrous crystals, which make up a large part of the red-clay sediments in the Pacific Ocean.

Phillips screw [DES ENG] A screw having in its head a recess in the shape of a cross; it is inserted or removed with a Phillips screwdriver that automatically centers itself in the screw.

Philomycidae [INV ZOO] A family of pulmonate gastropods composed of slugs.

Philopteridae [INV ZOO] A family of biting lice (Mallophaga) that are parasitic on most land birds and water birds.

philosopher's wool *See* zinc oxide.

-philous [SCI TECH] Suffix meaning having an affinity for.

philtrum-otobasion inferior [ANTHRO] A measure of the distance from the midpoint of the philtrum to the otobasion inferior.

phi meson [PARTIC PHYS] A neutral vector meson resonance, having a mass of about 1019 MeV, a width of about 4.2 MeV, and negative charge parity and G parity.

phimosis [MED] Elongation of the prepuce and constriction of the orifice, so that the foreskin cannot be retracted to uncover the glans penis.

phlebite [PETR] Roughly banded or veined metamorphite or migmatite.

phlebitis [MED] Inflammation of a vein.

phlebography [MED] **1.** X-ray photography of a vein or veins following intravenous injection of a radiopaque substance. **2.** Recording of venous pulsations.

phlebolith [MED] A calculus in a vein.

phlebosclerosis [MED] **1.** Sclerosis of a vein. **2.** Chronic phlebitis.

phlebotaxis [BIOL] Movement of a simple motile organism in response to the presence of blood.

phlebothrombosis [MED] A venous thrombus not associated with inflammation of the vein.

phlebotomus fever [MED] An acute viral infection, transmitted by the fly *Phlebotomus papatosii* and characterized by fever, pains in the head and eyes, inflammation of the conjunctiva, leukopenia, and general malaise. Also known as Chitral fever; pappataci fever; sandfly fever; three-day fever.

phlebotomy [MED] The withdrawal of blood from a vein.

phleger corer [ENG] A device for obtaining ocean bottom cores up to about 4 feet (1.2 meters) in length; consists of an upper tube, main body weight, and tailfin assembly with a check valve that prevents the flow of water into the upper section and a consequent washing out of the core sample while hoisting the corer.

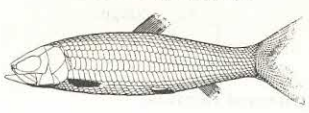
phlegm [PHYSIO] A viscid, stringy mucus, secreted by the mucosa of the air passages.

phlegmasia alba dolens [MED] A painful swelling of the leg usually seen postpartum, due to femoral vein thrombophlebitis or lymphatic obstruction. Also known as milk leg.

phlegmon [MED] Pyogenic inflammation with infiltration and spread in the tissues, seen with invasive organisms which produce hyaluronidase and fibrinolysins.

phleomycin [MICROBIO] An antibacterial antibiotic produced by *Streptomyces verticillatus;* antitumor activity has also been demonstrated.

PHOLIDOPHORIDAE



Pholidophorus bechei Agassiz, Lower Jurassic of England: length to 8 inches (20 centimeters). *(From D. Rayner, The structure of certain Jurassic holostean fishes with special reference to their neurocrania, Phil. Trans. Roy. Soc. London, Ser. B, no. 601, Cambridge University Press, 1948)*

Phloeidae [INV ZOO] The bark bugs, a small neotropical family of hemipteran insects in the superfamily Pentatomoidea.

phloem [BOT] A complex, food-conducting vascular tissue in higher plants; principal conducting cells are sieve elements. Also known as bast; sieve tissue.

phloem necrosis [PL PATH] A pathological state in a plant in which the phloem undergoes brown discoloration and disintegration.

phlogopite [MINERAL] $K_2[Mg,Fe(II)]_6(Si_6,Al_2)O_{20}(OH)_4$ A yellow-brown to copper mineral of the mica group occurring in disseminated flakes, foliated masses, or large crystals; hardness is 2.5–3.0 on Mohs scale, and specific gravity is 2.8–3.0. Alters to vermiculite. Also known as bronze mica; brown mica.

phloridzin [ORG CHEM] $C_{21}H_{24}O_{19}\cdot 2H_2O$ A glycoside extracted from the root bark of apple, plum, and pear trees; white needles with a melting point of 109°C; soluble in alcohol and hot water; used in medicine. Also known as phlorizin.

phlorizin *See* phloridzin.

phloroglucine *See* phloroglucinol.

phloroglucinol [ORG CHEM] $C_6H_3(OH)_3\cdot 2H_2O$ White to yellow crystals with a melting point of 212–217°C when heated rapidly and 200–209°C when heated slowly; soluble in alcohol and ether; used as a bone decalcifying agent, as a floral preservative, and in the manufacture of pharmaceuticals. Also known as phloroglucine; 1,3,5-trihydroxy benzene.

pH measurement [ANALY CHEM] Determination of the hydrogen-ion concentration in an ionized solution by means of an indicator solution (such as phenolphthalein) or a pH meter.

pH meter [ENG] An electronic voltmeter using a pH-responsive electrode that gives a direct conversion of voltage differences to differences of pH at the temperature of the measurement.

phobia [PSYCH] A disproportionate, obsessive, persistent, and unrealistic fear of an external situation or object, symbolically taking the place of an internal unconscious conflict.

phobic neurosis [PSYCH] A neurotic disorder characterized by a persistent phobia which frequently interferes with the individual's activities and creates tension and anxiety, sometimes accompanied by physical manifestation.

phobophobia [PSYCH] An abnormal fear of developing a phobia.

Phobos [ASTRON] A satellite of Mars; it is the larger of the two satellites, with a diameter of about 24 kilometers.

Phocaenidae [VERT ZOO] The porpoises, a family of marine mammals in the order Cetacea.

Phocidae [VERT ZOO] The seals, a pinniped family of carnivoran mammals in the superfamily Canoidea.

Phodilidae [VERT ZOO] A family of birds in the order Strigiformes; the bay owl (*Pholidus bodius*) is the single species.

Phoebe [ASTRON] A satellite of the planet Saturn; its diameter is judged to be about 320 kilometers; it has an eccentric orbit and retrograde revolution.

phoenicite *See* phoenicochroite.

phoenicochroite [MINERAL] Pb_2CrO_5 A red mineral composed of basic chromate of lead, occurring in crystals and masses. Also known as beresovite; phenicochroite; phoenicite.

Phoenicopteridae [VERT ZOO] The flamingos, a family of long-legged, long-necked birds in the order Ciconiiformes.

Phoenicopteriformes [VERT ZOO] An order comprising the flamingos in some systems of classification.

Phoeniculidae [VERT ZOO] The African wood hoopoes, a family of birds in the order Coraciiformes.

Phoenix [ASTRON] A southern constellation; right ascension 1 hour, declination 50°S. [ORD] An air-to-air solid-propellant guided missile that has both radar and infrared acquisition, a speed of about Mach 5, and a range of about 400 nautical miles (740 kilometers).

Pholadidae [INV ZOO] A family of bivalve mollusks in the subclass Eulamellibranchia; individuals may have one or more dorsal accessory plates, and the visceral mass is attached to the valves in the dorsal portion of the body.

Pholidophoridae [PALEON] A generalized family of extinct fishes belonging to the Pholidophoriformes.

Pholidophoriformes [PALEON] An extinct actinopterygian group composed of mostly small fusiform marine and freshwater fishes of an advanced holostean level.

Pholidota [VERT ZOO] An order of mammals comprising the

living pangolins and their fossil predecessors; characterized by an elongate tubular skull with no teeth, a long protrusive tongue, strong legs, and five-toed feet with large claws.

Phomaceae [MYCOL] The equivalent name for Sphaerioidaceae.

Phomales [MYCOL] The equivalent name for Sphaeropsidales.

phon [ACOUS] A unit of loudness level; the loudness level, in phons, of a sound is numerically equal to the sound pressure level, in decibels, of a 1000-hertz reference tone which is judged by listeners to be equally loud to the sound under evaluation.

phonation [PHYSIO] Production of speech sounds.

phone *See* headphone.

phonemic synthesizer [ENG ACOUS] A voice response system in which each word is abstractly represented as a sequence of expected vowels and consonants, and speech is composed by juxtaposing the expected phonemic sequence for each word with the sequences for the preceding and following words.

phone patch [ELECTR] A device connecting an amateur or citizens'-band transceiver temporarily to a telephone system.

phone plug [ELEC] A standard plug having a ¾-inch-diameter (19-millimeter-diameter) shank, used with headphones, microphones, and other audio equipment; usually designed for use with either two or three conductors. Also known as telephone plug.

phonetic alphabet [COMMUN] A list of standard words used for positive identification of letters in a voice message transmitted by radio or telephone.

phonic motor [ELEC] A small synchronous motor which is driven by the current of an accurate oscillator, such as a crystal oscillator, and whose frequency is thus constant to a high degree of accuracy; used in astronomical instruments where a driving speed of great accuracy is required.

phonocardiograph [MED] An instrument that provides a graphic record of heart murmurs and other sounds.

phonoelectrocardioscope [MED] An electronic medical instrument that uses a double-beam cathode-ray oscilloscope to show simultaneously the waveforms of two different quantities related to the heart.

phonograph [ENG ACOUS] An instrument for recording or reproducing acoustical signals, such as voice or music, by transmission of vibrations from or to a stylus that is in contact with a groove in a rotating disk.

phonograph cartridge *See* phonograph pickup.

phonograph cutter *See* cutter.

phonograph needle *See* stylus.

phonograph pickup [ENG ACOUS] A pickup that converts variations in the grooves of a phonograph record into corresponding electric signals. Also known as cartridge; phonograph cartridge.

phonograph record [ENG ACOUS] A shellac-composition or vinyl-plastic disk, usually 7 or 12 inches (18 or 30 centimeters) in diameter, on which sounds have been recorded as modulations in grooves. Also known as disk; disk recording.

phono jack [ELECTR] A jack designed to accept a phono plug and provide a ground connection for the shield of the conductor connected to the plug.

phonolite [PETR] A light-colored, aphanitic rock of volcanic origin, composed largely of alkali feldspar, feldspathoids, and smaller amounts of mafic minerals.

phonon [SOLID STATE] A quantum of an acoustic mode of thermal vibration in a crystal lattice.

phonon-electron interaction [SOLID STATE] An interaction between an electron and a vibration of a lattice, resulting in a change in both the momentum of the particle and the wave vector of the vibration.

phonon emission [SOLID STATE] The production of a phonon in a crystal lattice, which may result from the interaction of other phonons via anharmonic lattice forces, from scattering of electrons in the lattice, or from scattering of x-rays or particles which bombard the crystal.

phonon wind [SOLID STATE] A stream of nonthermal phonons that is effective in propelling electron-hole droplets through a crystal.

phonophobia [PSYCH] An abnormal fear of sound.

phono plug [ELECTR] A plug designed for attaching to the end of a shielded conductor, for feeding audio-frequency signals from a phonograph or other a-f source to a mating phono jack on a preamplifier or amplifier.

phonoreception [PHYSIO] The perception of sound through specialized sense organs.

phonotelemeter [ENG] A device consisting essentially of a stopwatch, for estimating the distance of guns in action by measuring the interval between the flash and the arrival of the sound waves from the discharge.

phony disease [PL PATH] A virus disease of the peach characterized by dwarfing, abnormal darkening of leaves, and a light crop of small, highly colored fruit; tree stops bearing fruit after a few years.

phony mine [ORD] Harmless object used to simulate a mine or to give false signals in detectors; used in phony mine fields.

phorate [ORG CHEM] $C_7H_{17}O_2PS_2$ A clear liquid with slight solubility in water; used as an insecticide for a wide range of insects on a wide range of crops. Also known as *O,O*-diethyl *S*-(ethylthio)-methyl phosphorodithioate.

phoresy [ECOL] A type of commensalism which involves the transporation of one organism (the guest) by a larger organism (the host) of a different species.

Phoridae [INV ZOO] The hump-backed flies, a family of cyclorrhaphous dipteran insects in the series Aschiza.

phorogenesis [GEOL] The shifting or slipping of the earth's crust relative to the mantle.

Phoronida [INV ZOO] A small, homogeneous group, or phylum, of animals having an elongate body, a crown of tentacles surrounding the mouth, and the anus occurring at the level of the mouth.

phosalone [ORG CHEM] $C_{12}H_{15}ClNO_4PS_2$ A white solid, insoluble in water, with a melting point of 43–45°C; used as an insecticide and miticide on fruits. Also known as *O,O*-diethyl *S* [(6-chloro-2-oxobenzoxazolin-3-yl)methyl] phosphorodithioate.

phosazetim [ORG CHEM] $C_{14}H_{13}N_2PO_2Cl_2$ A white, crystalline compound with a melting point of 104–106°C; used as a rodenticide. Also known as *O,O*-bis(*para*-chlorophenyl)acetimidoylphosphoramidothioate.

phosgene [ORG CHEM] $COCl_2$ A highly toxic, colorless gas that condenses at 0°C to a fuming liquid; used as a war gas and in manufacture of organic compounds. Also known as carbonyl chloride; chloroformyl chloride.

phosgenite [MINERAL] $Pb_2Cl_2(CO_3)$ A white, yellow, or grayish mineral that crystallizes in the tetragonal system, has adamantine luster, hardness of 3 on Mohs scale, and specific gravity of 6–6.3. Also known as cromfordite; horn lead.

phosmet [ORG CHEM] $C_{11}H_{11}NO_4PS_2$ A white solid with a melting point of 71.9°C; used as an insecticide for fruit tree pests and alfalfa weevil. Also known as *N*-(mercaptomethyl)-phthalimide *S*-(*O,O*-dimethylphosphorodithioate).

phosphamidon [ORG CHEM] $C_{10}H_{19}NO_5P$ A colorless liquid, miscible with water; used as a systemic and contact insecticide to control mites, aphids, beetles, and plant bugs. Also known as 2-chloro-2-diethylcarbamoyl-1-methylvinyl dimethylphosphate.

phosphatase [BIOCHEM] An enzyme that catalyzes the hydrolysis and synthesis of phosphoric acid esters and the transfer of phosphate groups from phosphoric acid to other compounds.

phosphate [CHEM] **1.** Generic term for any compound containing a phosphate group (PO_4^{3-}), such as potassium phosphate, K_3PO_4. **2.** Generic term for a phosphate-containing fertilizer material. [MINERAL] A mineral compound characterized by a tetrahedral ionic group of phosphate and oxygen, PO_4^{3-}.

phosphate anion [INORG CHEM] PO_4^{3-} The negative ion of phosphoric acid.

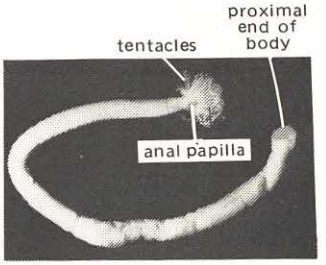
phosphate buffer [ANALY CHEM] Laboratory pH reference solution made of KH_2PO_4 and Na_2HPO_4; when 0.025 molal (equimolal of the K and Na salts), the pH is 6.865 at 25°C.

phosphate coating [MET] A conversion coating on metal, usually steel, produced by dipping in an aqueous solution of zinc or manganese acid phosphate; used to furnish a black finish to small arms, artillery, or automotive components to provide resistance to corrosion.

phosphate desulfurization [CHEM ENG] A continuous, regenerative petroleum-refinery process using a tripotassium phosphate solution to remove hydrogen sulfide from natural gas, refinery gas, or liquid hydrocarbons.

phosphate fertilizer [MATER] Fertilizer compound or mixture containing available (soluble) phosphate; examples are phosphate rock (phosphorite), superphosphates or triple super-

PHORONIDA



Phoronopsis harmeri removed from its tube, just below the surface in intertidal or subtidal mud flats. Length is about 20 centimeters.

phosphates, nitrophosphate, potassium phosphates, or N-P-K mixtures.

phosphate glass [MATER] Glass in which phosphorus pentoxide is a major component; resistant to hydrofluoric acid.

phosphate recovery process [MIN ENG] A process developed by the U.S. Bureau of Mines for recovering phosphate from low-grade phosphorus-bearing shales.

phosphate rock [MATER] **1.** A rock that is naturally high enough in phosphorus to be used directly in fertilizer manufacturing. **2.** The beneficiated concentrate of a phosphate deposit.

phosphatic nodule [GEOL] A dark, usually black, earthy mass or pebble of variable size and shape, having a hard shiny surface and occurring in marine strata.

phosphatide *See* phospholipid.

phosphating [MET] Forming a phosphate coating on a metal. Also known as phosphatizing.

phosphatization [GEOCHEM] Conversion to a phosphate or phosphates; for example, the diagenetic replacement of limestone, mudstone, or shale by phosphate-bearing solutions, producing phosphates of calcium, aluminum, or iron.

phosphatizing *See* phosphating.

phosphaturia *See* hyperphosphaturia.

phosphide [INORG CHEM] Binary compound of trivalent phosphorus, as in Na_3P.

phosphine [INORG CHEM] PH_3 Poisonous, colorless, spontaneously flammable gas with garlic aroma; soluble in alcohol, slightly soluble in cold water; boils at −85°C; used in organic reactions. Also known as hydrogen phosphide; phosphoretted hydrogen.

phosphinic acid [ORG CHEM] Organic derivative of hypophosphorous acid; contains the radical $—H_2PO_2$ or $=HPO_2$; examples are methylphosphinic acid, CH_3HPOOH, and dimethyl phosphinic acid, $(CH_3)_2POOH$.

phosphite [INORG CHEM] Salt of phosphorous acid; contains the radical PO_3^{3-}; an example is normal sodium phosphite, Na_3PO_3

phosphocreatine [BIOCHEM] $C_4H_{10}N_3O_5P$ Creatine phosphate, a phosphoric acid derivative of creatine which contains an energy-rich phosphate bond; it is present in muscle and other tissues, and during the anaerobic phase of muscular contraction it hydrolyzes to creatine and phosphate and makes energy available. Abbreviated PC.

phosphoenolpyruvic acid [BIOCHEM] $CH_2{=}O(OPO_3H_2)$-COOH A high-energy phosphate formed by dehydration of 2-phosphoglyceric acid; it reacts with adenosinediphosphate to form adenosinetriphosphate and enolpyruvic acid.

phosphoferrite [MINERAL] $(Fe,Mn)_3(PO_4)_2{\cdot}3H_2O$ A white or greenish orthorhombic mineral composed of hydrous phosphate of ferrous iron manganese phosphate; exhibits micalike cleavage.

phosphoglucoisomerase [BIOCHEM] An enzyme that catalyzes the conversion of galactose-1-phosphate to glucose-1-phosphate.

phosphoglucomutase [BIOCHEM] An enzyme that catalyzes the conversion of glucose-1-phosphate to glucose-6-phosphate.

phospholan [ORG CHEM] $C_6H_{14}O_3PNS_2$ A colorless to yellow solid with a melting point of 37–45°C; used as an insecticide and miticide for cotton. Also known as 2-(diethoxyphosphenylimino)-1,3-dithiolane.

phospholipase [BIOCHEM] An enzyme that catalyzes a hydrolysis of a phospholipid, especially a lecithinase that acts in this manner on a lecithin.

phospholipid [BIOCHEM] Any of a class of esters of phosphoric acid containing one or two molecules of fatty acid, an alcohol, and a nitrogenous base. Also known as phosphatide.

phosphomolybdic acid [INORG CHEM] $H_3PO_4{\cdot}12MoO_3{\cdot}xH_2O$ Yellow crystals; soluble in alcohol, ether, and water; used as an alkaloid reagent and a pigment. Abbreviated PMA.

phosphomonoesterase [BIOCHEM] An enzyme catalyzing hydrolysis of phosphoric acid esters containing one ester linkage.

phosphonic acid [ORG CHEM] $ROP(OH)_2$, where R is an organic radical such as $C_6H_5^-$, as in phenylphosphonic acid.

***N*-(phosphonomethyl)glycine** *See* glyphosate.

phosphophyllite [MINERAL] $Zn_2(FeMn)(PO_4)_2{\cdot}4H_2O$ Colorless to pale-blue mineral composed of hydrous zinc ferrous iron manganese phosphate; exhibits micalike cleavage.

phosphor *See* luminophor.

phosphor bronze [MET] A hard copper-base alloy containing several percent tin, and sometimes smaller percentages of lead, deoxidized with phosphorus.

phosphor dot [ELECTR] One of the tiny dots of phosphor material that are used in groups of three, one group for each primary color, on the screen of a color television picture tube.

phosphorescence [ATOM PHYS] **1.** Luminescence that persists after removal of the exciting source. Also known as afterglow. **2.** Luminescence whose decay, upon removal of the exciting source, is temperature-dependent.

phosphorescent paint [MATER] A luminous paint containing phosphors or phosphorogens which requires activation from an outside source of light, depending upon the ability of the chemical to absorb light energy, and to emit it in the form of photons of light.

phosphoretted hydrogen *See* phosphine.

phosphoric acid [INORG CHEM] H_3PO_4 Water-soluble, transparent crystals, melting at 42°C; used as a fertilizer, in soft drinks and flavor syrups, pharmaceuticals, water treatment, and animal feeds and to pickle and rust-proof metals. Also known as orthophosphoric acid.

phosphoric acid polymerization [CHEM ENG] A petroleum-refinery process using phosphoric acid catalyst to convert propylene, butylene, or both, into high-octane gasoline or petrochemical polymers.

phosphoric anhydride [INORG CHEM] P_2O_5 A flammable, dangerous, soft-white deliquescent powder; used as a dehydrating agent, in medicine and sugar refining, and as a chemical intermediate and analytical reagent. Also known as anhydrous phosphoric acid; phosphoric oxide; phosphorus pentoxide.

phosphoric bromide *See* phosphorus pentabromide.

phosphoric chloride *See* phosphorus pentachloride.

phosphoric oxide *See* phosphoric anhydride.

phosphoric perbromide *See* phosphorus pentabromide.

phosphoric perchloride *See* phosphorus pentachloride.

phosphoric sulfide *See* phosphorus pentasulfide.

phosphorimetry [ANALY CHEM] Low-temperature, analytical procedure related to fluorometry; based on the nature and intensity of the phosphorescent light emitted by an appropriately excited molecule.

phosphorite [PETR] A sedimentary rock composed chiefly of phosphate minerals.

phosphorization [GEOCHEM] Impregnation or combination with phosphorus or a compound of phosphorus; for example, the diagenetic process of phosphatization.

phosphorized copper [MET] A phosphorus deoxidized copper.

phosphorogen [PHYS] A substance that promotes phosphorescence in another substance, as manganese does in zinc sulfide.

phosphorolysis [BIOCHEM] A reaction by which elements of phosphoric acid are incorporated into the molecule of a compound.

phosphorous acid [INORG CHEM] H_3PO_3 Alcohol- and water-soluble deliquescent white or yellowish crystals; decomposes at 200°C; used as an analytical reagent and reducing agent.

phosphorroesslerite [MINERAL] $MgH(PO_4){\cdot}7H_2O$ A yellowish, monoclinic mineral consisting of a hydrated acid magnesium phosphate.

phosphor tin [MET] A master alloy of tin and phosphorus, usually containing up to 5% phosphorus; used to make phosphor bronze.

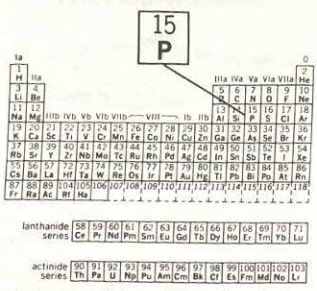
phosphorus [CHEM] A nonmetallic element, symbol P, atomic number 15, atomic weight 30.98; used to manufacture phosphoric acid, in phosphor bronzes, incendiaries, pyrotechnics, matches, and rat poisons; the white (or yellow) allotrope is a soft waxy solid melting at 44.5°C, is soluble in carbon disulfide, insoluble in water and alcohol, and is poisonous and self-igniting in air; the red allotrope is an amorphous powder subliming at 416°C, igniting at 260°C, is insoluble in all solvents, and is nonpoisonous; the black allotrope comprises lustrous crystals similar to graphite, and is insoluble in most solvents.

phosphorus bromide *See* phosphorus pentabromide.

phosphorus nitride [INORG CHEM] P_3N_5 Amorphous white solid that decomposes in hot water; insoluble in cold water, soluble in organic solvents; used to dope semiconductors.

phosphorus-nitrogen ratio [OCEANOGR] The proportion,

PHOSPHORUS



Periodic table of the chemical elements showing the position of phosphorus.

by weight, of phosphorus to nitrogen in seawater or in plankton; the ratio is approximately 7:1.

phosphorus oxide [INORG CHEM] An oxygen compound of phosphorus; examples are phosphorus monoxide (P_2O), phosphorus trioxide (P_2O_3), phosphorus suboxide (P_4O).

phosphorus oxychloride [INORG CHEM] $POCl_3$ Toxic, colorless, fuming liquid with pungent aroma; boils at 107°C; decomposes in water or alcohol; causes skin burns; used as a catalyst, chlorinating agent, and in manufacture of various anhydrides. Also known as phosphoryl chloride.

phosphorus pentabromide [INORG CHEM] PBr_5 Yellow crystals, decomposing at 106°C and in water; used in organic synthesis. Also known as phosphoric bromide; phosphoric perbromide; phosphorus bromide.

phosphorus pentachloride [INORG CHEM] PCl_5 Toxic, yellowish crystals with irritating aroma; an eye irritant; sublimes on heating, but will melt at 148°C under pressure; soluble in carbon disulfide; decomposes in water; used as a catalyst and chlorinating agent. Also known as phosphoric chloride; phosphoric perchloride.

phosphorus pentasulfide [INORG CHEM] P_2S_5 Flammable, hygroscopic, yellow crystals, melting at 281°C; decomposes in moist air; soluble in alkali hydroxides; used to make lube-oil additives, rubber additives, and flotation agents. Also known as phosphoric sulfide; phosphorus persulfide; thiophosphoric anhydride.

phosphorus pentoxide *See* phosphoric anhydride.

phosphorus persulfide *See* phosphorus pentasulfide.

phosphorus sesquisulfide [INORG CHEM] P_4S_3 Flammable, yellow crystals, melting at 172°C; decomposed by hot water, insoluble in water, soluble in carbon disulfide; used as chemical intermediate and to make matches. Also known as tetraphosphorus trisulfide.

phosphorus sulfide *See* phosphorus trisulfide.

phosphorus thiochloride [INORG CHEM] $PSCl_3$ Yellow liquid, boiling at 125°C; used to make insecticides and oil additives.

phosphorus tribromide [INORG CHEM] PBr_3 A corrosive, fuming, colorless liquid with penetrating aroma; soluble in acetone, alcohol, carbon disulfide, and hydrogen sulfide; decomposes in water; used as an analytical reagent to test for sugar and oxygen.

phosphorus trichloride [INORG CHEM] PCl_3 A colorless, fuming liquid that decomposes rapidly in moist air and water; soluble in ether, benzene, carbon disulfide, and carbon tetrachloride; boils at 76°C; used as a chlorinating agent, phosphorus solvent, and in saccharin manufacture.

phosphorus triiodide [INORG CHEM] PI_3 Hygroscopic, red crystals, melting at 61°C; soluble in alcohol and carbon disulfide; decomposes in water; used in organic syntheses.

phosphorus trisulfide [INORG CHEM] P_2S_3 or P_4S_6 Grayish-yellow, tasteless, odorless solid that burns in air; soluble in alcohol, carbon disulfide, and ether; melts at 290°C; used as an analytical reagent. Also known as phosphorus sulfide.

phosphorylase [BIOCHEM] An enzyme that catalyzes the formation of glucose-1-phosphate (Cori ester) from glycogen and inorganic phosphate; it is widely distributed in animals, plants, and microorganisms.

phosphorylation [ORG CHEM] The esterification of compounds with phosphoric acid.

phosphoryl chloride *See* phosphorus oxychloride.

phosphosiderite [MINERAL] $FePO_4 \cdot 2H_2O$ A pinkish-red mineral crystallizing in the monoclinic system, dimorphous with strengite and isomorphous with metavariscite.

phosphotransacetylase [BIOCHEM] An enzyme that catalyzes the reversible transfer of an acetyl group from acetyl coenzyme A to a phosphate, with formation of acetyl phosphate.

phosphotungstic acid [INORG CHEM] $H_3PO_4 \cdot 12WO_3 \cdot xH_2O$ Heavy-greenish, water- and alcohol-soluble crystals; used as an analytical reagent and in the manufacture of organic pigments. Also known as heavy acid; phosphowolframic acid; PTA.

phosphotungstic pigment [ORG CHEM] A green or blue pigment prepared by precipitating solutions of phosphotungstic or phosphomolybdic acid with malachite green, Victoria blue, and other basic dyestuffs; used in printing inks, paints, and enamels. Also known as tungsten lake.

phosphowolframic acid *See* phosphotungstic acid.

phosphuranylite [MINERAL] $(UO_2)(PO_4)_2 \cdot 6H_2O$ A yellow secondary mineral composed of hydrous uranyl phosphate, occurring in powder form; it is phosphorescent when exposed to radium emanations.

phot [OPTICS] A unit of illumination equal to the illumination of a surface, 1 square centimeter in area, on which there is a luminous flux of 1 lumen, or the illumination on a surface all points of which are at a distance of 1 centimeter from a uniform point source of 1 candela. Also known as centimeter-candle (deprecated usage).

photic zone [ECOL] The uppermost layer of a body of water (approximately the upper 100 meters) that receives enough sunlight to permit the occurrence of photosynthesis.

Photidae [INV ZOO] A family of amphipod crustaceans in the suborder Gammaridea.

photoacoustic spectroscopy [SPECT] A spectroscopic technique for investigating solid and semisolid materials, in which the sample is placed in a closed chamber filled with a gas such as air and illuminated with monochromatic radiation of any desired wavelength, with intensity modulated at some suitable acoustic frequency; absorption of radiation results in a periodic heat flow from the sample, which generates sound that is detected by a sensitive microphone attached to the chamber. Abbreviated PAS.

photoaddition [PHYS CHEM] A bimolecular photochemical process in which a single product is formed by electronically excited unsaturated molecules.

photoalidade [ENG] A photogrammetric instrument which has a telescopic alidade, a plateholder, and a hinged ruling arm and is mounted on a tripod frame; used for plotting lines of direction and measuring vertical angles to selected features appearing on oblique and terrestrial photographs.

photoautotrophic [BIOL] Pertaining to organisms which derive energy from light and manufacture their own food.

Photobacterium [MICROBIO] A genus of bacteria in the family Vibrionaceae; luminescent, motile, asporogenous coccobacilli, occasionally rods, occurring singly and sometimes in pairs.

photocathode [ELECTR] A photosensitive surface that emits electrons when exposed to light or other suitable radiation; used in phototubes, television camera tubes, and other light-sensitive devices.

photocell [ELECTR] A solid-state photosensitive electron device whose current-voltage characteristic is a function of incident radiation. Also known as electric eye; photoelectric cell.

photocell relay [ELECTR] A relay actuated by a signal received when light falls on, or is prevented from falling on, a photocell.

photochemical oxidant [CHEM] Any of the chemicals which enter into oxidation reactions in the presence of light or other radiant energy.

photochemical reaction [PHYS CHEM] A chemical reaction influenced or initiated by light, particularly ultraviolet light, as in the chlorination of benzene to produce benzene hexachloride.

photochemical smog [METEOROL] Chemical pollutants in the atmosphere resulting from chemical reactions involving hydrocarbons and nitrogen oxides in the presence of sunlight.

photochemistry [PHYS CHEM] The study of the effects of light on chemical reactions.

photochromic compound [CHEM] A chemical compound that changes in color when exposed to visible or near-visible radiant energy; the effect is reversible; used to produce very-high-density microimages.

photochromic glass [MATER] A glass that darkens when exposed to light but regains its original transparency a few minutes after light is removed; the rate of clearing increases with temperature.

photochromic reaction [CHEM] A chemical reaction that produces a color change.

photochromism [CHEM] The ability of a chemically treated plastic or other transparent material to darken reversibly in strong light.

photoclinometer [ENG] A directional surveying instrument which records photographically the direction and magnitude of well deviations from the vertical.

photoclinometry [GEOL] A technique for ascertaining slope information from an image brightness distribution, used especially for studying the amount of slope to a lunar crater wall or ridge by measuring the density of its shadow.

photocoagulator [MED] An instrument that uses a xenon

flash lamp and an associated train of optics to focus an intense beam of light on a detached retina for the purpose of inducing coagulation and a lesion that welds the retina back into position.

photoconduction [SOLID STATE] An increase in conduction of electricity resulting from absorption of electromagnetic radiation.

photoconductive cell [ELECTR] A device for detecting or measuring electromagnetic radiation by variation of the conductivity of a substance (called a photoconductor) upon absorption of the radiation by this substance. Also known as photoresistive cell; photoresistor.

photoconductive device [ELECTR] A photoelectric device which utilizes the photoinduced change in electrical conductivity to provide an electrical signal.

photoconductive film [ELECTR] A film of material whose current-carrying ability is enhanced when illuminated.

photoconductive gain factor [ELECTR] The ratio of the number of electrons per second flowing through a circuit containing a cube of semiconducting material, whose sides are of unit length, to the number of photons per second absorbed in this volume.

photoconductive meter [ELECTR] An exposure meter in which a battery supplies power through a photoconductive cell to a milliammeter.

photoconductivity [SOLID STATE] The increase in electrical conductivity displayed by many nonmetallic solids when they absorb electromagnetic radiation.

photoconductivity gain [ELECTR] The number of charge carriers that circulate through a circuit involving a photoconductor for each charge carrier generated by light.

photoconductor [SOLID STATE] A nonmetallic solid whose conductivity increases when it is exposed to electromagnetic radiation.

photoconductor diode *See* photodiode.

photocopying process [GRAPHICS] Any of the means by which a copy is created on a sensitized surface (generally paper, film, or metal plate) by the action of radiant energy.

photocoupler *See* optoisolator.

photocurrent [PHYS CHEM] An electric current induced at an electrode by radiant energy.

photodarlington [ELECTR] A Darlington amplifier in which the input transistor is a phototransistor.

photodegradation [PHYS CHEM] Decomposition of a compound by radiant energy.

photodetachment [PHYS CHEM] The removal of an electron from a negative ion by absorption of a photon, resulting in a neutral atom or molecule.

photodetector [ELECTR] A detector that responds to radiant energy; examples include photoconductive cells, photodiodes, photoresistors, photoswitches, phototransistors, phototubes, and photovoltaic cells. Also known as light-sensitive cell; light-sensitive detector; light sensor photodevice; photoelectric detector; photosensor.

photodevice *See* photodetector.

photodichroic material [OPTICS] A material which exhibits photoinduced dichroism and birefringence.

photodiffusion effect *See* Dember effect.

photodimerization [PHYS CHEM] A bimolecular photochemical process involving an electronically excited unsaturated molecule that undergoes addition with an unexcited molecule of the same species.

photodiode [ELECTR] A semiconductor diode in which the reverse current varies with illumination; examples include the alloy-junction photocell and the grown-junction photocell. Also known as photoconductor diode.

photodisintegration [NUC PHYS] The breakup of an atomic nucleus into two or more fragments as a result of bombardment by gamma radiation. Also known as Chadwick-Goldhaber effect.

photodissociation [PHYS CHEM] The removal of one or more atoms from a molecule by the absorption of a quantum of electromagnetic energy.

photodosimetry [NUCLEO] Determination of the cumulative dose of ionizing radiation by use of photographic film.

photodraft [DES ENG] A photographic reproduction of a master layout or design on a specially prepared emulsion-coated piece of sheet metal; used as a master in a tool-construction department.

photoecology [ENG] The application of air photography to ecology, integrated land resource studies, and forestry.

photoelastic effect [OPTICS] Changes in optical properties of a transparent dielectric when it is subjected to mechanical stress, such as mechanical birefringence. Also known as photoelasticity.

photoelasticity [OPTICS] **1.** An experimental technique for the measurement of stresses and strains in material objects by means of the phenomenon of mechanical birefringence. **2.** *See* photoelastic effect.

photoelectret [SOLID STATE] An electret produced by the removal of light from an illuminated photoconductor in an electric field.

photoelectric [ELECTR] Pertaining to the electrical effects of light, such as the emission of electrons, generation of voltage, or a change in resistance when exposed to light.

photoelectric absorption [ELECTR] Absorption of photons in one of the several photoelectric effects.

photoelectric absorption analysis [ANALY CHEM] Type of activation analysis in which the γ-photon gives all of its energy to an electron in the crystal under analysis, generating a maximum-sized pulse for that particular γ-energy.

photoelectric cell *See* photocell.

photoelectric color comparator *See* color comparator.

photoelectric colorimeter [ENG] A colorimeter that uses a phototube or photocell, a set of color filters, an amplifier, and an indicating meter for quantitative determination of color.

photoelectric colorimetry [ANALY CHEM] Measurement of the colorant concentration in a solution by means of the tristimulus values of three primary light filter-photocell combinations.

photoelectric constant [ELECTR] The ratio of the frequency of radiation causing emission of photoelectrons to the voltage corresponding to the energy absorbed by a photoelectron; equal to Planck's constant divided by the electron charge.

photoelectric control [ELECTR] Control of a circuit or piece of equipment by changes in incident light.

photoelectric counter [ELECTR] A photoelectrically actuated device used to record the number of times a given light path is intercepted by an object.

photoelectric cutoff register control [ELECTR] Use of a photoelectric control system as a longitudinal position regulator to maintain the position of the point of cutoff with respect to a repetitive pattern of moving material.

photoelectric densitometer [ENG] An electronic instrument used to measure the density or opacity of a film or other material; a beam of light is directed through the material, and the amount of light transmitted is measured with a photocell and meter.

photoelectric detector *See* photodetector.

photoelectric device [ELECTR] A device which gives an electrical signal in response to visible, infrared, or ultraviolet radiation.

photoelectric door opener [CONT SYS] A control system that employs a photocell or other photo device, used to open and close a power-operated door.

photoelectric effect *See* photoelectricity.

photoelectric electron-multiplier tube *See* multiplier phototube.

photoelectric flame-failure detector [CONT SYS] A photoelectric control that cuts off fuel flow when the fuel-consuming flame is extinguished.

photoelectric fluorometer [ENG] Device using a photoelectric cell to measure fluorescence in a chemical sample that has been excited (one or more electrons have been raised to higher energy level) by ultraviolet or visible light; used for analysis of chemical mixtures.

photoelectric infrared radiation *See* near-infrared radiation.

photoelectric intrusion detector [ELECTR] A burglar-alarm system in which interruption of a light beam by an intruder reduces the illumination on a phototube and thereby closes an alarm circuit.

photoelectricity [ELECTR] The liberation of an electric charge by electromagnetic radiation incident on a substance; includes photoemission, photoionization, photoconduction, the photovoltaic effect, and the Auger effect (an internal photoelectric process). Also known as photoelectric effect; photoelectric process.

photoelectric lighting control [ELECTR] Use of a photoelectric relay actuated by a change in illumination in a given area or at a given point.

photoelectric liquid-level indicator [ENG] A level indica-

tor in which rising liquid interrupts the light beam of a photoelectric control system; used in a tank or process vessel.

photoelectric loop control [CONT SYS] A photoelectric control system used as a position regulator for a loop of material passing from one strip-processing line to another that may travel at a different speed. Also known as loop control.

photoelectric magnitude [ASTRON] The magnitude of a celestial object, as measured by a photoelectric photometer attached to a telescope.

photoelectric photometer [ENG] A photometer that uses a photocell, phototransistor, or phototube to measure the intensity of light. Also known as electronic photometer.

photoelectric photometry [OPTICS] In contrast to the methods of visual photometry, an objective approach to the problems of photometry, wherein any of several types of photoelectric devices are used to replace the human eye as the sensing element.

photoelectric plethysmograph [MED] A medical instrument for measuring and recording ear opacity by means of a tiny phototube and lamp clipped to the ear, as a measure of the state of fullness of blood vessels; also worn by aircraft pilots during high-altitude flights, as an alarm indicating the need for more oxygen.

photoelectric process *See* photoelectricity.

photoelectric pyrometer [ENG] An instrument that measures high temperatures by using a photoelectric arrangement to measure the radiant energy given off by the heated object.

photoelectric reader [COMPUT SCI] A device for reading information stored on paper tape or cards; data are read by sensing the presence or absence of holes.

photoelectric reflectometer [ENG] A reflectometer that uses a photocell or phototube to measure the diffuse reflection of surfaces, powders, pastes, and opaque liquids.

photoelectric register control [CONT SYS] A register control using a light source, one or more phototubes, a suitable optical system, an amplifier, and a relay to actuate control equipment when a change occurs in the amount of light reflected from a moving surface due to register marks, dark areas of a design, or surface defects. Also known as photoelectric scanner.

photoelectric relay [ELECTR] A relay combined with a phototube and amplifier, arranged so changes in incident light on the phototube make the relay contacts open or close. Also known as light relay.

photoelectric scanner [COMPUT SCI] A device that scans punched cards by photoelectric means, as opposed to the standard brushes or "feelers," or mechanical plungers. [CONT SYS] *See* photoelectric register control.

photoelectric smoke-density control [CONT SYS] A photoelectric control system used to measure, indicate, and control the density of smoke in a flue or stack.

photoelectric sorter [CONT SYS] A photoelectric control system used to sort objects according to color, size, shape, or other light-changing characteristics.

photoelectric transmissometer [ENG] A device to measure the runway visibility at an airport by measuring the degree to which a light beam falling on a photocell is obscured by clouds or fog.

photoelectric tube *See* phototube.

photoelectric turbidimeter [ENG] Device for measurement of solution turbidity by use of photocells to detect the loss of intensity of light beamed through the solution.

photoelectrolysis [PHYS CHEM] The process of using optical energy to assist or effect electrolytic processes that ordinarily require the use of electrical energy.

photoelectromagnetic effect [ELECTR] The effect whereby, when light falls on a flat surface of an intermetallic semiconductor located in a magnetic field that is parallel to the surface, excess hole-electron pairs are created, and these carriers diffuse in the direction of the light but are deflected by the magnetic field to give a current flow through the semiconductor that is at right angles to both the light rays and the magnetic field.

photoelectromotive force [ELECTR] Electromotive force caused by photovoltaic action.

photoelectron [ELECTR] An electron emitted by the photoelectric effect.

photoelectron spectroscopy [SPECT] The branch of electron spectroscopy concerned with the energy analysis of photoelectrons ejected from a substance as the direct result of bombardment by ultraviolet radiation or x-radiation.

photoemission [ELECTR] The ejection of electrons from a solid (or less commonly, a liquid) by incident electromagnetic radiation. Also known as external photoelectric effect.

photoemission threshold [ELECTR] The energy of a photon which is just sufficient to eject an electron from a solid or liquid in photoemission.

photoemissive cell [ELECTR] A device which detects or measures radiant energy by measurement of the resulting emission of electrons from the surface of a photocathode.

photoemissive tube photometer [ENG] A photometer which uses a tube made of a photoemissive material; it is highly accurate, but requires electronic amplification, and is used mainly in laboratories.

photoemissivity [ELECTR] The property of a substance that emits electrons when struck by light.

photoemitter [SOLID STATE] A material that emits electrons when sufficiently illuminated.

photoengraving [GRAPHICS] The technique of producing relief plates such as halftones or zinc etchings by photography; a metal plate is coated with a photosensitive emulsion and exposed to light under a reversed positive; the picture is developed by dissolving away the portion of the emulsion not acted upon by the light, and the plate is etched.

photoengraving zinc [MET] Pure zinc mixed with a small amount of iron to reduce grain size, and alloyed with a maximum of 0.2% each of cadmium, manganese, and magnesium; used for printing plates.

photoenlarger *See* enlarger.

photoferroelectric effect [SOLID STATE] An effect observed in ferroelectric ceramics such as PLZT materials, in which light at or near the band-gap energy of the material has an effect on the electric field in the material created by an applied voltage, and, at a certain value of the voltage, also influences the degree of ferroelectric remanent polarization. Abbreviated PFE.

photo finishing [GRAPHICS] The commercial processing of photographs.

photofission [NUC PHYS] Fission of an atomic nucleus that results from absorption by the nucleus of a high-energy photon.

photoflash bomb [ENG] A missile dropped from aircraft; it contains a photoflash mixture and a means for ignition at a distance above the ground, to produce a brilliant light of short duration for photographic purposes.

photoflash composition [MATER] A pyrotechnic material which, when loaded in a suitable casing and ignited, produces a flash of sufficient intensity and duration for photographic purposes; used as the filler in photoflash bombs and cartridges.

photoflash lamp [ELEC] A lamp consisting of a glass bulb filled with finely shredded aluminum foil in an atmosphere of oxygen; when the foil is ignited by a low-voltage dry cell, it burns with a burst of high-intensity light of short time duration and with definitely regulated time characteristics.

photoflash unit [ELECTR] A portable electronic light source for photographic use, consisting of a capacitor-discharge power source, a flash tube, a battery for charging the capacitor, and sometimes also a high-voltage pulse generator to trigger the flash.

photoflood lamp [ELEC] An incandescent lamp used in photography which has a high-temperature filament, so that it gives high illumination and high color temperature for a short lifetime.

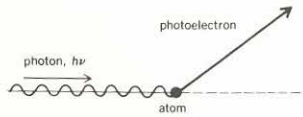
photofluorography *See* fluorography.

photogelatin printing [GRAPHICS] A method of printing that produces extremely fine tones on uncoated papers by means of a photogelatin printing plate.

photogelatin printing plate [GRAPHICS] An aluminum or heavy-glass base coated with a layer of light-sensitive gelatin, exposed to light through an unscreened photographic negative of the copy to be reproduced; after treatment, the printing image varies in thickness, moisture content, and ability to hold or repel printing ink. Also known as albertype; artotype; collotype; heliotype; phototype.

photogelatin process [GRAPHICS] Photomechanical process for producing prints directly from a hardened colloid film; the sensitized film is exposed under a reversed negative, desensitized, and then soaked in glycerin and salt water so that the parts that have not been exposed to light undergo swelling; the swelled parts are ink-repellent and the unswelled parts ink-receptive, thereby forming a printing surface of the lithographic sort. Also known as collotype.

PHOTOEMISSION



Albert Einstein's approach to photoemission. Light beam behaves like a stream of photons, each of energy $h\nu$, where h is Planck's constant, and ν the frequency of the photon. When a photon interacts with an electron, the electron absorbs entire photon energy and is ejected from emitter if this energy exceeds a well-defined minimum value.

photogeologic anomaly [GEOL] Any systematic deviation of a photogeologic factor from the expected norm in a given area.

photogeologic map [GEOL] A compilation of interpretations of a series of aerial photographs, including annotations of geologic features.

photogeology [GEOL] The geologic interpretation of landforms by means of aerial photographs.

photogeomorphology [GEOL] The study of landforms by means of aerial photographs.

photoglow tube [ELECTR] Gas-filled phototube used as a relay by making the operating voltage sufficiently high so that ionization and a flow discharge occur, with considerable current flow, when a certain illumination is reached.

photoglycine *See* glycin.

photogoniometer [ENG] A goniometer that uses a phototube or photocell as a sensing device for studying x-ray spectra and x-ray diffraction effects in crystals.

photogram [GRAPHICS] A design or pattern produced on regular photographic paper without the use of a negative or a lens system; opaque or transparent objects are assembled on the paper, and the paper is exposed to light and processed in the usual way.

photogrammetry [ENG] **1.** The science of making accurate measurements and maps from aerial photographs. **2.** The practice of obtaining surveys by means of photography.

photograph [GRAPHICS] A positive or negative image obtained by photography.

photographic barograph [ENG] A mercury barometer arranged so that the position of the upper or lower meniscus may be measured photographically.

photographic emulsion [GRAPHICS] Microscopic grains of light-sensitive silver halide suspended in a gelatin surface on paper, plastic, metal, or glass; used to coat photographic film.

photographic field [OPTICS] The area covered or "seen" by the lens of a camera.

photographic film [GRAPHICS] Sensitized material (emulsion) coated on a flexible support, usually a transparent plastic material.

photographic fixing [GRAPHICS] The process by which the unexposed and unreduced silver halide in a negative is removed in an exposed film; sodium thiosulfate (hypo) is the chemical usually used.

photographic interpretation *See* photointerpretation.

photographic magnitude [ASTRON] The magnitude of a star, as obtained by measuring the apparent size of a star's image on a photographic emulsion sensitive to blue light at wavelengths between 400 and 500 nanometers.

photographic meteor [ASTRON] A meteor which has been photographed for the purpose of determining its origin, velocity, and other characteristics.

photographic photometry [SPECT] The use of a comparator-densitometer to analyze a photographed spectrograph spectrum by emulsion density measurements.

photographic plane [GRAPHICS] **1.** The flat area on which a document is photographed. **2.** The surface at which an image is formed by a lens for recording on a photosensitive material.

photographic recording [COMMUN] Facsimile recording in which a photosensitive surface is exposed to a signal-controlled light beam or spot.

photographic sound recorder [ELECTR] A sound recorder having means for producing a modulated light beam and means for moving a light-sensitive medium relative to the beam to give a photographic recording of sound signals. Also known as optical sound recorder.

photographic sound reproducer [ELECTR] A sound reproducer in which an optical sound record on film is moved through a light beam directed at a light-sensitive device, to convert the recorded optical variations back into audio signals. Also known as optical sound reproducer.

photographic surveying [ENG] Photographing of plumb bobs, clinometers, or magnetic needles in borehole surveying to provide an accurate permanent record.

photographic zenith tube [OPTICS] A type of zenith telescope in which light is reflected from a pool of mercury, and the photographic plate is held in a carriage just below the objective that is alternately rotated through 180° and moved slowly across the field of view to follow a star image; used for the accurate determination of time.

photograph nadir [OPTICS] The point at which a vertical line through the perspective center of a camera lens pierces the plane of the photograph. Also known as nadir point.

photography [GRAPHICS] The process of forming visible images directly or indirectly by the action of light or other forms of radiation on sensitive surfaces.

photogravure [GRAPHICS] A method of making intaglio engravings in copper from photographs in which a gelatin image is used as an acid resist; it is considered high quality for halftones, but not very good for type.

photoheliograph [OPTICS] A refracting telescope specially designed to photograph the sun's disk.

photohomolysis [PHYS CHEM] A homolysis reaction in which bond breaking is caused by radiant energy.

photointerpretation [ENG] The science of identifying and describing objects in a photograph, such as deducing the topographic significance or the geologic structure of landforms on an aerial photograph. Also known as photographic interpretation.

photoionization [PHYS CHEM] The removal of one or more electrons from an atom or molecule by absorption of a photon of visible or ultraviolet light. Also known as atomic photoelectric effect.

photoisland grid [ELECTR] Photosensitive surface in the storage-type, Farnsworth dissector tube for television cameras.

photoisolator *See* optoisolator.

photoisomer [PHYS CHEM] An isomer produced by photolysis.

photojunction battery [NUCLEO] A nuclear-type battery in which a radioactive material such as promethium-147 irradiates a phosphor which converts nuclear energy into light; the light is then converted to electrical energy by a small silicon junction.

photolithography [GRAPHICS] Lithography in which photographically produced plates or masks are used.

photology [OPTICS] The scientific study of light.

photoluminescence [ATOM PHYS] Luminescence stimulated by visible, infrared, or ultraviolet radiation.

photolysis [PHYS CHEM] The use of radiant energy to produce chemical changes.

photomacrography [GRAPHICS] Making large pictures of small subjects by using a short-focal-length lens on a long-bellows camera.

photomagnetic effect [PHYS] The direct effect of light on the magnetic susceptibility of certain substances.

photomagnetoelectric effect [ELECTROMAG] The generation of a voltage when a semiconductor material is positioned in a magnetic field and one face is illuminated.

photomap [MAP] An aerial photograph or a controlled mosaic of rectified photographs to which have been added a reference grid, scale, place names, marginal information, and other pertinent data or map symbols.

photomask [ELECTR] A film or glass negative that has many high-resolution images, used in the production of semiconductor devices and integrated circuits.

photomechanical [GRAPHICS] Pertaining to any platemaking process in which photographic negatives and positives are exposed onto plates or cylinders that have been coated with photosensitive substances.

photomechanochemistry [PHYS CHEM] A branch of polymer sciences that deals with photochemical conversion of chemical energy into mechanical energy.

photometer [ENG] An instrument used for making measurements of light or electromagnetic radiation, in the visible range.

photometric parallax [ASTRON] The annual parallax of a star too far away for its parallax to be measured directly, as calculated from its apparent magnitude and its absolute magnitude inferred from its spectral type.

photometric titration [ANALY CHEM] A titration in which the titrant and solution cause the formation of a metal complex accompanied by an observable change in light absorbance by the titrated solution.

photometry [OPTICS] The calculation and measurement of quantities describing light, such as luminous intensity, luminous flux, luminous flux density, light distribution, color, absorption factor, spectral distribution, and the reflectance and transmittance of light; sometimes taken to include measurement of near-infrared and near-ultraviolet radiation as well as visible light.

photomicrograph [GRAPHICS] A micrograph produced by photography.

photomicrography [GRAPHICS] The photography of the image formed by the microscope.

photomorphogenesis [BOT] The control exerted by light over growth, development, and differentiation of plants that is independent of photosynthesis.

photomosaic [GRAPHICS] Composite photograph (usually aerial) made up of individual, small-area photographs placed side by side.

photomultiplier *See* multiplier phototube.

photomultiplier cell [ELECTR] A transistor whose *pn*-junction is exposed so that it conducts more readily when illuminated.

photomultiplier counter [ELECTR] A scintillation counter that has a built-in multiplier phototube.

photomultiplier tube *See* multiplier phototube.

photon [OPTICS] *See* troland. [QUANT MECH] A massless particle, the quantum of the electromagnetic field, carrying energy, momentum, and angular momentum. Also known as light quantum.

photon coupled isolator [ELECTR] Circuit coupling device, consisting of an infrared emitter diode coupled to a photon detector over a short shielded light path, which provides extremely high circuit isolation.

photon coupling [ELECTR] Coupling of two circuits by means of photons passing through a light pipe.

photon curve [PETRO ENG] A graphical plot of depth versus gamma radiation (photon) scatter during the radioactive logging of a well bore; used to detect differences in density at various reservoir depths.

photo echo [OPTICS] A coherent pulse of light generated in a nonlinear medium at a characteristic time after two other pulses, separated by a certain time interval, have entered the medium.

photonegative [ELECTR] Having negative photoconductivity, hence decreasing in conductivity (increasing in resistance) under the action of light; selenium sometimes exhibits photonegativity.

photon emission spectrum [PHYS] The relative numbers of optical photons emitted by a scintillator material per unit wavelength as a function of wavelength; the emission spectrum may also be given in alternative units such as wave number, photon energy, or frequency.

photonephelometer [ENG] A nephelometer that uses a photocell or phototube to measure the amount of light transmitted by a suspension of particles.

photoneutron [NUC PHYS] A neutron released from a nucleus in a photonuclear reaction.

photon flux [OPTICS] The number of photons in a light beam reaching a surface, such as the surface of the photocathode of a photomultiplier tube, in a unit of time.

photon gas [STAT MECH] An electromagnetic field treated as a collection of photons; it behaves as any other collection of bosons, except that the particles are emitted or absorbed without restriction on their number.

photon microscope *See* optical microscope.

photon sail *See* solar sail.

photon theory [QUANT MECH] A theory of photoemission developed by Einstein, according to which a light beam behaves like a stream of particles (called photons) when it delivers energy to a substance displaying photoemission, the particles each having an energy equal to Planck's constant times the frequency of the light.

photonuclear reaction [NUC PHYS] A nuclear reaction resulting from the collision of a photon with a nucleus.

photoperiodism [PHYSIO] The physiological responses of an organism to the length of night or day or both.

photophilic [BIOL] Thriving in full light.

photophobia [PSYCH] An abnormal fear of light.

photophobic [BIOL] **1.** Avoiding light. **2.** Exhibiting negative phototropism.

photophore gland [VERT ZOO] A highly modified integumentary gland which develops into a luminous organ composed of a lens and a light-emitting gland; occurs in deep-sea teleosts and elasmobranchs.

photophoresis [PHYS] Production of unidirectional motion in a collection of very fine particles, suspended in a gas or falling in a vacuum, by a powerful beam of light.

photophosphorylase [BIOCHEM] An enzyme that is associated with the surface of a thylakoid membrane and is involved in the final stages of adenosinetriphosphate production by photosynthetic phosphorylation.

photophosphorylation [BIOCHEM] Phosphorylation induced by light energy in photosynthesis.

photophygous [BIOL] Thriving in shade.

photopic vision *See* foveal vision.

photopigment [BIOCHEM] A pigment that is unstable in the presence of light of appropriate wavelengths, such as the chromophore pigment which combines with opsins to form rhodopsin in the rods and cones of the vertebrate eye.

photopolymer [PHYS CHEM] Any of a class of light-sensitive polymers which undergo a spontaneous and permanent change in physical properties on exposure to light.

photopositive [ELECTR] Having positive photoconductivity, hence increasing in conductivity (decreasing in resistance) under the action of light; selenium ordinarily has photopositivity.

photoproton [NUC PHYS] A proton released from a nucleus in a photonuclear reaction.

photoreactive chlorophyll [BIOCHEM] Chlorophyll molecules which receive light quanta from antenna chlorophyll and constitute a photoreaction center where light energy conversion occurs.

photoreception [PHYSIO] The process of absorption of light energy by plants and animals and its utilization for biological functions, such as photosynthesis and vision.

photoreceptor [PHYSIO] A highly specialized, light-sensitive cell or group of cells containing photopigments.

photorelief map [MAP] **1.** A map consisting of a photograph of a relief model of the area under study and showing salient physical features. **2.** A diagrammatic map that simulates or gives the impression of a photograph of a relief model of the area under study.

photoresist [GRAPHICS] A light-sensitive coating that is applied to a substrate or board, exposed, and developed prior to chemical etching; the exposed areas serve as a mask for selective etching.

photoresistive cell *See* photoconductive cell.

photoresistor *See* photoconductive cell.

photorespiration [BIOCHEM] Respiratory activity taking place in plants during the light period; CO_2 is released and O_2 is taken up, but no useful form of energy, such as adenosinetriphosphate, is derived.

photoscanner [ENG] A scanner used to make a film record of gamma rays passing through tissue from an injected radioactive material.

photo-SCR *See* light-activated silicon controlled rectifier.

photosensitive *See* light-sensitive.

photosensitive glass [GRAPHICS] Glass containing submicroscopic metallic particles; when ultraviolet light passes through a negative on the glass, it precipitates the particles, with shadowed areas of the negative permitting deeper penetration into the glass than highlight areas, giving the picture three dimensions and color; photograph is developed by heating the glass to 1000°F (538°C).

photosensor *See* photodetector.

photosphere [ASTRON] The intensely bright portion of the sun visible to the unaided eye; it is a shell a few hundred miles in thickness marking the boundary between the dense interior gases of the sun and the more diffuse cooler gases in the outer portions of the sun.

photospheric granulation *See* granulation.

Photostat [GRAPHICS] A registered trademark of the Photostat Corporation for a photographic copying machine.

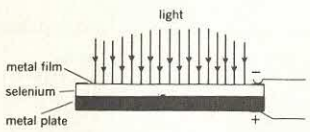
photosynthesis [BIOCHEM] Synthesis of chemical compounds in light, especially the manufacture of organic compounds (primarily carbohydrates) from carbon dioxide and a hydrogen source (such as water), with simultaneous liberation of oxygen, by chlorophyll-containing plant cells.

photosystem I [BIOCHEM] One of two reaction sequences of the light phase of photosynthesis in green plants that involves a pigment system which is excited by wavelengths shorter than 700 nanometers and which transfers this energy to energy carriers such as NADPH that are subsequently utilized in carbon dioxide fixation.

photosystem II [BIOCHEM] One of two reaction sequences of the light phase of photosynthesis in green plants which involves a pigment system excited by wavelengths shorter than 685 nanometers and which is directly involved in the splitting or photolysis of water.

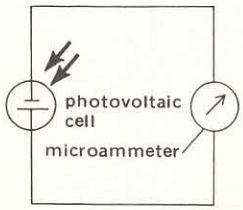
phototaxis [BIOL] Movement of a motile organism or free plant part in response to light stimulation.

PHOTOVOLTAIC CELL



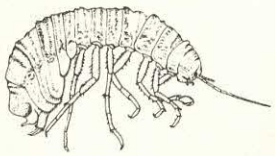
Schematic of a photovoltaic cell; metal plate usually is iron, and thin metal film is either gold or platinum.

PHOTOVOLTAIC METER



Circuit diagram of photovoltaic type of exposure meter. Heavy arrows represent light falling on cell.

PHREATOICOIDEA



Onchotelson brevicaudatus (Smith), adult male.

phototelegraphy *See* facsimile.

phototheodolite [ENG] A ground-surveying instrument used in terrestrial photogrammetry which combines the functions of a theodolite and a camera mounted on the same tripod.

photothermoelasticity [OPTICS] Changes in optical properties of a transparent dielectric when it is subjected to mechanical stress, which is, in turn, induced by temperature gradients.

photothyristor *See* light-activated silicon controlled rectifier.

phototopography [ENG] The science of mapping and surveying in which details are plotted entirely from photographs taken at suitable ground stations.

phototransistor [ELECTR] A junction transistor that may have only collector and emitter leads or also a base lead, with the base exposed to light through a tiny lens in the housing; collector current increases with light intensity, as a result of amplification of base current by the transistor structure.

phototriangulation [ENG] The extension of horizontal or vertical control points, or both, by photogrammetric methods, whereby the measurements of angles and distances on overlapping photographs are related into a spatial solution using the perspective principles of the photographs.

phototronic photocell *See* photovoltaic cell.

phototroph [BIOL] An organism that utilizes light as a source of metabolic energy.

phototrophic bacteria [MICROBIO] Primarily aquatic bacteria comprising two principal groups: purple bacteria and green sulfur bacteria; all contain bacteriochlorophylls.

phototropism [BOT] A growth-mediated response of a plant to stimulation by visible light. [SOLID STATE] A reversible change in the structure of a solid exposed to light or other radiant energy, accompanied by a change in color. Also known as phototropy.

phototropy *See* phototropism.

phototube [ELECTR] An electron tube containing a photocathode from which electrons are emitted when it is exposed to light or other electromagnetic radiation. Also known as electric eye; light-sensitive tube; photoelectric tube.

phototube cathode [ELECTR] The photoemissive surface which is the most negative element of a phototube.

phototube current meter [ENG] A device for measuring the speed of water currents in which a perforated disk, which rotates with the current by means of a propeller, is placed in the path of a beam of light that is then reflected from a mirror onto a phototube.

phototube relay [ELECTR] A photoelectric relay in which a phototube serves as the light-sensitive device.

phototype *See* photogelatin printing plate.

phototypesetter [GRAPHICS] Machine for placing individual characters on photographic film.

phototype setting [GRAPHICS] A method of composing text matter by successively projecting the images of characters on light-sensitive film or on photographic paper.

photovaristor [ELECTR] Varistor in which the current-voltage relation may be modified by illumination, for example, one in which the semiconductor is cadmium sulfide or lead telluride.

photoviscoelasticity [OPTICS] Changes in optical properties of a transparent, viscoelastic substance when it is subjected to stress.

photovisual magnitude [ASTRON] The magnitude of a star, obtained by measuring the size of the star's image on an isochromatic photographic emulsion, using a filter transmitting only the longer wavelengths between 500 and 600 nanometers; nearly identical with visual magnitude.

photovoltaic [ELECTR] Capable of generating a voltage as a result of exposure to visible or other radiation.

photovoltaic cell [ELECTR] A device that detects or measures electromagnetic radiation by generating a potential at a junction (barrier layer) between two types of material, upon absorption of radiant energy. Also known as barrier-layer cell; barrier-layer photocell; boundary-layer photocell; photronic photocell.

photovoltaic effect [ELECTR] The production of a voltage in a nonhomogeneous semiconductor, such as silicon, or at a junction between two types of material, by the absorption of light or other electromagnetic radiation.

photovoltaic meter [ELECTR] An exposure cell in which a photovoltaic cell produces a current proportional to the light falling on the cell, and this current is measured by a sensitive microammeter.

photox cell [ELECTR] Type of photovoltaic cell in which a voltage is generated between a copper base and a film of cuprous oxide during exposure to visible or other radiation.

photronic cell [ELECTR] Type of photovoltaic cell in which a voltage is generated in a layer of selenium during exposure to visible or other radiation.

photronic photocell *See* photovoltaic cell.

Phoxichilidiidae [INV ZOO] A family of marine arthropods in the subphylum Pycnogonida; typically, chelifores are present, palpi are lacking, and ovigers have five to nine joints in males only.

phoxim *See* phenylglyoxylonitriloxime *O,O*-diethyl phosphorothioate.

Phoxocephalidae [INV ZOO] A family of amphipod crustaceans in the suborder Gammaridea.

Phractolaemidae [VERT ZOO] A family of tropical African fresh-water fishes in the order Gonorynchiformes.

Phragmidiothrix [MICROBIO] A genus of sheathed bacteria; cells are nonmotile, and sheaths are attached and not encrusted with iron or manganese oxides.

Phragmobasidiomycetes [MYCOL] An equivalent name for Heterobasidiomycetidae.

phragmoid [BOT] Having septae perpendicular to the long axis, as the conidia of certain fungi.

phragmoplast [CYTOL] A thin barrier which is formed across the spindle equator in late cytokinesis in plant cells and within which the cell wall is laid down.

phragmosome [CYTOL] A differentiated cytoplasmic partition in which the phragmoplast and cell plate develop during cell division in plant cells.

Phragmosporae [MYCOL] A spore group of the Fungi Imperfecti with three- to many-celled spores.

phrase name *See* metavariable.

phreatic [GEOL] Of a volcanic explosion of material such as steam or mud, not being incandescent.

phreatic cycle [HYD] The period of time during which the water table rises and then falls.

phreatic gas [GEOL] A gas formed by the contact of atmospheric or surface water with ascending magma.

phreatic surface *See* water table.

phreatic water [HYD] Groundwater in the zone of saturation.

phreatic-water discharge *See* groundwater discharge.

phreatic zone *See* zone of saturation.

Phreatoicidae [INV ZOO] A family of isopod crustaceans in the suborder Phreatoicoidea in which only the left mandible retains a lacinia mobilis.

Phreatoicoidea [INV ZOO] A suborder of the Isopoda having a subcylindrical body that appears laterally compressed, antennules shorter than the antennae, and the first thoracic segment fused with the head.

phreatomagmatic [GEOL] Pertaining to a volcanic explosion that extrudes both magmatic gases and steam; it is caused by the contact of the magma with groundwater or ocean water.

phreatophyte [ECOL] A plant with a deep root system which obtains water from the groundwater or the capillary fringe above the water table.

phrenectomy [MED] Resection of a section of a phrenic nerve or removal of an entire phrenic nerve.

phrenic nerve [ANAT] A nerve, arising from the third, fourth, and fifth cervical (cervical plexus) segments of the spinal cord; innervates the diaphragm.

phrynoderma [MED] Dryness of the skin with follicular hyperkeratosis, caused by vitamin A deficiency.

Phrynophiurida [INV ZOO] An order of the Ophiuroidea in which the vertebrae usually articulate by means of hourglass-shaped surfaces, and the arms are able to coil upward or downward in the vertical plane.

pH(S) *See* pH standard.

pH standard [ANALY CHEM] Five standard laboratory solutions available from the U. S. National Bureau of Standards, each solution having a known pH value; the standards cover pH ranges from 3.557 to 8.833. Abbreviated pH(S).

phthalate [ORG CHEM] A salt of phthalic acid; contains the radical $C_6H_4(COO)_2^{2-}$; an example is dibutylphthalate, $C_{16}H_{22}O_4$; used as a plasticizer in plastics, and as a buffer in standard laboratory solutions.

phthalate buffer [ANALY CHEM] Laboratory pH reference solution made of potassium hydrogen phthalate, $KHC_8H_4O_4$; at 0.05 molal, the pH is 4.008 at 25°C.

phthalate ester [ORG CHEM] Any of a group of plastics

plasticizers made by the direct action of alcohol on phthalic anhydride; generally characterized by moderate cost, good stability, and good general properties.

phthalazine [ORG CHEM] $C_6H_4CHN_2CH$ Colorless crystals, melting at 91°C; soluble in alcohol. Also known as 2, 3-benzodiazine; β-benzo-*o*-diazine; β-phenodiazine.

phthalic acid [ORG CHEM] $C_6H_4(CO_2H)_2$ Any of three isomeric benzene dicarboxylic acids; the ortho form is usually called phthalic acid, comprises alcohol-soluble, colorless crystals decomposing at 191°C, slightly soluble in water and ether, is used to make dyes, medicine, and synthetic perfumes, and as a chemical intermediate, and is also known as benzene orthodicarboxylic acid; the para form, known as terephthalic acid, is used to make polyester resins (Dacron) and as poultry feed additives; the meta form is isophthalic acid.

***meta*-phthalic acid** *See* isophthalic acid.

***ortho*-phthalic acid** *See* phthalic acid.

***para*-phthalic acid** *See* terephthalic acid.

phthalic anhydride [ORG CHEM] $C_6H_4(CO)_2O$ White crystals, melting at 131°C; sublimes when heated; slightly soluble in ether and hot water, soluble in alcohol; used to make dyes, resins, plasticizers, and insect repellents. Also known as acid phthalic anhydride.

phthalocyanine pigments [ORG CHEM] A group of lightfast organic pigments with four isoindole groups, $(C_6H_4)C_2N$, linked by four nitrogen atoms to form a conjugated chain; included are phthalocyanine (blue-green), copper phthalocyanine (blue), chlorinated copper phthalocyanine (green), and sulfonated copper phthalocyanine (green); used in enamels, plastics, linoleum, inks, wallpaper, and rubber goods.

phthalocyanine Q switching [OPTICS] Laser Q switching in which a solution of metal-organic compounds known as phthalocyanines is placed in a cell between an uncoated ruby laser crystal and a high-reflectivity mirror; when the incident ruby light reaches a certain level, the solution suddenly becomes almost perfectly transparent to this light, permitting the release of all the energy stored in the ruby as a giant pulse.

phthalonitrile [ORG CHEM] $C_6H_4(CN)_2$ Buff-colored crystals with a melting point of 138°C; soluble in acetone and benzene; used in organic synthesis and as an insecticide. Also known as *O*-dicyanobenzene.

phthanite *See* chert.

phthisis [MED] **1.** Any disease characterized by emaciation and loss of strength. **2.** *See* tuberculosis.

phugoid [AERO ENG] Pertaining to variations in the longitudinal motion or course of the center of mass of an aircraft.

phycite *See* erythritol.

Phycitinae [INV ZOO] A large subfamily of moths in the family Pyralididae in which the frenulum of the female is a simple spine rather than a bundle of bristles.

phycobilin [BIOCHEM] Any of various protein-bound pigments which are open-chain tetrapyrroles and occur in some groups of algae.

phycocyanin [BIOCHEM] A blue phycobilin.

phycocyanobilin [BIOCHEM] $C_{31}H_{38}O_2N_4$ Phycobilin with an ethylidene side chain (=CH—CH_3) and only one asymmetric carbon atom (C_1).

phycoerythrin [BIOCHEM] A red phycobilin.

phycoerythrobilin [BIOCHEM] $C_{31}H_{38}O_2N_4$ Phycobilin with seven conjugated double bonds, an ethylidine side chain (=CH—CH_3), and two asymmetric carbon atoms (C_1 and C_7).

Phycomycetes [MYCOL] A primitive class of true fungi belonging to the Eumycetes; they lack regularly spaced septa in the actively growing portions of the plant body, and have the sporangiospore, produced in the sporangium by cleavage, as the fundamental, asexual reproductive unit.

Phycosecidae [INV ZOO] A small family of coleopteran insects of the superfamily Cucujoidea, including five species found in New Zealand, Australia, and Egypt.

Phylactolaemata [INV ZOO] A class of fresh-water ectoproct bryozoans; individuals have lophophores which are U-shaped in basal outline, and relatively short, wide zooecia.

phyletic evolution [EVOL] The gradual evolution of population without separation into isolated parts.

phyllary [BOT] A bract of the involucre of a composite plant.

phyllite [PETR] A metamorphic rock intermediate in grade between slate and schist, and derived from argillaceous sediments; has a silky sheen on the cleavage surface.

Phyllobothrioidea [INV ZOO] The equivalent name for Tetraphyllidea.

phyllobranchiate gill [INV ZOO] A type of decapod crustacean gill with flattened branches, or lamellae usually arranged in two opposite series.

phyllocladе [BOT] A flattened stem that fulfills the same functions as a leaf.

phyllode [BOT] A broad, flat petiole that replaces the blade of a foliage leaf. [INV ZOO] A petal-shaped group of ambulacra near the mouth of certain echinoderms.

Phyllodocidae [INV ZOO] A leaf-bearing family of errantian annelids in which the species are often brilliantly iridescent and are highly motile.

phyllofacies [GEOL] A facies differentiated on the basis of stratification characteristics, especially the stratification index.

Phyllogoniaceae [BOT] A family of mosses in the order Isobryales in which the leaves are equitant.

Phyllolepida [PALEON] A monogeneric order of placoderms from the late Upper Devonian in which the armor is broad and low with a characteristic ornament of concentric and transverse ridges on the component plates.

phyllomorphic stage [GEOL] The most advanced geochemical stage of diagenesis, characterized by authigenic development of micas, feldspars, and chlorites at the expense of clays.

phyllonite [PETR] A metamorphic rock occupying an intermediate position between phyllite and mylonite.

Phyllophoridae [INV ZOO] A family of dendrochirotacean holothurians in the order Dendrochirotida having a rather naked skin and a complex calcareous ring.

phyllosilicate [MINERAL] A structural type of silicate mineral in which flat sheets are formed by the sharing of three of the four oxygen atoms in each tetrahedron with neighboring tetrahedrons. Also known as layer silicate; sheet mineral; sheet silicate.

phyllosoma [INV ZOO] A flat, transparent, long-legged larval stage of various spiny lobsters.

phyllospondylous [VERT ZOO] Of vertebrae, having a hypocentrum but no pleurocentra; the neural arch extends ventrad to enclose the notochord and form transverse processes which articulate with the ribs.

Phyllosticales [MYCOL] An equivalent name for Sphaeropsidales.

Phyllostomatidae [VERT ZOO] The New World leaf-nosed bats (Chiroptera), a large tropical and subtropical family of insect- and fruit-eating forms with narrow, pointed ears.

phyllotaxy [BOT] The arrangement of leaves on a stem.

Phylloxerinae [INV ZOO] A subfamily of homopteran insects in the family Chermidae in which the sexual forms lack mouthparts, and the parthenogenetic females have a beak but the digestive system is closed, and no honeydew is produced.

phylogeny [EVOL] The evolutionary or ancestral history of organisms.

phylum [SYST] A major taxonomic category in classifying animals (and plants in some systems), composed of groups of related classes.

phyma [MED] **1.** A tumor of new growth of varying size, composed of any of the structures of the skin or subcutaneous tissue. **2.** A localized plastic exudate larger than a tubercle; a circumscribed swelling of the skin.

Phymatidae [INV ZOO] A family of carnivorous hemipteran insects characterized by strong, thick forelegs.

phymatosis [MED] Any disease characterized by the formation of phymas or nodules.

Phymosomatidae [INV ZOO] A family of echinacean echinoderms in the order Phymosomatoida with imperforate crenulate tubercles; one surviving genus is known.

Phymosomatoida [INV ZOO] An order of Echinacea with a stirodont lantern and diademoid ambulacral plates.

physa [INV ZOO] The rounded basal portion of the body of certain sea anemones.

Physalopteridae [INV ZOO] A family of parasitic nematodes in the superfamily Spiruroidea.

Physaraceae [MYCOL] A family of slime molds in the order Physarales.

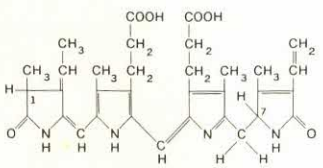
Physarales [MYCOL] An order of Myxomycetes in the subclass Myxogastromycetidae.

physiatrics [MED] The science and practice of physical therapy.

physical adsorption [PHYS CHEM] Reversible adsorption in which the adsorbate is held by weak physical forces.

physical anthropology [ANTHRO] The science that deals

PHYCOCYANOBILIN

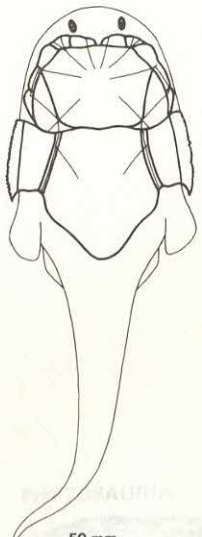


Structural formula of phycocyanobilin.

PHYLLOBRANCHIATE GILL

The phyllobranchiate gill of the mud shrimp *(Thalassina)*. *(Smithsonian Institution)*

PHYLLOLEPIDA



Phyllolepis orvini from the Upper Devonian of Greenland. The restoration of the dermal armor is shown in dorsal aspect. The outline of the front of the head and the body is hypothetical, but shows how the fish might have appeared in life. *(After Erik Stensiö)*

with the biological aspects of humankind and their relation to historical or cultural aspects.

physical chemistry [CHEM] The branch of chemistry that deals with the interpretation of chemical phenomena and properties in terms of the underlying physical processes, and with the development of techniques for their investigation.

physical climate [CLIMATOL] The actual climate of a place, as distinguished from a hypothetical climate, such as the solar climate or mathematical climate.

physical climatology [CLIMATOL] The major branch of climatology, which deals with the explanation of climate, rather than with presentation of it (climatography).

physical compatibility [ENG] The ability of two or more materials, substances, or chemicals to be used together without ill effect.

physical constant [PHYS] A physical quantity which has a fixed and unchanging numerical value.

physical data independence [COMPUT SCI] A file structure such that the physical structure of the data can be modified without changing the logical structure of the file.

physical device table [COMPUT SCI] A table associated with a physical input/output unit containing such information as the device type, an indication of data paths that may be used to transfer information to and from the device, status information on whether the device is busy, the input/output operation currently pending on the device, and the availability of any storage contained in the device.

physical electronics [ELECTR] The study of physical phenomena basic to electronics, such as discharges, thermionic and field emission, and conduction in semiconductors and metals.

physical exfoliation [GEOL] A type of exfoliation caused by physical forces; for example, by the freezing of water that has penetrated fine cracks in rock or by the removal of overburden concealing deeply buried rocks.

physical forecasting *See* numerical forecasting.

physical geography [GEOGR] The branch of geography which deals with the description, analysis, classification, and genetic interpretation of the natural features and phenomena of the earth's surface.

physical geology [GEOL] That branch of geology concerned with understanding the composition of the earth and the physical changes occurring in it, based on the study of rocks, minerals, and sediments, their structures and formations, and their processes of origin and alteration.

physical input/output control system *See* PIOCS.

physical law [PHYS] A property of a physical phenomenon, or a relationship between the various quantities or qualities which may be used to describe the phenomenon, that applies to all members of a broad class of such phenomena, without exception.

physical libration of the moon *See* lunar libration.

physical measurement [PHYS] Quantitative information on a physical condition, property, or relation, generally in the form of the ratio of the measured quantity to a standard quantity, or to some fixed multiple or fraction thereof.

physical medicine [MED] A consultative, diagnostic, and therapeutic medical specialty, coordinating and integrating the use of physical and occupational therapy and physical reconditioning in the professional management of the diseased and injured.

physical metallurgy [MET] The branch of metallurgy concerned with physical and mechanical properties of metals as affected by composition, mechanical working, and heat treatment.

physical meteorology [METEOROL] That branch of meteorology which deals with optical, electrical, acoustical, and thermodynamic phenomena of the atmosphere, its chemical composition, the laws of radiation, and the explanation of clouds and precipitation.

physical oceanography [OCEANOGR] The study of the physical aspects of the ocean, the movements of the sea, and the variability of these factors in relationship to the atmosphere and the ocean bottom.

physical optics [OPTICS] The study of the interaction of electromagnetic waves in the optical frequency range with material systems.

physical property [CHEM] Property of a compound that can change without involving a change in chemical composition; examples are the melting point and boiling point.

physical realizability [CONT SYS] For a transfer function, the possibility of constructing a network with this transfer function.

physical record [COMPUT SCI] A set of adjacent data characters recorded on some storage medium, physically separated from other physical records that may be on the same medium by means of some indication that can be recognized by a simple hardware test. Also known as record block.

physical residue [GEOL] A residue which results from physical, as opposed to chemical, weathering processes.

physical stratigraphy [GEOL] Stratigraphy based on the physical aspects of rocks, especially the sedimentologic aspects.

physical system *See* causal system.

physical testing [ENG] Determination of physical properties of materials based on observation and measurement.

physical theory [PHYS] An attempt to explain a certain class of physical phenomena by deducing them as necessary consequences of some primitive assumptions.

physical therapy [MED] The treatment of disease and injury by physical means.

physical time [GEOL] Geologic time as measured by some physical process, such as the radioactive decay of elements.

physical weathering *See* mechanical weathering.

physician [MED] An individual authorized to practice medicine.

physicist [PHYS] A person who does research in physics.

physics [SCI TECH] The study of those aspects of nature which can be understood in a fundamental way in terms of elementary principles and laws.

physiognomy [PSYCH] The prediction of personality functioning from facial appearances and expression.

physiographic diagram [GEOL] A small-scale map showing landforms by the systematic application of a standardized set of simplified pictorial symbols that represent the appearance such forms would have if viewed obliquely from the air at an angle of about 45°. Also known as landform map; morphographic map.

physiographic feature [GEOL] A prominent or conspicuous physiographic form or noticeable part thereof.

physiographic form [GEOL] A landform considered with regard to its origin, cause, or history.

physiographic province [GEOL] A region having a pattern of relief features or landforms that differs significantly from that of adjacent regions.

physiological biophysics [BIOPHYS] An area of biophysics concerned with the use of physical mechanisms to explain the behavior and the functioning of living organisms or parts thereof, and with the response of living organisms to physical forces.

physiological dead space *See* dead space.

physiological ecology [ECOL] The study of biological processes and growth under natural or simulated environments.

physiological genetics *See* phenogenetics.

physiological psychology [PSYCH] The study of the physiological mechanisms or correlates of behavior.

physiological saline *See* normal saline.

physiological salt solution *See* normal saline.

physiological sodium chloride solution *See* normal saline.

physiologic diplopia [PHYSIO] A normal phenomenon in which there is formation of images in noncorresponding retinal points, giving a perception of depth. Also known as introspective diplopia.

physiologic tremor [PHYSIO] A tremor in normal individuals, caused by fatigue, apprehension, or overexposure to cold.

physiology [BIOL] The study of the basic activities that occur in cells and tissues of living organisms by using physical and chemical methods.

physisorption [PHYS CHEM] A physical adsorption process in which there are van der Waals forces of interaction between gas or liquid molecules and a solid surface.

Physopoda [INV ZOO] The equivalent name for Thysanoptera.

Physosomata [INV ZOO] A superfamily of amphipod crustaceans in the suborder Hyperiidea; the eyes are small or rarely absent, and the inner plates of the maxillipeds are free at the apex.

physostigmine [ORG CHEM] $C_{15}H_{21}O_2N_3$ An alkaloid; poisonous, colorless-to-pinkish crystals; soluble in alcohol and dilute acids; melts at 86°C; used as a source of salicylate and sulfate forms. Also known as calabarine; eserine.

physostigmine salicylate [ORG CHEM] $C_{15}H_{21}O_2N_3 \cdot C_7H_6O_3$ Poisonous, colorless-to-yellow crystals; soluble in water, alcohol, and chloroform; melts at 182°C; used for medicines.

physostigmine sulfate [ORG CHEM] $(C_{15}H_{21}O_2N_3)_2 \cdot H_2SO_4$ Poisonous, white crystals; soluble in water, alcohol, and chloroform; melts at 150°C; used for medicines.

Phytalmiidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

phytal zone [ECOL] The part of a lake bottom covered by water shallow enough to permit the growth of rooted plants.

Phytamastigophorea [INV ZOO] A class of the subphylum Sarcomastigophora, including green and colorless phytoflagellates.

phytase [BIOCHEM] An enzyme occurring in plants, especially cereals, which catalyzes hydrolysis of phytic acid to inositol and phosphoric acid.

phyteral [GEOL] Morphologically recognizable forms of vegetal matter in coal.

phytic acid [ORG CHEM] $C_6H_6[(OPO(OH)_2]_6$ An acid found in seeds of plants as the insoluble calcium magnesium salt (phytin); derived from corn steep liquor; inhibits calcium absorption in intestine; used to treat hard water, to remove iron and copper from wines, and to inactivate trace-metal contaminants in animal and vegetable oils.

phytochorology *See* plant geography.

phytochrome [BIOCHEM] A protein plant pigment which serves to direct the course of plant growth and development in response variously to the presence or absence of light, to photoperiod, and to light quality.

phytoclimatology [CLIMATOL] The study of the microclimate in the air space occupied by plant communities, on the surfaces of the plants themselves and, in some cases, in the air spaces within the plants.

phytocoenosis [ECOL] The entire plant population of a particular habitat.

phytocollite [GEOL] A black, gelatinous, nitrogenous humic body occurring beneath or within peat deposits.

phytogenic dam [ECOL] A natural dam consisting of plants and plant remains.

phytogenic dune [ECOL] Any dune in which the growth of vegetation influences the form of the dune, for example, by arresting the drifting of sand.

phytogeography *See* plant geography.

phytohemagglutinin *See* phytolectin.

phytohormone *See* plant hormone.

phytol [ORG CHEM] $C_{20}H_{40}O$ A liquid with a boiling point of 202–204°C; soluble in organic solvents; used in the synthesis of vitamins E and K.

phytolectin [BIOCHEM] A lectin found in plants. Also known as phytohemagglutinin.

phytolith [PALEON] A fossilized part of a living plant that secreted mineral matter.

Phytomastigina [INV ZOO] The equivalent name for Phytamastigophorea.

phytometer [ENG] A device for measuring transpiration, consisting of a vessel containing soil in which one or more plants are rooted and sealed so that water can escape only by transpiration from the plant.

Phytomonadida [INV ZOO] The equivalent name for Volvocida.

phytonadione [ORG CHEM] $C_{31}H_{46}O_2$ A yellow, viscous liquid soluble in benzene, chloroform, and vegetable oils; used in medicine and as a food supplement. Also known as 2-methyl-3-phytyl-1,4-napthoquinone; vitamin K_1.

phytopathogen [ECOL] An organism that causes a disease in a plant.

phytophagous [ZOO] Feeding on plants.

phytoplankton [ECOL] Planktonic plant life.

Phytosauria [PALEON] A suborder of Late Triassic long-snouted aquatic thecodonts resembling crocodiles but with posteriorly located external nostrils, absence of a secondary palate, and a different structure of the pelvic and pectoral girdles.

Phytoseiidae [INV ZOO] A family of the suborder Mesostigmata.

phytosociology [ECOL] A broad study of plants that includes the study of all phenomena affecting their lives as social units.

phytosterol [BIOCHEM] Any of various sterols obtained from plants, including ergosterol and stigmasterol.

phytotoxin [BIOCHEM] **1.** A substance toxic to plants. **2.** A toxin produced by plants.

pi [MATH] The irrational number which is the ratio of the circumference of any circle to its radius; an approximation is 3.14159. Symbolized π.

pia arachnoid [VERT ZOO] The outer meninx of certain submammalian forms having two membranes covering the brain and spinal cord.

Piacention *See* Plaisancian.

pia mater [ANAT] The vascular membrane covering the surface of the brain and spinal cord.

piano wire [MET] High-tensile-strength, 0.75 to 0.85% carbon steel wire cold-drawn to uniform thickness.

piastrenemia *See* thrombocytosis.

pi attenuator [ELEC] An attenuator consisting of a pi network whose impedances are all resistances.

pibal *See* pilot-balloon observation.

pi bonding [PHYS CHEM] Covalent bonding in which the greatest overlap between atomic orbitals is along a plane perpendicular to the line joining the nuclei of the two atoms.

PIC *See* personal identification code.

pica [GRAPHICS] A printer's unit of measurement, 0.166044 inch (1/6 inch) or 4.2175176 millimeters, and equal to 12 points. [MED] Craving for substances not normally used as food; an abnormal appetite; sometimes seen in hysterical patients or during pregnancy.

Picard method [MATH] A method of successive substitution for solving differential equations.

Picard's big theorem [MATH] The image of every neighborhood of an essential singularity of a complex function is dense in the complex plane. Also known as Picard's second theorem.

Picard's first theorem *See* Picard's little theorem.

Picard's little theorem [MATH] A nonconstant entire function of the complex plane assumes every value save at most one. Also known as Picard's first theorem.

Picard's second theorem *See* Picard's big theorem.

Picatinny test [ENG] An impact test used in the United States for evaluating the sensitivity of high explosives; a small sample of the explosive is placed in a depression in a steel die cup and capped by a thin brass cover, a cylindrical steel plug is placed in the center of the cover, and a 2-kilogram weight is dropped from varying heights on the plug; the reported sensitivity figure is the minimum height, in inches, at which at least 1 firing results from 10 trials.

Piche evaporimeter [ENG] A porous-paper-wick atmometer.

Picidae [VERT ZOO] The woodpeckers, a large family of birds in the order Piciformes; adaptive modifications include a long tongue and hyoid mechanism, and stiffened tail feathers.

Piciformes [VERT ZOO] An order of birds characterized by the peculiar arrangement of the tendons of the toes.

Picinae [VERT ZOO] The true woodpeckers, a subfamily of the Picidae.

pick [COMPUT SCI] To select the next card from an input stack for feeding into a card machine. [DES ENG] **1.** The steel cutting points used on a coal-cutter chain. **2.** A miner's steel or iron digging tool with sharp points at each end. [ENG] **1.** To dress the sides of a shaft or other excavation. **2.** To remove shale, dirt, and such from coal. [TEXT] *See* filling.

pick-a-back conveyor [MIN ENG] A short conveyor that advances with a loader or continuous miner at the face of a mine and loads coal on the main haulage system.

pick-and-pick [TEXT] A method of weaving fabric in which one type of crosswise thread is alternated with another, for example, cotton or acetate alternated with elastic yarn.

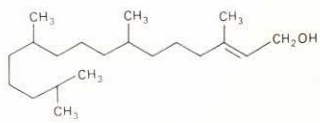
Pickard core barrel [MIN ENG] A type of double-tube core barrel; the distinguishing feature of the barrel is that when blocked the inner barrel slides upward into the head, closing the water ports and stopping the flow of the circulating liquid, without irreparably damaging the bit until the barrel is pulled and the blocked inner tube cleared.

pickax [DES ENG] A pointed steel or iron tool mounted on a wooden handle and used for breaking earth and stone.

picker [MIN ENG] **1.** An employee who picks or discards slate and other foreign matter from the coal in an anthracite breaker or at a picking table. **2.** A mechanical arrangement for removing slate from coal. [TEXT] A machine used to pull apart and separate cotton fibers.

pickeringite [MINERAL] $MgAl_2(SO_4)_4 \cdot 22H_2O$ A white or

PHYTOL



Structural formula.

PHYTOSAURIA

Nicrosaurus, a quadrupedal thecodont. *(After E. H. Colbert, Evolution of Vertebrates, 2d ed., copyright © 1969 by John Wiley & Sons, Inc.; reprinted by permission)*

faintly colored mineral composed of hydrous sulfate of magnesium and aluminum, occurring in fibrous masses.

picker knives [COMPUT SCI] The narrow edges of a moving slide which will pick the bottom card from a stack and feed it to a card reader.

picket ship [NAV ARCH] A radar-equipped ship, generally anchored, that is used to extend radar early-warning coverage seaward.

pick glass [TEXT] Calibrated magnifying glass used to count warp and filling threads in a square inch of fabric.

pick hammer [DES ENG] A hammer with a point at one end of the head and a blunt surface at the other end.

picking [COMPUT SCI] Identification of information displayed on a screen for subsequent computer processing, by pointing to it with a lightpen. [GRAPHICS] The lifting of the paper surface during printing. [MIN ENG] **1.** Removal of waste material from an ore. **2.** Extraction of the lightest-grade ore from a mine. **3.** Emission of particles from the roof of a mine on the verge of collapse. [TEXT] **1.** In yarn manufacture, the removal of extraneous matter from the face of woolen fabric. **2.** In the weaving process, the movement of the shuttle along the warp of the fabric.

picking conveyor [MIN ENG] A continuous belt or apron conveyor used to carry a relatively thin bed of material past pickers who hand-sort or pick the material being conveyed.

picking table [MIN ENG] A flat or slightly inclined platform on which the coal or ore is run to be picked free from slate or gangue.

pick lacing [DES ENG] The pattern to which the picks are set in a cutter chain.

pickle liquor [MET] A spent pickling solution.

pickle patch [MET] A coating of oxide or scale that remains adherent after pickling.

pickle stain [MET] Discoloration of a metal surface due to chemical cleaning but without adequate washing and drying.

pickling [CHEM ENG] A method of preparing hides for tanning by immersion in a salt solution with a pH of 2.5 or less. [FOOD ENG] A method of preserving food by using salt, sugar, spices, and acetic acid. [MET] Preferential removal of oxide or mill scale from the surface of a metal by immersion usually in an acidic or alkaline solution.

pickling acid [CHEM] Any of the acids used in pickling solutions, such as hydrochloric, sulfuric, nitric, phosphoric, or hydrofluoric acid.

pick miner [MIN ENG] **1.** In anthracite and bituminous coal mining, one who uses hand tools to extract coal in underground working places. **2.** One who cuts out a channel under the bottom of the working face of coal with a pick.

pickoff [ELECTR] A device used to convert mechanical motion into a proportional electric signal. [MECH ENG] A mechanical device for automatic removal of the finished part from a press die.

Pick's disease [MED] **1.** A form of presenile dementia characterized by severe atrophy of the frontal and temporal lobes of the cerebrum. **2.** A recurrent or progressive form of ascites with little or no edema. **3.** *See* constrictive pericarditis. **4.** *See* polyserositis.

pickup [AERO ENG] A potentiometer used in an automatic pilot to detect the motion of the airplane around the gyro and initiate corrective adjustments. [ELEC] **1.** A device that converts a sound, scene, measurable quantity, or other form of intelligence into corresponding electric signals, as in a microphone, phonograph pickup, or television camera. **2.** The minimum current, voltage, power, or other value at which a relay will complete its intended function. **3.** Interference from a nearby circuit or system. [MET] Transfer of metal from the work to the tool, or from the tool to the work, during a forming operation. [NUC PHYS] A type of nuclear reaction in which the incident particle takes a nucleon from the target nucleus and proceeds with this nucleon bound to itself.

pickup tube *See* camera tube.

pickup voltage [ELEC] Of a magnetically operated device, the voltage at which the device starts to operate.

picloram [ORG CHEM] $C_6H_3Cl_3N_2$ A colorless powder that decomposes at 215°C; used as an herbicide to control brush for rights-of-way, pasture, and rangeland. Also known as 4-amino-3,5,6-trichloropicolinic acid.

pico- [MATH] A prefix meaning 10^{-12}; used with metric units. Also known as micromicro-.

picoammeter [ENG] An ammeter whose scale is calibrated to indicate current values in picoamperes.

picoampere [ELEC] A unit of current equal to 10^{-12} ampere, or one-millionth of a microampere. Abbreviated pA.

picodnavirus [VIROL] A group of deoxyribonucleic acid–containing animal viruses including the adeno-satellite viruses.

picofarad [ELEC] A unit of capacitance equal to 10^{-12} farad, or one-millionth of a microfarad. Also known as micromicrofarad (deprecated usage); puff (British usage). Abbreviated pF.

picoline [ORG CHEM] $C_5H_4N(CH_3)$ Family of colorless liquid isomers, soluble in water and alcohol; the alpha form, boiling at 129°C, is used as a solvent and chemical intermediate, and is also known as 2-methyl pyridine; the beta form, boiling at 143.5°C, is used as a solvent for chemical synthesis reactions, to make nicotinic acid, and in fabric waterproofing, and is also known as 3-methyl pyridine; the gamma form, boiling at 143.1°C, is used as a solvent for chemical synthesis reactions and in fabric waterproofing.

picolinic acid [ORG CHEM] $C_{10}H_8N_4O_5$ An alcohol-soluble crystalline compound, forming yellow leaflets that melt at 116–117°C; used as a reagent in phenylalanine, tryptophan, and alkaloids production, and for the quantitative detection of calcium. Also known as 3-methyl-4-nitro-1-(*para*-nitrophenyl)-2-pyrazoline-5-one.

picornavirus [VIROL] A viral group made up of small (18–30 nanometers), ether-sensitive viruses that lack an envelope and have a ribonucleic acid genome; among subgroups included are enteroviruses and rhinoviruses, both of human origin.

picosecond [MECH] A unit of time equal to 10^{-12} second, or one-millionth of a microsecond. Abbreviated ps; psec. Formerly known as micromicrosecond.

picotite [MINERAL] A dark-brown variety of hercynite that contains chromium and is commonly found in dunites. Also known as chrome spinel.

picowatt [MECH] A unit of power equal to 10^{-12} watt, or one-millionth of a microwatt. Abbreviated pW. Formerly known as micromicrowatt.

picramic acid [ORG CHEM] $C_6H_5N_3O_5$ A crystalline acid, forming dark red needles from alcohol solutions, melting at 169–170°C; used in dye manufacture and as a reagent in tests for albumin. Also known as 2-amino-4,6-dinitrophenol; 4,6-dinitro-2-aminophenol.

picratol [MATER] A binary explosive composed of 52% ammonium picrate and 48% TNT (trinitrotoluene); it can be melt-loaded; less sensitive than TNT, it was developed for use in armor-piercing bombs.

picric acid [ORG CHEM] $C_6H_2(NO_2)_3OH$ Poisonous, explosive, highly oxidative yellow crystals with bitter taste; soluble in water, alcohol, chloroform, benzene, and ether; melts at 122°C; used in explosives, in external medicines; to make dyes, matches, and batteries, and to etch copper. Also known as carbazotic acid; nitroxanthic acid; picronitric acid; trinitrophenol.

picrite [PETR] A medium- to fine-grained igneous rock composed chiefly of olivine, with smaller amounts of pyroxene, hornblende, and plagioclase felspar.

Picrodendraceae [BOT] A small family of dicotyledonous plants in the order Juglandales characterized by unisexual flowers borne in catkins, four apical ovules in a superior ovary, and trifoliate leaves.

picrolite *See* antigorite.

picromerite [MINERAL] $K_2Mg(SO_4)_2 \cdot 6H_2O$ A white mineral composed of hydrous sulfate of magnesium and potassium, occurring as crystalline encrustations.

picronitric acid *See* picric acid.

picropharmacolite [MINERAL] $(Ca,Mg)_3(AsO_4)_2 \cdot 6H_2O$ Mineral composed of hydrous calcium magnesium arsenate.

picrotoxin [BIOCHEM] $C_{30}H_{34}O_{13}$ A poisonous, crystalline plant alkaloid found primarily in *Cocculus indicus*; used as a stimulant and convulsant drug. Also known as cocculin.

Pictet's liquid [MATER] Liquid mixture of carbon dioxide and sulfur dioxide; used to produce low temperatures.

Pictor [ASTRON] A southern constellation; right ascension 6 hours, declination 55°S. Also known as Easel.

picture [COMPUT SCI] In COBOL, a symbolic description of each data element or item according to specified rules concerning numerals, alphanumerics, location of decimal points, and length. [COMMUN] The image on the screen of a televi-

sion receiver. [GRAPHICS] The image produced by a photographic process.

picture black *See* black signal.

picture carrier [COMMUN] A carrier frequency located 1.25 megahertz above the lower frequency limit of a standard National Television Systems Committee television signal; in color television, it is used for transmitting color information. Also known as luminance carrier.

picture compression [COMPUT SCI] The elimination of redundant information from a digital picture through the use of efficient encoding techniques in which frequently occurring gray levels or blocks of gray levels are represented by short codes and infrequently occurring ones by longer codes.

picture element [ELECTR] **1.** That portion, in facsimile, of the subject copy which is seen by the scanner at any instant; it can be considered a square area having dimensions equal to the width of the scanning line. **2.** In television, any segment of a scanning line, the dimension of which along the line is exactly equal to the nominal line width; the area which is being explored at any instant in the scanning process. Also known as critical area; elemental area; recording spot; scanning spot.

picture frequency [COMMUN] A frequency that results solely from scanning of subject copy in a facsimile system. [ELECTR] *See* frame frequency.

picture grammar [COMPUT SCI] A formalism for carrying out computations on pictures and describing picture structure.

picture processing *See* image processing.

picture segmentation [COMPUT SCI] The division of a complex picture into parts corresponding to regions or objects, so that the picture can then be described in terms of the parts, their properties, and their spatial relationships. Also known as scene analysis.

picture signal [COMMUN] The signal resulting from the scanning process in television or facsimile.

picture synchronizing pulse *See* vertical synchronizing pulse.

picture transmission [COMMUN] Electric transmission of a picture having a gradation of shade values.

picture transmitter *See* visual transmitter.

picture tube [ELECTR] A cathode-ray tube used in television receivers to produce an image by varying the electron-beam intensity as the beam is deflected from side to side and up and down to scan a raster on the fluorescent screen at the large end of the tube. Also known as kinescope; television picture tube.

picture-tube brightener [ELECTR] A small step-up transformer that can be inserted between the socket and base of a picture tube to increase the heater voltage and thereby increase picture brightness to compensate for normal aging of the tubes.

picture white *See* white signal.

picture window [BUILD] A large window framing an exterior view.

Picumninae [VERT ZOO] The piculets, a subfamily of the avian family Picidae.

Pidgeon process [MET] A method for producing magnesium from calcined dolomite by reduction with ferrosilicon. Also known as ferrosilicon process; silicothermic process.

piebaldism [MED] A pigmentary disorder characterized by patterns of white spots on the skin and caused by an inherited absence of melanocytes.

piece [ORD] An artillery weapon, a machine gun, a rifle, or any firearm.

piece mark [ENG] Identification number for an individual part, subassembly, or assembly; shown on the drawing, but not necessarily on the part.

piecemeal stoping [GEOL] Magmatic stoping in which only isolated blocks of roof rock are assimilated.

piece rate [IND ENG] Wages paid per unit of production.

piece-root grafting [BOT] Grafting in which each piece of a cut seedling root is used as a stock.

piecewise-linear [MATH] A continuous curve or function obtained by joining a finite number of linear pieces.

piecewise-linear system [CONT SYS] A system for which one can divide the range of values of input quantities into a finite number of intervals such that the output quantity is a linear function of the input quantity within each of these intervals.

piecewise linear topology *See* combinatorial topology.

piecework [IND ENG] Work paid for in accordance with the amount done rather than the hours taken.

piedmont [GEOL] Lying or formed at the base of a mountain or mountain range, as a piedmont terrace or a piedmont pediment.

piedmont alluvial plain *See* bajada.

piedmont angle [GEOL] The sharp break of slope between a hill and a plain, such as the angle at the junction of a mountain front and the pediment at its base.

piedmont bench *See* piedmont step.

piedmont benchland [GEOL] One of several successions or systems of piedmont steps. Also known as piedmont stairway; piedmont treppe.

piedmont bulb [HYD] The lobe or fan of ice formed when a glacier spreads out on a plain at the lower end of a valley.

piedmont flat *See* piedmont step.

piedmont glacier [HYD] A thick, continuous ice sheet formed at the base of a mountain range by the spreading out and coalescing of valley glaciers from higher mountain elevations.

piedmont gravel [GEOL] Coarse gravel derived from high ground by mountain torrents and spread out on relatively flat ground where the velocity of the water is decreased.

piedmont ice [HYD] An ice sheet formed by the joining of two or more glaciers on a comparatively level plain at the base of the mountains down which the glaciers descended; it may be partly afloat.

piedmont interstream flat *See* pediment.

piedmontite *See* piemontite.

piedmont lake [HYD] An oblong lake occupying a partly overdeepened basin excavated from rock by a piedmont glacier, or dammed by a glacial moraine.

piedmont plain *See* bajada.

piedmont plateau [GEOL] A plateau lying between the mountains and the plains or the ocean.

piedmont scarp [GEOL] A small, low cliff formed in alluvium on a piedmont slope at the foot of a steep mountain range; due to dislocation of the surface, especially by faulting. Also known as scarplet.

piedmont slope *See* bajada.

piedmont stairway *See* piedmont benchland.

piedmont step [GEOL] A terracelike or benchlike piedmont feature that slopes outward or downvalley. Also known as piedmont bench; piedmont flat.

piedmont treppe *See* piedmont benchland.

pi electron [PHYS CHEM] An electron which participates in pi bonding.

piemontite [MINERAL] $Ca_2(Al,Mn^{3-},Fe)_3Si_3O_{12}(OH)$ Reddish-brown epidote mineral that contains manganese. Also known as manganese epidote; piedmontite.

pier [BUILD] A concrete block that supports the floor of a building. [CIV ENG] **1.** A vertical, rectangular or circular support for concentrated loads from an arch or bridge superstructure. **2.** A structure with a platform projecting from the shore into navigable waters for mooring vessels.

piercement *See* diapir.

piercement dome *See* diapir.

Pierce oscillator [ELECTR] Oscillator in which a piezoelectric crystal unit is connected between the grid and the plate of an electron tube, in what is basically a Colpitts oscillator, with voltage division provided by the grid-cathode and plate-cathode capacitances of the circuit.

Pierce's disease [PL PATH] A virus disease of grapes in which there is mottling between the veins of leaves, early defoliation, and early ripening and withering of the fruit.

piercing *See* fusion piercing.

piercing fold *See* diapir.

pier foundation *See* caisson foundation.

pierhead line [CIV ENG] The line in navigable waters beyond which construction is prohibited; open-pier construction may extend outward from the bulkhead line to the pierhead line.

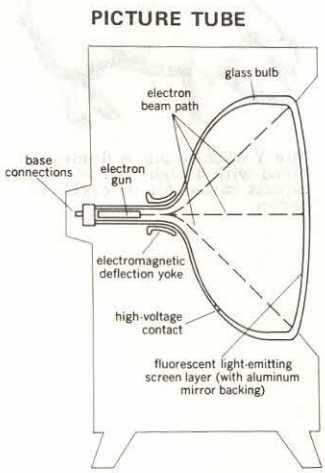
Pieridae [INV ZOO] A family of lepidopteran insects in the superfamily Papilionoidea including white, sulfur, and orange-tip butterflies; characterized by the lack of a prespiracular bar at the base of the abdomen.

Piesmatidae [INV ZOO] The ash-gray leaf bugs, a family of hemipteran insects belonging to the Pentatomorpha.

Piesmidae [INV ZOO] A small family of hemipteran insects in the superfamily Lygaeoidea.

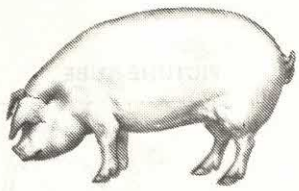
pièze [MECH] A unit of pressure equal to 1 sthène per square meter, or to 1000 pascals. Abbreviated pz.

piezochemistry [CHEM] The field of chemical reactions under high pressures.



Schematic drawing of a black-and-white picture tube.

PIG



The Yorkshire pig, a domestic breed with a high-quality carcass, raised for its excellent bacon.

PIKA

A pika, a rock-dwelling diurnal mammal which grows to the size of a guinea pig.

PIKE

Esox lucius, one of the fish species commonly called a pike.

piezocrystallization [GEOL] Crystallization of a magma under pressure, such as the pressure associated with orogeny.

piezoelectric [SOLID STATE] Having the ability to generate a voltage when mechanical force is applied, or to produce a mechanical force when a voltage is applied, as in a piezoelectric crystal.

piezoelectric ceramic [MATER] A ceramic material that has piezoelectric properties similar to those of some natural crystals.

piezoelectric crystal [SOLID STATE] A crystal which exhibits the piezoelectric effect; used in crystal loudspeakers, crystal microphones, and crystal cartridges for phono pickups.

piezoelectric detector [ENG] A seismic detector constructed from a stack of piezoelectric crystals with an inertial mass mounted on top and intervening metal foil to collect the charges produced on the crystal faces when the crystals are strained.

piezoelectric effect [SOLID STATE] **1.** The generation of electric polarization in certain dielectric crystals as a result of the application of mechanical stress. **2.** The reverse effect, in which application of a voltage between certain faces of the crystal produces a mechanical distortion of the material.

piezoelectric element [ELECTR] A piezoelectric crystal used in an electric circuit, for example, as a transducer to convert mechanical or acoustical signals to electric signals, or to control the frequency of a crystal oscillator.

piezoelectric gage [ENG] A pressure-measuring gage that uses a piezoelectric material to develop a voltage when subjected to pressure; used for measuring blast pressures resulting from explosions and pressures developed in guns.

piezoelectric hysteresis [SOLID STATE] Behavior of a piezoelectric crystal whose electric polarization depends not only on the mechanical stress to which the crystal is subjected, but also on the previous history of this stress.

piezoelectricity [SOLID STATE] Electricity or electric polarization resulting from the piezoelectric effect.

piezoelectric loudspeaker *See* crystal loudspeaker.

piezoelectric microphone *See* crystal microphone.

piezoelectric oscillator *See* crystal oscillator.

piezoelectric pickup *See* crystal pickup.

piezoelectric resonator *See* crystal resonator.

piezoelectric semiconductor [SOLID STATE] A semiconductor exhibiting the piezoelectric effect, such as quartz, Rochelle salt, and barium titanate.

piezoelectric transducer [ELECTR] A piezoelectric crystal used as a transducer, either to convert mechanical or acoustical signals to electric signals, as in a microphone, or vice versa, as in ultrasonic metal inspection.

piezoelectric vibrator [SOLID STATE] An element cut from piezoelectric material, usually in the form of a plate, bar, or ring, with electrodes attached to or supported near the element to excite one of its resonant frequencies.

piezogene [GEOL] Pertaining to the formation of minerals primarily under the influence of pressure.

piezoglypt *See* regmaglypt.

piezomagnetism [SOLID STATE] Stress dependence of magnetic properties.

piezometer [ENG] **1.** An instrument for measuring fluid pressure, such as a gage attached to a pipe containing a gas or liquid. **2.** An instrument for measuring the compressibility of materials, such as a vessel that determines the change in volume of a substance in response to hydrostatic pressure.

piezometer opening *See* pressure tap.

piezometric surface *See* potentiometric surface.

piezooptical effect [OPTICS] The change produced in the index of refraction of a light-transmitting material by externally applied stress.

piezotropic [FL MECH] Characterized by piezotropy.

piezotropy [FL MECH] The property of a fluid in which processes are characterized by a functional dependence of the thermodynamic functions of state: $dp/dt = b(dp/dt)$, where ρ is the density, p the pressure, and b a function of the thermodynamic variables, called the coefficient of piezotropy.

pi filter [ELECTR] A filter that has a series element and two parallel elements connected in the shape of the Greek letter pi (π).

pig [ELECTR] **1.** An ion source based on the same principle as the Philips ionization gage. **2.** *See* Philips ionization gage. [ENG] In-line scraper (brush, blade cutter, or swab) forced through pipelines by fluid pressure; used to remove scale, sand, water, and other foreign matter from the interior surfaces of the pipe. [MET] A crude metal casting prepared for storage, transportation, or remelting. [NUCLEO] A heavily shielded container, usually lead, used to ship or store radioisotopes and other radioactive materials. [VERT ZOO] Any wild or domestic mammal of the superfamily Suoidea in the order Artiodactyla; toes terminate in nails which are modified into hooves, the tail is short, and the body is covered sparsely with hair which is frequently bristlelike.

pigeon [VERT ZOO] Any of various stout-bodied birds in the family Columbidae having short legs, a bill with a horny tip, and a soft cere.

pigeonite [MINERAL] $(Mg,Fe^{2+},Ca)(MgFe^{2+})Si_{2O}$ Clinopyroxene mineral species intermediate in composition between clinoenstatite and diopside, found in basic igneous rocks.

pigeon milk [PHYSIO] A milky glandular secretion of the crop of pigeons that is regurgitated to feed newly hatched young.

piggyback twistor [ELECTR] Electrically alterable nondestructive-readout storage device that uses a thin narrow tape of magnetic material wound spirally around a fine copper conductor to store information; another similar tape is wrapped on top of the first, piggyback fashion, to sense the stored information; a binary digit or bit is stored at the intersection of a copper strap and a pair of these twistor wires.

pig iron [MET] **1.** Crude, high-carbon iron produced by reduction of iron ore in a blast furnace. **2.** Cast iron in the form of pigs.

pigment [BIOCHEM] Any coloring matter in plant or animal cells. [MATER] A solid that reflects light of certain wavelengths while absorbing light of other wavelengths, without producing appreciable luminescence; used to impart color to other materials.

pigmentation [PHYSIO] The normal color of the body and its organs, resulting from a summation of the natural color of the tissue, the pigments deposited therein, and the pigments carried through the blood bathing the tissue.

pigment cell [CYTOL] Any cell containing deposits of pigment.

pigment print [TEXT] A fabric that has been printed with a paste made of an insoluble pigment mixed with a binder and a thickener.

pigtail [ELEC] A short, flexible wire, usually stranded or braided, used between a stationary terminal and a terminal having a limited range of motion, as in relay armatures.

pigtail splice [ELEC] A splice made by twisting together the bared ends of parallel conductors.

pika [VERT ZOO] Any member of the family Ochotonidae, which includes 14 species of lagomorphs resembling rabbits but having a vestigial tail and short, rounded ears.

pike [GEOL] A mountain or hill which has a peaked summit. [VERT ZOO] Any of about five species of predatory fish which compose the family Esocidae in the order Clupeiformes; the body is cylindrical and compressed, with cycloid scales that have deeply scalloped edges.

Pilacraceae [MYCOL] A family of Basidiomycetes.

Pilargidae [INV ZOO] A family of small, short, depressed errantian polychaete annelids.

pilaster [CIV ENG] A vertical rectangular architectural member that is structurally a pier and architecturally a column.

pilchard oil [MATER] Pale-yellow oil expressed from pickled pilchards (of the herring family); used to make paints and potash soft soap.

pile [ENG] A long, heavy timber, steel, or reinforced concrete post that has been driven, jacked, jetted, or cast vertically into the ground to support a load. [NUCLEO] *See* nuclear reactor. [TEXT] Loops on a fabric surface.

pile beacon [NAV] In marine operation, a beacon formed of one or more piles.

pile bent [CIV ENG] A row of timber or concrete bearing piles with a pile cap forming that part of a trestle which carries the adjacent ends of timber stringers or concrete slabs.

pile cap [CIV ENG] A mass of reinforced concrete cast around the head of a group of piles to ensure that they act as a unit to support the imposed load.

pile dike [CIV ENG] A dike consisting of a group of piles braced and lashed together along a riverbank.

pile dolphin [NAV] A minor light structure consisting of a number of piles driven into the offshore bottom in a circular pattern and drawn together with a light mounted at the top.

pile driver [MECH ENG] A hoist and movable steel frame equipped to handle piles and drive them into the ground.

pile extractor [MECH ENG] **1.** A pile hammer which strikes the pile upward so as to loosen its grip and remove it from the ground. **2.** A vibratory hammer which loosens the pile by high-frequency jarring.

pile formula [MECH] An equation for the forces acting on a pile at equilibrium: $P = pA + tS + Sn \sin \phi$, where P is the load, A is the area of the pile point, p is the force per unit area on the point, S is the embedded surface of the pile, t is the force per unit area parallel to S, n is the force per unit area normal to S, and ϕ is the taper angle of the pile.

pile foundation [CIV ENG] A substructure supported on piles.

pile hammer [MECH ENG] The heavy weight of a pile driver that depends on gravity for its striking power and is used to drive piles into the ground. Also known as drop hammer.

pile lighthouse [NAV] A lighthouse built on piles.

pile shoe [CIV ENG] A cast-iron point on the foot of a timber or concrete driven pile to facilitate penetration of the ground.

pileum [VERT ZOO] The top of a bird's head, from the nape to the bill.

pileup [ELECTR] A set of moving and fixed contacts, insulated from each other, formed as a unit for incorporation in a relay or switch. Also known as stack.

pileus [BIOL] The umbrella-shaped upper cap of mushrooms and other basidiomycetous fungi. [METEOROL] An accessory cloud of small horizontal extent, often cirriform, in the form of a cap, hood, or scarf, which occurs above or attached to the top of a cumuliform cloud that often pierces it; several pileus clouds fairly often are observed above each other. Also known as scarf cloud.

pile weave [TEXT] Type of weave made by using two warp yarns and one filling yarn, or one warp yarn and two filling yarns.

Pilger tube-reducing process [MET] A tube-reducing process in which pierced billets are forced over a mandrel between two rolls with inclined axes and given a rotary forging treatment; the tube is advanced during the gap in each revolution.

Pilidae [INV ZOO] A family of fresh-water snails in the order Pectinibranchia.

Pilifera [VERT ZOO] Collective designation for animals with hair, that is, mammals.

Pilimelia [MICROBIO] A genus of bacteria in the family Actinoplanaceae; sporangia are cylindrical; rod-shaped spores are arranged in parallel chains and are motile by means of one polar flagellum or several lateral flagella; grow on hair or other keratin substrate.

piling [GRAPHICS] Caking of ink on the rollers, plate, or blanket of a printing press or an accumulation of paper coating on the blanket of an offset press.

pill [ELECTROMAG] A microwave stripline termination. [PHARM] A small, solid dosage form of a globular, ovoid, or lenticular shape, containing one or more medicinal substances.

pillar [CIV ENG] A column for supporting part of a structure. [GEOL] **1.** A natural formation shaped like a pillar. **2.** A joint block produced by columnar jointing. [MIN ENG] An area of coal or ore left to support the overlying strata or hanging wall in a mine.

pillar-and-breast system [MIN ENG] A system of coal mining in which the working places are rectangular rooms usually five or ten times as long as they are broad, opened on the upper side of the gangway.

pillar-and-room system [MIN ENG] A system of mining whereby solid blocks of coal are left on either side of working places to support the roof until first-mining has been completed, when the pillar coal is then recovered.

pillar-and-stall system [MIN ENG] A system of working coal and other minerals where the first stage of excavation is accomplished with the roof sustained by coal or ore.

pillar bolt [DES ENG] A bolt projecting from a part so as to support it.

pillar buoy [NAV] A buoy composed of a tall central structure mounted on a broad flat base; not used in United States waters.

pillar burst [MIN ENG] A failure of a pillar, by crushing.

pillar crane [MECH ENG] A crane whose mechanism can be rotated about a fixed pillar.

pillar drive [MIN ENG] A wide irregular drift or entry, in firm dry ground, in which the roof is supported by pillars of the natural earth, or by artificial pillars of stone, no timber being used.

pillar extraction [MIN ENG] Removal of the pillars of coal left over from mining by the pillar-and-stall method. Also known as pillar mining.

pillaring [MIN ENG] The process of extracting pillars. Also called pillar robbing; pulling pillars; robbing pillars. [ORD] The rapid vertical movement of smoke which sometimes results, for instance, from the explosion of a white phosphorus bomb or projectile; the effect is undesirable because it does not produce obscuration over a desirably large area.

pillar ladder [NAV ARCH] A ladder formed by fitting rungs extending out from a pillar or stanchion; commonly used as a means of providing access to cargo holds.

pillar line [MIN ENG] Air currents which have definitely coursed through an inaccessible abandoned panel or area or which have ventilated a pillar line or a pillar area, regardless of the methane content, or absence of methane, in such air.

pillar man *See* pack builder.

pillar mining *See* pillar extraction.

pillar press [MECH ENG] A punch press framed by two upright columns; the driving shaft passes through the columns, and the slide operates between them.

pillar robbing *See* pillaring.

pillar split [MIN ENG] An opening or crosscut driven through a pillar in the course of extraction of ore.

pillbox [ORD] Small, low fortification that houses machine guns or antitank weapons; usually made of concrete, steel, or sandbags.

pillbox antenna [ELECTROMAG] Cylindrical parabolic reflector enclosed by two plates perpendicular to the cylinder, spaced to permit the propagation of only one mode in the desired direction of polarization.

pilling [TEXT] The formation of little fuzzy balls on a fabric surface caused by the rubbing off of loose ends of fiber too long or strong to break away entirely.

pillow breccia [PETR] A deposit of pillow structures and fragments of lava in a matrix of tuff.

pillow lace *See* bobbin lace.

pillow lava [GEOL] Any lava characterized by pillow structure and presumed to have formed in a subaqueous environment. Also known as ellipsoidal lava.

pillow structure [GEOL] A primary sedimentary structure that resembles a pillow in size and shape. Also known as mammillary structure. [PETR] A pillow-shaped structure visible in some extrusive lavas attributed to the congealment of lava under water.

pilmer [METEOROL] In England, a heavy shower of rain.

pilocarpine [ORG CHEM] $C_{11}H_{16}N_2O_2$ An alkaloid, in either oil or crystal form, melting at 34°C; soluble in chloroform, water, and alcohol; used in medicine.

pilomotor nerve [ANAT] A nerve causing contraction of one of the arrectoris pilorum muscles.

pilomotor reflex [PHYSIO] Erection of the hairs of the skin (gooseflesh) in response to chilling or irritation of the skin or to an emotional stimulus.

pilosebaceous [ANAT] Pertaining to the hair follicles and sebaceous glands, as the pilosebaceous apparatus, comprising the hair follicle and its attached gland.

pilosis [MED] The abnormal or excessive development of hair.

pilot [AERO ENG] **1.** A person who handles the controls of an aircraft or spacecraft from within the craft, and guides or controls the craft in flight. **2.** A mechanical system designed to exercise control functions in an aircraft or spacecraft. [COMMUN] **1.** In a transmission system, a signal wave, usually single frequency, transmitted over the system to indicate or control its characteristics. **2.** Instructions, in tape relay, appearing in routing line, relative to the transmission or handling of that message. [MECH ENG] A cylindrical steel bar extending through, and about 8 inches (20 centimeters) beyond the face of, a reaming bit; it acts as a guide that follows the original unreamed part of the borehole and hence forces the reaming bit to follow, and be concentric with, the smaller-diameter, unreamed portion of the original borehole. [NAV] **1.** A person who directs the movements of a vessel through pilot waters, usually a person who has demonstrated extensive knowledge of channels, aids to navigation, dangers to navigation, and so on, in a particular area and is licensed for that area. **2.** A book of sailing directions; for waters of the United States and its posses-

sions, the books are prepared by the U.S. Coast and Geodetic Survey, and are called coast pilots. **3.** The person who flies aircraft.

pilotage [NAV] **1.** A marine pilot's fee. **2.** The process of directing a vehicle by reference to recognizable landmarks or soundings; these observations may be made by optical, aural, mechanical, or electronic means.

pilotage waters *See* pilot waters.

pilotaxitic [GEOL] Pertaining to the texture of the groundmass of a holocrystalline igneous rock in which lath-shaped microlites (usually of plagioclase) are arranged in a glass-free felty mesh, often aligned along the flow lines.

pilot balloon [ENG] A small balloon whose ascent is followed by a theodolite in order to obtain data for the computation of the speed and direction of winds in the upper air.

pilot-balloon observation [METEOROL] A method of winds-aloft observation, that is, the determination of wind speeds and directions in the atmosphere above a station; involves reading the elevation and azimuth angles of a theodolite while visually tracking a pilot balloon. Also known as pibal.

pilot bit [DES ENG] A noncoring bit with a cylindrical diamond-set plug of somewhat smaller diameter than the bit proper, set in the center and projecting beyond the main face of the bit.

pilot boat [NAV] A small vessel used by a pilot to go to or from a vessel employing the pilot's services. Also known as pilot vessel.

pilot briefing [METEOROL] Oral comment on the observed and forecast weather conditions along a route, given by a forecaster to the pilot, navigator, or other air crew member prior to takeoff. Also known as briefing; flight briefing; flight-weather briefing.

pilot cell [ELEC] Selected cell of a storage battery whose temperature, voltage, and specific gravity are assumed to indicate the condition of the entire battery.

pilot channel [CIV ENG] One of a series of cutoffs for converting a meandering stream into a straight channel of greater slope.

pilot chart [NAV] A chart of a major ocean area published, for the benefit of mariners, by the U.S. Naval Oceanographic Office in cooperation with the U.S. Weather Bureau; these charts contain information required in planning safe routes, including ocean currents, ice at sea, wind roses, storm tracks, isotherms, magnetic variation, and recommended routes or steamer tracks.

pilot chute [AERO ENG] A small parachute canopy attached to a larger canopy to actuate and accelerate the opening of the load-bearing canopy.

pilot drill [MECH ENG] A small drill to start a hole to ensure that a larger drill will run true to center.

pilot flood [PETRO ENG] A test waterflood operation (water-injection well) designed to evaluate procedures and to give advance information prior to instituting an extensive, multipoint waterflood.

pilot hole [ENG] A small hole drilled ahead of a larger borehole.

pilothouse [NAV ARCH] A compartment on or near the bridge of a ship that contains the steering wheel and other controls, compass, charts, navigating equipment, and means of communicating with the engine room and other parts of the ship. Also known as wheelhouse.

pilot lamp [ELEC] A small lamp used to indicate that a circuit is energized. Also known as pilot light.

pilotless aircraft [AERO ENG] An aircraft adapted to control by or through a preset self-reacting unit or a radio-controlled unit, without the benefit of a human pilot.

pilot light [ELEC] *See* pilot lamp. [ENG] A small, constantly burning flame used to ignite a gas burner.

pilot lightship [NAV] A lightship which also serves as a pilot station.

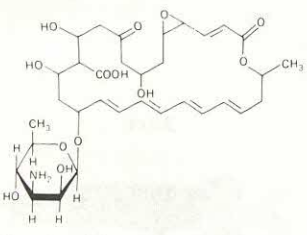
pilot line operation [IND ENG] Minimum production of an item in order to preserve or develop the art of its production.

pilot materials [IND ENG] A minimum quantity of special materials, partially finished components, forgings, and castings, identified with specific production equipment and processes and required for the purpose of proofing, tooling, and testing manufacturing processes to facilitate later reactivation.

pilot model [IND ENG] An early production model of a product used to debug the manufacturing process.

pilot motor [ELEC] A small motor used in the automatic control of an electric current.

PIMARICIN



Structural formula.

pilot plant [IND ENG] A small version of a planned industrial plant, built to gain experience in operating the final plant.

pilot production [PETRO ENG] Limited or test production of oil or gas from a field to determine reservoir and product characteristics before commencing full-scale recovery operations.

pilot reaming bit *See* reaming bit.

pilot relaying [ELEC] A system for protecting transmission consisting of protective relays at line terminals and a communication channel between relays which is used by the relays to determine if a fault is within the protected line section, in which case all terminals are tripped simultaneously at high speed, or outside it, in which case tripping is blocked.

pilot report [METEOROL] A report of in-flight weather by an aircraft pilot or crew member; a complete pilot report includes the following information in this order: location or extent of reported weather phenomena, time of observation, description of phenomena, altitude of phenomena, type of aircraft (only with reports of turbulence or icing). Also known as aircraft report; pirep.

pilot rules [NAV] Regulations supplementing the Inland Rules of the Road.

pilot-scale chemical reaction [CHEM ENG] Small-scale chemical reaction used to test operating conditions and product yields; used as a pilot for design of large-scale reaction systems.

pilot station [NAV] At seaports, the office or headquarters of marine pilots; the place where the services of a pilot may be obtained. [NAV ARCH] Position on the bridge of a ship where the pilot stands to steer or to give directions for steering a ship into and out of a harbor.

pilot streamer [GEOPHYS] A relatively slow-moving, nonluminous lightning streamer, the existence of which has been postulated to help account for the observed mode of advance of a stepped leader as it initiates a lightning discharge.

pilot system [COMPUT SCI] A system for evaluating new procedures for handling data in which a sample that is representative of the data to be handled is processed.

pilot tone [COMMUN] Single frequency transmitted over a narrow channel to operate an alarm or automatic control.

pilot tunnel [ENG] A small tunnel or shaft excavated in advance of the main drivage in mining and tunnel building to gain information about the ground, create a free face, and thus simplify the blasting operations.

pilot vessel *See* pilot boat.

pilot waters [NAV] **1.** Areas in which the services of a marine pilot are essential. **2.** Waters in which navigation is by piloting. Also known as pilotage waters.

pilot wire regulator [CONT SYS] Automatic device for controlling adjustable gains or losses associated with transmission circuits to compensate for transmission changes caused by temperature variations, the control usually depending upon the resistance of a conductor or pilot wire having substantially the same temperature conditions as the conductors of the circuits being regulated.

Piltdown man [PALEON] An alleged fossil man based on fragments of a skull and mandible that were eventually discovered to constitute a skillful hoax.

pilus [ANAT] A hair. [BIOL] A fine, slender, hairlike body. [MICROBIO] Any filamentous appendage other than flagella on certain gram-negative bacteria. Also known as fimbria.

pima cotton [TEXT] Fine-quality, long-staple cotton fibers or fine-combed cottons.

pimaricin [ORG CHEM] $C_{33}H_{47}NO_{13}$ A compound crystallizing from a methanol-water solution, decomposing at about 200°C; soluble in water and organic solvents; used in medicine as an antifungal agent for *Candida albicans* vaginitis. Also known as tennecetin.

pimelic acid [ORG CHEM] $HOOC(CH_2)_5COOH$ Crystals melting at 105°C; slightly soluble in water, soluble in alcohol and ether; used in biochemical research. Also known as heptanedioic acid.

pimelic ketone *See* cyclohexanone.

pimenta oil [MATER] A yellow to brownish essential oil with spicy aroma and pungent taste; derived from allspice (*Pimenta officinalis*); main components are eugenol, cineol, and phellandrene; used in medicine and flavors. Also known as allspice oil; pimento oil.

pimento [BOT] *Capsicum annuum*. A type of pepper in the order Polemoniales grown for its thick, sweet-fleshed red fruit.

pimento oil *See* pimenta oil.

pi meson [PARTIC PHYS] **1.** Collective name for three semistable mesons which have charges of +1, 0, and −1 times the proton charge, and form a charge multiplet, with an approximate mass of 138 MeV (million electron volts), spin 0, negative parity, negative G parity, and positive charge parity (for the neutral meson). Also known as pion. Symbolized π. **2.** Any meson belonging to an isospin triplet with hypercharge 0, negative G parity, and positive charge parity (for the neutral meson).

pi mode [ELECTR] Of a magnetron, the mode of operation for which the phases of the fields of successive anode openings facing the interaction space differ by pi radians.

pimple [MATER] A small, conical elevation on the surface of a plastic. [MED] A small pustule or papule.

pimple mound [GEOL] A low, flattened, roughly circular or elliptical dome consisting of sandy loam that is entirely distinct from the surrounding soil; peculiar to the Gulf coast of eastern Texas and southwestern Louisiana.

pimple plain [GEOL] A plain distinguished by the presence of numerous, conspicuous pimple mounds.

pi-mu atom *See* pionium.

pin [DES ENG] **1.** A cylindrical fastener made of wood, metal, or other material used to join two members or parts with freedom of angular movement at the joint. **2.** A short, pointed wire with a head used for fastening fabrics, paper, or similar materials. [ELECTR] A terminal on an electron tube, semiconductor, integrated circuit, plug, or connector. Also known as base pin; prong.

piña [BOT] A fiber obtained from the large leaves of the pineapple plant. Also known as pineapple fiber.

pinacocyte [INV ZOO] A flattened polygonal cell occurring in the dermal epithelium of sponges, and lining the exhalant canals.

pinacoid [CRYSTAL] An open crystal form that comprises two parallel faces.

pinacoidal class [CRYSTAL] That crystal class in the triclinic system having only a center of symmetry.

pinacoidal cleavage [CRYSTAL] A type of crystal cleavage that is parallel to one of the crystal's pinacoidal surfaces.

pinakiolite [MINERAL] $Mg_3Mn_3B_2O_{10}$ A black mineral composed of borate of magnesium and manganese; it is polymorphous with orthopinakiolite.

Pinales [BOT] An order of gymnospermous woody trees and shrubs in the class Pinopsida, including pine, spruce, fir, cypress, yew, and redwood; the largest plants are the conifers.

Pinatae *See* Pinopsida.

pin bar [MET] A small-diameter, case-hardened steel rod used for making dowel pins.

pinboard [COMPUT SCI] A board or panel containing an array of uniform holes into which pins may be inserted to control the operation of equipment.

pincer [INV ZOO] A grasping apparatus, as on the anterior legs of a lobster, consisting of two hinged jaws.

pinch [ENG] The closing-in of borehole walls before casing is emplaced, resulting from rock failure when drilling in formations having a low compressional strength. [GEOL] Thinning of a rock layer, as where a vein narrows. [MIN ENG] *See* horseback; squeeze.

pinch-and-swell structure [GEOL] A structural condition common in pegmatites and veins of quartz in metamorphosed rocks; the vein is pinched at frequent intervals, leaving expanded parts between.

pinch bar [DES ENG] A pointed lever, used somewhat like a crowbar, to roll heavy wheels.

pinch effect [ELEC] Manifestation of the magnetic self-attraction of parallel electric currents, such as constriction of ionized gas in a discharge tube, or constriction of molten metal through which a large current is flowing. Also known as cylindrical pinch; magnetic pinch; rheostriction.

pinch graft [MED] A small, full-thickness graft lifted from the donor area by a needle, and cut free with a razor.

pinch-off *See* cutoff.

pinch-off blades [ENG] In blow molding, the part that compresses the parison to seal it prior to blowing, and to allow easy cooling and removal of flash.

pinch-off voltage [ELECTR] Of a field-effect transistor, the voltage at which the current flow between source and drain is blocked because the channel between these electrodes is completely depleted.

pinch pass [MET] A cold rolling of sheet metal to effect a very small reduction in thickness and to produce a piece of accurate dimensions.

pinch resistor [ELECTR] A silicon integrated-circuit resistor produced by diffusing an n-type layer over a p-type resistor; this narrows or pinches the resistive channel, thereby increasing the resistance value.

pinch trimming [MET] Trimming a tubular or hollow part by pinching the flange or lip over the cutting edge of a punch.

pinch-tube process [ENG] A plastics blow-molding process in which the extruder drops a tube between mold halves, and the tube is pinched off when the mold closes.

pincushion distortion [ELECTR] Distortion in which all four sides of a received television picture are concave (curving inward). [OPTICS] Aberration in which the magnification produced by an optical system increases with the distance of the object point from the optical axis, so that the image of a square has concave sides.

pin diode [ELECTR] A diode consisting of a silicon wafer containing nearly equal p-type and n-type impurities, with additional p-type impurities diffused from one side and additional n-type impurities from the other side; this leaves a lightly doped intrinsic layer in the middle, to act as a dielectric barrier between the n-type and p-type regions. Also known as power diode.

pindone [ORG CHEM] $C_{14}H_{14}O_3$ A yellow, crystalline compound with a melting point of 108.5–110.5°C; slight solubility in water; used as a rodenticide. Also known as 2-pivalyl-1,3-indandione.

pine [BOT] Any of the cone-bearing trees composing the genus *Pinus;* characterized by evergreen leaves (needles), usually in tight clusters of two to five.

pineal body [ANAT] An unpaired, elongated, club-shaped, knoblike or threadlike organ attached by a stalk to the roof of the vertebrate forebrain. Also known as conarium; epiphysis.

pineapple [BOT] *Ananas sativus*. A perennial plant of the order Bromeliales with long, swordlike, usually rough-edged leaves and a dense head of small abortive flowers; the fruit is a sorosis that develops from the fleshy inflorescence and ripens into a solid mass, covered by the persistent bracts and crowned by a tuft of leaves.

pineapple fiber *See* piña.

pinene [ORG CHEM] $C_{10}H_{16}$ Either of two colorless isomeric unsaturated bicyclic terpene hydrocarbon liquids derived from sulfate wood turpentine; 95% of the alpha form boils in the range 156–160°C, and of the beta form boils in the range 164–169°C; used as solvents for coatings and wax formulations, as chemical intermediates for resins, and as lube-oil additives. Also known as nopinene.

pine needle oil [MATER] An essential oil derived from various pines; colorless to yellowish oil with balsamic aroma; soluble in alcohol; used in perfumes and medicines. Also known as Douglas fir oil; fir wood oil.

pinene hydrochloride *See* terpene hydrochloride.

pine nut [BOT] The edible seed borne in the cone of various species of pine (*Pinus*), such as stone pine (*P. pinea*) and piñon pine (*P. cembroides* var. *edulis*).

pine oil [MATER] Any of a group of volatile essential oils with pinaceous aromas distilled from cones, needles, or stumps of various pine or other conifer species; used as solvents, emulsifying agents, wetting agents, deodorants, germicides, and sources of chemicals.

pine oleoresin [MATER] Fused solid blend of turpentine and rosin.

piner [METEOROL] In England, a rather strong breeze from the north or northeast.

pine tar [MATER] A viscous black mass obtained as a by-product in the distillation of pine wood; used for roofing.

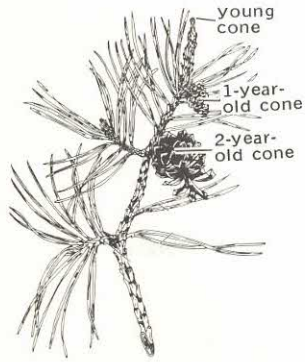
pine tar pitch [MATER] Viscous residue resulting from distillation of volatile oils from pine tar.

pine-tree array [ELECTROMAG] Array of dipole antennas aligned in a vertical plane known as the radiating curtain, behind which is a parallel array of dipole antennas forming a reflecting curtain.

pi network [ELEC] An electrical network which has three impedance branches connected in series to form a closed circuit, with the three junction points forming an output terminal, an input terminal, and a common output and input terminal.

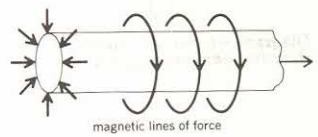
pin expansion test [MET] A test for determining tube expandability or for revealing longitudinal weaknesses by forcing a tapered pin into the open end of the tube.

PINALES



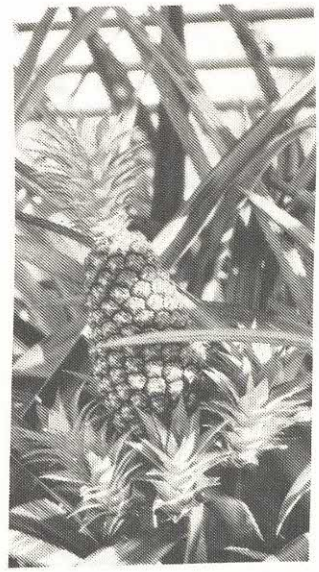
Branch of pine with leaves and ovulate cones. *(From J. B. Hill et al., Botany, 3d ed., McGraw-Hill, 1960)*

PINCH EFFECT



Example of pinch effect. Current I, uniformly distributed in cylindrical wire, gives rise to compression force indicated by arrows at left.

PINEAPPLE



Pineapple *(Ananas sativus)* fruit with tuft of leaves. *(USDA)*

pinfeather [VERT ZOO] A young, underdeveloped feather, especially one still enclosed in a cylindrical horny sheath which is afterward cast off.

ping [ELECTR] A sonic or ultrasonic pulse sent out by an echo-ranging sonar.

pinger [ENG ACOUS] A battery-powered, low-energy source for an echo sounder.

pingo [HYD] A frost mound resembling a volcano, being a relatively large and conical mound of soil-covered ice, elevated by hydrostatic pressure of water within or below the permafrost of arctic regions.

pingo ice [HYD] Clear or relatively clear ice that occurs in permafrost; originates from groundwater under pressure.

pingo remnant [GEOL] A rimmed depression formed by the rupturing of a pingo summit which results in the exposure of the ice core to melting followed by partial or total collapse. Also known as pseudokettle.

ping-pong [COMPUT SCI] The programming technique of using two magnetic tape units for multiple reel files and switching automatically between the two units until the complete file is processed.

pinguecula [ANAT] A small patch of yellowish-white connective tissue located on the conjunctiva, between the cornea and the canthus of the eye.

pinguite *See* nontronite.

pinhole [MET] A material fault resulting from small blisters that have burst in a casting or that have formed during electroplating.

pinhole camera [OPTICS] A camera which has no lenses, but consists essentially of a darkened box with a small hole in one side, so that an inverted image of outside objects is projected on the opposite side where it is recorded on photographic film.

pinhole chert [PETR] Chert containing weathered pebbles which are pierced by minute holes or pores.

pinhole detector [ENG] A photoelectric device that detects extremely small holes and other defects in moving sheets of material.

pinic acid [ORG CHEM] $C_9H_{14}O_4$ A crystalline dicarboxylic acid derived from α-pinene; used to make diesters for plasticizers and lubricants.

Pinicae [BOT] A large subdivision of the Pinophyta, comprising woody plants with a simple trunk and excurrent branches, simple, usually alternative, needlelike or scalelike leaves, and wood that lacks vessels and usually has resin canals.

pinion [MECH ENG] The smaller of a pair of gear wheels or the smallest wheel of a gear train. [VERT ZOO] The distal portion of a bird's wing.

pinite [MINERAL] A compact gray, green, or brown mica, chiefly muscovite derived from other minerals such as cordierite.

pin jack [ELEC] Single conductor jack having an opening for the insertion of a plug of very small diameter.

pin joint [DES ENG] A joint made with a pin hinge which has a removable pin.

pin junction [ELECTR] A semiconductor device having three regions: *p*-type impurity, intrinsic (electrically pure), and *n*-type impurity.

pink disease [PL PATH] A fungus disease of the bark of rubber, cacao, citrus, coffee, and other trees caused by *Corticium salmonicolor* and characterized by a pink covering of hyphae on the stems and branches.

pinkeye [MED] **1.** A contagious, mucopurulent conjunctivitis. **2.** *See* catarrhal conjunctivitis.

pink noise [ACOUS] Noise whose intensity is inversely proportional to frequency over a specified range, to give constant energy per octave.

pink root [PL PATH] A fungus disease of onion and garlic caused by various organisms, especially species of *Phoma* and *Fusarium*; marked by red discoloration of the roots.

pink rot [PL PATH] **1.** A fungus disease of potato tubers caused by *Phytophtora erythroseptica* and characterized by wet rot and pink color of the cut surfaces of the tuber upon exposure to air. **2.** A rot disease of apples caused by the fungus *Tricothecium roseum*. **3.** A watery soft rot of celery caused by the fungus *Sclerotinia sclerotiorum*.

pin metal [MET] Brass with a composition of 63% copper and 37% zinc, used as cold-drawn wire for making ordinary dressmaking pins.

PINNATE MUSCLE

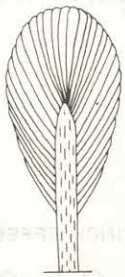


Diagram of pinnate muscle showing central tendon.

pinna [ANAT] The cartilaginous, projecting flap of the external ear of vertebrates. Also known as auricle.

pinnacle [ARCH] A projection on the highest point of the roof of a building. [GEOL] **1.** A sharp-pointed rock rising from the bottom, which may extend above the surface of the water, and may be a hazard to surface navigation; due to the sheer rise from the sea floor, no warning is given by sounding. **2.** Any high tower or spire-shaped pillar of rock, alone or cresting a summit.

pinnacled iceberg [OCEANOGR] An iceberg weathered in such manner as to produce spires or pinnacles. Also known as irregular iceberg; pyramidal iceberg.

pinnate [BOT] Having parts arranged like a feather, branching from a central axis.

pinnate drainage [HYD] A dendritic drainage pattern in which the main stream receives many closely spaced, subparallel tributaries that join it at acute angles; resembles a feather in plan view.

pinnate joint *See* feather joint.

pinnate muscle [ANAT] A muscle having a central tendon onto which many short, diagonal muscle fibers attach at rather acute angles.

pinning [SOLID STATE] The hindering of motion of dislocations in a solid, and the consequent hardening of the solid, by impurities which collect near the dislocations, resulting in a large energy barrier being imposed against the motion of the dislocations.

Pinnipedia [VERT ZOO] A suborder of aquatic mammals in the order Carnivora, including walruses and seals.

pinnoite [MINERAL] $Mg(BO_2)_2 \cdot 3H_2O$ A yellow mineral composed of hydrous borate of magnesium, occurring in nodular masses.

Pinnotheridae [INV ZOO] The pea crabs, a family of decapod crustaceans belonging to the Brachygnatha.

pinnulate [BIOL] Having pinnules.

pinnule [BIOL] The secondary branch of a plumelike or pinnate organ.

pinocytosis [CYTOL] Deprecated term formerly used to describe the process of uptake or internalization of particles, macromolecules, and fluid droplets by living cells; the process is now termed endocytosis.

pinolite [PETR] A metamorphic rock containing magnesite (breunnerite) as crystals and as granular aggregates in a schistose matrix (phyllite or talc schist).

Pinophyta [BOT] The gymnosperms, a division of seed plants characterized as vascular plants with roots, stems, and leaves, and with seeds that are not enclosed in an ovary but are borne on cone scales or exposed at the end of a stalk.

Pinopsida [BOT] A class of gymnospermous plants in the subdivision Pinicae characterized by entire-margined or slightly toothed, narrow leaves.

pinosome [CYTOL] A closed intracellular vesicle containing material captured by pinocytosis.

pinpoint [NAV] **1.** A precisely identified point, especially on the ground, that locates a very small target, a reference point for rendezvous or for other purposes; the coordinates that define this point. **2.** The ground position of aircraft determined by direct observation of the ground. **3.** To establish (position) with great accuracy.

pinpoint gate [ENG] In plastics molding, an orifice of 0.030 inch (0.76 millimeter) or less in diameter through which molten resin enters a mold cavity.

pin register [GRAPHICS] The use of accurately positioned holes and special pins to ensure exact superimposition of copy, film, plates, and presses during makeup and printing.

pin rod [DES ENG] A rod designed to connect two parts so they act as one.

pin sensing [COMPUT SCI] Device using a punched card, sensing the opening and closing of switches to generate digital data.

pint [MECH] Abbreviated pt. **1.** A unit of volume, used in the United States for measurement of liquid substances, equal to ⅛ U.S. gallon, or 29⅞ cubic inches, or $4.73176473 \times 10^{-4}$ cubic meters. Also known as liquid pint (liq pt). **2.** A unit of volume used in the United States for measurement of solid substances, equal to 1/64 U.S. bushel, or 107,521/3200 cubic inches, or approximately 5.50610×10^{-4} cubic meters. Also known as dry pint (dry pt). **3.** A unit of volume, used in the United Kingdom for measurement of liquid and solid substances, although usually the former, equal to ⅛ imperial gallon, or ap-

proximately 5.68261×10^{-4} cubic meters. Also known as imperial pint.

pinta [MED] A disease of the skin seen most frequently in tropical America, characterized by dyschromic changes and hyperkeratosis in patches of the skin; caused by the spirochete *Treponema carateum*. Also known as carate; mal de pinto; piquite; purupuru; quitiqua.

pintadoite [MINERAL] $Ca_2V_2O_7 \cdot 9H_2O$ A green mineral consisting of a hydrated calcium vanadate; occurs as an efflorescence.

pin timbering [MIN ENG] A method of mine roof support in which bolts are driven up into strong material, thus supporting lower weak layers.

pintle [DES ENG] A vertical pivot pin, as on a rudder or a gun carriage.

pintle center [ORD] An assumed center of a weapon on which all firing data computations are based.

pintle chain [DES ENG] A chain with links held together by pivot pins; used with sprocket wheels.

pintle hitch [ORD] A frame, secured to the rear of a tank or combat vehicle, that carries a quick-release pintle assembly with a cable running over a pulley into the tank; used for towing trailers.

pin-type mill [MECH ENG] Solids pulverizer in which protruding pins on high-speed rotating disk provide the breaking energy.

pinulus [INV ZOO] A sponge spicule, usually with five rays, one of which develops numerous small spines.

Pinus [BOT] The type genus of the family Pinaceae; the true pines, coniferous trees of north temperate regions having early deciduous primary leaves, needlelike secondary leaves, and cones with woody scales.

pinworm [INV ZOO] *Enterobius vermicularis*. A phasmid nematode of the superfamily Oxyuroidea; causes enterobiasis. Also known as human threadworm; seatworm.

Piobert lines *See* Lüders lines.

PIOCS [COMPUT SCI] An extension of the hardware, constituting an interface between programs and data channels; opposed to LIOCS, logical input/output control system. Derived from physical input/output control system.

pion *See* pi meson.

pion condensate [NUC PHYS] A state of nuclear matter compressed to abnormally high densities, in which great numbers of pairs of particles, each consisting of a positive pion and a negative pion, are generated, and interact strongly with the nucleons, causing them to form a coherent spin-isospin structure.

pioneer [ECOL] An organism that is able to establish itself in a barren area and begin an ecological cycle.

pioneer tunnel [MIN ENG] A small tunnel parallel to but ahead of a main tunnel and used to make crosscuts to the path that the main tunnel will follow.

pionium [PARTIC PHYS] **1.** An exotic atom consisting of a muon orbiting about an oppositely charged pion. Also known as pi-mu atom. **2.** An exotic atom consisting of an electron in orbit about an oppositely charged pion.

Piophilidae [INV ZOO] The skipper flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

piotine *See* saponite.

pip *See* blip.

pipe [DES ENG] A tube made of metal, clay, plastic, wood, or concrete and used to conduct a fluid, gas, or finely divided solid. [GEOL] **1.** A vertical, cylindrical ore body. Also known as chimney; neck; ore chimney; ore pipe; stock. **2.** A tubular cavity of varying depth in calcareous rocks, often filled with sand and gravel. **3.** A vertical conduit through the crust of the earth below a volcano, through which magmatic materials have passed. Also known as breccia pipe. [MET] **1.** The central cavity in an ingot or casting formed by contraction of the metal during solidification. **2.** An extrusion defect caused by the oxidized surface of the billet flowing toward the center of the rod at the back end.

pipe amygdule [GEOL] An elongate amygdule occurring toward the base of a lava flow, probably formed by the generation of gases or vapor from the underlying material.

pipe bit [DES ENG] A bit designed for attachment to standard coupled pipe for use in socketing the pipe in bedrock.

pipe clamp [DES ENG] A device similar to a casing clamp, but used on a pipe to grasp it and facilitate hoisting or suspension.

pipe clay [GEOL] A mass of fine clay, usually lens-shaped, which forms the surface of bedrock and upon which often rests the gravel of old river beds.

pipe culvert [CIV ENG] A buried pipe for carrying a watercourse below ground level.

pipe cutter [DES ENG] A hand tool consisting of a clamplike device with three cutting wheels which are forced inward by screw pressure to cut into a pipe as the tool is rotated around the pipe circumference.

pipe elbow meter [ENG] A variable-head meter for measuring flow around the bend in a pipe.

pipe fitting [ENG] A piece, such as couplings, unions, nipples, tees, and elbows for connecting lengths of pipes.

pipe flow [ENG] Conveyance of fluids in closed conduits.

pipe laying [ENG] The placing of pipe into position in a trench, as with buried pipelines for oil, water, or chemicals.

pipeline [ENG] A line of pipe connected to valves and other control devices, for conducting fluids, gases, or finely divided solids.

pipelining [COMPUT SCI] A procedure for processing instructions in a computer program more rapidly, in which each instruction is divided into numerous small stages, and a population of instructions are in various stages at any given time.

pipe pile [CIV ENG] A steel pipe 6–30 inches (15–76 centimeters) in diameter, usually filled with concrete and used for underpinning.

Piperaceae [BOT] A family of dicotyledonous plants in the order Piperales characterized by alternate leaves, a solitary ovule, copious perisperm, and scanty endosperm.

Piperales [BOT] An order of dicotyledonous herbaceous plants marked by ethereal oil cells, uniaperturate pollen, and reduced crowded flowers with orthotropous ovules.

piperalin [ORG CHEM] $C_{16}H_{21}O_2NCl_2$ An amber liquid with a boiling point of 156–157°C; used as a fungicide. Also known as 3-(2-methylpiperidino)propyl 3,4-dichlorobenzoate.

piperazidine *See* piperazine.

piperazine [ORG CHEM] $C_4H_{10}N_2$ A cyclic compound; colorless, deliquescent crystals, melting at 104–107°C; soluble in water, alcohol, glycerol, and glycols; absorbs carbon dioxide from air; used in medicine. Also known as diethylenediamine; ethyleneamine; piperazidine.

piperazine dihydrochloride [ORG CHEM] $C_4H_{10}N_2 \cdot 2HCl$ White, water-soluble needles; used for insecticides and pharmaceuticals.

2,5-piperazine-dione *See* diketopiperazine.

***N,N'*-[1,4-piperazinediyl-bis(2,2,2-trichloroethylidine)]-bis-[formamide]** *See* triforine.

piperazine hexahydrate [ORG CHEM] $C_4H_{10}N_2 \cdot 6H_2O$ White crystals with a melting point of 44°C; soluble in alcohol and water; used for pharmaceuticals and insecticides.

piperidic acid *See* γ-aminobutyric acid.

piperidine [ORG CHEM] $C_5H_{11}N$ A cyclic compound, and strong base; colorless liquid with pepper aroma; boils at 106°C; soluble in water, alcohol, and ether; used as a chemical intermediate and rubber accelerator, and in medicine.

β-2-(piperidyl propionaldehyde) *See* pelletierine.

piperine [ORG CHEM] $C_{17}H_{19}NO_3$ A crystalline compound that is found in black pepper; melting point is 130°C; soluble in benzene and acetic acid; used to give a pungent taste to brandy and as an insecticide.

pipernoid texture [GEOL] The eutaxitic texture of certain extrusive igneous rocks in which dark patches and stringers occur in a light-colored groundmass.

piperocaine hydrochloride [ORG CHEM] $C_{16}H_{23}NO_2 \cdot HCl$ A white, crystalline powder with a bitter taste and a melting point of 172–175°C; soluble in water, chloroform, and alcohol; used in medicine. Also known as 3-(2-methyl-1-piperidyl)propyl benzoate hydrochloride.

pipe rock [PETR] A marine sandstone containing abundant scolites.

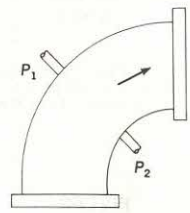
piperonal [ORG CHEM] $C_8H_6O_3$ White crystals with a floral odor and a melting point of 35.5–37°C; soluble in alcohol and ether; used in medicine, perfumes, suntan preparations, and mosquito repellents. Also known as heliotropin; 3,4-methylenedioxybenzaldehyde; piperonyl aldehyde.

piperonal bis[2-(2-butoxyethoxy)ethyl[acetal *See* piprotal.

piperonyl aldehyde *See* piperonal.

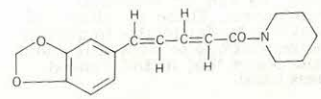
piperoxan [PHARM] $C_{14}H_{19}NO_2$ An adrenergic blocking

PIPE ELBOW METER



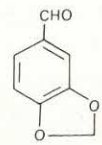
The meter measures flow rate by using the difference in pressure ($P_1 - P_2$) between pressure connections on the inside and outside of the bend in a pipe elbow.

PIPERINE



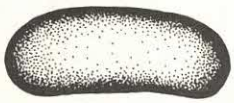
Structural formula.

PIPERONAL



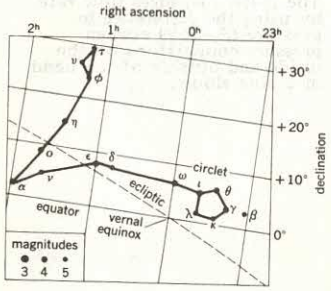
Structural formula.

PIPTOBLAST



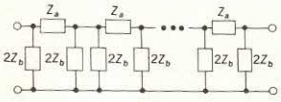
Piptoblast of *Fredericella sultana*.

PISCES



Line pattern in the constellation Pisces. The grid lines represent the coordinates of the sky. The apparent brightness, or magnitude, of the various stars is shown by the sizes of the dots, which are graded by appropriate numbers as indicated.

PI SECTION FILTER



Schematic diagram of pi section filter. Z_a and Z_b represent impedances. These are chosen so that $|Z_a| \gg |Z_b|$ in the frequency range which is to be a stop band and $|Z_a| \ll |Z_b|$ in the desired pass band.

agent that has been used, as the hydrochloride salt, for diagnosis of pheochromocytoma.

piperylene *See* pentadiene.

pipe scale [ENG] Rust and corrosion products adhering to the inner surfaces of pipes; serve to decrease ability to transfer heat and to increase the pressure drop for flowing fluids.

pipe still [CHEM ENG] A petroleum-refinery still in which heat is applied to the oil while it is being pumped through a coil or pipe arranged in a firebox, the oil then running to a fractionator with continuous removal of overhead vapor and liquid bottoms.

pipestone [PETR] A pink or mottled argillaceous stone; carved by the Indians into tobacco pipes.

pipet [CHEM] Graduated or calibrated tube which may have a center reservoir (bulb); used to transfer known volumes of liquids from one vessel to another; types are volumetric or transfer, graduated, and micro.

pipe tap [ENG] A small threaded hole or entry made into the wall of a pipe; used for sampling of pipe contents, or connection of control devices or pressure-drop-measurement devices.

pipe tee [DES ENG] A T-shaped pipe fitting with two outlets, one at 90° to the connection to the main line.

pipe thread [DES ENG] Most commonly, a 60° thread used on pipes and tubes, characterized by flat crests and roots and cut with 3/4-inch taper per foot (about 1.9 centimeters per 30 centimeters). Also known as taper pipe thread.

pipe-thread protector *See* thread protector.

pipe tongs [ENG] Heavy tongs that are hung on a cable and used for screwing pipe and tool joints.

pipe-to-soil potential [ELEC] The voltage potential (emf) generated between a buried pipe and its surrounding soil, the result of electrolytic action and a cause of electrolytic corrosion of the pipe.

pipe train [ENG] In the extrusion of plastic pipe, the entire equipment assembly used to fabricate the pipe (such as the extruder, die, cooling bath, haul-off, and cutter).

pipe vesicle [GEOL] A slender vertical cavity, a few centimeters or tens of centimeters in length, extending upward from the base of a lava flow.

pipe wrench [DES ENG] A tool designed to grip and turn a pipe or rod about its axis in one direction only.

Pipidea [VERT ZOO] A family of frogs sometimes included in the suborder Opisthocoela, but more commonly placed in its own suborder, Aglossa; a definitive tongue is lacking, and free ribs are present in the tadpole but they fuse to the vertebrae in the adult.

piping [ENG] A system of pipes provided to carry a fluid. [HYD] Erosive action of water passing through or under a dam, which may result in leakage or failure.

pi point [ELEC] Frequency at which the insertion phase shift of an electric structure is 180° or an integral multiple of 180°

pipper [OPTICS] A small hole in the reticle of an optical sight or computing sight.

pipper image [OPTICS] A spot of light projected through the pipper in an optical or computing sight, used in aiming.

Pipridae [VERT ZOO] The manakins, a family of colorful, neotropical suboscine birds in the order Passeriformes.

piprotal [ORG CHEM] $C_{16}H_{31}O_8$ An amber liquid, insoluble in water; used as a synergist with pyrethrum and carbamate insecticides for control of wood borers. Also known as piperonal bis[2-(2-butoxyethoxy)ethyl[acetal.

piptoblast [INV ZOO] A statoblast that is free but has no float.

piqué [TEXT] A cotton, polyester and cotton, rayon, or silk fabric with ribs running lengthwise, sometimes forming a waffle weave.

piquite *See* pinta.

piracy *See* capture.

Pirani gage [PHYS] A thermal conductivity gage (where the thermal conductivity of a gas heated by a hot wire varies with pressure) connected to a Wheatstone bridge to measure the resistance of the hot wire, thus the gas pressure; used to measure pressure from 1 to 10^{-3} mmHg (133.32 to 0.13332 newtons per square meter).

pirep *See* pilot report.

piriformis [ANAT] A muscle arising from the front of the sacrum and inserted into the greater trochanter of the femur.

pirimiphosethyl [ORG CHEM] $C_{13}H_{24}N_3O_3PS$ A straw-colored liquid which decomposes at 130°C; used as an insecticide for the control of soil insects in vegetables and other crops. Also known as 2-diethylamino-6-methylpyrimidin-4-yl diethyl phosphorothioate.

pirimiphosmethyl *See* 2-diethylamino-6-methylpyrimidin-4-yl dimethyl phosphorothionate.

Piroplasmea [INV ZOO] A class of parasitic protozoans in the superclass Sarcodina; includes the single genus *Babesia*.

pirssonite [MINERAL] $Na_2Ca(CO_3)_2 \cdot 2H_2O$ A colorless or white orthorhombic mineral composed of hydrous carbonate of sodium and calcium.

pisanite [MINERAL] $(Fe,Cu)SO_4 \cdot 7H_2O$ A blue mineral composed of hydrous sulfate of copper and iron; it is isomorphous with kirovite and melanterite.

Pisces [ASTRON] A northern constellation; right ascension 1 hour, declination 15°N. Also know as Fishes. [VERT ZOO] The fish and fishlike vertebrates, including the classes Agnatha, Placodermi, Chondrichthyes, and Osteichthyes.

Pisces Volan *See* Volan.

Piscis Australis [ASTRON] A southern constellation; right ascension 22 hours, declination 30°S. Also known as Southern Fish.

α Piscis Australis [ASTRON] The brightest star in the southern constellation Piscis Australis. Also known as Fomalhaut.

piscivorous [ZOO] Feeding on fishes.

D-piscose *See* allulose.

pi section filter [ELEC] An electric filter made of several pi networks connected in series.

Pisionidae [INV ZOO] A small family of errantian polychaete annelids; allies of the scale bearers.

pisolite [PETR] A sedimentary rock composed principally of pisoliths.

pisolith [GEOL] Small, more or less spherical particles found in limestones and dolomites, having a diameter of 2–10 millimeters and often formed of calcium carbonate.

pisolitic [PETR] Pertaining to pisolite or to the characteristic texture of such a rock.

pisolitic tuff [GEOL] Of a tuff, composed of accretionary lapilli or pisolites.

pisoparite [PETR] A limestone which contains at least 25% pisoliths and no more than 25% intraclasts and in which the sparry-calcite cement is more abundant than the carbonate-mud matrix (micrite).

pistachio [BOT] *Pistacia vera*. A small, spreading dioecious evergreen tree with leaves that have three to five broad leaflets, and with large drupaceous fruit; the edible seed consists of a single green kernel covered by a brown coat and enclosed in a tough shell.

pistil [BOT] The ovule-bearing organ of angiosperms; consists of an ovary, a style, and a stigma.

pistillate [BOT] **1.** Having a pistil. **2.** Having pistils but no stamens.

pistol [ORD] A short automatic or semiautomatic firearm aimed and fired from one hand, using the force of recoil to eject the empty shell and to insert a new round into the firing chamber.

pistol lanyard [ORD] An assembly of a cord, slides, and a fastening device, generally used by military police; it is worn looped over the shoulder with the end attached to the pistol.

piston [ELECTROMAG] A sliding metal cylinder used in waveguides and cavities for tuning purposes or for reflecting essentially all of the incident energy. Also known as plunger; waveguide plunger. [ENG] *See* force plug. [MECH ENG] A sliding metal cylinder that reciprocates in a tubular housing, either moving against or moved by fluid pressure.

piston attenuator [ELECTROMAG] A microwave attenuator inserted in a waveguide to introduce an amount of attenuation that can be varied by moving an output coupling device along its longitudinal axis.

piston blower [MECH ENG] A piston-operated, positive-displacement air compressor used for stationary, automobile, and marine duty.

piston corer [MECH ENG] A steel tube which is driven into the sediment by a free fall and by lead attached to the upper end, and which is capable of recovering undistorted vertical sections of sediment.

piston displacement [MECH ENG] The volume which a piston in a cylinder displaces in a single stroke, equal to the distance the piston travels times the internal cross section of the cylinder.

piston drill [MECH ENG] A heavy percussion-type rock drill mounted either on a horizontal bar or on a short horizontal arm

fastened to a vertical column; drills holes to 6 inches (15 centimeters) in diameter. Also known as reciprocating drill.

piston engine [MECH ENG] A type of engine characterized by reciprocating motion of pistons in a cylinder. Also known as displacement engine; reciprocating engine.

piston flow [FL MECH] Two-phase (vapor-liquid) flow in which the gas flows as large plugs; occurs for gas superficial velocities from about 2 to 30 feet per second (60 to 900 centimeters per second). Also known as plug flow; slug flow.

piston head [MECH ENG] That part of a piston above the top ring.

piston meter [ENG] A variable-area, constant-head fluid-flow meter in which the position of the piston, moved by the buoyant force of the liquid, indicates the flow rate. Also known as piston-type area meter.

piston pin [MECH ENG] A cylindrical pin that connects the connecting rod to the piston. Also known as wrist pin.

piston pump [MECH ENG] A pump in which motion and pressure are applied to the fluid by a reciprocating piston in a cylinder. Also known as reciprocating pump.

piston ring [DES ENG] A sealing ring fitted around a piston and extending to the cylinder wall to prevent leakage. Also known as packing ring.

piston rod [MECH ENG] The rod which is connected to the piston, and moves or is moved by the piston.

piston skirt [MECH ENG] That part of a piston below the piston pin bore.

piston speed [MECH ENG] The total distance a piston travels in a given time; usually expressed in feet per minute.

piston-type area meter *See* piston meter.

piston valve [MECH ENG] A cylindrical type of steam engine slide valve for admission and exhaust of steam.

piston viscometer [ENG] A device for the measurement of viscosity by the timed fall of a piston through the liquid being tested.

pit [BOT] **1.** A cavity in the secondary wall of a plant cell, formed where secondary deposition has failed to occur, and the primary wall remains uncovered; two main types are simple pits and bordered pits. **2.** The stone of a drupaceous fruit. [MET] A small hole in the surface of a metal; usually caused by corrosion or formed during electroplating operations. [MIN ENG] **1.** A coal mine; the term is not commonly used by the coal industry, except in reference to surface mining where the workings may be known as a strip pit. **2.** Any quarry, mine, or excavation area worked by the open-cut method to obtain material of value.

pitch [ACOUS] That psychological property of sound characterized by highness or lowness, depending primarily upon frequency of the sound stimulus, but also upon its sound pressure and waveform. [ARCH] The ratio of the rise of a roof to its span. [COMPUT SCI] The distance between the centerlines of adjacent rows of hole positions in punched paper tape. [DES ENG] The distance between similar elements arranged in a pattern or between two points of a mechanical part, as the distance between the peaks of two successive grooves on a disk recording or on a screw. [GEOL] *See* plunge. [MATER] A dark heavy liquid or solid substance obtained as a residue after distillation of tar, oil, and such materials; occurs naturally as asphalt. [MECH] **1.** Of an aerospace vehicle, an angular displacement about an axis parallel to the lateral axis of the vehicle. **2.** The rising and falling motion of the bow of a ship or the tail of an airplane as the craft oscillates about a transverse axis. [MOL BIO] The distance between two adjacent turns of double-stranded deoxyribonucleic acid. [SCI TECH] The inclination or degree of slope of an object or structure.

pitch acceleration [MECH] The angular acceleration of an aircraft or missile about its lateral, or Y, axis.

pitch attitude [MECH] The attitude of an aircraft, rocket, or other flying vehicle, referred to the relationship between the longitudinal body axis and a chosen reference line or plane as seen from the side.

pitch axis [MECH] A lateral axis through an aircraft, missile, or similar body, about which the body pitches. Also known as pitching axis.

pitchblende [MINERAL] A massive, brown to black, and fine-grained, amorphous, or microcrystalline variety of uraninite which has a pitchy to dull luster and contains small quantities of uranium. Also known as nasturan; pitch ore.

pitch circle [DES ENG] In toothed gears, an imaginary circle concentric with the gear axis which is defined at the thickest point on the teeth and along which the tooth pitch is measured.

pitch coal *See* bituminous lignite.

pitch coke [MATER] Coke made from coal tar pitch, characterized by high carbon and low ash content, and used mainly for production of electrode carbon.

pitch cone [DES ENG] A cone representing the pitch surface of a bevel gear.

pitch cylinder [DES ENG] A cylinder representing the pitch surface of a spur gear.

pitch diameter [DES ENG] The diameter of the pitch circle of a gear.

pitcher plant [BOT] Any of various insectivorous plants of the families Sarraceniaceae and Nepenthaceae; the leaves form deep pitchers in which water collects and insects are drowned and digested.

pitch indicator [AERO ENG] An instrument for indicating the existence and approximate magnitude of the angular velocity about the lateral axis of an airframe.

pitching axis *See* pitch axis.

pitching fold *See* plunging fold.

pitching moment [MECH] A moment about a lateral axis of an aircraft, rocket, or airfoil.

pitch line *See* cam profile.

pitch mining [MIN ENG] Mining coal beds with steep slopes.

pitch opal [MINERAL] A yellowish to brownish inferior quality of common opal displaying a luster resembling that of pitch.

pitch ore *See* pitchblende.

pitchover [AERO ENG] The programmed turn from the vertical that a rocket under power takes as it describes an arc and points in a direction other than vertical.

pitch-row [COMPUT SCI] The distance between two adjacent holes in a paper tape.

pitchstone [GEOL] A type of volcanic glass distinguished by a waxy, dull, resinous, pitchy luster. Also known as fluolite.

pit furnace [MET] A low-temperature furnace in which steel is tempered.

pith [BOT] A central zone of parenchymatous tissue that occurs in most vascular plants and is surrounded by vascular tissue.

pi theorem *See* Buckingham's π theorem.

pit limits [MIN ENG] The vertical and lateral extent to which the mining of a mineral deposit by open pitting may be carried economically.

pitman [ENG] A worker in or near a pit, as in a quarry, mine, garage, or foundry.

pitometer [ENG] Reversed pitot-tube-type flow-measurement device with one pressure opening facing upstream and the other facing downstream.

pitometer log [ENG] A log consisting essentially of a pitot tube projecting into the water, and suitable registering devices.

pitot pressure [FL MECH] Pressure at the open end of a pitot tube.

pitot tube [ENG] An instrument that measures the stagnation pressure of a flowing fluid, consisting of an open tube pointing into the fluid and connected to a pressure-indicating device. Also known as impact tube.

pitot-tube anemometer [ENG] A pressure-tube anemometer consisting of a pitot tube mounted on the windward end of a wind vane and a suitable manometer to measure the developed pressure, and calibrated in units of wind speed.

pitot-venturi flow element [ENG] Liquid-flow measurement device in which a pair of concentric venturi elements replaces the pitot-tube probe.

pit-run gravel [GEOL] A natural deposit of a mixture of gravel, sand, and foreign materials.

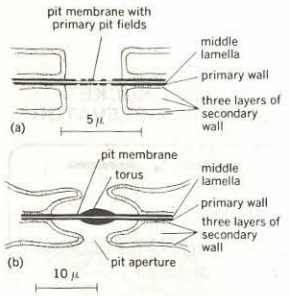
pit sampling [MIN ENG] Using small untimbered pits to gain access to shallow alluvial deposits or ore dumps for purpose of testing or valuation.

pit slope [MIN ENG] The angle at which the wall of an open pit or cut stands as measured along an imaginary plane extended along the crests of the berms or from the slope crest to its toe.

pitted outwash plain [GEOL] An outwash plain characterized by numerous depressions such as kettles, shallow pits, and potholes.

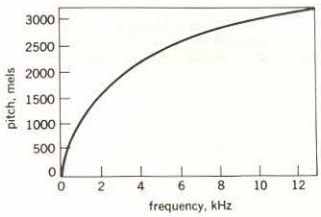
pitted pebble [GEOL] A pebble having marked concavities not related to the texture of the rock in which it appears or to differential weathering.

PIT



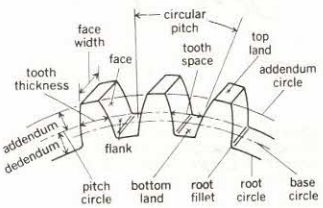
Diagrams of pit pairs in the secondary walls of plants. *(a)* Simple. *(b)* Bordered.

PITCH



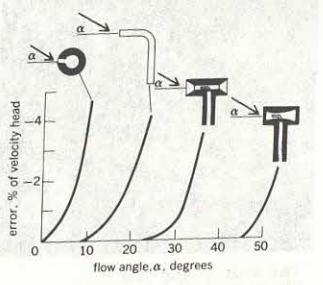
Pitch level of sounds of different frequency, in mels. A tone of 1000 hertz at an intensity level of 40 decibels above absolute threshold has a pitch level of 1000 mels. *(After S. S. Stevens and J. Volkman, The relation of pitch to frequency, Amer. J. Psychol., 53(3):329–353, 1940)*

PITCH CIRCLE



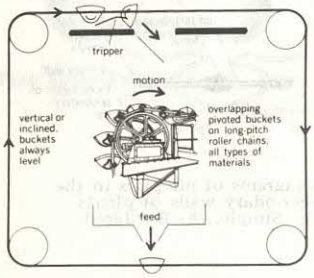
Drawing of principal features of gear teeth showing the pitch circle.

PITOT TUBE



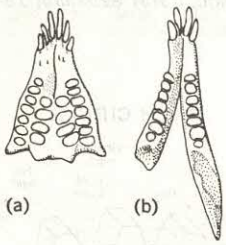
Effect of the flow alignment of a pitot tube with streamline on accuracy of measurement. Here α = angle between direction of flow and direction of tube opening.

PIVOT-BUCKET CONVEYOR-ELEVATOR



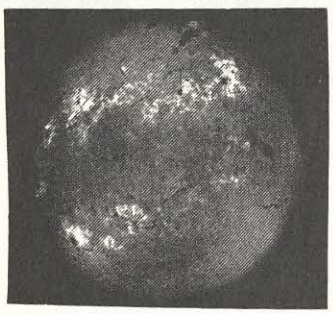
Components of pivot-bucket conveyor-elevator and typical path of travel.

PLACODONTIA



Dentition of *Paraplacodus broilii*, Triassic, Switzerland. *(a)* Upper jaw. *(b)* Lower jaw. *(After B. Peyer, 1935)*

PLAGE



The disk of the sun photographed in H-α light, showing bright plages in centers of activity and dark filaments (prominences). *(Sacramento Peak Observatory, operated by the Association of Universities for Research in Astronomy, Inc.)*

pitticite [MINERAL] A mineral of varying color composed of a hydrous sulfate-arsenate of iron.

Pittidae [VERT ZOO] The pittas, a homogeneous family of brightly colored suboscine birds with an erectile crown of feathers, in the suborder Tyranni.

pitting [MED] **1.** The formation of pits; in the fingernails, a consequence and sign of psoriasis. **2.** The preservation for a short time of indentations on the skin made by pressing with the finger; seen in pitting edema. [MET] Selective localized formation of rounded cavities in a metal surface due to corrosion or to nonuniform electroplating. [MIN ENG] The act of digging or sinking a pit.

pitting edema [MED] Edema of such degree that the skin can be temporarily indented by pressure with the fingers.

pitting potential [MET] The electrochemical potential in a given environment above which, but not below, a corrosion pit initiates in a metal surface.

pi-T transformation *See* Y-delta transformation.

pituicyte [HISTOL] The characteristic cell of the neurohypophysis; these cells are pigmented and fusiform and are probably derived from neuroglial cells.

pituitary [ANAT] Of or pertaining to the hypophysis. [PHYSIO] Secreting phlegm or mucus (archaic usage).

pituitary dwarfism [MED] Stunted growth due to a deficiency of the primary growth hormone; characterized clinically by growth failure in early life, and in older persons by deficient subcutaneous fat with loose, wrinkled skin and precocious senility.

pituitary gland *See* hypophysis.

Pityaceae [PALEOBOT] A family of fossil plants in the order Cordaitales known only as petrifactions of branches and wood.

pityriasis [MED] A fine, branny desquamation of the skin.

Pitzer equation [PHYS CHEM] Equation for the approximation of data for heats of vaporization for organic and simple inorganic compounds; derived from temperature and reduced temperature relationships.

2-pivalyl-1,3-indandione *See* pindone.

pivot [MECH] A short, pointed shaft forming the center and fulcrum on which something turns, balances, or oscillates.

pivotal fault *See* rotary fault.

pivot bridge [CIV ENG] A bridge in which a span can open by pivoting about a vertical axis.

pivot-bucket conveyor-elevator [MECH ENG] A bucket conveyor having overlapping pivoted buckets on long-pitch roller chains; buckets are always level except when tripped to discharge materials.

pivoted window [BUILD] A window having a section which is pivoted near the center so that the top of the section swings in and the bottom swings out.

pivoting [MATH] A strategy for avoiding difficulties in solving a system of linear equations by elimination, by choosing a suitable equation from among the remaining equations to deal with at each step.

pivoting point [NAV ARCH] The point about which a ship pivots when turning, usually somewhat forward of amidships.

pivot joint [ANAT] A diarthrosis that permits a rotation of one bone around another; an example is the articulation of the atlas with the axis. Also known as trochoid.

PIXE *See* proton-induced x-ray emission.

pixel [COMPUT SCI] The smallest part of an electronically coded picture image. [ELECTR] The smallest addressable element in an electronic display; a short form for picture element. Also known as pel.

pk *See* peck.

pK [CHEM] The logarithm (to base 10) of the reciprocal of the equilibrium constant for a specified reaction under specified conditions.

PK *See* psychokinesis.

PKU *See* phenylketonuria.

Pl *See* poiseuille.

PL/1 [COMPUT SCI] A multipurpose programming language, developed by IBM for the Model 360 systems, which can be used for both commercial and scientific applications.

PLA *See* programmed logic array.

placanticline [GEOL] A gentle, anticlinallike uplift of the continental platform, usually asymmetric and without a typical outline.

place [MATH] A position corresponding to a given power of the base in positional notation. Also known as column.

placebo [MED] A preparation, devoid of pharmacologic effect, given to patients for psychologic effect, or as a control in evaluating a medicinal believed to have a pharmacologic action.

placenta [BOT] A plant surface bearing a sporangium. [EMBRYO] A vascular organ that unites the fetus to the wall of the uterus in all mammals except marsupials and monotremes.

placenta accreta [MED] A placenta that has partially grown into the myometrium of the uterus.

placental barrier [EMBRYO] The tissues intervening between the maternal and the fetal blood of the placenta, which prevent or hinder certain substances or organisms from passing from mother to fetus.

placentation [BOT] The arrangement of ovules and placenta in the ovary of a plant. [EMBRYO] The formation and fusion of the placenta to the uterine wall.

placer [GEOL] A mineral deposit at or near the surface of the earth, formed by mechanical concentration of mineral particles from weathered debris. Also known as ore of sedimentation.

placer claim [MIN ENG] A mining claim located upon gravel or ground whose mineral contents are extracted by the use of water, as by sluicing, or hydraulicking.

placer dredge [MIN ENG] A dredge for mining metals from placer deposits; it consists of a chain of closely connected buckets passing over an idler tumbler and an upper or driving tumbler, mounted on a structural-steel ladder which carries a series of rollers.

placer location [MIN ENG] Location of a tract of land for the sake of loose mineral-bearing or other valuable deposits on or near its surface, rather than within lodes or veins in rock in place.

placer mining [MIN ENG] **1.** The extraction and concentration of heavy metals from placers. **2.** Mining of gold by washing the sand, gravel, or talus.

placic horizon [GEOL] A black to dark red soil horizon that is usually cemented with iron and is not very permeable.

placode [EMBRYO] A platelike epithelial thickening, frequently marking, in the embryo, the anlage of an organ or part.

Placodermi [PALEON] A large and varied class of Paleozoic fishes characterized by a complex bony armor covering the head and the front portion of the trunk.

Placodontia [PALEON] A small order of Triassic marine reptiles of the subclass Euryapsida characterized by flat-crowned teeth in both the upper and lower jaws and on the palate.

Placothuriidae [INV ZOO] A family of holothurian echinoderms in the order Dendrochirotida; individuals are invested in plates and have a complex calcareous ring mechanism.

plage [ASTRON] One of the luminous areas that appear in the vicinity of sunspots or disturbed areas on the sun; they may be seen distinctively in spectroheliograms taken in the calcium K line.

Plaggept [GEOL] A suborder of the soil order Inceptisol, with very thick surface horizons of mixed mineral and organic materials resulting from manure or human wastes added over long periods of time.

plagiaplite [PETR] An aplite composed chiefly of plagioclase (oligoclase to andesine), possibly green hornblende, and accessory quartz, biotite, and muscovite.

Plagiaulacida [PALEON] A primitive, monofamilial suborder of multituberculate mammals distinguished by their dentition (dental formula I 3/0 C 0/0 Pm 5/4 M 2/2), having cutting premolars and two rows of cusps on the upper molars.

Plagiaulacidae [PALEON] The single family of the extinct mammalian suborder Plagiaulacida.

plagiocephaly [MED] A type of strongly asymmetric cranial deformation, in which the anterior portion of one side and the posterior portion of the opposite side of the skull are developed more than their counterparts so that the maximum length of the skull is not in the midline but on a diagonal.

plagioclase [MINERAL] **1.** A type of triclinic feldspars having the general formula $(Na,Ca)Al(Si,Al)Si_2O_8$; they are common rock-forming minerals. **2.** A series in the plagioclase group which can be divided into a number of varieties based on the relative proportion of the solid solution end members, albite and anorthite (An): albite (An 0–10) oligoclase (An 10–30), andesine (An 30–50), labradorite (An 50–70), bytownite (An 70–90), and anorthite (An 90–100). Also known as sodium-calcium feldspar.

plagioclimax [ECOL] A plant community which is in equilibrium under present conditions, but which has not reached its natural climax, or has regressed from it, due to biotic factors such as human intervention.

plagiodont [VERT ZOO] Of a snake, having obliquely set, or two converging series of, palatal teeth.
plagiogravitropism [PL PHYS] A response of root and shoot branches to gravity where growth is at different angles from the vertical.
plagiohedral [CRYSTAL] Pertaining to obliquely arranged spiral faces; in particular, to a member of a group in the isometric system with 13 axes but no center or planes.
plagionite [MINERAL] $Pb_5Sb_8S_{17}$ A lead-gray mineral with metallic appearance, composed of sulfide of lead and antimony.
Plagiosauria [PALEON] An aberrant Triassic group of labyrinthodont amphibians.
plagiosere [ECOL] A plant succession deflected from its normal course by biotic factors.
plague [MED] **1.** An infectious bacterial disease of rodents and humans caused by *Pasteurella pestis*, transmitted to humans by the bite of an infected flea (*Xenopsylla cheopis*) or by inhalation. Also known as black death; bubonic plague. **2.** Any contagious, malignant, epidemic disease.
plain [GEOGR] An extensive, broad tract of level or rolling, almost treeless land with a shrubby vegetation, usually at a low elevation. [GEOL] A flat, gently sloping region of the sea floor, Also known as submarine plain.
plain concrete [CIV ENG] Concrete without reinforcement but often with light steel to reduce shrinkage and temperature cracking.
plain-laid [DES ENG] Pertaining to a rope whose strands are twisted together in a direction opposite to that of the twist in the strands.
plain milling cutter [DES ENG] A cylindrical milling cutter with teeth on the periphery only; used for milling plain or flat surfaces. Also known as slab cutter.
plain of denudation [GEOL] A surface that has been reduced to sea level or to just above sea level by the agents of erosion (usually considered to be of subaerial origin).
plain of lateral planation [GEOL] An extensive, smooth, apronlike surface developed at the base of a mountain or escarpment by the widening of valleys and the coalescence of floodplains as a result of lateral planation.
plain of marine denudation [GEOL] A plane or nearly plane surface worn down by the gradual encroachment of ocean waves upon the land; or a plane or nearly plane imaginary surface representing such a plain after uplift and partial subaerial erosion. Also known as plain of submarine denudation.
plain of marine erosion [GEOL] A theoretical platform representing a plane surface of unlimited width produced below sea level by the complete cutting away of the land by marine processes acting over a very long period of stillstand.
plain of submarine denudation *See* plain of marine denudation.
plain-sawing *See* backsawing.
plain turning [MECH ENG] Lathe operations involved when machining a workpiece between centers.
plains-type fold [GEOL] An anticlinal or domelike structure of the continental platform which has no typical outline and for which there is no corresponding synclinal structure.
plaintext [COMMUN] The form of a message in which it can be generally understood, before it has been transformed by a code or cipher into a form in which it can be read only by those privy to the secrets of the form.
plain tract [GEOL] The lower part of a stream, characterized by a low gradient and a wide floodplain.
plain weave [TEXT] A weave made by passing the filling yarns over one warp yarn and under the next, continuing alternately across each row.
Plaisancian [GEOL] A European stage of geologic time: lower Pliocene (above Pontian of Miocene, below Astian). Also known as Piacention; Plaisanzian.
Plaisanzian *See* Plaisancian.
plaiting [GEOL] A texture in some schists that results from the intersection of relict bedding planes with well-developed cleavage planes. Also known as gaufrage.
plait point [CHEM] Composition conditions in which the three coexisting phases of partially soluble components of a three-phase liquid system approach each other in composition.
plan [GRAPHICS] **1.** An orthographic drawing on a horizontal plane, as of an instrument, a horizontal section, or a layout. **2.** A large-scale map or chart of a small area.
planar [MATH] Lying in or pertaining to a euclidean plane.
planar array [ELECTR] An array of ultrasonic transducers that can be mounted in a single plane or sheet, to permit closer conformation with the hull design of a sonar-carrying ship.
planar-array antenna [ELECTROMAG] An array antenna in which the centers of the radiating elements are all in the same plane.
planar ceramic tube [ELECTR] Electron tube having parallel planar electrodes and a ceramic envelope.
planar cross-bedding [GEOL] Cross-bedding characterized by planar surfaces of erosion in the lower bounding surface.
planar device [ELECTR] A semiconductor device having planar electrodes in parallel planes, made by alternate diffusion of *p*- and *n*-type impurities into a substrate.
planar diode [ELECTR] A diode having planar electrodes in parallel planes.
planar flow structure *See* platy flow structure.
planar graph [MATH] A graph that can be drawn in a plane without any lines crossing.
planaria [INV ZOO] Any flatworm of the turbellarian order Tricladida; the body is broad and dorsoventrally flattened, with anterior lateral projections, the auricles, and a pair of eyespots on the anterior dorsal surface.
planar photodiode [ELECTR] A vacuum photodiode consisting simply of a photocathode and an anode; light enters through a window sealed into the base, behind the photocathode.
planar process [ENG] A silicon-transistor manufacturing process in which a fractional-micrometer-thick oxide layer is grown on a silicon substrate; a series of etching and diffusion steps is then used to produce the transistor inside the silicon substrate.
planar transistor [ELECTR] A transistor constructed by an etching and diffusion technique in which the junction is never exposed during processing, and the junctions reach the surface in one plane; characterized by very low leakage current and relatively high gain.
planate [GEOL] Referring to a surface that has been flattened or leveled by planation.
planation [GEOL] Erosion resulting in flat surfaces, caused by meandering streams, waves, ocean currents, wind, or glaciers.
planation stream piracy [HYD] Capture effected by the lateral planation of a stream invading and diverting the upper part of a smaller stream.
planchet [ENG] A small metal container or sample holder; usually used to hold radioactive materials that are being checked for the degree of radioactivity in a proportional counter or scintillation detector. [MATER] A milled metal disk ready for coining.
planck [PHYS] A unit of action equal to the product of an energy of 1 joule and a time of 1 second.
Planck distribution law *See* Planck radiation formula.
Planck era [ASTRON] The epoch in the early universe when the gravitational interaction between particles was as strong as the other interactions.
Planck length [PHYS] The length $\sqrt{Gh/2\pi c^3}$ (where G is the gravitational constant, h is Planck's constant, and c is the speed of light) at which quantum fluctuations are believed to dominate the geometry of space-time; it is equal to 1.616×10^{-35}m.
Planck mass [PHYS] The mass $\sqrt{hc/2\pi G}$, where h is Planck's constant, c is the speed of light, and G is the gravitational constant; equivalently, the mass of a particle whose reduced Compton wavelength equals the Planck length; it is equal to 21.77 micrograms or 1.221×10^{19} GeV/c^2.
Planck oscillator [QUANT MECH] An oscillator which can absorb or emit energy only in amounts which are integral multiples of Planck's constant times the frequency of the oscillator. Also known as radiation oscillator.
Planck radiation formula [STAT MECH] A formula for the intensity of radiation emitted by a blackbody within a narrow band of frequencies (or wavelengths), as a function of frequency, and of the body's temperature. Also known as Planck distribution law; Planck's law.
Planck's constant [QUANT MECH] A fundamental physical constant, the elementary quantum of action; the ratio of the energy of a photon to its frequency, it is equal to $6.62620 \pm 0.00005 \times 10^{-34}$ joule-second. Symbolized h. Also known as quantum of action.
Planck's law [QUANT MECH] A fundamental law of quantum theory stating that energy associated with electromagnetic radiation is emitted or absorbed in discrete amounts which are

PLANARIA

Planaria, a bilaterally symmetrical, dorsoventrally flattened, triploblastic organism.

proportional to the frequency of radiation. [STAT MECH] *See* Planck radiation formula.

Planctomyces [MICROBIO] A genus of appendaged bacteria; spherical, oblong, or pear-shaped cells with long, slender stalks; reproduce by budding.

plane [ELECTR] Screen of magnetic cores; planes are combined to form stacks. [DES ENG] A tool consisting of a smooth-soled stock from the face of which extends a wide-edged cutting blade for smoothing and shaping wood. [MATH] A surface containing any straight line through any two of its points.

plane angle [MATH] An angle between lines in the euclidean plane.

plane atmospheric wave [METEOROL] An atmospheric wave represented in two-dimensional rectangular cartesian coordinates, in contrast to a wave considered on the spherical earth.

plane bed [GEOL] A sedimentary bed without elevations or depressions larger than the maximum size of the bed material.

plane correction [ENG] A correction applied to observed surveying data to reduce them to a common reference plane.

plane curve [MATH] Any curve lying entirely within a plane.

plane cyclic curve *See* cyclic curve.

plane defect [CRYSTAL] A type of crystal defect that occurs along the boundary plane of two regions of a crystal, or between two grains.

plane dendrite *See* plane-dendritic crystal.

plane-dendritic crystal [CRYSTAL] An ice crystal exhibiting an elaborately branched (dendritic) structure of hexagonal symmetry, with its much larger dimension lying perpendicular to the principal (c-axis) of the crystal. Also known as plane dendrite; stellar crystal.

plane earth [ELECTROMAG] Earth that is considered to be a plane surface as used in ground-wave calculations.

plane-earth attenuation [ELECTROMAG] Attenuation of an electromagnetic wave over an imperfectly conducting plane earth in excess of that over a perfectly conducting plane.

plane field *See* field of planes on a manifold.

plane geometry [MATH] The geometric study of the figures in the euclidean plane such as lines, triangles, and polygons.

plane group [MATH] One of 17 two-dimensional patterns which can be produced by one asymmetric motif that is repeated by symmetry operations to produce a pattern unit which then is repeated by translation to build up an ordered pattern that fills any two-dimensional area. Also known as plane symmetry group.

plane jet [HYD] A stream flow pattern characteristic of hyperpycnal inflow, in which the inflowing water spreads as a parabola whose width is about three times the square root of the distance downstream from the mouth.

plane lamina [MECH] A body whose mass is concentrated in a single plane.

plane mirror [OPTICS] A mirror whose surface lies in a plane; it forms an image of an object such that the mirror surface is perpendicular to and bisects the line joining all corresponding object-image points.

plane of departure [MECH] Vertical plane containing the path of a projectile as it leaves the muzzle of the gun.

plane of fire [MECH] Vertical plane containing the gun and the target, or containing a line of site.

plane of incidence [PHYS] A plane containing the direction of propagation of a wave striking a surface and a line perpendicular to the surface. Also known as incidence plane.

plane of maximum shear stress [MECH] Either of two planes that lie on opposite sides of and at angles of 45° to the maximum principal stress axis and that are parallel to the intermediate principal stress axis.

plane of mirror symmetry Also known as mirror plane of symmetry; plane of symmetry; reflection plane; symmetry plane. [CRYSTAL] In certain crystals, a symmetry element whereby reflection of the crystal through a certain plane leaves the crystal unchanged. [MATH] An imaginary plane which divides an object into two halves, each of which is the mirror image of the other in this plane.

plane of polarization [ELECTROMAG] Plane containing the electric vector and the direction of propagation of electromagnetic wave.

plane of reflection [CRYSTAL] *See* plane of mirror symmetry. [MATH] *See* plane of mirror symmetry. [OPTICS] A plane containing the direction of propagation of radiation reflected from a surface, and the normal to the surface. Also known as reflection plane.

plane of saturation *See* water table.

plane of symmetry *See* plane of mirror symmetry.

plane of yaw [MECH] The plane determined by the tangent to the trajectory of a projectile in flight and the axis of the projectile.

plane parallel texture [PETR] The parallel texture of a rock in which the constituents are parallel to a plane, but not to a line as in linear parallel texture.

plane Poiseuille flow [FL MECH] Rheological (viscosity) measurement in which the fluid of interest is propelled through a narrow slot, and the volumetric flow rate and the pressure gradient are measured simultaneously to determine viscosity.

plane polarization *See* linear polarization.

plane-polarized wave [ELECTROMAG] An electromagnetic wave whose electric field vector at all times lies in a fixed plane that contains the direction of propagation through a homogeneous isotropic medium.

plane polygon [MATH] A polygon lying in the euclidean plane.

plane quadrilateral [MATH] A four-sided polygon lying in the euclidean plane.

plan equation [MECH ENG] The mathematical statement that horsepower = $plan/33{,}000$, where p = mean effective pressure (pounds per square inch), l = length of piston stroke (feet), a = net area of piston (square inches), and n = number of cycles completed per minute.

planer [MECH ENG] A machine for the shaping of long, flat, or flat contoured surfaces by reciprocating the workpiece under a stationary single-point tool or tools. [MIN ENG] A fixed-blade device for continuous longwall mining of narrow seams of friable coal; the machine is operated along the coal face, planing a narrow cut from the solid coal as it travels.

plane reflector *See* passive reflector.

plane sailing [NAV] A method of solving the various problems involving course, distance, difference of latitude, and departure, in which the earth or a smaller area is considered a plane.

plane strain [MECH] A deformation of a body in which the displacements of all points in the body are parallel to a given plane, and the values of these displacements do not depend on the distance perpendicular to the plane.

plane stress [MECH] A state of stress in which two of the principal stresses are always parallel to a given plane and are constant in the normal direction.

plane surveying [ENG] Measurement of areas on the assumption that the earth is flat.

plane symmetry group *See* plane group.

planet [ASTRON] A relatively small, solid celestial body circulating around a star, in particular the star known as the sun (which has nine planets).

plane table [ENG] A surveying instrument consisting of a drawing board mounted on a tripod and fitted with a compass and a straight-edge ruler; used to graphically plot survey lines directly from field observations.

plane-table method [MIN ENG] A method of measuring areas of mine roadways; a drawing board is set up on a tripod in the plane of the mine section to be measured; the distance from a central point on the board to the perimeter of the roadway is measured with a tape along various offsets; the distance measured is scaled on the drawing board along the proper offset line.

planetarium [ASTRON] **1.** A projection device which accurately portrays the position of the stars and planets at any time in the past, present, or future from any point on the earth or the near region of space; the modern planetarium instrument is a mechanical-electrical analog of space. **2.** The name given to the building and gear associated with this device.

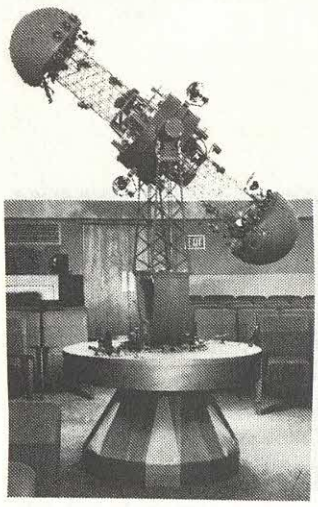
planetary aberration [OPTICS] The apparent displacement of an object in the solar system that results from the fact that light takes a certain time to travel from the object to earth, during which time the object travels a certain distance in its orbit.

planetary atmosphere [ASTRON] The outer shell of gas around some planets.

planetary boundary layer [METEOROL] That layer of the atmosphere from the earth's surface to the geostrophic wind level, including, therefore, the surface boundary layer and the Ekman layer; above this layer lies the free atmosphere.

planetary circulation *See* general circulation.

PLANETARIUM



The Spitz STP public oriented planetarium, which is also used in a 40-foot (12.2-meter) diameter dome for school planetariums. This type of planetarium is computer-controlled. *(Denver Museum of Natural History)*

planetary electron *See* orbital electron.

planetary gear train [MECH ENG] An assembly of meshed gears consisting of a central gear, a coaxial internal or ring gear, and one or more intermediate pinions supported on a revolving carrier.

planetary geology [GEOL] A science that applies geologic principles and techniques to the study of planets and their natural satellites. Also know as planetary geoscience.

planetary geoscience *See* planetary geology.

planetary nebula [ASTRON] An oval or round nebula of expanding concentric rings of gas associated with a hot central star.

planetary orbit [ASTRON] The path that a planet has as it revolves about the sun.

planetary perturbation [ASTRON] A deviation of a planet from its computed orbit because of the attraction of another celestial body or bodies.

planetary physics [ASTROPHYS] The study of the structure, composition, and physical and chemical properties of the planets of the solar system, including their atmospheres and immediate cosmic environment.

planetary precession [ASTRON] A comparatively small eastward motion of the equinoxes caused by the action of other planets in altering the plane of the earth's orbit.

planetary vorticity effect [GEOPHYS] The effect of the variation of the earth's vorticity with latitude in altering the relative vorticity of a flow with a meridional component; a fluid with a free surface in a rotating cylinder exhibits a corresponding effect, owing to the shrinking or stretching of radially displaced columns.

planetary wave *See* long wave; Rossby wave.

planetary wind [METEOROL] Any wind system of the earth's atmosphere which owes its existence and direction to solar radiation and to the rotation of the earth.

planet gear [MECH ENG] A pinion in a planetary gear train.

planetocentric coordinates [ASTRON] Coordinates that indicate the position of a point on the surface of a planet, determined by the direction of a line joining the center of the planet to the point.

planetographic coordinates [ASTRON] Coordinates that indicate the position of a point on the surface of a planet, determined by the direction of a perpendicular to the mean surface at the point.

planetography [ASTRON] The descriptive science of the physical features of planets.

planetoid *See* asteroid.

planetology [ASTRON] Scientific study of the planets, in particular their surface markings.

plane triangulation [MATH] The process of adding arcs between pairs of verticals of a planar graph to produce another planar graph, each of whose regions is bounded by three sides.

plane trigonometry [MATH] The study of triangles in the euclidean plane with the use of functions defined by the ratios of sides of right triangles.

plane wave [PHYS] Wave in which the wavefront is a plane surface; a wave whose equiphase surfaces form a family of parallel planes.

plane-wave initiation [ORD] Simultaneous initiation at all points of the rear surface of the main explosive charge by a flat detonation wave, usually accomplished by a composite explosive charge of proper dimensions.

planform [AERO ENG] The shape or form of an object, such as an airfoil, as seen from above, as in a plan view. [GEOGR] A body of water's outline or morphology as defined by the still water line.

planidium [INV ZOO] A first-stage legless larva of various insects in the orders Diptera and Hymenoptera.

planigraphy *See* sectional radiography.

planimeter [ENG] A device used for measuring the area of any plane surface by tracing the boundary of the area.

planimetric map [MAP] A map indicating only the horizontal positions of features, without regard to elevation, in contrast with a topographic map, which indicates both horizontal and vertical positions. Also known as line map.

planimetric method [MET] A method of measuring grain size by counting the number of grains in a given area.

planimetry [MAP] **1.** The measurement of plane surfaces; for example, the determination of horizontal distances, angles, and areas on a map. **2.** The plan details of a map; the natural and cultural features of a region (excluding relief) as shown on a map.

planing [ENG] Smoothing or shaping the surface of wood, metal, or plastic workpieces.

Planipennia [INV ZOO] A suborder of insects in the order Neuroptera in which the larval mandibles are modified for piercing and for sucking.

planisaic [MAP] A photomap in which the planimetric detail is shown by color overprints.

planishing [MECH ENG] Smoothing the surface of a metal by a rapid series of overlapping, light hammerlike blows or by rolling in a planishing mill.

planisphere [MAP] A representation, on a plane, of the celestial sphere, especially one on a polar projection, with means provided for making certain measurements such as altitude and azimuth.

plank [MATER] A heavy board with thickness of 2–4 inches (5–10 centimeters) and a width of at least 8 inches (20 centimeters).

planking [NAV ARCH] The wood decks and outside planks in wood or composite ships.

plankton [ECOL] Passively floating or weakly motile aquatic plants and animals.

plankton net [ENG] A net for collecting plankton.

planning by abstraction [COMPUT SCI] A computer problem-solving method in which the task to be accomplished is simplified; the simplified task is solved; and the solution is used as a guide.

planning chart [NAV] A chart designed for use in planning voyages or flight operations, or investigating areas of marine or aviation activities.

Planobispora [MICROBIO] A genus of bacteria in the family Actinoplanaceae; linear or fingerlike sporangia, each containing a pair of motile, rod-shaped spores.

planoblast [INV ZOO] The medusa form of a hydrozoan.

planocaine base *See* procaine base.

planoclastic rock [PETR] An even-grained or uniformly sized clastic rock.

Planococcus [MICROBIO] A genus of bacteria in the family Micrococcaceae; motile cells occur singly, in pairs, in threes, or in tetrads; metabolism is respiratory.

planoconcave lens [OPTICS] A lens for which one surface is plane and the other is concave.

planoconformity [GEOL] The relation between conformable strata that are approximately uniform in thickness and sensibly parallel throughout.

planoconvex lens [OPTICS] A lens for which one surface is plane and the other is convex.

planoconvex spotlight [ELEC] A light that can be used as a sharply defined spotlight or for soft-edged lighting; ranges in power from 100 to 2000 watts.

planocylindrical lens [OPTICS] A lens, one of whose surfaces is a portion of a plane, while the other is a portion of a cylinder.

planographic process [GRAPHICS] Nonrelief printing process (such as collotype and lithography), in which the areas of the plate to receive ink are on the same level or plane as those that remain uninked.

Planomonospora [MICROBIO] A genus of bacteria in the family Actinoplanaceae; club-shaped or fingerlike sporangia, each containing a single, large, motile spore.

planomycin *See* fervenulin.

Planosol [GEOL] An intrazonal, hydromorphic soil having a clay pan or hardpan covered with a leached surface layer; developed in a humid to subhumid climate.

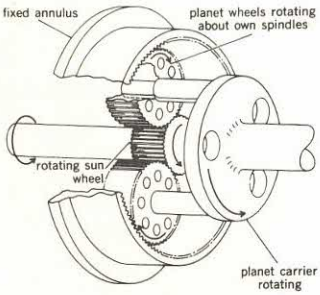
planospiral [INV ZOO] Having the shell coiled in one plane, used particularly of foraminiferans and mollusks.

plan position indicator [ELECTR] A radarscope display in which echoes from various targets appear as bright spots at the same locations as they would on a circular map of the area being scanned, the radar antenna being at the center of the map. Abbreviated PPI. Also known as P display.

plan position indicator repeater [ELECTR] Unit which repeats a plan position indicator (PPI) at a location remote from the radar console. Also known as remote plan position indicator.

plant [BOT] Any organism belonging to the kingdom Plantae, generally distinguished by the presence of chlorophyll, a rigid cell wall, and abundant, persistent, active embryonic tissue, and by the absence of the power of locomotion.

PLANETARY GEAR TRAIN



Cutaway isometric of mode of operation of a simple planetary gear train with a fixed or locked annulus.

PLANOCONCAVE LENS

Shape of a planoconcave lens. *(From F. A. Jenkins and H. E. White, Fundamentals of Optics, 3d ed., McGraw-Hill, 1957)*

PLANOCONVEX LENS

Shape of a planoconvex lens. *(From F. A. Jenkins and H. E. White, Fundamentals of Optics, 3d ed., McGraw-Hill, 1957)*

PLAN POSITION INDICATOR

Plan position indicator type of radar display; range is measured radially from center.

[COMPUT SCI] To place a number or instruction that has been generated in the course of a computer program in a storage location where it will be used or obeyed at a later stage of the program. [IND ENG] The land, buildings, and equipment used in an industry.

Plantae [BOT] The plant kingdom.

Plantaginaceae [BOT] The single family of the plant order Plantaginales.

Plantaginales [BOT] An order of dicotyledonous herbaceous plants in the subclass Asteridae, marked by small hypogynous flowers with a persistent regular corolla and four petals.

plantar [ANAT] Of or relating to the sole of the foot.

plantaris [ANAT] A small muscle of the calf of the leg; origin is the lateral condyle of the femur, and insertion is the calcaneus; flexes the knee joint.

plantar reflex [PHYSIO] Flexion of the toes in response to stroking of the outer surface of the sole, from heel to little toe.

plant decomposition [CONT SYS] The partitioning of a large-scale control system into subsystems along lines of weak interaction.

Plante cell [ELEC] A type of lead-acid cell in which the active material is formed on the plates by electrochemical means during repeated charging and discharging, instead of being applied as a prepared paste.

plant factor [ELEC] The ratio of the average power load of an electric power plant to its rated capacity. Also known as capacity factor.

plant fermentation [BIOCHEM] A form of plant metabolism in which carbohydrates are partially degraded without the consumption of molecular oxygen.

plant geography [BOT] A major division of botany, concerned with all aspects of the spatial distribution of plants. Also known as geographical botany; phytochorology; phytogeography.

plant hormone [BIOCHEM] An organic compound that is synthesized in minute quantities by one part of a plant and translocated to another part, where it influences physiological processes. Also known as phytohormone.

plantigrade [VERT ZOO] Pertaining to walking with the whole sole of the foot touching the ground.

plant key [BOT] An analytical guide to the identification of plants, based on the use of contrasting characters to subdivide a group under study into branches.

plant kingdom [BOT] The worldwide array of plant life constituting a major division of living organisms.

plant layout [IND ENG] The location of equipment and facilities in a manufacturing plant.

plant pathology [BOT] The branch of botany concerned with diseases of plants.

plant physiology [BOT] The branch of botany concerned with the processes which occur in plants.

plant protection [IND ENG] That portion of industrial security which concerns the safeguarding of industrial installations, resources, utilities, and materials by physical measures such as guards, fences, and lighting designation of restricted areas.

plant societies [ECOL] Assemblages of plants which constitute structural parts of plant communities.

plantula [INV ZOO] A small, cushionlike structure on the ventral surface of the segments of insect tarsi.

plant virus [VIROL] A virus that replicates only within plant cells.

planula [INV ZOO] The ciliated, free-swimming larva of coelenterates.

Planuloidea [INV ZOO] The equivalent name for Moruloidea.

plaque [MED] **1.** A patch, or an abnormal flat area on any internal or external body surface. **2.** A localized area of atherosclerosis. [VIROL] A clear area representing a colony of viruses on a plate culture formed by lysis of the host cell.

plash [HYD] A shallow, standing, usually short-lived pool or small pond resulting from a flood, heavy rain, or melting snow.

plasma [GEOL] The part of a soil material that can be, or has been, moved, reorganized, or concentrated by soil-forming processes. [HISTOL] The fluid portion of blood or lymph. [MINERAL] A faintly translucent or semitranslucent and bright green, leek green, or nearly emerald green variety of chalcedony, sometimes having white or yellowish spots. [PL PHYS] **1.** A highly ionized gas which contains equal numbers of ions and electrons in sufficient density so that the Debye shielding length is much smaller than the dimensions of the gas. **2.** A completely ionized gas, composed entirely of a nearly equal number of positive and negative free charges (positive ions and electrons).

plasma accelerator [PL PHYS] An accelerator that forms a high-velocity jet of plasma by using a magnetic field, an electric arc, a traveling wave, or other similar means.

plasma-arc cutting [ENG] Metal cutting by melting a localized area with an arc followed by removal of metal by high-velocity, high-temperature ionized gas.

plasma-arc welding [MET] Welding metal in a gas stream heated by a tungsten arc to temperatures approaching 60,000°F (33,315°C).

plasma cathode [ELECTR] A cathode in which the source of electrons is a gas plasma rather than a solid.

plasma cell *See* plasmacyte.

plasmacyte [HISTOL] A fairly large, generally ovoid cell with a small, eccentrically placed nucleus; the chromatin material is adherent to the nuclear membrane and the cytoplasm is agranular and deeply basophilic everywhere except for a clear area adjacent to the nucleus in the area of the cytocentrum. Also known as plasma cell.

plasma desorption mass spectrometry [SPECT] A technique for analysis of nonvolatile molecules, particularly heavy molecules with atomic weight over 2000, in which heavy ions with energies on the order of 100 MeV penetrate and deposit energy in thin films, giving rise to chemical reactions that result in the formation of molecular ions and shock waves that result in the ejection of these ions from the surface; the ions are then analyzed in a mass spectrometer. Abbreviated PDMS.

plasma diode [ELECTR] A diode used for converting heat directly into electricity; it consists of two closely spaced electrodes serving as cathode and anode, mounted in an envelope in which a low-pressure cesium vapor fills the interelectrode space; heat is applied to the cathode, causing emission of electrons.

plasma display [ELECTR] A display in which sets of parallel conductors at right angles to each other are deposited on glass plates, with the very small space between the plates filled with a gas; each intersection of two conductors defines a single cell that can be energized to produce a gas discharge forming one element of a dot-matrix display.

plasma engine [AERO ENG] An engine for space travel in which neutral plasma is accelerated and directed by external magnetic fields that interact with the magnetic field produced by current flow through the plasma. Also known as plasma jet.

plasma frequency *See* Langmuir plasma frequency.

plasmagel [CYTOL] The outer, gelated zone of protoplasm in a pseudopodium.

plasmagene [CYTOL] A cytoplasmic particle or substance, which may be present in bodies such as plastids or mitochondria, and which can reproduce and pass on inherited qualities to daughter cells.

plasma generator [ELECTR] Any device that produces a high-velocity plasma jet, such as a plasma accelerator, engine, oscillator, or torch.

plasma gun [ELECTR] A machine, such as an electric-arc chamber, that will generate very high heat fluxes to convert neutral gases into plasma. [ELECTROMAG] An electromagnetic device which creates and accelerates bursts of plasma.

plasma instability [PL PHYS] A sudden change in the quasistatic distribution of positions or velocities of particles constituting a plasma, and a sudden change in the accompanying electromagnetic field.

plasma jet *See* plasma engine.

plasma-jet excitation [SPECT] The use of a high-temperature plasma jet to excite an element to provide measurable spectra with many ion lines similar to those from spark-excited spectra.

plasmalemma *See* cell membrane.

plasma mantle [GEOPHYS] A thick layer of plasma just inside the magnetopause characterized by a tailward bulk flow with a speed of 100 to 200 kilometers per second and by a gradual decrease of density, temperature, and speed as the depth inside the magnetosphere increases.

plasma membrane *See* cell membrane.

plasmapause [GEOPHYS] The sharp outer boundary of the plasmasphere, at which the plasma density decreases by a factor of 100 or more.

plasmapheresis [MED] The withdrawal of blood from a do-

nor to obtain plasma, its components, or the nonerythrocytic formed elements of blood, followed by the return of the erythrocytes to the donor.

plasma physics [PHYS] The study of highly ionized gases.

plasma pinch [PL PHYS] Application of the pinch effect to plasma in attempts to produce controlled nuclear fusion.

plasma propulsion [AERO ENG] Propulsion of spacecraft and other vehicles by using electric or magnetic fields to accelerate both positively and negatively charged particles (plasma) to a very high velocity.

plasma radiation [PL PHYS] Electromagnetic radiation emitted from a plasma, primarily by free electrons undergoing transitions to other free states or to bound states of atoms and ions, but also by bound electrons as they undergo transitions to other bound states.

plasma rocket [AERO ENG] A rocket that is accelerated by means of a plasma engine.

plasma sheath [ELECTR] An envelope of ionized gas that surrounds a spacecraft or other body moving through an atmosphere at hypersonic velocities; affects transmission, reception, and diffraction of radio waves.

plasma sheet [GEOPHYS] A region of relatively hot plasma outside the plasmasphere, which reaches, during quiet times, from an altitude of about 50,000 kilometers to at least past the moon's orbit in a long tail extending away from the sun; composed of particles with typical thermal energies of 2 to 4 kilo electron volts.

plasmasol [CYTOL] The inner, solated zone of protoplasm in a pseudopodium.

plasmasphere [GEOPHYS] A region of relatively dense, cold plasma surrounding the earth and extending out to altitudes of approximately 2 to 6 earth radii, composed predominantly of electrons and protons, with thermal energies not exceeding several electronvolts.

plasma spraying [MET] In thermal spraying, melting and transference of a metal coating to a workpiece by use of a nontransferred arc.

plasma tail [ASTRON] A comet tail that is composed primarily of electrons and molecular ions, the dominant visible ion being positively ionized carbon monoxide, and that is generally straight, with a length in the range from 10^7 to 10^8 kilometers.

plasma thromboplastin antecedent *See* factor XI.

plasma thromboplastin component *See* Christmas factor.

plasma torch [ENG] A torch in which temperatures as high as 50,000°C are achieved by injecting a plasma gas tangentially into an electric arc formed between electrodes in a chamber; the resulting vortex of hot gases emerges at very high speed through a hole in the negative electrode, to form a jet for welding, spraying of molten metal, and cutting of hard rock or hard metals.

plasmatron [ELECTR] A gas-discharge tube in which independently generated plasma serves as a conductor between a hot cathode and an anode; the anode current is modulated by varying either the conductivity or the effective cross section of the plasma.

plasma wave [PL PHYS] A disturbance of a plasma involving oscillation of its constituent particles and of an electromagnetic field, which propagates from one point in the plasma to another without net motion of the plasma.

plasmid [GEN] An extrachromosomal genetic element found among various strains of *Escherichia coli* and other bacteria.

plasmin [BIOCHEM] A proteolytic enzyme in plasma which can digest many proteins through the process of hydrolysis. Also known as fibrinolysin.

plasminogen [BIOCHEM] The inert precursor, or zymogen, of plasmin. Also known as profibrinolysin.

plasmodesma [CYTOL] An intercellular bridge, thought to be strands of cytoplasm connecting two cells.

Plasmodiidae [INV ZOO] A family of parasitic protozoans in the suborder Haemosporina inhabiting the erythrocytes of the vertebrate host.

Plasmodiophorida [INV ZOO] An order of the protozoan subclass Mycetozoia occurring as endoparasites of plants.

Plasmodiophoromycetes [MYCOL] A class of the Fungi.

plasmoditrophoblast *See* syncytiotrophoblast.

plasmodium [MICROBIO] The noncellular, multinucleate, jellylike, ameboid, assimilative stage of the Myxomycetes.

Plasmodium [INV ZOO] A genus of protozoans in the family Plasmodiidae in which all the true malarial parasites are placed.

Plasmodroma [INV ZOO] A subphylum of the Protozoa, including Mastigophora, Sarcodina, and Sporozoa, in some taxonomic systems.

plasmogamy [INV ZOO] Fusion of protoplasts, without nuclear fusion, to form a multinucleate mass; occurs in certain protozoans.

plasmoid [PHYS] An isolated collection of electrons, ions, and neutral particles which holds together for a duration many times as long as the collision times between particles.

plasmolysis [PHYSIO] Shrinking of the cytoplasm away from the cell wall due to exosmosis by immersion of a plant cell in a solution of higher osmotic activity.

plasmon [SOLID STATE] A quantum of a collective longitudinal wave in the electron gas of a solid.

plasmosome *See* nucleolus.

plasmotomy [INV ZOO] Subdivision of a plasmodium into two or more parts.

plaster [MATER] A plastic mixture of various materials, such as lime or gypsum, and water which sets to a hard, coherent solid.

plaster bat [GRAPHICS] Basic working surface on which clay is turned or modeled.

plasterboard [MATER] A large, thin sheet of pulpboard, paper, or felt bonded to a hardened gypsum plaster core and used as a wall backing or as a substitute for plaster.

plaster coat [BUILD] A thin layer of plaster lining walls in buildings.

plaster conglomerate [GEOL] A conglomerate composed entirely of boulders derived from a partially exhumed monadnock forming a wedgelike mass of its flank.

plaster ground [BUILD] A piece of wood used as a gage to control the thickness of a plaster coat placed on a wall; usually put around windows and doors and at the floor.

plaster of paris [INORG CHEM] White powder consisting essentially of the hemihydrate of calcium sulfate ($CaSO_4 \cdot \frac{1}{2}H_2O$ or $2CaSO_4 \cdot H_2O$), produced by calcining gypsum until it is partially dehydrated; forms with water a paste that quickly sets; used for casts and molds, building materials, and surgical bandages. Also known as calcined gypsum.

plaster shooting [ENG] A surface blasting method used when no rock drill is necessary or one is not available; consists of placing a charge of gelignite, primed with safety fuse and detonator, in close contact with the rock or boulder and covering it completely with stiff damp clay.

plastic [MATER] A polymeric material (usually organic) of large molecular weight which can be shaped by flow; usually refers to the final product with fillers, plasticizers, pigments, and stabilizers included (versus the resin, the homogeneous polymeric starting material); examples are polyvinyl chloride, polyethylene, and urea-formaldehyde. [MECH] Displaying, or associated with, plasticity.

plasticate [ENG] To soften a material by heating or kneading. Also known as plastify.

plastic bonding [ENG] The joining of plastics by heat, solvents, adhesives, pressure, or radio frequency.

plastic bronze [MET] A copper alloy containing lead, usually on the order of 30%, of sufficient plasticity to make a good bearing.

plastic cement [MATER] A plastic material used to seal narrow openings in buildings.

plastic clay [MATER] Fireclay which forms a moldable mass when mixed with water.

plastic deformation [MECH] Permanent change in shape or size of a solid body without fracture resulting from the application of sustained stress beyond the elastic limit.

plastic design *See* ultimate-load design.

plastic dielectric [MATER] A plastic used in an application in which its high resistance, dielectric strength, or other electrical properties are important, such as for electrical insulation or in a capacitor.

plastic equilibrium [GEOL] State of stress within a soil mass or a portion thereof that has been deformed to such an extent that its ultimate shearing resistance is mobilized.

plastic explosive *See* high-explosive plastic.

plastic film [MATER] Film with thickness from 0.0015 to 0.006 inch (3.8×10^{-3} to 15×10^{-3} centimeter); made from polyvinyl chloride, polyethylene, polypropylene, polystyrene, Mylar, and other resins; used for wrapping, sealing, garment waterproofing, and coating wood, paper, or fabric.

plastic film capacitor [ELEC] A capacitor constructed by stacking, or forming into a roll, alternate layers of foil and a

dielectric which consists of a plastic, such as polystyrene or Mylar, either alone or as a laminate with paper.

plastic flow [PHYS] Rheological phenomenon in which flowing behavior of the material occurs after the applied stress reaches a critical (yield) value, such as with putty.

plastic foam *See* expanded plastic.

plasticity [MECH] The property of a solid body whereby it undergoes a permanent change in shape or size when subjected to a stress exceeding a particular value, called the yield value.

plasticity index [GEOL] The percent difference between moisture content of soil at the liquid and plastic limits.

plasticize [ENG] To soften a material to make it plastic or moldable by adding a plasticizer or by using heat.

plasticizer *See* flexibilizer.

plasticizing oil [MATER] Coal tar distillate or solvent naphthas distilling in a wide range above 300°C; used with plastics as a plasticizer.

plasticlast [GEOL] An intraclast consisting of calcareous mud that has been torn up while still soft.

plastic limit [GEOL] The water content of a sediment, such as a soil, at the point of transition between the plastic and semisolid states.

plasticorder [ENG] Laboratory device used to predict the performance of a plastic material by measurement of temperature, viscosity, and shear-rate relationships. Also known as plastigraph.

plasticoviscosity [MECH] Plasticity in which the rate of deformation of a body subjected to stresses greater than the yield stress is a linear function of the stress.

plastic paint [MATER] Paint composed of a plastic (such as vinyl or nitrocellulose) in a solvent.

plastic plate [ELECTR] A plate of plastic dielectric material used as a base for a semiconductor device. [GRAPHICS] A direct printing plate formed on a plastic base.

plastic relief map [MAP] A topographic map printed on plastic and then molded by heat and pressure into a three-dimensional form to emphasize the relief.

plastic semiconductor [MATER] An organic plastic resin with a conjugated double-bond structure, such as polyacetylene; the material is a semiconductor due to resistance of electrons to transfer from one molecule to another.

plastic shading *See* hill shading.

plastic surgery [MED] Surgical repair, replacement, or alteration of lost, injured, or deformed parts of the body by transfer of tissue.

plastic viscosity [FL MECH] A measure of the internal resistance to fluid flow of a Bingham plastic, expressed as the tangential shear stress in excess of the yield stress divided by the resulting rate of shear.

plastic wood [MATER] Wood flour or wood cellulose compounded with a synthetic resin of high molecular weight; it is adhesive but does not penetrate wood, and is used to fill cavities or seams in wood products.

plastic zone [GEOL] A region located adjacent to the rupture zone of an explosion crater and at an increased distance from the shot site, differing from the rupture zone by having less fracturing and only small permanent deformations.

plastid [CYTOL] One of the specialized cell organelles containing pigments or protein materials, often serving as centers of special metabolic activities; examples are chloroplasts and leukoplasts.

plastify *See* plasticate.

plastigel [MATER] A plastisol with gellike flow properties achieved by adding a thixotropic agent (such as bentonite) to the plastisol.

plastigraph *See* plasticorder.

plastisol [MATER] A vinyl resin dissolved in a plasticizer to make a pourable liquid.

plastogene [CYTOL] A cytoplasmic factor, controlled by or interacting with the nucleus, which determines differentiation of a plastid.

plastometer [ENG] Instrument used to determine the flow properties of a thermoplastic resin by forcing molten resin through a specified die opening or orifice at a given pressure and temperature.

plastron [INV ZOO] The ventral plate of the cephalothorax of spiders. [VERT ZOO] The ventral portion of the shell of tortoises and turtles.

plat [MAP] A plan that shows land ownership, boundaries, and subdivisions together with data for description and identification of various parts.

Platanaceae [BOT] A small family of monoecious dicotyledonous plants in which flowers have several carpels which are separate, three or four stamens, and more or less orthotropous ovules, and leaves are stipulate.

Plataspidae [INV ZOO] A family of shining, oval hemipteran insects in the superfamily Pentatomoidea.

plate [BUILD] **1.** A shoe or base member, such as of a partition or other kind of frame. **2.** The top horizontal member of a row of studs used in a frame wall. [DES ENG] A rolled, flat piece of metal of some arbitrary minimum thickness and width depending on the type of metal. [ELEC] **1.** One of the conducting surfaces in a capacitor. **2.** One of the electrodes in a storage battery. [ELECTR] *See* anode. [GEOL] **1.** A smooth, thin, flat fragment of rock, such as a flagstone. **2.** A large rigid, but mobile, block involved in plate tectonics; thickness ranges from 50 to 250 kilometers and includes both crust and a portion of the upper mantle. [GRAPHICS] **1.** In etching, the piece of copper, zinc, or other metal that constitutes the base from which prints are made. **2.** In photography, a sheet of glass coated with a sensitized emulsion. **3.** In printing, the reproduction of type or cuts in metal or other material; a plate may bear a relief, intaglio, or planographic printing surface. [MET] A thick flat particle of metal powder.

plate amalgamation [MET] Use of copper-alloy plates or copper coated with mercury in order to trap gold from crushed ore pulp as it flows over the plates.

plate anemometer *See* pressure-plate anemometer.

plateau [ELECTR] The portion of the plateau characteristic of a counter tube in which the counting rate is substantially independent of the applied voltage. [GEOGR] An extensive, flat-surfaced upland region, usually more than 150–300 meters in elevation and considerably elevated above the adjacent country and limited by an abrupt descent on at least one side. [GEOL] A broad, comparatively flat and poorly defined elevation of the sea floor, commonly over 200 meters in elevation.

plateau basalt [GEOL] One or a succession of high-temperature basaltic lava flows from fissure eruptions which accumulate to form a plateau. Also known as flood basalt.

plateau characteristic [ELECTR] The relation between counting rate and voltage for a counter tube when radiation is constant, showing a plateau after the rise from the starting voltage to the Geiger threshold. Also known as counting rate–voltage characteristic.

plateau glacier [HYD] A highland glacier that overlies a generally flat mountain tract; usually overflows its edges in hanging glaciers.

plateau gravel [GEOL] A sheet, spread, or patch of surficial gravel, often compacted, occupying a flat area on a hilltop, plateau, or other high region at a height above that normally occupied by a stream terrace gravel.

plateau level [PETRO ENG] The peak production level reached by an oil field.

plateau mountain [GEOL] A pseudomountain produced by the dissection of a plateau.

plateau plain [GEOL] An extensive plain surmounted by a sublevel summit area and bordered by escarpments.

plateau problem [MATH] The problem of finding a minimal surface having as boundary a given curve.

plateau ring structure [ASTRON] A lunar crater whose floor is significantly higher than the surrounding surface.

plate bearing test [ENG] Former method to estimate the bearing capacity of a soil; a rigid steel plate about 1 foot (30 centimeters) square was placed on the foundation level and then loaded until the foundation failed, as evidenced by rapid sinking of the plate.

plate-belt feeder *See* apron feeder.

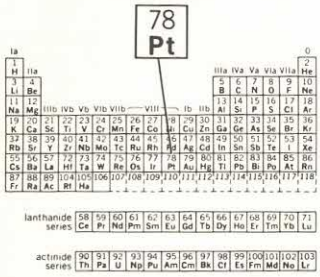
plate budding [BOT] Plant budding by inserting a rectangular scion with a bud under a flap of bark on the stock in such a manner that the exposed wood on the stock is covered.

plate burning [GRAPHICS] After a negative has been prepared for an engraving, it is placed on the plate in a vacuum frame; the rays from the light source "burn" the plate, passing through the transparent areas of the negative and hardening the plate surface coating; this coating is later developed and the unexposed areas washed away; plates are also burned for offset printing.

plate cam [MECH ENG] A flat, open cam that imparts a sliding motion.

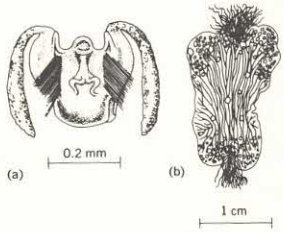
plate center [ASTRON] The point used as the origin of coordinates for measuring positions of stars on a photographic plate in photographic astrometry, ideally located on the optical axis of the telescope.
plate circuit *See* anode circuit.
plate-circuit detector *See* anode-circuit detector.
plate coil [MECH ENG] Heat-transfer device made from two metal sheets held together, one or both plates embossed to form passages between them for a heating or cooling medium to flow through. Also known as panel coil.
plate constants [ASTRON] Coefficients that appear in linear equations used to derive the standard coordinates of the position of a star on a photographic plate from the measured coordinates of the star's image on the plate.
plate conveyor [MECH ENG] A conveyor with a series of steel plates as the carrying medium; each plate is a short trough, all slightly overlapped to form an articulated band, and attached to one center chain or to two side chains; the chains join rollers running on an angle-iron framework and transmit the drive from the driveheads, installed at intermediate points and sometimes also at the head or tail ends.
plate crystal [HYD] An ice crystal exhibiting typical hexagonal (rarely triangular) symmetry and having comparatively little thickness parallel to its principal axis (*c*-axis); as such crystals fall through the clouds in which they form, they may encounter conditions causing them to develop dendritic extensions, that is, to become plane-dendritic crystals.
plate current *See* anode current.
plate cut [BUILD] The cut made in a rafter to rest on the plate.
plated circuit [ELECTR] A printed circuit produced by electrodeposition of a conductive pattern on an insulating base. Also known as plated printed circuit.
plate detector *See* anode detector.
plate dissipation *See* anode dissipation.
plated printed circuit *See* plated circuit.
plated wire memory [COMPUT SCI] A nonvolatile magnetic memory utilizing small zones of thin films plated on wires; such memories are characterized by very fast access and nondestructive readout.
plate efficiency [CHEM ENG] The equilibrium produced by an actual plate of a distillation column or countercurrent tower extractor compared with that of a perfect plate, expressed as a ratio. [ELECTR] *See* anode efficiency.
plate feeder *See* apron feeder.
plate-fin exchanger [MECH ENG] Heat-transfer device made up of a stack or layers, with each layer consisting of a corrugated fin between flat metal sheets sealed off on two sides by channels or bars to form passages for the flow of fluids.
plate finish [GRAPHICS] A smooth, hard finish given to paper by a calendering machine.
plate girder [CIV ENG] A riveted or welded steel girder having a deep vertical web plate with a pair of angles along each edge to act as compression and tension flanges.
plate girder bridge [CIV ENG] A fixed bridge consisting, in its simplest form, of two flange plates welded to a web plate in the overall shape of an I.
plate glass [MATER] Flat, high-quality glass with plane, parallel surfaces.
plate ice *See* pancake ice.
plate impedance *See* anode impedance.
plate input power *See* anode input power.
platelet [HISTOL] *See* thrombocyte. [HYD] A small ice crystal which, when united with other such crystals, forms a layer of floating ice, especially sea ice, and serves as seed crystals for further thickening of the ice cover.
plate-load impedance *See* anode impedance.
plate-making [GRAPHICS] The forming of printing plates; the plate may be an offset plate, gravure plate, or a photogelatin plate.
plate modulation *See* anode modulation.
platen [ENG] **1.** A flat plate against which something rests or is pressed. **2.** The rubber-covered roller of a typewriter against which paper is pressed when struck by the typebars. [MECH ENG] A flat surface for exchanging heat in a boiler or heat exchanger which may have extended heat transfer surfaces.
plate neutralization *See* anode neutralization.
platen press [GRAPHICS] A type of printing press with a flat surface bearing the inked type; another flat surface, bearing the paper, is pressed against the type; small hand presses are ordinarily of this sort.
plate proof [GRAPHICS] A proof obtained from a printing plate.
plate pulse modulation *See* anode pulse modulation.
plate resistance *See* anode resistance.
plate saturation *See* anode saturation.
plate scale [ASTRON] The ratio of the angular distance between two stars to the linear distance between their images on a photographic plate.
plate-shear test [ENG] A method used to get true shear data on a honeycomb core by bonding the core between two thick steel plates and subjecting the core to shear by displacing the plates relative to each other by loading in either tension or compression.
plate tectonics [GEOL] Global tectonics based on a model of the earth characterized by a small number (10–25) of semirigid plates which float on some viscous underlayer in the mantle; each plate moves more or less independently and grinds against the others, concentrating most deformation, volcanism, and seismic activity along the periphery. Also known as raft tectonics.
plate theory [ANALY CHEM] In gas chromatography, the theory that the column operates similarly to a distillation column; for example, chromatographic columns are considered as consisting of a number of theoretical plates, each performing a partial separation of components.
plate tower [CHEM ENG] A distillation tower along the internal height of which is a series of transverse plates (bubble-cap or sieve) to force intimate contact between downward flowing liquid and upward flowing vapor.
plate-type exchanger [MECH ENG] Heat-exchange device similar to a plate-and-frame filter press; fluids flow between the frame-held plates, transferring heat between them.
plate wave [ACOUS] A type of ultrasonic vibration generated in a thin solid, such as a sheet of metal having a thickness of less than one wavelength, and usually consisting of a variety of simultaneous modes having different velocities; it is used in metal inspection. Also known as Lamb wave.
platform [GEOL] **1.** Any level or almost level surface; a small plateau. **2.** A continental area covered by relatively flat or gently tilted, mainly sedimentary strata which overlay a basement of rocks consolidated during earlier deformations; platforms and shields together constitute cratons. [MIN ENG] A wooden floor on the side of a gangway at the bottom of an inclined seam, to which the coal runs by gravity, and from which it is shoveled into mine cars. [ORD] **1.** Temporary or permanent solid bed on which artillery pieces are supported to give greater stability. **2.** Metal stand at the base of some types of guns upon which the gun crew stands while serving the gun.
platform balance [ENG] A weighing device with a flat plate mounted above a balanced beam.
platform beach [GEOL] A looped bar or ridge of sand and gravel formed on a wave-cut platform.
platform blowing [ENG] Special technique for blow-molding large parts made of plastic without sagging of the part being formed.
platform conveyor [MECH ENG] A single- or double-strand conveyor with plates of steel or hardwood forming a continuous platform on which the loads are placed.
platform deck [NAV ARCH] A partial deck fitted in the hold of a ship.
platform erection [NAV] In the alignment of inertial navigation equipment, the alignment of the stable platform vertical axis with the local vertical.
platform facies *See* shelf facies.
platform framing [BUILD] A construction method in which each floor is framed independently by nailing the horizontal framing member to the top of the wall studs.
platform reef [GEOL] An organic reef, generally small but more extensive than a patch reef, with a flat upper surface.
platina [MET] A white brittle brass containing 75% zinc and 25% copper; used for jewelry.
plating [MET] Forming a thin, adherent layer of metal on an object. Also known as metal plating.
plating rack [MET] A fixture that holds, and conducts current to, a piece of work during electrodeposition.
platinic chloride *See* chloroplatinic acid.
platinic sodium chloride *See* sodium chloroplatinate.
platinic sulfate *See* platinum sulfate.

PLATINUM



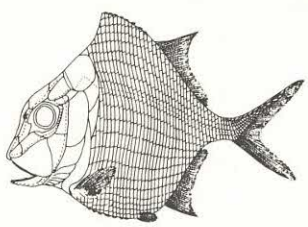
Periodic table of the chemical elements showing the position of platinum.

PLATYCTENEA



Coeloplana bocki. *(a)* Larva. *(b)* Adult.

PLATYSOMIDAE



Platysomus parvulus Agassiz, an Upper Carboniferous platysomid from Britain which attained a length of 5 inches (13 centimeters). *(Modified from R. H. Traquair, On the structure and affinities of the Platysomidae, Trans. Roy. Soc. Edinburgh, vol. 29, 1879)*

platiniridium [MINERAL] A silver-white cubic mineral composed of platinum, iridium, and related metals, occurring in grains.

platinite *See* platynite.

platinochloride *See* chloroplatinate.

platinocyanide [INORG CHEM] A double salt of platinous cyanide and another cyanide, such as $K_2Pt(CN)_4$; used in photography and fluorescent x-ray screens. Also known as cyanoplatinate.

platinoid [MET] **1.** Resembling or related to platinum. **2.** A copper-nickel-zinc alloy used for electrical resistance wire.

platinotron [ELECTR] A microwave tube that may be used as a high-power saturated amplifier or oscillator in pulsed radar applications; requires permanent magnet just as does a magnetron.

platinous chloride *See* platinum dichloride.

platinous iodide *See* platinum iodide.

platinum [CHEM] A chemical element, symbol Pt, atomic number 78, atomic weight 195.09. [MET] A soft, ductile, malleable, grayish white noble metal with relatively high electric resistance; used in alloys, in electrical and electronic devices, and in jewelry.

platinum bichloride *See* platinum dichloride.

platinum black [MET] Black-colored, finely divided metallic platinum; soluble in aqua regia; used as a catalyst, as an absorbent for gases (hydrogen, oxygen), and for gas ignition. Also known as platinum Mohr.

platinum chloride [INORG CHEM] $PtCl_4$ or $PtCl_4 \cdot 5H_2O$ A brown solid or red crystals; soluble in alcohol and water; decomposes when heated (loses $4H_2O$ at 100°C); used as an analytical reagent.

platinum dichloride [INORG CHEM] $PtCl_2$ Water-insoluble, green-gray powder; decomposes to platinum at red heat; used to make platinum salts. Also known as platinous chloride; platinum bichloride.

platinum diiodide *See* platinum iodide.

platinum electrode [PHYS CHEM] A solid platinum wire electrode used during voltammetric analyses of electrolytes.

platinum iodide [INORG CHEM] PtI_2 Water- and alkali-insoluble black powder; slightly soluble in hydrochloric acid; decomposes at 300–350°C. Also known as platinous iodide; platinum diiodide.

platinum-iridium alloy [MET] An alloy with 1–30% iridium; as concentration of iridium increases, so do hardness, chemical resistance, and melting point; used in jewelry, electrical contacts, and hypodermic needles.

platinum Mohr *See* platinum black.

platinum oxide [INORG CHEM] An oxide of platinum; examples are platinum monoxide (or platinous oxide), PtO, and platinum dioxide (or platinic oxide), PtO_2.

platinum potassium chloride *See* potassium chloroplatinate.

platinum resistance thermometer [ENG] The basis of the International Practical Temperature Scale of 1968 from 259.35° to 630.74°C; used in industrial thermometers in the range 0 to 650°C; capable of high accuracy because platinum is noncorrosive, ductile, and nonvolatile, and can be obtained in a very pure state. Also known as Callendar's thermometer.

platinum-rhodium alloy [MET] An alloy with up to 40% rhodium; as concentration of rhodium increases, so do chemical resistance and hardness (although less hard than for platinum-iridium alloys); used as a catalyst to make nitric acid, in thermocouples, and in rayon spinnerets.

platinum sodium chloride *See* sodium chloroplatinate.

platinum sponge [MET] Porous, grayish-black mass of finely divided platinum; soluble in aqua regia; used as a catalyst, and for ignition of combustible gases.

platinum sulfate [INORG CHEM] $Pt(SO_4)_2$ A hygroscopic, dark mass; soluble in alcohol, ether, water, and dilute acids; used in microanalysis for halogens. Also known as platinic sulfate.

platonic year *See* great year.

platte [GEOL] A resistant knob of rock in a glacial valley or rising in the midst of an existing glacier, often causing a glacier to split near its snout.

plattnerite [MINERAL] PbO_2 An iron-black mineral consisting of lead dioxide, occurring in masses with submetallic luster.

Plattner's process [MET] A process for extracting gold in which a charge of gold-bearing pulp is placed in a revolving iron drum lined with lead, and a stream of chlorine gas is conducted through the pulp, producing chloride of gold, which is soluble in water.

platy [GEOL] **1.** Referring to a sedimentary particle whose length is more than three times its thickness. **2.** Referring to a sandstone or limestone that splits into laminae having thicknesses in the range of 2 to 10 millimeters.

Platyasterida [INV ZOO] An order of Asteroidea in which traces of metapinnules persist, the ossicles of the arm skeleton being arranged in two growth gradient systems.

Platybelondoninae [PALEON] A subfamily of extinct elephantoid mammals in the family Gomphotheriidae consisting of species with digging specializations of the lower tusks.

platycelous [VERT ZOO] Of a vertebra, having a flat or concave ventral surface and a convex dorsal surface.

Platycephalidae [VERT ZOO] The flatheads, a family of perciform fishes in the suborder Cottoidei.

Platyceratacea [PALEON] A specialized superfamily of extinct gastropod mollusks which adapted to a coprophagous life on crinoid calices.

platycnemic index [ANTHRO] The ratio, multiplied by 100, of the anteroposterior diameter to the lateral diameter of the shinbone.

Platycopa [INV ZOO] A suborder of ostracod crustaceans in the order Podocopida including marine forms with two pairs of thoracic legs.

Platycopina [INV ZOO] The equivalent name for Platycopa.

Platyctenea [INV ZOO] An order of the ctenophores whose members are sedentary or parasitic; adults often lack ribs and are flattened due to shortening of the main axis.

platy flow structure [PETR] Structure of an igneous rock characterized by tabular sheets which suggest stratification, and formation by contraction during cooling. Also known as linear flow structure; planar flow structure.

Platygasteridae [INV ZOO] A family of hymenopteran insects in the superfamily Proctotrupoidea.

Platyhelminthes [INV ZOO] A phylum of invertebrates composed of bilaterally symmetrical, nonsegmented, dorsoventrally flattened worms characterized by lack of coelom, anus, circulatory and respiratory systems, and skeleton.

platymeric [ANTHRO] Of a thighbone, being flattened laterally, with a platymeric index of 75 to 85.

platymeric index [ANTHRO] The index, multiplied by 100, of the anteroposterior diameter to the lateral diameter of the femur.

platymyarian [INV ZOO] In nematodes, pertaining to flat muscle cells with the fibrillar region limited to a basal zone.

platynite [MINERAL] $PbBi_2(Se,S)_3$ An iron-black mineral composed of selenide and sulfide of lead and bismuth; occurs in thin metallic plates resembling graphite. Also spelled platinite.

platypellic [ANTHRO] Referring to or descriptive of a broad pelvis having a pelvic index of less than 90.

Platypodidae [INV ZOO] The ambrosia beetles, a family of coleopteran insects in the superfamily Curculionoidea.

Platypsyllidae [INV ZOO] The equivalent name for Leptinidae.

platypus [VERT ZOO] *Ornithorhynchus anatinus.* A monotreme, making up the family Ornithorhynchidae, which lays and incubates eggs in a manner similar to birds, and retains some reptilian characters; the female lacks a marsupium. Also known as duckbill platypus.

platysma [ANAT] A subcutaneous muscle of the neck, extending from the face to the clavicle; muscle of facial expression.

Platysomidae [PALEON] A family of extinct palaeonisciform fishes in the suborder Platysomoidei; typically, the body is laterally compressed and rhombic-shaped, with long dorsal and anal fins.

Platysomoidei [PALEON] A suborder of extinct deep-bodied marine and fresh-water fishes in the order Palaeonisciformes.

platyspondylia [MED] A rare congenital skeletal defect marked by abnormally shaped vertebrae.

Platysternidae [VERT ZOO] The big-headed turtles, a family of Asiatic fresh-water Chelonia with a single species (*Platysternon megacephalum*), characterized by a large head, hooked mandibles, and a long tail.

playa [GEOL] **1.** A low, essentially flat part of a basin or other undrained area in an arid region. **2.** A small, generally sandy land area at the mouth of a stream or along the shore of a bay. **3.** A flat, alluvial coastland, as distinguished from a beach.

playa lake [HYD] A shallow temporary sheet of water covering a playa in the wet season.
playback [ENG ACOUS] Reproduction of a sound recording.
playback head [ELECTR] A head that converts a changing magnetic field on a moving magnetic tape into corresponding electric signals. Also known as reproduce head.
Playfair's law [GEOL] The law that each stream cuts its own valley, the valley being proportional in size to its stream, and the stream junctions in the valley are accordant in level.
play of color [OPTICS] An optical phenomenon consisting of a rapid succession of flashes of a variety of prismatic colors as certain minerals or cabochon-cut gems are moved about; caused by diffraction of light from spherical particles of amorphous silica stacked in an orderly three-dimensional pattern. Also known as schiller.
play therapy [PSYCH] A form of treatment, used particularly with children, in which a child's play, as with dolls in the presence of a therapist, is used as a medium for expression and communication.
pleasure principle [PSYCH] The instinctive attempt to avoid pain, discomfort, or unpleasant situations; the desire to obtain maximum gratification with minimum effort.
pleated cartridge [DES ENG] A filter cartridge made into a convoluted form that resembles the folds of an accordian.
Plecoptera [INV ZOO] The stoneflies, an order of primitive insects in which adults differ only slightly from immature stages, except for wings and tracheal gills.
plectane [INV ZOO] A cuticular plate supporting papillae in some nematodes.
Plectascales [MYCOL] An equivalent name for Eurotiales.
Plectognathi [VERT ZOO] The equivalent name for Tetraodontiformes.
Plectoidea [INV ZOO] A superfamily of small, free-living nematodes characterized by simple spiral amphids or variants thereof, elongate cylindroconoid stoma, and reflexed ovaries.
plectostele [BOT] A protostele that has the xylem divided into plates.
Pleiades [ASTRON] An open cluster of a few hundred stars in the constellation Taurus; six of the stars are easily visible to the naked eye.
Pleidae [INV ZOO] A family of hemipteran insects in the superfamily Pleoidea.
pleiotropy [GEN] The quality of a gene having more than one phenotypic effect.
Pleistocene [GEOL] An epoch of geologic time of the Quaternary period, following the Tertiary and before the Holocene. Also known as Ice Age; Oiluvium.
plenum [ENG] A condition in which air pressure within an enclosed space is greater than that in the outside atmosphere.
plenum chamber [ENG] An enclosed space in which a plenum condition exists; air is forced into it for slow distribution through ducts.
plenum system [MECH ENG] A heating or air conditioning system in which air is forced through a plenum chamber for distribution to ducts.
pleochroic halos [OPTICS] Halos of color or color differences that are sometimes observed around inclusions in minerals, resulting from irradiation by alpha particles.
pleochroism [OPTICS] Phenomenon exhibited by certain transparent crystals in which light viewed through the crystal has different colors when it passes through the crystal in different directions. Also known as polychroism.
pleocytosis [MED] Increase of cells in the cerebrospinal fluid.
pleodont [VERT ZOO] Having solid teeth.
Pleoidea [INV ZOO] A superfamily of suboval hemipteran insects belonging to the subdivision Hydrocoriseae.
pleomorphism [BIOL] The occurrence of more than one distinct form of an organism in a single life cycle. [CRYSTAL] *See* polymorphism.
pleonaste *See* ceylonite.
pleopod [INV ZOO] An abdominal appendage in certain crustaceans that is modified for swimming.
Pleosporales [BOT] The equivalent name for the lichenized Pseudophaeriales.
plerocercoid [INV ZOO] The infective metacestode of certain cyclophyllidean tapeworms; distinguished by a solid body.
plerome [BOT] Central core of primary meristem which gives rise to all cells of the stele from the pericycle inward.
plerotic water [HYD] That part of subsurface water that forms the zone of saturation, including underground streams.
plesioaster [INV ZOO] A type of poriferan microscleric monaxonic spicule.
Plesiocidaroida [PALEON] An extinct order of echinoderms assigned to the Euechinoidea.
Plesiomonas [MICROBIO] A genus of bacteria in the family Vibrionaceae; straight, motile rods with rounded ends, occurring singly, in pairs, or in short chains with polar flagella.
plesiomorph [EVOL] The original character of a branching phyletic lineage, found in the ancestral forms.
Plesiosauria [PALEON] A group of extinct reptiles in the order Sauropterygia constituting a highly specialized offshoot of the nothosaurs.
plesiotype [SYST] A specimen or specimens on which subsequent descriptions are based.
Plessy's green [INORG CHEM] $CrPO_4 \cdot xH_2O$ Deep-green pigment made of chromium phosphate mixed with chromium oxide and calcium phosphate.
Plethodontidae [VERT ZOO] A large family of salamanders in the suborder Salamandroidea characterized by the absence of lungs and the presence of a fine groove from nostril to upper lip.
plethysmograph [MED] An instrument for measuring changes in the size of a part of the body by measuring changes in the amount of blood in that part.
pleura [ANAT] The serous membrane covering the lung and lining the thoracic cavity.
Pleuracanthodii [PALEON] An order of Paleozoic sharklike fishes distinguished by two-pronged teeth, a long spine projecting from the posterior braincase, and direct backward extension of the tail.
pleural cavity [ANAT] The potential space included between the parietal and visceral layers of the pleura.
pleural rib *See* ventral rib.
pleurapophysis [ANAT] One of the lateral processes of a vertebra, corresponding morphologically to a rib.
pleurisy [MED] Inflammation of the pleura. Also known as pleuritis.
pleuritis *See* pleurisy.
pleurobranchia [INV ZOO] A gill that arises from the lateral wall of the thorax in certain arthropods.
pleurocarpous [BOT] Having the sporophyte in leaf axils along the side of the stem or on lateral branches; refers specifically to mosses.
Pleuroceridae [INV ZOO] A family of fresh-water snails in the order Pectinibranchia.
Pleurocoelea [INV ZOO] An extinct superfamily of gastropod mollusks of the order Opisthobranchia in which the shell, mantle cavity, and gills were present.
Pleurodira [VERT ZOO] A suborder of turtles (Chelonia) distinguished by spines on the posterior cervical vertebrae so that the head is retractile laterally.
pleurodontia [VERT ZOO] Attachment of the teeth to the inner surface of the jawbone.
pleurodynia [MED] Severe paroxysmal pain and tenderness of the intercostal muscles.
pleurolophocercous cercaria [INV ZOO] A larval digenetic trematode distinguished by a long, powerful tail with a pair of fin folds, a protrusible oral sucker, and pigmented dorsal eyespots.
Pleuromeiaceae [PALEOBOT] A family of plants in the order Pleuromeiales, but often included in the Isoetales due to a phylogenetic link.
Pleuromeiales [PALEOBOT] An order of Early Triassic lycopods consisting of the genus *Pleuromeia*; the upright branched stem had grasslike leaves and a single terminal strobilus.
pleuron [INV ZOO] The lateral portion of a single thoracic segment in arthropods.
Pleuronectiformes [VERT ZOO] The flatfishes, an order of actinopterygian fishes distinguished by the loss of bilateral symmetry.
Pleuronematina [INV ZOO] A suborder of the Hymenostomatida.
pleuroperitoneal cavity [VERT ZOO] The body cavity containing both the lungs and the abdominal viscera in all pulmonate vertebrates except mammals.
pleuropneumonia [MED] Combined pleurisy and pneumonia. [VET MED] An infectious disease of cattle produc-

PLEISTOCENE

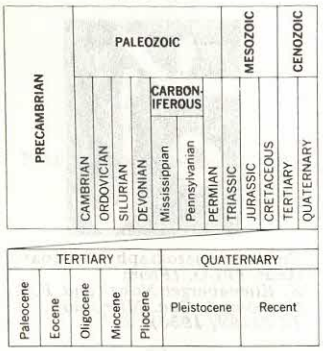


Chart showing the relationship of the Pleistocene epoch to the periods and eras of geologic time.

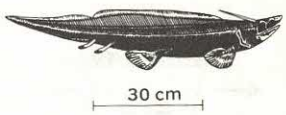
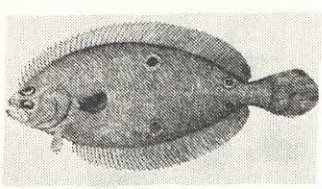
PLEURACANTHODII



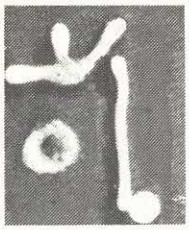
Xenacanthus (Pleuracanthus), Carboniferous and Permian sharklike form; note the spine projecting from the posterior braincase. *(After Fritsch)*

PLEURONECTIFORMES



Fourspot flounder *(Paralichthys oblongus)*, of the Pleuronectiformes. *(After G. B. Goode, Fishery Industries of the United States, sect. 1, 1884)*

PLEUROPNEUMONIALIKE ORGANISM



Electron micrograph of a goat strain PPLO. *(From E. Klieneberger-Nobel and F. W. Cuckow, J. Gen. Microbiol., 12:95–99, 1955)*

PLIOCENE

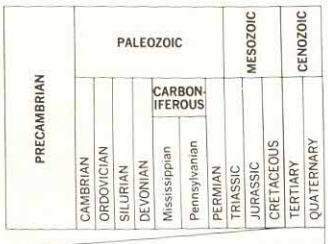


Chart showing the relationship of the Pliocene to the eras and periods of geologic time.

ing pleural and lung inflammation, caused by *Mycoplasma* species.

pleuropneumonialike organism [MICROBIO] Any of a poorly defined group of microorganisms classified in the order Mycoplasmatales, including the smallest organisms capable of independent life, and comparable in size to the large filterable viruses. Abbreviated PPLO.

Pleurostigmophora [INV ZOO] A subclass of the centipedes, in some taxonomic systems, distinguished by lateral spiracles.

Pleurotomariacea [PALEON] An extinct superfamily of gastropod mollusks in the order Aspidobranchia.

plexus [ANAT] A network of interlacing nerves or anastomosing vessels. [GEOL] An area on a subglacial deposit that encloses a giant's kettle.

pli [MECH] A unit of line density (mass per unit length) equal to 1 pound per inch, or approximately 17.8580 kilograms per meter.

plica [BIOL] A fold, as of skin or a leaf.

plication [GEOL] Intense, small-scale folding.

plied yarn [TEXT] A yarn composed of two or more strands.

Pliensbachian [GEOL] A European stage of geologic time: Lower Jurassic (above Sinemurian, below Toarcian).

pliers [DES ENG] A small instrument with two handles and two grasping jaws, usually long and roughened, working on a pivot; used for holding small objects and cutting, bending, and shaping wire.

Plimsoll mark [NAV ARCH] **1.** A circular disk with a horizontal line placed on the side of a ship to indicate the summer load line. **2.** A series of marks on the side of a ship indicating the load line for various seasons and geographical areas.

Plinian eruption *See* Vulcanian eruption.

plinth [ARCH] **1.** The block forming the lowest member or base of a column or pedestal. **2.** A slight widening at the base of a column or wall. [GEOL] The lower and outer part of a seif dune, beyond the slip-face boundaries, that has never been subjected to sand avalanches.

plinth block *See* skirting block.

plinthite [GEOL] In a soil, a material consisting of a mixture of clay and quartz with other diluents, that is rich in sesquioxides, poor in humus, and highly weathered.

Pliocene [GEOL] A worldwide epoch of geologic time of the Tertiary period, extending from the end of the Miocene to the beginning of the Pleistocene.

Pliohyracinae [PALEON] An extinct subfamily of ungulate mammals in the family Procaviidae.

pliothermic [GEOL] Pertaining to a period in geologic history characterized by more than average climatic warmth.

pliotron [ELECTR] General term for any hot-cathode vacuum tube having one or more grids.

plissé [TEXT] Thin cotton fabric, soft or crisp, with puckered stripes or patterns forming an allover blister effect; produced either by weaving with yarns having different degrees of shrinkage in finishing or by chemical treatment.

PLL *See* phase-locked loop.

ploidy [GEN] Number of complete chromosome sets in a nucleus.

Plokiophilidae [INV ZOO] A small family of predacious hemipteran insects in the superfamily Cimicoidea; individuals live in the webs of spiders and embiids.

plot [CIV ENG] A measured piece of land.

Plotosidae [VERT ZOO] A family of Indo-Pacific salt-water catfishes (Siluriformes).

plotter [ENG] A visual display or board on which a dependent variable is graphed by an automatically controlled pen or pencil as a function of one or more variables.

plotting board [ENG] The surface portion of a plotter, on which graphs are recorded. Also known as plotting table.

plotting chart [NAV] A chart designed primarily for plotting lines of position obtained from dead reckoning, celestial observations, or radio aids, and other sources of navigational data.

plotting head *See* reflection plotter.

plotting interval [NAV] The elapsed time between the first and last readings of radar range and bearing of an object being tracked.

plotting paper [GRAPHICS] Drawing paper laminated to both sides of an aluminum sheet or foil to ensure better dimensional stability; it is often used in drawing the color separations used in mapmaking.

plotting sheet [NAV] A blank chart, usually on the Mercator projection, showing only the graticule and a compass rose, so that the plotting sheet can be used for any longitude. [ORD] An item having lines forming rectangular grids printed on one side; the grid lines are approximately parallel with and extending to the edges of the sheet, and are approximately centered thereon; used in graphical determination of artillery ranges and deflection angles to targets from plotted gun position.

plotting table *See* plotting board.

plough [ENG] A groove cut lengthwise with the grain in a piece of wood. [MIN ENG] **1.** A continuous mining machine in which cutting blades, moved over the face being worked, bite into the coal as they are pulled along and discharge it on an accompanying conveyor. **2.** A V-shaped scraper that presses against the return belt of a conveyor, removing coal and debris from it.

Plough [ASTRON] The British name for that part of the constellation Ursa Major forming the Big Dipper.

plough deflector [MIN ENG] A steel plate at the end of a cutter-loader to deflect cut coal onto the face conveyor.

ploughed-and-tongued joint *See* feather joint.

plough wind *See* plow wind.

plow [AGR] An implement consisting of a share, moldboard, and landside attached to a frame; used to cut, lift, turn, and pulverize soil in preparation of a seedbed.

plowshare [DES ENG] The pointed part of a plow moldboard, which penetrates and cuts the soil first. [HYD] A wedge-shaped feature developed on a snow surface by further ablation of foam crust.

Plowshare [NUCLEO] The U.S. Atomic Energy Commission program of research and development on peaceful uses of nuclear explosives; possible uses include large-scale excavation, such as for canals and harbors, crushing ore bodies, and producing heavy transuranic isotopes.

plow sole [GEOL] A pressure pan representing a layer of soil compacted by repeated plowing to the same depth.

plow steel [MET] High-quality, high-strength steel with 0.5 to 0.95% carbon content, used for wire rope.

plow wind [METEOROL] A term used in the midwestern United States to describe strong, straight-line winds associated with squall lines and thunderstorms; resulting damage is usually confined to narrow zones like that caused by tornadoes; however, the winds are all in one direction. Also spelled plough wind.

plucking [GEOL] A process of glacial erosion which involves the penetration of ice or rock wedges into subglacial niches, crevices, and joints in the bedrock; as the glacier moves, it plucks off pieces of jointed rock and incorporates them. Also known as glacial plucking; quarrying.

plug [ELEC] The half of a connector that is normally movable and is generally attached to a cable or removable subassembly; inserted in a jack, outlet, receptacle, or socket. [GEOL] **1.** A vertical pipelike magmatic body representing the conduit to a former volcanic vent. **2.** A crater filling of lava, the surrounding material of which has been removed by erosion. **3.** A mass of clay, sand, or other sediment filling the part of a stream channel abandoned by the formation of a cutoff. [MET] **1.** A rod or mandrel over which a pierced tube is forced, or that fills a tube as it is drawn through a die. **2.** A punch or mandrel over which a cup is drawn. **3.** A protruding portion of a die impression for forming a corresponding recess in the forging. **4.** A false bottom in a die. Also known as peg. [MIN ENG] A watertight seal in a shaft formed by removing the lining and inserting a concrete dam, or by placing a plug of clay over ordinary debris used to fill the shaft up to the location of the plug. [SCI TECH] **1.** A piece of material used to fill a hole. **2.** A small segment of material removed from a larger object.

plug adapter lamp holder [ELEC] A device that can be inserted in a lamp holder to act as a lamp holder and one or more receptacles. Also known as current tap.

plug-and-feather hole [ENG] A hole drilled in quarries for the purpose of splitting a block of stone by the plug-and-feather method.

plug-and-feather method [MIN ENG] A method of breaking large quarry stones into smaller blocks; a row of holes is drilled in the stone along a line where the break is desired; a pair of feathers (semicircular cross-section rods) is inserted in each hole; a plug (steel wedge) is inserted between each feather pair; the plugs are hammered in succession until the stone fractures.

plug back [PETRO ENG] To place cement or a mechanical plug in a well bottom for the purpose of excluding bottom water,

sidetracking, or producing from a formation already drilled through.

plug bit *See* noncoring bit.

plugboard *See* control panel.

plugboard chart *See* plugging chart.

plug cock *See* plug valve.

plug-compatible hardware [COMPUT SCI] A piece of equipment which can be immediately connected to a computer manufactured by another company.

plug die *See* floating plug.

plug dome [GEOL] A volcanic dome characterized by an upheaved, consolidated conduit filling.

plug drawing [MET] Drawing tubing over a plug or mandrel and through a die simultaneously to reduce diameter and thickness and to produce a smooth symmetrical bore surface.

plug flow *See* piston flow.

plug forming [ENG] Thermoforming process for plastics molding in which a plug or male mold is used to partially preform the part before forming is completed, using vacuum or pressure.

plug fuse [ELEC] A fuse designed for use in a standard screw-base lamp socket.

plug gage [DES ENG] A steel gage that is used to test the dimension of a hole; may be straight or tapered, plain or threaded, and of any cross-sectional shape.

plugging [ELEC] Braking an electric motor by reversing its connections, so it tends to turn in the opposite direction; the circuit is opened automatically when the motor stops, so the motor does not actually reverse. [ENG] The formation of a barrier (plug) of solid material in a process flow system, such as a pipe or reactor. [MIN ENG] *See* blinding. [PETRO ENG] The act or process of stopping the flow of water, oil, or gas in strata penetrated by a borehole or well so that fluid from one stratum will not escape into another or to the surface; especially the sealing up of a well that is dry and is to be abandoned.

plugging agent [PETRO ENG] A chemical used to plug or block off selected permeable zones of a reservoir formation; used during formation acidizing to direct the acid to the tighter (less permeable) zones; examples are viscous gels, suspensions of graded solids, and finely ground vegetable material.

plugging chart [COMPUT SCI] A printed chart of the sockets in a plugboard on which may be shown the jacks or wires connecting these sockets. Also known as plugboard chart.

plughole [MIN ENG] **1.** A passageway left open while an old portion of a mine is sealed off, to help maintain normal ventilation; it is sealed when the work is finished. **2.** A hole for an explosive charge or for a bolt.

plug-in unit [ELEC] A component or subassembly having plug-in terminals so all connections can be made simultaneously by pushing the unit into a suitable socket.

plug meter [ENG] A variable-area flowmeter in which a tapered plug, located in an orifice and raised until the resulting opening is sufficient to handle the fluid flow, is used to measure the flow rate.

plug program patching [COMPUT SCI] A relatively small auxiliary plugboard patched with a specific variation of a portion of a program and designed to be plugged into a relatively larger plugboard patched with the main program.

plug reef [GEOL] A small, triangular reef that grows with its apex pointing seaward through openings between linear shelf-edge reefs.

plug-to-plug compatibility [COMPUT SCI] Property of a peripheral device that can be made to operate with a computer merely by attachment of a plug or a relatively small number of cables.

plug valve [DES ENG] A valve fitted with a plug that has a hole through which fluid flows and that is rotatable through 90° for operation in the open or closed position. Also known as plug cock.

plug weld [MET] A circular fusion weld made in the hole of a slotted lap or tee joint.

plum [BOT] Any of various shrubs or small trees of the genus *Prunus* that bear smooth-skinned, globular to oval, drupaceous stone fruit. [GEOL] A clast embedded in a matrix of a different kind, especially a pebble in a conglomerate.

plumage [VERT ZOO] The entire covering of feathers of a bird.

Plumatellina [INV ZOO] The single order of the ectoproct bryozoan class Phylactolaemata.

plumb [ENG] Pertaining to an object or structure in true vertical position as determined by a plumb bob.

Plumbaginaceae [BOT] The leadworts, the single family of the order Plumbaginales.

Plumbaginales [BOT] An order of dicotyledonous plants in the subclass Caryophyllidae; flowers are pentamerous with fused petals, trinucleate pollen, and a compound ovary containing a single basal ovule.

plumbago *See* graphite.

plum blotch [PL PATH] A fungus disease of plums caused by *Phyllosticta congesta* and characterized by minute brown or gray angular leaf spots and brown or gray blotches on the fruit.

plumb bob [ENG] A weight suspended on a string to indicate the direction of the vertical.

plumb bond [CIV ENG] A masonry bond in which corresponding joints (for example, on alternate courses) are aligned.

plumbing [CIV ENG] The system of pipes and fixtures concerned with the introduction, distribution, and disposal of water in a building. [ELECTROMAG] Slang term for the pipelike waveguide circuit elements used in microwave radio and radar equipment.

plumbism [MED] Lead poisoning.

plumb line [ENG] The string on which a plumb bob hangs. [GEOPHYS] A continuous curve to which the direction of gravity is everywhere tangential.

plumboferrite [MINERAL] $PbFe_4O_7$ A dark hexagonal mineral composed of lead iron oxide.

plumbogummite [MINERAL] **1.** $PbAl_3(PO_4)_2(OH)_5 \cdot H_2O$ A mineral composed of hydrous basic lead aluminum phosphate. **2.** A group of isostructural minerals, that includes gorceixite, goyazite, crandallite, deltaite, florencite, and dussertite, as well as plumbogummite.

plumbojarosite [MINERAL] $PbFe_6(SO_4)_4(OH)_{12}$ A mineral composed of basic lead iron sulfate; it is isostructural with jarosite.

plumbous oxide *See* lead monoxide.

plumbous sulfide *See* lead sulfide.

plumbum [CHEM] Latin name for lead; source of the element symbol Pb.

plume *See* column.

plume structure [GEOL] On the surface of a master joint, a ridgelike tracing in a plumelike pattern, usually oriented parallel to the upper and lower surfaces of the constituent rock unit. Also known as plumose structure.

plumicome [BIOL] A spicule with plumelike tufts.

Plummer-Vinson syndrome [MED] Dysphagia koilonychia, gastric achlorhydria, glossitis, and hypochromic microcytic anemia caused by iron deficiency. Also known as Paterson-Kelly syndrome; sideropenic dysphagia.

plummet [ENG] A loose-fitting metal plug in a tapered rotameter tube which moves upward (or downward) with an increase (or decrease) in fluid flow rate upward through the tube. Also known as float.

plumose [VERT ZOO] Having feathers or plumes.

plumose structure *See* plume structure.

plum pocket [PL PATH] A mild fungus disease of plums, caused either by *Taphrina pruni* or *T. communia*, in which the stone of the fruit is aborted.

plumule [BOT] The primary bud of a plant embryo. [VERT ZOO] A down feather.

plunge [ENG] **1.** To set the horizontal cross hair of a theodolite in the direction of a grade when establishing a grade between two points of known level. **2.** *See* transit. [GEOL] The inclination of a geologic structure, especially a fold axis, measured by its departure from the horizontal. Also known as pitch; rake.

plunge basin [GEOL] A deep, large hollow or cavity scoured in the bed of a stream at the foot of a waterfall or cataract by the force and eddying effect of the falling water.

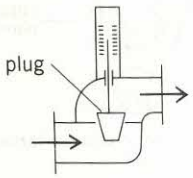
plunge grinding [MECH ENG] Grinding in which the wheel moves radially toward the work.

plunge point [OCEANOGR] The point at which a plunging wave curls over and falls as it moves toward the shore.

plunge pool [HYD] **1.** The water in a plunge basin. **2.** A deep, circular lake occupying a plunge basin after the waterfall has ceased to exist or the stream has been diverted. Also known as waterfall lake. **3.** A small, deep plunge basin.

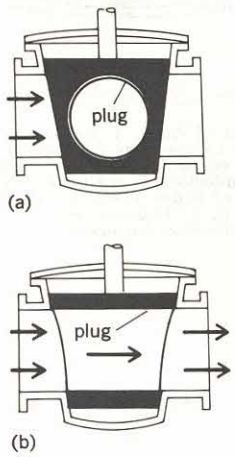
plunger [DES ENG] A wooden shaft with a large rubber suction cup at the end, used to clear plumbing traps and waste outlets. [ELECTROMAG] *See* piston. [ENG] *See* force

PLUG METER



Plug-type variable-area flowmeter.

PLUG VALVE



Plug valve. *(a)* Closed. *(b)* Open. Arrows show direction of fluid flow.

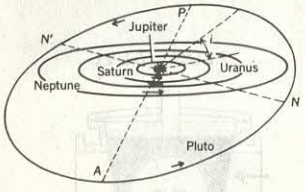
PLUM

Fruit on branch of Damson plum.

PLUTEUS

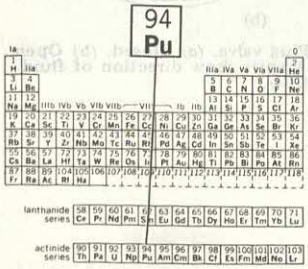
Drawing of a pluteus larva.

PLUTO



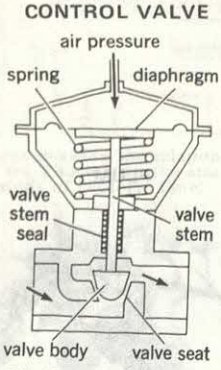
Orbit of Pluto. A perspective view to show the inclination i and eccentricity of the orbit. A, aphelion; P, perihelion; NN', line of nodes. *(From L. Rudaux and G. de Vaucouleurs, Astronomie, Larousse, 1948)*

PLUTONIUM



Periodic table of the chemical elements showing the position of plutonium.

PNEUMATIC CONTROL VALVE



Simplified cross section of typical pneumatic control valve. Arrows indicate direction of fluid stream.

plunger [MECH ENG] The long rod or piston of a reciprocating pump.

plunger jig washer [MIN ENG] A machine for washing ore, coal, or stones in which water is forced alternately up or down by a plunger.

plunger lift [PETRO ENG] A method of lifting oil by using compressed gas to drive a free piston from the lower end of the tubing string to the surface.

plunger overtravel [PETRO ENG] Excessive upward or downward movement in a reciprocating-plunger-type sucker-rod oil-well pump.

plunger pump [MECH ENG] A reciprocating pump where the packing is on the stationary casing instead of the moving piston.

plunger-type instrument [ENG] Moving-iron instrument in which the pointer is attached to a long and specially shaped piece of iron that is drawn into or moved out of a coil carrying the current to be measured.

plunging breaker [OCEANOGR] A breaking wave whose crest curls over and collapses suddenly. Also known as spilling breaker; surging breaker.

plunging cliff [GEOL] A sea cliff bordering directly on deep water, having a base that lies well below water level.

plunging fire [ORD] Gunfire that strikes the earth's surface at a high angle of fall, that is, greater than 45°.

plunging fold [GEOL] A fold having a relatively steep plunge. Also known as pitching fold.

plus [MATH] A mathematical symbol; A plus B, where A and B are mathematical quantities, denotes the quantity obtained by taking their sum in an appropriate context.

plus-90 orientation [COMPUT SCI] In optical character recognition, that determinate position which indicates that the line elements of an inputted source document appear perpendicular with the leading edge of the optical reader.

plush [TEXT] Warp pile fabric with silk or wool pile longer than that of velvet.

plush copper ore *See* chalcotrichite.

plus sieve [MET] That portion of a powder sample that is retained by a standard sieve of a specified number.

plus strand [MOL BIO] A parental ribonucleic acid strand in RNA bacteriophages that is used as a template for a complementary RNA strand (minus strand) produced with the formation of a double-stranded (double-helix) RNA.

plus zone [COMPUT SCI] The bit positions in a computer code which represent the algebraic plus sign.

pluteus [INV ZOO] The free-swimming, bilaterally symmetrical, easel-shaped larva of ophiuroids and echinoids.

Pluto [ASTRON] The most distant planet in the solar system; mean distance to the sun is about 5.6×10^9 kilometers; it has no known satellite, and its sidereal revolution period is 248.4 years.

plutology [GEOL] The study of the interior of the earth.

pluton [GEOL] **1.** An igneous intrusion. **2.** A body of rock formed by metasomatic replacement.

plutonian *See* plutonic.

plutonic [GEOL] Pertaining to rocks formed at a great depth. Also known as abyssal; deep-seated; plutonian.

plutonic breccia [GEOL] Breccia consisting of older annular rock fragments enclosed in younger plutonic rock.

plutonic metamorphism [GEOL] Deep-seated regional metamorphism at high temperatures and pressures, often accompanied by strong deformation.

plutonic rock [GEOL] A rock formed at considerable depth by crystallization of magma or by chemical alteration.

plutonic theory *See* volcanic theory.

plutonic water [HYD] Juvenile water in magma, or derived from magma, at a considerable depth, probably several kilometers.

plutonism [GEOL] **1.** Pertaining to the processes associated with pluton formation. **2.** The theory that the earth formed by solidification of a molten mass. [MED] A disease caused by exposure to plutonium, manifested in experimental animals by graying of the hair, liver degeneration, and tumor formation.

plutonium [CHEM] A reactive metallic element, symbol Pu, atomic number 94, in the transuranium series of elements; the first isotope to be identified was plutonium-239; used as a nuclear fuel, to produce radioactive isotopes for research, and as the fissile agent in nuclear weapons.

plutonium-238 [NUC PHYS] The first synthetic isomer made of plutonium; similar chemically to uranium and neptunium; atomic number 94; formed by bombardment of uranium with deuterons.

plutonium-239 [NUC PHYS] A synthetic element chemically similar to uranium and neptunium; atomic number 94; made by bombardment of uranium-238 with slow electrons in a nuclear reactor; used as nuclear reactor fuel and an ingredient for nuclear weapons.

plutonium bomb [ORD] An atomic bomb using plutonium.

plutonium oxide [INORG CHEM] PuO_2 A radioactively poisonous pyrophoric oxide of plutonium; particles may be easily airborne.

plutonium reactor [NUCLEO] A nuclear reactor in which plutonium is the principal fissionable material.

pluvial [GEOL] Of a geologic process or feature, effected by rain action. [METEOROL] Pertaining to rain, or more broadly, to precipitation, particularly to an abundant amount thereof.

pluvial lake [GEOL] A lake formed during a period of exceptionally heavy rainfall; specifically, a Pleistocene lake formed during a period of glacial advance and now either extinct or only a remnant.

pluviilignosa [ECOL] A tropical rain forest.

pluviofluvial [GEOL] Pertaining to the combined action of rainwater and streams.

pluviograph *See* recording rain gage.

pluviometer *See* rain gage.

pluviometric coefficient [METEOROL] For any month at a given station, the ratio of the monthly normal precipitation to one-twelfth of the annual normal precipitation. Also known as hyetal coefficient.

ply [MATER] A thin sheet of wood or other material bonded to one or more additional thin sheets, as in plywood. [TEXT] A strand of yarn made by twisting together two or more strands.

plymetal [MATER] **1.** A material consisting of layers of dissimilar metals bonded together. **2.** Plywood faced with aluminum on both sides.

plywood [MATER] A material composed of thin sheets of wood glued together, with the grains of adjacent sheets oriented at right angles to each other.

PLZT *See* lead lanthanum zirconate titanate.

Pm *See* promethium.

PM *See* permanent magnet; phase modulation.

PMA *See* phosphomolybdic acid; pyromellitic acid.

PMDA *See* pyromellitic dianhydride.

PMR *See* projection microradiography.

PMS notation [COMPUT SCI] A notation that provides a clear, concise description of the physical structure of computer systems, and that contains only a few primitive components, namely symbols for memory, link, switch, data operation, control unit, and transducer. Acronym for processor-memory-switch notation.

pNa [CHEM] Logarithm of the sodium-ion concentration in a solution; that is, $pNa = -\log a_{Na^+}$, where a_{Na^+} is the sodium-ion concentration.

PNdB *See* perceived noise decibel.

pneumatic [ENG] Pertaining to or operated by air or other gas.

pneumatic atomizer [MECH ENG] An atomizer that uses compressed air to produce drops in the diameter range of 5–100 micrometers.

pneumatic caisson [CIV ENG] A caisson having a chamber filled with compressed air at a pressure equal to the pressure of the water outside.

pneumatic controller [MECH ENG] A device for the mechanical movement of another device (such as a valve stem) whose action is controlled by variations in pneumatic pressure connected to the controller.

pneumatic control valve [MECH ENG] A valve in which the force of compressed air against a diaphragm is opposed by the force of a spring to control the area of the opening for a fluid stream.

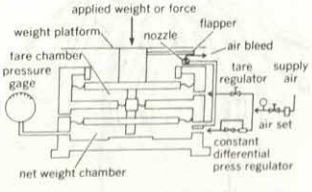
pneumatic conveyor [MECH ENG] A conveyor which transports dry, free-flowing, granular material in suspension, or a cylindrical carrier, within a pipe or duct by means of a high-velocity airstream or by pressure of vacuum generated by an air compressor. Also known as air conveyor.

pneumatic deception device [ORD] A dummy tank, vehicle, or weapon made of inflatable material; used for deceiving the enemy intelligence as to location of friendly installations.

pneumatic drill [MECH ENG] Compressed-air drill worked by reciprocating piston, hammer action, or turbo drive.

pneumatic drilling [MECH ENG] Drilling a hole when using air or gas in lieu of conventional drilling fluid as the circulating medium; an adaptation of rotary drilling.
pneumatic filling [MIN ENG] A filling method using compressed air to blow filling material into the mined-out stope.
pneumatic gun charger [ORD] A gun charger that operates by compressed air or gas.
pneumatic hammer [MECH ENG] A hammer in which compressed air is utilized for producing the impacting blow.
pneumatic hoist *See* air hoist.
pneumatic injection [MIN ENG] A method for fighting underground coal fires, developed by the U.S. Bureau of Mines; this air-blowing technique involves the injection of incombustible mineral, like rock wool or dry sand, through 6-inch (15 centimeter) boreholes drilled from the surface to intersect underground passageways in the mines.
pneumatic lighting [MIN ENG] Lighting of underground chambers by a compressed-air turbomotor driving a small dynamo.
pneumatic loudspeaker [ENG ACOUS] A loudspeaker in which the acoustic ouput results from controlled variation of an airstream.
pneumatic method [MIN ENG] A method of flotation in which gas is introduced near the bottom of the flotation vessel.
pneumatic riveter [MECH ENG] A riveting machine having a rapidly reciprocating piston driven by compressed air.
pneumatics [FL MECH] Fluid statics and behavior in closed systems when the fluid is a gas.
pneumatic servo *See* valve positioner.
pneumatic servomechanism [CONT SYS] A servomechanism in which power is supplied and transmission of signals is carried out through the medium of compressed air.
pneumatic steelmaking [MET] Any steelmaking process which employs air or oxygen and for which all heat is derived from the initial heat content of the charge materials and from the thermal energy of the refining reactions.
pneumatic stowing [MIN ENG] A method of filling used mine cavities with crushed rock; which is forced by compressed air into the cavity.
pneumatic tank switcher [PETRO ENG] Pneumatic actuated valving system for oil-field tanks to shut off crude-oil flow to a filled tank and then to direct incoming crude flow to the next available empty tank.
pneumatic telemetering [ENG] The transmission of a pressure impulse by means of pneumatic pressure through a length of small-bore tubing; used for remote transmission of signals from primary process-unit sensing elements for pressure, temperature, flow rate, and so on.
pneumatic test [ENG] Pressure testing of a process vessel by the use of air pressure.
pneumatic transmission lag [ELEC] The time delay in a pneumatic transmission line between the generation of an impulse at one end and the resultant reaction at the other end.
pneumatic weighing system [ENG] A system for weight measurement in which the load is detected by a nozzle and balanced by modulating the air pressure in an opposing capsule.
pneumatocele [MED] **1.** Herniation of the lung. **2.** A sac or tumor containing gas; especially the scrotum filled with gas.
pneumatocodon [INV ZOO] Exumbrellar surface of the float or pneumatophore of siphonophorans.
pneumatogenic [GEOL] Referring to a rock or mineral deposit formed by a gaseous agent.
pneumatolysis [GEOL] Rock alteration or mineral crystallization effected by gaseous emanations from solidifying magma.
pneumatolytic [GEOL] Formed by gaseous agents.
pneumatolytic metamorphism [PETR] Contact metamorphism by the chemical action of magmatic gases.
pneumatolytic stage [GEOL] The stage in the cooling of a magma in which the solid and gaseous phases are in equilibrium.
pneumatophore [BOT] **1.** An air bladder in marsh plants. **2.** A submerged or exposed erect root that functions in the respiration of certain marsh plants. [INV ZOO] The air sac of a siphonophore.
pneumatosaccus [INV ZOO] Subumbrellar surface of the float or pneumatophore of siphonophorans.
pneumatosis [MED] The presence of air or gas in abnormal situations in the body.
pneumaturia [MED] The voiding of urine containing free gas.
pneumoangiography [MED] The outline of the vessels of the lung by means of radiopaque material, for roentgenographic visualization.
pneumobacillus *See* Klebsiella pneumoniae.
pneumoconiosis [MED] Any lung disease caused by dust inhalation.
pneumocystis carinii pneumonia [MED] A lung infection in man caused by the protozoans *Pneumocystis carinii*. Also known as interstitial plasma-cell pneumonia.
pneumoencephalography [MED] A method of visualizing the ventricular system and subarachnoid pathways of the brain by roentgenography after removal of spinal fluid followed by the injection of air or gas into the subarachnoid space.
pneumoenteritis [MED] Inflammation of the lungs and of the intestine.
pneumography [MED] **1.** Roentgenography of the lung. **2.** The recording of the respiratory excursions.
pneumohemothorax [MED] The presence of air or gas and blood in the thoracic cavity.
pneumolithiasis [MED] The occurrence of calculi or concretions in a lung.
pneumomycosis [MED] Any disease of the lungs caused by a fungus.
pneumonectomy [MED] Surgical removal of an entire lung.
pneumonia [MED] An acute or chronic inflammation of the lungs caused by numerous microbial, immunological, physical, or chemical agents, and associated with exudate in the alveolar lumens.
pneumonic plague [MED] A virulent type of plague in humans, with lung involvement.
pneumonitis [MED] Inflammation of the lung.
pneumonolysis [MED] The loosening of any portion of lung adherent to the chest wall; a form of collapse therapy used in the treatment of pulmonary tuberculosis.
pneumopericardium [MED] The presence of air in the pericardial cavity.
pneumoperitoneum [MED] **1.** The presence of air or gas in the peritoneal cavity. **2.** Injection of a gas into the peritoneal cavity as a diagnostic or therapeutic measure.
pneumostome [INV ZOO] The respiratory aperture of gastropod mollusks.
pneumotectic [GEOL] Referring to processes and products of magmatic consolidation affected to some degree by the gaseous constituents of the magma.
pneumothorax [MED] The presence of air or gas in the pleural cavity.
pn hook transistor *See* hook collector transistor.
pnicogen [CHEM] Any member of the nitrogen family of elements, group V in the periodic table.
pnictide [CHEM] A simple compound of a pnicogen and an electropositive element.
pnigophobia [PSYCH] An abnormal fear of choking.
pnip transistor [ELECTR] An intrinsic junction transistor in which the intrinsic region is sandwiched between the *n*-type base and the *p*-type collector.
pn junction [ELECTR] The interface between two regions in a semiconductor crystal which have been treated so that one is a *p*-type semiconductor and the other is an *n*-type semiconductor; it contains a permanent dipole charge layer.
pnpn diode [ELECTR] A semiconductor device consisting of four alternate layers of *p*-type and *n*-type semiconductor material, with terminal connections to the two outer layers. Also known as *npnp* diode.
pnpn transistor *See npnp* transistor.
pnp transistor [ELECTR] A junction transistor having an *n*-type base between a *p*-type emitter and a *p*-type collector.
Po *See* polonium.
Poaceae [BOT] The equivalent name for Gramineae.
Poales [BOT] The equivalent name for Cyperales.
pock [MED] A pustule of an eruptive fever, especially of smallpox.
Pockels cell [OPTICS] A crystal that exhibits the Pockels effect, such as potassium dihydrogen phosphate, which is placed between crossed polarizers and has ring electrodes bonded to two faces to allow application of an electric field; used to modulate light beams, especially laser beams.
Pockels effect [OPTICS] Changes in the refractive proper-

PNEUMATIC WEIGHING SYSTEM



Elements of a pneumatic weighing system. *(From D. M. Considine, ed., Process Instruments and Controls Handbook, McGraw-Hill, 1957)*

ties of certain crystals in an applied electric field, which are proportional to the first power of the electric field strength.

Pockels readout optical modulator [ELECTR] A device for storing data in the form of images; it consists of bismuth silicon oxide crystal coated with an insulating layer of parylene and transparent electrodes evaporated on the surfaces; a blue laser is used for writing and a red laser is used for nondestructive readout or processing. Abbreviated PROM.

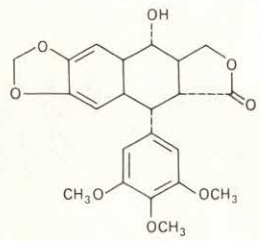
pocket [COMPUT SCI] One of the several receptacles into which punched cards are fed by a card sorter. [GEOL] **1.** A localized enrichment. **2.** An enclosed or sheltered place along a coast, such as a reentrant between rocky, cliffed headlands or a bight on a lee shore. [MIN ENG] A receptacle from which coal, ore, or waste is loaded into wagons or cars.

pocket beach [GEOL] A small, narrow beach formed in a pocket, commonly crescentic in plan, with the concave edge toward the sea, and displaying well-sorted sands.

pocket gopher *See* gopher.

pocket valley [GEOL] A valley whose head is enclosed by steep walls at the base of which underground water emerges as a spring.

PODOPHYLLOTOXIN



Structural formula.

pod [AERO ENG] An enclosure, housing, or detachable container of some kind on an airplane or space vehicle, as an engine pod. [BOT] A dry dehiscent fruit; a legume. [DES ENG] **1.** The socket for a bit in a brace. **2.** A straight groove in the barrel of a pod auger. [GEOL] An orebody of elongate, lenticular shape. Also known as podiform orebody.

POD analysis [ANALY CHEM] A precision laboratory distillation procedure used to separate low-boiling hydrocarbon fractions quantitatively for analytical purposes. Also known as Podbielniak analysis.

Podargidae [VERT ZOO] The heavy-billed frogmouths, a family of Asian and Australian birds in the order Caprimulgiformes.

Podbielniak analysis *See* POD analysis.

Podbielniak extractor [CHEM ENG] A solvent-extraction device in which centrifugal action enhances liquid-liquid contact and increases resultant separation efficiency.

pod blight [PL PATH] A fungus disease of legumes caused by *Diaporthe* species.

podiatrist *See* chiropodist.

Podicipedide [VERT ZOO] The single family of the avian order Podicipediformes.

Podicipediformes [VERT ZOO] The grebes, an order of swimming and diving birds distinguished by dense, silky plumage, a rudimentary tail, and toes that are individually broadened and lobed.

Podicipitiformes [VERT ZOO] The equivalent name for Podicipediformes.

podiform orebody *See* pod.

podite [INV ZOO] A segment of a limb of an arthropod.

podium [INV ZOO] The terminal portion of a body wall appendage in certain echinoderms.

podobranch [INV ZOO] A gill of a crustacean attached to the basal segment of a thoracic limb.

Podocopa [INV ZOO] A suborder of fresh-water ostracod crustaceans in the order Podocopida in which the inner lamella has a calcified rim joining the outer lamella along a chitinous zone of concrescence, and the two valves fit together firmly.

Podocopida [INV ZOO] An order of the Ostracoda; contains all fresh-water ostracods and is divided into the suborders Podocopa, Metacopina, and Platycopina.

Podocopina [INV ZOO] The equivalent name for Podocopa.

podocyst [INV ZOO] A sinus in the foot of certain gastropod mollusks.

Podogona [INV ZOO] The equivalent name for Ricinuleida.

podophyllin [PHARM] A light yellow to greenish-yellow or light brown powder with a bitter taste; soluble in alcohol, ether, and ammonium hydroxide; used in medicine. Also known as podophyllum resin.

podophyllinic acid lactone *See* podophyllotoxin.

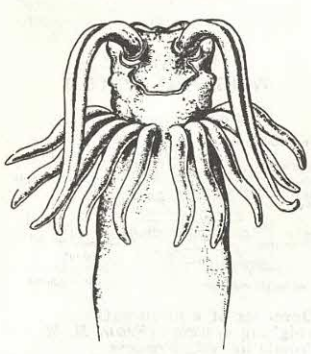
podophyllotoxin [PHARM] $C_{22}H_{22}O_8$ A crystalline compound with a melting point of 114–118°C; soluble in alcohol, chloroform, acetone, and warm benzene; used as an antineoplastic agent in medicine. Also known as podophyllinic acid lactone.

podophyllum resin *See* podophyllin.

Podostemaceae [BOT] The single family of the order Podostemales.

Podostemales [BOT] An order of dicotyledonous plants in the subclass Rosidae; plants are submerged aquatics with modified, branching shoots and small, perfect flowers having a superior ovary and united carpels.

POEOBIIDAE



Anterior end of *Poeobius* (Poeobiidae) in dorsal view.

pod rot [PL PATH] A fungus disease of cacao caused by *Monilia roreri* and characterized by lesions on the pods.

Podzol [GEOL] A soil group characterized by mats of organic matter in the surface layer and thin horizons of organic minerals overlying gray, leached horizons and dark-brown illuvial horizons; found in coal forests to temperate coniferous or mixed forests.

podzolization [GEOL] The process by which a soil becomes more acid because of the depletion of bases, and develops surface layers that have been leached of clay.

Poeciliidae [VERT ZOO] A family of fishes in the order Atheriniformes including the live-bearers, such as guppies, swordtails, and mollies.

Poecilosclerida [INV ZOO] An order of sponges of the class Demospongiae in which the skeleton includes two or more types of megascleres.

Poeobiidae [INV ZOO] A monotypic family of spioniform worms (*Poeobius meseres*) belonging to the Sedentaria and found in the North Pacific Ocean.

Poetsch process [MIN ENG] Shaft sinking in which brine at subzero temperature is circulated through boreholes to freeze running water through which a shaft or tunnel is to be driven, during development of a waterlogged mine.

Poggendorff's first method *See* constant-current dc potentiometer.

Poggendorff's second method *See* constant-resistance dc potentiometer.

pogonip *See* ice fog.

pogonochore [BOT] A type of plant that produces plumed disseminules.

Pogonophora [INV ZOO] The single class of the phylum Brachiata; the elongate body consists of three segments, each with a separate coelom; there is no mouth, anus, or digestive canal, and sexes are separate.

Pogson scale [ASTRON] An index of brightness used in star catalogs; it is the ratio of 2.512 to 1 between the brightness of successive magnitudes.

Pohlé air lift pump [MECH ENG] A pistonless pump in which compressed air fills the annular space surrounding the uptake pipe and is free to enter the rising column at all points of its periphery.

poidometer [ENG] An automatic weighing device for use on belt conveyors.

poikilitic [PETR] Of the texture of an igneous rock, having small crystals of one mineral randomly scattered without common orientation in larger crystals of another mineral.

poikiloblast [GEOL] A large crystal (xenoblast) formed by recrystallization during metamorphism and containing numerous inclusions of small idioblasts.

poikiloblastic [PETR] Of a metamorphic texture, simulating the poikilitic texture of igneous rocks in having small idioblasts of one constituent lying within larger xenoblasts. Also known as sieve texture.

poikilocrystallic *See* poikilotopic.

poikilocytosis [MED] A condition in which erythrocytes are distorted in shape.

poikilophitic [GEOL] Referring to ophitic texture characterized by lath-shaped feldspar crystals completely included in large, anhedral pyroxene crystals.

poikilotherm [ZOO] An animal, such as reptiles, fishes, and invertebrates, whose body temperature varies with and is usually higher than the temperature of the environment; a cold-blooded animal.

poikilotope [GEOL] A large crystal enclosing smaller crystals of another mineral in a sedimentary rock showing poikilotopic fabric.

poikilotopic [GEOL] Referring to the fabric of a crystalline sedimentary rock in which the constituent crystals are multisized and larger crystals enclose smaller crystals of another mineral. Also known as poikilocrystallic.

Poincaré conjecture [MATH] The question as to whether a compact, simply connected three-dimensional manifold without boundary must be homeomorphic to the three-dimensional sphere.

Poincaré electron [ELECTROMAG] A classical model of the electron in which nonelectromagnetic forces hold the electron

together so that it has zero self-stress; it is unstable and has infinite self-energy in the case of a point electron.

Poincaré recurrence theorem [MATH] **1.** A volume preserving homeomorphism T of a finite dimensional euclidean space will have, for almost all points x, infinitely many points of the form $T^i(x)$, $i = 1,2, \ldots$ within any open set containing x. **2.** A measure preserving transformation on a space with finite measure is recurrent.

Poinsot ellipsoid *See* inertia ellipsoid.

Poinsot motion [MECH] The motion of a rigid body with a point fixed in space and with zero torque or moment acting on the body about the fixed point.

Poinsot's method [MECH] A method of describing Poinsot motion, by means of a geometrical construction in which the inertia ellipsoid rolls on the invariable plane without slipping.

point [GEOGR] A tapering piece of land projecting into a body of water; it is generally less prominent than a cape. [GRAPHICS] A printer's unit of measurement, equivalent to 1/72 or 0.013837 inch (0.3514598 millimeter) or 1/12 pica. Also known as printer's point; typography point. [LAP] A unit of mass, used in measuring precious stones, equal to 0.01 metric carat, or to 2 milligrams. [MATH] **1.** An element in a topological space. **2.** One of the basic undefined elements of geometry possessing position but no nonzero dimension. **3.** In positional notation, the character or the location of an implied symbol that separates the integral part of a numerical expression from its fractional part; for example, it is called the binary point in binary notation and the decimal point in decimal notation. [NAV] In marine operation, one thirty-second of a circle, or 11¼ degrees.

point angle [DES ENG] The angle at the point or edge of a cutting tool.

point at infinity *See* ideal point.

point bar [GEOL] One of a series of low, arcuate sand and gravel ridges formed on the inside of a growing meander by the gradual addition of accretions. Also known as meander bar.

point-bearing pile *See* end-bearing pile.

point-blank range [MECH] Distance to a target that is so short that the trajectory of a bullet or projectile is practically a straight, rather than a curved, line.

point characteristic function [OPTICS] The integral between two points of $n\,ds$ along some path, where ds is the arc length of an infinitesimal piece of the path and n is the refractive index; according to Fermat's principle, it is a maximum or minimum with respect to nearby paths for the actual path of a light ray.

point contact [ELECTR] A contact between a specially prepared semiconductor surface and a metal point, usually maintained by mechanical pressure but sometimes welded or bonded.

point-contact diode [ELECTR] A semiconductor rectifier that uses the barrier formed between a specially prepared semiconductor surface and a metal point to produce the rectifying action.

point-contact transistor [ELECTR] A transistor having a base electrode and two or more point contacts located near each other on the surface of an n-type semiconductor.

point defect [CRYSTAL] A departure from crystal symmetry which affects only one, or, in some cases, two lattice sites.

point diagram [PETR] A fabric diagram in which a point represents the preferred orientation of each individual fabric element. Also known as scatter diagram.

pointed bracket *See* angle bracket.

pointer [COMPUT SCI] The part of an instruction which contains the address of the next record to be accessed. [ENG] The needle-shaped rod that moves over the scale of a meter.

Pointers [ASTRON] The stars α and β Ursae Majoris, which appear to point toward the north celestial pole and Polaris.

point fire [ORD] Concentrated fire from a number of guns, directed at a single point or small area.

point function [MATH] A function whose values are points.

point group [CRYSTAL] A group consisting of the symmetry elements of an object having a single fixed point; 32 such groups are possible.

point harmonization [ORD] The adjusting of a fighter aircraft's fixed guns so that they converge upon a point at a given range.

pointing [CIV ENG] **1.** Finishing a mortar joint. **2.** Pressing mortar into a raked joint. [MATER] The material (mortar) used in pointing. [MET] Reducing the diameter and tapering a short length at the end of a rod, wire, or tube. Also known as metal pointing. [ORD] The operation of giving the piece a designated elevation and direction.

pointing trowel [ENG] A tool used to apply pointing to the joints between bricks.

point initiation [ENG] Application of the initial impulse from the detonator to a single point on the main charge surface; for a cylindrical charge this point is usually the center of one face.

point jammer [ELECTR] Any electronic jammer directed against a specific enemy installation operating on a specific frequency.

point-junction transistor [ELECTR] Transistor having a base electrode and both point-contact and junction electrodes.

point-mode display [COMPUT SCI] A method of representing information in the form of dots on the face of a cathode-ray tube.

point mutation [GEN] Mutation of a single gene due to addition, loss, replacement, or change of sequence in one or more base pairs of the deoxyribonucleic acid of that gene.

point of arrival [NAV] The position which a craft will reach after following specified courses for specified distances from a point of departure.

point of contraflexure [MECH] A point at which the direction of bending changes. Also known as point of inflection.

point of control [IND ENG] Fraction defective in those lots that have a probability of .50 of acceptance according to a specific sampling acceptance plan.

point of departure *See* departure.

point of destination [NAV] The point at which the final course from the point of departure ends, exclusive of the courses needed to reach a berth or runway.

point of fall [MECH] The point in the curved path of a falling projectile that is level with the muzzle of the gun. Also known as level point.

point of frog [CIV ENG] The place of intersection of the gage lines of the main track and a turnout.

point of impact [ORD] The point at which a bullet, bomb, or projectile strikes.

point of inflection [MATH] A point where a plane curve changes from the concave to the convex relative to some fixed line; equivalently, if the function determining the curve has a second derivative, this derivative changes sign at this point. Also known as inflection point. [MECH] *See* point of contraflexure.

point of intersection [CIV ENG] The point at which two straight sections or tangents to a road curve or rail curve meet when extended.

point of no return [NAV] A point along an aircraft track beyond which the aircraft's fuel supply will not permit it to return to its own or some other associated base but must continue in attempt to reach its destination.

point-of-sale terminal [COMPUT SCI] A computer-connected terminal used in place of a cash register in a store, for customer checkout and such added functions as recording inventory data, transferring funds from the customer's bank account to the merchant's bank account, and checking credit on charged or charge-card purchases; the terminals can be modified for many nonmerchandising applications, such as checkout of books in libraries. Abbreviated POS terminal.

point of switch [CIV ENG] That place in a track where a car passes from the main track to a turnout.

point of tangency [CIV ENG] The point at which a road curve or railway curve becomes straight or changes its curvature. Also known as tangent point.

point rainfall [METEOROL] The rainfall during a given time interval (or often one storm) measured in a rain gage, or an estimate of the amount which might have been measured at a given point.

point set topology [MATH] The general study of topological spaces.

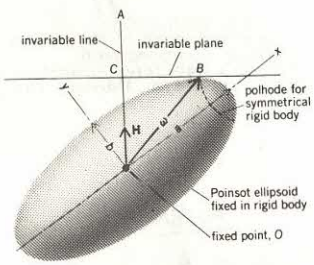
points of the compass *See* compass points.

point source [PHYS] A source of radiation having definite position but no extension in space; this is an ideal which is a good approximation for distances from the source sufficiently large compared to the dimensions of the source.

point-source light [ELEC] A special lamp in which the radiating element is concentrated in a small physical area.

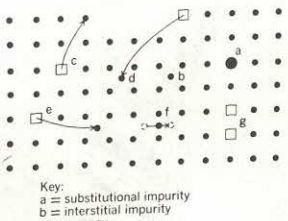
point spectrum [MATH] Those eigenvalues in the spectrum

POINSOT'S METHOD



Inertia ellipsoid has axes with lengths a, b, and c (not shown) along principal axes of body, x, y, and z (not shown). OA = invariable line drawn in direction of fixed vector angular momentum **H**. Inertia ellipsoid rolls on invariable plane which is perpendicular to OA and intersects it at C. Ellipsoid is tangent to plane at B, where OB = vector angular momentum $\boldsymbol{\omega}$.

POINT DEFECT



Key:
a = substitutional impurity
b = interstitial impurity
c = vacancy
d = interstitial
e = Frenkel pair
f = interstitial impurity moving from one site through a saddle point to a neighboring site
g = divacancy

Point defects in a lattice. The squares indicate positions that were formerly occupied by atoms displaced as shown by the arrows.

POISON HEMLOCK

lowering branch of the poison emlock. *(Adapted from ebster's New International ictionary, 2d ed., Merriam, 1959)*

POISON IVY

hree-foliolate leaf of poison ivy.

POISON SUMAC

oison sumac fruits and ompound leaf *(Rhus vernix)*.

of a linear operator between Banach spaces whose corresponding eigenvectors are nonzero and of finite norm.

point system [IND ENG] **1.** A system of job evaluation wherein job requirements are rated according to a scale of point values. **2.** A wage incentive plan based on points instead of man-minutes.

point target [ELECTROMAG] In radar, an object which returns a target signal by reflection from a relatively simple discrete surface; such targets are ships, aircraft, projectiles, missiles, and buildings. [ORD] A precise target of small dimensions.

point-to-point communication [COMMUN] Radio communication between two fixed stations.

point transposition [ELEC] Transposition, usually in an open-wire line, which is executed within a distance comparable to the wire separation, without material distortion of the normal wire configuration outside this distance.

pointwise convergence [MATH] A sequence of functions $f_1, f_2, \ldots$ defined on a set S converges pointwise to a function f if the sequence $f_1(x), f_2(x), \ldots$ converges to $f(x)$ for each x in S.

poise [FL MECH] A unit of dynamic viscosity equal to the dynamic viscosity of a fluid in which there is a tangential force 1 dyne per square centimeter resisting the flow of two parallel fluid layers past each other when their differential velocity is 1 centimeter per second per centimeter of separation. Abbreviated P.

poised stream [HYD] A stream that is neither eroding nor depositing sediment.

poiseuille [FL MECH] A unit of dynamic viscosity of a fluid in which there is a tangential force of 1 newton per square meter resisting the flow of two parallel layers past each other when their differential velocity is 1 meter per second per meter of separation; equal to 10 poise; used chiefly in France. Abbreviated Pl.

Poiseuille flow [FL MECH] The steady flow of an incompressible fluid parallel to the axis of a circular pipe of infinite length, produced by a pressure gradient along the pipe.

Poiseuille's law [FL MECH] The law that the volume flow of an incompressible fluid through a circular tube is equal to $\pi/8$ times the pressure differences between the ends of the tube, times the fourth power of the tube's radius divided by the product of the tube's length and the dynamic viscosity of the fluid.

poison [ATOM PHYS] A substance which reduces the phosphorescence of a luminescent material. [CHEM] A substance that exerts inhibitive effects on catalysts, even when present only in small amounts; for example, traces of sulfur or lead will poison platinum-based catalysts. [ELECTR] A material which reduces the emission of electrons from the surface of a cathode. [MATER] A substance that in relatively small doses has an action that either destroys life or impairs seriously the functions of organs or tissues. [NUCLEO] A substance that absorbs neutrons without any fission resulting, and thereby lowers the reactivity of a nuclear reactor.

poison gas [MATER] A substance employed in chemical warfare to disable enemy troops; may be a gas, or a liquid or solid that gives off a gas. An example is mustard gas.

poison gland [VERT ZOO] Any of various specialized glands in certain fishes and amphibians which secrete poisonous mucuslike substances.

poison hemlock [BOT] *Conium maculatum*. A branching biennial poisonous herb that contains a volatile alkaloid, coniine, in its fruits and leaves.

poison ivy [BOT] Any of several climbing, shrubby, or arborescent plants of the genus *Rhus* in the sumac family (Anacardiaceae); characterized by ternate leaves, greenish flowers, and white berries that produce an irritating oil.

poison oak [BOT] Any of several bushy poison ivy plants or shrubby poison sumacs.

poisonous plant [BOT] Any of about 400 species of vascular plants containing principles which initiate pathological conditions in man and animals.

poison sumac [BOT] *Rhus vernix*. A tall bush of the sumac family (Anacardiaceae) bearing pinnately compound leaves with 7–13 entire leaflets, and drooping, axillary clusters of white fruits that produce an irritating oil.

Poisson binomial trials model *See* generalized binomial trials model.

Poisson bracket [MECH] For any two dynamical variables, X and Y, the sum, over all degrees of freedom of the system, of $(\partial X/\partial q)(\partial Y/\partial p) - (\partial X/\partial p)(\partial Y/\partial q)$, where q is a generalized coordinate and p is the corresponding generalized momentum.

Poisson constant [PHYS] The ratio k of the gas constant R to the specific heat at constant pressure C_p.

Poisson density functions [STAT] Density functions corresponding to Poisson distributions.

Poisson distribution [STAT] A probability distribution whose mean and variance have a common value k, and whose frequency is $f(x) = k^x e^{-k}/x!$, for $x = 0,1,2, \ldots$.

Poisson formula [MATH] If the infinite series of functions $f(2\pi k + t)$, k ranging from $-\infty$ to ∞, converges uniformly to a function of bounded variation, then the infinite series with term $f(2\pi k)$, k ranging from $-\infty$ to ∞, is identical to the series with term the integral of $f(x)e^{-ikx}dx$, k ranging from $-\infty$ to ∞.

Poisson integral formula [MATH] This formula gives a solution function for the Dirichlet problem in terms of integrals; an integral representation for the Bessel functions.

Poisson number [MECH] The reciprocal of the Poisson ratio.

Poisson process [STAT] A process given by a discrete random variable which has a Poisson distribution.

Poisson ratio [MECH] The ratio of the transverse contracting strain to the elongation strain when a rod is stretched by forces which are applied at its ends and which are parallel to the rod's axis.

Poisson relation [GEOPHYS] A model of elastic behavior used in experimental structural geology that takes the Poisson ratio as equal to 0.25.

Poisson's equation [MATH] The partial differential equation which states that the Laplacian of an unknown function is equal to a given function.

Poisson transform [MATH] An integral transform which transforms the function $f(t)$ to the function

$$F(x) = (2/\pi) \int_0^\infty [t/(x^2 + t^2)] f(t)\, dt$$

Also known as potential transform.

poke welding *See* push welding.

polacke [METEOROL] A cold, dry, northeasterly katabatic wind in Bohemia descending from the Sudeten Mountains (from the direction of Poland).

polar [MATH] **1.** For a conic section, the polar of a point is the line that passes through the points of contact of the two tangents drawn to the conic from the point. **2.** For a quadric surface, the polar of a point is the plane that passes through the curve which is the locus of the points of contact of the tangents drawn to the surface from the point. **3.** For a quardric surface, the polar of a line is the line of intersection of the planes which are tangent to the surface at its points of intersection with the original line.

polar air [METEOROL] A type of air whose characteristics are developed over high latitudes; there are two types: continental polar air and maritime polar air.

polar anticyclone *See* arctic high; subpolar high.

polar automatic weather station [METEOROL] An automatic weather station which measures meteorological elements and transmits them by radio; the station is designed to function primarily in frigid or polar climates in order to fill the need for weather reports from inaccessible regions where manned stations are not practicable; since the equipment is designed to operate on ice or slush, the main structure is in the form of a sled with external pontoons for added stability.

polar axis [CRYSTAL] An axis of crystal symmetry which does not have a plane of symmetry perpendicular to it. [MATH] The directed straight line relative to which the angle is measured for a representation of a point in the plane by polar coordinates.

polar bear [VERT ZOO] *Thalarctos maritimus*. A large aquatic carnivore found in the polar regions of the Northern Hemisphere.

polar body [CYTOL] One of the small bodies cast off by the oocyte during maturation.

polar cap [ASTRON] Any of the bright areas covering the poles of Mars, believed to be composed of frozen carbon dioxide and water-ice. [HYD] An ice sheet centered at one of the poles of the earth.

polar-cap ice *See* polar ice.

polar chart [MAP] **1.** A chart of polar areas. **2.** A chart on a polar projection; the projections most used for polar charts are

the gnomonic, stereographic, azimuthal equidistant, transverse Mercator, and modified Lambert conformal.

polar circle [GEOD] A parallel of latitude whose distance from the pole is equal to the obliquity of the ecliptic (approximately 23° 27′).

polar climate [CLIMATOL] The climate of a geographical polar region, most commonly taken to be a climate which is too cold to support the growth of trees. Also known as arctic climate; snow climate.

polar compound [CHEM] Molecules which contain polar covalent bonds; they can ionize when dissolved or fused; polar compounds include inorganic acids, bases, and salts.

polar continental air [METEOROL] Air of an air mass that originates over land or frozen ocean areas in the polar regions; characterized by low temperature, stability, low specific humidity, and shallow vertical extent.

polar convergence [OCEANOGR] The line of convergence of polar and subpolar water masses in the ocean.

polar-coordinate navigation system [NAV] A system in which one or more signals are emitted from a facility (or co-located facilities) to produce simultaneous indication of bearing and distance.

polar coordinates [MATH] A point in the plane may be represented by coordinates (r,θ), where θ is the angle between the positive x-axis and the ray from the origin to the point, and r the length of that ray.

polar covalent bond [PHYS CHEM] A bond in which a pair of electrons is shared in common between two atoms, but the pair is held more closely by one of the atoms.

polar crystal *See* ferroelectric crystal.

polar cyclone *See* polar vortex.

polar desert [GEOGR] A high-latitude desert where the existing moisture is frozen in ice sheets and is thus unavailable for plant growth. Also known as arctic desert.

polar diagram [PHYS] A diagram employing polar coordinates to show the magnitude of a quantity in some or all directions from a point; examples include directivity patterns and radiation patterns.

polar distance [ASTRON] Angular distance from a celestial pole; the arc of an hour circle between a celestial pole, usually the elevated pole, and a point on the celestial sphere, measured from the celestial pole through 180°.

polar easterlies [METEOROL] The rather shallow and diffuse body of easterly winds located poleward of the subpolar low-pressure belt; in the mean in the Northern Hemisphere, these easterlies exist to an appreciable extent only north of the Aleutian low and Icelandic low.

polar-easterlies index [METEOROL] A measure of the strength of the easterly wind between the latitudes of 55° and 70°N; the index is computed from the average sea-level pressure difference between these latitudes and is expressed as the east to west component of geostrophic wind in meters and tenths of meters per second.

polar electrojet [GEOPHYS] An intense current that flows in a relatively narrow band of the auroral zone ionosphere during disturbances of the magnetosphere.

polar firn [HYD] Firn formed at low temperatures with no melting or liquid water present. Also known as dry firn.

polar form [MATH] A complex number $x + iy$ has as polar form $re^{i\theta}$, where (r,θ) are the polar coordinates corresponding to the point of the plane with rectangular coordinates (x,y), that is, $r = \sqrt{x^2 + y^2}$ and θ = arc tan y/x.

polar front [METEOROL] The semipermanent, semicontinuous front separating air masses of tropical and polar origin; this is the major front in terms of air mass contrast and susceptibility to cyclonic disturbance.

polar-front theory [METEOROL] A theory whereby a polar front, separating air masses of polar and tropical origin, gives rise to cyclonic disturbances which intensify and travel along the front, passing through various phases of a characteristic life history.

polar glacier [HYD] A glacier whose temperature is below freezing throughout its mass, and on which there is no melting during any season.

polar high *See* arctic high; subpolar high.

polar ice [OCEANOGR] Sea ice that is more than 1 year old; the thickest form of sea ice. Also known as polar-cap ice.

polarimeter [OPTICS] An instrument used to determine the rotation of the plane of polarization of plane polarized light when it passes through a substance; the light is linearly polarized by a polarizer (such as a Nicol prism), passes through the material being analyzed, and then passes through an analyzer (such as another Nicol prism).

polarimetric analysis [ANALY CHEM] A method of chemical analysis based on the optical activity of the substance being determined; the measurement of the extent of the optical rotation of the substance is used to identify the substance or determine its quantity.

polarimetry [OPTICS] Determination of the rotation of the plane of polarization of plane polarized light when it passes through a substance, using a polarimeter.

Polaris [ASTRON] A creamy supergiant star of stellar magnitude 2.0, spectral classification F8, in the constellation Ursa Minor; marks the north celestial pole, being about 1° from this point; the star Ursae Minoris. Also known as North Star; Pole Star.

polariscope [OPTICS] Any of several instruments used to determine the effects of substances on polarized light, in which linearly or elliptically polarized light passes through the substance being studied, and then through an analyzer.

Polaris correction [NAV] A correction to be applied to the corrected sextant altitude of Polaris to obtain latitude; this correction for the offset of Polaris from the north celestial pole varies with the local hour angle of Aries, latitude, and date.

Polaris missile [ORD] A U.S. Navy surface-to-surface intermediate-range ballistic missile designed to be launched from submarines and surface ships for accurate bombardment of small target areas with conventional or nuclear warheads at ranges up to 2500 nautical miles (4600 kilometers).

polarity [COMMUN] **1.** The direction in which a direct current flows, in a teletypewriter system. **2.** The sense of the potential of a portion of a television picture signal representing a dark area of a scene relative to the potential of a portion of the signal representing a light area. [MATH] Property of a line segment whose two ends are distinguishable. [MOL BIO] The orientation of a strand of polynucleotide with respect to its partner, expressed in terms of nucleotide linkages. [PHYS] Property of a physical system which has two points with different (usually opposite) characteristics, such as one which has opposite charges or electric potentials, or opposite magnetic poles.

polarity effect [ELECTR] An effect for which the breakdown voltage across a vacuum separating two electrodes, one of which is pointed, is much higher when the pointed electrode is the anode.

polarity epoch [GEOPHYS] A period of time during which the earth's magnetic field was predominantly of a single polarity.

polarity event [GEOPHYS] A period of no more than about 100,000 years when the earth's magnetic polarity was opposite to the predominant polarity of that polarity epoch.

polarizability [ELEC] The electric dipole moment induced in a system, such as an atom or molecule, by an electric field of unit strength.

polarizability catastrophe [ELEC] According to a theory using the Lorentz field concept, the phenomenon where, at a certain temperature, the dielectric constant of a material becomes infinite.

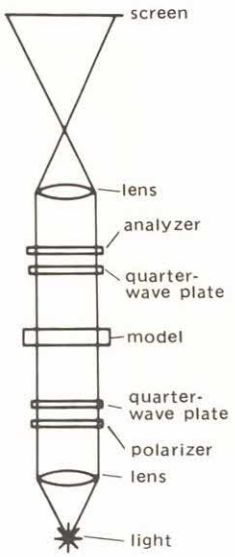
polarizability ellipsoid *See* index ellipsoid.

polarization [ELEC] **1.** The process of producing a relative displacement of positive and negative bound charges in a body by applying an electric field. **2.** A vector quantity equal to the electric dipole moment per unit volume of a material. Also known as dielectric polarization; electric polarization. **3.** A chemical change occurring in dry cells during use, increasing the internal resistance of the cell and shortening its useful life. [PHYS] **1.** Phenomenon exhibited by certain electromagnetic waves and other transverse waves in which the direction of the electric field or the displacement direction of the vibrations is constant or varies in some definite way. **2.** The direction of the electric field or the displacement vector of a wave exhibiting polarization (first definition). **3.** The process of bringing about polarization (first definition) in a transverse wave. **4.** Property of a collection of particles with spin, in which the majority have spin components pointing in one direction, rather than at random.

polarization charge *See* bound charge.

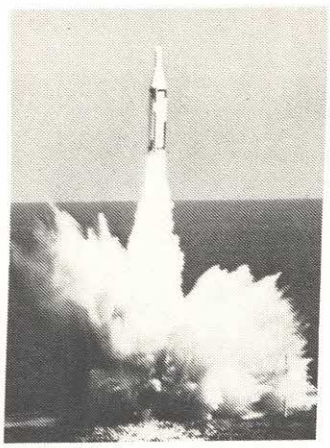
polarization diversity [COMMUN] A method of transmission and reception used to minimize the effects of selective fading of the horizontal and vertical components of a radio

POLARISCOPE



A polariscope used in measuring photoelastic stress.

POLARIS MISSILE



Polaris missile being fired from a submerged submarine. *(Official U.S. Navy photograph)*

signal; it is usually accomplished through the use of separate vertically and horizontally polarized receiving antennas.

polarization ellipse [PHYS] The ellipse traced out by the tip of the electric field vector or the displacement vector of a polarized wave at a fixed point in space in the course of time.

polarization error [NAV] An error in a radio direction-finder bearing or the course indicated by a radio beacon because of a change in the polarization of the radio waves between the transmitter and receiver on being reflected from the ionosphere. Formerly referred to as night effect because it occurs principally during the night.

polarization fading [COMMUN] Fading as the result of changes in the direction of polarization in one or more of the propagation paths of waves arriving at a receiving point.

polarization isocline [METEOROL] A locus of all points at which the inclination to the vertical of the plane of polarization of the diffuse sky radiation has the same value.

polarization potential [ELECTROMAG] One of two vectors from which can be derived, by differentiation, an electric scalar potential and magnetic vector potential satisfying the Lorentz condition. Also known as Hertz vector. [PHYS CHEM] The reverse potential of an electrolytic cell which opposes the direct electrolytic potential of the cell.

polarization spectroscopy [SPECT] A type of saturation spectroscopy in which a circularly polarized saturating laser beam depletes molecules with a certain orientation preferentially, leaving the remaining ones polarized; the latter are detected through their induction of elliptical polarization in a probe beam, allowing the beam to pass through crossed linear polarizers.

polarized ceramics [MATER] A substance, such as lead zirconate and barium titanate, having high electromechanical conversion efficiency and used as a transducer element in an ultrasonic system.

polarized electrolytic capacitor [ELEC] An electrolytic capacitor in which the dielectric film is formed adjacent to only one metal electrode; the impedance to the flow of current is then greater in one direction than in the other.

polarized electromagnetic radiation [ELECTROMAG] Electromagnetic radiation in which the direction of the electric field vector is not random.

polarized ion source [ELECTR] A device that generates ion beams in such a manner that the spins of the ions are aligned in some direction.

polarized light [OPTICS] Polarized electromagnetic radiation whose frequency is in the optical region.

polarized meter [ENG] A meter having a zero-center scale, with the direction of deflection of the pointer depending on the polarity of the voltage or the direction of the current being measured.

polarized neutrons [PHYS] A collection of neutrons in which the majority have spin pointing in one direction rather than at random.

polarized plug [ELEC] A plug that can be inserted in its receptacle only when in a predetermined position.

polarized receptacle [ELEC] A receptacle designed for use with a polarized plug, to ensure that the grounded side of an alternating-current line or the positive side of a direct-current line is always connected to the same terminal on a piece of equipment.

polarized relay [ELEC] Relay in which the movement of the armature depends upon the direction of the current in the circuit controlling the armature. Also known as polar relay.

polarized scattering [PHYS CHEM] In a quasielastic light scattering experiment performed with polarizers, the type of scattering produced when the polarizers select both the incident and final polarizations perpendicular to the scattering plane.

polarized-vane ammeter [ENG] An ammeter of only moderate accuracy in which the current to be measured passes through a small coil, distorting the field of a circular permanent magnet, and an iron vane aligns itself with the axis of the distorted field, the deflection being roughly proportional to the current.

polarizer [OPTICS] A device which produces polarized light, such as a Nicol prism or Polaroid sheet.

polarizing angle *See* Brewster's angle.

polarizing filter [OPTICS] A device which selectively absorbs components of electromagnetic radiation passing through it, so that light emerging from it is plane-polarized.

polarizing microscope [OPTICS] A microscope in which an object is viewed in polarized light.

polar keying [COMMUN] Telegraph signal in which circuit current flows in one direction for spacing.

polar lake [HYD] A lake whose surface temperature never exceeds 4°C.

polar low *See* polar vortex.

polar maritime air [METEOROL] Air of an air mass that originates in the polar regions and is then modified by passing over a relatively warm ocean surface; characterized by moderately low temperature, moderately high surface specific humidity, and a considerable degree of vertical instability.

polar meteorology [METEOROL] The application of meteorological principles to a study of atmospheric conditions in the earth's high latitudes or polar-cap regions, northern and southern.

polar migration *See* polar wandering.

polar modulation [COMMUN] Amplitude modulation in which the positive excursions of the carrier are modulated by one signal and the negative excursions by another.

polar molecule [PHYS CHEM] A molecule having a permanent electric dipole moment.

polar mutations [GEN] A class of mutations in the genes of an operon that affect the expression not only of the gene in which the mutation resides, but also of the genes located to one side of the mutated gene.

polar navigation [NAV] Navigation in polar regions, where unique considerations and techniques are applied; no definite limit for these regions is recognized, but polar navigation techniques are usually used from about latitude 70° to the nearest pole, north or south.

polar night [ASTRON] The period of winter darkness in the polar regions, both northern and southern.

polar nucleus [BOT] One of the two nuclei in the center of the embryo sac of a seed plant which fuse to form the endosperm nucleus.

polarogram [ANALY CHEM] Plotted output (current versus electrode voltage) for polarographic analysis of an electrolyte.

polarographic analysis [ANALY CHEM] An electroanalytical technique in which the current through an electrolysis cell is measured as a function of the applied potential; the apparatus consists of a potentiometer for adjusting the potential, a galvanometer for measuring current, and a cell which contains two electrodes, a reference electrode whose potential is constant and an indicator electrode which is commonly the dropping mercury electrode. Also known as polarography.

polarographic cell [ANALY CHEM] Device for polarographic (voltammetric) analysis of an electrolyte solution; a known voltage is applied to the solution, and the ensuing current that passes through the cell (to an electrode) is measured.

polarographic maximum [ANALY CHEM] A deceptively high voltage buildup on an electrode during polarographic analysis of an electrolyte; caused by a reduction or oxidation process at the electrode.

polarography *See* polarographic analysis.

polaron [SOLID STATE] An electron in a crystal lattice together with a cloud of phonons that result from the deformation of the lattice produced by the interaction of the electron with ions or atoms in the lattice.

polar orbit [AERO ENG] A satellite orbit running north and south, so the satellite vehicle orbits over both the North Pole and the South Pole.

polar outbreak [METEOROL] The movement of a cold air mass from its source region; almost invariably applied to a vigorous equatorward thrust of cold polar air, a rapid equatorward movement of the polar front. Also known as cold-air outbreak.

polar projection [MAP] A map projection centered on a pole.

polar radiation pattern [ELECTROMAG] Diagram showing the relative strength of the radiation from an antenna in all directions in a given plane. [ENG ACOUS] Diagram showing the strength of sound waves radiated from a loudspeaker in various directions in a given plane, or a similar response pattern for a microphone.

polar regions [GEOGR] The regions near the geographic poles; no definite limit for these regions is recognized.

polar relay *See* polarized relay.

polar resolution [COMPUT SCI] Given the x and y

components of a vector, the process of finding the magnitude of the vector and the angle it makes with the x axis.

polar sequence [ASTRON] A compilation of 96 brightness-standard stars within 2° of the North Pole.

polar solvent [MATER] A solvent in whose molecules there is either a permanent separation of positive and negative charges, or the centers of positive and negative charges do not coincide; these solvents have high dielectric constants, are chemically active, and form coordinate covalent bonds; examples are alcohols and ketones.

polar symmetry [CRYSTAL] A type of crystal symmetry in which the two ends of the central crystallographic axis are not symmetrical.

polar telescope [OPTICS] A telescope which uses rotating mirrors to enable celestial objects to be observed through a fixed eyepiece.

polar timing diagram [MECH ENG] A diagram of the events of an engine cycle relative to crankshaft position.

polar transmission [COMMUN] **1.** A method of signaling in teletypewriter transmission in which direct currents flowing in opposite directions represent a mark and a space respectively, and absence of current indicates a no-signal condition. **2.** By extension, any system of signaling that uses three conditions, representing a mark, a space, or a no-signal condition.

polar triangle [MATH] A triangle associated to a given spherical triangle obtained from three directed lines perpendicular to the planes associated with the sides of the original triangle.

polar trough [METEOROL] In tropical meteorology, a wave trough in the circumpolar westerlies having sufficient amplitude to reach the tropics in the upper air; at the surface it is reflected as a trough in the tropical easterlies, but at moderate elevations it is characterized by westerly winds.

polar variation [GEOPHYS] A small movement of the earth's axis of rotation relative to the geoid, the resultant of the Chandler wobble and other smaller movements.

polar vector *See* vector.

polar vortex [METEOROL] The large-scale cyclonic circulation in the middle and upper troposphere centered generally in the polar regions; specifically, the vortex has two centers in the mean, one near Baffin Island and another over northeastern Siberia; the associated cyclonic wind system comprises the westerlies of middle latitudes. Also known as circumpolar whirl; polar cyclone; polar low.

polar wandering [GEOL] Migration during geologic time of the earth's poles of rotation and magnetic poles. Also known as Chandler motion; polar migration.

polar westerlies *See* westerlies.

polder [CIV ENG] Land reclaimed from the sea or other body of water by the construction of an embankment to restrain the water.

pole [CRYSTAL] A direction perpendicular to one of the faces of a crystal. [ELEC] **1.** One of the electrodes in an electric cell. **2.** An output terminal on a switch; a double-pole switch has two output terminals. [MATH] **1.** An isolated singular point z_0 of a complex function whose Laurent series expansion about z_0 will include finitely many terms of form $a_n(z-z_0)^{-n}$. **2.** For a great circle on a sphere, the pole of the circle is a point of intersection of the sphere and a line that passes through the center of the sphere and is perpendicular to the plane of the circle. **3.** For a conic section, the pole of a line is the intersection of the tangents to the conic at the points of intersection of the conic with the line. **4.** For a quadric surface, the pole of a plane is the vertex of the cone which is tangent to the surface along the curve where the plane intersects the surface. [MECH] **1.** A point at which an axis of rotation or of symmetry passes through the surface of a body. **2.** *See* perch.

pole blight [PL PATH] A destructive disease of white pines characterized by shortening of the needle-bearing stems, yellowing and shortening of needles, and copious flow of resin.

pole-changing control [ELECTROMAG] A method of obtaining two or more running speeds of a three-phase motor by making changes in the number of magnetic poles, usually by making changes in the coil connections at the winding terminals.

pole-dipole array [ENG] An electrode array used in a lateral search conducted during a resistivity or induced polarization survey, or in drill hole logging, in which one current electrode is placed at infinity while another current electrode and two potential electrodes in proximity are moved across the structure to be investigated.

pole dominance [PARTIC PHYS] Property of a scattering amplitude, analytically continued to complex values of energy and scattering angle, whose behavior is dominated by the term or terms of negative power in the Laurent series of a nearby pole.

pole face [ELECTROMAG] The end of a magnetic core that faces the air gap in which the magnetic field performs useful work.

pole-face winding [ELECTROMAG] Winding in the pole face of a motor or generator used to neutralize the cross-magnetizing armature reaction under the pole faces, which would otherwise cause a nonuniform distribution of voltage between commutator segments. Also known as compensated winding.

pole horn [ELECTROMAG] The part of a pole piece or pole shoe in an electrical machine that projects circumferentially beyond the pole core.

pole lathe [MECH ENG] A simple lathe in which the work is rotated by a cord attached to a treadle.

Polemoniaceae [BOT] A family of autotrophic dicotyledonous plants in the order Polemoniales distinguished by lack of internal phloem, corolla lobes that are convolute in the bud, three carpels, and axile placentation.

Polemoniales [BOT] An order of dicotyledonous plants in the subclass Asteridae, characterized by sympetalous flowers, a regular, usually five-lobed corolla, and stamens equal in number and alternate with the petals.

pole of inaccessibility *See* ice pole.

pole piece [ELECTROMAG] A piece of magnetic material forming one end of an electromagnet or permanent magnet, shaped to control the distribution of magnetic flux in the adjacent air gap.

pole-pole array [ENG] An electrode array, used in lateral search or in logging, in which one current electrode and the other potential electrode are kept in proximity and traversed across the structure.

pole-positioning [CONT SYS] A design technique used in linear control theory in which many or all of a system's closed-loop poles are positioned as required, by proper choice of a linear state feedback law; if the system is controllable, all of the closed-loop poles can be arbitrarily positioned by this technique.

pole shoe [ELECTROMAG] Portion of a field pole facing the armature of the machine; it may be separable from the body of the pole.

Pole Star *See* Polaris.

polestar recorder [ENG] An instrument used to determine approximately the amount of cloudiness during the dark hours; consists of a fixed long-focus camera positioned so that Polaris is permanently within its field of view; the apparent motion of the star appears as a circular arc on the photograph and is interrupted as clouds come between the star and the camera.

pole strength *See* magnetic pole strength.

pole tide [OCEANOGR] An ocean tide, theoretically 6 millimeters in amplitude, caused by the Chandler wobble of the earth; has a period of 428 days.

pole-zero configuration [CONT SYS] A plot of the poles and zeros of a transfer function in the complex plane; used to study the stability of a system, its natural motion, its frequency response, and its transient response.

polhode [MECH] For a rotating rigid body not subject to external torque, the closed curve traced out on the inertia ellipsoid by the intersection with this ellipsoid of an axis parallel to the angular velocity vector and through the center.

Polhode cone *See* body cone.

polian vesicle [INV ZOO] Interradial reservoirs connecting with the ring vessel in most asteroids and holothuroids.

poling [ELEC] Adjustment of polarity; specifically, in wireline practice, the use of transpositions between transposition sections of open wire or between lengths of cable, to cause the residual cross-talk couplings in individual sections or lengths to oppose one another. [MET] A technique used in the refining of copper that consists of the thrusting of green-wood poles into the molten metal in order to generate the reducing gases that react with the oxides in the metal. [MIN ENG] The act or process of temporarily protecting the face of a level, drift, or cut by driving poles or planks along the sides of the yet unbroken ground.

poling back [MIN ENG] Carrying out excavation behind timbering already in place.

poling board [CIV ENG] A timber plank driven into soft soil to support the sides of an excavation.

polioencephalomyelitis [MED] A disease in which both the gray matter of the brain and the spinal cord are inflamed.

poliomyelitis [MED] An acute infectious viral disease which in its most serious form involves the central nervous system and, by destruction of motor neurons in the spinal cord, produces flaccid paralysis. Also known as Heine-Medin disease; infantile paralysis.

poliovirus vaccine [IMMUNOL] A vaccine prepared from one or all three types of polioviruses in a live or attenuated state.

polish [MATER] A powder, liquid, or semiliquid used to give smoothness, surface protection, or decoration to finishes; for example, finely ground red oxide (rouge) is used to polish plate glass, mirror backs, and optical glass; solvent-wax liquids and pastes are used to protect and enhance leather and wood surfaces; nitrocellulose lacquers are used to paint finger- and toenails.

polished cotton [TEXT] Cotton fabric, usually of plain weave, with a glazed finish produced with resin.

polished-joint hanger [PETRO ENG] A type of tubing hanger that is slipped over or assembled around the top tubing joint in an oil well tubing string.

polishing [CHEM ENG] In petroleum refining, removal of final traces of impurities, as for a lubricant, by clay adsorption or mild hydrogen treating. [MECH ENG] Smoothing and brightening a surface such as a metal or a rock through the use of abrasive materials.

polishing roll [MECH ENG] A roll or series of rolls on a plastics mold; has highly polished chrome-plated surfaces; used to produce a smooth surface on a plastic sheet as it is extruded.

polishing wheel [DES ENG] An abrasive wheel used for polishing.

Polish notation [COMPUT SCI] **1.** A notation system for digital-computer or calculator logic in which there are no parenthetical expressions and each operator is a binary or unary operator in the sense that it operates on not more than two operands. Also known as Lukasiewicz notation; parenthesis-free notation. **2.** The version of this notation in which operators precede the operands with which they are associated. Also known as prefix notation.

pollen [BOT] The small male reproductive bodies produced in pollen sacs of the seed plants.

pollen count [BOT] The number of grains of pollen that collect on a specified area (often taken as 1 square centimeter) in a specified time.

pollen tube [BOT] The tube produced by the wall of a pollen grain which enters the embryo sac and provides a passage through which the male nuclei reach the female nuclei.

pollination [BOT] The transfer of pollen from a stamen to a pistil; fertilization in flowering plants.

polling [COMMUN] A process that involves interrogating in succession every terminal on a shared communications line to determine which of the terminals are in need of servicing.

polling list [COMMUN] A roster of transmitting devices sequentially scanned in a time-sharing system.

pollucite [MINERAL] $(Cs,Na)_2Al_2Si_4O_{12}\cdot H_2O$ A colorless, transparent zoolite mineral composed of hydrous silicate of cesium, sodium, and aluminum, occurring massive or in cubes; used as a gemstone. Also known as pollux.

pollution [ECOL] Destruction or impairment of the purity of the environment. [PHYSIO] Emission of semen at times other than during coitus.

pollux *See* pollucite.

Pollux [ASTRON] A giant orange-yellow star with visual brightness of 1.16, a little less than 35 light-years from the sun, spectral classification K0-III, in the constellation Gemini; the star β Geminorum.

polonium [CHEM] A chemical element, symbol Po, atomic number 84; all polonium isotopes are radioactive; polonium-210 is the naturally occurring isotope found in pitchblende.

polonium-210 [NUC PHYS] Radioactive isotope of polonium; mass 210, half-life 140 days, α-radiation; used to calibrate radiation counters, and in oil well logging and atomic batteries. Also known as radium F.

poly- [ORG CHEM] A chemical prefix meaning many; for example, a polymer is made of a number of single molecules known as monomers, as polyethylene is made from ethylene.

polyacetals *See* acetal resins.

polyacrylamide [ORG CHEM] $(CH_2CHCONH_2)_x$ A white, water-soluble high polymer based on acrylamide; used as a thickening or suspending agent in water-base formulations.

polyacrylate [ORG CHEM] A polymer of an ester or salt of acrylic acid.

polyacrylic acid [ORG CHEM] $(CH_2CHCOOH)_x$ An acrylic or acrylate resin formed by the polymerization of acrylic acid; water-soluble; used as a suspending and textile-sizing agent, and in adhesives, paints, and hydraulic fluids.

polyacrylic fiber [ORG CHEM] Continuous-strand fiber extruded from an acrylate resin.

polyacrylonitrile [ORG CHEM] Polymer of acrylonitrile; semiconductive; used like an inorganic oxide catalyst to dehydrogenate *tert*-butyl alcohol to produce isobutylene and water.

polyalcohol *See* polyhydric alcohol.

polyalgorithm [MATH] A set of algorithms together with a strategy for choosing and switching among them.

polyallomer [ORG CHEM] A copolymer of propylene with other olefins.

polyamide *See* polyamide resin.

polyamide resin [ORG CHEM] Product of polymerization of amino acid or the condensation of a polyamine with a polycarboxylic acid; an example is the nylons. Also known as polyamide.

Polyangiaceae [MICROBIO] A family of bacteria in the order Myxobacterales; vegetative cells and myxospores are cylindrical with blunt, rounded ends; the slime capsule is lacking; sporangia are sessile or stalked.

Polyangium [MICROBIO] A genus of bacteria in the family Polyangiaceae; sporangia are sessile, and vegetative cells and myxospores are rod-shaped.

polyargyrite [MINERAL] $Ag_{24}Sb_2S_{15}$ A gray to black mineral composed of antimony silver sulfide.

polyarteritis [MED] Inflammation of several arteries simultaneously. Also known as panarteritis.

polyarteritis nodosa [MED] A systemic disease characterized by widespread inflammation of small- and medium-sized arteries in which some of the foci are nodular. Also known as disseminated necrotizing periarteritis; periarteritis nodosa.

polyarthritis [MED] Inflammation of several joints simultaneously.

polyatomic molecule [CHEM] A chemical molecule with three or more atoms.

polyaxon [INV ZOO] A spicule that is laid down along several axes.

polybasic [CHEM] A chemical compound in solution that yields two or more H^- ions per molecule, such as sulfuric acid, H_2SO_4.

polybasite [MINERAL] $(Ag,Cu)_{16}Sb_2S_{11}$ An iron-black to steel-gray metallic-looking mineral; an ore of silver.

polyblend [MATER] A mechanical mixture of two or more polymers, such as polystyrene and rubber.

Polybrachiidae [INV ZOO] A family of sedentary marine animals in the order Thecanephria.

polybutadiene [ORG CHEM] Oil-extendable synthetic elastomer polymer made from butadiene; resilience is similar to natural rubber; it is blended with natural rubber for use in tire and other rubber products. Also known as butadiene rubber.

polybutene [ORG CHEM] A polymer of isobutene, $(CH_3)_2CCH_2$; made in varying chain lengths to give a wide range of properties from oily to solid; used as a lube-oil additive, in adhesives, and in rubber products.

polybutylene [ORG CHEM] A polymer of one or more butylenes whose consistency ranges from a viscous liquid to a rubbery solid.

polycarbonate [ORG CHEM] $[OC_6H_4C(CH_3)_2C_6H_4OCO]_x$ A linear polymer of carbonic acid which is a thermoplastic synthetic resin made from bisphenol and phosgene; used in emulsion coatings with glass fiber reinforcement.

polycarboxylic [ORG CHEM] Prefix for a compound containing two or more carboxyl (—COOH) groups.

Polychaeta [INV ZOO] The largest class of the phylum Annelida, distinguished by paired, lateral, fleshy appendages (parapodia) provided with setae, on most segments.

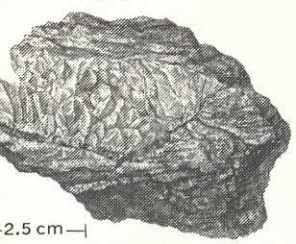
polychlorinated biphenyl [ORG CHEM] A colorless liquid, used as an insulating fluid in electrical equipment.

polychroism *See* pleochroism.

polychromatic radiation [ELECTROMAG] Electromagnetic radiation that is spread over a range of frequencies.

polychrome *See* esculin.

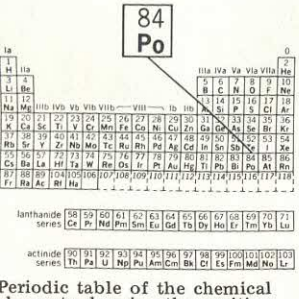
POLLUCITE



2.5 cm

Pollucite crystals with spodumene, Paris, Maine. (Specimen from Department of Geology, Bryn Mawr College)

POLONIUM



Periodic table of the chemical elements showing the position of polonium.

Polycirrinae [INV ZOO] A subfamily of polychaete annelids in the family Terebellidae.

polycistronic messenger [BIOCHEM] In ribonucleic acid viruses, messenger ribonucleic acid that contains the amino acid sequence for several proteins.

Polycladida [INV ZOO] A class of marine Turbellaria whose leaflike bodies have a central intestine with radiating branches, many eyes, and tentacles in most species.

polyclimax [ECOL] A climax community under the controlling influence of many environmental factors, including soils, topography, fire, and animal interactions.

polyclinal fold [GEOL] One of a group of adjacent folds, the axial surfaces of which are oriented randomly, but which have similar surface axes.

polyclonal mixed cryoglobulin [BIOCHEM] A cryoglobun made of heterogeneous immunoglobin molecules belonging to two or more different classes, and sometimes additional serum proteins.

polycondensation [ORG CHEM] A chemical condensation leading to the formation of a polymer by the linking together of molecules of a monomer and the releasing of water or a similar simple substance.

polyconic chart [MAP] A chart on the polyconic projection.

polyconic projection [MAP] A conic map projection in which the surface of a sphere or spheroid, such as the earth, is conceived as developed on a series of tangent cones, which are then spread out to form a plane; a separate cone is used for each small zone.

Polycopidae [INV ZOO] The single family of the suborder Cladocopa.

polycrase [MINERAL] $(Y,Ca,Ce,U,Th)(Ti,Cb,Ta)_2O_6$ Black mineral composed of titanate, columbate, and tantalate of yttrium-group metals; it is isomorphous with euxenite and occurs in granite pegmatites.

polycrystal [MATER] A polycrystalline solid.

polycrystalline [MATER] **1.** Pertaining to a material composed of aggregates of individual crystals. **2.** Characterized by variously oriented crystals.

Polyctenidae [INV ZOO] A family of hemipteran insects in the superfamily Cimicoidea; the individuals are bat ectoparasites which resemble bedbugs but lack eyes and have ctenidia and strong claws.

polycyclic [ORG CHEM] A molecule that contains two or more closed atomic rings; can be aromatic (such as DDT), aliphatic (bianthryl), or mixed (dicarbazyl).

polycyclic hydrocarbon *See* polynuclear hydrocarbon.

polycyesis [MED] Multiple pregnancy.

polycystic kidney [MED] A usually hereditary, congenital, and bilateral disease in which a large number of cysts are present on the kidney.

polycythemia [MED] A condition characterized by an increased number of erythrocytes in the circulation.

polycythemia vera [MED] An absolute increase in all blood cells derived from bone marrow, especially erythrocytes.

polydactyly [MED] The condition of having supernumerary fingers or toes.

polydipsia [MED] Excessive thirst.

polydispersity [CHEM] Molecular-weight nonhomogeneity in a polymer system; that is, there is some molecular-weight distribution throughout the body of the polymer.

Polydolopidae [PALEON] A Cenozoic family of rodentlike marsupial mammals.

polydymite [MINERAL] Ni_3S_4 A mineral of the linnaeite group consisting of nickel sulfide.

polyelectrolyte [ORG CHEM] A natural or synthetic electrolyte with high molecular weight, such as proteins, polysaccharides, and alkyl addition products of polyvinyl pyridine; can be a weak or strong electrolyte; when dissociated in solution, it does not give uniform distribution of positive and negative ions (the ions of one sign are bound to the polymer chain while the ions of the other sign diffuse through the solution).

polyembryony [ZOO] A form of sexual reproduction in which two or more offspring are derived from a single egg.

polyene [ORG CHEM] Compound containing many double bonds, such as the carotenoids.

polyester fiber [TEXT] A fiber filament made from a material that is 85% or more thermoplastic polyester resin.

polyester film [MATER] Thin film made of polyester resin; used for packaging food and other products.

polyester laminate [MATER] Glass fabric or fiber mat impregnated with a polyester resin slurry, and cured; used to make sheets, bars, and structural shapes.

polyester-reinforced urethane [MATER] A poromeric material which may have a urethane impregnation or a silicone coating; used for shoe uppers and as a substitute for industrial leathers.

polyester resin [ORG CHEM] A thermosetting or thermoplastic synthetic resin made by esterification of polybasic organic acids with polyhydric acids; examples are Dacron and Mylar; the resin has high strength and excellent resistance to moisture and chemicals when cured.

polyester rubber *See* polyurethane rubber.

polyestrous [PHYSIO] Having several periods of estrus in a year.

polyether resin [ORG CHEM] A polymer that contains $-(CH_2CHRO-)_x$ in the main-chain or side-chain linkage.

polyethylene *See* ethylene resin.

polyethylene glycol [ORG CHEM] Any of a family of colorless, water-soluble liquids with molecular weights from 200 to 6000; soluble also in aromatic hydrocarbons (not aliphatics) and many organic solvents; used to make emulsifying agents and detergents, and as plasticizers, humectants, and water-soluble textile lubricants.

polyethylene glycol distearate *See* polyglycol distearate.

polyethylene resin *See* ethylene resin.

polyethylene terephthalate [ORG CHEM] A thermoplastic polyester resin made from ethylene glycol and terephthalic acid; melts at 265°C; used to make films or fibers.

polyforming [CHEM ENG] A noncatalytic, petroleum-refinery process charging C_3 and C_4 gases with naphtha or gas oil at high temperature to produce high-quality gasoline and fuel oil; mostly replaced by catalytic reforming; the product is known as polyformdistillate.

Polygalaceae [BOT] A family of dicotyledonous plants in the order Polygalales distinguished by having a bicarpellate pistil and monadelphous stamens.

polygalacturonase [BIOCHEM] An enzyme that catalyzes the hydrolysis of glycosidic linkage of polymerized galacturonic acids.

Polygalales [BOT] An order of dicotyledonous plants in the subclass Rosidae characterized by its simple leaves and usually irregular, hypogynous flowers.

polygamous [BOT] Having both perfect and imperfect flowers on the same plant. [VERT ZOO] Having more than one mate at one time.

polygen *See* polyvalent.

polygene [GEN] One of a group of nonallelic genes that collectively control a quantitative character. [GEOL] A term applied specifically to an igneous rock composed of two or more minerals. Also known as polymere.

polygenetic [GEOL] **1.** Resulting from more than one process of formation or derived from more than one source, or originating or developing at various places and times. **2.** Consisting of more than one type of material, or having a heterogeneous composition. Also known as polygenic.

polygenic *See* polygenetic.

polygeosyncline [GEOL] A geosynclinal-geoanticlinal belt that lies along the continental margin and receives sediments from a borderland on its oceanic side.

polyglycol [ORG CHEM] A dihydroxy ether derived from the dehydration (removal of a water molecule) of two or more glycol molecules; an example is diethylene glycol, $CH_2OHCH_2OCH_2CH_2OH$.

polyglycol distearate [ORG CHEM] $(C_{17}H_{35})_2CO_2CO(CH_2CH_2O)_x$ An off-white, soft solid with a melting point of 43°C; soluble in chlorinated solvents, acetone, and light esters; used as a resin plasticizer. Also known as polyethylene glycol distearate.

Polygnathidae [PALEON] A family of Middle Silurian to Cretaceous conodonts in the suborder Conodontiformes, having platforms with small pitlike attachment scars.

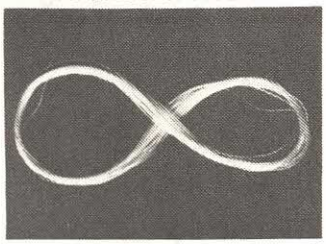
polygon [MATH] A figure in the plane given by points p_1, $p_2, \ldots, p_n$ and line segments p_1p_2, p_2p_3, $\ldots$, $p_{n-1}p_n$, p_np_1.

Polygonaceae [BOT] The single family of the order Polygonales.

Polygonales [BOT] An order of dicotyledonous plants in the subclass Caryophyllidae characterized by well-developed endosperm, a unilocular ovary, and often trimerous flowers.

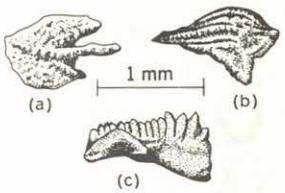
polygonal ground [GEOL] A ground surface consisting of polygonal arrangements of rock, soil, and vegetation formed on

POLYESTER FIBER



Continuous-filament polyester fiber; it lends abrasion resistance to fabrics.

POLYGNATHIDAE



Toothlike shapes of polygnaths show their platformlike appearance. *(a) Ancyrodella. (b) Palmatolepis. (c) Polygnathus.*

POLYGONALES

Polygonum hydropiper, eastern American smartweed, characteristic of order Polygonales. Sheathing stipules and many tiny flowers are typical of group. *(Photograph by A. W. Ambler, from National Audubon Society)*

a level or gently sloping surface by frost action. Also known as cellular soil.

polygonal karst [GEOL] A karst pattern that is characteristic of tropical types such as cone karsts, with the surface completely divided into a polygonal network.

polygonal method [MIN ENG] A method of estimating ore reserves in which it is assumed that each drill hole has an area of influence extending halfway to the neighboring drill holes.

polygonal ring structure [ASTRON] A lunar crater whose wall approximates a polygon in shape.

polygonization [SOLID STATE] A phenomenon observed during the annealing of plastically bent crystals in which the edge dislocations created by cold working organize themselves vertically above each other so that polygonal domains are formed.

polygraph *See* lie detector.

polyhalite [MINERAL] $K_2MgCa_2(SO_4)_4 \cdot 2H_2O$ A sulfate mineral usually found in fibrous brick-red masses due to iron.

polyhedral angle [MATH] The shape formed by the lateral faces of a polyhedron which have a common vertex.

polyhedral disease *See* polyhedrosis.

polyhedric projection [MAP] A projection for large-scale topographic maps in which a small quadrangle on the sphere or spheroid is projected onto a plane trapezoid, the rectilinear parallels and meridians corresponding closely to arc distances on the sphere or spheroid.

polyhedron [MATH] A solid bounded by planar polygons.

polyhedrosis [INV ZOO] Any of several virus diseases of insect larvae characterized by the breakdown of tissues and presence of polyhedral granules. Also known as polyhedral disease.

polyhidrosis *See* hyperhidrosis.

polyhydramnios [MED] An excessive volume of amniotic fluid. Also known as hydramnios.

polyhydric alcohol [ORG CHEM] An alcohol with many hydroxyl (—OH) radicals, such as glycerol, $C_3H_5(OH_3)$. Also known as polyalcohol; polyol.

polyhydric phenol [ORG CHEM] A phenolic compound containing two or more hydroxyl groups, such as diphenol, $C_6H_4(OH)_2$.

polyimide resin [ORG CHEM] An aromatic polyimide made by reacting pyromellitic dianhydride with an aromatic diamine; has high resistance to thermal stresses; used to make components of internal combustion engines.

polyisoprene [ORG CHEM] $(C_5H_8)_x$ The basis of natural rubber, balata, gutta-percha, and other rubberlike materials; can also be made synthetically; the stereospecific forms are *cis*-1,4- and *trans*-1,4-polyisoprene; the polymer is thermoplastic.

polylactic resin [ORG CHEM] A soft, elastic resin made by the heat reaction of lactic acid with castor oil or other fatty oils; used to produce tough, water-resistant coatings.

polyliner [ENG] A perforated sleeve with longitudinal ribs that is used inside the cylinder of an injection-molding machine.

polymenorrhea *See* metrorrhagia.

polymer [ORG CHEM] Substance made of giant molecules formed by the union of simple molecules (monomers); for example polymerization of ethylene forms a polyethylene chain, or condensation of phenol and formaldehyde (with production of water) forms phenol-formaldehyde resins.

Polymera [INV ZOO] Formerly a subphylum of the Vermes; equivalent to the phylum Annelida.

polymerase [BIOCHEM] An enzyme that links nucleotides together to form polynucleotide chains.

polymere *See* polygene.

polymer gasoline [MATER] A product of polymerization of normally gaseous hydrocarbons to form high-octane liquid hydrocarbons boiling in the gasoline range.

polymerization [CHEM] **1.** The bonding of two or more monomers to produce a polymer. **2.** Any chemical reaction that produces such a bonding.

polymer paint [MATER] A paint made of acrylic resin or vinyl resin, or a combination of both resins, in a liquid form with water as the base; it spreads out in a layer, and the water evaporates to leave a continuous, flexible, and waterproof film of plastic.

polymer plastic [MATER] The product of a high polymer with or without additives, such as plasticizers, autooxidants, colorants, or fillers; can be sprayed, shaped, molded, extruded, cast or foamed, depending on whether it is thermoplastic or thermosetting.

polymetamorphic diaphthoresis [GEOL] Retrograde changes during a second phase of metamorphism that is clearly separated from a previous, higher-grade metamorphic period.

polymetamorphism [GEOL] Polyphase or multiple metamorphism whereby two or more successive metamorphic events have left their imprint upon the same rocks.

polymethyl methacrylate [ORG CHEM] A thermoplastic polymer derived from methyl methacrylate, $CH_2{=}C(CH_3)COOCH_3$; transparent solid with excellent optical qualities and water resistance; used for aircraft domes, lighting fixtures, optical instruments, and surgical appliances.

polymictic [HYD] Pertaining to or characteristic of a lake having no stabile thermal stratification. [PETR] Of a clastic sedimentary rock, being made up of many rock types or of more than one mineral species.

polymignite *See* polymignyte.

polymignyte [MINERAL] $(Ca,Fe,Y,Zr,Th)(Nb,Ti,Ta)O_4$ A black mineral composed of niobate, titanate, and tantalate of cerium-group metals, with calcium and iron. Also spelled polymignite.

polymodal distribution [STAT] A frequency distribution characterized by two or more localized modes, each having a higher frequency of occurrence than other immediately adjacent individuals or classes.

polymorph [BIOL] An organism that exhibits polymorphism. [CRYSTAL] One of the crystal forms of a substance displaying polymorphism. Also known as polymorphic modification. [HISTOL] *See* granulocyte.

polymorphic modification *See* polymorph.

polymorphism [BIOL] **1.** Occurrence of different forms of individual in a single species. **2.** Occurrence of different structural forms in a single individual at different periods in the life cycle. [CRYSTAL] The property of a chemical substance crystallizing into two or more forms having different structures, such as diamond and graphite. Also known as pleomorphism. [GEN] The coexistence of genetically determined distinct forms in the same population, even the rarest of them being too common to be maintained solely by mutation; human blood groups are an example.

polymorphonuclear leukocyte *See* granulocyte.

polymyarian [INV ZOO] Referring to the cross-sectional appearance of muscle cells in a nematode, having many cells in each quadrant.

polymyositis [MED] Inflammation of many muscles simultaneously.

polymyxin [MICROBIO] Any of the basic polypeptide antibiotics produced by certain strains of *Bacillus polymyxa*.

Polynemidae [VERT ZOO] A family of perciform shore fishes in the suborder Mugiloidei.

polyneuritis [MED] Degenerative or inflammatory lesions of several nerves simultaneously, usually symmetrical. Also known as multiple neuritis.

Polynoidae [INV ZOO] The largest family of polychaetes, included in the Errantia and having a body of varying size and shape that is covered with elytra.

polynomial [MATH] A polynomial in the quantities x_1, x_2,..., x_n is an expression involving a finite sum of terms of form $bx_1^{p_1}x_2^{p_2} \ldots x_n^{p_n}$, where b is some number, and p_1, ... , p_n are integers.

polynuclear hydrocarbon [ORG CHEM] Hydrocarbon molecule with two or more closed rings; examples are naphthalene, $C_{10}H_8$, with two benzene rings side by side, or diphenyl, $(C_6H_5)_2$, with two bond-connected benzene rings. Also known as polycyclic hydrocarbon.

polynucleotide [BIOCHEM] A linear sequence of nucleotides.

polyn'ya [OCEANOGR] A Russian term for a water area, other than a lead, lane, or crack, which is surrounded by sea ice; the term "window" is sometimes used for a similar open area in river ice. Also known as ice clearing.

Polyodontidae [INV ZOO] A family of tubicolous, often large-bodied errantian polychaetes with characteristic cephalic and parapodial structures.

polyol *See* polyhydric alcohol.

polyolefin [ORG CHEM] A resinous material made by the polymerization of olefins, such as polyethylene from ethylene, polypropylene from propylene, or polybutene from butylene.

polyolefin fiber [MATER] Continuous-strand fiber made from a polyolefin.

polyoma virus [VIROL] A small deoxyribonucleic acid virus

POLYNOIDAE

rmothoe of the Polynoidae, rsal view. *(After McIntosh)*

normally causing inapparent infection in mice, but experimentally capable of producing parotid tumors and a wide variety of other tumors.

polyopia [MED] A condition in which more than one image of an object is formed upon the retina.

Polyopisthocotylea [INV ZOO] An order of the trematode subclass Monogenea having a solid posterior holdfast bearing suckers or clamps.

polyorganosiloxane *See* polysiloxane.

polyorrhymenitis *See* polyserositis.

polyoxyalkylene resin [ORG CHEM] Condensation polymer produced from an oxyalkene, such as polyethylene glycol from oxyethylene or ethylene glycol.

polyoxyethylene (8) stearate *See* polyoxyl (8) stearate.

polyoxyl (8) stearate [ORG CHEM] A cream-colored, soft, waxy solid at 25°C; soluble in toluene, acetone, ether, and ethanol; used in bakery products as an emulsifier. Also known as polyoxyethylene (8) stearate.

polyp [INV ZOO] A sessile coelenterate individual having a hollow, somewhat cylindrical body, attached at one end, with a mouth surrounded by tentacles at the free end; may be solitary (hydra) or colonial (coral). [MED] A smooth, rounded or oval mass projecting from a membrane-covered surface.

polypectomy [MED] Surgical excision of a polyp.

polypeptide [BIOCHEM] A chain of amino acids linked together by peptide bonds but with a lower molecular weight than a protein; obtained by synthesis, or by partial hydrolysis of protein.

polypetalous [BOT] Having distinct petals, in reference to a flower or a corolla. Also known as choripetalous.

Polyphaga [INV ZOO] A suborder of the order Coleoptera; members are distinguished by not having the hind coxae fused to the metasternum and by lacking notopleural sutures.

polyphagous [ZOO] Feeding on many different kinds of plants or animals.

polyphase [ELEC] Having or utilizing two or more phases of an alternating-current power line.

polyphase circuit [ELEC] Group of alternating-current circuits (usually interconnected) which enter (or leave) a delimited region at more than two points of entry; they are intended to be so energized that, in the steady state, the alternating currents through the points of entry, and the alternating potential differences between them, all have exactly equal periods, but have differences in phase, and may have differences in waveform.

polyphase meter [ENG] An instrument which measures some electrical quantity, such as power factor or power, in a polyphase circuit.

polyphase rectifier [ELECTR] A rectifier which utilizes two or more diodes (usually three), each of which operates during an equal fraction of an alternating-current cycle to achieve an output current which varies less than that in an ordinary half-wave or full-wave rectifier.

polyphase synchronous generator [ELEC] Generator whose alternating-current circuits are so arranged that two or more symmetrical alternating electromotive forces with definite phase relationships are produced at its terminals.

polyphase wattmeter [ENG] An instrument that measures electric power in a polyphase circuit.

polyphenol oxidase [BIOCHEM] A copper-containing enzyme that catalyzes the oxidation of phenol derivatives to quinones.

polyphenyl [ORG CHEM] Any of a group of direct colors used to dye cotton and wool.

polyphenylene oxide [ORG CHEM] A polyether resin of 2, 6-dimethylphenol, $(CH_3)_2C_6H_3OH$; useful temperature range is −275 to 375°F (−168 to 191°C), with intermittent use possible up to 400°F (204°C).

polyphobia [PSYCH] An abnormal fear of many different things.

polyphosphoric acid [INORG CHEM] $H_6P_4O_{13}$ Viscous, water-soluble, hygroscopic, water-white liquid; used wherever concentrated phosphoric acid is needed.

polyphyodont [VERT ZOO] Having teeth which may be constantly replaced.

polypide [INV ZOO] The internal contents of an ectoproct bryozoan zooid.

Polyplacophora [INV ZOO] The chitons, an order of mollusks in the class Amphineura distinguished by an elliptical body with a dorsal shell that comprises eight calcareous plates overlapping posteriorly.

polyploidy [GEN] The occurrence of related forms possessing chromosome numbers which are three or more times the haploid number.

Polypodiales [BOT] The true ferns; the largest order of modern ferns, distinguished by being leptosporangiate and by having small sporangia with a definite number of spores.

Polypodiatae *See* Polypodiopsida.

Polypodiophyta [BOT] The ferns, a division of the plant kingdom having well-developed roots, stems, and leaves that contain xylem and phloem and show well-developed alternation of generations.

Polypodiopsida [BOT] A class of the division Polypodiophyta; stems of these ferns bear several large, spirally arranged, compound leaves with sporangia grouped in sori on their undermargins.

polypropylene [ORG CHEM] (C_3H_{6x}) A crystalline, thermoplastic resin made by the polymerization of propylene, C_3H_6; the product is hard and tough, resists moisture, oils, and solvents, and withstands temperatures up to 170°C; used to make molded articles, fibers, film, rope, printing plates, and toys.

polypropylene glycol [ORG CHEM] $CH_3CHOH(CH_2OCH-CH_3)_xCH_2OH$ Polymeric material similar to polyethylene glycol, but with greater oil solubility and less water solubility; used as a solvent for vegetable oils, waxes, and resins, in hydraulic fluids and as a chemical intermediate.

Polypteridae [VERT ZOO] The single family of the order Polypteriformes.

Polypteriformes [VERT ZOO] An ancient order of actinopterygian fishes distinguished by thick, rhombic, ganoid scales with an enamellike covering, a slitlike spiracle behind the eye, a symmetrical caudal fin, and a dorsal series of free, spinelike finlets.

polyribosome *See* polysome.

polyrod antenna [ELECTROMAG] End-fire directional dielectric antenna consisting of a polystyrene rod energized by a section of waveguide.

polysaccharide [BIOCHEM] A carbohydrate composed of many monosaccharides.

polysaprobic [ECOL] Referring to a body of water in which organic matter is decomposing rapidly and free oxygen either is exhausted or is present in very low concentrations.

polysepalous [BOT] Having separate sepals. Also known as chorisepalous.

polyserositis [MED] Widespread, chronic fibrosing inflammation of serous membranes, especially in the upper abdomen. Also known as chronic hyperplastic perihepatitis; Concato's disease; multiple serositis; Pick's disease; polyorrhymenitis.

polysiloxane [ORG CHEM] $(R_2SiO)_n$ A polymer in which the chain contains alternate silicon and oxygen atoms; in the formula, R can be H or an alkyl or aryl group; commercially, the R is usually CH_3 (the methylsiloxanes); properties vary with molecular weight, from oils to greases to rubbers to plastics. Also known as polyorganosiloxane.

polysome [CYTOL] A complex of ribosomes bound together by a single messenger ribonucleic acid molecule. Also known as polyribosome.

polysomy [GEN] The occurrence in a nucleus of one or more individual chromosomes in a number higher than that of the remainder.

polyspermy [PHYSIO] Penetration of the egg by more than one sperm.

polystele [BOT] A stele consisting of vascular units in the parenchyma.

Polystomatoidea [INV ZOO] A superfamily of monogeneid trematodes characterized by strong suckers and hooks on the posterior end.

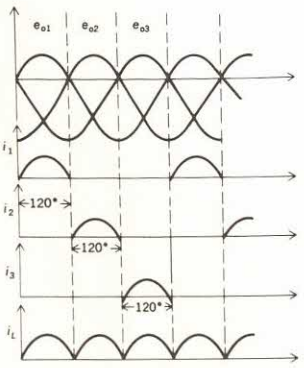
Polystylifera [INV ZOO] A suborder of the Hoplonemertini distinguished by many stylets.

polystyrene [ORG CHEM] $(C_6H_5CHCH_2)_x$ A water-white, tough synthetic resin made by polymerization of styrene; soluble in aromatic and chlorinated hydrocarbon solvents; used for injection molding, extrusion or casting for electrical insulation, fabric lamination, and molding of plastic objects.

polystyrene capacitor [ELEC] A capacitor that uses film polystyrene as a dielectric between rolled strips of metal foil.

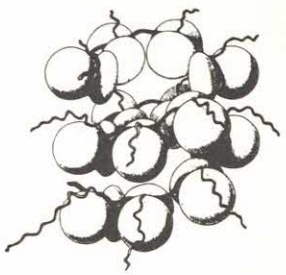
polystyrene dielectric [ELEC] Polystyrene used in applications where its very high resistivity, good dielectric strength, and other electrical properties are important, such as for electrical insulation or in dielectrics.

POLYPHASE RECTIFIER



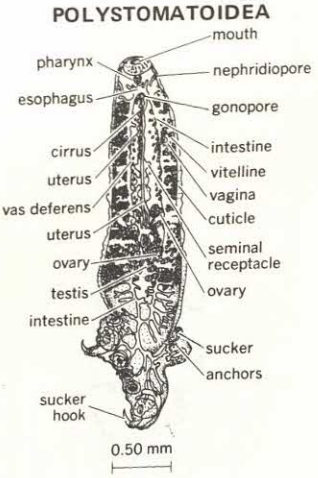
Graphs of transformer voltages e_{o1}, e_{o2}, e_{o3}, diode currents i_1, i_2, i_3, and load current i_L versus time, in a three-phase half-wave rectifier.

POLYSOME



A helical free polysome is bound together by a single messenger-RNA molecule, which follows the helix. Successive ribosomes along the messenger have proceeded farther in production of polypeptide chains.

POLYSTOMATOIDEA



Ventral view of *Heteronchocotyle leucas* Hargis from the bull shark *(Carcharhinus leucas)*.

polysulfide rubber [ORG CHEM] A synthetic polymer made by the reaction of sodium polysulfide with an organic dichloride; resistant to light, oxygen, oils, and solvents; impermeable to gases; poor tensile strength and abrasion resistance.

polysulfide treating [CHEM ENG] A petroleum-refinery process used to remove elemental sulfur from refinery liquids by contacting them with a nonregenerable solution of sodium polysulfide.

polysulfone resin [MATER] A thermoplastic polymer containing the sulfone linkage (O=S=O); have exceptional high-temperature, low-creep, and arc-resistance properties, and are self-extinguishing.

polysynthetic twinning [CRYSTAL] Repeated twinning that involves three or more individual crystals according to the same twin law and on parallel twin planes.

polytene chromosome [GEN] A giant, multistranded, cablelike chromosome composed of many identical chromosomes having their chromomeres in register and produced by polyteny.

polyterpene resin [ORG CHEM] A thermoplastic resin or viscous liquid from polymerization of turpentine; used in paints, polishes, and rubber plasticizers, and to cure concrete and impregnate paper.

polythene [ORG CHEM] Common name for polyethlylene in Great Britain.

Polytrichales [BOT] An order of ascocarpous perennial mosses; rigid, simple stems are highly developed and arise from a prostrate subterranean rhizome.

polytrifluorochloroethylene resin *See* chlorotrifluoroethylene polymer.

polytropic atmosphere [METEOROL] A model atmosphere in hydrostatic equilibrium with a constant nonzero lapse rate.

polytropic compression curve [PHYS] Graphical relationship between pressure p and volume V for various values of specific-heat ratios n in the compression formula $pV^n = K$.

polytropic process [THERMO] An expansion or compression of a gas in which the quantity pV^n is held constant, where p and V are the pressure and volume of the gas, and n is some constant.

polytype [CRYSTAL] A type of polymorph whose different forms are due to more than one possible mode of atomic packing.

polytypic [SYST] A taxon that contains two or more taxa in the immediately subordinate category.

polytypism [CRYSTAL] Referring to the ability of a mineral to crystallize into more than one form, because of more than one possible mode of atomic packing.

polyunsaturated acid [ORG CHEM] A fatty acid with two or more double bonds per molecule, such as linoleic or linolenic acid.

polyunsaturated fat [MATER] A fat or oil based on fatty acids such as linoleic or linolenic acids which have two or more double bonds in each molecule; corn oil and safflower oil are examples.

polyurethane foam [MATER] A solid or spongy cellular material produced by the reaction of a polyester (such as glycerin) with a diisocyanate (such as toluene diisocyanate) while carbon dioxide is liberated by the reaction of a carboxyl with the isocyanate; used for thermal insulation, soundproofing, and padding.

polyurethane resin [ORG CHEM] Any resins resulting from the reaction of diisocyanates (such as toluene diisocyanate) with a phenol, amine, or hydroxylic or carboxylic compound to produce a polymer with free isocyanate groups; used as protective coatings, potting or casting resins, adhesives, rubbers, and foams, and in paints, varnishes, and adhesives.

polyurethane rubber [ORG CHEM] A synthetic polyurethane-resin elastomer made by the reaction of a diisocyanate to a polyester (such as the glycol–adipic acid ester); has high resistance to abrasion, oil, ozone, and high temperatures. Also known as polyester rubber.

polyuria [MED] The passage of copious amounts of urine.

polyvalent [CHEM] An ion or radical with more than one valency, such as the sulfate ion, SO_4^{2-}. Also known as multivalent; polygen. [IMMUNOL] **1.** Of antigens, having many combining sites or determinants. **2.** Pertaining to vaccines composed of mixtures of different organisms, and to the resulting mixed antiserum.

polyvalent number [COMPUT SCI] A number, consisting of several figures, used for description, wherein each figure represents one of the characteristics being described.

polyvinyl acetal resin *See* vinyl acetal resin.

polyvinyl acetate [ORG CHEM] $(H_2CCHOOCCH_3)_x$ A thermoplastic polymer; insoluble in water, gasoline, oils, and fats, soluble in ketones, alcohols, benzene, esters, and chlorinated hydrocarbons; used in adhesives, films, lacquers, inks, latex paints, and paper sizes. Abbreviated PVA; pVAc.

polyvinyl alcohol [ORG CHEM] Water-soluble polymer made by hydrolysis of a polyvinyl ester (such as polyvinyl acetate); used in adhesives, as textile and paper sizes, and for emulsifying, suspending, and thickening of solutions. Abbreviated PVA.

polyvinyl carbazole [ORG CHEM] Thermoplastic resin made by reaction of acetylene with carbazole; softens at 150°C; has good electrical properties and heat and chemical stabilities; used as a paper-capacitor impregnant and as a substitute for electrical mica.

polyvinyl chloride [ORG CHEM] $(H_2CCHCl)_x$ Polymer of vinyl chloride; tasteless, odorless; insoluble in most organic solvents; a member of the family of vinyl resins; used in soft flexible films for food packaging and in molded rigid products such as pipes, fibers, upholstery, and bristles. Abbreviated PVC.

polyvinyl chloride acetate [ORG CHEM] Thermoplastic copolymer of vinyl chloride, CH_2CHCl, and vinyl acetate, $CH_3COOCH{=}CH_2$; colorless solid with good resistance to water, concentrated acids, and alkalies; compounded with plasticizers, it yields a flexible material superior to rubber in aging properties; used for cable and wire coverings and protective garments.

polyvinyl dichloride [ORG CHEM] A high-strength polymer of chlorinated polyvinyl chloride; it is self-extinguishing and has superior chemical resistance; used for pipes carrying hot, corrosive materials. Abbreviated PVDC.

polyvinyl ether *See* polyvinyl ethyl ether.

polyvinyl ethyl ether [ORG CHEM] $[—CH(OC_2H_5)CH_2—]_x$ A viscous gum to rubbery solid, soluble in organic solvents; used for pressure-sensitive tape. Also known as polyvinyl ether.

polyvinyl fluoride [ORG CHEM] $(—H_2CCHF—)_x$ Vinyl fluoride polymer; has superior resistance to weather, chemicals, oils, and stains, and has high strength; used for packaging (but not of food) and electrical equipment.

polyvinyl formate resin [ORG CHEM] $(CH_2{=}CHOOCH)_x$ Clear-colored resin that is hard and solvent-resistant; used to make clear, hard plastics.

polyvinylidene chloride [ORG CHEM] Thermoplastic polymer of vinylidene chloride, $H_2C{=}CCl_2$; white powder softening at 185–200°C; used to make soft-flexible to rigid products.

polyvinylidene fluoride [ORG CHEM] $H_2C{=}CF_2$ Fluorocarbon polymer made from vinylidene fluoride; has good tensile and compressive strength and high impact strength; used in chemical equipment for gaskets, impellers, and other pump parts, and for drum linings and protective coatings.

polyvinylidene resin *See* vinylidene resin.

polyvinyl isobutyl ether [ORG CHEM] $[—CH_2CHO-CH_2CH(CH_3)_2—]_x$ An odorless synthetic resin; elastomer to viscous liquid depending on molecular weight; soluble in hydrocarbons, esters, ethers, and ketones, insoluble in water; used in adhesives, waxes, plasticizers, lubricating oils, and surface coatings. Abbreviated PVI.

polyvinyl methyl ether [ORG CHEM] $(—CH_2CHOCH_3—)_x$ A colorless, tacky liquid, soluble in organic solvents, except aliphatic hydrocarbons, and in water below 32°C; used for pressure-sensitive adhesives, as a heat sensitizer for rubber latex, and as a pigment binder in inks and textile finishing. Abbreviated PVM.

polyvinyl pyrrolidone [ORG CHEM] $(C_6H_9NO)_x$ A water-soluble, white, resinous solid; used in pharmaceuticals, cosmetics, detergents, and foods, and as a synthetic blood plasma. Abbreviated PVP.

polyvinyl resin [ORG CHEM] Any resin or polymer derived from vinyl monomers. Also known as vinyl plastic.

Polyzoa [INV ZOO] The equivalent name for Bryozoa.

polzenite [PETR] **1.** A group of lamprophyres characterized by the presence of olivine and melilite. **2.** Any rock in this group.

Pomacentridae [VERT ZOO] The damselfishes, a family of perciform fishes in the suborder Percoidei.

Pomadasyidae [VERT ZOO] The grunts and sweetlips, a family of perciform fishes in the suborder Percoidei.

Pomatiasidae [INV ZOO] A family of land snails in the order Pectinibranchia.

Pomatomidae [VERT ZOO] A monotypic family of the Perciformes containing the bluefish (*Pomatomus saltatrix*).

pomegranate [BOT] *Punica granatum*. A small, deciduous ornamental tree of the order Myrtales cultivated for its fruit, which is a reddish, pomelike berry containing numerous seeds embedded in crimson pulp.

Pomeranchuk pole *See* Pomeron.

Pomeranchuk theorem [PARTIC PHYS] The theorem that if the total cross section both for scattering of a particle by a given target particle and for scattering of its antiparticle by the same target particle, approach a limit at high energies, and do so sufficiently rapidly, then these limits must be the same.

Pomeron [PARTIC PHYS] A Regge pole which is located at +1 in the angular momentum plane when the momentum transfer in the crossed channel equals zero, corresponding to the fact that total cross sections of reactions are observed to approach constants at high energies. Also known as Pomeranchuk pole.

Pompilidae [INV ZOO] The spider wasps, the single family of the superfamily Pompiloidea.

Pompiloidea [INV ZOO] A monofamilial superfamily of hymenopteran insects in the suborder Apocrita with oval abdomen and strong spinose legs.

pom-pom [ORD] **1.** A rack of antiaircraft cannon, usually mounted in fours, as on the deck of a ship. **2.** An automatic cannon.

PONA analysis [ENG] ASTM analysis of paraffins (P), olefins (O), naphthenes (N) and aromatics (A) in gasolines.

poncelet [PHYS] A unit of power equal to the power delivered by a force of 100 kilograms-force when the point at which the force is applied is moved at a rate of 1 meter per second in the direction of the force; equal to 980.665 watts.

Ponchon-Savarit method [CHEM ENG] Graphical solution on an enthalpy-concentration diagram of liquid-vapor equilibrium values between trays of a distillation column.

pond [GEOGR] A small natural body of standing fresh water filling a surface depression, usually smaller than a lake. [MECH] *See* gram-force.

pondage [HYD] Water held in a reservoir for short periods to regulate natural flow, usually for hydroelectric power.

pondage land [GEOL] Land on which water is stored as dead water during flooding, and which does not contribute to the downstream passage of flow. Also known as flood fringe.

ponded stream [HYD] A stream in which a pond forms due to an interruption of the normal streamflow.

ponderosa pine [BOT] *Pinus ponderosa*. A hard pine tree of western North America; attains a height of 150–225 feet (46–69 meters) and has long, dark-green leaves in bundles of two to five and tawny, yellowish bark.

ponding [BUILD] An accumulation of water on a flat roof because of clogged or inadequate drains. [CIV ENG] The impoundment of stream water to form a pond. [HYD] The natural formation of a pond in a stream by an interruption of the normal streamflow.

ponente [METEOROL] A west wind on the French Mediterranean coast, the northern Roussillon region, and Corsica.

Ponerinae [INV ZOO] A subfamily of tropical carnivorous ants (Formicidae) in which pupae characteristically form in cocoons.

pongee [TEXT] A rough-textured, plain-woven fabric of raw silk with irregular filling yarns and generally an ecru color.

Pongidae [VERT ZOO] A family of anthropoid primates in the superfamily Hominoidea; includes the chimpanzee, gorilla, and orangutan.

poniente [METEOROL] The west wind in the Straits of Gibraltar.

pons [ANAT] **1.** A process or bridge of tissue connecting two parts of an organ. **2.** A convex white eminence located at the base of the brain; consists of fibers receiving impulses from the cerebral cortex and sending fibers to the contralateral side of the cerebellum.

Pontian [GEOL] A European stage of geologic time in the uppermost Miocene, above the Sarmatian and below the Plaisancian of the Pliocene; it has also been regarded as the lowermost Pliocene.

pontianak gum [MATER] A grayish-white copal from various jelutongs of the genus *Dyera*, indigenous to Malacca and Borneo; used in rubber manufacture, chewing gum, adhesives, paints, and varnishes. Also known as jelutong.

pontic [GEOL] Pertaining to sediments or facies deposited in comparatively deep and motionless water, such as an association of black shales and dark limestones deposited in a stagnant basin.

pontine flexure [EMBRYO] A flexure in the embryonic brain concave dorsally, occurring in the region of the myelencephalon.

pontocaine *See* tetracaine hydrochloride.

Pontodoridae [INV ZOO] A monotypic family of pelagic polychaetes assigned to the Errantia.

pontoon [AERO ENG] A float on an airplane. [NAV ARCH] **1.** A low, flat-bottomed ship, similar to a barge, carrying cranes, capstans, and other machinery used to lift weights, to lean ships on their sides for repairs, and to perform other such operation. **2.** A wooden flat-bottomed boat or other float, used particularly to make temporary bridges.

pontoon bridge [CIV ENG] A fixed floating bridge supported by pontoons.

pontoon-tank roof [ENG] A type of floating tank roof, supported by buoyant floats on the liquid surface of a tank; the roof rises and falls with the liquid level in the tank; used to minimize vapor space above the liquid, thus reducing vapor losses during tank filling and emptying.

Pontryagin's maximum principle [MATH] A theorem giving a necessary condition for the solution of optimal control problems: let $\theta(\tau)$, $\tau_0 \leq \tau \leq T$ be a piecewise continuous vector function satisfying certain constraints; in order that the scalar function $S = \sum c_i x_i(T)$ be minimum for a process described by the equation $\partial x_i/\partial\tau = (\partial H/\partial z_i)[z(\tau), x(\tau), \theta(\tau)]$ with given initial conditions $x(\tau_0) = x^0$ it is necessary that there exist a nonzero continuous vector function $z(\tau)$ satisfying $dz_i/d\tau = -(\partial H/\partial x_i) \cdot [z(\tau), x(\tau), \theta(\tau)]$, $z_i(T) = -c_i$, and that the vector $\theta(\tau)$ be so chosen that $H[z(\tau), x(\tau), \theta(\tau)]$ is maximum for all τ, $\tau_0 \leq \tau \leq T$.

pony set [MIN ENG] A small timber set or frame incorporated in the main sets of a haulage level to accommodate an ore chute or other equipment from above or below.

pony truss [CIV ENG] A truss too low to permit overhead braces.

poodle cloth [TEXT] Loopy bouclé or knotted yarn cloth resembling the coat of a french poodle; originally wool, but now of various fibers and mixtures in knitted as well as woven versions.

pool [CIV ENG] A body of water contained in a reservoir, by a dam, or by the gates of a lock. [GEOL] Underground accumulation of petroleum. [HYD] A small deep body of water, often fed by a spring. [MIN ENG] **1.** To wedge for splitting in quarrying or mining. **2.** To undermine or undercut.

pool cathode [ELECTR] A cathode at which the principal source of electron emission is a cathode spot on a liquid-metal electrode, usually mercury.

pool-cathode mercury-arc rectifier [ELECTR] A pool tube connected in an electric circuit; its rectifying properties result from the fact that only the mercury-pool cathode, and not the anode, can emit electrons. Also known as mercury-pool rectifier.

pool-cathode tube *See* pool tube.

pool reactor [NUCLEO] A research nuclear reactor in which the core is suspended in a large pool of water that serves as moderator, reflector, coolant, and radiation shield. Also known as swimming-pool reactor.

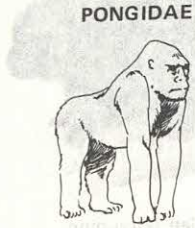
pool stage [HYD] As used along the Ohio and upper Mississippi Rivers of the United States, a low-water condition with the navigation dams up so that the river is a series of shallow pools; when this condition exists, the river is said to be "in pool"; river depth is regulated by the dams so as to be adequate for navigation.

pool tube [ELECTR] A gas-discharge tube having a mercury-pool cathode. Also known as mercury tube; pool-cathode tube.

poop bulkhead [NAV ARCH] A partition wall that extends between the upper and lower poopdecks at the poop's forward end.

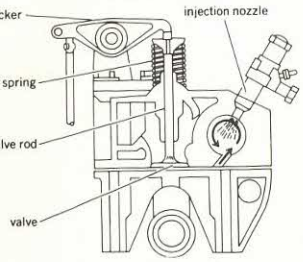
poop deck [NAV ARCH] A partial deck above the main deck in a ship's afterpart.

pop [MIN ENG] A drill hole blasted to reduce larger pieces of rock or to trim a working face. Also known as pop hole; pop shot.



Typical anthropoid ape of the family Pongidae.

POPPET VALVE



oppet valve for internal ombustion engine. *(From . Baumeister, ed., Standard andbook for Mechanical ngineers, 7th ed., McGraw-ill, 1967)*

POPPY

lower and leaves of the opium oppy *(Papaver somniferum)*.

PORCUPINE

he Canadian porcupine *Erethizon dorsatum)*, about ½ feet (1 meter) long, with ng white hairs scattered rough the brownish-black fur.

pop action [MECH ENG] The action of a safety valve as it opens under steam pressure when the valve disk is lifted off its seat.

popcorn noise [ELECTR] Noise produced by erratic jumps of bias current between two levels at random intervals in operational amplifiers and other semiconductor devices.

pop hole *See* pop.

poplar [BOT] Any tree of the genus *Populus*, family Salicaceae, marked by simple, alternate leaves, scaly buds, bitter bark, and flowers and fruits in catkins.

poplin [TEXT] A corded fabric made of cotton, polyester, wool, nylon, or blend of fibers.

popliteal artery [ANAT] A continuation of the femoral artery in the posterior portion of the thigh above the popliteal space and below the buttock.

popliteal nerve [ANAT] Either of two branches of the sciatic nerve in the lower part of the thigh; the larger branch continues as the tibial nerve, and the smaller branch continues as the peroneal nerve.

popliteal space [ANAT] A diamond-shaped area behind the knee joint.

popliteal vein [ANAT] A vein passing through the popliteal space, formed by merging of the tibial veins and continuing to become the femoral vein.

popliteus [ANAT] **1.** The ham or hinder part of the knee joint. **2.** A muscle on the back of the knee joint.

Popov's stability criterion [CONT SYS] A frequency domain stability test for systems consisting of a linear component described by a transfer function $G(s)$ preceded by a nonlinear component characterized by an input-output function $N(.)$, with a unity gain feedback loop surrounding the series connection.

poppet [CIV ENG] One of the timber and steel structures supporting the fore and aft ends of a ship for launching from sliding ways. [DES ENG] A spring-loaded ball engaging a notch; a ball latch. [MIN ENG] A pulley frame or the headgear over a mine shaft.

poppet valve [MECH ENG] A cam-operated or spring-loaded reciprocating-engine mushroom-type valve used for control of admission and exhaust of working fluid; the direction of movement is at right angles to the plane of its seat.

popping [COMPUT SCI] The deletion of the top element of a stack. [MIN ENG] Exploding a stick of dynamite on a boulder so as to break it for easy removal from a quarry or opencast mine.

popping pressure [MECH ENG] In compressible fluid service, the inlet pressure at which a safety valve disk opens.

popple rock *See* pebble bed.

poppy [BOT] Any of various ornamental herbs of the genus *Papaver*, family Papaveraceae, with large, showy flowers; opium is obtained from the fruits of the opium poppy (*P. somniferum*).

poppy oil [MATER] Golden-yellow drying oil with pleasant taste and aroma; soluble in carbon disulfide, ether, and chloroform; expressed from poppy seeds, especially of the opium poppy; used as a food oil; in artist's colors, soaps, varnishes, and lubricants. Also known as poppy-seed oil.

poppy-seed oil *See* poppy oil.

pop shot *See* pop.

population [BIOL] A group of organisms occupying a specific geographic area or biome.

Population I [ASTRON] A class of stars which are relatively young, have relatively low peculiar velocities, and are found chiefly in the spiral arms of galaxies.

Population II [ASTRON] A class of stars which are relatively old and evolved, have low metallic content and high peculiar velocities from 100 to 500 kilometers per second, and are found chiefly in the spheroidal halo of a galaxy.

population covariance [STAT] The number $(1/N)[(v_1 - \bar{v})\cdot(w_1 - \bar{w}) + \ldots + (v_N - \bar{v})(w_N - \bar{w})]$, where v_i and w_i, $i = 1,2, \ldots, N$, are the values obtained from two populations, and $\bar{v}$ and $\bar{w}$ are the respective means.

population density [ECOL] The size of the population within a particular unit of space.

population dispersal [BIOL] The process by which groups of living organisms expand the space or range within which they live.

population dispersion [BIOL] The spatial distribution at any particular moment of the individuals of a species of plant or animal.

population dynamics [BIOL] The aggregate of processes that determine the size and composition of any population.

population genetics [GEN] The study of both experimental and theoretical consequences of Mendelian heredity on the population level; includes studies of gene frequencies, genotypes, phenotypes, and mating systems.

population inversion [ATOM PHYS] The condition in which a higher energy state in an atomic system is more heavily populated with electrons than a lower energy state of the same system.

population mean [STAT] The average of the numbers obtained for all members in a population by measuring some quantity associated with each member.

population of levels [STAT MECH] The number of members of an ensemble which are in each of the allowed energy states of a system.

population variance [STAT] The arithmetic average of the numbers $(v_1 - \bar{v})^2, \ldots, (v_N - \bar{v})^2$, where v_i are numbers obtained from a population with N members, one for each member, and $\bar{v}$ is the population mean.

p orbital [ATOM PHYS] The orbital of an atomic electron with an orbital angular momentum quantum number of unity.

porcelain [MATER] A high-grade ceramic ware characterized by high strength, a white color, very low absorption, good translucency, and a hard glaze. Also known as European porcelain; hard paste porcelain; true porcelain.

porcelain capacitor [ELEC] A fixed capacitor in which the dielectric is a high grade of porcelain, molecularly fused to alternate layers of fine silver electrodes to form a monolithic unit that requires no case or hermetic seal.

porcelain cement [MATER] A cement for bonding porcelain to porcelain, such as a mixture of gutta-percha and shellac.

porcelain clay [MATER] A clay suitable for use in the manufacture of porcelain, specifically kaolin. Also known as porcelain earth.

porcelain earth *See* porcelain clay.

porcelain enamel *See* vitreous enamel.

porcelain insulator [MATER] An electrical insulator made from porcelain; the porcelain is often made in a one-fire process, the glaze being applied to the green or unfired ware, in contrast to the two-fire process used in making ordinary porcelain.

porcelainite *See* mullite.

porcelain jasper [GEOL] A hard, naturally baked, impure clay (or porcellanite) which because of its red color had long been considered a variety of jasper.

porcelaneous [GEOL] Resembling unglazed porcelain.

porcelaneous chert [PETR] A hard, opaque to subtranslucent smooth chert, having a smooth fracture surface and a typically china-white appearance resembling chinaware or glazed porcelain.

Porcellanasteridae [INV ZOO] A family of essentially deep-water forms in the suborder Paxillosina.

Porcellanidae [INV ZOO] The rock sliders, a family of decapod crustaceans of the group Anomura which resemble true crabs but are distinguished by the reduced, chelate fifth pereiopods and the well-developed tail fan.

porcellanite [PETR] A hard, dense siliceous rock, such as impure chert or indurated clay or shale.

porcupine [VERT ZOO] Any of about 26 species of rodents in two families (Hystricidae and Erethizontidae) which have spines or quills in addition to regular hair.

porcupine boiler [MECH ENG] A boiler having dead end tubes projecting from a vertical shell.

pore [ASTRON] A very small, dark area on the sun formed by the separation of adjacent flocculi. [BIOL] Any minute opening by which matter passes through a wall or membrane. [GEOL] An opening or channelway in rock or soil. [MET] A minute cavity in a powder compact, metal casting, or electroplated coating.

pore compressibility [GEOL] The fractional change in reservoir-rock pore volume with a unit change in pressure upon that rock.

pore diameter [DES ENG] The average or effective diameter of the openings in a membrane, screen, or other porous material.

pore diffusion [FL MECH] The movement of fluids (gas or liquid) into the interstices of porous solids or membranes; occurs in membrane separation, zeolite adsorption, dialysis, and reverse osmosis.

pore fungus [MYCOL] The common name for members of

the families Boletaceae and Polyporaceae in the group Hymenomycetes; sporebearing surfaces are characteristically within tubes or pores.

pore ice [HYD] Ice which fills or partially fills pore spaces in permafrost; forms by freezing soil water in place, with no addition of water.

porencephaly [MED] A condition in which the cavity of a lateral ventricle extends to the surface of the cerebral hemisphere; may result from brain tissue destruction or maldevelopment.

pore pressure *See* neutral stress.

pore-size distribution [GEOL] Variations in pore sizes in reservoir formations; each type of rock has its own typical pore size and related permeability.

pore space [GEOL] The pores in a rock or soil considered collectively. Also known as pore volume.

pore volume *See* pore space.

pore-water pressure *See* neutral stress.

poriaz [METEOROL] Violent northeast winds on the Black Sea near the Bosporus in the Soviet Union.

Porifera [INV ZOO] The sponges, a phylum of the animal kingdom characterized by the presence of canal systems and chambers through which water is drawn in and released; tissues and organs are absent.

Porlezzina [METEOROL] An east wind on Lake Lugano (Italy and Switzerland), blowing from the Gulf of Porlezza.

porocyte [INV ZOO] One of the perforated, tubular cells which constitute the wall of the incurrent canals in certain Porifera.

porogamy [BOT] Passage of the pollen tube through the micropyle of an ovule in a seed plant.

poromeric material [TEXT] A fabric made of polyurethane strengthened by polyester.

porosimeter [ENG] Laboratory compressed-gas device used for measurement of the porosity of reservoir rocks.

porosis [MED] Condition characterized by increased porosity, as of bone.

porosity [PHYS] **1.** Property of a solid which contains many minute channels or open spaces. **2.** The fraction as a percent of the total volume occupied by these channels or spaces; for example, in petroleum engineering the ratio (expressed in percent) of the void space in a rock to the bulk volume of that rock.

porosity feet [PETRO ENG] Reservoir porosity fraction multiplied by net pay in feet, where porosity fraction is the portion of the reservoir that is porous, and net pay is the depth and areal extent of the hydrocarbons-containing reservoir.

porosity trap *See* stratigraphic trap.

porous [MATER] **1.** Filled with pores. **2.** Capable of absorbing liquids.

porous alum *See* aluminum sodium sulfate.

porous bearing [DES ENG] A bearing made from sintered metal powder impregnated with oil by a vacuum treatment.

porous carbon [MATER] Plates, tubes, or disks of uniform carbon particles pressed together without a binder; used for the filtration of corrosive liquids and gases.

porous graphite [MATER] Plates, tubes, or disks of uniform graphite particles pressed together without a binder; more resistant to oxidation but lower in strength than porous carbon.

porous metals [MET] Metals, made by powder metallurgy, having uniformly distributed controlled pore sizes, in the form of sheets, tubes, and shapes; used for filtering liquids and gases at elevated temperatures.

porous mold [ENG] A plastic-forming mold made from bonded or fused aggregates (such as powdered metal or coarse pellets) so that the resulting mass contains numerous open interstices through which air or liquids can pass.

porous reservoir model [PETRO ENG] Scaled laboratory model of porous reservoir used for the study of reservoir areal waterflood efficiencies.

porous wheel [DES ENG] A grinding wheel having a porous structure and a vitrified or resinoid bond.

Poroxylaceae [PALEOBOT] A monogeneric family of extinct plants included in the Cordaitales.

porpezite [MINERAL] A mineral consisting of a native alloy of palladium (5–10%) and gold. Also known as palladium gold.

porphin [BIOCHEM] A heterocyclic ring consisting of four pyrrole rings linked by methine (—CH=) bridges; the basic structure of chlorophyll, hemoglobin, the cytochromes, and certain other related substances.

porphobilinogen [BIOCHEM] $C_{10}H_{14}O_4N_2$ Dicarboxylic acid derived from pyrrole; a product of hemoglobin breakdown that gives the urine a Burgundy-red color.

porphrite *See* porphyry.

porphyria [MED] A usually hereditary, pathologic disorder of porphyrin metabolism characterized by porphyrinuria and photosensitivity.

porphyrin [BIOCHEM] A class of red-pigmented compounds with a cyclic tetrapyrrolic structure in which the four pyrrole rings are joined through their α-carbon atoms by four methene bridges (=C—); the porphyrins form the active nucleus of chlorophylls and hemoglobin.

porphyrinuria [MED] The excretion of large quantities of porphyrin in the urine.

porphyritic [PETR] Pertaining to or resembling porphyry.

porphyroblast [PETR] A relatively large crystal formed in a metamorphic rock.

porphyroblastic [PETR] Pertaining to the texture of recrystallized metamorphic rock having large idioblasts of minerals possessing high form energy in a finer-grained crystalloblastic matrix.

porphyrocrystallic *See* porphyrotopic.

porphyroclastic structure *See* mortar structure.

porphyrogranulitic [PETR] Referring to ophitic texture characterized by large phenocrysts of feldspar and augite or olivine in a groundmass of smaller lath-shaped feldspar crystals and irregular augite grains; a combination of porphyritic and intergranular textures.

porphyroid [PETR] **1.** A blastoporphyritic, or sometimes porphyroblastic, metamorphic rock of igneous origin. **2.** A feldspathic metasedimentary rock having the appearance of a porphyry.

porphyroskelic [GEOL] Pertaining to an arrangement in a soil fabric whereby the plasma occurs as a dense matrix in which skeleton grains are set like phenocrysts in a porphyritic rock.

porphyrotope [GEOL] A large crystal enclosed in a finer-grained matrix in a sedimentary rock showing porphyrotopic fabric.

porphyrotopic [GEOL] Referring to the fabric of a crystalline sedimentary rock in which the constituent crystals are of more than one size and in which larger crystals are enclosed in a finer-grained matrix. Also known as porphyrocrystallic.

porphyry [PETR] An igneous rock in which large phenocrysts are enclosed in a very-fine-grained to aphanitic matrix. Formerly known as porphrite.

porpoise [VERT ZOO] Any of several species of marine mammals of the family Phocaenidae which have small flippers, a highly developed sonar system, and smooth, thick, hairless skin.

porpoise oil [MATER] A pale-yellow fatty oil obtained from blubber of the brown porpoise; soluble in ether, benzene, carbon disulfide, and chloroform; used as a lubricant, leather dressing, and illuminating oil, and in soap stock.

Porro prism [OPTICS] One of two identical prisms used in the Porro prism erecting system; it is a right-angle prism with the corners rounded to minimize breakage and simplify assembly.

Porro prism erecting system [OPTICS] A compound erecting system, designed by M. Porro, in which there are four reflections to completely erect the image; two porro prisms are employed; the line of sight is bent through 360°, is displaced, but is not deviated; used in prism binoculars and some telescope systems.

port [COMPUT SCI] An interface between a communications channel and a unit of computer hardware. [ELEC] An entrance or exit for a network. [ELECTROMAG] An opening in a waveguide component, through which energy may be fed or withdrawn, or measurements made. [ENG] The side of a ship or airplane on the left of a person facing forward. [ENG ACOUS] An opening in a bass-reflex enclosure for a loudspeaker, designed and positioned to improve bass response. [GEOGR] *See* harbor. [NAV ARCH] An opening in a vessel to provide access for passengers, cargo handling, discharging water, and so forth. [NUCLEO] An opening in a research reactor through which objects are inserted for irradiation or from which beams of radiation emerge for experimental use.

portability [COMPUT SCI] Property of a computer program that is sufficiently flexible to be easily transferred to run on a computer of a type different from the one for which it was designed.

PORIFERA

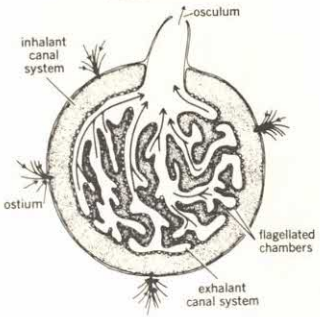


Diagram of the canal system of a young fresh-water sponge. *(After Ankel, 1950)*

PORPOISE

The common porpoise, a cetacean found in North American and European coastal waters.

portable [ENG] Capable of being easily and conveniently transported.

portable audio terminal [COMPUT SCI] A lightweight, self-contained computer terminal with a typewriter keyboard, which can be attached to a telephone line by placing the telephone handset in a receptacle in the terminal.

porta hepatis [ANAT] The transverse fissure of the liver through which the portal vein and hepatic artery enter the liver and the hepatic ducts leave.

portal [ANAT] **1.** Of or pertaining to the porta hepatis. **2.** Pertaining to the portal vein or system. [ENG] A redundant frame consisting of two uprights connected by a third member at the top. [MIN ENG] **1.** An entrance to a mine. **2.** The rock face at which a tunnel is started.

portal circulation [PHYSIO] The passage of venous blood through a portal system.

portal cirrhosis [MED] Replacement of normal liver structure by abnormal lobules of liver cells, often hyperplastic, delimited by bands of fibrous tissue, giving the gross appearance of a finely nodular surface. Also known as Laennec's cirrhosis.

portal crane [MECH ENG] A jib crane carried on a four-legged portal built to run on rails.

portal hypertension [MED] Portal venous pressure in excess of 20 mmHg (2666 newtons per square meter), resulting from intrahepatic or extrahepatic portal venous compression or occlusion.

portal system [ANAT] A system of veins that break into a capillary network before returning the blood to the heart.

portal vein [ANAT] Any vein that terminates in a network of capillaries.

Porterfield [GEOL] A North American geologic stage of the Middle Ordovician, forming the lower division of the Mohawkian, and lying above Ashby and below Wilderness.

porthole [DES ENG] The opening or passageway connecting the inside of a bit or core barrel to the outside and through which the circulating medium is discharged. [ENG] A circular opening in the side of a ship or airplane, usually serving as a window and containing one or more panes of glass.

porthole die [MET] An extrusion die having two or more sections in which metal is extruded separately in each section and welded before leaving the die to form intricate hollow shapes.

portico [ARCH] A colonnade or other sheltered place to walk in.

portland cement [MATER] A hydraulic cement resembling portland stone when hardened; made of pulverized, calcined argillaceous and calcareous materials; the proper name for ordinary cement.

Portlandian [GEOL] A European geologic stage of the Upper Jurassic, above Kimmeridgian, below Berriasian of Cretaceous.

portlandite [MINERAL] $Ca(OH)_2$ A colorless, hexagonal mineral consisting of calcium hydroxide; occurs as minute plates.

portland-pozzolana cement [MATER] Portland cement to which pozzolana has been added, in the amount of about 20%, to reduce the liability of leaching.

port of entry [CIV ENG] A location for clearance of foreign goods and citizens through a customhouse.

port operations service [COMMUN] Maritime mobile communications service in or near a port, between coast stations and ship stations, or between ship stations, in which messages are restricted to those relating to the movement and safety of ships and, in an emergency, to the safety of persons.

Portuguese man-of-war [INV ZOO] Any of several brilliantly colored tropical siphonophores in the genus *Physalia* which possess a large float and extremely long tentacles.

Portulacaceae [BOT] A family of dicotyledonous plants in the order Caryophyllales distinguished by a syncarpous gynoecium, few, cyclic tepals and stamens, two sepals, and two to many ovules.

Portunidae [INV ZOO] The swimming crabs, a family of the Brachyura having the last pereiopods modified as swimming paddles.

port-wine stain [MED] A congenital hemangioma characterized by one or more red to purplish patches, usually on the face.

Porulosida [INV ZOO] An order of the protozoan subclass Radiolaria in which the central capsule shows many pores.

PORTUGUESE MAN-OF-WAR

loat and tentacles of a ortuguese man-of-war. *(From I. Storer and R. L. Usinger, eneral Zoology, 3d ed., cGraw-Hill, 1957)*

Poseidon [ORD] A submarine-launched multiple-warhead nuclear missile that replaces the Polaris missile in nuclear submarines.

posistor [ELECTR] A thermistor having a large positive resistance-temperature characteristic.

position [NAV] A point defined by stated or implied coordinates, usually on the surface of the earth.

positional astronomy [ASTRON] The branch of astronomy that deals with the determination of the positions of celestial objects.

positional-error constant [CONT SYS] For a stable unity feedback system, the limit of the transfer function as its argument approaches zero.

positional isomer [CHEM] One of a set of structural isomers which differ only in the point at which a side-chain group is attached. [ORG CHEM] Constitutional isomer having the same functional group located in different positions along a chain or in a ring.

positional notation [MATH] Any of several numeration systems in which a number is represented by a sequence of digits in such a way that the significance of each digit depends on its position in the sequence as well as its numeric value. Also known as notation.

positional punch [COMPUT SCI] The row position of a punched hole in a specific column of a punch card; in an 80-column punch card the rows are designated 0 to 9, or x and y; in a 90-column card the rows are designated 0, 1, 3, 5, 7, and 9.

positional servomechanism [CONT SYS] A feedback control system in which the mechanical position (as opposed to velocity) of some object is automatically maintained.

position angle [ASTRON] **1.** The angle formed by the great circle running through two celestial objects and the hour circle running through one of the objects. **2.** In measuring double stars, the angle formed between the great circle running through both components and the hour circle going through the primary measured from the north through the east from 0 to 360°. [NAV] That angle of the navigational triangle at the celestial body having the hour circle and the vertical circle at its sides. Also known as parallactic angle.

position approximate [NAV] Of inexact position; used principally on charts to indicate that the position of a wreck, shoal, and so on, has not been accurately determined or does not remain fixed.

position blocks [MIN ENG] Unproved mining claims that are in a position to contain a lode if the lode continues in the direction in which it has been proved in other claims.

position buoy [NAV] A buoy attached to the stern of a boat which allows the vessel behind to maintain the appropriate or prescribed distance, especially under conditions of low visibility. Also known as fog buoy; towing spar.

position circle [NAV] **1.** A circle covering all possible points within which a search objective can be located. **2.** The line of position produced by a distance measurement such as those produced by a DME (distance-measuring equipment).

position correction [ORD] Correction applied to firing data to compensate for difference in location of individual pieces in a battery.

position correction grid [ORD] Transparent template superimposed on a large-scale plot of a battery position used to determine individual range and deflection corrections within the battery in order to obtain the type of sheaf (planned planes of fire) desired.

position dialing [COMMUN] Dialing over the regular position cord circuits by means of relay circuit under control of a dial of the regular cord circuits.

position doubtful [NAV] Of uncertain position; used principally on charts to indicate that a wreck, shoal, and so on, has been reported in various positions and not definitely determined in any.

positioned weld [MET] A weld made in a joint in which members have been positioned to facilitate welding.

position effect [GEN] **1.** Change in expressivity of a gene associated with chromosome aberrations. **2.** Inherent gene expression as influenced by neighboring genes.

position error [NAV] **1.** The error of a position. **2.** That error of an instrument reading due to location or orientation.

position finder [ORD] Optical or electrical instrument used in finding the range and position of a target.

position finding [ORD] The process of determining the posi-

tion of a target with relation to the battery, and the determination of a future position upon which to direct the fire.

position firing [ORD] A method of defensive gunnery used by bombers, especially during World War II, in which definite amounts of deflection are prescribed for firing at attacking fighter planes.

position indicator [ENG] An electromechanical dead-reckoning computer, either an air-position indicator or a ground-position indicator.

positioning [MECH ENG] A tooling function concerned with manipulating the workpiece in relationship to the working tools.

positioning action [CONT SYS] Automatic control action in which there is a predetermined relation between the value of a controlled variable and the position of a final control element.

positioning band [ORD] A metal band on some recoilless ammunition, placed to ensure the proper positioning of the round inside the chamber and tube.

position line *See* line of position.

position operator [QUANT MECH] The quantum-mechanical operator corresponding to the classical position variable of a particle.

position pulse *See* commutator pulse.

position report [NAV] A radio message containing specified information regarding the position and progress of a craft.

position representation [QUANT MECH] A representation in which the state functions are eigenfunctions of the position operator. Also known as Schrödinger representation.

position sensor [ENG] A device for measuring a position and converting this measurement into a form convenient for transmission. Also known as position transducer.

position telemetering [ENG] A variation of voltage telemetering in which the system transmits the measurand by positioning a variable resistor or other component in a bridge circuit so as to produce relative magnitudes of electrical quantities or phase relationships.

position transducer *See* position sensor.

position vector [MATH] The position vector of a point in euclidean space is a vector whose length is the distance from the origin to the point and whose direction is the direction from the origin to the point. Also known as radius vector.

positive [ELEC] Having fewer electrons than normal, and hence having ability to attract electrons. [GRAPHICS] Having the same rendition of light and shade as in the original scene. [MATH] Having value greater than zero.

positive acceleration [MECH] **1.** Accelerating force in an upward sense or direction, such as from bottom to top, or from seat to head; **2.** The acceleration in the direction that this force is applied.

positive afterimage [PHYSIO] An afterimage persisting after the eyes are closed or turned toward a dark background, and of the same color as the stimulating light.

positive angle [MATH] The angle swept out by a ray moving in a counterclockwise direction.

positive area *See* positive element.

positive axis [MATH] The segment of an axis arising from a cartesian coordinate system which is realized by positive values of the coordinate variables. [METEOROL] In tropical synoptic analysis, a locus of maximum streamline curvature in an easterly wave; used primarily in the analysis of waves that span the equatorial trough (equatorial waves); a positive axis corresponds to a trough line in the Northern Hemisphere and a ridge line in the Southern Hemisphere.

positive bias [ELECTR] A bias such that the control grid of an electron tube is positive with respect to the cathode.

positive birefringence [OPTICS] Birefringence in which the velocity of the ordinary ray is greater than that of the extraordinary ray.

positive charge [ELEC] The type of charge which is possessed by protons in ordinary matter, and which may be produced in a glass object by rubbing with silk.

positive clutch [MECH ENG] A clutch designed to transmit torque without slip.

positive column [ELECTR] The luminous glow, often striated, that occurs between the Faraday dark space and the anode in a glow-discharge tube. Also known as positive glow.

positive crystal [OPTICS] **1.** Uniaxial anisotropic crystal having the ordinary index of refraction greater than the extraordinary index. **2.** Biaxial anisotropic crystal having the intermediate index of refraction beta closer in value to alpha, and with Z the acute bisectrix.

positive definite [MATH] **1.** A square matrix A of order n is positive definite if

$$\sum_{i,j=1}^{n} A_{ij} x_i \bar{x}_j > 0$$

for every choice of complex numbers $x_1, x_2, \ldots, x_n$, not all equal to 0, where $\bar{x}_j$ is the complex conjugate of x_j. **2.** A linear operator T on an inner product space is positive definite if $<Tu,u>$ is greater than 0 for all nonzero vectors u in the space.

positive derail [MIN ENG] A device installed in or on a mine track to derail runaway cars or trips.

positive-displacement compressor [MECH ENG] A compressor that confines successive volumes of fluid within a closed space in which the pressure of the fluid is increased as the volume of the closed space is decreased.

positive-displacement meter [ENG] A fluid quantity meter that separates and captures definite volumes of the flowing stream one after another and passes them downstream, while counting the number of operations.

positive-displacement pump [MECH ENG] A pump in which a measured quantity of liquid is entrapped in a space, its pressure is raised, and then it is delivered; for example, a reciprocating piston-cylinder or rotary-vane, gear, or lobe mechanism.

positive draft [MECH ENG] Pressure in the furnace or gas passages of a steam-generating unit which is greater than atmospheric pressure.

positive drive belt *See* timing belt.

positive electrode *See* anode.

positive electron *See* positron.

positive element [GEOGR] A large structural feature of the earth's crust characterized by long-term upward movement (uplift, emergence) or subsidence less rapid than that of adjacent negative elements. Also known as archibole; positive area.

positive estuary [HYD] An estuary in which there is a measurable dilution of seawater by land drainage.

positive feedback [CONT SYS] Feedback in which a portion of the output of a circuit or device is fed back in phase with the input so as to increase the total amplification. Also known as reaction (British usage); regeneration; regenerative feedback; retroaction (British usage).

positive glow *See* positive column.

positive-grid oscillator *See* retarding-field oscillator.

positive image [GRAPHICS] A picture as normally seen on a television picture tube or in a photograph, having the same rendition of light and shade as in the original scene.

positive interference [GEN] The reduction, by one crossover exchange, of the likelihood of another crossover in its vicinity.

positive ion [CHEM] An atom or group of atoms which by loss of one or more electrons has acquired a positive electric charge; occurs on ionization of chemical compounds as H^+ from ionization of hydrochloric acid, HCl.

positive-ion sheath [ELECTR] Collection of positive ions on the control grid of a gas-filled triode tube.

positive landform [GEOL] An upstanding topographic form, such as a mountain, hill, plateau, or cinder cone.

positive logic [ELECTR] Pertaining to a logic circuit in which the more positive voltage (or current level) represents the 1 state; the less positive level represents the 0 state.

positive meniscus lens [OPTICS] A lens having one convex (bulging) and one concave (depressed) surface, with the radius of curvature of the convex surface smaller than that of the concave surface.

positive modulation [ELECTR] In an amplitude-modulated television system, that form of television modulation in which an increase in brightness corresponds to an increase in transmitted power.

positive mold [ENG] A plastics mold designed to trap all of the molding resin when the mold closes.

positive motion [MECH ENG] Motion transferred from one machine part to another without slippage.

positive movement [GEOL] **1.** Uplift or emergence of the earth's crust relative to an adjacent area of the crust. **2.** A relative rise in sea level with respect to land level.

positive ore [MIN ENG] Ore exposed on four sides in blocks of a size variously prescribed.

positive phase sequence [ELEC] The phase sequence that

corresponds to the normal order of phases in a polyphase system.

positive-phase-sequence relay [ELEC] Relay which functions in conformance with the positive-phase-sequence component of the current, voltage, or power of the circuit.

positive ray [ELECTR] A stream of positively charged atoms or molecules, produced by a suitable combination of ionizing agents, accelerating fields, and limiting apertures.

positive real function [MATH] An analytic function whose value is real when the independent variable is real, and whose real part is positive or zero when the real part of the independent variable is positive or zero.

positive semidefinite [MATH] Also known as nonnegative semidefinite. **1.** A square matrix A is positive semidefinite if

$$\sum_{i,j=1}^{n} A_{ij} x_i \bar{x}_j \geq 0$$

for every choice of complex numbers $x_1, x_2, \ldots, x_n$, where $\bar{x}_j$ is the complex conjugate x_j. **2.** A linear operator T on an inner product space is positive semidefinite if $<Tu,u>$ is equal to or greater than 0 for all vectors u in the space.

positive shoreline *See* shoreline of submergence.

positive temperature coefficient [THERMO] The condition wherein the resistance, length, or some other characteristic of a substance increases when temperature increases.

positive terminal [ELEC] The terminal of a battery or other voltage source toward which electrons flow through the external circuit.

positive transfer [PSYCH] Rapid learning in a new situation because the stimuli or responses required are similar to those learned in an earlier situation.

positive transmission [COMMUN] Transmission of television signals in such a way that an increase in initial light intensity causes an increase in the transmitted power.

positive zero [COMPUT SCI] The zero value reached by counting down from a positive number in the binary system.

positron [PARTIC PHYS] An elementary particle having mass equal to that of the electron, and having the same spin and statistics as the electron, but a positive charge equal in magnitude to the electron's negative charge. Also known as positive electron.

positron camera [ENG] An instrument that uses photomultiplier tubes in combination with scintillation counters to detect oppositely directed gamma-ray pairs resulting from the annihilation with electrons of positrons emitted by short-lived radioisotopes used as tracers in the human body.

positron emission [NUC PHYS] A β-decay process in which a nucleus ejects a positron and a neutrino.

positronium [PARTIC PHYS] The bound state of an electron and a positron.

possible ore [MIN ENG] A class of ore whose existence is a reasonable possibility, based upon geologic-mineralogic relationships and the extent of ore bodies already developed. Also known as extension ore.

possible reserves [PETRO ENG] Primary petroleum reserves that may exist, but available data do not confirm their presence.

post [CIV ENG] **1.** A vertical support such as a pillar, upright, or fence stake. **2.** A pole used as a boundary marker. [MIN ENG] **1.** A mine timber, or any upright timber, more commonly the uprights which support the roof crosspieces. **2.** The support fastened between the roof and floor of a coal seam, used with certain types of mining machines or augers. **3.** A pillar of coal or ore. [NAV] A small beacon used for marking channels; it is usually more substantial than a perch.

postaccelerating electrode *See* intensifier electrode.

postacceleration [ELECTR] Acceleration of beam electrons after deflection in an electron-beam tube. Also known as postdeflection acceleration (PDA).

post-and-beam construction [BUILD] A type of wall construction using posts instead of studs.

post-and-lintel [ARCH] Pertaining to construction employing vertical supports and horizontal beams instead of arches or vaults.

post brake [MECH ENG] A brake occasionally fitted on a steam winder or haulage, and consisting of two upright posts mounted on either side of the drum that operate on brake paths bolted to the drum cheeks.

postcard paper [MATER] Lightweight Bristol board, made from soda and sulfite pulps, that has a smooth, firm surface for writing with pen or pencil, or for ordinary printing.

postcentral gyrus [ANAT] The cerebral convolution that lies immediately posterior to the central sulcus and extends from the longitudinal fissure above the posterior ramus of the lateral sulcus.

postcentral sulcus [ANAT] The first sulcus of the parietal lobe of the cerebrum, lying behind and roughly parallel to the central sulcus.

postcure bonding [ENG] A method of postcuring at elevated temperatures of parts previously subjected to autoclave or press in order to obtain higher heat-resistant properties of the adhesive bond.

postcure finish [TEXT] A durable-press finish applied to a fabric by the mill but heat-set after the garment is completed.

postdecrementing *See* autodecrement addressing.

postdeflection accelerating electrode *See* intensifier electrode.

postdeflection acceleration *See* postacceleration.

post drill [ENG] An auger or drill supported by a post.

postedit [COMPUT SCI] To edit the output data of a computer.

postemphasis *See* deemphasis.

postencephalitic parkinsonism [MED] The parkinsonian syndrome occurring as a sequel to lethargic encephalitis within a variable period, from days to many years, after the acute process.

postequalization *See* deemphasis.

poster board [MATER] A stiff cardboard used for show cards, posters, display advertising, and signs; it may be white or colored on one side.

posterior [ZOO] **1.** The hind end of an organism. **2.** Toward the back, or hinder end, of the body.

posterior chamber [ANAT] The space in the eye between the posterior surface of the iris and the ciliary body, and the lens.

posterior probabilities [STAT] Probabilities of the outcomes of an experiment after it has been performed and a certain event has occurred.

POS terminal *See* point-of-sale terminal.

poster paint [MATER] A water paint with a gum binder, which is brilliant, opaque, and fast-drying, and usually sold in jars. Also known as show-card color.

poster paper [MATER] A strong, waterproofed paper used for billboard poster work; it is white or colored with nonfading pigments, and does not curl when paste is applied to it.

postfix notation *See* reverse Polish notation.

postforming [ENG] Forming, bonding, or shaping of heated, flexible thermoset laminates before the final thermoset reaction has occurred; upon cooling, the formed shape is held.

postglacial [GEOL] Referring to the interval of geologic time since the total disappearance of continental glaciers in middle latitudes or from a particular area.

postheating [MET] Application of heat after thermal spraying, brazing, or welding to control cooling rate.

posthitis [MED] Inflammation of the prepuce.

posthole [CIV ENG] A hole bored in the ground to hold a fence post.

posthumous structure [GEOL] Folds, faults, and other structural features in covering strata which revive or mimic the structure of older underlying rocks that are generally more deformed.

postignition [CHEM] Surface ignition after the passage of the normal spark.

postincrementing *See* autoincrement addressing.

postindexing [COMPUT SCI] Operation in which the contents of a register indicated by the index bits of an indirect address are added to the indirect address to form the effective address.

posting interpreter *See* transfer interpreter.

postmagmatic [GEOL] Pertaining to geologic reactions or events occurring after the bulk of the magma has crystallized.

postmeridian [SCI TECH] After noon, or the period of time between noon (1200) and midnight (2400).

postmortem [COMPUT SCI] Any action taken after an operation is completed to help analyze that operation. [MED] Occurring after death.

postmortem dump [COMPUT SCI] **1.** The printout showing the state of all registers and the contents of main memory, taken after a computer run terminates normally or terminates owing to fault. **2.** The program which generates this printout.

postmortem program *See* postmortem routine.

postmortem routine [COMPUT SCI] A computer routine designed to provide information about the operation of a program after the program is completed. Also known as postmortem program.

postnatal [MED] Subsequent to birth.

postnecrotic cirrhosis [MED] Cirrhosis, usually due to toxic agents or viral hepatitis, characterized by necrosis of liver cells, regenerating nodules of hepatic tissue, and the presence of large bands of connective tissue.

postnova [ASTRON] A nova that has faded to the brightness it had before its outburst.

postobsequent stream [HYD] A strike stream developed after the obsequent stream into which it flows.

postoperative hernia *See* incisional hernia.

postorogenic [GEOL] Of a geologic process or event, occurring after a period of orogeny.

postpartum [MED] Following childbirth.

postprandial [MED] After a meal.

postprecipitation [CHEM] Precipitation of an impurity from a supersaturated solution onto the surface of an already present precipitate; used for analytical laboratory separations.

posttensioning [ENG] Compressing of cast concrete beams or other structural members to impart the characteristics of prestressed concrete.

posttraumatic hernia *See* incisional hernia.

posttuning drift [ELECTR] In a frequency-agile source such as the fast-tuning oscillators used in set-on jammers for electronic warfare equipment, the increase in frequency brought about by the drop in temperature of the varactor after warm-up time, settling time, and the time when the oscillator has reached a new frequency. Abbreviated PTD.

postulate *See* axiom.

postweld interval [MET] The elapsed time between the end of a resistance welding current and the start of hold time.

pot *See* potentiometer; pothole.

potable [SCI TECH] Suitable for drinking.

potamic [SCI TECH] Pertaining to rivers or river navigation.

Potamogalinae [VERT ZOO] An aberrant subfamily of West African tenrecs (Tenrecidae).

potamogenic rock [PETR] A sedimentary rock formed by precipitation from river water.

Potamogetonaceae [BOT] A large family of monocotyledonous plants in the order Najadales characterized by a solitary, apical or lateral ovule, usually two or more carpels, flowers in spikes or racemes, and four each of tepals and stamens.

Potamogetonales [BOT] The equivalent name for Najadales.

potamology [HYD] The scientific study of rivers.

Potamonidae [INV ZOO] A family of fresh-water crabs included in the Brachyura.

potamoplankton [BIOL] Plankton found in rivers.

potarite [MINERAL] PdHg A silver-white isometric mineral composed of palladium and mercury alloy. Also known as palladium amalgam.

potash *See* potassium carbonate.

potash alum *See* kalinite.

potash bentonite *See* potassium bentonite.

potash blue [INORG CHEM] A pigment made by oxidizing ferrous ferrocyanide; used in making carbon paper.

potash feldspar *See* potassium feldspar.

potash kettle *See* giant's kettle.

potash lake [HYD] An alkali lake whose waters contain a high content of dissolved potassium salts.

potash mica *See* muscovite.

potash regulations [MIN ENG] Rules governing the prospecting and exploitation of land containing potash.

potassic [PETR] Referring to a rock which contains a significant amount of potassium.

potassium [CHEM] A chemical element, symbol K, atomic number 19, atomic weight 39.102; an alkali metal. Also known as kalium.

potassium-40 [NUC PHYS] A radioactive isotope of potassium having a mass number of 40, a half-life of approximately 1.31×10^9 years, and an atomic abundance of 0.000122 gram per gram of potassium.

potassium-42 [NUC PHYS] Radioactive isotope with mass number of 42; half-life is 12.4 hours, with β- and γ-radiation; radiotoxic; used as radiotracer in medicine.

potassium acetate [ORG CHEM] $KC_2H_3O_2$ White, deliquescent solid; soluble in water and alcohol, insoluble in ether; melts at 292°C; used as analytical reagent, dehydrating agent, in medicine, and in crystal glass manufacture.

potassium acid carbonate *See* potassium bicarbonate.

potassium acid fluoride *See* potassium bifluoride.

potassium acid oxalate *See* potassium binoxalate.

potassium acid phosphate *See* potassium phosphate.

potassium acid phthalate *See* potassium biphthalate.

potassium acid saccharate [ORG CHEM] $HOOC(CHOH)_4COOK$ An off-white powder, soluble in hot water, acid, or alkaline solutions; used in rubber formulations, soaps, and detergents, and for metal plating.

potassium acid sulfate *See* potassium bisulfate.

potassium acid sulfite *See* potassium bisulfite.

potassium acid tartrate *See* potassium bitartrate.

potassium alginate [ORG CHEM] $(C_6H_7O_6K)_n$ A hydrophilic colloid occurring as filaments, grains, granules, and powder; used in food processing as a thickener and stabilizer. Also known as potassium polymannuronate.

potassium alum *See* potassium aluminum sulfate.

potassium aluminate [INORG CHEM] $K_2Al_2O_4 \cdot 3H_2O$ Water-soluble, alcohol-insoluble, lustrous crystals; used as a dyeing and printing mordant, and as a paper sizing.

potassium aluminum fluoride [INORG CHEM] K_3AlF_6 A toxic, white powder used as an insecticide.

potassium aluminum sulfate [INORG CHEM] $KAl(SO_4)_2 \cdot 12H_2O$ White, odorless crystals that are soluble in water; used in medicines and baking powder, in dyeing, papermaking, and tanning. Also known as alum; aluminum potassium sulfate; potassium alum.

potassium antimonate [INORG CHEM] $KSbO_3$ White, water-soluble crystals. Also known as potassium stibnate.

potassium antimonyl tartrate *See* tartar emetic.

potassium argentocyanide *See* silver potassium cyanide.

potassium-argon dating [GEOL] Dating of archeological, geological, or organic specimens by measuring the amount of argon accumulated in the matrix rock through decay of radioactive potassium.

potassium arsenate [INORG CHEM] K_3AsO_4 Poisonous, colorless crystals; soluble in water, insoluble in alcohol; used as an insecticide, analytical reagent, and in hide preservation and textile printing. Also known as Macquer's salt.

potassium arsenite [INORG CHEM] $KH(AsO_2)_2$ Poisonous, hygroscopic, white powder; soluble in alcohol; decomposes slowly in air; used in medicine, on mirrors, and as an analytical reagent. Also known as potassium metarsenite.

potassium aurichloride *See* potassium gold chloride.

potassium bentonite [GEOL] A clay of the illite group that contains potassium and is formed by alteration of volcanic ash. Also known as K bentonite; potash bentonite.

potassium benzyl penicillinate *See* benzyl penicillin potassium.

potassium bicarbonate [INORG CHEM] $KHCO_3$ A white powder or granules, or transparent colorless crystals; used in baking powder and in medicine as an antacid. Also known as potassium acid carbonate.

potassium bichromate *See* potassium dichromate.

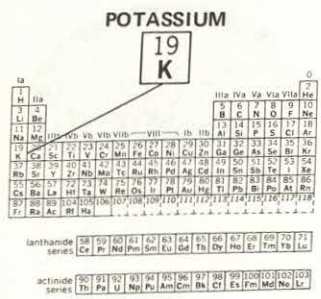
potassium bifluoride [INORG CHEM] KHF_2 Colorless, corrosive, poisonous crystals; soluble in water and dilute alcohol; used to etch glass and as a metallurgy flux. Also known as Fremy's salt; potassium acid fluoride.

potassium binoxalate [ORG CHEM] $KHC_2O_4 \cdot H_2O$ A poisonous, white, odorless, crystalline compound; used to clean wood and remove ink stains, as a mordant in dyeing, and in photography. Also known as potassium acid oxalate; sal acetosella; salt of sorrel.

potassium biphthalate [ORG CHEM] $HOOCC_6H_4COOK$ A crystalline compound, soluble in 12 parts of water; used as a buffer in pH determinations and as a primary standard for preparation of volumetric alkali solutions. Also known as acid potassium phthalate; potassium acid phthalate; potassium hydrogen phthalate.

potassium bismuth tartrate [ORG CHEM] A white, granular powder with a sweet taste; soluble in water; used in medicine. Also known as bismuth potassium tartrate.

potassium bisulfate [INORG CHEM] $KHSO_4$ Water-soluble, colorless crystals, melting at 214°C; used in winemaking, fertilizer manufacture, and as a flux and food preservative. Also known as acid potassium sulfate; potassium acid sulfate.



Periodic table of the chemical elements showing the position of potassium.

potassium bisulfite [INORG CHEM] $KHSO_3$ White, water-soluble powder with sulfur dioxide aroma; insoluble in alcohol; decomposes when heated; used as an antiseptic and reducing chemical, and in analytical chemistry, tanning, and bleaching. Also known as potassium acid sulfite.

potassium bitartrate [ORG CHEM] $KHC_4H_4O_6$ White, water-soluble crystals or powder; used in baking powder, for medicine, and as an acid and buffer in foods. Also known as cream of tartar; potassium acid tartrate.

potassium borohydride [INORG CHEM] KBH_4 A white, crystalline powder, soluble in water, alcohol, and ammonia; used as a hydrogen source and a reducing agent for aldehydes and ketones.

potassium bromate [INORG CHEM] $KBrO_3$ Water-soluble, white crystals, melting at 434°C; insoluble in alcohol; strong oxidizer and a fire hazard; used in analytical chemistry and as an additive for permanent-wave compounds.

potassium bromide [INORG CHEM] KBr White, hygroscopic crystals with bitter taste; soluble in water and glycerin, slightly soluble in alcohol and ether; melts at 730°C; used in medicine, soaps, photography, and lithography.

potassium bromide–disk technique [ANALY CHEM] Method of preparing an infrared spectrometry sample by grinding it and mixing it with a dry powdered alkali halide (such as KBr), then compressing the mixture into a tablet or pellet. Also known as pellet technique; pressed-disk technique.

potassium cadmium iodide *See* potassium tetraiodocadmate.

potassium carbonate [INORG CHEM] K_2CO_3 White, water-soluble, deliquescent powder, melting at 891°C; insoluble in alcohol; used in brewing, ceramics, explosives, fertilizers, and as a chemical intermediate. Also known as potash; salt of tartar.

potassium chlorate [INORG CHEM] $KClO_3$ Transparent, colorless crystals or a white powder with a melting point of 356°C; soluble in water, alcohol, and alkalies; used as an oxidizing agent, for explosives and matches, and in textile printing and paper manufacture.

potassium chloride [INORG CHEM] KCl Colorless crystals with saline taste; soluble in water, insoluble in alcohol; melts at 776°C; used as a fertilizer and in photography and pharmaceutical preparations. Also known as potassium muriate.

potassium chloroaurate *See* potassium gold chloride.

potassium chloroplatinate [INORG CHEM] K_2PtCl_6 Orange-yellow crystals or powder which decomposes when heated (250°C); used in photography. Also known as platinum potassium chloride; potassium platinichloride.

potassium chromate [INORG CHEM] K_2CrO_4 Yellow crystals, melting at 971°C; soluble in water, insoluble in alcohol; used as an analytical reagent and textile mordant, in enamels, inks, and medicines, and as a chemical intermediate.

potassium chromium sulfate *See* chrome alum.

potassium citrate [ORG CHEM] $K_3C_6H_5O_7 \cdot H_2O$ Odorless crystals with saline taste; soluble in water and glycerol, deliquesent and insoluble in alcohol; decomposes about 230°C; used in medicine.

potassium cobaltinitrite *See* cobalt potassium nitrite.

potassium cyanate [INORG CHEM] KOCN Colorless, water-soluble crystals; used as an herbicide and for the manufacture of drugs and organic chemicals.

potassium cyanide [INORG CHEM] KCN Poisonous, white, deliquescent crystals with bitter almond taste; soluble in water, alcohol, and glycerol; used for metal extraction, for electroplating, for heat-treating steel, and as an analytical reagent and insecticide.

potassium cyanoargentate *See* silver potassium cyanide.

potassium cyanoaurite *See* potassium gold cyanide.

potassium dichloroisocyanurate [INORG CHEM] White, crystalline powder or granules; strong oxidant used in dry household bleaches, detergents, and scouring powders.

potassium dichromate [INORG CHEM] $K_2Cr_2O_7$ Poisonous, yellowish-red crystals with metallic taste; soluble in water, insoluble in alcohol; melts at 396°C, decomposes at 500°C; used as an oxidizing agent and analytical reagent, and in explosives, matches, and electroplating. Also known as potassium bichromate; red potassium chromate.

potassium dihydrogen phosphate *See* potassium phosphate.

potassium diphosphate *See* potassium phosphate.

potassium ethyldithiocarbonate *See* potassium xanthate.

potassium ethylxanthogenate *See* potassium xanthate.

potassium feldspar [MINERAL] Any alkali feldspar (orthoclase, microcline, sonidine, adularia) containing the molecule $KAlSi_3O_8$. Incorrectly known as K feldspar; potash feldspar.

potassium ferric oxalate [INORG CHEM] $K_3Fe(C_2O_4)_3 \cdot 3H_2O$ Green crystals decomposing at 230°C, soluble in water and acetic acid; used in photography and blueprinting.

potassium ferricyanide [INORG CHEM] $K_3Fe(CN)_6$ Poisonous, water-soluble, bright-red crystals; decomposes when heated; used in calico printing and wool dyeing. Also known as red potassium prussiate; red prussiate of potash.

potassium ferrocyanide [INORG CHEM] $K_4Fe(CN)_6 \cdot 3H_2O$ Yellow crystals with saline taste; soluble in water, insoluble in alcohol; loses water at 60°C; used in medicine, dry colors, explosives, and as an analytical reagent. Also known as yellow prussiate of potash.

potassium fluoborate [INORG CHEM] KBF_4 White powder or gelatinous crystals that decompose at high temperatures; slightly soluble in water and hot alcohol; used as a sand agent to cast magnesium and aluminum, and in electrochemical processes.

potassium fluoride [INORG CHEM] KF or $KF \cdot 2H_2O$ Poisonous, white, deliquescent crystals with saline taste; soluble in water and hydrofluoric acid, insoluble in alcohol; melts at 846°C; used to etch glass and as a preservative and insecticide.

potassium fluosilicate [INORG CHEM] K_2SiF_6 An odorless, white crystalline compound; slightly soluble in water; used in vitreous frits, synthetic mica, metallurgy, and ceramics. Also known as potassium silicofluoride.

potassium gluconate [ORG CHEM] $KC_6H_{11}O_7$ An odorless, white crystalline compound with salty taste; soluble in water, insoluble in alcohol and benzene; used in medicine.

potassium glutamate [ORG CHEM] $KOOC(CH_2)_2CH(NH_2)COOH \cdot H_2O$ White, hygroscopic, water-soluble powder; used as a flavor enhancer and salt substitute. Also known as monopotassium L-glutamate.

potassium glycerinophosphate *See* potassium glycerophosphate.

potassium glycerophosphate [ORG CHEM] $K_2C_3H_5O_2 \cdot H_2PO_4 \cdot 3H_2O$ Pale yellow, syrupy liquid, soluble in alcohol; used in medicine and as a dietary supplement. Also known as potassium glycerinophosphate.

potassium gold chloride [INORG CHEM] $KAuCl_4 \cdot 2H_2O$ Yellow crystals, soluble in water, ether, and alcohol; used in photography and medicine. Also known as gold potassium chloride; potassium aurichloride; potassium chloroaurate.

potassium gold cyanide [INORG CHEM] $KAu(CN)_2$ A white, water-soluble, crystalline powder; used in medicine and for gold plating. Also known as gold potassium cyanide; potassium cyanoaurite.

potassium hexafluoroarsenate *See* hexaflurate.

potassium hydrate *See* potassium hydroxide.

potassium hydrogen phosphate *See* potassium phosphate.

potassium hydrogen phthalate *See* potassium biphthalate.

potassium hydroxide [INORG CHEM] KOH Toxic, corrosive, water-soluble, white solid, melting at 360°C; used to make soap and matches, and as an analytical reagent and chemical intermediate. Also known as caustic potash; potassium hydrate.

potassium *N*-hydroxy-methyl-*N*-methyldithiocarbamate [ORG CHEM] $C_3H_6OS_2K$ A fungicide, nematicide, and bactericide used on foliage and soil.

potassium hyperchlorate *See* potassium perchlorate.

potassium hypophosphite [INORG CHEM] KH_2PO_2 White, opaque crystals or powder, soluble in water and alcohol; used in medicine.

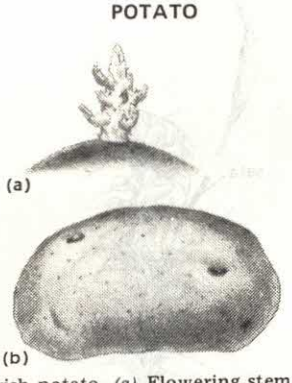
potassium iodate [INORG CHEM] KIO_3 Odorless, white crystals; soluble in water, insoluble in alcohol; melts at 560°C; used as an analytical reagent and in medicine.

potassium iodide [INORG CHEM] KI Water- and alcohol-soluble, white crystals with saline taste; melts at 686°C; used in medicine and photography, and as an analytical reagent.

potassium linoleate [ORG CHEM] $C_{17}H_{31}COOK$ Light-tan, water-soluble paste; used as an emulsifying agent.

potassium manganate [INORG CHEM] K_2MnO_4 Water-soluble dark-green crystals, decomposing at 190°C; used as an analytical reagent, bleach, oxidizing agent, disinfectant, mordant for dyeing wool and in photography, printing, and water purification.

potassium metabisulfite [INORG CHEM] $K_2S_2O_5$ White granules or powder, decomposing at 150–190°C; used as an antiseptic, for winemaking, food preservation, and process engraving, and as a source for sulfurous acid. Also known as potassium pyrosulfite.
potassium metarsenite *See* potassium arsenite.
potassium monophosphate *See* potassium phosphate.
potassium muriate *See* potassium chloride.
potassium nitrate [INORG CHEM] KNO_3 Flammable, water-soluble, white crystals with saline taste; melts at 337°C; used in pyrotechnics, explosives, and matches, as a fertilizer, and as an analytical reagent. Also known as niter.
potassium nitrite [INORG CHEM] KNO_2 White, deliquescent prisms, melting at 297–450°C; soluble in water, insoluble in alcohol; strong oxidizer, exploding at over 550°C; used as an analytical reagent, in medicine, organic synthesis, pyrotechnics, and explosives.
potassium oxalate [ORG CHEM] $K_2C_2O_4 \cdot H_2O$ Odorless, efflorescent, water-soluble, colorless crystals; decomposes when heated; used in analytical chemistry and photography and as a bleach and oxalic acid source.
potassium oxide [INORG CHEM] K_2O Gray, water-soluble crystals; melts at red heat; forms potassium hydroxide in water.
potassium penicillin G_1 *See* benzyl penicillin potassium.
potassium percarbonate [INORG CHEM] $K_2C_2O_6 \cdot H_2O$ White, granular, water-soluble mass with a melting point of 200–300°C; used in microscopy, photography, and textile printing.
potassium perchlorate [INORG CHEM] $KClO_4$ Explosive, oxidative, colorless crystals; soluble in water, insoluble in alcohol; decomposes at 400°C; used in explosives, medicine, pyrotechnics, analysis, and as a reagent and oxidizing agent. Also known as potassium hyperchlorate.
potassium permanganate [INORG CHEM] $KMnO_4$ Highly oxidative, water-soluble, purple crystals with sweet taste; decomposes at 240°C; and explodes in contact with oxidizable materials; used as a disinfectant and analytical reagent, in dyes, bleaches, and medicines, and as a chemical intermediate. Also known as purple salt.
potassium peroxide [INORG CHEM] K_2O_2 Yellow mass with a melting point of 490°C; decomposes with oxygen evolution in water; used as an oxidizing and bleaching agent.
potassium peroxydisulfate *See* potassium persulfate.
potassium persulfate [INORG CHEM] $K_2S_2O_8$ White, water-soluble crystals, decomposing below 100°C; used for bleaching and textile desizing, as an oxidizing agent and antiseptic, and in the manufacture of soap and pharmaceuticals. Also known as potassium peroxydisulfate.
potassium phosphate [INORG CHEM] Any one of three orthophosphates of potassium. The monobasic form, KH_2PO_4, consists of colorless, water-soluble crystals melting at 253°C; used in sonar transducers, optical modulation, medicine, baking powders, and nutrient solutions; also known as potassium acid phosphate, potassium dihydrogen phosphate (KDP), potassium diphosphate, potassium orthophosphate. The dibasic form, K_2HOP_4, consists of white, water-soluble crystals; used in medicine, fermentation, and nutrient solutions; also known as potassium hydrogen phosphate, potassium monophosphate. The tribasic form, K_3PO_4, is a water-soluble, hygroscopic white powder, melting at 1340®c; used to purify gasoline, to soften water, and to make liquid soaps and fertilizers; also known as neutral potassium phosphate, tripotassium orthophosphate.
potassium platinichloride *See* potassium chloroplatinate.
potassium polymannuronate *See* potassium alginate.
potassium polymetaphosphate [INORG CHEM] $(KPO_3)_n$ White powder with a molecular weight up to 500,000; used in foods as a fat emulsifier and moisture-retaining agent.
potassium pyrophosphate [INORG CHEM] $K_4P_2O_7 \cdot 3H_2O$ Water-soluble, colorless crystals; dehydrates below 300°C, melts at 1090°C; used in tin plating, china-clay purification, dyeing, oil-drilling muds, and synthetic rubber production. Also known as normal potassium pyrophosphate; tetrapotassium pyrophosphate.
potassium pyrosulfite *See* potassium metabisulfite.
potassium rhodanide *See* potassium thiocyanate.
potassium silicate [INORG CHEM] $SiO_2{=}K_2O$ A compound existing in two forms, solution and solid (glass); as a solution, it is colorless to turgid in water, and is used in paints and coatings, as an arc-electrode binder and catalyst and in detergents; as a solid, it is colorless and water-soluble solid, and is used in glass manufacture and for dyeing and bleaching.
potassium silicofluoride *See* potassium fluosilicate.
potassium sodium ferricyanide [INORG CHEM] $K_2NaFe(CN)_6$ Red, water-soluble crystals; used for blueprint paper and in photography.
potassium sodium tartrate [INORG CHEM] $KNaC_4H_4O_6 \cdot 4H_2O$ Colorless, water-soluble, efflorescent crystals or white powder with a melting point of 70–80°C; used in medicine and as a buffer and sequestrant in foods. Also known as Rochelle salt; sodium potassium tartrate.
potassium sorbate [ORG CHEM] $C_6H_7KO_2$ A crystalline compound, more soluble in water than in alcohol; decomposes above 270°C; used to inhibit mold and yeast growth in food. Also known as sorbic acid potassium salt.
potassium stannate [INORG CHEM] $K_2SnO_3 \cdot 3H_2O$ White crystals; soluble in water, insoluble in alcohol; used in textile printing and dyeing, and in tin-plating baths.
potassium stibnate *See* potassium antimonate.
potassium sulfate [INORG CHEM] K_2SO_4 Colorless crystals with bitter taste; soluble in water, insoluble in alcohol; melts at 1072°C; used as an analytical reagent, medicine, and fertilizer, and in aluminum and glass manufacture. Also known as salt of Lemery.
potassium sulfide [INORG CHEM] K_2S Moderately flammable, water-soluble, deliquescent red crystals; melts at 840°C; used in analytical chemistry, medicine, and depilatories. Also known as fused potassium sulfide; hepar sulfuris; potassium sulfuret.
potassium sulfite [INORG CHEM] $K_2SO_3 \cdot 2H_2O$ Water-soluble, white crystals; used in medicine and photography.
potassium sulfocyanate *See* potassium thiocyanate.
potassium sulfocyanide *See* potassium thiocyanate.
potassium sulfuret *See* potassium sulfide.
potassium tetraiodocadmate [INORG CHEM] $K_2(CdI_4) \cdot 2H_2O$ A crystalline compound; used in analytical chemistry for alkaloids, amines, and other compounds. Also known as cadmium potassium iodide; potassium cadmium iodide.
potassium thiocyanate [INORG CHEM] KCNS Water- and alcohol-soluble, colorless, odorless hygroscopic crystals with saline taste; decomposes at 500°C; used as an analytical reagent and in freezing mixtures, chemicals manufacture, textile printing and dyeing, and photographic chemicals. Also known as potassium rhodanide; potassium sulfocyanate; potassium sulfocyanide.
potassium undecylenate [ORG CHEM] $CH_2{:}CH(CH_2)_8COOK$ A white, water-soluble powder, decomposing at about 250°C; used in pharmaceuticals and cosmetics as a fungistat and bacteriostat.
potassium xanthate [ORG CHEM] KC_2H_5OCSS Water- and alcohol-soluble, yellow crystals; used as an analytical reagent and soil-treatment fungicide. Also known as potassium ethyldithiocarbonate; potassium ethylxanthogenate; potassium xanthogenate.
potassium xanthogenate *See* potassium xanthate.
potato [BOT] *Solanum tuberosum*. An erect herbaceous annual that has a round or angular aerial stem, underground lateral stems, pinnately compound leaves, and white, pink, yellow, or purple flowers occurring in cymose inflorescences; produces an edible tuber which is a shortened, thickened underground stem having nodes (eyes) and internodes. Also known as Irish potato; white potato.
potato stone [GEOL] A potato-shaped geode, especially one consisting of hard, silicified limestone with an internal lining of quartz crystals.
pot clay [MATER] Refractory clay used to make the pots in which glass is produced.
pot core [ELECTROMAG] A ferrite magnetic core that has the shape of a pot, with a magnetic post in the center and a magnetic plate as a cover; the coils for a choke or transformer are wound on the center post.
pot die forming [MECH ENG] Forming sheet or plate metal through a hollow die by the application of pressure which causes the workpiece to assume the contour of the die.
pot earth *See* potter's clay.
potential [ELEC] *See* electric potential. [PHYS] A function or set of functions of position in space, from whose first derivatives a vector can be formed, such as that of a static field intensity.
potential barrier [PHYS] The potential in a region in a field



Irish potato. *(a)* Flowering stem. *(b)* Tuber.

of force where the force exerted on a particle is such as to oppose the passage of the particle through the region. Also known as barrier; potential hill.

potential density [PHYS] The density that would be reached by a compressible fluid if it were adiabatically compressed or expanded to a standard pressure of the bar.

potential difference [ELEC] Between any two points, the work which must be done against electric forces to move a unit charge from one point to the other. Abbreviated PD.

potential divider *See* voltage divider.

potential drop [ELEC] The potential difference between two points in an electric circuit. [FL MECH] The difference in pressure head between one equipotential line and another.

potential energy [MECH] The capacity to do work that a body or system has by virtue of its position or configuration.

potential evaporation *See* evaporative power.

potential evapotranspiration [HYD] Generally, the amount of moisture which, if available, would be removed from a given land area by evapotranspiration; expressed in units of water depth.

potential flow [FL MECH] Flow in which the velocity of flow is the gradient of a scalar function, known as the velocity potential.

potential flow analyzer *See* electrolytic tank.

potential gradient [ELEC] Difference in the values of the voltage per unit length along a conductor or through a dielectric.

potential hill *See* potential barrier.

potential index of refraction [METEOROL] An atmospheric index of refraction so formulated that it would have no height variation in an adiabatic atmosphere. Also known as potential refractive index.

potential instability *See* convective instability.

potential ore [MIN ENG] **1.** As yet undiscovered mineral deposits. **2.** A known mineral deposit for which recovery is not yet economically feasible.

potential refractive index *See* potential index of refraction.

potential scattering [QUANT MECH] Scattering of a particle which can be treated as the effect of a potential, representing the particle's potential energy, on the particle's Schrödinger wave function.

potential temperature [THERMO] The temperature that would be reached by a compressible fluid if it were adiabatically compressed or expanded to a standard pressure, usually 1 bar.

potential theory [MATH] The study of the functions arising from Laplace's equation, especially harmonic functions.

potential transform *See* Poisson transform.

potential transformer *See* voltage transformer.

potential transformer phase angle [ELEC] Angle between the primary voltage vector and the secondary voltage vector rsed; this angle is conveniently considered as positive when the reversed, secondary voltage vector leads the primary voltage vector.

potential vorticity [FL MECH] The product of the absolute vorticity and the static stability, conservative in adiabatic flow, given by the expression $(\eta/\theta)(\partial\theta/\partial p)$, where η is the absolute vorticity of a fluid parcel, θ the potential temperature, and p the pressure. Also known as absolute potential vorticity.

potential well [PHYS] For an object in a conservative field of force, a region in which the object has a lower potential energy than in all the surrounding regions.

potentiometer [ELEC] A resistor having a continuously adjusted sliding contact that is generally mounted on a rotating shaft; used chiefly as a voltage divider. Also known as pot (slang). [ENG] A device for the measurement of an electromotive force by comparison with a known potential difference.

potentiometric cell [ANALY CHEM] Container for the two electrodes and the electrolytic solution being titrated potentiometrically.

potentiometric controller [CONT SYS] A controller that operates on the null balance principle, in which an error signal is produced by balancing the sensor signal against a set-point voltage in the input circuit; the error signal is amplified for use in keeping the load at a desired temperature or other parameter.

potentiometric map [HYD] A map showing the elevation of a potentiometric surface of an aquifer by means of contour lines or other symbols. Also known as pressure-surface map.

potentiometric model study [PETRO ENG] Analogic electrical-resistance model (electrolyte in a contoured container) of an underground reservoir based on Darcy's law that is, the steady-state flow of liquids through porous media is analogous to the flow of current through an electrical conductor; used to predict conditions in gas-condensate oil reservoirs.

potentiometric surface [HYD] An imaginary surface that represents the static head of groundwater and is defined by the level to which water will rise. Also known as isopotential level; piezometric surface; pressure surface.

potentiometric titration [ANALY CHEM] Solution titration in which the end point is read from the electrode-potential variations with the concentrations of potential-determining ions, following the Nernst concept. Also known as constant-current titration.

potentiometry [ELEC] Use of a potentiometer to measure electromotive forces, and the applications of such measurements.

potentiostat [ENG] An automatic laboratory instrument that controls the potential of a working electrode to within certain limits during coulometric (electrochemical reaction) titrations.

pot furnace [ENG] **1.** A furnace containing several pots in which glass is melted. **2.** A furnace in which the charge is contained in a pot or crucible.

pothole [CIV ENG] A pot-shaped hole in a pavement surface. [GEOL] **1.** A shaftlike cave opening upward to the surface. **2.** Any bowl-shaped, cylindrical, or circular hole formed by the grinding action of a stone in the rocky bed of a river or stream. Also known as churn hole; colk; eddy mill; evorsion hollow; kettle; pot. **3.** A vertical, or nearly vertical shaft in limestone. Also known as aven; cenote. **4.** A small depression with steep sides in a coastal marsh; contains water at or below low-tide level. Also known as rotten spot. [HYD] *See* moulin.

Potier diagram [ELEC] Vector diagram showing the voltage and current relations in an alternating-current generator.

potometer [ENG] A device for measuring transpiration, consisting of a small vessel containing water and sealed so that the only escape of moisture is by transpiration from a leaf, twig, or small plant with its cut end inserted in the water.

potomology [CIV ENG] The systematic study of the factors affecting river channels to provide the basis for predictions of the effects of proposed engineering works on channel characteristics.

pot plunger [ENG] A plunger used to force softened plastic molding material into the closed cavity of a transfer mold.

potrero [GEOL] An elongate, islandlike beach ridge, surrounded by mud flats and separated from the coast by a lagoon and barrier island, made up of a series of accretionary dune ridges.

potted circuit [ELEC] A pulse-forming network immersed in oil and enclosed in a metal container.

potted line [ELEC] Pulse-forming network immersed in oil and enclosed in a metal container.

Potter-Bucky grid [MED] An assembly of lead strips resembling an open venetian blind, placed between a patient being x-rayed and the screen or film, to reduce the effects of scattered radiation. Also known as Bucky diaphragm; grid.

potter's clay [MATER] A plastic clay, free from iron and devoid of fissility, suitable for modeling or pottery making or adapted for use on a potter's wheel. Also known as argil; pot earth; potter's earth.

potter's earth *See* potter's clay.

potter's wheel [ENG] A revolving horizontal disk that turns when a treadle is operated; used to shape clay by hand.

pottery [MATER] Objects made of clay which may be nonvitreous, porous, opaque, and glazed or unglazed; also included is earthenware such as stoneware.

Pottiales [BOT] An order of mosses distinguished by erect stems, lanceolate to broadly ovate or obovate leaves, a strong, mostly percurrent or excurrent costa, and a cucullate calyptra.

potting [ELECTR] Process of filling a complete electronic assembly with a thermosetting compound for resistance to shock and vibration, and for exclusion of moisture and corrosive agents.

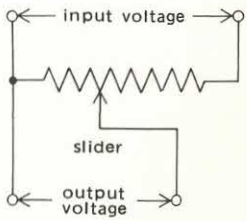
Pott's disease [MED] Abnormal backward curvature of the spine caused by tuberculous osteitis.

Poulter seismic method [GEOPHYS] A type of air shooting in which the explosive is set on poles above the ground.

poultice [MED] A soft mass of hot, moist material applied as an external counterirritant, analgesic, or antiseptic.

poultry [AGR] Domesticated fowl grown for their meat and eggs.

POTENTIOMETER



chematic of potentiometer.

POTTIALES

he entire plant of the moss
ortula ruralis.

poumar [TEXT] A unit of line density (mass per unit length) used chiefly in the textile industry to measure yarn fiber, equal to 1 pound per 1,000,000 yards, or approximately 4.96055×10^{-7} kilogram per meter.

pounce [MATER] Pumice in the form of a very fine powder, used for preparing parchment and tracing cloth.

pounce wheel [GRAPHICS] An instrument having a toothed wheel at the tip, used to follow the lines in a master drawing in pouncing.

pouncing [GRAPHICS] A method of making copies of patterns and signs; a master drawing is made on paper of the design to be copied, and the lines are traced with a pounce wheel; the teeth perforate the paper with 12 to 24 holes per inch; the master drawing is then placed on the permanent support, and powder is forced through the holes, effectively transferring the drawing.

pouncing paper [MATER] Paper coated with pumice for polishing felt hats.

pound [MECH] **1.** A unit of mass in the English absolute system of units, equal to 0.45359237 kilogram. Abbreviated lb. Also known as avoirdupois pound; pound mass. **2.** A unit of force in the English gravitational system of units, equal to the gravitational force experienced by a pound mass when the acceleration of gravity has its standard value of 9.80665 meters per second per second (approximately 32.1740 ft/sec^2) equal to 4.4482216152605 newtons. Abbreviated lb. Also spelled Pound (Lb). Also known as pound force (lbf). **3.** A unit of mass in the troy and apothecaries' systems, equal to 12 troy or apothecaries' ounces, or 5760 grains, or 5760/7000 avoirdupois pound, or 0.3732417216 kilogram. Also known as apothecaries' pound (abbreviated lb ap in the US or lb apoth in the UK), troy pound (abbreviated lb UK).

poundal [MECH] A unit of force in the British absolute system of units equal to the force which will impart an acceleration of 1 ft/sec^2 to a pound mass, or to 0.138254954376 newton.

poundal-foot *See* foot-poundal.

pound-foot *See* foot-pound.

pound force *See* pound.

pound mass *See* pound.

pound per square foot [MECH] A unit of pressure equal to the pressure resulting from a force of 1 pound applied uniformly over an area of 1 square foot. Abbreviated psf.

pound per square inch [MECH] A unit of pressure equal to the pressure resulting from a force of 1 pound applied uniformly over an area of 1 square inch. Abbreviated psi.

pounds per square inch absolute [MECH] The absolute, thermodynamic pressure, measured by the number of pounds-force exerted on an area of 1 square inch. Abbreviated lbf in.$^{-2}$ abs; psia.

pounds per square inch differential [ENG] The difference in pressure between two points in a fluid-flow system, measured in pounds per square inch. Abbreviated psid.

pounds per square inch gage [MECH] The gage pressure, measured by the number of pounds-force exerted on an area of 1 square inch. Abbreviated psig.

Poupart's ligament *See* inguinal ligament.

pour depressant *See* pour-point depressant.

pouring [MET] Transferring molten metal to a mold or ladle.

pouring rope *See* asbestos joint runner.

pour-plate culture [MICROBIO] A technique for pure-culture isolation of bacteria; liquid, cooled agar in a test tube is inoculated with one loopful of bacterial suspension and mixed by rolling the tube between the hands; subsequent transfers are made from this to a second test tube, and from the second to a third; contents of each tube are poured into separate petri dishes; pure cultures can be isolated from isolated colonies appearing on the plates after incubation.

pour point [FL MECH] Lowest test temperature at which a liquid will flow. [MET] Temperature at which a molten alloy is cast.

pour-point depressant [MATER] An additive that lowers the pour point of a wax-containing petroleum-base lubricating oil by reducing the tendency of the wax to solidify. Also known as pour depressant; pour-point inhibitor.

pour-point inhibitor *See* pour-point depressant.

pour reversion [MATER] The difference between the original ASTM pour point of a lubricating oil and the relatively high solidification temperature observed in the field.

pour stability [MATER] Ability of a pour-depressant-treated petroleum lubricating oil to maintain its original ASTM pour point at low temperatures approximating winter conditions.

Pourtalesiidae [INV ZOO] A family of exocyclic Echinoidea in the order Holasteroida, including those forms with a bottle-shaped test.

pour test [ENG] The chilling of a liquid under specified test conditions to determine the ASTM pour point.

powder [MATER] **1.** A general term for explosives. **2.** A loose grouping or aggregation of solid particles, usually smaller than 1000 micrometers.

powder box [MIN ENG] A wooden box used by miners to store explosive powder and blasting caps.

powder clutch [MECH ENG] A type of electromagnetic disk clutch in which the space between the clutch members is filled with dry, finely divided magnetic particles; application of a magnetic field coalesces the particles, creating friction forces between clutch members.

powder diffraction camera [CRYSTAL] A metal cylinder having a window through which an x-ray beam of known wavelength is sent by an x-ray tube to strike a finely ground powder sample mounted in the center of the cylinder; crystal planes in this powder sample diffract the x-ray beam at different angles to expose a photographic film that lines the inside of the cylinder; used to study crystal structure. Also known as x-ray powder diffractometer.

powdered-iron core *See* ferrite core.

powder flowmeter [ENG] A device used to measure the flow rate of a metal powder.

powder house [CIV ENG] A magazine for the temporary storage of explosives.

powder insulation [MATER] Thermal insulation material made up of a finely divided solid held between two surfaces (one hot, one cold); the powder reduces both convection and radiation heat flow between the surfaces.

powder keg [ENG] A small metal keg for black blasting powder.

powder lubricant [MET] An agent mixed with a powder metal to facilitate formation and ejection of a compact.

powderman [MIN ENG] A man in charge of explosives in an operation of any nature requiring their use.

powder metal [MET] Finely divided particles of a metal.

powder metallurgy [MET] The production of massive materials and shaped objects by pressing, binding, and sintering powdered metal.

powder method [SOLID STATE] A method of x-ray diffraction analysis in which a collimated, monochromatic beam of x-rays is directed at a sample consisting of an enormous number of tiny crystals having random orientation, producing a diffraction pattern that is recorded on film or with a counter tube. Also known as x-ray powder method.

powder mine [MIN ENG] An excavation filled with powder for the purpose of blasting rocks.

powder-moisture test [ENG] Determination of moisture in a propellant by drying under prescribed conditions; expressed as percentage by weight.

powder molding [ENG] Generic term for plastics-molding techniques to produce objects of varying sizes and shapes by melting polyethylene powder, usually against the heated inside of a mold.

powder pattern [CRYSTAL] In the powder method of x-ray diffraction analysis, the display of lines made on film by the Debye-Scherrer method or on paper by a recording diffractometer. [ELECTROMAG] The pattern created by very fine powders or colloidal particles, spread over the surface of a magnetic material; reveals the magnetic domains in a single crystal of such material.

powder silk [TEXT] Special silk fabric formerly used in making propellant bags; it left no burning residue when the propellant burned; silk has now been largely replaced by other materials, and the fabric is called cartridge cloth. Also known as cartridge silk.

powder snow [HYD] A cover of dry snow that has not been compacted in any way.

powder train [ENG] **1.** Train, usually of compressed black powder, used to obtain time action in older fuse types. **2.** Train of explosives laid out for destruction by burning.

powdery mildew [MYCOL] A fungus characterized by production of abundant powdery conidia on the host; a member of the family Erysiphaceae or the genus *Oidium*. [PL PATH] A plant disease caused by a powdery mildew fungus.

powdery scab [PL PATH] A fungus disease of potato tubers caused by *Spongospora subterranea* and characterized by nodu-

lar discolored lesions, which burst and expose masses of powdery fungus spores.

powellite [MINERAL] $Ca(WMo)O_4$ A commercially important tungsten mineral, crystallizing in the tetragonal system; isomorphous with scheelite ($CaWO_4$).

power [MATH] **1.** The value that is assigned to a mathematical expression and its exponent. **2.** The power of a set is its cardinality. [PHYS] The time rate of doing work.

power-actuated pressure relief valve [MECH ENG] A pressure relief valve connected to and controlled by a device which utilizes a separate energy source.

power amplification *See* power gain.

power amplifier [ELECTR] The final stage in multistage amplifiers, such as audio amplifiers and radio transmitters, designed to deliver maximum power to the load, rather than maximum voltage gain, for a given percent of distortion.

power amplifier tube *See* power tube.

power attenuation *See* power loss.

power bandwidth [COMMUN] The frequency range for which half the rated power of an audio amplifier is available at rated distortion.

power barker *See* barker.

power brake [MECH ENG] An automotive brake with engine-intake-manifold vacuum used to amplify the atmospheric pressure on a piston operated by movement of the brake pedal.

power breeder [NUCLEO] A nuclear reactor designed to produce both useful power and fuel.

power car [AERO ENG] A suspended structure on an airship that houses an engine. [MECH ENG] **1.** A railroad car with equipment for furnishing heat and electric power to a train. **2.** A railroad car with controls, which can be operated by itself or as part of a train.

power component *See* active component.

power control rod [NUCLEO] A control rod that produces only a small change in reactivity of a nuclear reactor, as required for controlling power level.

power control valve [MECH ENG] A safety relief device operated by a power-driven mechanism rather than by pressure.

power cord *See* line cord.

power curve [STAT] The graph of the power of a test for various alternatives.

power dam [CIV ENG] A dam designed to raise the level of a stream to create or concentrate hydrostatic head for power purposes.

power density [ELECTROMAG] The amount of power per unit area in a radiated microwave or other electromagnetic field, usually expressed in units of watts per square centimeter. [NUCLEO] The power generation per unit volume of a nuclear-reactor core.

power-density spectrum *See* frequency spectrum.

power detection [ELECTR] Form of detection in which the power output of the detecting device is used to supply a substantial amount of power directly to a device such as a loudspeaker or recorder.

power detector [ELECTR] Detector capable of handling strong input signals without appreciable distortion.

power diode *See* pin-diode.

power divider [ELECTROMAG] A device used to produce a desired distribution of power at a branch point in a waveguide system.

power drill [MECH ENG] A motor-driven drilling machine.

power-driven [MECH ENG] Of a component or piece of equipment, moved, rotated, or operated by electrical or mechanical energy, as in a power-driven fan or power-driven turret.

power efficiency [STAT] The probability of rejecting a statistical hypothesis when it is false.

power equation [MIN ENG] The relationship indicating that the natural ventilating power plus the power required to force air through a mine is equal to the power used in lifting water out of the mine plus the power lost in the kinetic energy of air leaving the mine plus the power converted to heat in overcoming friction.

power excursion [NUCLEO] A sudden increase in the power level of a nuclear reactor, caused by a sudden increase in reactivity.

power factor [ELEC] The ratio of the average (or active) power to the apparent power (root-mean-square voltage times rms current) of an alternating-current circuit. Abbreviated pf. Also known as phase factor.

power factor controller [ELECTR] A solid-state electronic device that reduces excessive energy waste in alternating-current induction motors by holding constant the phase angle between current and voltage.

power-factor meter [ENG] A direct-reading instrument for measuring power factor.

power factor regulator [ELEC] Regulator which functions to maintain the power factor of a line or an apparatus at a predetermined value, or to vary it according to a predetermined plan.

power flow [ELECTROMAG] The rate at which energy is transported across a surface by an electromagnetic field.

Powerforming [CHEM ENG] A fixed-bed petroleum-refinery process to catalytically reform petroleum naphtha to produce high-octane motor gasoline.

power frequency [ELEC] The frequency at which electric power is generated and distributed; in most of the United States it is 60 hertz.

power gain [ELECTR] The ratio of the power delivered by a transducer to the power absorbed by the input circuit of the transducer. Also known as power amplification. [ELECTROMAG] An antenna ratio equal to 4π (12.57) times the ratio of the radiation intensity in a given direction to the total power delivered to the antenna.

power generator [ELEC] A device for producing electric energy, such as an ordinary electric generator or a magnetohydrodynamic, thermionic, or thermoelectric power generator.

power grizzly [MIN ENG] Power-operated machine for removing dirt and fine particles from ore before it is crushed.

power-law fluid [FL MECH] A fluid in which the shear stress at any point is proportional to the rate of shear at that point raised to some power.

power-law profile [METEOROL] A formula for the variation of wind with height in the surface boundary layer.

power level [ELEC] The ratio of the amount of power being transmitted past any point in an electric system to a reference power value; usually expressed in decibels. [NUCLEO] The power production of a nuclear reactor in watts.

power line [ELEC] Two or more wires conducting electric power from one location to another. Also known as electric power line.

power-line carrier [ELEC] The use of transmission lines to transmit speech, metering indications, control impulses, and other signals from one station to another, without interfering with the lines' normal function of transmitting power.

power-line filter *See* line filter.

power-line interference [COMMUN] Interference caused by radiation from high-voltage power lines.

power loader [MIN ENG] Power-operated machine for loading ore, coal, or other material into a car, conveyor, or other collector.

power loss [ELECTR] The ratio ofthe power absorbed by the input circuit of a transducer to the power delivered to a specified load; usually expressed in decibels. Also known as power attenuation.

power meter *See* electric power meter.

power of a test [STAT] One minus the probability that a given test causes the acceptance of the null hypothesis when it is false due to the validity of an alternative hypothesis; this is the same as the probability of rejecting the null hypothesis by the test when the alternative is true.

power of the continuum [MATH] The cardinality of the set of real numbers.

power oil [MATER] Fluid used to actuate (power) hydraulic pumps, motors, and other power-type equipment; can be based on petroleum oils or synthetic materials.

power output [ELECTR] The alternating-current power in watts delivered by an amplifier to a load.

power output tube *See* power tube.

power pack [ELECTR] Unit for converting power from an alternating- or direct-current supply into an alternating- or direct-current power at voltages suitable for supplying an electronic device.

power package [MECH ENG] A complete engine and its accessories, designed as a single unit for quick installation or removal.

power plant [MECH ENG] Any unit that converts some form of energy into electrical energy, such as a hydroelectric or steam-generating station, a diesel-electric engine in a locomo-

tive, or a nuclear power plant. Also known as electric power plant.

power rating [ELEC] The power available at the output terminals of a component or piece of equipment that is operated according to the manufacturer's specifications.

power ratio [ELECTROMAG] The ratio of the maximum power to the minimum power in a waveguide that is improperly terminated.

power reactor [NUCLEO] A nuclear reactor designed to provide useful power, as for submarines, aircraft, ships, vehicles, and power plants.

power rectifier [ELEC] A device which converts alternating current to direct current and operates at high power loads.

power relay [ELEC] Relay that functions at a predetermined value of power; may be an overpower relay, an underpower relay, or a combination of both.

power resistor [ELEC] A resistor used in electric power systems, ranging in size from 5 watts to many kilowatts, and cooled by air convection, air blast, or water.

power saw [MECH ENG] A power-operated woodworking saw, such as a bench or circular saw.

power semiconductor [ELECTR] A semiconductor device capable of dissipating appreciable power (generally over 1 watt) in normal operation; may handle currents of thousands of amperes or voltages up into thousands of volts, at frequencies up to 10 kilohertz.

power series [MATH] An infinite series composed of functions having nth term of the form $a_n(x - x_0)^n$, where x_0 is some point and a_n some constant.

power set [MATH] The set consisting of all subsets of a given set.

power shovel [MECH ENG] A power-operated shovel that carries a short boom on which rides a movable dipper stick carrying an open-topped bucket; used to excavate and remove debris.

power-shovel mining [MIN ENG] A technique utilizing power shovels to mine ores by mining or stripping and taking away overburden.

power spectrum *See* frequency spectrum.

power station *See* generating station.

power steering [MECH ENG] A steering control system for a propelled vehicle in which an auxiliary power source assists the driver by providing the major force required to diect the road wheels.

power stroke [MECH ENG] The stroke in an engine during which pressure is applied to the piston by expanding steam or gases.

power supply [ELECTR] A source of electrical energy, such as a battery or power line, employed to furnish the tubes and semiconductor devices of an electronic circuit with the proper electric voltages and currents for their operation. Also known as electronic power supply.

power supply circuit [ELEC] An electrical network used to convert alternating current to direct current.

power switch [ELEC] An electric switch which energizes or deenergizes an electric load; ranges from ordinary wall switches to load-break switches and disconnecting switches in power systems operating at voltages of hundreds of thousands of volts.

power switchboard [ELEC] Part of a switch gear which consists of one or more panels upon which are mounted the switching control, measuring, protective, and regulatory equipment; the panel or panel supports may also carry the main switching and interrupting devices together with their connection.

power switching [ELEC] Switching between supplies of electrical energy at high levels of current and voltage.

power train [MECH ENG] The part of a vehicle connecting the engine to propeller or driven axle; may include drive shaft, clutch, transmission, and differential gear.

power transfer theorem [ELEC] The theorem that, in an electrical network which carries direct or sinusoidal alternating current, the greatest possible power is transferred from one section to another when the impedance of the section that acts as a load is the complex conjugate of the impedance of the section that acts as a source, where both impedances are measured across the pair of terminals at which the power is transferred, with the other part of the network disconnected.

power transformer [ELEC] An iron-core transformer having a primary winding that is connected to an alternating-current power line and one or more secondary windings that provide different alternating voltage values.

power transistor [ELECTR] A junction transistor designed to handle high current and power; used chiefly in audio and switching circuits.

power transmission line [ELEC] The facility in an electric power system used to transfer large amounts of power from one location to a distant location; distinguished from a subtransmission or distribution line by higher voltage, greater power capability, and greater length. Also known as electric main; main (both British usages).

power transmission tower [ELEC] A rigid steel tower supporting a high-voltage electric power transmission line, having a large enough spacing between conductors, and between conductors and ground, to prevent corona discharge.

power traverse [ORD] Turning of a gun to change the direction of fire by means of a power-driven mechanism, as in a tank, aircraft, or ship turret.

power tube [ELECTR] An electron tube capable of handling more current and power than an ordinary voltage-amplifier tube; used in the last stage of an audio-frequency amplifier or in high-power stages of a radio-frequency amplifier. Also known as power amplifier tube; power output tube.

power winding [ELEC] In a saturable reactor, a winding to which is supplied the power to be controlled; commonly the functions of the output and power windings are accomplished by the same winding, which is then termed the output winding.

pox [MED] A vesicular or pustular exanthematic disease that may leave pit scars.

poxvirus [VIROL] A deoxyribonucleic acid–containing animal virus group including the viruses of smallpox, molluscum contagiosum, and various animal pox and fibromas.

Poynting-Robertson effect [ASTRON] The gradual decrease in orbital velocity of a small particle such as a micrometeorite in orbit about the sun due to the absorption and reemission of radiant energy by the particle.

Poynting's law [THERMO] A special case of the Clapeyron equation, in which the fluid is removed as fast as it forms, so that its volume may be ignored.

Poynting theorem [ELECTROMAG] A theorem, derived from Maxwell's equations, according to which the rate of loss of energy stored in electric and magnetic fields within a region of space is equal to the sum of the rate of dissipation of electrical energy as heat and the rate of flow of electromagnetic energy outward through the surface of the region.

Poynting vector [ELECTROMAG] A vector, equal to the cross product of the electric-field strength and the magnetic-field strength (mks units) whose outward normal component, when integrated over a closed surface, gives the outward flow of electromagnetic energy through that surface.

pozzolan [GEOL] A finely ground burnt clay or shale resembling volcanic dust, found near Pozzuoli, Italy; used in cement because it hardens underwater. [MATER] Cement made by mixing and grinding together slaked lime and pozzolan without burning; sometimes used for concrete not exposed to the air.

PPI *See* plan position indicator.

pp junction [ELECTR] A region of transition between two regions having different properties in p-type semiconducting material.

PPLO *See* pleuropneumonialike organism.

PPM *See* pulse-position modulation.

p-process [NUC PHYS] The synthesis of certain nuclides in stars through capture of protons or ejection of neutrons by gamma rays.

P pulse *See* commutator pulse.

Pr *See* praseodymium.

practical astronomy [ASTRON] That part of astronomy concerned with the use of information acquired by an observer in the solution of problems determining latitude and longitude on sea or land and directions on the earth's surface by the help of celestial objects.

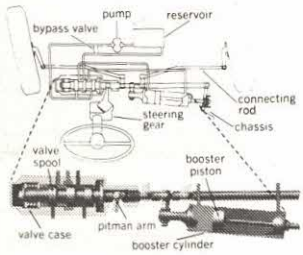
practical entropy *See* virtual entropy.

practical system *See* meter-kilogram–second-ampere system.

practical units [ELECTROMAG] The units of the meter-kilogram-second-ampere system.

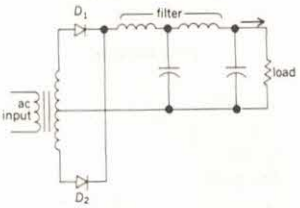
practice ammunition [ORD] Ammunition used for target practice or similar types of training; for gun and rocket types of weapons, practice ammunition contains a propelling charge, and either an inert filler or a spotting charge in the projectile; other types of practice ammunition, such as bombs or mines, usually contain a spotting charge or some form of charge to indicate functioning.

POWER STEERING



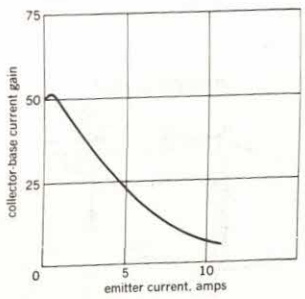
The linkage power steering reacts between the chassis and steering linkages. *(Ford Motor Co.)*

POWER SUPPLY



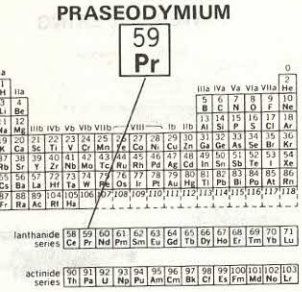
Schematic for a typical direct-current power supply. Alternating-current power line energizes primary of transformer whose secondary is connected to anodes of rectifier diodes D_1 and D_2.

POWER TRANSISTOR



Variation of grounded-emitter current gain with emitter current for a typical *pnp* junction power transistor with a circular emitter and collector, showing that high current rating is obtained at sacrifice in gain.

PRASEODYMIUM

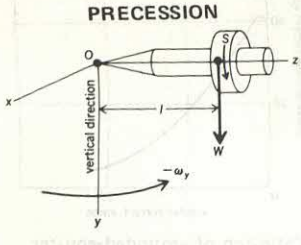


Periodic table of the chemical elements showing the position of praseodymium.

PRECAMBRIAN

Chart showing position of the Precambrian in relation to the eras and periods of geologic time.

PRECESSION



A fast-spinning top supported at point O and released in a horizontal plane precesses about the vertical y-axis. Here z = top's axis of symmetry; x = axis perpendicular to y and z; S = spin velocity of top about z-axis; W = weight of top; l = distance from O to top's center of mass; ω_y = angular velocity of precession of top about y-axis, given by $\omega_y = -Wl/I_zS$, where I_z = top's moment of inertia about z-axis.

practice mine [ORD] Imitation land mine used in training; it may contain a smoke-producing agent for maneuvers or for practice in observing the effects of mines against vehicles, or it may be simply a block of wood, metal, or concrete for practice in laying mine fields.

praecipitatio [METEOROL] Precipitation falling from a cloud and apparently reaching the earth's surface; this supplementary cloud feature is mostly encountered in altostratus, nimbostratus, stratocumulus, stratus, cumulus, and cumulonimbus.

Praesepe [ASTRON] A cluster of faint stars in the center of the constellation Cancer. Also known as Beehive; Manger.

pragmatics [COMMUN] The branch of semiotics that treats the relation of symbols to behavior and the meaning received by the listener or reader of a statement.

prairie [GEOGR] An extensive level-to-rolling treeless tract of land in the temperate latitudes of central North America, characterized by deep, fertile soil and a cover of coarse grass and herbaceous plants.

prairie climate *See* subhumid climate.

prairie dog [VERT ZOO] The common name for three species of stout, fossorial rodents belonging to the genus *Cynomys* in the family Sciuridae; all have a short, flat tail, small ears, and short limbs terminating in long claws.

prairie soil [GEOL] A group of zonal soils having a surface horizon that is dark or grayish brown, which grades through brown soil into lighter-colored parent material; it is 0.6–1.5 meters thick and develops under tall grass in a temperate and humid climate.

prairie wolf *See* coyote.

Prandtl number [FL MECH] A dimensionless number used in the study of diffusion in flowing systems, equal to the kinematic viscosity divided by the molecular diffusivity. Symbolized Pr_m. Also known as Schmidt number 1 (N_{Sc}). [THERMO] A dimensionless number used in the study of forced and free convection, equal to the dynamic viscosity times the specific heat at constant pressure divided by the thermal conductivity. Symbolized N_{Pr}.

prase [MINERAL] **1.** A translucent and dull leek green or light-grayish yellow-green variety of chalcedony. **2.** Crystalline quartz containing a multitude of green hairlike crystals of actinolite. Also known as mother-of-emerald.

praseodymium [CHEM] A chemical element, symbol Pr, atomic number 59, atomic weight 140.91; a metallic element of the rare-earth group.

prase opal *See* prasopal.

prasinite [PETR] A greenschist in which the proportions of the hornblende-chlorite-epidote assemblage are more or less equal.

Prasinovolvocales [BOT] An order of green algae in which there are lateral appendages in the flagellum.

prasopal [MINERAL] A green variety of common opal containing chromium. Also known as prase opal.

pratincolous [ECOL] **1.** Living in meadows. **2.** Living in low grass.

Pratt truss [CIV ENG] A truss having both vertical and diagonal members between the upper and lower chords, with the diagonals sloped toward the center.

preadaptation [EVOL] Possession by an organism or group of organisms, specialized to one mode of life, of characters which favor easy adaptation to a new environment.

prealpine facies [GEOL] A geosynclinal facies characteristic of neritic areas, displaying thick limestone deposits and coarse terrigenous material and resembling epicontinental platform sediments.

preamble [COMMUN] The portion of a commercial radio telegraph message that is sent first, containing the message number, office of origin, date, and other numerical data not part of the original message.

preamplifier [ELECTR] An amplifier whose primary function is boosting the output of a low-level audio-frequency, radio-frequency, or microwave source to an intermediate level so that the signal may be further processed without appreciable degradation of the signal-to-noise ratio of the system. Also known as preliminary amplifier.

preassembled [ENG] Assembled beforehand.

prebreaker [MECH ENG] Device used to break down large masses of solids prior to feeding them to a crushing or grinding device.

Precambrian [GEOL] All geologic time prior to the beginning of the Paleozoic era (before 600,000,000 years ago); equivalent to about 90% of all geologic time.

precancerous [PATH] Pertaining to any pathological condition of a tissue which is likely to develop into cancer.

precast concrete [MATER] Concrete components which are cast and partly matured in a factory or on the site before being lifted into their final position on a structure.

precedence relation [COMPUT SCI] A rule stating that, in a given programming language, one of two operators is to be applied before the other in any mathematical expression.

preceding limb [ASTRON] The half of the limb of a celestial body with an observable disk that appears to precede the body in its apparent motion across the field of view of a fixed telescope.

precentral gyrus [ANAT] The cerebral convolution that lies between the precentral sulcus and the central sulcus and extends from the superomedial border of the hemisphere to the posterior ramus of the lateral sulcus.

precession [MECH] The angular velocity of the axis of spin of a spinning rigid body, which arises as a result of external torques acting on the body.

precession camera [CRYSTAL] An x-ray diffraction camera used in the Buerger precession method for recording the diffractions of an individual crystal.

precession in declination [ASTRON] The component of general precession of the earth along a celestial meridian, amounting to about 20″ per year.

precession in right ascension [ASTRON] The component of general precession of the earth along the celestial equator, amounting to about 46″ per year.

precession of the equinoxes [ASTRON] A slow conical motion of the earth's axis about the vertical to the plane of the ecliptic, having a period of 26,000 years, caused by the attractive force of the sun, moon, and other planets on the equatorial protuberance of the earth; it results in a gradual westward motion of the equinoxes.

precharge [MET] The pressure introduced into the cavity of a mold before forming a part.

prechlorination [CIV ENG] Chlorination of water before filtration.

precious metal [MET] A relatively scarce, valuable metal, such as gold, silver, and members of the platinum group.

precious stone [MINERAL] **1.** Any genuine gemstone. **2.** A gemstone of high commercial value because of its beauty, rarity, durability, and hardness; examples are diamond, ruby, sapphire, and emerald.

precipice [GEOL] A very steeply inclined, vertical, or overhanging wall or surface of rock.

precipitable water [METEOROL] The total atmospheric water vapor contained in a vertical column of unit cross-sectional area extending between any two specified levels, commonly expressed in terms of the height to which that water substance would stand if completely condensed and collected in a vessel of the same unit cross section. Also known as precipitable water vapor.

precipitable water vapor *See* precipitable water.

precipitant [CHEM] A chemical or chemicals that cause a precipitate to form when added to a solution.

precipitate [CHEM] **1.** A substance separating, in solid particles, from a liquid as the result of a chemical or physical change; **2.** To form a precipitate.

precipitation [CHEM] The process of producing a separable solid phase within a liquid medium; represents the formation of a new condensed phase, such as a vapor or gas condensing to liquid droplets; a new solid phase gradually precipitates within a solid alloy as a result of slow, inner chemical reaction; in analytical chemistry, precipitation is used to separate a solid phase in an aqueous solution. [IMMUNOL] Aggregation of soluble antigen by an antibody. [METEOROL] **1.** Any or all of the forms of water particles, whether liquid or solid, that fall from the atmosphere and reach the ground. **2.** The amount, usually expressed in inches of liquid water depth, of the water substance that has fallen at a given point over a specified period of time.

precipitation area [METEOROL] **1.** On a synoptic surface chart, an area over which precipitation is falling. **2.** In radar meteorology, the region from which a precipitation echo is received.

precipitation attenuation [ELECTROMAG] Loss of radio energy due to the passage through a volume of the atmosphere

containing precipitation; part of the energy is lost by scattering, and part by absorption.

precipitation ceiling [METEOROL] After United States weather observing practice, a ceiling classification applied when the ceiling value is the vertical visibility upward into precipitation; this is necessary when precipitation obscures the cloud base and prevents a determination of its height.

precipitation cell [METEOROL] In radar meteorology, an element of a precipitation area over which the precipitation is more or less continuous.

precipitation clutter suppression [ELECTR] Technique of reducing, by one of the various devices integral to the radar system, clutter caused by rain in the radar range.

precipitation current [METEOROL] The downward transport of charge, from cloud region to earth, that occurs in a fall of electrically charged rain or other hydrometeors.

precipitation echo [METEOROL] A type of radar echo returned by precipitation.

precipitation effectiveness *See* precipitation-evaporation ratio.

precipitation electricity [GEOPHYS] **1.** That branch of the study of atmospheric electricity concerned with the electric charges carried by precipitation particles and with the manner in which these charges are acquired. **2.** The electric charge borne by precipitation particles.

precipitation-evaporation ratio [CLIMATOL] For a given locality and month, an empirical expression devised for the purpose of classifying climates numerically on the basis of precipitation and evaporation. Abbreviated P-E ratio. Also known as precipitation effectiveness.

precipitation excess [HYD] The volume of water from precipitation that is available for direct runoff.

precipitation facies [GEOL] Facies characteristics that provide evidence of depositional conditions; revealed mainly by sedimentary structures (such as cross-bedding and ripple marks) and by primary constituents (especially fossils).

precipitation gage [ENG] Any device that measures the amount of precipitation; principally, a rain gage or snow gage.

precipitation-generating element [METEOROL] In radar meteorology, a relatively small volume of supercooled cloud droplets in which ice crystals form and grow much more rapidly than in a lower, larger cloud mass.

precipitation hardening *See* age hardening.

precipitation intensity [METEOROL] The rate of precipitation, usually expressed in inches per hour.

precipitation inversion [METEOROL] As found in some mountain areas, a decrease of precipitation with increasing elevation of ground above sea level. Also known as rainfall inversion.

precipitation noise [ELECTR] Noise generated in an antenna circuit, generally in the form of a relaxation oscillation, caused by the periodic discharge of the antenna or conductors in the vicinity of the antenna into the atmosphere.

precipitation number [ANALY CHEM] The number of milliliters of asphaltic precipitate formed when 10 milliliters of petroleum-lubricating oil is mixed with 90 milliliters of a special-quality petroleum naphtha, then centrifuged according to ASTM test conditions; used to determine the quantity of asphalt in petroleum-lubricating oil.

precipitation physics [METEOROL] The study of the formation and precipitation of liquid and solid hydrometeors from clouds; a branch of cloud physics and of physical meteorology.

precipitation static [COMMUN] Static interference due to the discharge of large charges built up on an aircraft or other object by rain, sleet, snow, or electrically charged clouds.

precipitation station [METEOROL] A station at which only precipitation observations are made.

precipitation titration [ANALY CHEM] Amperometric titration in which the potential of a suitable indicator electrode is measured during the titration.

precipitation trails *See* virga.

precipitation trajectory [METEOROL] In radar meteorology, a characteristic echo observed on range-height indicator scopes and time-height sections which represents the height-range pattern of snow falling from isolated precipitation-generating elements of a few miles in diameter. Also known as mare's tail.

precipitator *See* electrostatic precipitator.

precipitin test [IMMUNOL] An immunologic test in which a specific reaction between antigen and antibody results in a visible precipitate.

precipitous terrain [NAV] In air operations, terrain characterized by steep or abrupt slopes.

precision [NAV] In air operations, pertaining to a navigational facility which provides a combined azimuth and glide slope guidance to a runway. [SCI TECH] The quality of being exactly or sharply defined or stated.

precision adjustment [ORD] A deliberate adjustment of the fire of one weapon for the purpose of placing the center of impact accurately on the target.

precision approach radar [NAV] A radar system located on an airfield for observation of the position of an aircraft with respect to an approach path, and specifically intended to provide guidance to the aircraft during its approach to the field; the system consists of a ground radar equipment which is alternately connected to two antenna systems; one antenna system sweeps a narrow beam over a 20° sector in the horizontal plane; the second sweeps a narrow beam over a 7° sector in the vertical plane; course correction is transmitted to the aircraft from the ground. Abbreviated PAR.

precision attribute [COMPUT SCI] A set of one or more integers that denotes the number of symbols used to represent a given number and positional information for determining the base point of the number.

precision-balanced hybrid circuit [ELEC] Circuit used to interconnect a four-wire telephone circuit to a particular two-wire circuit, in which the impedance of the balancing network is adjusted to give a relatively high degree of balance.

precision block *See* gage block.

precision bombing [ORD] Horizontal bombing done with the appropriate precision instruments and equipment so as to strike a target of comparatively small bulk or area.

precision casting [MET] A metal casting of accurately reproducible dimensions.

precision depth recorder [ENG] A machine that plots sonar depth soundings on electrosensitive paper; can plot variations in depth over a range of 400 fathoms (730 meters) on a paper 18.85 inches (47.9 centimeters) wide. Abbreviated PDR. Also known as precision graphic recorder (PGR).

precision fire [ORD] Fire in which the center of impact is accurately placed on a limited target; fire which is based on precision adjustment.

precision graphic recorder *See* precision depth recorder.

precision grinding [MECH ENG] Machine grinding to specified dimensions and low tolerances.

precision net [ELEC] In a four-wire terminating set or similar device employing a hybrid coil, an artificial line designed and adjusted to provide an accurate balance for the loop and subscribers set or line impedance.

precision sweep [ELECTR] Delayed expanded radar sweep for high resolution and range accuracy.

precoat [MET] In casting, thin coating of refractory slurry applied to an expendable wax or plastic pattern as a base for the application of the main slurry.

precoat filter [ENG] A device designed to filter solid particles from a liquid-solid slurry after a precoat of builtup solid material (filter aid or filtered solid) has been applied to the inner surface of the filter medium.

precoating [ENG] The depositing of an inert material, such as filter aid, onto the filter medium prior to the filtration of suspended solids from a solid-liquid slurry.

precognition [PSYCH] A form of extrasensory perception involving foreknowledge of a future event.

pre-cold-frontal squall line *See* prefrontal squall line.

precollagenous fiber *See* reticular fiber.

precombustion chamber [MECH ENG] A small chamber before the main combustion space of a turbine or reciprocating engine in which combustion is initiated.

precompact set [MATH] A set in a metric space which can always be covered by open balls of any diameter about some finite number of its points. Also known as totally bounded set.

precomputation [NAV] The process of making navigational solutions in advance, applied particularly to the determination of computed altitude and azimuth before making a celestial observation for a line of position; when this is done, the observation must be made at the time used for the computation, or a correction applied.

precomputed altitude [ASTRON] The altitude of a celestial body computed before observation with the sextant. Altitude

corrections are included in the calculations but are applied with reversed sign.

precomputed curve [NAV] A graphical representation of the azimuth or altitude of a celestial body which is plotted against time for a given assumed position or positions, and which is computed for subsequent use with celestial observations.

preconduction current [ELECTR] Low value of plate current flowing in a thyratron or other grid-controlled gas tube prior to the start of conduction.

preconsolidation pressure [GEOL] The greatest effective stress exerted on a soil; result of this pressure from overlying materials is compaction. Also known as prestress.

precooler [MECH ENG] A device for reducing the temperature of a working fluid before it is used by a machine.

precure finish [TEXT] A durable-press finish applied to a fabric and heat-set by the mill.

predation [BIOL] The killing and eating of an individual of one species by an individual of another species.

predator [ZOO] An animal that preys on other animals as a source of food.

predazzite [PETR] A recrystallized limestone that resembles pencatite, but contains less brucite than calcite.

predecessor [MATH] For a vertex a in a directed graph, any vertex b for which there is an arc between a and b directed from b to a.

predetection combining [ELECTR] Method used to produce an optimum signal from multiple receivers involved in diversity reception of signals.

predicate [MATH] To affirm or deny, in mathematical logic, one or more subjects.

predictability [NAV] The measure of the accuracy with which the system can define the location of a point in terms of geographic coordinates rather than the lattice peculiar to that system.

predicted barrage *See* antiaircraft barrage.

predicted firing [ORD] Firing at the point at which a moving target is expected to be when the projectile reaches it, according to predictions based on observation.

predicted ground speed [NAV] The speed computed by applying estimated wind direction and speed to course and estimated airspeed.

predicted-wave signaling [COMMUN] Communications system in which detection is optimized in the presence of severe noise by using mechanical resonator filters and other circuits in the detector to take advantage of known information on the arrival and completion times of each pulse, as well as on pulse shape, pulse frequency and spectrum, and possible data content.

predicting dead time [ORD] The time allowed for calculation and applying firing data, from the time of observation to the instant of firing.

predicting interval [ORD] The interval between successive predictions of future positions of the target.

prediction [METEOROL] **1.** The act of making a weather forecast. **2.** The forecast itself.

predissociation [PHYS CHEM] The dissociation of a molecule that has absorbed energy before it can lose energy by radiation.

prednisolone [BIOCHEM] $C_{21}H_{28}O_5$ A glucocorticoid that is a dehydrogenated analog of hydrocortisone.

prednisone [PHARM] $C_{21}H_{26}O_5$ An adrenocortical steroid drug, obtained in crystalline form, that is an analog of cortisone.

predozzite [PETR] Limestone rich in periclase and brucite.

preece [ELEC] A unit of electrical resistivity equal to 10^13 times the product of 1 ohm and 1 meter.

preeclampsia [MED] A toxemia occurring in the latter half of pregnancy, characterized by an acute elevation of blood pressure and usually by edema and proteinuria, but without convulsions or coma. Also known as toxemia of pregnancy.

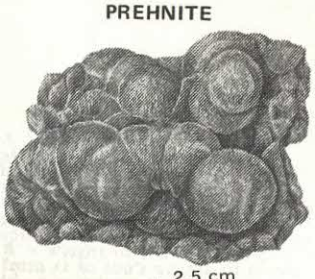
preedit [COMPUT SCI] To edit data before feeding it to a computer.

preemphasis [ELECTR] A process which increases the magnitude of some frequency components with respect to the magnitude of others to reduce the effects of noise introduced in subsequent parts of the system.

preemphasis network [ELECTR] An RC (resistance-capacitance) filter inserted in a system to emphasize one range of frequencies with respect to another. Also known as emphasizer.

preen gland *See* uropygial gland.

PREHNITE



Prehnite in reniform aggregates, Paterson, New Jersey. *(Specimen from Department of Geology, Bryn Mawr College)*

preferential shop [IND ENG] An establishment in which preference is given to union members in hiring, layoffs, and dismissals, with the understanding that nonunion workers may be employed without being required to join the union when the union cannot supply workers.

preferred numbers [ELECTR] A series of numbers adopted by the Electronic Industries Association and the military services for use as nominal values of resistors and capacitors, to reduce the number of different sizes that must be kept in stock for replacements. Also known as preferred values.

preferred orientation [PETR] The nonrandom orientation of planar or linear fabric elements in structural petrology.

preferred values *See* preferred numbers.

prefilter [ENG] Filter used to remove gross solid contaminants before the liquid stream enters a separator-filter.

prefix notation *See* Polish notation.

preflashing [GRAPHICS] The uniform exposure of a photographic plate to a small amount of light before its exposure to the image to be photographed.

prefocus lamp [ELEC] A light bulb whose filaments are precisely positioned with respect to the lamp socket.

prefoliation *See* vernation.

preform [ENG ACOUS] The small slab of record stock material that is loaded into a press to be formed into a disk recording. Also known as biscuit (deprecated usage).

preforming [MET] **1.** Initial pressing of a powder metal to form a compact. **2.** Preliminary shaping of a refractory metal compact after presintering.

prefrontal [ANAT] Situated in the anterior part of the frontal lobe of the brain. [VERT ZOO] **1.** Of or pertaining to a bone of some vertebrate skulls, located anterior and lateral to the frontal bone. **2.** Of, pertaining to, or being a scale or plate in front of the frontal scale on the head of some reptiles and fishes.

prefrontal lobotomy *See* lobotomy.

prefrontal squall line [METEOROL] A squall line or instability line located in the warm sector of a wave cyclone, about 50 to 300 miles (80 to 480 kilometers) in advance of the cold front, usually oriented roughly parallel to the cold front, and moving in about the same manner as the cold front. Also called nonfrontal squall line; pre-cold-frontal squall line.

preglacial [GEOL] **1.** Pertaining to the geologic time immediately preceding the Pleistocene epoch. **2.** Of material, underlying glacial deposits.

Pregl procedure [ANALY CHEM] Microanalysis technique in which the sample is decomposed thermally, with subsequent oxidation of decomposition products.

pregnancy [MED] The state of being pregnant, from conception to childbirth.

pregnancy test [PATH] Any biologic or chemical procedure used to diagnose pregnancy.

pregnanediol [BIOCHEM] $C_{21}H_{36}O_2$ A metabolite of progesterone, present in urine during the progestational phase of the menstrual cycle and also during pregnancy.

pregnenolone [BIOCHEM] $C_{21}H_{32}O_2$ A steroid ketone that is formed as an oxidation product of cholesterol, stigmasterol, and certain other steroids.

preheat current [MET] Current impulses which occur prior to and apart from the electric current in a resistance welding process.

preheater [MECH ENG] A device for preliminary heating of a material, substance, or fluid that will undergo further use or treatment by heating.

preheat fluorescent lamp [ELECTR] A fluorescent lamp in which a manual switch or thermal starter is used to preheat the cathode for a few seconds before high voltage is applied to strike the mercury arc.

preheat roll [ENG] In plastic-extrusion coating, the heated roll between the pressure roll and the unwind roll; used to heat the substrate before it is coated.

prehensile [VERT ZOO] Adapted for seizing, grasping, or plucking, especially by wrapping around some object.

pre-Hilbert space [MATH] A linear space which has an inner product defined on it.

prehnite [MINERAL] $Ca_2Al_2Si_3O_{10}(OH)_2$ A light-green to white mineral sorosilicate crystallizing in the orthorhombic system and generally found in reniform and stalactitic aggregates with crystalline surface; it has a vitreous luster, hardness is 6–6.5 on Mohs scale, and specific gravity is 2.8–2.9.

preignition [MECH ENG] Ignition of the charge in the cylin-

der of an internal combustion engine before ignition by the spark.

pre-Imbrian [ASTRON] Pertaining to the oldest lunar topographic features and lithologic map units constituting a system of rocks that appear in the mountainous terrae and are well displayed in the southern part of the visible lunar surface and over much of the reverse side.

preimpregnation [ENG] The mixing of a plastic resin with reinforcing material or substrate before molding takes place.

preindexing [COMPUT SCI] Operation in which the address bits of a word are added to the contents of a specified register to determine the pointer address.

preliminary amplifier *See* preamplifier.

preliminary waves [GEOPHYS] The body of waves of an earthquake, including both P waves and S waves.

preloading [ENG] For back-pressure-control gas valves, a weight or spring device to control the gas pressure at which the valve will open or close.

prelogging [FOR] Cutting down and removing small trees before large trees are logged.

premaxilla [ANAT] Either of two bones of the upper jaw of vertebrates located in front of and between the maxillae.

premium motor oil [MATER] A lubricating oil with improved oxidation stability and having corrosion-preventive and detergent properties; used in internal combustion engines operating under severe conditions.

premix [ENG] In plastics molding, materials in which the resin, reinforcement, extenders, fillers, and so on have been premixed before molding.

premix gas burner [ENG] Fuel (gas or oil) burner in which fuel and air are premixed prior to ignition in the combustion chamber.

premolar [ANAT] In each quadrant of the permanent human dentition, one of the two teeth between the canine and the first molar; a bicupid.

prenatal [MED] Existing or occurring before birth.

prenova [ASTRON] A star that is destined to become a nova, but whose outburst has not yet taken place.

preorogenic [GEOL] The initial phase of an orogenic cycle during which geosynclines form.

preparation fire [ORD] Fire delivered on a target or predetermined point preparatory to an assault on the target; may be naval, ground, or air.

preparatory fire [ORD] Antiaircraft fire to determine or check corrections of firing data prior to conducting fire for effect.

preparatory work [MIN ENG] Various excavations within a deposit so that actual mining can begin; includes inclines, drives between levels, crosscuts, and chutes.

preparing salt *See* sodium stannate.

preplastication [ENG] Premelting of injection-molding powders in a chamber separate from the injection cylinder.

preplumbed system [ELECTROMAG] Fixed nontunable waveguides or coaxial transmission lines.

prepolymer [ORG CHEM] A plastic or resin intermediate whose molecular weight is between that of the original monomer or monomers and that of the final, cured polymer or resin.

prepolymer molding [ENG] A urethane-foam-producing system in which a portion of the polyol is prereacted with the isocyanate to form a liquid prepolymer with a pumpable viscosity; when combined with a second blend containing more polyol, catalyst, or blowing agent, the two components react and a foamed plastic results.

prepositioned [ORD] Actual placement of a weapon at the desired point of detonation and preparation for firing by some form of remote control or a timer mechanism.

prepreg [ENG] A reinforced-plastics term for the reinforcing material that contains or is combined with the full complement of resin before the molding operation.

prepress proofs [GRAPHICS] Proofs which are made by photographic techniques in order to avoid the expense of press proofs.

preprogramming [COMPUT SCI] The prerecording of instructions or commands for a machine, such as an automated tool in a factory.

prepsychotic [PSYCH] Of or pertaining to the mental state that precedes or is potentially capable of precipitating a psychotic disorder.

prepuce [ANAT] **1.** The foreskin of the penis, a fold of skin covering the glans penis. **2.** A similar fold over the glans clitoridis.

preputial gland *See* Tyson's gland.

preread head [COMPUT SCI] A read head that is placed near another read head in such a way that it can read data stored on a moving medium such as a tape or disk before these data reach the second head.

prerinse [GRAPHICS] A water bath used prior to development of photographic film.

presbycusis [MED] A condition of diminished auditory acuity associated with old age.

presbyophrenia [PSYCH] A variety of senile dementia in which apparent mental alertness is combined with disorientation of place and loss of memory.

presbyopia [MED] Diminished ability to focus the eye on near objects due to gradual loss of elasticity of the crystalline lens with age.

prescaler [ELECTR] A scaler that extends the upper frequency limit of a counter by dividing the input frequency by a precise amount, generally 10 or 100.

prescutum [INV ZOO] The anterior part of the tergum of a segment of the thorax in insects.

preselection [COMPUT SCI] A technique for saving time available in buffered computers by which a block of data is read into computer storage from the next input tape to be called upon before the data are required in the computer; the selection of the next input tape is determined by instructions to the computer.

preselector [ELEC] Device in automatic switching which performs its selecting operation before seizing an idle trunk. [ELECTR] A tuned radio-frequency amplifier stage used ahead of the frequency converter in a superheterodyne receiver to increase the selectivity and sensitivity of the receiver.

presence [ACOUS] The impression, as created by a recording or radio receiver, that the original program source is in the room.

presensitized plate [GRAPHICS] In a photomechanical process, a metal or paper plate that has been precoated with a light-sensitive substance.

present angular height [ORD] The element of data pertaining to the present position of the target; that is, the position at the instant the gun is fired.

presentation *See* radar display.

present elevation [ORD] Elevation corresponding to the present position of the target.

present position [ORD] Position of a moving target at the instant of firing.

present range [ORD] The range between a gun and the present position of its target.

present value [MIN ENG] The sum of money which, if expended on a mine for purchase, development, and equipment, would produce over the life of the mine a return of the original investment plus a commensurate profit.

present-worth factor *See* discount factor.

preservative [MATER] A chemical added to foodstuffs to prevent oxidation, fermentation, or other deterioration, usually by inhibiting the growth of bacteria.

preset [COMPUT SCI] **1.** Of a variable, having a value established before the first time it is used. **2.** To initialize a value of a variable before the value of the variable is used or tested.

preset guidance [ENG] Guidance in which a predetermined path is set into the guidance mechanism of a craft, drone, or missile and is not altered after launching.

preset parameter [COMPUT SCI] In computers, a parameter which is fixed for each problem at a value set by the programmer.

preshrunk [TEXT] Pertaining to a fabric that has been shrunk during manufacture in order to minimize later shrinkage.

presintering [MET] Heating a compact to a temperature lower than the final sintering temperature to facilitate handling or to remove a binder or lubricant.

presoma [INV ZOO] The anterior portion of an invertebrate that lacks a definitive head structure.

presort [COMPUT SCI] **1.** The first part of a sort program in which data items are arranged into strings that are equal to or greater than some prescribed length. **2.** The sorting of data on off-line equipment before it is processed by a computer.

presque isle [GEOGR] A promontory or peninsula extending into a lake, nearly or almost forming an island; its head or end section is connected with the shore by a sag or low gap only

slightly above water level or by a strip of lake bottom exposed as a land surface by a drop in lake level.

press [MECH ENG] Any of various machines by which pressure is applied to a workpiece, by which a material is cut or shaped under pressure, by which a substance is compressed, or by which liquid is expressed.

press bonding [ENG] A method of bonding structures or materials through the application of pressure by a platen press or other tool.

press camera [OPTICS] A folding camera, usually of 4- by 5-inch (10.2- by 12.7-centimeter) format, once widely used in newspaper photography.

press drip [MATER] Oil that drips from the wax press after pressed petroleum distillate has been removed.

pressed brick [MATER] Brick subjected to pressure before burning to eliminate imperfections of shape and texture.

pressed density [MET] The density of a metal powder compact before sintering.

pressed-disk technique *See* potassium bromide–disk technique.

pressed distillate [MATER] Oil recovered when refinery paraffin distillate is pressed to separate the liquid from the solid wax.

pressed glass [MATER] Glass shaped by being poured into a mold under pressure or pressed into a mold in a plastic state.

pressed loading [ENG] A loading operation in which bulk material, such as an explosive in granular form, is reduced in volume by the application of pressure.

press fit [ENG] An interference or force fit assembled through the use of a press. Also known as force fit.

press forging [MET] Forging hot metal between dies in a press.

pressing [ENG ACOUS] A phonograph record produced in a record-molding press from a master or stamper. [MET] **1.** Shallow-drawing metal sheet or plate. **2.** Using compressive force to form a metal powder compact.

pressolution *See* pressure solution.

pressolved [GEOL] Referring to a sedimentary bed or rock in which the grains have undergone pressure solution.

press polish [ENG] High-sheen finish on plastic sheet stock produced by contact with a smooth metal under heat and pressure.

press proof [GRAPHICS] Proof removed from the printing press to inspect line and color values and overall quality; this is the last proof before the complete printing is done.

press slide [MECH ENG] The reciprocating member of a power press on which the punch and upper die are fastened.

press teletype network [COMMUN] A large teletypewriter network employed by a press association or other news distributing organization, usually employing modern carrier telegraph circuits operating over both wire and radio facilities, and transmitting to as many as 2000 stations simultaneously.

press-to-talk switch [ELECTR] A switch mounted directly on a microphone to provide a convenient means for switching two-way radiotelephone equipment or electronic dictating equipment to the talk position.

pressure [MECH] A type of stress which is exerted uniformly in all directions; its measure is the force exerted per unit area.

pressure altimeter [ENG] A highly refined aneroid barometer that precisely measures the pressure of the air at the altitude an aircraft is flying, and converts the pressure measurement to an indication of height above sea level according to a standard pressure-altitude relationship. Also known as barometric altimeter.

pressure altitude [METEOROL] The height above sea level at which the existing atmospheric pressure would be duplicated in the standard atmosphere; atmospheric pressure expressed as height according to a standard scale.

pressure-altitude variation [METEOROL] The pressure difference, in feet or meters, between mean sea level and the standard datum plane.

pressure angle [MECH ENG] The angle that the line of force makes with a line at right angles to the center line of two gears at the pitch points.

pressure bag [ENG] A bag made of rubber, plastic, or other impermeable material that provides a flexible barrier between the pressure medium and the part being bonded.

pressure bar [MECH ENG] A bar that holds the edge of a metal sheet during press operations, such as punching, stamping, or forming, and prevents the sheet from buckling or becoming crimped.

pressure-base factor [CHEM ENG] Factor used in orifice pressure-drop calculations to allow for conditions where the pressure base used for calculating the orifice factor is not 14.73 psia (101.56 megapascals); calculated as $F_pb = 14.73/\text{pressure base (absolute)}$.

pressure block [MIN ENG] The pressure on pillars, walls, and other supports in a mine caused by removal of surrounding formations from masses of rocks or by natural geological formations.

pressure bomb [PETRO ENG] Pipe-and-valve device used to capture downhole pressurized gas samples from oil wells; used to measure downhole pressure.

pressure breccia *See* tectonic breccia.

pressure broadening [SPECT] A spreading of spectral lines when pressure is increased, due to an increase in collision broadening.

pressure bulb [CIV ENG] The zone in a loaded soil mass bounded by an arbitrarily selected isobar of stress.

pressure bump [MIN ENG] Sudden failure of a coal pillar overloaded by the weight of the rock above it.

pressure burst [MIN ENG] A rockburst produced under stresses exceeding the elastic strength of the rock.

pressure cable [ELEC] A cable in which a fluid such as oil or gas, at greater than atmospheric pressure, surrounds the conductors and insulation and keeps their temperature down.

pressure carburetor *See* injection carburetor.

pressure casting [MET] Making castings of molten or plastic metal in metal molds under applied pressures.

pressure center [METEOROL] **1.** On a synoptic chart (or on a mean chart of atmospheric pressure), a point of local minimum or maximum pressure; the center of a low or high. **2.** A center of cyclonic or anticyclonic circulation.

pressure chamber [ENG] A chamber in which an artificial environment is established at low or high pressures to test equipment under simulated conditions of operation. [MIN ENG] An enclosed space that seals off a part of a mine and in which the air pressure can be raised or lowered.

pressure-change chart [METEOROL] A chart indicating the change in atmospheric pressure of a constant-height surface over some specified interval of time. Also known as pressure-tendency chart.

pressure coefficient [THERMO] The ratio of the fractional change in pressure to the change in temperature under specified conditions, usually constant volume.

pressure-containing member [MECH ENG] The part of a pressure-relieving device which is in direct contact with the pressurized medium in the vessel being protected.

pressure contour [METEOROL] A line connecting points of equal height of a given barometric pressure; the intersection of a constant pressure surface by a plane parallel to mean sea level.

pressure control [ENG] Any device or system able to maintain, raise, or lower the pressure in a vessel or processing system as desired.

pressure cooker [ENG] An autoclave designed for high-temperature cooking.

pressure decline [PETRO ENG] The loss or decline in reservoir pressure resulting from pressure drawdown during the production of gas or oil. Also known as pressure depletion.

pressure deflection [ENG] In a Bourdon or bellows-type pressure gage, the deflection or movement of the primary sensing element when pressured by the fluid being measured.

pressure depletion *See* pressure decline.

pressure depth [OCEANOGR] The depth at which an ocean sample was taken, as inferred from the difference in readings on protected and unprotected thermometers on the sampler; the higher reading is on the unprotected thermometer due to the effect of pressure on the mercury column at the sampling depth.

pressure distillate [MATER] Light, gasoline-bearing distillate product from petroleum-refinery pressure stills; the product is cracked, as contrasted to virgin or straight-run stock; includes pressure naphtha.

pressure distribution [PETRO ENG] The relative pressures (pressure gradients) between various portions of a producing reservoir zone; lowest pressures are nearest the producing wellbores.

pressure drag *See* pressure resistance.

pressure drawdown [PETRO ENG] The drop in reservoir pressure related to the withdrawal of gas from a producing well;

PRESSURE ALTIMETER

Photograph of a pressure altimeter. Windows at right indicate altimeter is adjusted to sea level pressure of 1013 millibars or 29.92 inches of mercury. Window at left indicates altitude between 41,500 and 41,600 feet; dial provides more precise indication of altitude.

for low-permeability formations, pressures near the wellbores can be much lower than in the main part of the reservoir; leads to pressure decline in the reservoir and ultimate pressure depletion.

pressure drop [FL MECH] The difference in pressure between two points in a flow system, usually caused by frictional resistance to a fluid flowing through a conduit, filter media, or other flow-conducting system.

pressure-drop manometer [ENG] Manometer device (liquid-filled U tube) open at both ends, each end connected by tubing to a different location in a flow system (such as fluid- or gas-carrying pipe) to measure the drop in system pressure between the two points.

pressure dye test [ENG] A leak detection method in which a pressure vessel is filled with liquid dye and is pressurized under water to make possible leakage paths visible.

pressure effect [SPECT] The effect of changes in pressure on spectral lines in the radiation emitted or absorbed by a substance; namely, pressure broadening and pressure shift.

pressure elements [ENG] Those portions of a pressure-measurement gage which are moved or temporarily deformed by the gas or liquid of the system to which the gage is connected; the amount of movement or deformation is proportional to the pressure and is indicated by the position of a pointer or movable needle.

pressure-enthalpy chart [PHYS] A graph of the pressure versus the enthalpy of a substance at various values of temperature, specific volume, and entropy; especially useful in refrigeration calculations. Also known as enthalpy-pressure chart.

pressure-fall center [METEOROL] A point of maximum decrease in atmospheric pressure over a specified interval of time; on synoptic charts, a point of greatest negative pressure tendency. Also known as center of falls; isallobaric low; isallobaric minimum; katallobaric center.

pressure fan [MIN ENG] A fan that forces fresh air into a mine as distinguished from one that exhausts air from the mine.

pressure field [OCEANOGR] A representation of a pressure gradient as isobar contours, parallel to which ocean currents flow.

pressure force [FL MECH] The force due to differences of pressure within a fluid mass; the (vector) force per unit volume is equal to the pressure gradient $-\nabla p$, and the force per unit mass (specific force) is equal to the product of the volume force and the specific volume $-\alpha\nabla p$. [METEOROL] *See* pressure gradient-force.

pressure forming [ENG] A plastics thermoforming process using pressure to push the plastic sheet to be formed against the mold surface, as opposed to using vacuum to suck the sheet flat against the mold.

pressure fringe *See* pressure shadow.

pressure front *See* shock front.

pressure gage [ENG] An instrument having metallic sensing element (as in a Bourdon pressure gage or aneroid barometer) or a piezoelectric crystal (as in a quartz pressure gage) to measure pressure.

pressure gradient [FL MECH] The rate of decrease (that is, the gradient) of pressure in space at a fixed time; sometimes loosely used to denote simply the magnitude of the gradient of the pressure field. Also known as barometric gradient. [METEOROL] The change in atmospheric pressure per unit horizontal distance, usually measured along a line perpendicular to the isobars.

pressure-gradient force [METEOROL] The force due to differences of pressure within the atmosphere; it usually refers only to the horizontal component of the force. Also known as pressure force.

pressure head [FL MECH] Also known as head. **1.** The height of a column of fluid necessary to develop a specific pressure. **2.** The pressure of water at a given point in a pipe arising from the pressure in it.

pressure hydrophone [ENG ACOUS] A pressure microphone that responds to waterborne sound waves.

pressure ice [OCEANOGR] Ice, especially sea ice, which has been deformed or altered by the lateral stresses of any combination of wind, water currents, tides, waves, and surf; may include ice pressed against the shore, or one piece of ice upon another.

pressure ice foot [HYD] An ice foot formed along a shore by the freezing together of stranded pressure ice.

pressure interface [PETRO ENG] The interrelation of several individual reservoir pressures whose productions are supported by water influx from a common aquifer; pressure depletion from withdrawal of oil from one reservoir will affect the position of the common aquifer and thus affect the pressures and gas-oil or water-oil contacts in the other reservoirs.

pressure jump [METEOROL] A steady-state propagation of a sudden finite change of inversion height, in analogy to the shock wave in a compressible fluid or to a hydraulic jump; the prefrontal squall line has been interpreted as a pressure jump, with the cold front providing the initial pistonlike impetus.

pressure jump line [METEOROL] A fast-moving line of sudden rise in atmospheric pressure, followed by a higher pressure level than that which preceded the jump; under suitable moisture conditions, sudden instability of the atmosphere conducive to the formation of thunderstorms can result.

pressure line of position [NAV] A line of position parallel to the effective air path and at a distance perpendicular to it equal to the lateral displacement, determined by pressure pattern formulas.

pressure maintenance [PETRO ENG] The maintenance of gas pressure in a reservoir by an active water drive, water injection, gas injection, or a combination of the foregoing.

pressure mark [GRAPHICS] A defect found in processed film which may appear as reduced or increased density.

pressure measurement [ENG] Measurement of the internal forces of a process vessel, tank, or piping caused by pressurized gas or liquid; can be for a static or dynamic pressure, in English or metric units, either absolute (total) or gage (absolute minus atmospheric) pressure.

pressure melting [PHYS] The melting of ice due to applied pressure.

pressure melting temperature [PHYS] The temperature at which ice can melt at a given pressure.

pressure microphone [ENG ACOUS] A microphone whose output varies with the instantaneous pressure produced by a sound wave acting on a diaphragm; examples are capacitor, carbon, crystal, and dynamic microphones.

pressure naphtha [MATER] Petroleum naphtha made by cracking, as contrasted to virgin or straight-run naphtha; a special grade of pressure distillate.

pressure pad [ENG] A steel reinforcement in the face of a plastics mold to help the land absorb the closing pressure. [ENG ACOUS] A felt pad mounted on a spring arm, used to hold magnetic tape in close contact with the head on some tape recorders.

pressure pan [GEOL] An induced soil pan which has a higher bulk density and a lower total porosity than the soil directly above or below it and is produced as a result of pressure applied by normal tillage operations or by other artificial means.

pressure pattern [METEOROL] The general geometric characteristics of atmospheric pressure distribution as revealed by isobars on a constant-height chart; usually applied to cyclonic-scale features of a surface chart.

pressure pattern displacement *See* lateral displacement.

pressure pattern flying *See* aerologation.

pressure penitente [GEOL] A nieve penitente composed of brilliantly white ice which is shaped into a slender ridge by lateral pressure of converging morainal streams and by melting of the adjacent debris-covered ice.

pressure pickup [ELECTR] A device that converts changes in the pressure of a gas or liquid into corresponding changes in some more readily measurable quantity such as inductance or resistance.

pressure pillow [ENG] A mechanical-hydraulic snow gage consisting of a circular rubber or metal pillow filled with a solution of antifreeze and water, and containing either a pressure transducer or a riser pipe to record increase in pressure of the snow.

pressure plate [MECH ENG] The part of an automobile disk clutch that presses against the flywheel.

pressure-plate anemometer [ENG] An anemometer which measures wind speed in terms of the drag which the wind exerts on a solid body; may be classified according to the means by which the wind drag is measured. Also known as plate anemometer.

pressure plateau [GEOL] An uplifted area of a thick lava flow, measuring up to 3 or 4 meters, the uplift of which is due to the intrusion of new lava from below that does not reach the surface.

pressure point [PHYSIO] A point of marked sensibility to

pressure or weight, arranged like the temperature spots, and showing a specific end apparatus arranged in a punctate manner and connected with the pressure sense.

pressure process [CHEM ENG] Treatment of timber to prevent decay by forcing a preservative such as creosote and zinc chloride into the cells of the wood.

pressure radius [PETRO ENG] The effective radius of increased reservoir pressure surrounding a water-injection well.

pressure rating [ENG] The operating (allowable) internal pressure of a vessel, tank, or piping used to hold or transport liquids or gases.

pressure-regulating valve [ENG] A valve that releases or holds process-system pressure (that is, opens or closes) either by preset spring tension or by actuation by a valve controller to assume any desired position between full open and full closed.

pressure regulator [ENG] Open-close device used on the vent of a closed, gas-pressured system to maintain the system pressure within a specified range.

pressure release [GEOPHYS] The outward-expanding force of pressure which is released within rock masses by unloading, as by erosion of superincumbent rocks or by removal of glacial ice.

pressure-release jointing [GEOL] Exfoliation that occurs in once deeply buried rock that erosion has brought nearer the surface, thus releasing its confining pressure.

pressure relief [ENG] A valve or other mechanical device (such as a rupture disk) that eliminates system overpressure by allowing the controlled or emergency escape of liquid or gas from a pressured system.

pressure relief device [MECH ENG] **1.** In pressure vessels, a device designed to open in a controlled manner to prevent the internal pressure of a component or system from increasing beyond a specified value, that is, a safety valve. **2.** A spring-loaded machine part which will yield, or deflect, when a predetermined force is exceeded.

pressure relief valve [MECH ENG] A valve which relieves pressure beyond a specified limit and recloses upon return to normal operating conditions.

pressure resistance [FL MECH] In fluid dynamics, a normal stress caused by acceleration of the fluid, which results in a decrease in pressure from the upstream to the downstream side of an object acting perpendicular to the boundary. Also known as pressure drag.

pressure-retaining member [MECH ENG] That part of a pressure-relieving device loaded by the restrained pressurized fluid.

pressure ridge [GEOL] **1.** A seismic feature resulting from transverse pressure and shortening of the land surface. **2.** An elongate upward movement of the congealing crust of a lava flow. **3.** A ridge of glacier ice. [OCEANOGR] A ridge or wall of hummocks where one ice floe has been pressed against another.

pressure ring [MIN ENG] A ring about a large excavated area, evidenced by distortion of the openings near the main excavation.

pressure-rise center [METEOROL] A point of maximum increase in atmospheric pressure over a specified interval of time; on synoptic charts, a point of maximum positive pressure tendency. Also known as anallobaric center; center of rises; isallobaric high; isallobaric maximum.

pressure roll [ENG] In plastics-extrusion coating, the roll that with the chill roll applies pressure to the substrate and the molten extruded web.

pressure seal [ENG] A seal used to make pressure-proof the interface (contacting surfaces) between two parts that have frequent or continual relative rotational or translational motion.

pressure-sensitive adhesive [MATER] An adhesive that develops maximum bonding power when applied by a light pressure only.

pressure shadow [PETR] In structural petrology, an area adjoining a porphyroblast, characterized by a growth fabric rather than a deformation fabric, as seen in a section perpendicular to the *b* axis of the fabric. Also known as pressure fringe; strain shadow.

pressure shift [SPECT] An increase in the wavelength at which a spectral line has maximum intensity, which takes place when pressure is increased.

pressure solution [PETR] In a sedimentary rock, solution occurring preferentially at the grain boundary surfaces. Also known as pressolution.

pressure-stabilized [AERO ENG] Referring to membrane-type structures that require internal pressure for maintenance of a stable structure.

pressure still [CHEM ENG] A continuous-flow, petroleum-refinery still in which heated oil (liquid and vapor) is kept under pressure so that it will crack (decompose into smaller molecules) to produce lower-boiling products (pressure distillate or pressure naphtha).

pressure storage [ENG] The storage of a volatile liquid or liquefied gas under pressure to prevent evaporation.

pressure suppression *See* vapor suppression.

pressure surface *See* potentiometric surface.

pressure-surface map *See* potentiometric map.

pressure survey [MIN ENG] A study to determine the pressure distribution or pressure losses along consecutive lengths or sections of a ventilation circuit. [PETRO ENG] The measurement of static bottomhole pressures in an oil field with producing wells shut in for a time interval sufficient for reservoir pressure buildup to stabilize.

pressure switch [ELEC] A switch that is actuated by a change in pressure of a gas or liquid.

pressure system [ENG] Any system of pipes, vessels, tanks, reactors, and other equipment, or interconnections thereof, operating with an internal pressure greater than atmospheric. [METEOROL] An individual cyclonic-scale feature of atmospheric circulation, commonly used to denote either a high or a low, less frequently a ridge or a trough.

pressure tank [CHEM ENG] A pressurized tank into which timber is inserted for impregnation with preservative. [CIV ENG] An airtight water tank in which air is compressed to exert pressure on the water and which is used in connection with a water distribution system.

pressure tap [ENG] A small perpendicular hole in the wall of a pressurized, fluid-containing pipe or vessel; used for connection of pressure-sensitive elements for the measurement of static pressures. Also known as piezometer opening; static pressure tap.

pressure tendency [METEOROL] The character and amount of atmospheric pressure change for a 3-hour or other specified period ending at the time of observation. Also known as barometric tendency.

pressure-tendency chart *See* pressure-change chart.

pressure tensor [PL PHYS] A tensor which plays a role in magnetohydrodynamics analogous to that of the pressure in ordinary fluid mechanics.

pressure thrust [AERO ENG] In rocketry, the product of the cross-sectional area of the exhaust jet leaving the nozzle exit and the difference between the exhaust pressure and the ambient pressure.

pressure topography *See* height pattern.

pressure transducer [ENG] An instrument component that detects a fluid pressure and produces an electrical signal related to the pressure. Also known as electrical pressure transducer.

pressure-travel curve [MECH] Curve showing pressure plotted against the travel of the projectile within the bore of the weapon.

pressure traverse [PETRO ENG] Measurement of reservoir pressures at progressive depths.

pressure treater [CHEM ENG] Any chemical treating device operated at higher-than-atmospheric pressure, as in the chemical and petroleum industries.

pressure tube [HYD] A deep, slender, cylindrical hole formed in a glacier by the sinking of an isolated stone that has absorbed more solar radiation than the surrounding ice.

pressure-tube anemometer [ENG] An anemometer which derives wind speed from measurements of the dynamic wind pressures; wind blowing into a tube develops a pressure greater than the static pressure, while wind blowing across a tube develops a pressure less than the static; this pressure difference, which is proportional to the square of the wind speed, is measured by a suitable manometer.

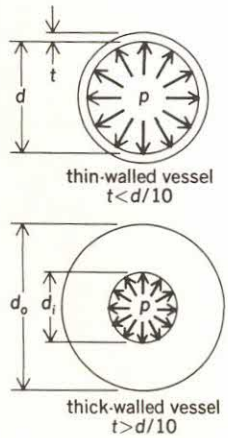
pressure-tube reactor [NUCLEO] A nuclear reactor in which the fuel elements are located inside numerous tubes containing coolant circulating at high pressure; the tube assembly is surrounded by a tank containing the moderator at low pressure.

pressure tunnel [CIV ENG] A waterway tunnel under pressure because the hydraulic gradient lies above the tunnel crown.

pressure ulcer *See* decubitus ulcer.

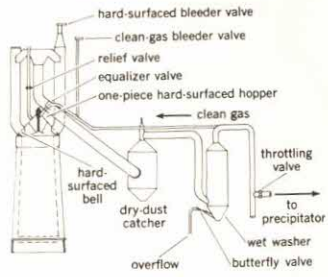
pressure vessel [ENG] A metal container generally cylindrical or spheroid, capable of withstanding bursting pressures.
pressure viscosity [FL MECH] Property of petroleum lubricating oils to increase in viscosity when subjected to pressure.
pressure wave [METEOROL] A wave or periodicity which exists in the variation of atmospheric pressure on any time scale, usually excluding normal diurnal or seasonal trends. [PHYS] *See* compressional wave.
pressure welding [MET] Welding of metal surfaces by the application of pressure; examples are percussion welding, resistance welding, seam welding, and spot welding.
pressurization [ENG] **1.** Use of an inert gas or dry air, at several pounds above atmospheric pressure, inside the components of a radar system or in a sealed coaxial line, to prevent corrosion by keeping out moisture, and to minimize high-voltage breakdown at high altitudes. **2.** The act of maintaining normal atmospheric pressure in a chamber subjected to high or low external pressure.
pressurize [ENG] To maintain normal atmospheric pressure in a chamber subjected to high or low external pressures.
pressurized blast furnace [ENG] A blast furnace operated under pressure above the ambient; pressure is obtained by throttling the off-gas line, which permits a greater volume of air to be passed through the furnace at a lower velocity, and results in increase in smelting rate.
pressurized stoppings [MIN ENG] Stoppings which are erected in the intake and return roadways of a district to isolate an open fire or spontaneous heating and in which the pressures on both sides of each stopping are made equal by the use of auxiliary fans.
pressurized water reactor [NUCLEO] A nuclear reactor in which water is circulated under enough pressure to prevent it from boiling, while serving as moderator and coolant for the uranium fuel; the heated water is then used to produce steam for a power plant. Abbreviated PWR.
presswork [GRAPHICS] In printing, the actual operation of putting ink on paper; this activity is preceded by composition and perhaps platemaking, and is followed by binding.
prester [METEOROL] A whirlwind or waterspout accompanied by lightning in the Mediterranean Sea and Greece.
prestore [COMPUT SCI] To store a quantity in an available computer location before it is required in a routine.
prestress [ENG] To apply a force to a structure to condition it to withstand its working load more effectively or with less deflection. [GEOL] *See* preconsolidation pressure.
prestressed concrete [MATER] Concrete compressed with heavily loaded wires or bars to reduce or eliminate cracking and tensile forces.
presumptive address *See* address constant.
presumptive instruction *See* basic instruction.
presuppression [GEOPHYS] In seismic prospecting, the suppression of the early events on a seismic record for control of noise and reflections on that portion of the record.
pretensioning [ENG] Process of precasting concrete beams with tensioned wires embedded in them. Also known as Hoyer method of prestressing.
pretersonics *See* acoustoelectronics.
pre-transmit-receive tube *See* pre-TR tube.
pretravel [CONT SYST] The distance or angle through which the actuator of a switch moves from the free position to the operating position.
pretrigger [ELECTR] Trigger used to initiate sweep ahead of transmitted pulse.
pre-TR tube [ELECTR] Gas-filled radio-frequency switching tube used in some radar systems to protect the TR tube from excessively high power and the receiver from frequencies other than the fundamental. Derived from pre-transmit-receive tube.
prevailing current [OCEANOGR] The ocean current most frequently observed during a given period, such as a month, a season, or a year.
prevailing visibility [METEOROL] In United States weather observing practice, the greatest horizontal visibility equaled or surpassed throughout half of the horizon circle; in the case of rapidly varying conditions, it is the average of the prevailing visibility while the observation is being taken.
prevailing westerlies [METEOROL] The prevailing westerly winds on the poleward sides of the subtropical high-pressure belts.
prevailing wind *See* prevailing wind direction.
prevailing wind direction [METEOROL] The wind direction most frequently observed during a given period; the periods most often used are the observational day, month, season, and year. Also known as prevailing wind.
preventive maintenance [ENG] A procedure of inspecting, testing, and reconditioning a system at regular intervals according to specific instructions, intended to prevent failures in service or to retard deterioration.
previewing [COMPUT SCI] In character recognition, a process of attempting to gain prior information about the characters that appear on an incoming source document; this information, which may include the range of ink density, relative positions, and so forth, is used as an aid in the normalization phase of character recognition.
previous element coding [COMMUN] System of signal coding, used for digital television transmission, whereby each transmitted picture element is dependent upon the similarity of the preceding picture element.
previtrain [GEOL] The woody lenses in lignite that are equivalent to vitrain in coal of higher rank.
Prevost's theory [THERMO] A theory according to which a body is constantly exchanging heat with its surroundings, radiating an amount of energy which is independent of its surroundings, and increasing or decreasing its temperature depending on whether it absorbs more radiation than it emits, or vice versa.
preweld interval [MET] In resistance spot welding, elapsed time between the end of squeeze time and the beginning of welding current.
prewhitening filter *See* whitening filter.
PRF *See* pulse repetition rate.
pri *See* primary winding.
Priabonian [GEOL] A European stage of geologic time in the upper Eocene, believed to consist of Auversian and Bartonian.
priapism [MED] Persistent erection of the penis, usually unaccompanied by sexual desire, as seen in certain pathologic conditions.
Priapulida [INV ZOO] A minor phylum of wormlike marine animals; the body is made up of three distinct portions (proboscis, trunk, and caudal appendage) and is often covered with spines and tubercles, and the mouth is surrounded by concentric rows of teeth.
Priapuloidea [INV ZOO] An equivalent name for Priapulida.
priceite [MINERAL] $Ca_4B_{10}O_{19}\cdot 7H_2O$ A snow-white earthy mineral composed of hydrous calcium borate, occurring as a massive. Also known as pandermite.
Price meter [ENG] The ocean current meter in use in the United States: six conical cups, mounted around a vertical axis, rotate and cause a signal in a set of headphones with each rotation; tail vanes and a heavy weight stabilize the instrument.
pricker *See* needle.
prickly heat *See* miliaria.
prick punch [DES ENG] A tool that has a sharp conical point ground to an angle of 30–60°C; used to make a slight indentation on a workpiece to locate the intersection of centerlines.
priest [OPTICS] The Z tristimulus value.
prill [CHEM ENG] To form pellet-sized crystals or agglomerates of material by the action of upward-blowing air on falling hot solution; used in the manufacture of ammonium nitrate and urea fertilizers. [MATER] Spherical particles about the size of buckshot. [MIN ENG] **1.** The best ore after cobbing. **2.** A circular particle about the size of buckshot. **3.** Compressed and sized explosives such as ammonium nitrate.
primaquine [PHARM] $C_{15}H_{21}N_3O$ An ether-soluble viscous liquid, used as the diphosphate salt in medicine to cure malaria.
primary [ASTRON] **1.** A planet with reference to its satellites, or the sun with reference to its planets. **2.** The brighter star of a double star system. [CHEM] A term used to distinguish basic compounds from similar or isomeric forms; in organic compounds, for example, RCH_2OH is a primary alcohol, R_1R_2CHOH is a secondary alcohol, and $R_1R_2R_3COH$ is a tertiary alcohol; in inorganic compounds, for example, NaH_2PO_4 is primary sodium phosphate, Na_2HPO_4 is the secondary form, and Na_3PO_4 is the tertiary form. [ELEC] **1.** *See* primary winding. **2.** One of the high-voltage conductors of a power distribution system. [GEOL] **1.** A young shoreline whose features are produced chiefly by nonmarine agencies. **2.** Of a mineral deposit, unaffected by supergene enrichment. [MET] Of a metal, obtained directly from ore. [VERT ZOO] Of or pertaining to quills on the distal joint of a bird wing.

PRESSURE VESSEL



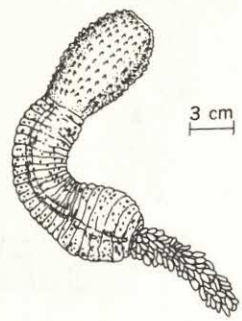
Pressure vessels for moderate and for high pressures; t = wall thickness; d = vessel diameter; p = pressure; d_i, d_O = inside and outside diameters.

PRESSURIZED BLAST FURNACE



Flow diagram of a pressurized blast furnace.

PRIAPULIDA



Adult form of *Priapulus*.

primary air [MECH ENG] That portion of the combustion air introduced with the fuel in a burner.

primary alcohol [ORG CHEM] An alcohol whose molecular structure may be written as RCH_2OH, rather than as R_1R_2CHOH (secondary) or $R_1R_2R_3COH$ (tertiary).

primary amine [ORG CHEM] An amine whose molecular structure may be written as RNH_2, instead of R_1R_2NH (secondary) or $R_1R_2R_3N$ (tertiary).

primary arc [GEOL] **1.** A curved segment of elongated mountain zones that are the areas of the earth's major and most recent tectonic activity. **2.** *See* internides.

primary area [NAV] In terminal operations, an area within a segment in which full obstacle clearance is applied.

primary atypical pneumonia *See* Eaton agent pneumonia.

primary basalt [PETR] Theoretically, the original magma from which all other rock types are supposedly obtained by various processes.

primary battery [ELEC] A battery consisting of one or more primary cells.

primary body [ASTRON] The celestial body or central force field about which a satellite or other body orbits, or from which it is escaping, or toward which it is falling.

primary breaker [MECH ENG] A machine which takes over the work of size reduction from blasting operations, crushing rock to maximum size of about 2-inch (5 centimeter) diameter; may be a gyratory crusher or jaw breaker. Also known as primary crusher.

primary carbon atom [ORG CHEM] A carbon atom in a molecule that is singly bonded to only one other carbon atom.

primary cell [ELEC] A cell that delivers electric current as a result of an electrochemical reaction that is not efficiently reversible, so that the cell cannot be recharged efficiently.

primary center [COMMUN] A telephone office having lower rank than a sectional center and higher rank than a toll center; connects toll centers and may also serve as a toll center for nearby end offices.

primary circle *See* primary great circle.

primary circulation [METEOROL] The prevailing fundamental atmospheric circulation on a planetary scale which must exist in response to radiation differences with latitude, to the rotation of the earth, and to the particular distribution of land and oceans, and which is required from the viewpoint of conservation of energy.

primary clay *See* residual clay.

primary coil [ELEC] The input coil in an induction coil or transformer.

primary colors [OPTICS] Three colors, red, yellow, and blue, which can be combined in various proportions to produce any other color.

primary constriction *See* centromere.

primary control program [COMPUT SCI] The program which provides the sequential scheduling of jobs and basic operating systems functions. Abbreviated PCP.

primary cosmic rays *See* cosmic rays.

primary crater [GEOL] **1.** An impact crater produced directly by the high-velocity impact of a meteorite or other projectile. **2.** *See* true crater.

primary creep [MECH] The initial high strain-rate region in a material subjected to sustained stress.

primary crusher *See* primary breaker.

primary cyclone [METEOROL] Any cyclone (or low), especially a frontal cyclone, within whose circulation one or more secondary cyclones have developed. Also known as primary low.

primary detector *See* sensor.

primary dip [GEOL] The slight dip assumed by a bedded deposit at its moment of deposition. Also known as depositional dip; initial dip; original dip.

primary drilling [ENG] The process of drilling holes in a solid rock ledge in preparation for a blast by means of which the rock is thrown down.

primary electron [ELECTR] An electron which bombards a solid surface, causing secondary emission.

primary emission [ELECTR] Emission of electrons due to primary causes, such as heating of a cathode, and not to secondary effects, such as electron bombardment.

primary excavation [ENG] Digging performed in undisturbed soil.

primary explosive [MATER] Explosive or explosive mixture sensitive to shock and friction; used in primers and detonators to initiate explosion. Also known as initiating explosive.

primary extinction [SOLID STATE] A weakening of the stronger beams produced in x-ray diffraction by a very perfect crystal, as compared with the weaker.

primary fabric *See* apposition fabric.

primary fault [ELEC] In an electric circuit, the initial breakdown of the insulation of a conductor, usually followed by a flow of power current.

primary fission products *See* fission fragments.

primary flat joint [GEOL] An approximately horizontal joint plane in igneous rocks. Also known as L joint.

primary flow [ELECTR] The current flow that is responsible for the major properties of a semiconductor device.

primary focus [OPTICS] In an astigmatic system, a line at which some of the bundle of rays from an off-axis point meet; this line is perpendicular to a plane which contains the point and the optical axis, and has a smaller image distance than the secondary focus. Also known as meridional focus; tangential focus.

primary frequency [COMMUN] Frequency assigned for normal use on a particular circuit or communications channel.

primary frequency standard [COMMUN] One of the standards of frequency maintained by various governments; the operating frequency of a radio station is determined by comparison with multiples of this standard frequency.

primary front [METEOROL] The principal, and usually original, front in any frontal system in which secondary fronts are found.

primary fuel cell [ELEC] A fuel cell in which the fuel and oxidant are continuously consumed.

primary geosyncline *See* orthogeosyncline.

primary gneiss [PETR] A rock that exhibits planar or linear structures characteristic of metamorphic rocks but lacks observable granulation or recrystallization and is therefore considered to be of igneous origin.

primary gneissic banding [PETR] A kind of banding developed in certain igneous (plutonic) rocks of heterogeneous composition, produced by the admixture of two magmas only partly miscible or by magma intimately admixed with country rock into which it has been injected along planes of bedding or foliation.

primary great circle [GEOD] A great circle used as the origin of measurement of a coordinate; particularly, such a circle 90° from the poles of a system of spherical coordinates, as the equator. Also known as fundamental circle; primary circle.

primary gun [ORD] Principal or main gun, especially of a tank or other armored vehicle.

primary haulage [MIN ENG] A short haul in which there is no secondary- or main-line haulage. Also known as face haulage.

primary high explosive [MATER] An explosive which is extremely sensitive to heat and shock and is normally used to initiate a secondary high explosive; examples are mercury fulminate, lead azide, lead styphnate, and tetracene.

primary hydrogen atom [ORG CHEM] A hydrogen atom that is bonded to a primary carbon atom.

primary hypertension *See* essential hypertension.

primary instrument [ENG] A measuring instrument that can be calibrated without reference to another instrument.

primary interstice *See* original interstice.

primary isoamyl alcohol *See* isobutyl carbinol.

primary lateral sclerosis [MED] A sclerotic disease of the crossed pyramidal tracts of the spinal cord, characterized by paralysis of the limbs, with rigidity, increased tendon reflexes, and absence of sensory and nutritive disorders. Also known as lateral sclerosis.

primary lead [MET] Lead recovered from ore, as contrasted with recycled scrap (secondary) lead.

primary lesion [MED] **1.** In syphilis, tuberculosis, and cowpox, a chancre. **2.** In dermatology, the earliest clinically recognizable manifestation of cutaneous disease, such as a macule, papule, vesicle, pustule, or wheal.

primary lights [OPTICS] Any three lights used in a system of tristimulus colorimetric analysis of solutions.

primary low *See* primary cyclone.

primary magma [GEOL] A magma that originates below the earth's crust.

primary measuring element [ENG] The portion of a measuring or sensing device that is in direct contact with the varia-

bles being measured (such as temperature, pressure, pH, or velocity).

primary meristem [BOT] Meristem which is derived directly from embryonic tissue and which gives rise to epidermis, vascular tissue, and the cortex.

primary mineral [MINERAL] A mineral that is formed at the same time as the rock in which it is contained, and that retains its original form and composition.

primary optic axis [OPTICS] One of two optic axes in a crystal that are perpendicular to the circular sections of the indicatrix and along which all light rays travel with equal velocity.

primary orogeny [GEOL] Orogeny that is characteristic of the internides and that involves deformation, regional metamorphism, and granitization.

primary phase [THERMO] The only crystalline phase capable of existing in equilibrium with a given liquid.

primary phase region [THERMO] On a phase diagram, the locus of all compositions having a common primary phase.

primary phloem [BOT] Phloem derived from apical meristem.

primary photocurrent [ELECTR] A photocurrent resulting from nonohmic contacts unable to replenish charge carriers which pass out of the opposite contact, and whose maximum gain is unity.

primary plasticizer [MATER] A plasticizer material for plastics formulations that has sufficient affinity to a polymer or resin so that it is considered compatible and therefore may be used as the sole plasticizer.

primary porosity [GEOL] Natural porosity in petroleum reservoir sands or rocks.

primary power cable [ELEC] Power service cables connecting the outside power source to the main-office switch and metering equipment.

primary production [ECOL] The total amount of new organic matter produced by photosynthesis.

primary radar [ENG] Radar in which the incident beam is reflected from the target to form the return signal. Also known as primary surveillance radar (PSR).

primary radiation [PHYS] Radiation arriving directly from its source without interaction with matter.

primary rainbow [OPTICS] The most common of the principal rainbow phenomena, which appears as an arc of angular radius of about 42° about the observer's antisolar point; it is the inner of two rainbows, whose light undergoes only one internal reflection, and which is narrower and brighter than the outer, or secondary, rainbow.

primary reference fuel [MATER] **1.** Gasoline; isooctane, *n*-heptane, or mixtures thereof used in the ASTM-CFR gasoline test engine to determine the octane rating of commercial gasoline. **2.** Diesel fuel; cetane, α-methylnaphthalene, or mixtures thereof used in ASTM-CFR diesel test engines to rate the cetane number of commercial diesel fuels.

primary relay [ELEC] Relay that produces the initial action in a sequence of operations.

primary reserve [PETRO ENG] Petroleum reserve recoverable commercially at current prices and costs by conventional methods and equipment as a result of the natural energy inherent in the reservoir.

primary rocks [PETR] Rocks whose constituents are newly formed particles that have never been constituents of previously formed rocks and that are not the products of alteration or replacement, such as limestones formed by precipitation from solution.

primary root [BOT] The first plant root to develop; derived from the radicle.

primary scattering [PHYS] Any scattering process in which radiation is received at a detector, such as the eye, after having been scattered just once; distinguished from multiple scattering.

primary sedimentary structure [GEOL] A sedimentary structure produced during deposition, such as ripple marks and graded bedding.

primary service area [COMMUN] The area in which the ground wave of a broadcast station is not subject to objectionable interference or fading.

primary sewage sludge [CIV ENG] A semiliquid waste resulting from sedimentation with no additional treatment.

primary skip zone [ELECTROMAG] Area around a transmitter beyond the ground wave but within the skip distance.

primary standard [SCI TECH] A unit directly defined and established by some authority, against which all secondary standards are calibrated; for example, in analytical chemistry, reference substances or solutions of known chemical purity and concentration are used to standardize laboratory solutions prior to volumetric analysis or titration.

primary storage [COMPUT SCI] Main internal storage of a computer.

primary stratification [GEOL] Stratification which develops when sediments are first deposited. Also known as direct stratification.

primary stratigraphic trap [GEOL] A stratigraphic trap formed by the deposition of clastic materials (such as shoestring sands, lenses, sand patches, bars, or cocinas) or through chemical deposition (such as organic reefs or biostromes).

primary stress [MECH] A normal or shear stress component in a solid material which results from an imposed loading and which is under a condition of equilibrium and is not self-limiting.

primary stress field *See* ambient stress field.

primary structure [AERO ENG] The main framework, of an aircraft including fittings and attachments; any structural member whose failure would seriously impair the safety of the missile is a part of the primary structure. [GEOL] A structure, in an igneous rock, that formed at the same time as the rock, but before its final consolidation.

primary succession *See* prisere.

primary surveillance radar *See* primary radar.

primary syphilis [MED] The first stage of the venereal disease, characterized clinically by a painless ulcer, or chancre, at the point of infection and painless, discrete regional adenopathy.

primary tectonite [PETR] A tectonite with depositional fabric.

primary tissue [BOT] Plant tissue formed during primary growth. [HISTOL] Any of the four fundamental tissues composing the vertebrate body.

primary treatment [CIV ENG] Removal of floating solids and suspended solids, both fine and coarse, from raw sewage.

primary voltage [ELEC] The voltage applied to the terminals of the primary winding of a transformer.

primary wave [COMMUN] A radio wave traveling by a direct path, as contrasted with skips. [GEOPHYS] The first seismic wave that reaches a station from an earthquake.

primary weapon [ORD] The principal arm of a combat unit; the rifle is the primary or basic weapon for an infantry rifle company, as compared with grenades or chemical projectiles, which are secondary or auxiliary weapons in such an organization.

primary winding [ELEC] The transformer winding that receives signal energy or alternating-current power from a source. Also known as primary. Abbreviated pri. Symbolized P.

primary xylem [BOT] Xylem derived from apical meristem.

Primates [VERT ZOO] The order of mammals to which man belongs; characterized in terms of evolutionary trends by retention of a generalized limb structure and dentition, increasing digital mobility, replacement of claws by flat nails, development of stereoscopic vision, and progressive development of the cerebral cortex.

prime [ENG] **1.** Main or primary, as in prime contractor. **2.** In blasting, to place a detonator in a cartridge or charge of explosive. **3.** To treat wood with a primer or penetrant primer.

prime coat *See* primer.

prime contractor [ENG] A contractor having a direct contract for an entire project; he may in turn assign portions of the work to subcontractors.

prime fictitious meridian [NAV] The reference meridian (real or fictitious) used as the origin for measurement of fictitious longitude.

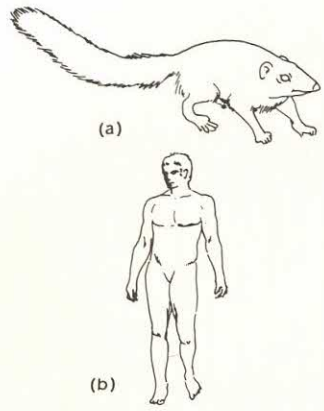
prime focus [OPTICS] The position in a reflecting telescope at which light from celestial objects is focused by the main mirror, located on the axis of the mirror near the open end of the tube.

prime grid meridian [NAV] The reference meridian of a grid; in polar regions it is usually the 180–0° geographic meridian, used as the origin for measuring grid longitude.

prime ideal [MATH] A principal ideal of a ring given by a single element that has properties analogous to those of the prime numbers.

prime inverse meridian *See* prime transverse meridian.

PRIMATES



Representative Primates. *(a)* Member of the family Tupaiidae. *(b)* Man, of the family Hominidae.

prime meridian [GEOD] The meridian of longitude 0°, used as the origin for measurement of longitude; the meridian of Greenwich, England, is almost universally used.

prime mover [MECH ENG] The component of a power plant that transforms energy from the thermal or the pressure form to the mechanical form.

prime navaids facilities [NAV] Navigational aid facilities that, under certain operational environments (for example, weather or mission) are considered to be essential to the safe completion of departure and approach-to-land maneuvering by aircraft; these facilities may include RAPCON, GCA, ILS, TACAN, VOR, and associated critical air-traffic control communications equipments.

prime number [MATH] A positive integer having no divisors except itself and the integer 1.

prime oblique meridian [NAV] The reference fictitious meridian of an oblique graticule.

prime polynomial [MATH] A polynomial whose only factors are itself and constants.

primer [ENG] In general, a small, sensitive initial explosive train component which on being actuated initiates functioning of the explosive train, and will not reliably initiate high explosive charge; classified according to the method of initiation, for example, percussion primer, electric primer, or friction primer. [MATER] A prefinishing coat applied to a wood surface that is to be painted or otherwise finished. Also known as prime coat.

primer cup [ENG] A small metal cup, into which the primer mixture is loaded.

primer-detonator [ENG] A unit, in a metal housing, in which are assembled a primer, a detonator, and when indicated, an intervening delay charge.

primer leak [ENG] Defect in a cartridge which allows partial escape of the hot propelling gases in a primer, caused by faulty construction or an excessive charge.

primer mixture [MATER] An explosive mixture containing a sensitive explosive and other ingredients, used in a primer.

primer pouch [ORD] Container that holds the primer used in firing with separate-loading ammunition.

primer seat [ORD] The chamber, in the breech mechanism of a gun that uses separate-loading ammunition, into which the primer is set.

primer setback [ORD] The backward movement of a primer cup in a cartridge case which occurs when the base of the cup is not properly supported by the bolt face or breechblock.

primes [MET] High-quality metal products, particularly sheet and plate, that are free from visible defects.

prime transverse meridian [NAV] The reference meridian of a transverse graticule. Also known as prime inverse meridian.

prime vertical circle [GEOD] The vertical circle through the east and west points of the horizon.

prime-white kerosine [MATER] A kerosine with an off-white color, between water-white and standard-white kerosine.

primibrach [INV ZOO] In crinoids, the brachials of the unbranched arm.

priming [MECH ENG] In a boiler, the excessive carryover of fine water particles along with the steam because of insufficient steam space, faulty boiler design, or faulty operating conditions.

priming composition [MATER] A physical mixture of materials that is very sensitive to impact or percussion and, when so exploded, undergoes very rapid autocombustion, producing hot gases and incandescent solid particles; priming compositions are used for the ignition of primary high explosives, black powder igniter charges, and propellants in small arms ammunition.

priming of the tides [OCEANOGR] The acceleration in the times of occurrence of high and low tides when the sun's tidal effect comes before that of the moon.

priming pump [MECH ENG] A device on motor vehicles and tanks, providing a means of injecting a spray of fuel into the engine to facilitate starting.

Primitiopsacea [PALEON] A small dimorphic superfamily of extinct ostracods in the suborder Beyrichicopina; the velum of the male was narrow and uniform, but that of the female was greatly expanded posteriorly.

primitive cell [CRYSTAL] A parallelepiped whose edges are defined by the primitive translations of a crystal lattice; it is a unit cell of minimum volume.

primitive circle [MATH] The stereographic projection of the great circle whose plane is perpendicular to the diameter of the projected sphere that passes through the point of projection.

primitive equations [FL MECH] The Eulerian equations of motion of a fluid in which the primary dependent variables are the fluid's velocity components; these equations govern a wide variety of fluid motions and form the basis of most hydrodynamical analysis; in meteorology, these equations are frequently specialized to apply directly to the cyclonic-scale motions by the introduction of filtering approximations.

primitive gut [EMBRYO] The tubular structure in embryos which differentiates into the alimentary canal.

primitive lattice [CRYSTAL] A crystal lattice in which there are lattice points only at its corners. Also known as simple lattice.

primitive period [MATH] The smallest increment of a periodic quantity of an independent variable for which the function repeats itself.

primitive polynomial [MATH] A polynomial with integer coefficients which have 1 as their greatest common divisor.

primitive root [MATH] An nth root of unity that is not an mth root of unity for any m less than n.

primitive streak [EMBRYO] A dense, opaque band of ectoderm in the bilaminar blastoderm associated with the morphogenetic movements and proliferation of the mesoderm and notochord; indicates the first trace of the vertebrate embryo.

primitive translation [CRYSTAL] For a space lattice, one of three translations which can be repeatedly applied to generate any translation which leaves the lattice unchanged.

primitive water [HYD] Water that has been imprisoned in the earth's interior, in either molecular or dissociated form, since the formation of the earth.

primordial black holes [ASTRON] Hypothetical black holes which may have formed in the early, highly compressed stages of the universe immediately following the big bang.

primordial gut *See* archenteron.

primordium *See* anlage.

Primulaceae [BOT] A family of dicotyledonous plants in the order Primulales characterized by a herbaceous habit and capsular fruit with two to many seeds.

Primulales [BOT] An order of dicotyledonous plants in the subclass Dilleniidae distinguished by sympetalous flowers, stamens located opposite the corolla lobes, and a compound ovary with a single style.

principal axis [CRYSTAL] The longest axis in a crystal. [ENG ACOUS] A reference direction for angular coordinates used in describing the directional characteristics of a transducer; it is usually an axis of structural symmetry or the direction of maximum response. [MECH] One of three perpendicular axes in a rigid body such that the products of inertia about any two of them vanish. [OPTICS] *See* optic axis.

principal axis of strain [MECH] One of the three axes of a body that were mutually perpendicular before deformation. Also known as strain axis.

principal axis of stress [MECH] One of the three mutually perpendicular axes of a body that are perpendicular to the principal planes of stress. Also known as stress axis.

principal branch [MATH] For complex valued functions such as the logarithm which are multiple-valued, a selection of values so as to obtain a genuine single-valued function.

principal curvatures [MATH] For a point on a surface, the absolute maximum and absolute minimum values attained by the normal curvature.

principal distance [GRAPHICS] The perpendicular distance from the internal perspective center to the plane of a particular finished negative or print, or of a drawing.

principal E plane [ELECTROMAG] Plane containing the direction of radiation of electromagnetic waves and arranged so that the electric vector everywhere lies in the plane.

principal focus *See* focal point.

principal function [MECH] The integral of the Lagrangian of a system over time; it is involved in the statement of Hamilton's principle.

principal H plane [ELECTROMAG] Plane that contains the direction of radiation and the magnetic vector, and is everywhere perpendicular to the E plane.

principal ideal [MATH] The smallest ideal of a ring which contains a given element of the ring.

principal item [ENG] Item which, because of its major importance, requires detailed analysis and examination of all fac-

tors affecting its supply and demand, as well as an unusual degree of supervision; its selection is based upon such criteria as strategic importance, high monetary value, unusual complexity of issue, and procurement difficulties.

principal line [GRAPHICS] The trace of the principal plane upon a photograph. [SPECT] That spectral line which is most easily excited or observed.

principal lobe [PHYS] The lobe of a radiation pattern or directivity pattern that lies on the axis of symmetry of an acoustic or electromagnetic transmitter or receptor.

principal meridian [CIV ENG] One of the meridians established by the United States government as a reference for subdividing public land.

principal mode *See* fundamental mode.

principal moments [PHYS CHEM] The three moments of inertia of a rigid molecule calculated with respect to the principal axes.

principal normal [MATH] The line perpendicular to a space curve at some point which also lies in the osculating plane at that point.

principal plane [OPTICS] **1.** Two planes perpendicular to the optical axis such that objects in one plane form images in the other with a lateral magnification of unity. **2.** *See* principal section. **3.** The vertical plane passing through the internal perspective center and containing the perpendicular from that center to the plane of a tilted photograph.

principal plane of stress [MECH] For a point in an elastic body, a plane at that point across which the shearing stress vanishes.

principal point [OPTICS] The intersection of a principal plane with the optical axis.

principal quantum number [ATOM PHYS] A quantum number for orbital electrons, which, together with the orbital angular momentum and spin quantum numbers, labels the electron wave function; the energy level and the average distance of an electron from the nucleus depend mainly upon this quantum number.

principal ray [OPTICS] **1.** The one ray within a bundle of incident rays that, upon entering an optical instrument from any given point of the object, passes through the optical center of the lens. **2.** *See* principal visual ray.

principal root [MATH] The positive real root of a positive number, or the negative real root in the case of odd roots of negative numbers.

principal section [OPTICS] A plane in a crystal that contains the crystal's optic axis and the ray of light under consideration. Also known as principal plane.

principal series [SPECT] A series occurring in the line spectra of many atoms and ions with one, two, or three electrons in the outer shell, in which the total orbital angular momentum quantum number changes from 1 to 0.

principal strain [MECH] The elongation or compression of one of the principal axes of strain relative to its original length.

principal stress [MECH] A stress occurring at right angles to a principal plane of stress.

principal value *See* Cauchy principal value.

principal vertical circle [GEOD] The vertical circle through the north and south points of the horizon, coinciding with the celestial meridian.

principal visual ray [OPTICS] A perpendicular extending from a station point to a perspective plane and theoretically passing exactly along the visual axis of a viewing eye. Also known as principal ray.

principle [SCI TECH] A scientific law which is highly general or fundamental, and from which other laws are derived.

principle of covariance [RELAT] **1.** In classical physics and in special relativity, the principle that the laws of physics take the same mathematical form in all inertial reference frames. **2.** In general relativity, the principle that the laws of physics take the same mathematical form in all conceivable curvilinear coordinate systems.

principle of duality *See* duality principle.

principle of equivalence *See* equivalence principle.

principle of inaccessibility *See* Carathéodory's principle.

principle of insufficient reason [STAT] The principle that cases are equally likely to occur unless reasons to the contrary are known.

principle of least action [MECH] The principle that, for a system whose total mechanical energy is conserved, the trajectory of the system in configuration space is that path which makes the value of the action stationary relative to nearby paths between the same configurations and for which the energy has the same constant value. Also known as least-action principle.

principle of optimality [CONT SYS] A principle which states that for optimal systems, any portion of the optimal state trajectory is optimal between the states it joins.

principle of reciprocity *See* reciprocity theorem.

principle of superposition [ELEC] **1.** The principle that the total electric field at a point due to the combined influence of a distribution of point charges is the vector sum of the electric field intensities which the individual point charges would produce at that point if each acted alone. **2.** The principle that, in a linear electrical network, the voltage or current in any element resulting from several sources acting together is the sum of the voltages or currents resulting from each source acting alone. Also known as superposition theorem. [MECH] The principle that when two or more forces act on a particle at the same time, the resultant force is the vector sum of the two. [PHYS] Also known as superposition principle. **1.** A general principle applying to many physical systems which states that if a number of independent influences act on the system, the resultant influence is the sum of the individual influences acting separately. **2.** In all theories characterized by linear homogeneous differential equations, such as optics, acoustics, and quantum theory, the principle that the sum of any number of solutions to the equations is another solution.

principle of the maximum [MATH] The principle that for a nonconstant complex analytic function defined in a domain, the absolute value of the function cannot attain its maximum at any interior point of the domain.

principle of the minimum [MATH] The principle that for a nonvanishing nonconstant complex analytic function defined in a domain, the absolute value of the function cannot attain its minimum at any interior point of the domain.

principle of uniformity *See* uniformitarianism.

principle of virtual work [MECH] The principle that the total work done by all forces acting on a system in static equilibrium is zero for any infinitesimal displacement from equilibrium which is consistent with the constraints of the system. Also known as virtual work principle.

print [GRAPHICS] A photographic copy made by placing a negative or transparency in contact with a sensitized surface or by projecting the image on a screen or sensitized photographic medium, and then developing the result.

printability gage [GRAPHICS] A standard pattern of lines with graduated spaces between them, used by printers to determine the size of symbol that can be printed with fidelity and to measure the amount of spread in the width of printed lines inherent in the particular printing process.

printed circuit [ELECTR] A conductive pattern that may or may not include printed components, formed in a predetermined design on the surface of an insulating base in an accurately repeatable manner.

printed circuit board [ELECTR] A flat board whose front contains slots for integrated circuit chips and connections for a variety of electronic components, and whose back is printed with electrically conductive pathways between the components.

printed-wiring armature [ELEC] An armature in which the conductors consist of printed-wiring strips on both sides of a thin insulating disk, to give a low-inertia armature for servomotors and other variable high-speed applications.

printer [COMPUT SCI] A computer output mechanism that prints characters one at a time or one line at a time.

printer's point *See* point.

print film [GRAPHICS] A fine-grain, high-resolving-power, yellow-dyed positive photographic film used for continuous contact printing.

print hammer [GRAPHICS] A device on certain kinds of printers which, upon receiving the proper signal, strikes the paper, bringing it in contact with the character to be printed.

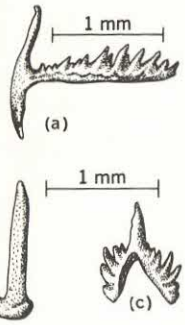
printing calculator [COMPUT SCI] A desk-model electronic calculator that provides a printed record on paper tape with or without a digital display.

printing ink [MATER] Ink generally made from carbon black, lampblack, or other pigment suspended in an oil vehicle, with a resin, solvent, adhesive, and drier; available in many variations.

printing press [GRAPHICS] A machine for the production of printed impressions on paper and other materials.

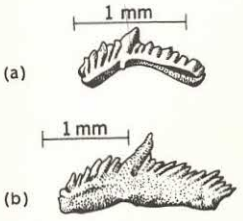
printing-telegraph code [COMMUN] A five- or seven-unit

PRIONIODIDAE



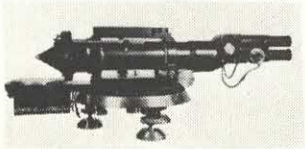
Three examples of Prioniodidae: *(a) Ligonodina. (b) Hibbardella. (c) Hindeodella.*

PRIONIODINIDAE



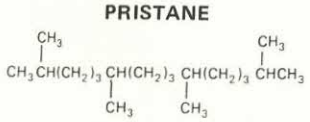
Two examples of the Prioniodinidae: *(a) Bryantodus; (b) Lewistownella.*

PRISMATIC ASTROLABE



A prismatic astrolabe, used to make celestial observations. *(U.S. Naval Oceanographic Office)*

PRISTANE



Structural formula.

code used for operation of a teleprinter, teletypewriter, and similar telegraph printing devices.

printing telegraphy [COMMUN] Method of telegraph operation in which the received signals are automatically recorded in printed characters.

print member [COMPUT SCI] The part of a computer printer that determines the form of a printed character, such as a print wheel or type bar.

printout [COMPUT SCI] A printed output of a data-processing machine or system.

printout paper [GRAPHICS] A paper used to make prints by light alone, without any processing involved; it has a reddish color, is often used as a proof, and can be made permanent by toning.

print position [COMPUT SCI] One of the positions on a printer at which a character can be printed.

print processes [GRAPHICS] Three general print processes: relief process, in which the printing areas stand above the surface of the plate; intaglio process, in which the printing areas fall below the surface of the plate; and planographic process, in which there is no appreciable difference between the level of the printing areas and the general surface.

print server [COMPUT SCI] A computer controlling a series of printers.

printthrough [ELECTR] Transfer of signals from one recorded layer of magnetic tape to the next on a reel.

print wheel [COMPUT SCI] A disk which has around its rim the letters, numerals, and other characters that are used in printing in a wheel printer.

Prioniodidae [PALEON] A family of conodonts in the suborder Conodontiformes having denticulated bars with a large denticle at one end.

Prioniodinidae [PALEON] A family of conodonts in the suborder Conodontiformes characterized by denticulated bars or blades with a large denticle in the middle third of the specimen.

prionodont [VERT ZOO] Having many simple, similar teeth set in a row like sawteeth.

prior-art search [ENG] **1.** A search for prior art which may possibly anticipate an invention which is being considered for patentability. **2.** A similar search but for the purpose of determining what the status of existing technology is before going ahead with new research; it is done to avoid unwittingly retracing new steps taken by other workers in the field.

priorite [MINERAL] $(Y,Ca,Th)(Ti,Nb)_2O_6$ A mineral composed of titanoniobate of rare-earth metals; it is isomorphous with eschynite. Also known as blomstrandine.

priority-arbitration circuit [COMPUT SCI] A logic circuit which combines all interrupts but allows only the highest-priority request to enable its active flipflop.

priority indicator [COMMUN] Data attached to a message to indicate its relative priority and hence the order in which it will be transmitted. [COMPUT SCI] Data attached to a computer program or job which are used to determine the order in which it will be processed by the computer.

priority interrupt [COMPUT SCI] An interrupt procedure in which control is passed to the monitor, the required operation is initiated, and then control returns to the running program, which never knows that it has been interrupted.

priority phase [COMPUT SCI] Phase consisting of execution of operations in response to instruments or process interrupts other than clock interrupts.

priority processing [COMPUT SCI] A method of computer time-sharing in which the order in which programs are processed is determined by a system of priorities, involving such factors as the length, nature, and source of the programs.

prior probabilities [STAT] Probabilities of the outcomes of an experiment before the experiment has been performed.

priscol *See* tolazoline hydrochloride.

prisere [ECOL] The ecological succession of vegetation that occurs in passing from barren earth or water to a climax community. Also known as primary succession.

prism [CRYSTAL] A crystal which has three, four, six, eight, or twelve faces, with the face intersection edges parallel, and which is open only at the two ends of the axis parallel to the intersection edges. [GEOL] A long, narrow, wedge-shaped sedimentary body with a width-thickness ratio greater than 5 to 1 but less than 50 to 1. [MATH] A polyhedron with two parallel, congruent faces and all other faces parallelograms. [OPTICS] An optical system consisting of two or more usually plane surfaces of a transparent solid or embedded liquid at an angle with each other. Also known as optical prism.

prismatic astrolabe [ENG] A surveying instrument that makes use of a pan of mercury forming an artificial horizon, and a prism mounted in front of a horizontal telescope to determine the exact times at which stars reach a fixed altitude, and thereby to establish an astronomical position.

prismatic binoculars *See* prism binoculars.

prismatic cleavage [CRYSTAL] A type of crystal cleavage that occurs parallel to the faces of a prism.

prismatic coefficient *See* longitudinal coefficient.

prismatic compass [ENG] A hand compass used by surveyors which is equipped with a prism that allows the compass to be read while the site is being taken.

prismatic error [OPTICS] That error due to lack of parallelism of the two faces of an optical element, such as a mirror or a shade glass.

prismatic jointing *See* columnar jointing.

prismatic plane [MET] Any plane parallel to the principal *c* axis in noncubic metals.

prismatic structure *See* columnar jointing.

prismatic surface [MATH] A surface generated by moving a straight line which always meets a broken line lying in a given plane and which is always parallel to some given line not in that plane.

prismatoid [MATH] A polyhedron whose vertices all are in one or the other of two parallel planes.

prism binoculars [OPTICS] A type of binoculars, each half of which is a Kepler telescope that employs a Porro prism erecting system both to erect the image and to reduce the length of the instrument. Also known as prismatic binoculars.

prism crack [GEOL] A mud crack that develops in regular or irregular polygonal patterns on the surface of drying mud puddles and that breaks the sediment into prisms standing normal to the bedding.

prism diopter [OPTICS] A unit used in measuring the deviating power of a prism; this power in prism diopters is 100 times the tangent of the angle of deviation of a ray of light.

prism level [ENG] A surveyor's level with prisms that allow the levelman to view the level bubble without moving his eye from the telescope.

prismoid [MATH] A prismatoid whose two parallel faces are polygons having the same number of sides while the other faces are trapezoids or parallelograms.

prism spectrograph [SPECT] Analysis device in which a prism is used to give two different but simultaneous light wavelengths derived from a common light source; used for the analysis of materials by flame photometry.

prism transit *See* broken-back transit.

pristane [ORG CHEM] $C_{19}H_{40}$ A liquid soluble in such organic solvents as ether, petroleum ether, benzene, chloroform, and carbon tetrachloride; used as a lubricant, as an oil in transformers, and as an anticorrosion agent. Also known as norphytane.

Pristidae [VERT ZOO] The sawfishes, a family of modern sharks belonging to the batoid group.

Pristiophoridae [VERT ZOO] The saw sharks, a family of modern sharks often grouped with the squaloids which have a greatly extended rostrum with enlarged denticles along the margins.

privacy system [COMMUN] A device or method for scrambling overseas telephone conversations handled by radio links in order to make them unintelligible to outside listeners. Also known as privacy transformation; secrecy system.

privacy transformation *See* privacy system.

private aid to navigation [NAV] In marine operation, an aid to navigation authorized by the U.S. Coast Guard but established, operated, and maintained by private interests in the navigable waters of the United States.

private automatic branch exchange [COMMUN] A private branch exchange in which connections are made by remote-controlled switches. Abbreviated PABX.

private automatic exchange [COMMUN] A private telephone exchange in which connections are made by remote-controlled switches. Abbreviated PAX.

private branch exchange [COMMUN] A telephone exchange serving a single organization, having a switchboard and associated equipment, usually located on the customer's premises; provides for switching calls between any two extensions served by the exchange or between any extension and the na-

tional telephone system via a trunk to a central office. Abbreviated PBX.

private branch exchange access line [ELEC] Circuit that connects a main private branch exchange (PBX) to a switching center.

private data [COMPUT SCI] Data that are open to a single user only.

private exchange [COMMUN] Telephone exchange serving a single organization and having no means for connecting to a public telephone system.

private line [COMMUN] A line, channel, or service reserved solely for one user.

private line arrangement [COMPUT SCI] The structure of a computer system in which each input/output device has a set of lines leading to the central processing unit for the device's own private use. Also known as radial selector.

private line service [COMMUN] Service provided by United States common carrier engaged in domestic or international wire, radio, and cable communications for the intercity communications purposes of a customer; this service is provided over integrated communications pathways, including facilities or local channels, which are integrated components of intercity private line services, and station equipment between specified locations for a continuous period or for regularly recurring periods at stated hours.

private stream [HYD] Any stream which diverts part or all of the drainage of another stream.

privileged direction [OPTICS] One of two mutually perpendicular directions for the plane of polarization of a beam of plane-polarized light falling on a plate of anisotropic material such that the light which emerges from the plate is also plane-polarized.

privileged instruction [COMPUT SCI] A class of instructions, usually including storage protection setting, interrupt handling, timer control, input/output, and special processor status-setting instructions, that can be executed only when the computer is in a special privileged mode that is generally available to an operating or executive system, but not to user programs.

privileged mode *See* master mode.

proaccelerin [BIOCHEM] A labile procoagulant in normal plasma but deficient in the blood of patients with parahemophilia; essential for rapid conversion of prothrombin to thrombin. Also known as factor V; labile factor.

proamnion [EMBRYO] The part of the embryonic area at the sides and in front of the head of the developing amniote embryo, which remains without mesoderm for a considerable period.

Proanura [PALEON] Triassic forerunners of the Anura.

probabilistic automaton [COMPUT SCI] A device, with a finite number of internal states, which is capable of scanning input words over a finite alphabet and responding by successively changing its internal state in a probabilistic way. Also known as stochastic automaton.

probabilistic sequential machine [COMPUT SCI] A probabilistic automaton that has the capability of printing output words probabilistically, over a finite output alphabet. Also known as stochastic sequential machine.

probability [STAT] The probability of an event is the ratio of the number of times it occurs to the large number of trials that take place; the mathematical model of probability is a positive measure which gives the measure of the space the value 1.

probability amplitude *See* Schrödinger wave function.

probability current density [QUANT MECH] A vector whose component normal to a surface gives the probability that a particle will cross a unit area of the surface during a unit time.

probability density [QUANT MECH] The square of the absolute value of the Schrödinger wave function for a particle at a given point; gives the probability per unit volume of finding the particle at that point.

probability density function [STAT] A real-valued function whose integral over any set gives the probability that a random variable has values in this set. Also known as density function; frequency function.

probability deviation *See* probable error.

probability distribution *See* distribution of a random variable.

probability forecast [METEOROL] A forecast of the probability of occurrence of one or more of a mutually exclusive set of weather contingencies, as distinguished from a series of categorical statements.

probability ratio test [STAT] Testing a simple hypothesis against a simple alternative by using the ratio of the probability of each simple event under the alternative to the probability of the event under the hypothesis.

probability theory [MATH] The study of the mathematical structures and constructions used to analyze the probability of a given set of events from a family of outcomes.

probable [ORD] **1.** An instance in which a hostile aircraft is probably destroyed. **2.** The hostile aircraft so designated.

probable error [STAT] The error that is exceeded by a variable with a probability of ½. Also known as probability deviation.

probable maximum precipitation [METEOROL] The theoretically greatest depth of precipitation for a given duration that is physically possible over a particular drainage area at a certain time of year; in practice, this is derived over flat terrain by storm transposition and moisture adjustment to observed storm patterns.

probable ore [MIN ENG] **1.** A mineral deposit adjacent to a developed ore but not yet proved by development. **2.** *See* indicated ore.

probable reserves [PETRO ENG] Primary petroleum reserves based on limited evidence, but not proved by a commercial oil-production rate.

probe [AERO ENG] An instrumented vehicle moving through the upper atmosphere or space or landing upon another celestial body in order to obtain information about the specific environment. [COMMUN] To determine a radio interference by obtaining the relative interference level in the immediate area of a source by the use of a small, insensitive antenna in conjunction with a receiving device. [ELECTROMAG] A metal rod that projects into but is insulated from a waveguide or resonant cavity; used to provide coupling to an external circuit for injection or extraction of energy or to measure the standing-wave ratio. Also known as waveguide probe. [ENG] A small tube containing the sensing element of electronic equipment, which can be lowered into a borehole to obtain measurements and data. [PHYS] A small device which can be brought into contact with or inserted into a system in order to make measurements on the system; ordinarily it is designed so that it does not significantly disturb the system.

probe coil [ELECTROMAG] In eddy-current nondestructive tests, a type of test coil which is placed on the surface of an object.

probe gas [ENG] Tracer gas emitted from a small orifice for impingement on a restricted area being tested for leaks.

probend [GEN] The clinically affected individual who is being studied with respect to a pedigree of interest to human genetics.

probertite [MINERAL] $NaCaB_5O_9 \cdot 5H_2O$ A colorless mineral crystallizing in the monoclinic system, consisting of hydrous sodium calcium borate.

probe-type liquid-level meter [ENG] Device to sense or measure the level of liquids in storage or process vessels by means of an immersed electrode or probe.

problem check [COMPUT SCI] One or more tests used to assist in obtaining the correct machine solution to a problem.

problem definition [COMPUT SCI] The art of compiling logic in the form of general flow charts and logic diagrams which clearly explain and present the problem to the programmer in such a way that all requirements involved in the run are presented.

problem-defining language [COMPUT SCI] A programming language that literally defines a problem and may specifically define the input and output, but does not define the method of transforming one to the other. Also known as problem specification language.

problem-describing language [COMPUT SCI] A programming language that describes, in the most general way, the problem to be solved, but gives no indication of the problem's detailed characteristics or its solution.

problem file *See* run book.

problem folder *See* run book.

problem mode [COMPUT SCI] A condition of computer operation in which, in contrast to supervisor mode, the privileged instructions cannot be executed, preventing the program from upsetting the supervisor program or any other program.

problem-oriented language [COMPUT SCI] A language designed to facilitate the accurate expression of problems belonging to specific sets of problem types.

problem-solving language [COMPUT SCI] A programming

language that can be used to specify a complete solution to a problem.

problem-specification language *See* problem-defining language.

Proboscidea [VERT ZOO] An order of herbivorous placental mammals characterized by having a proboscis, incisors enlarged to become tusks, and pillarlike legs with five toes bound together on a broad pad.

proboscis [INV ZOO] A tubular organ of varying form and function on a large number of invertebrates, such as insects, annelids, and tapeworms. [VERT ZOO] The flexible, elongated snout of certain mammals.

Proca equations [QUANT MECH] A set of equations, analogous to Maxwell's equations, relating a four-vector potential and a second-rank tensor field describing a particle of spin 1 and nonzero mass.

procaine *See* procaine base.

procaine base [ORG CHEM] $C_6H_4NH_2COOCH_2CH_2N(C_2H_5)_2$ Water-insoluble, light-sensitive, odorless, white powder, melting at 60°C; soluble in alcohol, ether, chloroform, and benzene; used in medicine as a local anesthetic. Also known as *para*-aminobenzoyldiethylaminoethanol base; planocaine base; procaine.

procaine penicillin G [ORG CHEM] $C_{29}H_{38}N_4O_6S \cdot H_2O$ White crystals or powder, fairly soluble in chloroform; used as an antibiotic in animal feed.

Procampodeidae [INV ZOO] A family of the insect order Diplura.

Procaviidae [VERT ZOO] A family of mammals in the order Hyracoidea including the hyraxes.

Procaviinae [VERT ZOO] A subfamily of ungulate mammals in the family Procaviidae.

procedural language [COMPUT SCI] A programming language made up of macroinstructions, each macroinstruction usually written in assembly language.

procedural representation [COMPUT SCI] The representation of certain concepts in a computer by procedures or programs in some appropriate language, rather than by static data items such as numbers or lists.

procedure [COMPUT SCI] A sequence of actions (or computer instructions) which collectively accomplish some desired task.

procedure division [COMPUT SCI] The section of a program (written in the COBOL language) in which a programmer specifies the operations to be performed with the data names appearing in the program.

procedure-oriented language [COMPUT SCI] A language designed to facilitate the accurate description of procedures, algorithms, or routines belonging to a certain set of procedures.

procedure track [NAV] The path specified for making an instrument approach to an airport and for pull-up in case of a missed approach; this information is indicated on instrument approach charts by lines both in plan and profile.

procedure turn [NAV] A constant-rate turn of an aircraft in flight; used for computing the radius of turn and time required for its execution when very accurate navigation is required in controlling time or maintaining accurate, predetermined tracks.

procedure work log system [NAV] In air operations, a system utilized for logging the flight procedures in airspace data and establishing the source of documentation for automatic data processing. Abbreviated PROWL.

proceed-to-select signal [COMMUN] Signal returned from distant automatic equipment over the backward signaling path, in response to a calling signal, to indicate that selecting information can be transmitted; in certain signaling systems, both signals can be the same.

proceed-to-transmit signal [COMMUN] Signal returned from a distant manual switchboard over the backward signaling path, in response to a calling signal, to indicate that the teleprinter of the distant operator is connected to the circuit.

Procellarian [GEOL] Pertaining to lunar lithologic map units and topographic forms constituting, or closely associated with, the maria.

Procellariidae [VERT ZOO] A family of birds in the order Procellariiformes comprising the petrels, fulmars, and shearwaters.

Procellariiformes [VERT ZOO] An order of oceanic birds characterized by tubelike nostril openings, webbed feet, dense plumage, compound horny sheath of the bill, and, often, a peculiar musky odor.

procephalon [INV ZOO] The part of an insect's head that lies anteriorly to the segment in which the mandibles are located.

procercoid [INV ZOO] The solid parasitic larva of certain eucestodes, such as pseudophyllideans, that develops in the body of the intermediate host.

process [COMPUT SCI] To assemble, compile, generate, interpret, compute, and otherwise act on information in a computer. [ENG] A system or series of continuous or regularly occurring actions taking place in a predetermined or planned manner; for example, as oil refining process or chemicals manufacturing process.

process analyzer [CHEM ENG] An instrument for determining the chemical composition of the substances involved in a chemical process directly, or for measuring the physical parameters indicative of composition.

process annealing [MET] Softening a ferrous alloy by heating to a temperature close to but below the lower limit of the transformation range and then cooling.

process camera [OPTICS] Large camera used to produce materials for reproduction in printing; permits a large range of enlargement and reduction.

process chart [IND ENG] A graphic representation of events occurring during a series of actions or operations.

process color [GRAPHICS] Method of reproducing full-color originals such as paintings and color photographs; four-color process plates print in yellow, magenta, cyan, and black.

process control [ENG] Manipulation of the conditions of a process to bring about a desired change in the output characteristics of the process.

process control chart [IND ENG] A tabulated graphical arrangement of test results and other pertinent data for each production assembly unit, arranged in chronological sequence for the entire assembly.

process control engineering [ENG] A field of engineering dealing with ways and means by which conditions of continuous processes are automatically kept as close as possible to desired values or within a required range.

process control system [CONT SYS] The automatic control of a continuous operation.

process dynamics [ENG] The dynamic response interrelationships between components (units) of a complex system, such as in a chemical process plant.

process engineering [ENG] A service function of production engineering that involves selection of the processes to be used, determination of the sequence of all operations, and requisition of special tools to make a product.

process furnace [CHEM ENG] Furnace used to heat process-stream materials (liquids, gases, or solids) in a chemical-plant operation; types are direct-fired, indirect-fired, and pebble heaters.

process heater [CHEM ENG] Equipment for the heating of chemical process streams (gases, liquids, or solids); usually refers to furnaces, in contrast to heat exchangers.

process heat reactor [NUCLEO] A nuclear reactor that produces heat for use in manufacturing processes.

processing [COMMUN] Further handling, manipulation, consolidation, compositing, and so on, of information to convert it from one format to another or to reduce it to manageable or intelligible information. [ENG] The act of converting material from one form into another desired form.

processing interrupt [COMPUT SCI] The interruption of the batch processing mode in a real-time system when live data are entered in the system.

processing section [COMPUT SCI] The computer unit that does the actual changing of input into output; includes the arithmetic unit and intermediate storage.

process lapse rate [METEOROL] The rate of decrease of the temperature of an air parcel as it is lifted, expressed as $-dT/dz$, where z is the altitude, or occasionally dT/dp, where p is pressure; the concept may be applied to other atmospheric variables, such as the process lapse rate of density.

process lens [OPTICS] A highly corrected, apochromatic lens used for precise color-separation work.

process-limited *See* processor-limited.

process metallurgy [MET] The branch of metallurgy concerned with the extraction of metals from ore, and with the refining of metals; usually synonymous with extractive metallurgy.

process monitoring [CHEM ENG] The observation of chemical process variables by means of pressure, temperature, flow,

and other types of indicators; usually occurs in a central control room.

processor [COMPUT SCI] **1.** A device that performs one or many functions, usually a central processing unit. **2.** A program that transforms some input into some output, such as an assembler, compiler, or linkage editor.

processor error interrupt [COMPUT SCI] The interruption of a computer program because a parity check indicates an error in a word that has been transferred to or within the central processing unit.

processor-limited [COMPUT SCI] Property of a computer system whose processing time is determined by the speed of its central processing unit rather than by the speed of its peripheral equipment. Also known as process-limited.

processor-memory-switch notation *See* PMS notation.

processor stack pointer [COMPUT SCI] A programmable register used to access all temporary-storage words related to an interrupt-service routine which was halted when a new service routine was called in.

processor status word [COMPUT SCI] A word comprising a set of flag bits and the interrupt-mask status.

process planning [IND ENG] Determining the conditions necessary to convert material from one state to another.

process printing [GRAPHICS] The printing from a series of two or more halftone plates to produce intermediate colors and shades.

process research [SCI TECH] Applied research with a new or improved process in view.

process schizophrenia [PSYCH] Schizophrenia having a slow, insidious onset; the person exhibits poor adjustment before hospitalization.

process time [IND ENG] **1.** Time needed for completion of the machine-controlled portion of a work cycle. **2.** Time required for completion of an entire process.

process variable [CHEM ENG] Any of those varying operational and physical conditions associated with a chemical processing operation, such as temperature, pressure, flowrate, density, pH, viscosity, or chemical composition.

prochirality [ORG CHEM] The property displayed by a molecule or atom which contains (or is bonded to) two constitutionally identical ligands; Also known as prostereoisomerism.

procoagulant [BIOCHEM] Any of blood clotting factors V to VIII; accelerates the conversion of prothrombin to thrombin in the presence of thromboplastin and calcium.

Procoela [VERT ZOO] A suborder of the Anura characterized by a procoelous vertebral column and a free coccyx articulating with a double condyle.

procoelous [VERT ZOO] The form of a vertebra that is concave anteriorly and convex posteriorly.

procollagen [BIOCHEM] A high-molecular-weight form of collagen that is found in intracellular spaces and is believed to be the precursor of collagen.

Procolophonia [PALEON] A subclass of extinct cotylosaurian reptiles.

proctiger [INV ZOO] The cone-shaped, reduced terminal segment of the abdomen of an insect which contains the anus.

proctitis [MED] Inflammation of the anus or rectum.

proctology [MED] A branch of medicine concerned with the structure and disease of the anus, rectum, and sigmoid colon.

proctoscope [MED] An instrument for inspecting the anal canal and rectum.

proctosigmoidectomy [MED] The abdominoperineal excision of the anus and rectosigmoid, usually with the formation of an abdominal colostomy.

Proctotrupidae [INV ZOO] A family of hymenopteran insects in the superfamily Proctotrupoidea.

Proctotrupoidea [INV ZOO] A superfamily of parasitic Hymenoptera in the suborder Apocrita.

procumbent [BOT] Having stems that lie flat on the ground but do not root at the nodes. [SCI TECH] **1.** Lying stretched out. **2.** Slanting forward. **3.** Lying face down.

procurement [ORD] **1.** The complete action or process of acquiring or obtaining personnel, materiel, services, or property from outside a military service by means authorized in pertinent directives. **2.** More specifically, the action or process of acquiring or obtaining materiel, property, or services at the operational level, for example, purchasing, contracting, and negotiating directly with the source of supply.

procurement lead time [ORD] The time elapsing between the initiation of procurement action and the receipt into the supply system of the materiel procured.

Procyon [ASTRON] A star of magnitude 0.3, of spectral type F5, and 11 light-years (1.041×10^{17} meters) from earth; one of a binary. Also known as α Canis Minoris.

Procyonidae [VERT ZOO] A family of carnivoran mammals in the superfamily Canoidea, including raccoons and their allies.

prod *See* test prod.

prod cast [GEOL] The cast of a prod mark. Also known as impact cast.

prodelta [GEOL] The part of a delta lying beyond the delta front, and sloping gently down to the basin floor of the delta; it is entirely below the water level.

prodelta clay [GEOL] Fine sand, silt, and clay transported by the river and deposited on the floor of a sea or lake beyond the main body of a delta.

Prodinoceratinae [PALEON] A subfamily of extinct herbivorous mammals in the family Untatheriidae; animals possessed a carnivorelike body of moderate size.

prod mark [GEOL] A short tool mark oriented parallel to the current and gradually deepening downcurrent. Also known as impact mark.

prodrome [MED] **1.** An early or premonitory manifestation of impending disease before the specific symptoms begin. **2.** An aura.

producer [ECOL] An autotrophic organism of the ecosystem; any of the green plants.

producer gas [MATER] Fuel gas high in carbon monoxide and hydrogen, produced by burning a solid fuel with a deficiency of air or by passing a mixture of air and steam through a bed of incandescent fuel; used as a cheap, low-Btu industrial fuel.

producer's risk [IND ENG] The probability that in an acceptance sampling plan, material of an acceptable quality level will be rejected.

producing gas-oil ratio [PETRO ENG] The ratio of gas to oil (GOR, or gas-oil ratio) from a producing well; an increase in GOR is a danger signal in the efficient control of reservoir performance.

producing horizon [PETRO ENG] A reservoir bed within the stratigraphic series of an oil province from which gas or liquid hydrocarbons can be obtained by drilling a well.

producing reserves [PETRO ENG] Developed (proved) petroleum reserves to be produced by existing wells in that portion of a reservoir subjected to full-scale secondary-recovery operations.

product [CHEM ENG] *See* discharge liquor. [IND ENG] **1.** An item or goods made by an industrial firm. **2.** The total of such items or goods. [MATH] **1.** The product of two algebraic quantities is the result of their multiplication relative to an operation analogous to multiplication of real numbers. **2.** The product of a collection of sets $A_1, A_2, \ldots, A_n$ is the set of all elements of the form $(a_1, a_2, \ldots, a_n)$ where each a_i is an element of A_i for each $i = 1, 2, \ldots, n$.

product demodulator [ELECTR] A receiver demodulator whose output is the product of the input signal voltage and a local oscillator signal voltage at the input frequency. Also known as product detector.

product design [DES ENG] The determination and specification of the parts of a product and their interrelationship so that they become a unified whole.

product detector *See* product demodulator.

Productinida [PALEON] A suborder of extinct articulate brachiopods in the order Strophomenida characterized by the development of spines.

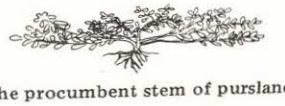
production [COMPUT SCI] A rule in a grammar of a formal language that describes how parts of a string (or word, phrase, or construct) can be replaced by other strings. Also known as rule of inference. [ENG] Output, such as units made in a factory, oil from a well, or chemicals from a processing plant.

production control [IND ENG] The procedure for planning, routing, scheduling, dispatching, and expediting the flow of materials, parts, subassemblies, and assemblies within a plant, from the raw state to the finished product, in an orderly and efficient manner.

production-decline curve [PETRO ENG] A graphical means to estimate the ultimate recovery (oil or gas) from a reservoir; cumulative production is plotted against time, the curve being extrapolated to an end point (that is, ultimate recovery).

production engineering [IND ENG] The planning and con-

PROCUMBENT



The procumbent stem of purslane.

trol of the mechanical means of changing the shape, condition, and relationship of materials within industry toward greater effectiveness and value.

production model [IND ENG] A model in its final mechanical and electrical form of final production design made by production tools, jigs, fixtures, and methods.

production packer [PETRO ENG] A downhole tool used to assist in the efficient production of oil and gas from a well having one or more productive horizons; the function is to provide a seal between the outside of the tubing and the inside of the casing to prevent movement of fluids past that point. Also known as packer.

production program [COMPUT SCI] A proprietary program used primarily for internal processing in a business and not generally made available to third parties for profit.

production reactor [NUCLEO] A nuclear reactor designed primarily for large-scale production of transmutation products, such as plutonium.

production requirements [IND ENG] The sum of authorized stock levels and pipeline needs less stocks expected to become available, stock on hand, stocks due in, returned stocks, and stocks from salvage, reclamation, rebuild, and other sources.

production standard *See* standard time.

production time [COMPUT SCI] Good computing time, including occasional duplication of one case for a check or rerunning of the test run; also including duplication requested by the sponsor, any reruns caused by misinformation or bad data supplied by sponsor, and error studies using different intervals, covergence criteria, and so on.

production track [ENG ACOUS] A sound track which is either prerecorded or recorded directly on the set, and which exists in the film at that time when the music breakdown for scoring is about to begin.

production tubing [PETRO ENG] The final string of pipe that is placed in an oil well after the oil has stopped flowing naturally.

productive time [IND ENG] Time during which useful work is performed in an operation or process.

productivity [AGR] The yield of a given crop per unit of land. [IND ENG] **1.** The effectiveness with which labor and equipment are utilized. **2.** The production output per unit of effort. [PETRO ENG] Measure of an oil well's ability to produce liquid or gaseous hydrocarbons; categories include relative, specific, ultimate, and fractured-well productivity.

productivity index [PETRO ENG] The number of barrels of oil produced per day per decline in well bottom-hole pressure in pounds per square inch.

productivity ratio [PETRO ENG] **1.** The amount of damage or improvement to reservoir formation permeability adjacent to the borehole (due to invasion or reduction of drilling mud present, drilling-fluid filtrate water, swollen clay particles, or salt or wax deposition). **2.** The ratio of permeability calculated from the productivity index to the permeability calculated from reservoir buildup pressure.

productivity test [PETRO ENG] Graphical relation of bottomhole static pressure (calculated or measured) versus producing pressure for various gas flow rates; used to predict future oil well behavior.

product line [IND ENG] **1.** The range of products offered by a firm. **2.** A group of basically similar products, differentiated only by such characteristics as color, style, or size.

product measure [MATH] A measure on a product of measure spaces constructed from the measures on each of the individual spaces by taking the measure of the product of a finite number of measurable sets, one from each of the measure spaces in the product, to be the product of the measures of these sets.

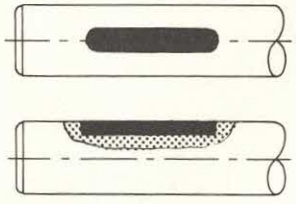
product model [STAT] A model for independent repetition of an experiment, or independent performance of several experiments, obtained by taking the cartesian product of the probability spaces representing the experiments.

product modulator [ELECTR] Modulator whose modulated output is substantially equal to the carrier and the modulating wave; the term implies a device in which intermodulation between components of the modulating wave does not occur.

product of inertia [MECH] Relative to two rectangular axes, the sum of the products formed by multiplying the mass (or, sometimes, the area) of each element of a figure by the product of the coordinates corresponding to those axes.

product research [SCI TECH] Applied research with a new or improved product in view.

PROFILED KEYWAY



End-milled or profiled type of keyway. *(From P.H. Black and O.E. Adams, Jr., Machine Design, 3d ed., 1968)*

product topology [MATH] A topology on a product of topological spaces whose open sets are constructed from cartesian products of open sets from the individual spaces.

product water [CHEM ENG] Fresh water that is produced by a desalination process; Also known as converted water.

proenzyme *See* zymogen.

proerythroblast of Ferrata *See* pronormoblast.

proestrus [PHYSIO] The beginning of the follicular phase of estrus.

profibrinolysin *See* plasminogen.

profile [GEOL] **1.** The outline formed by the intersection of the plane of a vertical section and the ground surface. Also known as topographic profile. **2.** Data recorded by a single line of receivers from one shot point in seismic prospecting. [GEOPHYS] A graphic representation of the variation of one property, such as gravity, usually as ordinate, with respect to another property, usually linear, such as distance. [HYD] A vertical section of a potentiometric surface, such as a water table. [PETR] In structural petrology, a cross section of a homoaxial structure.

profile chart [ELECTROMAG] A vertical cross-section drawing of a microwave path between two stations, indicating terrain, obstructions, and antenna height requirements.

profile die [ENG] A plastics extrusion die used to produce continuous shapes, but not tubes or sheets.

profiled keyway [DES ENG] A keyway for a straight key formed by an end-milling cutter. Also known as end-milled keyway.

profile drag [FL MECH] That part of the airfoil drag that results from the skin friction and the shape of the airfoil as indicated by the airfoil profile.

profile line [GEOL] The top line of a profile section, representing the intersection of a vertical plane with the surface of the ground.

profile section [GEOL] A diagram or drawing that shows along a given line the configuration or slope of the surface of the ground as it would appear if it were intersected by a vertical plane.

profile of equilibrium [GEOL] **1.** The slope of the floor of a sea, ocean, or lake, taken in a vertical plane, when deposition of sediment is balanced by erosion. **2.** The longitudinal profile of a graded stream. Also known as equilibrium profile; graded profile.

profile thickness [AERO ENG] The maximum distance between the upper and lower contours of an airfoil, measured perpendicular to the mean line of the profile.

profiling [ENG] Electrical exploration wherein the transmitter and receiver are moved in unison across a structure to obtain a profile of mutual impedance between transmitter and receiver. Also known as lateral search.

profiling machine [MECH ENG] A machine used for milling irregular profiles; the cutting tool is guided by the contour of a model.

profiling snow gage [HYD] A type of radioactive gage for measuring the water equivalent and density/depth distribution of a snowpack, consisting of a radioactive source and a radioactivity detector which move up and down in two adjacent vertical pipes surrounded by snow. Also known as nuclear twin-probe gage.

profilograph [ENG] An instrument for measuring and recording roughness of the surface over which it travels.

profilometer [ENG] An instrument for measuring the roughness of a surface by means of a diamond-pointed tracer arm attached to a coi in an electric field; movement of the arm across the surface induces a current proportional to surface roughness.

profit in sight [MIN ENG] Probable gross profit from a mine's ore reserves, as distinct from the ground that is still to be blocked out.

profit sharing [IND ENG] Sharing of company profits with the employees.

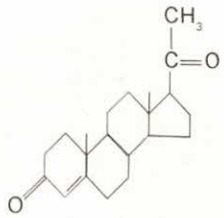
proflavine *See* proflavine sulfate.

proflavine sulfate [ORG CHEM] $C_{13}H_{11}N_3 \cdot H_2SO_4$ A reddish-brown, crystalline powder, soluble in alcohol and water; used in medicine. Also known as 6-diaminoacridinium hydrogen sulfate; proflavine.

profluralin [ORG CHEM] $C_{14}H_{16}F_3N_3O_4$ An orange to yellow, crystalline compound; melting point is 33–36°C; used to control grasses and weeds in cotton, soybeans, turf, and ornamentals. Also known as *N*-(cyclopropylmethy)-α,α,α-trifluoro-2,6-dinitro-*N*-propyl-*para*-toluidine.

profunda [ANAT] Deep-seated; applied to certain arteries.
profundal zone [ECOL] The region occurring below the limnetic zone and extending to the bottom in lakes deep enough to develop temperature stratification.
Proganosauria [PALEON] The equivalent name for Mesosauria.
progeny [BIOL] Offspring; descendants.
progeria [MED] An abnormal state of premature senescence; known as Werner's syndrome in adults and Hutchinson-Gilford syndrome in children.
progestational hormone [BIOCHEM] **1.** The natural hormone progesterone, which induces progestational changes of the uterine mucosa. **2.** Any derivative or modification or progesterone having similar actions.
progesterone [BIOCHEM] $C_{21}H_{30}O_2$ A steroid hormone produced in the corpus luteum, placenta, testes, and adrenals; plays an important physiological role in the luteal phase of the menstrual cycle and in the maintenance of pregnancy; it is an intermediate in the biosynthesis of androgens, estrogens, and the corticoids.
proglacial [GEOL] Of streams, deposits, and other features, being immediately in front of or just beyond the outer limits of a glacier or ice sheet, and formed by or derived from glacier ice.
proglottid [INV ZOO] One of the segments of a tapeworm.
prognathic [ANTHRO] A condition of the upper jaw in which it projects anteriorly with respect to the profile of the facial skeleton, when the skull is oriented on the Frankfort horizontal plane; having a gnathic index of 103.0 or more.
prognosis [MED] A prediction as to the course and outcome of a disease, injury, or developmental abnormality.
prognostic chart [METEOROL] A chart showing, principally, the expected pressure pattern (or height pattern) of a given synoptic chart at a specified future time; usually, positions of fronts are also included, and the forecast values of other meteorological elements may be superimposed.
prognostic equation [METEOROL] Any equation governing a system which contains a time derivative of a quantity and therefore can be used to determine the value of that quantity at a later time when the other terms in the equation are known (for example, the vorticity equation).
progradation [GEOL] Seaward buildup of a beach, delta, or fan by nearshore deposition of sediments transported by a river, by accumulation of material thrown up by waves, or by material moved by longshore drifting.
prograde metamorphism [GEOL] Metamorphic changes in response to a higher pressure or temperature than that to which the rock was last adjusted.
prograde motion [ASTRON] **1.** The apparent motion of a planet around the sun in the direction of the sun's rotation. **2.** *See* prograde orbit.
prograde orbit [ASTRON] Orbital motion in the usual direction of celestial bodies within a given system; specifically, of a satellite, motion in the direction of rotation of the primary. Also known as prograde motion.
prograding shoreline [GEOL] A shoreline that is being built seaward by accumulation or deposition.
program [AERO ENG] In missile guidance, the planned flight path events to be followed by a missile in flight, including all the critical functions, preset in a program device, which control the behavior of the missile. [COMMUN] A sequence of audio signals alone, or audio and video signals, transmitted for entertainment or information. [COMPUT SCI] A detailed and explicit set of directions for accomplishing some purpose, the set being expressed in some language suitable for input to a computer, or in machine language.
program card [COMPUT SCI] A punched card containing one or more instructions in a computer program in either source language or machine language, in contrast to a card that contains data to be processed according to the instructions.
program check [COMPUT SCI] A built-in check system in a program to determine that the program is running correctly.
program compatibility [COMPUT SCI] The type of compatibility shared by two computers that can process the identical program or programs written in the same source language or machine language.
program control *See* control.
program counter *See* instruction counter.
program development time [COMPUT SCI] The total time taken on a computer to produce operating programs, including the time taken to compile, test, and debug programs, plus the time taken to develop and test new procedures and techniques.
program device [CONT SYS] In missile guidance, tha automatic device used to control time and sequence of events of a program.
program editor [COMPUT SCI] A computer routine used in time-sharing systems for on-line modification of computer programs.
program element [COMPUT SCI] Part of a central computer system that carries out the instruction sequence scheduled by the programmer.
program evaluation and review technique *See* PERT.
program failure alarm [COMMUN] Signal-operated radio or television vacuum-tube relay that gives a visual and aural alarm when the program fails on the line being monitored; a time delay is provided to prevent the relay from operating and giving a false alarm during station identification periods or other short periods of silence in program continuity.
program generator [COMPUT SCI] A program that permits a computer to write other programs automatically.
program level [ENG ACOUS] The level of the program signal in an audio system, expressed in volume units.
program library [COMPUT SCI] An organized set of computer routines and programs.
program logic [COMPUT SCI] A particular sequence of instructions in a computer program.
programmable calculator [COMPUT SCI] An electronic calculator that has some provision for changing its internal program, usually by inserting a new magnetic card on which the desired calculating program has been stored.
programmable controller [CONT SYS] A control device, normally used in industrial control applications, that employs the hardware architecture of a computer and a relay ladder diagram language. Also known as programmable logic controller.
programmable counter [ELECTR] A counter that divides an input frequency by a number which can be programmed into decades of synchronous down counters; these decades, with additional decoding and control logic, give the equivalent of a divide-by-N counter system, where N can be made equal to any number.
programmable decade resistor [ELECTR] A decade box designed so that the value of its resistance can be remotely controlled by programming logic as required for the control of load, time constant, gain, and other parameters of circuits used in automatic test equipment and automatic controls.
programmable logic array *See* field-programmable logic array.
programmable logic controller *See* programmable controller.
programmable power supply [ELEC] A power supply whose output voltage can be changed by digital control signals.
programmable read-only memory [ELECTR] A large-scale integrated-circuit chip for storing digital data; it can be erased with ultraviolet light and reprogrammed, or it can be programmed only once either at the factory or in the field. Abbreviated PROM.
program maintenance [COMPUT SCI] The updating of computer programs both by error correction and by alteration of programs to meet changing needs.
programmed check [COMPUT SCI] **1.** An error-detecting operation programmed by instructions rather than built into the hardware. **2.** A computer check in which a sample problem with known answer, selected for having a program similar to that of the next problem to be run, is put through the computer.
programmed dump [COMPUT SCI] A storage dump which results from an instruction in a computer program at a particular point in the program.
programmed halt [COMPUT SCI] A halt that occurs deliberately as the result of an instruction in the program. Also known as programmed stop.
programmed logic array [ELECTR] An array of AND/OR logic gates that provides logic functions for a given set of inputs programmed during manufacture and serves as a read-only memory. Abbreviated PLA.
programmed marginal check [COMPUT SCI] Computer program that varies its own voltage to check some piece of electronic computer equipment during a preventive maintenance check.
programmed operators [COMPUT SCI] Computer instruc-

PROGESTERONE



Structural formula of progesterone.

tions which enable subroutines to be accessed with a single programmed instruction.

programmed stop *See* programmed halt.

programmed turn [AERO ENG] The automatically controlled turn of a ballistic missile into the curved path that will lead to the correct velocity and vector for the final portion of the trajectory.

programmer [COMPUT SCI] A person who prepares sequences of instructions for a computer, without necessarily converting them into the detailed codes. [CONT SYS] A device used to control the motion of a missile in accordance with a predetermined plan.

programmer analyst [COMPUT SCI] A person who both writes computer programs and analyzes and designs information systems.

programmer-defined macroinstruction [COMPUT SCI] A macroinstruction which is equivalent to a set of ordinary instructions as specified by the programmer for use in a particular computer program.

programming [COMPUT SCI] Preparing a detailed sequence of operating instructions for a particular problem to be run on a digital computer. Also known as computer programming. [ENG] In a plastics process, extruding a parison whose thickness differs longitudinally in order to equalize wall thickness of the blown container.

programming language [COMPUT SCI] The language used by a programmer to write a program for a computer.

program module [COMPUT SCI] A logically self-contained and discrete part of a larger computer program, for example, a subroutine or a coroutine.

program monitor [COMMUN] A monitor used to observe the quality of a radio or television broadcast.

program parameter [COMPUT SCI] In computers, an adjustable parameter in a subroutine which can be given a different value each time the subroutine is used.

program register [COMPUT SCI] The register in the control unit of a digital computer that stores the current instruction of the program and controls the operation of the computer during the execution of that instruction. Also known as computer control register.

program-sensitive fault [COMPUT SCI] A hardware malfunction that appears only in response to a particular sequence (or kind of sequence) of program instructions.

program specification [COMPUT SCI] A statement of the precise functions which are to be carried out by a computer program, including descriptions of the input to be processed by the program, the processing needed, and the output from the program.

program status word [COMPUT SCI] An internal register to the central processing unit denoting the state of the computer at a moment in time.

program step [COMPUT SCI] In computers, some part of a program, usually one instruction.

program stop [COMPUT SCI] An instruction built into a computer program that will automatically stop the machine under certain conditions, or upon reaching the end of processing or completing the solution of a program. Also known as halt instruction; stop instruction.

program storage [COMPUT SCI] Portion of the internal storage reserved for the storage of programs, routines, and subroutines; in many systems, protection devices are used to prevent inadvertent alteration of the contents of the program storage; contrasted with temporary storage.

program tape [COMPUT SCI] Tape containing the sequence of computer instructions for a given problem.

program test [COMPUT SCI] A system of checking before running any problem in which a sample problem of the same type with a known answer is run.

program testing time [COMPUT SCI] The machine time expended for program testing, debugging, and volume and compatibility testing.

program time [COMPUT SCI] The phase of computer operation when an instruction is being interpreted so that it can be carried out.

progress chart [IND ENG] A graphical representation of the degree of completion of work in progress.

progression [MATH] A sequence or series of mathematical objects or quantities, each entry determined from its predecessors by some algorithm.

progressive aging [MET] Aging of metals achieved by increasing the temperature in stages or by continuous elevation of the temperature.

progressive block sequence [MET] A welding sequence in which the joint is completed in sections from one end to the other or from the center alternately to both ends.

progressive bonding [ENG] A method of curing a resin adhesive wherein heat and pressure are applied in successive steps.

progressive die [MET] A die in which two or more operations are performed sequentially at different positions.

progressive forming [MET] Sequential forming at consecutive stations either with a single die or with separate dies.

progressive granulation [MATER] Propellant granulation in which the surface area of a grain increases during burning.

progressive lateral sclerosis [MED] Amyotrophic lateral sclerosis with primary involvement of the pyramidal tracts.

progressive metamorphism [GEOL] Systematic change in metamorphic grade from lower to higher in any metamorphic terrain.

progressive muscular dystrophy [MED] Chronic progressive dystrophy of the skeletal muscles.

progressive overflow [COMPUT SCI] Retrieval of a randomly stored overflow record by a forward serial search from the home address.

progressive powder [MATER] A slow-burning explosive.

progressive proofs [GRAPHICS] The proofs from color plates showing each color alone, and also in combination with each succeeding color in printing rotation; the order is yellow, magenta, cyan, and black.

progressive sand wave [GEOL] A sand wave characterized by downcurrent migration.

progressive scanning [COMMUN] Scanning all lines in sequence, without interlace, so all picture elements are included during one vertical sweep of the scanning beam. Also known as sequential scanning.

progressive sorting [GEOL] Sorting of sedimentary particles in the downcurrent direction, resulting in a systematic downcurrent decrease in the mean grain size of the sediment.

progressive wave [METEOROL] A wave or wavelike disturbance which moves relative to the earth's surface. [PHYS] A wave which transfers energy from one part of a medium to another, in contrast to a standing wave. Also known as free-traveling wave.

progressive-wave antenna *See* traveling-wave antenna.

Progymnospermopsida [PALEON] A class of plants intermediate between ferns and gymnosperms; comprises the Devonian genus *Archaeopteris*.

prohaptor [INV ZOO] The anterior attachment organ of a typical monogenetic trematode.

prohibited area [NAV] **1.** An airspace of defined dimensions identified by an area on the surface of the earth within which flight is prohibited, except as authorized by governmental authority. **2.** An area within which no vessels may be navigated, except as authorized by governmental authority.

Projapygidae [INV ZOO] A family of wingless insects in the order Diplura.

project [ENG] A specifically defined task within a research and development field, which is established to meet a single requirement, either stated or anticipated, for research data, an end item of material, a major component, or a technique.

projected planform [AERO ENG] The contour of the planform as viewed from above.

projected window [BUILD] A window having one or more rotatable sashes which swing either inward or outward.

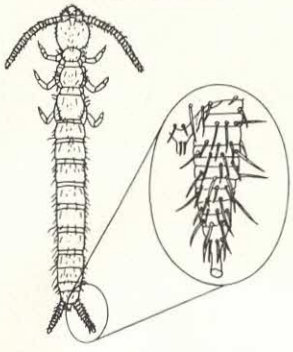
project engineering [ENG] **1.** The engineering design and supervision (coordination) aspects of building a manufacturing facility. **2.** The engineering aspects of a specific project, such as development of a product or solution to a problem.

projectile [ORD] A special device for use at proving grounds, usually consisting of a solid, blunt-nosed projectile of low cost; it duplicates the standard projectile in weight, and location and type of rotating band so that it may be used in developing propelling charges as well as for proof firing of guns.

projectile ogive [ORD] A hollow, conical, metallic item, designed to enclose the forward portion of a projectile to reduce air resistance during flight.

projection [MAP] A system for presenting on a plane surface the spherical surface of the earth or the celestial sphere; some of these systems are conic, cylindrical, gnomonic, Mercator, orthographic, and stereographic. Also known as map projec-

PROJAPYGIDAE



Anajapyx vesiculosus Silvestri, showing the cerci which contain a silk gland.

tion. [MATH] **1.** The continuous map for a fiber bundle. **2.** Geometrically, the image of a geometric object or vector superimposed on some other. **3.** A linear map P from a linear space to itself such that $P \cdot P$ is equal to P. [PSYCH] Ascribing one's motives to someone else to disguise a source of conflict in oneself.

projection area [ANAT] An area of the cortex connected with lower centers of the brain by projection fibers.

projection cathode-ray tube [ELECTR] A television cathode-ray tube designed to produce an intensely bright but relatively small image that can be projected onto a large viewing screen by an optical system.

projection chamber *See* projection spark chamber.

projection display [ELECTR] An electronic system in which an image is generated on a high-brightness cathode-ray tube or similar electronic image generator and then optically projected onto a larger screen.

projection fibers [ANAT] Fibers joining the cerebral cortex to lower centers of the brain, and vice versa.

projection microradiography [PHYS] Microradiography in which an electron beam, focused into an extremely fine pencil, generates a point source of x-rays, and enlargement is achieved by placing the sample very near this source, and several centimeters from the recording material. Abbreviated PMR. Also known as shadow microscopy; x-ray projection microscopy.

projection microscope [PHYS] An x-ray microscope which magnifies by image projection, either in contact microradiography or in projection microradiography.

projection net *See* net.

projection optics *See* Schmidt system.

projection plan position indicator [ELECTR] Unit in which the image of a 4-inch (10 centimeter) dark-trace cathode-ray tube is projected on a 24-inch (61 centimeter) horizontal plotting surface; the echoes appear as magenta-colored arcs on white background.

projection printer [OPTICS] An optical, image-enlarging device, used in enlarging photographs.

projection printing [GRAPHICS] The production of photographic prints with the use of an enlarger.

projection spark chamber [NUCLEO] A spark chamber in which the track of the particle is perpendicular, or nearly so, to the electric field, so that each electron of the track produces a streamer across the gap; the resulting curtain contains information only as to the projection of the track perpendicular to the electric field. Also known as projection chamber.

projection thermography [ENG] A method of measuring surface temperature in which thermal radiation from a surface is imaged by an optical system on a thin screen of luminescent material, and the pattern formed corresponds to the heat radiation of the surface.

projection welding [MET] Resistance welding in which the welds are localized at projections, intersections, and overlaps on the parts.

projective geometry [MATH] The study of those properties of geometric objects which are invariant under projection.

projective group [MATH] A group of transformations arising in the general theory of projective geometry.

projective line [MATH] The line obtained from the stereographic projection of the circle.

projective plane [MATH] The topological space obtained from the two-dimensional sphere by identifying antipodal points; the space of all lines through the origin in euclidean space.

projective point [MATH] The point from which a projection by rays is performed, as in stereographic projection.

projective space [MATH] The topological space obtained from the n-dimensional sphere under identification of antipodal points.

projective technique [PSYCH] A procedure used to identify and evaluate an individual's characteristic modes of thought and behavior, personality traits, attitudes, and motivation, by means of an objective test.

projective test [PSYCH] Observation of a subject's responses to various test materials presented in a relatively unstructured, yet standard situation.

projector [ENG ACOUS] **1.** A horn designed to project sound chiefly in one direction from a loudspeaker. **2.** An underwater acoustic transmitter. [OPTICS] *See* optical projection system. [ORD] **1.** Any apparatus for launching a projectile, such as a gun or rocket launcher. **2.** Smooth-bore-type barrel or other unrifled weapon from which pyrotechnic signals, grenades, and certain mortar projectiles are fired. **3.** A rack for launching target rockets. **4.** Special type of gun for projecting antisubmarine projectiles.

projector compass [NAV] A magnetic compass in which the lubber's line and compass card, or a portion thereof, are viewed as an image projected through a system of lenses upon a screen adjacent to the helmsman's position.

prokaryote [CYTOL] **1.** A primitive nucleus, where the deoxyribonucleic acid–containing region lacks a limiting membrane. **2.** Any cell containing such a nucleus, such as the bacteria and the blue-green algae.

Prolacertiformes [PALEON] A suborder of extinct terrestrial reptiles in the order Eosuchia distinguished by reduction of the lower temporal arcade.

prolactin [BIOCHEM] A protein hormone produced by the adenohypophysis; stimulates lactation and promotes functional activity of the corpus luteum. Also known as lactogenic hormone; luteotropic hormone; mammary-stimulating hormone; mammogen; mammogenic hormone; mammotropin.

prolamin [BIOCHEM] Any of the simple proteins, such as zein, found in plants; soluble in strong alcohol, insoluble in absolute alcohol and water.

prolapse [MED] The falling or sinking down of a part or organ.

prolapsed bedding [GEOL] Bedding characterized by a series of flat folds with near-horizontal axial planes contained entirely within a bed which has undisturbed boundaries.

prolate [SCI TECH] Pertaining to a body that is extended or elongated in the direction of an axis of symmetry.

prolate ellipsoid *See* prolate spheroid.

prolate spheroid [MATH] The ellipsoid or surface obtained by revolving an ellipse about one of its axes so that the equatorial circle has a diameter less than the length of the axis of revolution. Also known as prolate ellipsoid.

proliferative arthritis *See* rheumatoid arthritis.

proline [BIOCHEM] $C_5H_9O_2$ A heterocyclic amino acid occurring in essentially all proteins, and as a major constituent in collagen proteins.

prolinemia [MED] A rare hereditary disease caused by absence of the degradative enzymes that convert proline to glutamic acid, and characterized by a high content of proline in blood and urine with consequent mental retardation and renal malfunction.

prolonge [ORD] Rope, with a hook or loop at one end, with which soldiers can move a vehicle or gun carriage into position.

proluvium [GEOL] A complex, friable, deltaic sediment accumulated at the foot of a slope as a result of an occasional torrential washing of fragmental material.

PROM *See* Pockels readout optical modulator; programmable read-only memory.

promazine hydrochloride [ORG CHEM] $C_{17}H_{20}N_2S \cdot HCl$ A white to slightly yellow, crystalline powder, melting at 172–182°C; used in medicine and as a food additive.

promecarb [ORG CHEM] $C_{12}H_{17}C_2N$ A colorless, crystalline compound with a melting point of 87–88°C; slight solubility in water; used as an insecticide for potatoes and fruits. Also known as *meta*-cym-*s*-yl-methylcarbamate.

promenade deck [NAV ARCH] An upper deck, or part of a deck, of a passenger ship where passengers walk about. Also known as hurricane deck.

prometaphase [CYTOL] A stage between prophase and metaphase in mitosis in which the nuclear membrane disappears and the spindle forms.

promethium [CHEM] A chemical element, symbol Pm, atomic number 61; atomic weight of the most abundant isotope is 147; a member of the rare-earth group of metals.

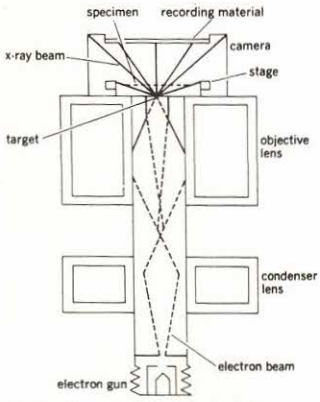
promethium-147 [NUC PHYS] Artificially produced rare-earth element with atomic number 61 and mass 147; produced during fission of U^{235}. Also known as florentium; illinium.

promethium cell [NUCLEO] A nuclear energy cell in which beta particles from promethium-147 cause a phosphor to glow; the light output is converted to electric energy by photocells.

prometon [ORG CHEM] $C_{10}H_{19}N_5O$ A white, crystalline solid with a melting point of 91–92°C; used as a postemergence herbicide on noncrop land. Also known as 2,4-bis(isopropylamino)-6-methoxy-*S*-triazine.

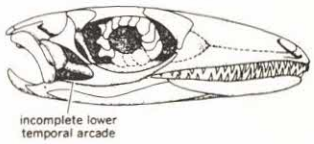
prometryn [ORG CHEM] $C_{10}H_{19}N_5S$ A white, crystalline solid with a melting point of 118–120°C; used as an herbicide to

PROJECTION MICROSCOPE



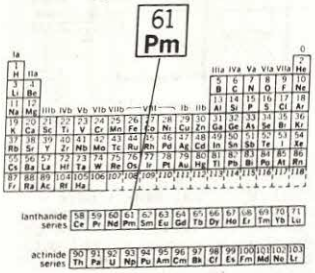
Projection microscope used in projection microradiography, showing components. *(After V. E. Cosslett, A. Engstrom and H. H. Pattee, eds., X-Ray Microscopy and Microradiography, Academic Press, 1957)*

PROLACERTIFORMES



Lateral view of *Prolacerta* skull, Lower Triassic. *(From A. S. Romer, Vertebrate Paleontology, 3d ed., University of Chicago Press, 1966)*

PROMETHIUM



Periodic table of the chemical elements showing the position of promethium.

control weeds in cotton and celery. Also known as 2,4-bis(isopropylamino)-6-(methylthio)-*S*-triazine.

prominence [ASTROPHYS] A volume of luminous, predominantly hydrogen gas that appears on the sun above the chromosphere; occurs only in the region of horizontal magnetic fields because these fields support the prominences against solar gravity.

promontory [GEOL] **1.** A high, prominent projection or point of land, or a rock cliff, jutting out boldly into a body of water. **2.** A cape, either low-lying or of considerable height, with a bold termination. **3.** A bluff or prominent hill overlooking or projecting into a lowland.

promoter [CHEM] A chemical which itself is a feeble catalyst, but greatly increases the activity of a given catalyst. [GEN] The site on deoxyribonucleic acid to which ribonucleic acid polymerase binds preparatory to initiating transcription of an operon.

PROM programmer [COMPUT SCI] A hardware device that writes programmable read-only memory chips in a permanent form.

prompt critical [NUCLEO] Capable of sustaining a chain reaction without the aid of delayed neutrons.

prompt neutron [NUC PHYS] A neutron released coincident with the fission process, as opposed to neutrons subsequently released.

prompt radiation [NUC PHYS] Radiation emitted within a time too short for measurement, including γ-rays, characteristic x-rays, conversion and Auger electrons, prompt neutrons, and annihilation radiation.

promyelocyte [HISTOL] The earliest myelocyte stage derived from the myeloblast.

pronamide [ORG CHEM] $C_{12}H_{11}Cl_2NO$ An off-white solid with a melting point of 154–156°C; slightly soluble in water; used as a pre- or postemergence herbicide on vegetable crops. Also known as *N*-(1,1-dimethyl-2-propynyl)-3,5-dichlorobenzamide.

pronate [ANAT] **1.** To turn the forearm so that the palm of the hand is down or toward the back. **2.** To turn the sole of the foot outward with the lateral margin of the foot elevated; to evert.

pronator [PHYSIO] A muscle which pronates, as the muscles of the forearm attached to the ulna and radius.

pronephros [EMBRYO] One of the anterior pair of renal organs in higher vertebrate embryos; the pair initiates formation of the archinephric duct.

prong *See* pin.

pronghorn [VERT ZOO] *Antilocapra americana*. An antelopelike artiodactyl composing the family Antilocapridae; the only hollow-horned ungulate with branched horns present in both sexes.

prong reef [GEOL] A wall reef that has developed irregular buttresses normal to its axis in both leeward and (to a smaller degree) seaward directions.

pronormoblast [HISTOL] A nucleated erythrocyte precursor with scanty basophilic cytoplasm without hemoglobin. Also known as lymphoid hemoblast of Pappenheim; macroblast of Naegeli; megaloblast of Sabin; proerythroblast of Ferrata; prorubricyte; rubriblast; rubricyte.

pronucleus [CYTOL] One of the two nuclear bodies of a newly fertilized ovum, the male pronucleus and the female pronucleus, the fusion of which results in the formation of the germinal (cleavage) nucleus.

prony brake [MECH ENG] An absorption dynamometer that applies a friction load to the output shaft by means of wood blocks, a flexible band, or other friction surface.

proof [ENG] Reproduction of a die impression by means of a cast. [FOOD ENG] The strength of the ethyl alcohol in distilled spirits; in the United States, each degree of proof is equal to ½% of alcohol by volume. [GRAPH] The inked impression of composed type or a plate; used for inspection purposes or for pasting up with other artwork. [MATH] A deductive demonstration of a mathematical statement.

proof firing [ORD] The firing of certain rounds for the purpose of testing the serviceability of a weapon or its mount.

proof load [ENG] A predetermined test load, greater than the service load, to which a specimen is subjected before acceptance for use.

proof mark [ORD] Distinguishing mark on a weapon to indicate inspection and proof firing.

proof resilience [MECH] The tensile strength necessary to stretch an elastomer from zero elongation to the breaking point, expressed in foot-pounds per cubic inch of original dimension.

proof stress [MECH] **1.** The stress that causes a specified amount of permanent deformation in a material. **2.** A specified stress to be applied to a member or structure in order to assess its ability to support service loads.

proof total [COMPUT SCI] One of a group of totals which are compared with each other to check their consistency.

prop [MIN ENG] Underground supporting post set across the lode, seam, bed, or other opening.

propachlor [ORG CHEM] $C_{11}H_{14}ClNO$ A tan solid with a melting point of 67–76°C; used as a preemergence herbicide for treatment of sweet corn, field corn, sorghum, and seed soybeans. Also known as 2-chloro-*N*-isopropylacetanilide.

propadiene *See* allene.

propaedeutic stratigraphy *See* prostratigraphy.

propagated blast [ENG] A blast of a number of unprimed charges of explosives plus one hole primed, generally for the purpose of ditching, where each charge is detonated by the explosion of the adjacent one, the shock being transmitted through the wet soil.

propagated error [COMPUT SCI] An error which takes place in one operation and spreads through succeeding operations.

propagation *See* wave motion.

propagation anomaly [PHYS] Change in propagation characteristics due to a resonance in the medium of propagation.

propagation constant [ELECTROMAG] A rating for a line or medium along or through which a wave of a given frequency is being transmitted; it is a complex quantity; the real part is the attenuation constant in nepers per unit length, and the imaginary part is the phase constant in radians per unit length.

propagation delay [ELECTR] The time required for a signal to pass through a given complete operating circuit; it is generally of the order of nanoseconds, and is of extreme importance in computer circuits.

propagation forecasting [METEOROL] Forecasting in which the known or predicted vertical distribution of the index of refraction over an area is used to forecast the propagation performance of radars or any microwave radio equipment operating in that area.

propagation loss [COMMUN] The attenuation of signals passing between two points on a transmission path.

propagation notice [COMMUN] A forecast of propagation conditions for long-distance radio communications, broadcast at regular intervals over radio stations operated by the National Bureau of Standards.

propagation path [COMMUN] A path between receiver and transmitter including direct tropospheric scatter, ionospheric scatter, E-layer skip, and F_1-layer and F_2-layer skip and echo.

propagation rate [CHEM] The speed at which a flame front progresses through the body of a flammable fuel-oxidizer mixture, such as gas and air.

propagation time delay [COMMUN] The time required for a wave to travel between two points on a transmission path.

propagation velocity [ELECTROMAG] Velocity of electromagnetic wave propagation in the medium under consideration.

propagule [BOT] **1.** A reproductive structure of brown algae. **2.** A propagable shoot.

Propalticidae [INV ZOO] A family of coleopteran insects of the superfamily Cucujoidea found in Old World tropics and Pacific islands.

propane [ORG CHEM] $CH_3CH_2CH_3$. A heavy, colorless, gaseous petroleum hydrocarbon gas of the paraffin series; boils at −44.5°C; used as a solvent, refrigerant, and chemical intermediate. Also known as dimethylmethane.

propane bubble chamber [NUCLEO] A bubble chamber whose liquid is propane; used when it is desirable to have a dense, heavy target in experiments such as detection of neutrinos or measurements of the decay products of neutral pions, not usually visible in a hydrogen bubble chamber.

propane deasphalting [CHEM ENG] Petroleum-refinery solvent process using propane to remove and precipitate asphalt from petroleum stocks, such as for lubricating oils.

propane decarbonizing [CHEM ENG] Petroleum-refinery solvent process using propane to recover catalytic-cracking feedstock from heavy-fuel residues; when butane or butane-propane solvent is used, the process is called solvent decarbonizing.

propane dewaxing [CHEM ENG] Petroleum-refinery solvent

PRONY BRAKE

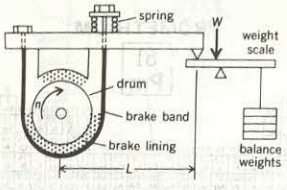


Diagram of a prony brake. Brake horsepower = $2\pi nL(W-W_0)/33{,}000$, where n = shaft speed in revolutions per minute, L = distance shown on drawing, W = scale weight with brake operating, and W_0 = scale weight with brake free.

process using propane to remove waxes from lubricating oils to lower the lube-oil pour point.

1,2-propanediol *See* propylene glycol.

propane fractionation [CHEM ENG] Continuous, petroleum-refinery solvent process using liquid propane to segregate long-vacuum residue into two or more grades of lube-oil stock (such as heavy neutral stock or bright stock) and asphalt.

1-propanethiol *See* *n*-propyl mercaptan.

propanil [ORG CHEM] $C_9H_9Cl_2NO$ A light-colored solid with a melting point of 90.6–91.6°C; slightly soluble in water; used as an herbicide for control of weeds in rice. Also known as 3,4-dichloropropionanilide.

propanoic acid *See* propionic acid.

propanol *See* propyl alcohol.

2-propanone *See* acetone.

2-propanone oxime *See* acetoxime.

propargite [ORG CHEM] $C_{19}H_{26}O_4S$ A light to dark brown, viscous liquid, insoluble in water; used to control many types of mites on almonds, field corn, hops, mint, potatoes, strawberries, and walnuts. Also known as 2-(*para-tert*-butyl phenoxy)cyclohexyl 2-propynyl sulfite.

propargyl alcohol [ORG CHEM] $HCCCH_2OH$ Colorless, water- and alcohol-soluble liquid, boiling at 114°C; used as a chemical intermediate, stabilizer, and corrosion inhibitor. Also known as 2-propyn-1-ol.

propargyl bromide [ORG CHEM] C_3H_3Cl A flammable liquid with a boiling point range of 56.0–57.1°C; used as a soil fumigant. Also known as 3-chloro-1-propyne.

propargyl chloride [ORG CHEM] C_3H_3Cl A liquid miscible with benzene, carbon tetrachloride, ethanol, and ethylene glycol; used as an intermediate in organic synthesis.

propazine [ORG CHEM] $C_9H_{16}ClN_5$ A colorless solid with a melting point of 212–214°C; used as a preemergence herbicide for control of weeds in milo and sweet sorghum. Also known as 2-chloro-4,6-bis(isopropylamino)-*S*-triazine.

prop-crib timbering [MIN ENG] Shaft timbering with cribs kept apart at the proper distance by means of props.

propellant [MATER] A combustible substance that produces heat and supplies ejection particles as in a rocket engine.

propellant 23 *See* fluoroform.

propellant-actuated device [ENG] A device that employs the energy supplied by the gases produced by burning propellants to accomplish or initiate a mechanical action other than propelling a projectile.

propellant-acutated exactor [ORD] A propellant-actuated device intended to release the safety mechanism of another propellant-actuated device.

propellant additive [MATER] Any material added to the basic formulation of a solid propellant to accomplish some special purpose such as to increase or decrease the rate of burning.

propellant binder [MATER] An elastomeric fuel used in a composite propellant so that the propellant may be cast directly into the combustion chamber, where the binder cures to a rubber and the propellant grain is then supported by adhesion to the walls; used in missiles.

propellant fouling [ORD] Bits of unburned or partially burned propellant left in the bore after firing.

propellant grain [MATER] An elongated molding or extrusion, often of intricate shape, of solid propellant for a rocket, regardless of size.

propellant injector [AERO ENG] A device for injecting propellants, which include fuel and oxidizer, into the combustion chamber of a rocket engine.

propellant mass fraction *See* propellant mass ratio.

propellant mass ratio [AERO ENG] Of a rocket, the ratio of the effective propellant mass to the initial vehicle mass. Also known as propellant mass fraction.

propellant powder [MATER] A low explosive of fine granulation which, through burning, produces gases at a controlled rate to provide the energy for propelling a projectile.

propellant weight fraction [AERO ENG] The weight of the solid propellant charge divided by weight of the complete solid propellant propulsion unit.

propeller [MECH ENG] A bladed device that rotates on a shaft to produce a useful thrust in the direction of the shaft axis.

propeller anemometer [ENG] A rotation anemometer which is encased in a strong glass outer shell that protects it against hydrostatic pressure.

propeller blade [DES ENG] One of two or more plates radiating out from the hub of a propeller and normally twisted to form part of a helical surface.

propeller boss [DES ENG] The central portion of the screw propeller which carries the blades, and forms the medium of attachment to the propeller shaft. Also known as propeller hub.

propeller cavitation [FL MECH] Formation of vapor-filled and air-filled bubbles or cavities in water at or on the surface of a rotating propeller, occurring when the pressure falls below the vapor pressure of water.

propeller efficiency [MECH ENG] The ratio of the thrust horsepower delivered by the propeller to the shaft horsepower as delivered by the engine to the propeller.

propeller fan [MECH ENG] An axial-flow blower, with or without a casing, using a propeller-type rotor to accelerate the fluid.

propeller horsepower [NAV ARCH] The horsepower delivered to the propeller of a ship.

propeller hub *See* propeller boss.

propeller meter [ENG] A quantity meter in which the flowing stream rotates a propellerlike device and revolutions are counted.

propeller post [NAV ARCH] The forward post of a stern frame on vessels having a center-line propeller.

propeller pump *See* axial-flow pump.

propeller racing [NAV ARCH] The sudden increase in the number of revolutions made by the engine when the propeller blades are lifted clear of the water, or nearly so, due to the roll or pitch of the ship.

propeller shaft [MECH ENG] A shaft, carrying a screw propeller at its end, that transmits power from an engine to the propeller.

propeller slip angle [MECH ENG] The angle between the plane of the blade face and its direction of motion.

propeller strut *See* strut.

propeller thrust [NAV ARCH] The effort delivered by a propeller in pushing a vessel ahead.

propeller tip clearance [NAV ARCH] Generally, the shortest distance between the skin of a vessel and the circle swept by the propeller tips.

propeller tip speed [MECH ENG] The speed in feet per minute swept by the propeller tips.

propeller turbine [MECH ENG] A form of reactive-type hydraulic turbine using an axial-flow propeller rotor.

propeller windmill [MECH ENG] A windmill that extracts wind power from horizontal air movements to rotate the blades of a propeller.

2-propenal *See* acrolein.

2-propen-1-amine *See* allylamine.

propene *See* propylene.

2-propene-1-thiol *See* allyl mercaptan.

2-propen-1-ol *See* allyl alcohol.

1-propen-2-yl-acetate *See* isopropenyl acetate.

***para*-propenylanisole** *See* anethole.

α-propenyldichlorohydrin *See* α-dichlorohydrin.

propenyl guaethol [ORG CHEM] $C_{11}H_{14}O_2$ A white powder with a vanilla flavor and a melting point of 85–86°C; soluble in fats, essential oils, and edible solvents; used for artificial vanilla flavoring. Also known as 1-ethoxy-2-hydroxy-4-propenylbenzene.

properdin [IMMUNOL] A macroglobin of normal plasma capable of killing various bacteria and viruses in the presence of complement and magnesium ions.

proper fraction [MATH] A fraction a/b where the absolute value of a is less than the absolute value of b.

proper function *See* eigenfunction.

proper Lorentz transformation [RELAT] A Lorentz transformation which can be represented by a matrix whose determinant is $+1$.

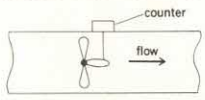
proper motion [ASTRON] That component of the space motion of a celestial body perpendicular to the line of sight, resulting in the change of a star's apparent position relative to that of other stars; expressed in angular units.

proper subset [MATH] A set X is a proper subset of a set Y if there is an element of Y which is not in X while X is a subset of Y.

property detector [COMPUT SCI] In character recognition, that electronic component of a character reader which processes the normalized signal for the purpose of extracting from it a set of characteristic properties on the basis of which the character can be subsequently identified.

property list [COMPUT SCI] A list for describing some object

PROPELLER METER



Schematic of a propeller meter, a type of quantity meter.

or concept, in which odd-numbered items name a property or attribute of a relevant class of objects, and the item following the property name is the property's value for the described objects.

proper value *See* eigenvalue.

prop-free [MIN ENG] A face with no posts between the coal and the conveyor used to remove it in longwall mining of a coal seam.

prop-free front [MIN ENG] In coal mining, longwall working in which support to the roof is given by roof beams cantilevered from behind the working face.

prophage [VIROL] Integrated unit formed by union of the provirus into the bacterial genome.

propham [ORG CHEM] $C_{10}H_{13}NO_2$ A light brown solid with a melting point of 87–88°C; slightly soluble in water; used as a pre- and postemergence herbicide for vegetable crops. Also known as isopropyl-*N*-phenylcarbamate (IPC).

prophase [CYTOL] The initial stage of mitotic or meiotic cell division in which chromosomes are condensed from the nuclear material and split logitudinally to form pairs.

prophenpyridamine maleate *See* pheniramine maleate.

prophylaxis [MED] The prevention of disease.

propine *See* allylene.

propineb *See* zinc-[*N*,*N*′-propylene-1,2-bis(dithiocarbamate)].

propiodal [PHARM] $C_5H_{13}ONI_2$ A white, crystalline solid with a melting point of 275°C; soluble in water; used in medicine for iodine therapy. Also known as 1,3-bis(trimethylamino)-2-propanol diiodide; hexamethyldiaminoisopropanol diiodide; iodisan.

β-propiolactone [ORG CHEM] $C_3H_4O_2$ Water-soluble liquid that decomposes rapidly at boiling point (155°C); miscible with ethanol, acetone, chloroform, and ether; reacts with alcohol; used as a chemical intermediate.

propionaldehyde [ORG CHEM] C_2H_5CHO Flammable, water-soluble, water-white liquid, with suffocating aroma; boils at 48.8°C; used to manufacture acetals, plastics, and rubber chemicals, and as a disinfectant and preservative.

propionate [ORG CHEM] A salt of propionic acid, CH_3CH_2COOH; an example is sodium propionate, CH_3CH_2COONa.

propione *See* pentanone.

Propionibacteriaceae [MICROBIO] A family of bacteria related to the actinomycetes; gram-positive, anaerobic to aerotolerant rods or filaments; ferment carbohydrates, with propionic acid as the principal product.

Propionibacterium [MICROBIO] The type genus of bacteria in the family Propionibacteriaceae; all species ferment glucose; principal fermentation products are propionic and acetic acids.

propionic acid [ORG CHEM] CH_3CH_2COOH Water- and alcohol-soluble, clear, colorless liquid with pungent aroma; boils at 140.7°C; used to manufacture various propionates, in nickel-electroplating solutions, for perfume esters and artificial flavors, for pharmaceuticals, and as a cellulosics solvent. Also known as methylacetic acid; propanoic acid.

propionic anhydride [ORG CHEM] $(CH_3CH_2CO)_2O$ A colorless liquid with a boiling point of 167–169°C; soluble in ether, alcohol, and chloroform; used as an esterifying agent and for dyestuffs and pharmaceuticals.

propionic ether *See* ethyl propionate.

propionitrile *See* ethyl cyanide.

***para*-propionylphenol** *See para*-hydroxypropiophenone.

proplastid [BOT] Precursor body of a cell plastid.

proplatinum [MET] A nickel-silver-bismuth alloy used as a substitute for platinum.

propleuron [INV ZOO] A pleuron of the prothorax in insects.

propodite [INV ZOO] The sixth leg joint of certain crustaceans. Also known as propodus.

propodus *See* propodite.

proportion [MATH] The proportion of two quantities is their ratio.

proportional band [ACOUS] One of a series of frequency bands whose members have equal band ratios. [CONT SYS] The range of values of the controlled variable that will cause a controller to operate over its full range.

proportional control [CONT SYS] Control in which the amount of corrective action is proportional to the amount of error; used, for example, in chemical engineering to control pressure, flow rate, or temperature in a process system.

proportional controller [CONT SYS] A controller whose output is proportional to the error signal.

proportional counter [NUCLEO] A radiation counter consisting of a proportional counter tube and its associated circuits; resembles a Geiger-Müller counter, but with a different counting gas (argon methane) and a lower voltage on the tube; used to measure α, β, and x-rays; has low sensitivity for γ-radiation.

proportional counter tube [NUCLEO] A radiation-counter tube operated at voltages high enough to produce ionization by collision and adjusted so the total ionization per count is proportional to the ionization produced by the initial ionizing event.

proportional dividers [DES ENG] Dividers with two legs, pointed at both ends, and an adjustable pivot; distances measured by the points at one end can be marked off in proportion by the points at the other end.

proportional elastic limit [MECH] The greatest stress intensity for which stress is still proportional to strain.

proportional ionization chamber [ELECTR] An ionization chamber in which the initial ionization current is amplified by electron multiplication in a region of high electric-field strength, as in a proportional counter; used for measuring ionization currents or charges over a period of time, rather than for counting.

proportional limit [MECH] The greatest stress a material can sustain without departure from linear proportionality of stress and strain.

proportional navigation [NAV] Homing guidance of a guided missile toward a moving target in which the missile turning rate is proportional to the rate of change of line of sight between missile and target.

proportional parts [MATH] Numbers in the same proportion as a set of given numbers; such numbers are used in an auxiliary interpolation table based on the assumption that the tabulated quantity and entering arguments differ in the same proportion.

proportional-plus-derivative control [CONT SYS] Control in which the control signal is a linear combination of the error signal and its derivative.

proportional-plus-integral control [CONT SYS] Control in which the control signal is a linear combination of the error signal and its integral.

proportional-plus-integral-plus-derivative control [CONT SYS] Control in which the control signal is a linear combination of the error signal, its integral, and its derivative.

proportional reducer [GRAPHICS] A solution that is used to lower density in a negative or positive image in proportion to the silver present, with a certain amount of loss in shadow detail.

proportional region [NUCLEO] The range of applied voltages in a radiation counter tube in which the gas amplification is greater than 1 and does not depend on the charge liberated in the initial ionizing event.

proportional spacing [GRAPHICS] Spacing in which each character occupies space according to its width.

proportional-speed control *See* floating control.

proportioning probe [ENG] A leak-testing probe capable of changing the air–tracer gas ratio without changing the amount of flow it transmits to the testing device.

proportioning pump *See* metering pump.

proportioning reactor [ELECTROMAG] A saturable-core reactor used for regulation and control; increasing the input control current from zero to rated value makes output current increase in proportion from cutoff up to full load value.

proposition [MATH] Any problem or theorem.

propositional calculus [MATH] The mathematical study of logical connectives between propositions and deductive inference. Also known as sentential calculus.

propped cantilever [CIV ENG] A beam having one built-in support and one simple support.

propping agent [PETRO ENG] A granular substance, for example, sand grains or walnut shells, suspended in the drilling fluid during the fracturing portion of the drilling operation to keep the fracture open when the fluid is withdrawn.

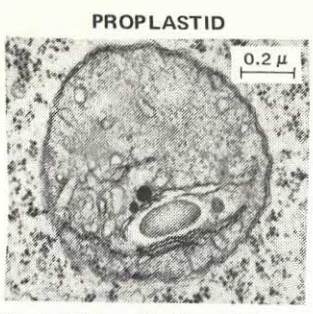
proprietary program [COMPUT SCI] **1.** A computer program that is owned by someone, and whose use may thus be restricted in some manner or entail payment of a fee. Also known as owned program. **2.** More narrowly, a program that is exploited commercially as a separate product.

proprioception [PHYSIO] The reception of internal stimuli.

proprioceptor [PHYSIO] A sense receptor that signals spatial position and movements of the body and its members, as well as muscular tension.

prop root [BOT] A root that serves to support or brace the plant. Also known as brace root.

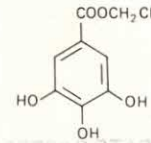
PROPLASTID



Proplastid in cell of broad bean root tip. Double membranous envelope is shown, and rudimentary nature of internal membrane system is obvious.

propterygium [VERT ZOO] The anterior of the three principal basal cartilages forming a support of one of the paired fins of sharks, rays, and certain other fishes.
proptosis [MED] A falling downward or forward, especially of an eyeball.
propulsion [MECH] The process of causing a body to move by exerting a force against it.
propulsion system [MECH ENG] For a vehicle moving in a fluid medium, such as an airplane or ship, a system that produces a required change in momentum in the vehicle by changing the velocity of the air or water passing through the propulsive device or engine; in the case of a rocket-propelled vehicle operating without a fluid medium, the required momentum change is produced by using up some of the propulsive device's own mass, called the propellant.
propulsive coefficient [NAV ARCH] The ratio between the effective horsepower (ehp) and the shaft horsepower (shp) at any given speed.
propyl- [ORG CHEM] The $CH_3CH_2CH_2$— radical, derived from propane; found, for example, in 1-propanol.
***n*-propyl acetate** [ORG CHEM] $C_3H_7OOCCH_3$ Colorless liquid with pleasant aroma; miscible with alcohols, ketones, esters, and hydrocarbons; boils at 96–102°C; used for flavors and perfumes, in organic synthesis, and as a solvent.
propylacetone *See* methyl butyl ketone.
propyl alcohol [ORG CHEM] $CH_3CH_2CH_2OH$ A colorless liquid made by oxidation of aliphatic hydrocarbons; boils at 97°C; used as a solvent and chemical intermediate. Also known as ethyl carbinol; propanol.
***n*-propylamine** [ORG CHEM] $C_3H_7NH_2$ Colorless, flammable liquid, boiling at 46–51°C; used as a sedative.
propyl benzene [ORG CHEM] $C_6H_5C_3H_7$ Water-insoluble, colorless liquid, boiling at 158°C. Also known as phenylpropane.
***S*-propyl butylethylthiocarbamate** *See* pebulate.
propyl cyanide *See* butyronitrile.
***S*-propyldipropylthiocarbamate** *See* vernol ate.
propylene [ORG CHEM] $CH_3CH{=}CH_2$ Colorless unsaturated hydrocarbon gas, with boiling point of −47°C; used to manufacture plastics and as a chemical intermediate. Also known as methyl ethylene; propene.
propylene aldehyde *See* crotonaldehyde.
propylene carbonate [ORG CHEM] $C_3H_6CO_3$ Odorless, colorless liquid, boiling at 242°C; miscible with acetone, benzene, and ether; used as a solvent, extractant, plasticizer, and chemical intermediate.
propylene chloride *See* propylene dichloride.
propylene dichloride [ORG CHEM] $CH_3CHClCH_2Cl$ Water-insoluble, colorless, moderately flammable liquid, with chloroform aroma; boils at 96.3°C; miscible with most common solvents; used as a solvent, dry-cleaning fluid, metal degreaser, and fumigant. Also known as 1,2-dichloropropane; propylene chloride.
propylene glycol [ORG CHEM] $CH_3CHOHCH_2OH$ A viscous, colorless liquid, miscible with water, alcohol, and many solvents; boils at 188°C; used as a chemical intermediate, antifreeze, solvent, lubricant, plasticizer, and bactericide. Also known as 1,2-dihydroxypropane; methyl ethylene glycol; methyl glycol; 1,2-propanediol.
propylene glycol alginate [ORG CHEM] $C_9H_{14}O_7$ A white, water-soluble powder; used as a stabilizer, thickener, and emulsifier. Also known as hydroxypropyl alginate.
propylene glycol methyl ether *See* propylene glycol monoethyl ether.
propylene glycol monomethyl ether [ORG CHEM] $C_4H_{10}O_2$ A colorless liquid with a boiling point of 120.1°C; soluble in water, methanol, and ether; used as a solvent for cellulose, dyes, and inks. Also known as propylene glycol methyl ether.
propylene glycol monoricinoleate [ORG CHEM] $C_{21}H_{30}O_4$ A pale yellow, moderately viscous oily liquid, soluble in organic solvents; used as a plasticizer and lubricant and in dye solvents and cosmetics.
propyleneimine [ORG CHEM] C_3H_7N A clear, colorless liquid with a boiling point of 66–67°C; soluble in water and organic solvents; used as an intermediate in organic synthesis. Also known as 2-methylaziridine.
propylene oxide [ORG CHEM] C_3H_6O Colorless, flammable liquid, with etherlike aroma; soluble in water, alcohol, and ether; boils at 33.9°C; used as a solvent and fumigant, in lacquers, coatings, and plastics, and as a petrochemical intermediate.
propylene tetramer *See* dodecane.
propyl formate [ORG CHEM] $C_4H_8O_2$ A flammable liquid with a boiling point of 81.3°C; used for flavoring.
propylformic acid *See* butyric acid.
***n*-propyl furoate** [ORG CHEM] $C_8H_{10}O_3$ A colorless, fragrant liquid with a boiling point of 210.9°C; soluble in alcohol and ether; used for flavoring.
propyl gallate [ORG CHEM] $C_3H_7OOCC_6H_2(OH)_3$ Colorless crystals with a melting point of 150°C; used to prevent or retard rancidity in edible fats and oils.
propylhexedrine [PHARM] $C_{10}H_{21}N$ A clear, colorless liquid with a boiling point of 202–206°C; soluble in dilute acids; used in medicine. Also known as 1-cyclohexyl-2-methylaminopropane; *N*-dimethylcyclohexaneethylamine.
propyl *para*-hydroxybenzoate *See* propylparaben.
propyliodone [ORG CHEM] $C_{10}H_{11}O_3NI_2$ A white, crystalline powder with a melting point of 187–190°C; soluble in alcohol, acetone, and ether; used in medicine as a radiopaque medium.
propylite [PETR] A modified andesite, altered by hydrothermal processes, resembling a greenstone and consisting of calcite, epidote, serpentine, quartz, pyrite, and iron ore.
propylization [PETR] A hydrothermal process by which propylite is formed from andesite by the introduction of or replacement by an assemblage of minerals.
***n*-propyl mercaptan** [ORG CHEM] C_3H_7SH A liquid with an offensive odor and a boiling range of 67–73°C; used as an herbicide. Also known as 1-propanethiol.
***N*-propyl nitrate** [ORG CHEM] $C_3H_7NO_3$ A white to straw-colored liquid with a boiling range of 104–127°C; used as a monopropellant rocket fuel.
propylparaben [ORG CHEM] $C_{10}H_{12}O_3$ Colorless crystals or white powder with a melting point of 95–98°C; soluble in acetone, ether, and alcohol; used in medicine and as a food preservative and fungicide. Also known as propyl *para*-hydroxybenzoate.
1-propylphosphonic acid [ORG CHEM] $C_3H_9O_3P$ A white solid with a melting point of 68–69°C; soluble in water; used as a growth regulator for herbaceous and woody species.
propylpiperidine *See* coniine.
propylthiopyrophosphate [ORG CHEM] $C_{12}H_{28}P_2S_2O$ A straw-colored to dark amber liquid with a boiling point of 148°C; used as an insecticide for chinch bugs in lawns and turf.
propylthiouracil [PHARM] $C_7H_{10}N_2OS$ White, crystalline powder with a melting point of 218–221°C; soluble in ammonia and alkali hydroxides; used in medicine.
2-propyn-1-ol *See* propargyl alcohol.
Prorastominae [PALEON] A subfamily of extinct dugongs (Dugongidae) which occur in the Eocene of Jamaica.
prorennin *See* renninogen.
Prorhynchidae [INV ZOO] A family of turbellarians in the order Alloeocoela.
prorubricyte *See* pronormoblast.
Prosauropoda [PALEON] A division of the extinct reptilian suborder Sauropodomorpha; they possessed blunt teeth, long forelimbs, and extremely large claws on the first finger of the forefoot.
Prosobranchia [INV ZOO] The largest subclass of the Gastropoda; generally, respiration is by means of ctenidia, an operculum is present, there is one pair of tentacles, and the sexes are separate.
prosodus [INV ZOO] A canal leading from an incurrent canal to a flagellated chamber in Porifera.
prosoma [INV ZOO] The anterior part of the body of mollusks and other invertebrates; primitive segmentation is not apparent.
prosopite [MINERAL] $CaAl_2(F,OH)_8$ A colorless mineral composed of basic calcium aluminum fluoride.
Prosopora [INV ZOO] An order of the class Oligochaeta comprising mesonephridiostomal forms in which there are male pores in the segment of the posterior testes.
prosopyle [INV ZOO] The opening into a flagellated chamber from an inhalant canal in sponges.
prospect [MIN ENG] **1.** To search for minerals or oil by looking for surface indications, by drilling boreholes, or both. **2.** A plot of ground believed to be mineralized enough to be of economic importance.
prospecting seismology [PETRO ENG] The application of

PROPYL GALLATE



Structural formula.

seismology to the exploration for natural resources, especially gas and oil.

prospector [MIN ENG] A person engaged in exploring for valuable minerals, or in testing supposed discoveries of the same.

Prospector [AERO ENG] A specific unmanned spacecraft designed to make a soft landing on the moon to take measurements, photographs, and soil samples, and then return to earth.

prospect pit [MIN ENG] A pit excavated for the purpose of prospecting mineral-bearing ground.

prospect shaft [MIN ENG] A shaft constructed for the purpose of excavating mineral-bearing ground.

prostaglandin [BIOCHEM] Any of various physiologically active compounds containing 20 carbon atoms and formed from essential fatty acids; found in highest concentrations in normal human semen; activities affect the nervous system, circulation, female reproductive organs, and metabolism.

prostate [ANAT] A glandular organ that surrounds the urethra at the neck of the urinary bladder in the male.

prostatectomy [MED] Surgical removal of all or part of the prostate.

prostatitis [MED] Inflammation of the prostate.

prostereoisomerism *See* prochirality.

prosthecae [MICROBIO] Appendages that are part of the wall in bacteria in the genus *Caulobacter.*

prosthecate bacteria [MICROBIO] Single-celled microorganisms that differ from typical unicellular bacteria in having one or more appendages which extend from the cell surface; the best-known genus is *Caulobacter.*

Prosthecochloris [MICROBIO] A genus of bacteria in the family Chlorobiaceae; cells are irregular-spherical, form prosthecae, are nonmotile, do not have gas vacuoles, contain bacteriochlorophyll *c* or *e*, and are free-living.

Prosthecomicrobium [MICROBIO] A genus of prosthecate bacteria; motile or nonmotile, unicellular forms with many prosthecae on each cell; reproduction is by binary fission of cells.

prosthesis [MED] An artificial substitute for a missing part of the body, such as a substitute hand, leg, eye, or denture.

prosthetic group [BIOCHEM] A characteristic nonamino acid substance that is strongly bound to a protein and necessary for the protein portion of an enzyme to function; often used to describe the function, as in hemeprotein for hemoglobin.

prosthodontics [MED] The science and practice of replacement of missing dental and oral structures.

Prostigmata [INV ZOO] The equivalent name for Trombidiformes.

prostomium [INV ZOO] The portion of the head anterior to the mouth in annelids and mollusks.

prostratigraphy [GEOL] Preliminary stratigraphy, including lithologic and paleontologic studies, without consideration of the time factor. Also known as propaedeutic stratigraphy; protostratigraphy.

protactinium [CHEM] A chemical element, symbol Pa, atomic number 91; the third member of the actinide group of elements; all the isotopes are radioactive; the longest-lived isotope is protactinium-231.

protactinium-ionium age method [GEOL] A method of calculating the ages of deep-sea sediments formed during the last 150,000 years from measurements of the ratio of protactinium-231 to ionium (thorium-230), based on the gradual change of this ratio over time because of the difference in half-lives.

protalus rampart [GEOL] An arcuate ridge consisting of boulders and other coarse debris marking the downslope edge of an existing or melted snowbank.

protamine [BIOCHEM] Any of the simple proteins that are combined with nucleic acid in the sperm of certain fish, and that upon hydrolysis yield basic amino acids; used in medicine to control hemorrhage, and in the preparation of an insulin form to control diabetes.

protandry [PHYSIO] That condition in which an animal is first a male and then becomes a female.

protanomaly *See* protanopia.

protanopia [MED] Partial color blindness in which there is defective red vision; green sightedness. Also known as protanomaly.

Proteaceae [BOT] A large family of dicotyledonous plants in the order Proteales, notable for often having a large cluster of small or reduced flowers.

Proteales [BOT] An order of dicotyledonous plants in the subclass Rosidae marked by its strongly perigynous flowers, a four-lobed, often corollalike calyx, and reduced or absent true petals.

protease [BIOCHEM] An enzyme that digests proteins.

protected location [COMPUT SCI] A storage cell arranged so that access to its contents is denied under certain circumstances, in order to prevent programming accidents from destroying essential programs and data.

protected thermometer [ENG] A reversing thermometer which is encased in a strong glass outer shell that protects it against hydrostatic pressure.

protection [NUCLEO] Any provision to reduce exposure of persons to radiation; for example, protective barriers to reduce external radiation or measures to prevent inhalation of radioactive materials.

protection code [COMPUT SCI] A component of a task descriptor that specifies the protection domain of the task, that is, the authorizations it has to perform certain actions.

protection key [COMPUT SCI] An indicator, usually 1 to 6 bits in length, associated with a program and intended to grant the program access to those sections of memory which the program can use but to deny the program access to all other parts of memory.

protectite [PETR] A rock formed by the crystallization of a primary magma.

protective action guide [NUCLEO] The absorbed dose of ionizing radiation in individuals in the general population which would warrant protective action following a contaminating event, such as a nuclear explosion.

protective atmosphere [MET] A substance such as inert or combusted fuel gas which surrounds a workpiece to be heat-treated, welded, brazed, or thermally sprayed under controlled conditions.

protective clothing [NUCLEO] Special clothing worn by a radiation worker to prevent contamination of the body or personal clothing.

protective coloration [ZOO] A color pattern that blends with the environment and increases the animal's probability of survival.

protective device *See* electric protective device.

protective finish [ENG] A coating applied to equipment to protect it from corrosion and wear; many substances, including metals, glass, and ceramics, are used.

protective fire [ORD] Fire delivered by supporting guns and directed against the enemy to hinder his fire or movement against friendly forces.

protective grounding [ELEC] Grounding of the neutral conductor of a secondary power-distribution system, and of all metal enclosures for conductors, to protect persons from dangerous currents.

protective relay [ELEC] A relay whose principal function is to protect service from interruption or to prevent or limit damage to apparatus.

protective resistance [ELECTR] Resistance used in series with a gas tube or other device to limit current flow to a safe value.

protective survey [NUCLEO] An evaluation of the radiation hazards incidental to the production, use, or existence of radioactive materials or other sources of radiation under a specific set of conditions.

protector [ELEC] Device to protect equipment or personnel from high voltages or currents.

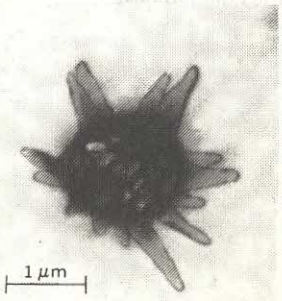
protector block [ELEC] Rectangular piece of carbon with an insulated metal insert, or porcelain with a carbon insert, constituting an element of a protector; it forms a gap which will break down and provide a path to ground for voltages over 350 volts.

protector gap [ELEC] A device designed to limit or equalize voltage in order to protect telephone and telegraph equipment; consists of two carbon blocks with an air gap between them, which are brought into contact when there is a steady-state discharge across the gap. Also known as gap.

protector tube [ELECTR] A glow-discharge cold-cathode tube that becomes conductive at a predetermined voltage, to protect a circuit against overvoltage.

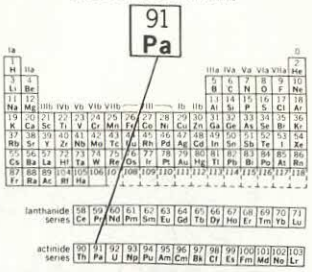
protectoscope [OPTICS] Device in a tank or armored car, similar to the periscope of a submarine; it enables a soldier to see around a shield without exposing himself to enemy gunfire directed at the ports of the vehicle.

PROSTHECATE BACTERIA



Photograph of a bacterial cell taken with the electron microscope. Note the 14 prosthecae extending from the cell and the transparent gas vesicles inside the cell.

PROTACTINIUM



Periodic table of the chemical elements showing the position of protactinium.

Proteeae [MICROBIO] Formerly a tribe of the Enterobacteriaceae comprising the genus *Proteus*; included organisms which were characteristically motile, fermented dextrose with gas production, and produced urease.

Proteida [VERT ZOO] A suborder coextensive with Proteidae in some classification systems.

Proteidae [VERT ZOO] A family of the amphibian suborder Salamandroidea; includes the neotenic, aquatic *Necturus* and *Proteus* species.

protein [BIOCHEM] Any of a class of high-molecular-weight polymer compounds composed of a variety of α-amino acids joined by peptide linkages.

proteinaceous [MATER] **1.** Pertaining to any material having a protein base. **2.** Pertaining to adhesive materials having a protein base such as animal glue, casein, and soya.

proteinase [BIOCHEM] A type of protease which acts directly on native proteins in the first step of their conversion to simpler substances.

protein-bound iodine [BIOCHEM] Iodine bound to blood protein. Abbreviated PBI.

protein-bound iodine test [PATH] A test of thyroid function that reflects the level of circulating thyroid hormone by determination of the level of protein-bound iodine in the blood. Abbreviated PBI test.

proteinometer *See* hand sugar refractometer.

proteinuria [MED] The presence of protein in the urine.

Proteocephalidae [INV ZOO] A family of tapeworms in the order Proteocephaloidea in which the reproductive organs are within the central mesenchyme of the segment.

Proteocephaloidea [INV ZOO] An order of tapeworms of the subclass Cestoda in which the holdfast organ bears four suckers and, frequently, a suckerlike apical organ.

proteoglycan [BIOCHEM] A high-molecular-weight polyanionic substance covalently linked by numerous heteropolysaccharide side chains to a polypeptide chain backbone.

proteolysin [BIOCHEM] A lysin that produces proteolysis.

proteolysis [BIOCHEM] Fragmentation of a protein molecule by addition of water to the peptide bonds.

proteolytic enzyme [BIOCHEM] Any enzyme that catalyzes the breakdown of protein.

Proteomyxida [INV ZOO] The single order of the Proteomyxidia.

Proteomyxidia [INV ZOO] A subclass of Actinopodea including protozoan organisms which lack protective coverings or skeletal elements and have reticulopodia, or filopodia.

proteoplast [CYTOL] A type of cell plastid containing crystalline, fibrillar, or amorphous masses of protein.

proteose [BIOCHEM] One of a group of derived proteins intermediate between native proteins and peptones; soluble in water, not coagulable by heat, but precipitated by saturation with ammonium or zinc sulfate.

Proterostomia [ZOO] That part of the animal kingdom in which cleavage of the egg is of the determinate type; includes all bilateral phyla except Echinodermata, Chaetognatha, Pogonophora, Hemichordata, and Chordata.

Proterosuchia [PALEON] A suborder of moderate-sized thecodont reptiles with lightly built triangular skulls, downturned snouts, and palatal teeth.

Proterotheriidae [PALEON] A group of extinct herbivorous mammals in the order Litopterna which displayed an evolutionary convergence with the horses in their dentition and in reduction of the lateral digits of their feet.

Proterozoic *See* Algonkian.

Proteus [COMPUT SCI] *See* advanced signal-processing system. [MICROBIO] A genus of bacteria in the family Enterobacteriaceae; motile, nonpigmented, usually straight rods occurring in pairs or chains, and generally found in human feces.

Proteutheria [VERT ZOO] A group of primatelike insectivores that contains the living tree shrews.

prothallium [BOT] The gametophyte of a pteridophyte in the form of a flat green thallus with thizoids.

prothiocarb [ORG CHEM] $C_8H_{18}N_2O \cdot HCl$ A colorless, crystalline compound with a melting point of 120–121°C; soluble in water; used as a fungicide for seed dressing. Also known as ethyl-*N*-(3-dimethylamino-propyl)-thiolcarbamate hydrochloride.

prothoate [ORG CHEM] $C_9H_{20}NO_3PS_2$ A white, crystalline compound with a melting point of 23–24°C; used as an insecticide and miticide on fruit trees. Also known as *O,O*-diethyl-*S*-(*N*-isopropylcarbamoylmethyl)phosphorodithioate.

prothoracic gland [INV ZOO] One of the paired glands in the prothorax of insects which produce ecdysone.

prothorax [INV ZOO] The first thoracic segment of an insect; bears the first pair of legs.

prothrombin [BIOCHEM] An inactive plasma protein precursor of thrombin. Also known as factor II; thrombinogen.

prothrombin factor *See* vitamin K.

prothrombin time [PATH] A one-stage clotting test based on the time required for clotting to occur after the addition of tissue thromboplastin and calcium to decalcified plasma.

proticity [BIOCHEM] In oxidative phosphorylation, the flowing of protons in the proton circuit from high to low protic potential.

Protista [BIOL] A proposed kingdom to include all unicellular organisms lacking a definite cellular arrangement, such as bacteria, algae, diatoms, and fungi.

protium [NUC PHYS] The lightest hydrogen isotope, having a mass number of 1 and consisting of a single proton and electron. Also known as light hydrogen.

Protoariciinae [INV ZOO] A subfamily of polychaete annelids in the family Orbiniidae.

protobitumen [MATER] Any of the fats, oils, waxes, or resins which are present as unaltered or nearly unaltered plant and animal products from which fossil bitumens are formed.

Protobranchia [INV ZOO] A small and primitive order in the class Bivalvia; the hinge is taxodont in all but one family, there is a central ligament pit, and the anterior and posterior adductor muscles are nearly equal in size.

Protoceratidae [PALEON] An extinct family of pecoran ruminants in the superfamily Traguloidea.

Protochordata [INV ZOO] The equivalent name for Hemichordata.

protoclastic [PETR] Of igneous rocks, characterized by granulation and deformation of the earlier-formed minerals due to differential flow of the magma before solidification.

Protococcaceae [BOT] A monogeneric family of green algae in the suborder Ulotrichineae in which reproduction is entirely vegetative.

Protococcida [INV ZOO] A small order of the protozoan subclass Coccidia; all are invertebrate parasites, and only sexual reproduction is known.

protocol [COMPUT SCI] **1.** A set of hardware and software interfaces in a terminal or computer which allows it to transmit over a communications network, and which collectively forms a communications language. **2.** *See* communication protocol.

Protocucujidae [INV ZOO] A small family of coleopteran insects in the superfamily Cucujoidea found in Chile and Australia.

protoderm *See* dermatogen.

protodolomite [MINERAL] A crystalline calcium-magnesium carbonate with a disordered lattice in which the metallic ions occur in the same crystallographic layers instead of in alternate layers as in the dolomite mineral.

Protodonata [PALEON] An extinct order of huge dragonflylike insects found in Permian rocks.

Protodrilidae [INV ZOO] A family of annelids belonging to the Archiannelida.

protoenstatite [MINERAL] An artificial, unstable, altered form of $MgSiO_3$ produced by thermal decomposition of talc; convertible to enstatite by grinding or heating to a high temperature.

Protoeumalacostraca [PALEON] The stem group of the crustacean series Eumalacostraca.

protogalaxy [ASTRON] The theoretical precursor of the Galaxy; suggested by James Jeans to be an initial structureless gas cloud, held together by its own gravitation, that broke up into a number of fragments.

protogenic [CHEM] Strongly acidic.

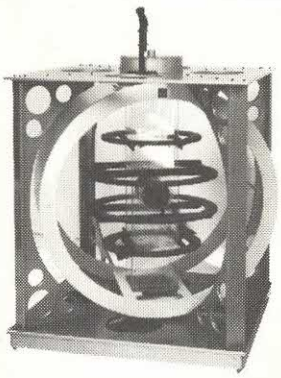
protogyny [PHYSIO] A condition in hermaphroditic or dioecious organisms in which the female reproductive structures mature before the male structures.

protointraclast [GEOL] A limestone component that resulted from a premature attempt at resedimentation while it was still in an unconsolidated and viscous or plastic state, and that never existed as a free clastic entity.

protolith [PETR] The original, unmetamorphosed rock from which a given metamorphic rock is formed.

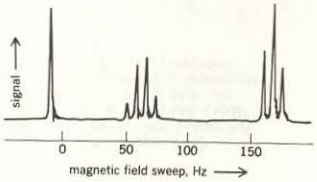
Protomastigida [INV ZOO] The equivalent name for Kinetoplastida.

PROTON MAGNETOMETER



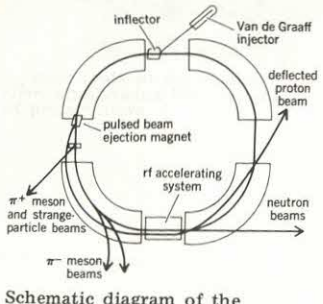
The water container and biasing coil assembly of the proton vector magnetometer. Instrument measures frequency of voltage induced in coil by the protons in water. *(U.S. Coast and Geodetic Survey)*

PROTON RESONANCE



Proton resonance spectra of ethyl alcohol at 40 megahertz. The three main resonance frequencies are due to protons in the OH, CH_2, and CH_3 groups respectively. *(From J. D. Roberts, Nuclear Magnetic Resonance, McGraw-Hill, 1959)*

PROTON SYNCHROTRON



Schematic diagram of the principal components of a proton synchrotron. Note the various possibilities of external neutral beams, charged beams, and extracted primary beams.

protomer [BIOCHEM] One of the polypeptide chains composing an oligomeric protein. Also known as subunit.

Protomonadina [INV ZOO] An order of flagellates, subclass Mastigophora, with one or two flagella, including many species showing protoplasmic collars ringing the base of the flagellum.

Protomonida [INV ZOO] The equivalent name for Protomonadina.

protomylonite [PETR] A mylonitic rock that develops from contact-metamorphosed rock; granulation and flowage are caused by overthrusts following the contact surfaces between the intrusion and the country rock.

Protomyzostomidae [INV ZOO] A family of parasitic polychaetes belonging to the Myzostomaria and known for three species from Japan and the Murman Sea.

proton [PHYS] An elementary particle that is the positively charged constituent of ordinary matter and, together with the neutron, is a building stone of all atomic nuclei; its mass is approximately 938 MeV (million electron volts) and spin ½.

proton accelerator [NUCLEO] A particle accelerator which accelerates protons to high energies, as opposed to one which accelerates heavier ions or electrons.

proton acid *See* Brönsted acid.

protonate [CHEM] To add protons to a base by a proton source.

proton capture [NUC PHYS] A nuclear reaction in which a proton combines with a nucleus.

proton-electron-proton reaction [NUC PHYS] A nuclear reaction in which two protons and an electron react to form a deuteron and a neutrino; it is an important source of detectable neutrinos from the sun. Abbreviated PeP reaction.

protonema [BOT] A green, filamentous structure that originates from an asexual spore of mosses and some liverworts and that gives rise by budding to a mature plant.

protonephridium [INV ZOO] **1.** A primitive excretory tube in many invertebrates. **2.** The duct of a flame cell.

protonic acid *See* Brönsted acid.

proton-induced x-ray emission [ANALY CHEM] A method of elemental analysis in which the energy of the characteristic x-rays emitted when a sample is bombarded with a beam of energetic protons is used to identify the elements present in the sample. Abbreviated PIXE.

protonium [ATOM PHYS] A bound state of a proton and an antiproton.

proton magnetometer [ELECTROMAG] A highly sensitive magnetometer which measures the frequency of the proton resonance in ordinary water.

proton microscope [ELECTR] A microscope that is similar to the electron microscope but uses protons instead of electrons as the charged particles.

proton moment [NUC PHYS] The magnetic dipole moment of the proton, a physical constant equal to $(1.41062 \pm 0.00001) \times 10^{-23}$ erg per gauss.

proton number *See* atomic number.

proton-proton chain [NUC PHYS] An energy-releasing nuclear reaction chain which is believed to be of major importance in energy production in hydrogen-rich stars. Also known as deuterium cycle.

proton-recoil counter [NUCLEO] A counter for measuring fast neutrons.

proton resonance [SPECT] A phenomenon in which protons absorb energy from an alternating magnetic field at certain characteristic frequencies when they are also subjected to a static magnetic field; this phenomenon is used in nuclear magnetic resonance quantitative analysis technique.

proton scattering microscope [SOLID STATE] A microscope in which protons produced in a cold-cathode discharge are accelerated and focused on a crystal in a vacuum chamber; protons reflected from the crystal strike a fluorescent screen to give a visual and photographable display that is related to the structure of the target crystal.

proton-stability constant [PHYS CHEM] The reciprocal of the dissociation constant of a weak base in solution.

proton storage ring [NUCLEO] A machine consisting of magnets and vacuum chambers in which beams of high-energy protons can be stored.

proton synchrotron [NUCLEO] A device for accelerating protons in circular orbits in a time-varying magnetic field, in which the orbit radius is kept constant.

proton vector magnetometer [ELECTROMAG] A type of proton magnetometer with a system of auxiliary coils that permits measurement of horizontal intensity or vertical intensity as well as total intensity.

protophilic [CHEM] Strongly basic.

Protophyta [BOT] A division of the plant kingdom, according to one system of classification, set up to include the bacteria, the blue-green algae, and the viruses.

proton vector magnetometer [ELECTROMAG] A type of proton magnetometer with a system of auxiliary coils that permits measurement of horizontal intensity or vertical intensity as well as total intensity.

Protophyta [BOT] A division of the plant kingdom according to one system of classification, set up to include the bacteria, the blue-green algae, and the viruses.

protophilic [CHEM] Strongly basic.

protoplasm [CYTOL] The colloidal complex of protein that composes the living material of a cell.

protoplast [CYTOL] The living portion of a cell considered as a unit; includes the cytoplasm, the nucleus, and the plasma membrane.

protopodite [INV ZOO] The basal segment of a crustacean limb bearing an endopodite or exopodite, or both, at its distal extremity.

Protopteridales [PALEOBOT] An extinct order of ferns, class Polypodiatae.

protoquartzite [PETR] A well-sorted sandstone that is intermediate in composition between subgraywacke and orthoquartzite, consisting of 75–95% quartz and chert, with less than 15% detrital clay matrix and 5–25% unstable materials in which there is a greater abundance of rock fragments than feldspar grains. Also known as quartzose subgraywacke.

protore [MIN ENG] **1.** A primary mineral deposit which, through enrichment, can be modified to form an economic ore. **2.** A deposit which could become economically workable if technological change occurred or prices were increased.

Protosireninae [PALEON] An extinct superfamily of sirenian mammals in the family Dugongidae found in the middle Eocene of Egypt.

Protospondyli [VERT ZOO] An equivalent name for Semionotiformes.

protostar [ASTRON] A flattened mass of gas in space that is hypothesized to form into a star.

protostele [BOT] A stele consisting of a solid rod of xylem surrounded by phloem.

Protostomia [INV ZOO] A major division of bilateral animals; includes most worms, arthropods, and mollusks.

protostratigraphy *See* prostratigraphy.

Protosuchia [PALEON] A suborder of extinct crocodilians from the Late Triassic and Early Jurassic.

Prototheria [VERT ZOO] A small subclass of Mammalia represented by a single order, the Monotremata.

prototroch [INV ZOO] The band of cilia characteristic of a trochophore larva.

prototrophic [MICROBIO] Pertaining to bacteria with the nutritional properties of the wild type, or the strains found in nature.

prototropy [ORG CHEM] A reversible interconversion of structural isomers that involves the transfer of a proton.

Prototrupoidea [INV ZOO] A superfamily of the Hymenoptera.

prototype [ENG] A model suitable for use in complete evaluation of form, design, and performance.

protoxylem [BOT] The part of the primary xylem that differentiates from the procambium and is formed during elongation of an embryonic plant organ.

Protozoa [INV ZOO] A diverse phylum of eukaryotic microorganisms; the structure varies from a simple uninucleate protoplast to colonial forms, the body is either naked or covered by a test, locomotion is by means of pseudopodia or cilia or flagella, there is a tendency toward universal symmetry in floating species and radial symmetry in sessile types, and nutrition may be phagotrophic or autotrophic or saprozoic.

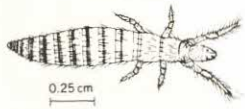
protozoology [INV ZOO] That branch of biology which deals with the Protozoa.

Protrachaeta [INV ZOO] The equivalent name for Onychophora.

protractor [ENG] An instrument used to construct and measure angles formed by lines of a plane; the midpoint of the diameter of the semicircle is marked and serves as the vertex of angles contructed or measured.

protropic [CHEM] Pertaining to chemical reactions that are influenced by protons.
protrypsin *See* trypsinogen.
Protura [INV ZOO] An order of primitive wingless insects belonging to the subclass Apterygota; individuals are elongate and eyeless, lack antennae, and are from pale amber to white in color; anamorphosis is characteristic of the group.
proustite [MINERAL] Ag_3AsS_3 A cochineal-red mineral that crystallizes in the rhombohedral system, consists of silver arsenic sulfide, is isomorphous with pyrargyrite, and occurs massively and in crystals. Also known as light-red silver ore; light-ruby silver.
Prout's hypothesis [PHYS CHEM] The hypothesis that all atoms are built up from hydrogen atoms.
proved ore [MIN ENG] Ore in which there is practically no risk of failure of continuity.
proved reserves [PETRO ENG] Reserves (primary or secondary) that have been proved by production at commercial flow rates.
provenance [GEOL] The location, topography, and composition of the source area for any sedimentary rock. Also known as source area; sourceland.
proventriculus [INV ZOO] **1.** A sac anterior to the gizzard in earthworms. **2.** A dilation of the foregut anterior to the midgut of Mandibulata. [VERT ZOO] The true stomach of a bird, usually separated from the gizzard by a constriction.
province [OCEANOGR] An area composed of a grouping of like bathymetric elements whose features are in obvious contrast with surrounding regions.
provincial series [GEOL] A time-stratigraphic series recognized only in a particular region and involving a major division of time within a period.
proving [COMPUT SCI] Testing whether a computer is free of faults and capable of functioning normally, usually by having it carry out a check routine or diagnostic routine.
proving ring [DES ENG] A ring used for calibrating test machines; the diameter of the ring changes when a force is applied along a diameter.
provirus [VIROL] The phage genome.
provitamin [BIOCHEM] A vitamin precursor; assumes vitamin activity upon activation or chemical change.
provitrain [GEOL] Vitrain in which some plant structure can be discerned by microscope. Also known as telain.
provitrinite [GEOL] A variety of vitrinite characteristic of provitrain and including the varieties periblinite, suberinite, and xylinite.
prow [NAV ARCH] The bow of a ship, especially the part above the waterline.
PROWL *See* procedure work log system.
Proxima Centauri [ASTRON] The star that is the sun's nearest neighbor; stellar magnitude is 11, and it is 2° from the bright star α Centauri.
proximal [ANAT] Near the body or the median line of the body. [GEOL] Of a sedimentary deposit, composed of coarse clastics and formed near the source.
proximal convoluted tubule [ANAT] The convoluted portion of the vertebrate nephron lying between Bowman's capsule and the loop of Henle; functions in the resorption of sugar, sodium and chloride ions, and water.
proximate analysis [CHEM ENG] A technique that separates and identifies categories of compounds in a mixture; reported are moisture and ash content, the extracts of the mixture made with alcohol, petroleum ether, water, hydrochloric acid and resins, starches, reducing sugars, proteins, fats, esters, free acids, and so on; this type of analysis of solid fuels allows a prediction to be made as to how the fuel will behave in a furnace.
proximity detector [ENG] A sensing device that produces an electrical signal when approached by an object or when approaching an object.
proximity effect [ELEC] Redistribution of current in a conductor brought about by the presence of another conductor.
proximity-effect microbridge [CRYO] A Josephson junction formed by overcoating a few micrometers of thin superconducting film with normal metal, thereby weakening the superconductivity in the film beneath the metal. Also known as Notarys-Mercereau microbridge.
proximity fuse [ORD] A fuse that detonates a warhead when the target is within some specified region near the fuse; radio, radar, photoelectric, or other devices may be used as activating elements. Also known as influence fuse; variable-time fuse; vt fuse.
proximity warning indicator [NAV] An airborne instrument which produces a warning signal indicating the approach of an aircraft on a possible collision course. Abbreviated PWI.
proximoceptor [PHYSIO] An exteroceptor involved in taste or cutaneous sensations.
PRR *See* pulse repetition rate.
prudent limit of endurance [AERO ENG] The time during which an aircraft can remain airborne and still retain a given safety margin of fuel.
pruritus [MED] Localized or generalized itch due to irritation of sensory nerve endings.
Prussian blue [INORG CHEM] $Fe_4[Fe(CN)_6]_3$ Ferric ferrocyanide, used as a blue pigment and in the removal of hydrogen sulfide from gases.
prussic acid *See* hydrocyanic acid.
prynachlor [ORG CHEM] $C_{12}H_{12}ClN$ A white, crystalline compound with a melting point of 40–47°C; used as a preemergence herbicide on sorghum, soybeans, corn, and onions. Also known as 2-chloro-*N*-(1-methyl-2-propynyl)acetanilide.
pryrrolidine [ORG CHEM] C_4H_9N A colorless to pale yellow liquid with a boiling point of 87°C; soluble in water and alcohol; used in the manufacture of pharmaceuticals, insecticides, and fungicides.
ps *See* picosecond.
psalterium *See* omasum.
Psamment [GEOL] A suborder of the soil order Entisol, characterized by a texture of loamy fine sand or coarser sand, and by a coarse fragment content of less than 35%.
psammite *See* arenite.
psammitic *See* arenaceous.
Psammodontidae [PALEON] A family of extinct cartilaginous fishes in the order Bradyodonti in which the upper and lower dentitions consisted of a few large quadrilateral plates arranged in two rows meeting in the midline.
Psammodrilidae [INV ZOO] A small family of spioniform worms belonging to the Sedentaria.
psammoma [MED] A tumor, usually a meningioma, which contains psammoma bodies.
psammoma bodies [PATH] Laminated calcific spherical structures found in certain benign and malignant tumors.
psammomatus papilloma *See* serous cystadenoma.
psammon [ECOL] **1.** In a body of fresh water, that part of the environment composed of a sandy beach and bottom lakeward from the water line. **2.** Organisms which inhabit the interstitial water in the sands on a lake shore.
psammophilic [ECOL] Pertaining to an organism found in sand.
psammophyte [ECOL] Thriving (as a plant) on sandy soil.
psammosere [ECOL] Stages in plant succession which begin in sandy soil.
PSC motor *See* permanent-split capacitor motor.
psec *See* picosecond.
Pselaphidae [INV ZOO] The ant-loving beetles, a large family of coleopteran insects in the superfamily Staphylinoidea.
Psephenidae [INV ZOO] The water penny beetles, a small family of coleopteran insects in the superfamily Dryopoidea.
psephicity [GEOL] A coefficient of roundability of a pebble- or sand-size mineral fragment, expressed as the ratio of specific gravity to hardness (as measured in the air) or the quotient of specific gravity minus one divided by hardness (as measured in water).
psephite [GEOL] A sediment or sedimentary rock composed of fragments that are coarser than sand and which are set in a qualitatively and quantitatively varying matrix; equivalent to a rudite or, generally, a conglomerate.
psephyte [GEOL] A lake-bottom deposit consisting mainly of coarse, fibrous plant remains.
Pseudaliidae [INV ZOO] A family of roundworms belonging to the Strongyloidea which occur as parasites of whales and porpoises.
pseudaposematic [ECOL] Pertaining to an imitation in coloration or form by an organism of another organism that possesses dangerous or disagreeable characteristics.
pseudoadiabat [METEOROL] On a thermodynamic diagram, a line representing a pseudoadiabatic expansion of an air parcel; in practice, approximate computations are employed, and the resulting lines represent, ambiguously, pseudoadiabats and saturation adiabats.

PROTURA

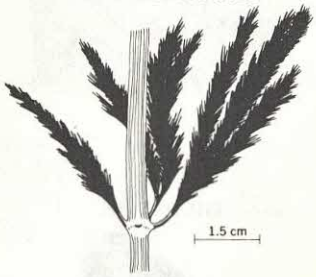


Acerentulus barberi, a proturan insect. *(From H. S. Ewing, Ann. Entomol. Soc. Amer., 33(3):497, 1940)*

PROUSTITE

Proustite crystals, Marienberg, Germany. *(Specimen from Department of Geology, Bryn Mawr College)*

PSEUDOBORNIALES



Pseudobornia node with a whorl of three leaves; has rhizomes and stems up to 6 centimeters wide and over a meter long. *(Modified from A. G. Nathorst)*

pseudoadiabatic chart *See* Stuve chart.

pseudoadiabatic expansion [GEOPHYS] A saturation-adiabatic process in which the condensed water substance is removed from the system, and which therefore is best treated by the thermodynamics of open systems; meteorologically, this process corresponds to rising air from which the moisture is precipitating.

pseudoalleles [GEN] Closely linked genes that behave as alleles and can be separated by crossing over.

pseudoallochem [GEOL] An object resembling an allochem but produced in place within a calcareous sediment by a secondary process such as recrystallization.

Pseudoborniales [PALEOBOT] An order of fossil plants found in Middle and Upper Devonian rocks.

pseudobreccia [PETR] Limestone that is partially and irregularly dolomitized and is characterized by a mottled, breccialike appearance. Also known as recrystallization breccia.

pseudobrookite [MINERAL] Fe_2TiO_5 A brown or black mineral consisting of iron titanium oxide and occurring in orthorhombic crystals; specific gravity is 4.4–4.98.

pseudocannel coal [GEOL] Cannel coal that contains much humic matter. Also known as humic-cannel coal.

pseudocarburizing *See* blank carburizing.

pseudocentrum [VERT ZOO] A centrum formed by fusion of the dorsal or dorsal and ventral arcualia, as in tailed amphibians.

pseudochrysolite *See* moldavite.

pseudocode *See* interpreti ve language.

pseudocoele [INV ZOO] A space between the body wall and internal organs that is not formed by gastrulation and lacks a cellular lining.

pseudocoelocyte [INV ZOO] In nematodes, a mesenchymal cell in the pseudocoelom.

Pseudocoelomata [INV ZOO] A group comprising the animal phyla Entoprocta, Aschelminthes, and Acanthocephala; characterized by a pseudocoelom.

pseudocol [GEOL] A landform represented by a constriction of a stream valley diverted by a glacial ponding, formed by the cutting through of a cover of drift and subsequent exposure of a former col.

pseudo cold front *See* pseudo front.

pseudocolumella [INV ZOO] In anthozoans, a type of axial structure.

pseudoconcretion [GEOL] A subspherical, secondary sedimentary structure resembling a true concretion but not formed by orderly precipitation of mineral matter in the pores of a sediment.

pseudoconformity *See* paraconformity.

pseudoconglomerate [GEOL] A rock that resembles, or may easily be mistaken for, a true or normal (sedimentary) conglomerate.

pseudocotunnite [MINERAL] K_2PbCl_4 A yellow or yellowish-green, orthorhombic mineral consisting of a potassium lead chloride.

pseudocritical properties [CHEM] Effective (empirical) values for the critical properties (such as temperature, pressure, and volume) of a multicomponent chemical system.

pseudo cross-bedding [GEOL] **1.** An inclined bedding produced by deposition in response to ripple-mark migration and characterized by foreset beds that appear to dip into the current. **2.** A structure resembling cross-bedding, caused by distortion-free slumping and sliding of a semiconsolidated mass of sediments (such as sandy shales).

pseudocrystal [CRYSTAL] A substance that appears to be crystalline but does not have a true crystalline diffraction pattern.

pseudocumene [ORG CHEM] C_9H_{12} Water-insoluble, hydrocarbon liquid, boiling at 168°C; soluble in alcohol, benzene, and ether; used to manufacture perfumes and dyes, and as a catgut sterilant. Also known as pseudocumol; uns-trimethylbenzene.

pseudocumol *See* pseudocumene.

Pseudocycnidae [INV ZOO] A family of the Caligoida which comprises external parasites on the gills of various fishes.

pseudocyesis [MED] A condition characterized by amenorrhea, enlargement of the abdomen, and other symptoms simulating gestation, due to an emotional disorder.

Pseudodiadematidae [INV ZOO] A family of Jurassic and Cretaceous echinoderms in the order Phymosomatoida which had perforate crenulate tubercles.

pseudodiffusion [GEOL] Mixing of thin superpositioned layers of slowly accumulated marine sediments by the action of water motion or subsurface organisms.

pseudoequivalent temperature *See* equivalent temperature.

pseudofault [GEOL] A faultlike feature resulting from weathering along joint, shrinkage, or bedding planes.

pseudofibrous peat [GEOL] Peat that is fibrous in texture but is plastic and incoherent.

pseudo front [METEOROL] A small-scale front, formed in association with organized severe convective activity, between a mass of rain-cooled air from the thunderstorm clouds and the warm surrounding air. Also known as pseudo cold front.

pseudogalena *See* sphalerite.

pseudogene [GEN] A sequence of deoxyribonucleic acid resembling but not functioning like a gene.

pseudoglanders [VET MED] An infectious bacterial lymphangitis of horses and other equines caused by *Corynebacterium pseudotuberculosis* and characterized by ulcerating nodules of the lymph nodes in the legs.

pseudogley [GEOL] A densely packed, silty soil that is alternately waterlogged and rapidly dried out.

pseudo-Goldstone bosons [PARTIC PHYS] Goldstone bosons which accompany the breakdown of approximate, accidental symmetries in certain unified gauge theories of weak and electromagnetic interactions.

pseudogradational bedding [GEOL] A structure in metamorphosed sedimentary rock in which the original textural graduation (coarse at the base, finer at the top) appears to be reversed because of the formation of porphyroblasts in the finer-grained part of the rock.

pseudohermaphroditism [PHYSIO] A condition in humans which simulates hermaphroditism, with gynandry in females and androgyny in males.

pseudoinstruction [COMPUT SCI] **1.** A symbolic representation in a compiler or interpreter. **2.** *See* quasi-instruction.

pseudoionone [ORG CHEM] $C_{13}H_{20}O$ A pale yellow liquid with a boiling point of 143–145°C; soluble in alcohol and ether; used for perfumes and cosmetics.

pseudokarst [GEOL] A topography that resembles karst but that is not formed by the dissolution of limestone; usually a rough-surfaced lava field in which ceilings of lava tubes have collapsed.

pseudokettle *See* pingo-remnant.

pseudoleucite [MINERAL] A pseudomorph after leucite consisting of a mixture of nepheline, orthoclase, and analcime.

pseudoliquid density [PETRO ENG] For reservoir studies, the calculated value of a pseudodensity for reservoir liquid at atmospheric conditions, followed by application of suitable correction factors to obtain an approximate value for actual liquid density in the reservoir.

pseudomalachite [MINERAL] $Cu_5(PO_4)_2(OH)_4 \cdot H_2O$ An emerald green to dark green and blackish-green, monoclinic mineral consisting of a hydrated basic copper phosphate. Also known as tagilite.

pseudometric *See* semimetric.

pseudomicroseism [GEOPHYS] A microseism due to instrumental effects.

Pseudomonadaceae [MICROBIO] A family of gram-negative, aerobic, rod-shaped bacteria; cells are straight or curved and motile by polar flagella.

Pseudomonadales [MICROBIO] Formerly an order of ovoid, rod-shaped, comma-shaped, or spiral bacteria in the class Schizomycetes; cells characterized as rigid and motile by means of polar flagella.

Pseudomonadineae [MICROBIO] Formerly a suborder of bacteria of the order Pseudomonadales including those families whose cells lacked photosynthetic pigments.

pseudomorph [MINERAL] An altered mineral whose crystal form has the outward appearance of another mineral species. Also known as false form.

pseudomountain [GEOL] A mountain formed by differential erosion, in contrast to one produced by uplift.

pseudomucinous cystadenoma [MED] A benign ovarian tumor composed of columnar mucin-producing cells lining multilocular cysts filled with mucinous material.

Pseudonocardia [MICROBIO] A genus of bacteria in the family Nocardiaceae; hyphae grow by budding; spores are produced in chains on aerial or substrate mycelia.

pseudonodule [GEOL] A primary sedimentary structure consisting of a ball-like mass of sandstone enclosed in shale or

mudstone; characterized by a rounded base with upturned or inrolled edges and resulting from the settling of sand into underlying clay or mud which has welled up between isolated sand masses. Also known as sand roll.

pseudo-oolith [GEOL] A spherical or roundish pellet or particle (generally less than 1 millimeter in diameter) in a sedimentary rock, externally resembling an oolith in size or shape but of secondary origin and amorphous or crypto- or microcrystalline, and lacking the radial or concentric internal structure of an oolith. Also known as false oolith.

pseudo-operation [COMPUT SCI] An operation which is not part of the computer's operation repertoire as realized by hardware; hence, an entension of the set of machine operations.

pseudoparalysis [MED] An apparent motor paralysis that is caused by voluntary inhibition of motor impulses because of pain or other organic or psychic causes.

pseudoparasite [MED] Something in the blood that is mistaken for a parasite.

Pseudophoracea [INV ZOO] An extinct superfamily of gastropod mollusks in the order Aspidobranchia.

Pseudophyllidea [INV ZOO] An order of tapeworms of the subclass Cestoda, parasitic principally in the intestine of cold-blooded vertebrates.

pseudoplasmodium [INV ZOO] An aggregate of amebas resembling a plasmodium.

pseudoplastic [BIOL] Referring to an organism which lacks the capacity for major modification or for evolutionary differentiation.

pseudoplastic fluid [FL MECH] A fluid whose apparent viscosity or consistency decreases instantaneously with an increase in shear rate.

pseudopodium [BOT] A slender, leafless branch of the gametophyte in certain Bryatae. [CYTOL] Temporary projection of the protoplast of ameboid cells in which cytoplasm streams actively during extension and withdrawal. [INV ZOO] Foot of a rotifer.

pseudoporphyritic [PETR] Pertaining to a rock that is not a true porphyry, but resembles one because of rapid growth of some of the crystals.

pseudorandom numbers [COMPUT SCI] Numbers produced by a definite arithmetic process, but satisfying one or more of the standard tests for randomness.

pseudoreduced compressibility [CHEM] The compressibility factor for a multicomponent gaseous system, calculated at reduced conditions using the pseudoreduced properties of the mixture.

pseudoreduced properties [CHEM] Reduced-state relationships (such as reduced pressure, reduced temperature, and reduced volume) calculated for multicomponent chemical systems by using pseudocritical properties.

pseudo ripple mark [GEOL] A bedding-plane feature that resembles a ripple mark but is formed by lateral pressure caused by slumping or by local, small-scale tectonic deformation.

pseudoscalar [PHYS] A quantity which has magnitude only, and which acts, under Lorentz transformation, like a scalar but with a sign change under space reflection or time reflection, or both.

pseudoscalar coupling [PARTIC PHYS] A type of interaction postulated between a nucleon and a pion in which the interaction energy is a product of the pion's pseudoscalar field and a bilinear pseudoscalar function of the nucleon fields.

pseudoscalar meson [PARTIC PHYS] A meson, such as the pion, which has spin 0 and negative parity, and may be described by a field which is a pseudoscalar quantity. Also known as pseudoscalar particle.

pseudoscalar particle *See* pseudoscalar meson.

Pseudoscorpionida [INV ZOO] An order of terrestrial Arachnida having the general appearance of miniature scorpions without the postabdomen and sting.

Pseudosphaeriales [BOT] An order of the class Ascolichenes, shared by the class Ascomycetes; the ascocarp is flask-shaped and lined with a layer of interwoven, branched pseudoparaphyses.

pseudospharolith [MINERAL] A spherulite consisting of two minerals, one with parallel and one with inclined extinction, growing from the same center.

Pseudosporidae [INV ZOO] A family of the protozoan subclass Proteomyxidia; flagellated stages invade Volvocidae and filamentous algae and become amoebas.

pseudostatic SP *See* pseudostatic spontaneous potential.

pseudostatic spontaneous potential [PETRO ENG] Theoretical maximum spontaneous potential current that can be measured in a downhole, mud-column log in shaly sand. Abbreviated pseudostatic SP; PSP.

pseudo steady-state pressure distribution [PETRO ENG] The condition when the declining pressure distribution within a reservoir system closed at one boundary is declining at a uniform rate everywhere (or, there is constant pressure gradient within the reservoir).

pseudostratification *See* sheeting structure.

pseudostratified epithelium [HISTOL] A type of epithelium in which all cells reach to the basement membrane but some extend toward the surface only part way, while others reach the surface.

Pseudosuchia [PALEON] A suborder of extinct reptiles of the order Thecodontia comprising bipedal, unarmored or feebly armored forms which resemble dinosaurs in many skull features but retain a primitive pelvis.

pseudosymmetry [CRYSTAL] Apparent symmetry of a crystal, resembling that of another system; generally due to twinning.

pseudotachylite [PETR] A black rock that resembles tachylite; carries fragmental enclosures and shows evidence of having been at high temperature.

pseudotensor [PHYS] **1.** A quantity which transforms as a tensor under space rotations, but which transforms as a tensor, together with a change in sign, under space inversion. **2.** A quantity which transforms as a tensor under Lorentz transformations, but with an additional sign change under space reflection or time reflection or both.

Pseudothelphusidae [INV ZOO] A family of fresh-water crabs belonging to the Brachyura.

pseudotillite [GEOL] A nonglacial tillitelike rock, such as a pebbly mudstone, formed on land by the flow of nonglacial mud or deposited by a subaqueous turbidity flow.

Pseudotriakidae [VERT ZOO] The false catsharks, a family of galeoids in the carcharinid line.

pseudotuberculosis [MED] A bacterial infection in man and many animals caused by *Pasteurella pseudotuberculosis;* may be severe in man with septicemia and symptoms resembling typhoid fever.

pseudounconformity [GEOL] A stratigraphic relationship that appears unconformable but is characterized by a superabundance or an excess accumulation of sediment, due to factors like submarine slumping which occurs penecontemporaneously with sedimentation off the sides of a rising anticline or dome.

pseudovector [PHYS] **1.** A quantity which transforms as a vector under space rotations but which transforms as a vector, together with a change in sign, under a space inversion. Also known as axial vector. **2.** A quantity which transforms as a four-vector under Lorentz transformations, but with an additional sign change under space reflection or time reflection or both.

pseudovector coupling [PARTIC PHYS] A type of interaction postulated between a nucleon and another particle in which the expression for the interaction energy contains a bilinear pseudovector function of nucleon fields.

pseudovector meson [PARTIC PHYS] A meson which has spin quantum number 1 and positive parity, and may be described by a field which is a pseudovector quantity.

pseudovitrinite [GEOL] A maceral of coal that is superficially similar to vitrinite but that is higher in reflectance from polished surfaces in oil immersion and has slitted structure, remnant cellular structures, uncommon fracture patterns, higher relief, and paucity or absence of pyrite inclusions.

pseudovitrinoid [GEOL] Pseudovitrinite occurring in bituminous coal.

pseudovolcano [GEOL] A large crater or circular hollow believed not to be associated with recent volcanic activity, such as a crater which is the result of cauldron subsidence or of a phreatic explosion in the distant past.

psf *See* pound per square foot.

P shell [ATOM PHYS] The sixth layer of electrons about the nucleus of an atom, having electrons whose principal quantum number is 6.

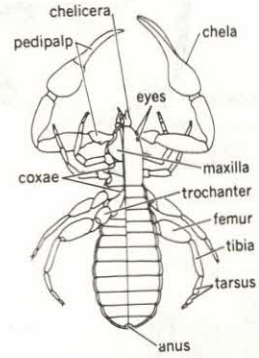
psi *See* pound per square inch.

psia *See* pounds per square inch absolute.

psid *See* pounds per square inch differential.

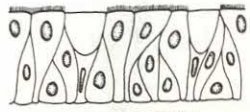
psi function [MATH] The special function of a complex variable which is obtained from differentiating the logarithm of the

PSEUDOSCORPIONIDA

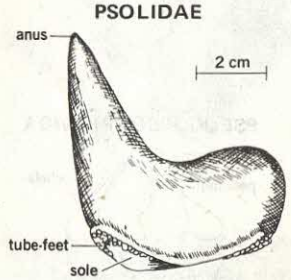


Adult Pseudoscorpionida: ventral view, left side; dorsal view, right side. *(From H. S. Pratt, A Manual of the Common Invertebrate Animals, rev. ed., McGraw-Hill, 1951)*

PSEUDOSTRATIFIED EPITHELIUM



Arrangement of cells in pseudostratified epithelium.



Psolus phantapus. (After T. Mortensen, 1927)

Thyridopteryx ephemeraeformis Haworth. *(a)* Male. *(b)* Female case.

gamma function. [QUANT MECH] *See* Schrödinger wave function.

psig *See* pounds per square inch gage.

psilate [BOT] Lacking ornamentation; generally applied to pollen.

Psilidae [INV ZOO] The rust flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Acalyptratae.

psilomelane [MINERAL] $BaMn_9O_{16}(OH)_4$ A massive, hard, black, botryoidal manganese oxide mineral mixture with a specific gravity ranging from 3.7 to 4.7.

Psilophytales [PALEOBOT] A group formerly recognized as an order of fossil plants.

Psilophytineae [PALEON] The equivalent name for Rhyniopsida.

Psilopsida [BOT] A subdivision of the Tracheophyta.

Psilorhynchidae [VERT ZOO] A small family of actinopterygian fishes belonging to the Cyprinoidei.

psilosis [MED] Falling out of the hair.

Psilotales [BOT] The equivalent name for Psilotophyta.

Psilotatae [BOT] A class of the Psilotophyta.

Psilotophyta [BOT] A division of the plant kingdom represented by three living species; the life cycle is typical of the vascular cryptogams.

psi particle *See* J particle.

psi-prime particle [PARTIC PHYS] A neutral meson which has a mass of 3684 mega-electron-volts, spin quantum number 1, and negative parity and charge parity; it has an anomalously long lifetime. Symbolized ψ'.

Psittacidae [VERT ZOO] The single family of the Psittaciformes.

Psittaciformes [VERT] The parrots, a monofamilial order of birds that exhibit zygodactylism and have a strong hooked bill.

psittacinite *See* mottramite.

psittacosis [MED] Pneumonia and generalized infection of man and of birds caused by agents of the PLT-Bedsonia group; transmitted to man by psittacine birds.

PSK *See* phase-shift keying.

psoas [ANAT] Either of two muscles: psoas major which arises from the bodies and transverse processes of the lumbar vertebrae and is inserted into the lesser trochanter of the femur, and psoas minor which arises from the bodies and transverse processes of the lumbar vertebrae and is inserted on the pubis.

Psocoptera [INV ZOO] An order of small insects in which wings may be present or absent, tarsi are two- or three-segmented, cerci are absent, and metamorphosis is gradual.

Psolidae [INV ZOO] A family of echinoderms in the order Dendrochirotida characterized by a ventral adhesive sucker and a U-shaped gut, with the mouth and anus opening upward on the adoral surface.

Psophiidae [VERT ZOO] The trumpeters, a family of birds in the order Gruiformes.

psophometer [ENG] An instrument for measuring noise in electric circuits; when connected across a 600-ohm resistance in the circuit under study, the instrument gives a reading that by definition is equal to half of the psophometric electromotive force actually existing in the circuit.

psophometric electromotive force [ELECTR] The true noise voltage that exists in a circuit.

psophometric voltage [ELECTR] The noise voltage as actually measured in a circuit under specified conditions.

psoriasis [MED] A usually chronic, often acute inflammatory skin disease of unknown cause; characterized by dull red, well-defined lesions covered by silvery scales which when removed disclose tiny capillary bleeding points.

psorosis [PL PATH] A virus disease of tangerine, grapefruit, and sweet orange trees characterized by scaly bark, a gummy exudate, retarded growth, small yellow leaves, and dieback of twigs. Also known as scaly bark.

PSP *See* pseudostatic spontaneous potential.

PSR *See* primary radar.

psyche [PSYCH] The mind or self as a functional entity.

Psyche [ASTRON] An asteroid with a diameter of about 205 kilometers, mean distance from the sun of 2.923 astronomical units, and unusual surface composition.

psychedelic [PSYCH] Of, pertaining to, or producing a psychic state.

psychiatric genetics [GEN] The study of the genetic causes and modes of inheritence that underlie the generally recognized mental illnesses.

psychiatric social worker [PSYCH] A specialist who utilizes the techniques of both social work and psychiatry to serve the community.

psychiatrist [MED] A person who specializes in psychiatry; a licensed physician trained in psychiatry.

psychiatry [MED] The medical science that deals with the origins, diagnosis, and treatment of mental and emotional disorders.

Psychidae [INV ZOO] The bagworms, a family of lepidopteran insects in the superfamily Tineoidea; males are large, hairy moths, but females are degenerate, wingless, and legless and live in bag-shaped cases.

psychoanalysis [PSYCH] A technique used in the treatment of neuroses and other emotional disorders which relies upon free associations of the patient to bring ideas and experiences from the unconscious to the conscious divisions of the psyche.

psychobiology [PSYCH] The school of psychiatry and psychology in which the individual is considered as the sum of his environment as well as being considered a physical organism.

Psychodidae [INV ZOO] The moth flies, a family of orthorrhaphous dipteran insects in the series Nematocera.

psychodynamics [PSYCH] The study of human behavior from the point of view of motivation and drives, depending largely on the functional significance of emotion, and based on the assumption that an individual's total personality and reactions at any given time are the product of the interaction between his genetic constitution and his environment.

psychogalvanic reflex [PHYSIO] A variation in the electric conductivity of the skin in response to emotional stimuli, which cause changes in blood circulation, secretion of sweat, and skin temperature.

psychogalvanometer [ENG] An instrument for testing mental reaction by determining how skin resistance changes when a voltage is applied to electrodes in contact with the skin.

psychogenic [MED] Of psychic origin.

psychointegroammeter *See* lie detector.

psychokinesis [PSYCH] The alleged ability of an individual to exert a mental influence on physical events in advance of their occurrence. Abbreviated PK.

psychologist [PSYCH] **1.** An individual who has made a professional study of, and usually thereafter professionally engages in, psychology. **2.** Specifically, an individual with the minimum professional qualifications set forth by an intraprofessionally recognized psychological association.

psychology [BIOL] **1.** The science that deals with the functions of the mind and the behavior of an organism in relation to its environment. **2.** The mental activity characteristic of a person or a situation.

psychometrics [PSYCH] The mathematical and statistical treatment of psychological data.

psychomotor [PSYCH] Pertaining to both mental and motor activity.

psychopathic personality [PSYCH] An emotionally immature individual characterized by pronounced defects in judgment and prone to impulsive, generally amoral or antisocial behavior.

psychopathology [PSYCH] The systematic study of mental diseases.

psychopharmacology [PSYCH] The science that deals with the action of drugs on mental function.

psychophysics [PSYCH] **1.** The study of mental processes by physical methods. **2.** The study of the relations of stimuli to the sensations they produce.

psychophysiologic nervous system reaction *See* neurasthenic neurosis.

psychosis [PSYCH] An impairment of mental functioning to the extent that it interferes grossly with an individual's ability to meet the ordinary demands of life, characterized generally by severe affective disturbance, profound introspection, and withdrawal from reality, formation of delusions or hallucinations, and regression presenting the appearance of personality disintegration.

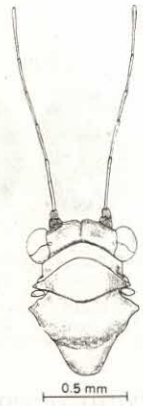
psychosomatic [MED] Of or pertaining to the interrelationship between mental processes and somatic functions.

psychosomatograph [ENG] An instrument for recording muscular action currents or physical movements during tests of mental–physical coordination.

psychosurgery [MED] The branch of medicine that deals with the treatment of various psychoses, severe neuroses, and chronic painful conditions by means of operative procedures on the brain.

psychotaxis [PSYCH] Involuntary adjustment of a person's thoughts and behavior in order to retain the agreeable and avoid the disagreeable; an ego defense mechanism.
psychotherapy [PSYCH] The use of psychological means in the treatment of emotional and mental disorders.
psychotomimetic [PSYCH] **1.** Mimicking a psychotic disorder. **2.** Pertaining to any drug or compound, such as lysergic acid diethylamide or mescaline, which can induce a psychotic-like state.
psychotropic [PSYCH] Pertaining to any drug or agent having a particular affinity for or effect on the psyche.
psychromatic ratio [THERMO] Ratio of the heat-transfer coefficient to the product of the mass-transfer coefficient and humid heat for a gas-vapor system; used in calculation of humidity or saturation relationships.
psychrometer [ENG] A device comprising two thermometers, one a dry bulb, the other a wet or wick-covered bulb, used in determining the moisture content or relative humidity of air or other gases. Also known as wet and dry bulb thermometer.
psychrometric calculator [ENG] A device for quickly computing certain psychrometric data, usually the dew point and the relative humidity, from known values of the dry- and wet-bulb temperatures and the atmospheric pressure.
psychrometric chart [THERMO] A graph each point of which represents a specific condition of a gas-vapor system (such as air and water vapor) with regard to temperature (horizontal scale) and absolute humidity (vertical scale); other characteristics of the system, such as relative humidity, wet-bulb temperature, and latent heat of vaporization, are indicated by lines on the chart.
psychrometric formula [THERMO] The semiempirical relation giving the vapor pressure in terms of the barometer and psychrometer readings.
psychrometric tables [THERMO] Tables prepared from the psychrometric formula and used to obtain vapor pressure, relative humidity, and dew point from values of wet-bulb and dry-bulb temperature.
psychrometry [ENG] The science and techniques associated with measurements of the water vapor content of the air or other gases.
psychrophile [BIOL] An organism that thrives at low temperatures.
psychrophobia [PHYSIO] Abnormal sensitivity to cold. [PSYCH] An abnormal fear of the cold.
psychrophyte [ECOL] A plant adapted to the climatic conditions of the arctic or alpine regions.
Psyllidae [INV ZOO] The jumping plant lice, a family of the Homoptera in the series Sternorrhyncha in which adults have a transverse head with protuberant eyes and three ocelli, 6- to 10-segmented antennae, and wings with reduced but conspicuous venation.
pt *See* pint.
Pt *See* platinum.
PTA *See* factor XI; phosphotungstic acid.
ptarmigan [VERT ZOO] Any of various birds of the genus *Lagopus* in the family Tetraonidae; during the winter, plumage is white and hairlike feathers cover the feet.
PT boat *See* motor torpedo boat.
PTC *See* Christmas factor.
PTD *See* posttuning drift.
Pteraspidomorphi [VERT ZOO] The equivalent name for Diplorhina.
Pterasteridae [INV ZOO] A family of deep-water echinoderms in the order Spinulosida distinguished by having webbed spine fins.
Pteridophyta [BOT] The equivalent name for Polypodiophyta.
Pteridophytic *See* Paleophytic.
Pteridospermae [PALEOBOT] Seed ferns, a class of the Cycadicae comprising extinct plants characterized by naked seeds borne on large fernlike fronds.
Pteridospermophyta [PALEOBOT] The equivalent name for Pteridospermae.
Pteriidae [INV ZOO] Pearl oysters, a family of bivalve mollusks which have nacreous shells.
pterinophore [CYTOL] A yellow to orange chromatophore that contains pterine pigment.
pterion [ANTHRO] The region surrounding the sphenoparietal suture where the frontal bone, parietal bone, squama temporalis, and greater wing of the sphenoid bone come together most closely.
Pterobranchia [INV ZOO] A group of small or microscopic marine animals regarded as a class of the Hemichordata; all are sessile, tubicolous organisms with a U-shaped gut and three body segments.
pterochore [BOT] A type of plant that produces winged diseminules.
Pteroclidae [VERT ZOO] The sandgrouse, a family of gramnivorous birds in the order Columbiformes; mainly an Afro-Asian group resembling pigeons and characterized by cryptic coloration, usually corresponding with the soil color of the habitat.
pterodactyl [PALEON] The common name for members of the extinct reptilian order Pterosauria.
Pterodactyloidea [PALEON] A suborder of Late Jurassic and Cretaceous reptiles in the order Pterosauria distinguished by lacking tails and having increased functional wing length due to elongation of the metacarpels.
pteroic acid [BIOCHEM] $C_{14}H_{12}N_6O_3$ A crystalline amino acid formed by hydrolysis of folic acid or other pteroylglutamic acids.
Pteromalidae [INV ZOO] A family of hymenopteran insects in the superfamily Chalcidoidea.
Pteromedusae [INV ZOO] A suborder of hydrozoan coelenterates in the order Trachylina characterized by a modified, bipyramidal medusae.
Pterophoridae [INV ZOO] The plume moths, a family of the lepidopteran superfamily Pyralidoidea in which the wings are divided into featherlike plumes, maxillary palpi are lacking, and the legs are long.
Pteropidae [INV ZOO] The fruit bats, a large family of the Chiroptera found in Asia, Australia, and Africa.
Pteropoda [INV ZOO] The sea butterflies, an order of pelagic gastropod mollusks in the subclass Opisthobranchia in which the foot is modified into a pair of large fins and the shell, when present, is thin and glasslike.
Pteropodidae [VERT ZOO] A family of fruit-eating bats in the suborder Megachiroptera, characterized by primitive ears and by shoulder joints.
pteropod ooze [GEOL] A pelagic sediment containing at least 45% calcium carbonate in the form of tests of marine animals, particularly pteropods.
Pteropsida [BOT] A large group of vascular plants characterized by having parenchymatous leaf gaps in the stele and by having leaves which are thought to have originated in the distant past as branched stem systems.
Pterosauria [PALEON] An extinct order of flying reptiles of the Mesozoic era belonging to the subclass Archosauria; the wing resembled that of a bat, and a large heeled sternum supported strong wing muscles.
pterostigma [INV ZOO] Opaque thickened spot occurring on the costal margin of an insect wing.
pteroylglutamic acid *See* folic acid.
pterygium [MED] **1.** A triangular mass of mucous membrane growing on the conjunctiva, usually near the inner canthus. **2.** Overgrowth of the cuticle forward on the nail. [VERT ZOO] A generalized vertebrate limb.
pterygoid bone [VERT ZOO] A rodlike bone or group of bones forming a portion of the palatoquadrate arch in lower vertebrates.
pterygopalatine fossa [ANAT] The gap between the pterygoid process of the sphenoid bone and the maxilla and palatine bone.
pterygoquadrate [EMBRYO] Of, pertaining to, or being the first branchial arch in lower vertebrate embryos; gives rise to most of the upper jaw.
Ptiliidae [INV ZOO] The feather-winged beetles, a family of coleopteran insects in the superfamily Staphylinoidea.
Ptilodactylidae [INV ZOO] The toed-winged beetles, a family of the Coleoptera in the superfamily Dryopoidea.
Ptilodontoidea [PALEON] A suborder of extinct mammals in the order Multituberculata.
ptilolite *See* mordenite.
Ptinidae [INV ZOO] The spider beetles, a family of coleopteran insects in the superfamily Bostrichoidea.
PTM *See* pulse-time modulation.
Ptolemaic system [ASTRON] The movements of the solar system according to Ptolemy; supposedly, the earth was a fixed center, with the sun and moon revolving about it in circular

PSYLLIDAE

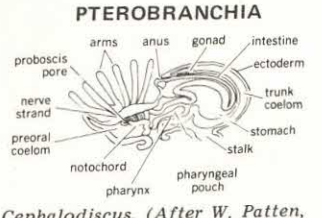


Anterior dorsum of a psyllid.

PTERIDOSPERMAE

Reconstruction of a seed fern. Note appearance of adventitious roots on the lower portion of the stem.

PTEROBRANCHIA



Cephalodiscus. (After W. Patten, from H. V. Neal and H. W. Rand, Comparative Anatomy, Blakiston-McGraw-Hill, 1936)

orbits; planets revolved in small circles (epicycles) whose centers revolved about the earth in larger circles (deferents).

ptosis [MED] Prolapse, abnormal depression, or falling down of an organ or part; applied especially to drooping of the upper eyelid, from paralysis of the third cranial nerve.

PTRM *See* partial thermoremanent magnetization.

ptyalase *See* ptyalin.

ptyalin [BIOCHEM] A diastatic enzyme found in saliva which catalyzes the hydrolysis of starch to dextrin, maltose, and glucose, and the hydrolysis of sucrose to glucose and fructose. Also known as ptyalase; salivary amylase; salivary diastase.

Ptychodactiaria [INV ZOO] An order of the zoantharian anthozoans of the phylum Coelenterata known only from two genera, *Ptychodactis* and *Dactylanthus*.

Ptychomniaceae [BOT] A family of mosses in the order Isobryales distinguished by an eight-ribbed capsule.

ptychotis oil *See* ajowan oil.

Ptyctodontida [PALEON] An order of Middle and Upper Devonian fishes of the class Placodermi in which both the head and trunk shields are present, and the joint between them is a well-differentiated and variable structure.

ptygma [GEOL] Pegmatitic material with migmatite or gneiss, resembling disharmonic folds. Also known as ptygmatic fold.

ptygmatic fold *See* ptygma.

p-type conductivity [ELECTR] The conductivity associated with holes in a semiconductor, which are equivalent to positive charges.

p-type crystal rectifier [ELECTR] Crystal rectifier in which forward current flows when the semiconductor is positive with respect to the metal.

p-type semiconductor [ELECTR] An extrinsic semiconductor in which the hole density exeeds the conduction electron density.

p^+-type semiconductor [ELECTR] A *p*-type semiconductor in which the excess mobile hole concentration is very large.

p-type silicon [ELECTR] Silicon to which more impurity atoms of acceptor type (with valence of 3, such as boron) than of donor type (with valence of 5, such as phosphorus) have been added, with the result that the hole density exceeds the conduction electron density.

Pu *See* plutonium.

puberty [PHYSIO] The period at which the generative organs become capable of exercising the function of reproduction; signalized in the boy by a change of voice and discharge of semen, in the girl by the appearance of the menses.

puberulic acid [BIOCHEM] $(HO)_3(C_7H_2O)COOH$ A keto acid formed as a metabolic product of certain species of *Penicillium;* has some germicidal activity against gram-positive bacteria.

pubic arch [ANAT] The arch formed by the conjoined rami of the pubis and ischium.

pubic crest [ANAT] The crest extending from the pubic tubercle to the medial extremity of the pubis.

pubic height [ANTHRO] A measure of the vertical distance from the pubis to the floor taken when the subject is in a standing position.

pubic symphysis [ANAT] The fibrocartilaginous union of the pubic bones. Also known as symphysis pubis.

pubis [ANAT] The pubic bone, the portion of the hipbone forming the front of the pelvis.

public address system *See* sound reinforcement system.

public area [BUILD] The total nonrentable area of a building, such as public conveniences and rest rooms.

public communications service [COMMUN] Telephone or telegraph service provided for the transmission of unofficial communications for the public.

public correspondence [COMMUN] Any telecommunications which offices and stations at the disposal of the public must accept for transmission.

public data [COMPUT SCI] Data that are open to all users, with no security measures necessary as far as reading is concerned.

public health [MED] **1.** The state of health of a community or of a population. **2.** The art and science dealing with the protection and improvement of community health.

public-key algorithm [COMMUN] A cryptographic algorithm in which one key (usually the enciphering key) is made public and a different key (usually the deciphering key) is kept secret; it must not be possible to deduce the private key from the public key.

public radio communications services [COMMUN] Land, mobile, and fixed services, the stations of which are open to public correspondence.

public safety frequency bands [COMMUN] Radio-frequency bands allocated in the United States for communication on land between base stations and mobile stations or between mobile stations by police, fire, highway, forestry, and emergency services.

public-safety radio service [COMMUN] Any service of radio communication essential to either the discharge of non-Federal governmental functions relating to public safety responsibilities or the alleviation of an emergency endangering life or property, the radio transmitting facilities of which are defined as fixed, land, or mobile stations.

public switched network [COMMUN] A national telephone network as contrasted with private lines and private exchanges.

public utility [IND ENG] A business organization considered by law to be vested with public interest and subject to public regulation.

public works [IND ENG] Government-owned and financed works and improvements for public enjoyment or use.

pucherite [MINERAL] $BiVO_4$ A reddish-brown orthorhombic mineral composed of bismuth vanadate, occurring as small crystals.

puckering [MET] Corrugations in metal parts resulting from pressing or drawing.

pudding ball *See* armored mud ball.

puddingstone [GEOL] In Great Britain, a conglomerate consisting of rounded pebbles whose colors are in marked contrast with the matrix, giving a section of the rock the appearance of a raisin pudding.

puddle [ENG] To apply water in order to settle loose dirt. [MET] A batch of molten iron within the puddling furnace.

puddling [MET] A process for the production of wrought iron by agitation of a bath of molten pig iron with iron oxide in order to reduce the carbon, silicon, phosphorus, and manganese content.

puddling furnace [MET] A coal-fired reverberatory furnace for puddling pig iron.

puelche [METEOROL] An east wind which has crossed the Andes; the Andean foehn of the South American west coast.

puerperal sepsis [MED] A toxic condition caused by infection in the birth canal, occurring as a complication or sequel of pregnancy.

puerperium [MED] **1.** The state of a woman during labor or immediately after delivery. **2.** The period from delivery to the time when the uterus returns to normal size, about 6 weeks.

puff [ELEC] *See* picofarad. [MECH ENG] A small explosion within a furnace due to combustion conditions.

puff cone *See* mud cone.

puffer [MIN ENG] A small stationary engine used in coal mines for hoisting material.

puff of wind [METEOROL] A slight local breeze which causes a patch of ripples on the surface of the sea.

pug mill [MECH ENG] A machine for mixing and tempering a plastic material by the action of blades revolving in a drum or trough.

puking [CHEM ENG] In a distillation column, the foaming and rising of liquid so that part of it is driven out of the vessel through the vapor line.

pulaskite [PETR] A light-colored, feldspathoid-bearing, granular or trachytoid alkali syenite composed chiefly of orthoclase, soda pyroxene, arfvedsonite, and nepheline.

pulegium oil *See* hedeoma oil.

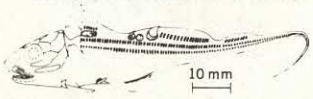
Pulfrich refractometer [OPTICS] A critical angle refractometer in which the material to be tested rests on a prism of material of known higher index of refraction and angle, and the angle of refraction of light which is directed at the interface between the two materials at grazing incidence is observed.

pull-apart [GEOL] A precompaction sedimentary structure having the appearance of boudinage and consisting of beds that have been stretched and pulled apart into relatively short slabs.

pull crack [MET] A crack in a casting caused by contraction strains during cooling and resulting from the shape of the casting.

puller [MECH ENG] A lever-operated chain or wire-rope hoist for lifting or pulling at any angle, which has a reversible ratchet mechanism in the lever permitting short-stroke operation for

PTYCTODONTIDA



Rhamphodopsis threiplandi from the Middle Devonian of Scotland. Restoration of skeleton with outline of body in lateral aspect. *(After Roger S. Miles)*

both tensioning and relaxing, and which holds the loads with a Weston-type friction brake or a releasable ratchet. Also known as come-along.

pulley [DES ENG] A wheel with a flat, round, or grooved rim that rotates on a shaft and carries a flat belt, V-belt, rope, or chain to transmit motion and energy.

pulley lathe [MECH ENG] A lathe for turning pulleys.

pulley stile [BUILD] The upright part of a window frame which holds the pulley and guides the sash.

pulley top [MECH ENG] A top with a long shank used to tap setscrew holes in pulley hubs.

pulling [ELECTR] An effect that forces the frequency of an oscillator to change from a desired value; causes include undesired coupling to another frequency source or the influence of changes in the oscillator load impedance. [PETRO ENG] Withdrawing sucker rods and production tubing from a pumping well prior to cleaning out or replacing parts of the pump.

pulling figure [ELECTR] The total frequency change of an oscillator when the phase angle of the reflection coefficient of the load impedance varies through 360°, the absolute value of this reflection coefficient being constant at 0.20.

pulling pillars *See* pillaring.

pull-in torque [MECH ENG] The largest steady torque with which a motor will attain normal speed after accelerating from a standstill.

pullorum disease [VET MED] A highly fatal disease of chickens and other birds caused by *Salmonella pullorum*, characterized by weakness, lassitude, lack of appetite, and whitish or yellowish diarrhea. Also known as bacillary white diarrhea; white diarrhea.

pull-out torque [MECH ENG] Th largest torque under which a motor can operate without sharply losing speed.

pull rope [MIN ENG] **1.** The rope that pulls a journey of loaded cars on a haulage plane. **2.** The rope that pulls the loaded scoop or bucket in a scraper loader layout. Also known as main rope.

pullshovel *See* backhoe.

pull strength [MECH] A unit in tensile testing; the bond strength in pounds per square inch.

pull tube [PETRO ENG] Tube used in rod-type, traveling-barrel oil well pumps to connect the pump plunger with the seating anchor.

pulmonary anthrax [MED] A form of anthrax in humans caused by the inhalation of dust containing *Bacillus anthracis* spores.

pulmonary artery [ANAT] A large artery that conducts venous blood from the heart to the lungs of tetrapods.

pulmonary aspergillosis [MED] A form of aspergillosis caused by *Aspergillus fumigatus*, with symptoms resembling chronic tuberculosis.

pulmonary circulation [PHYSIO] The circulation of blood through the lungs for the purpose of oxygenation and the release of carbon dioxide. Also known as lesser circulation.

pulmonary edema [MED] An effusion of fluid into the alveoli and interstitial spaces of the lungs.

pulmonary plexus [ANAT] A nerve plexus composed chiefly of vagal fibers situated on the anterior and posterior aspects of the bronchi and accompanying them into the substance of the lung.

pulmonary stenosis [MED] Narrowing of the orifice of the pulmonary artery.

pulmonary valve [ANAT] A valve consisting of three semilunar cusps situated between the right ventricle and the pulmonary trunk.

pulmonary vein [ANAT] A large vein that conducts oxygenated blood from the lungs to the heart in tetrapods.

Pulmonata [INV ZOO] A subclass of the gastropod mollusks which contains the "lung"-bearing snails; the gills have been lost and in their place the mantle cavity has become a pulmonary sac.

pulp [ANAT] A mass of soft spongy tissue in the interior of an organ. [BOT] The soft succulent portion of a fruit. [ENG] *See* slime. [MATER] The cellulosic material produced by reducing wood mechanically or chemically and used in making paper and cellulose products. Also known as wood pulp.

pulpboard [MATER] Chipboard to which is added a percentage of mechanical wood pulp.

pulp cavity [ANAT] The space within the central part of a tooth containing the dermal pulp and made up of the pulp chamber and a root canal.

pulp chamber [ANAT] The coronal portion of the central cavity of a tooth.

pulper [MECH ENG] A machine that converts materials to pulp, for example, one that reduces paper waste to pulp.

pulping [ENG] Reducing wood to pulp.

pulp molding [ENG] A plastics-industry process in which a resin-impregnated pulp material is preformed by application of a vacuum, after which it is oven-cured and molded.

pulpotomy [MED] Surgical removal of the pulp of a tooth.

pulpstone [MATER] A block of sandstone cut into wheels for grinding, especially wood pulp in paper manufacture.

pulpwood [MATER] Any wood that can be reduced to pulp.

pulsar [ASTROPHYS] A celestial radio source, emitting intense short bursts of radio emission; the periods of known pulsars range between 33 milliseconds and 3.75 seconds, and pulse durations range from 2 to about 150 milliseconds with longer-period pulsars generally having a longer pulse duration.

pulsatance [PHYS] Angular velocity in radians, equal to 2π times frequency in hertz.

pulsating current [ELEC] Periodic direct current.

pulsating electromotive force [ELEC] Sum of a direct electromotive force and an alternating electromotive force. Also known as pulsating voltage.

pulsating flow [ENG] Irregular fluid flow in a piping system often resulting from the pressure variations of reciprocating compressors or pumps within the system.

pulsating star [ASTRON] Variable star whose luminosity fluctuates as the star expands and contracts; the variation in brightness is thought to come from the periodic change of radiant energy to gravitational energy and back.

pulsating voltage *See* pulsating electromotive force.

pulsation [PHYSIO] A beating or throbbing, usually rhythmic, as of the heart or an artery.

pulsation dampening [ENG] Device installed in a fluid piping system (gas or liquid) to eliminate or even out the fluid-flow pulsations caused by reciprocating compressors, pumps, and such.

pulsation welding *See* multiple-impulse welding.

pulse [PHYS] A variation in a quantity which is normally constant; has a finite duration and is usually brief compared to the time scale of interest. [PHYSIO] **1.** The regular, recurrent, palpable wave of arterial distention due to the pressure of the blood ejected with each contraction of the heart. **2.** A single wave.

pulse altimeter [ENG] A device which is used to measure the distance of an aircraft above the ground by sending out radar signals in short pulses and measuring the time delay between the leading edge of the transmitted pulse and that of the pulse returned from the ground.

pulse amplifier [ELEC] An amplifier designed specifically to amplify electric pulses without appreciably changing their waveforms.

pulse amplitude [PHYS] The peak, average, effective, instantaneous, or other magnitude of a pulse, usually with respect to the normal constant value; the exact meaning should be specified when giving a numerical value.

pulse-amplitude discriminator [ENG] Electronic instrument used to investigate the amplitude distribution of the pulses produced in a nuclear detector.

pulse-amplitude modulation [COMMUN] Amplitude modulation of a pulse carrier. Abbreviated PAM.

pulse-amplitude modulation-frequency modulation [COMMUN] System in which pulse-amplitude-modulated subcarriers are used to frequency-modulate a second carrier; binary digits are formed by the absence or presence of a pulse in an assigned position.

pulse analyzer [ELECTR] An instrument used to measure pulse widths and repetition rates, and to display on a cathode-ray screen the waveform of a pulse.

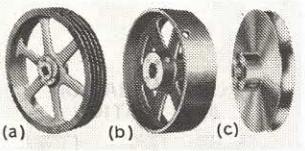
pulse bandwidth [COMMUN] The bandwidth outside of which the amplitude of a pulse-frequency spectrum is below a prescribed fraction of the peak amplitude.

pulse beating [COMMUN] Intermodulation of pulse-modulated waves.

pulse cable [COMMUN] A communications cable, capable of transmitting pulses without unacceptable distortion.

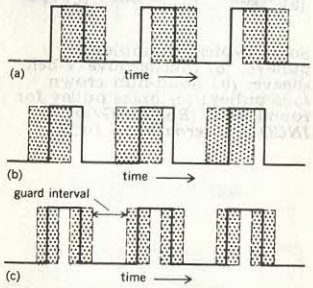
pulse carrier [COMMUN] A pulse train used as a carrier.

PULLEY



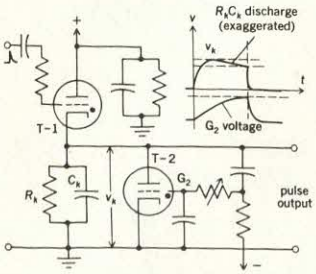
Some typical examples of pulleys. *(a)* Multigroove V-belt sheave; *(b)* Solid-hub crown face pulley; *(c)* brass pulley for round belt. *(Boston Gear, INCOM International Inc.)*

PULSE-DURATION MODULATION



Types of pulse-duration modulation. *(a)* Trailing edge modulated, leading edge fixed. *(b)* Leading edge modulated, trailing edge fixed. *(c)* Both edges modulated. Solid lines indicate duration of unmodulated pulses, shaded areas limits of maximum modulation. *(From H. S. Black, Modulation Theory, Van Nostrand, 1953)*

PULSE GENERATOR



Thyratron pulse generator, an example of a pulse generator having a controllable pulse width. Tube T-1 fires when positive triggering pulse is applied, charging capacitor C_k to some positive potential v_k which then slowly decreases as C_k discharges through resistor R_k. Grid G_2 of tube T-2 rises until it becomes sufficiently positive to fire T-2, which then acts as a low impedance across C_k discharging it to near ground potential.

pulse circuit [ELECTR] An active electrical network designed to respond to discrete pulses of current or voltage.

pulse code [COMMUN] A code consisting of various combinations of pulses, such as the Morse code, Baudot code, and the binary code used in computers.

pulse-coded scanning beam [NAV] **1.** A radio or radar beam which is swept over a sector of space and is accompanied by a repeated pattern of pulses that is varied to indicate the position of the beam in space. **2.** A system of ground equipment that generates such beams at microwave frequencies to furnish guidance to aircraft making microwave landings. Abbreviated PCSB.

pulse-code modulation [COMMUN] Modulation in which the peak-to-peak amplitude range of the signal to be transmitted is divided into a number of standard values, each having its own three-place code; each sample of the signal is then transmitted as the code for the nearest standard amplitude. Abbreviated PCM.

pulse-code modulation television [COMMUN] A television system in which digital signals using a pulse code are transmitted, rather than analog signals.

pulse coder *See* coder.

pulse coding and correlation [COMMUN] A general technique concerning a variety of methods used to change the transmitted waveform and then decode upon its reception; pulse compression is a special form of pulse coding and correlation.

pulse column [CHEM ENG] Continuous-phase process column (such as liquid only or gas only) in which the flow-through is pulsating; used to increase mass-transfer rates, as in a liquid-liquid extraction operation.

pulse communication [COMMUN] Radio communication using pulse modulation.

pulse compression [ELECTR] A matched filter technique used to discriminate against signals which do not correspond to the transmitted signal.

pulse-compression radar [ENG] A radar system in which the transmitted signal is linearly frequency-modulated or otherwise spread out in time to reduce the peak power that must be handled by the transmitter; signal amplitude is kept constant; the receiver uses a linear filter to compress the signal and thereby reconstitute a short pulse for the radar display.

pulse counter [ELECTR] A device that indicates or records the total number of pulses received during a time interval.

pulsed-bed sorption [CHEM ENG] Solid-liquid countercurrent adsorption process (such as an ion-exchange process) in which the granulated solids bed and the solution flow alternately, in opposite directions.

pulse decay time [COMMUN] The interval of time required for the trailing edge of a pulse to decay from 90% to 10% of the peak pulse amplitude.

pulse-delay network [ELECTR] A network consisting of two or more components such as resistors, coils, and capacitors, used to delay the passage of a pulse.

pulse demoder [COMMUN] Circuit that responds only to pulse signals having the specified spacing between pulses for which the device is adjusted. Also known as constant-delay discriminator.

pulse discriminator [ELECTR] A discriminator circuit that responds only to a pulse having a particular duration or amplitude.

pulsed laser [OPTICS] A laser in which a pulse of coherent light is produced at fixed time intervals, as required for ranging and tracking applications or to permit higher output power than can be obtained with continuous operation.

pulsed light [OPTICS] A beam of light whose intensity is modulated in some prescribed manner; analogous to a radar pulse.

pulsed-light ceilometer *See* pulsed-light cloud-height indicator.

pulsed-light cloud-height indicator [ENG] An instrument used for the determination of cloud heights; it operates on the principle of pulse radar, employing visible light rather than radio waves. Also known as pulsed-light ceilometer.

pulse-Doppler radar [ENG] Pulse radar that uses the Doppler effect to obtain information about the velocity of a target.

pulsed oscillator [ELECTR] An oscillator that generates a carrier-frequency pulse or a train of carrier-frequency pulses as the result of self-generated or externally applied pulses.

pulse dot soldering iron [ENG] A soldering iron that provides heat to the tip for a precisely controlled time interval, as required for making a good soldered joint without overheating adjacent parts.

pulsed reactor [NUCLEO] A research nuclear reactor in which continual short, intense surges of power and radiation can be produced; the neutron flux during the surge is much higher than could be tolerated during steady-state operation.

pulse droop [ELECTR] A distortion of an otherwise essentially flat-topped rectangular pulse, characterized by a decline of the pulse top.

pulsed ruby laser [OPTICS] A laser in which ruby is used as the active material; the extremely high pumping power required is obtained by discharging a bank of capacitors through a special high-intensity flash tube, giving a coherent beam that lasts for about 0.5 millisecond.

pulsed transfer function [CONT SYS] The ratio of the z-transform of the output of a system to the z-transform of the input, when both input and output are trains of pulses. Also known as discrete transfer function; z-transfer function.

pulse duration [COMMUN] The time interval between the first and last instants at which the instantaneous amplitude reaches a stated fraction of the peak pulse amplitude. Also known as pulse length; pulse width (both deprecated usages).

pulse-duration coder *See* coder.

pulse-duration discriminator [ELECTR] A circuit in which the sense and magnitude of the output are a function of the deviation of the pulse duration from a reference.

pulse-duration modulation [COMMUN] Modulation of a pulse carrier wherein the value of each instantaneous sample of a modulating wave produces a pulse of proportional duration by varying the leading, trailing, or both edges of a pulse. Abbreviated PDM. Also known as pulse-length modulation; pulse-width modulation.

pulse-duration modulation-frequency modulation [COMMUN] System in which pulse-duration-modulated subcarriers are used to frequency-modulate a second carrier. Also known as pulse-width modulation-frequency modulation.

pulse-echo method [MET] A nondestructive test in which pulses of energy are directed into a part, and the time for the echo to return from one or more surfaces is measured.

pulse form [PHYS] The amplitude of a pulse plotted as a function of time.

pulse-forming network [ELECTR] A network used to shape the leading or trailing edge of a pulse.

pulse-frequency modulation [COMMUN] A form of pulse-time modulation in which the pulse repetition rate is the characteristic varied. Abbreviated PFM.

pulse-frequency spectrum *See* pulse spectrum.

pulse generator [ELEC] *See* impulse generator. [ELECTR] A generator that produces repetitive pulses or signal-initiated pulses.

pulse group *See* pulse train.

pulse hardening [MET] A surface-hardening process performed by heating to the required temperature in a span of several milliseconds by using an energy and time-controlled pulse of very high power at a very high frequency, about 27 megahertz.

pulse height [ELECTR] The strength or amplitude of a pulse, measured in volts.

pulse-height analyzer [NUCLEO] An instrument capable of indicating the number of occurrences of pulses falling within each of one or more specified amplitude ranges; used to obtain the energy spectrum of nuclear radiations. Also known as kick-sorter (British usage); multichannel analyzer.

pulse-height discriminator [ELECTR] A circuit that produces a specified output pulse when and only when it receives an input pulse whose amplitude exceeds an assigned value. Also known as amplitude discriminator.

pulse-height selector [ELECTR] A circuit that produces a specified output pulse only when it receives an input pulse whose amplitude lies between two assigned values. Also known as amplitude selector; diffractional pulse-height discriminator.

pulse-height spectrum [PHYS] Distribution of various pulse wavelengths and strengths (heights) developed during activation analysis.

pulse improvement threshold [COMMUN] In a constant-amplitude pulse-modulation system, the condition in which the peak pulse voltage is greater than twice the peak noise voltage, after selection and before nonlinear processes such as amplitude clipping and limiting.

pulse integrator [ELECTR] An RC (resistance-capacitance) circuit which stretches in time duration a pulse applied to it.

pulse interference eliminator [ELECTR] Device which removes pulsed signals which are not precisely on the radar operating frequency.

pulse interference separator and blanker [ELECTR] Automatic interference blanker that will blank all video signals not synchronous with the radar pulse-repetition frequency.

pulse interleaving [COMMUN] A process in which pulses from two or more sources are combined in time-division multiplex for transmission over a common path.

pulse interval *See* pulse spacing.

pulse-interval modulation *See* pulse-spacing modulation.

pulsejet engine [AERO ENG] A type of compressorless jet engine in which combustion occurs intermittently so that the engine is characterized by periodic surges of thrust; the inlet end of the engine is provided with a grid to which are attached flap valves; these can be sucked inward by a negative differential pressure to allow a regulated amount of air to flow inward to mix with the fuel. Also known as aeropulse engine.

pulse jitter [COMMUN] A relatively small variation of the pulse spacing in a pulse train; the jitter may be random or systematic, depending on its origin, and is generally not coherent with any pulse modulation imposed.

pulse length *See* pulse duration.

pulse-length modulation *See* pulse-duration modulation.

pulse-link repeater [ELECTR] Arrangement of apparatus used in telephone signaling systems for receiving pulses from one E and M signaling circuit, and retransmitting corresponding pulses into another E and M signaling circuit.

pulse-mode multiplexing [COMMUN] A type of time-division multiplexing employing pulse-amplitude modulation in which a sequence of pulses is repeatedly transmitted, and the amplitude of each pulse in the sequence is modulated by a different communication channel.

pulse-modulated jamming [COMMUN] Use of jamming pulses of various widths and repetition rates.

pulse-modulated radar [ENG] Form of radar in which the radiation consists of a series of discrete pulses.

pulse modulation [COMMUN] A system of modulation in which the amplitude, duration, position, or mere presence of discrete pulses may be so controlled as to represent the message to be communicated.

pulse-numbers modulation [COMMUN] Modulation in which a pulse carrier's pulse density per unit time varies in accordance with a modulating wave, by making systematic omissions without changing the phase or amplitude of the transmitted pulses; as an example, the omission of every other pulse could correspond to zero modulation; the reinsertion of some or all pulses then corresponds to positive modulation, and the omission of more than every other pulse corresponds to negative modulation.

pulse operation [ELECTR] For microwave tubes, a method of operation in which the energy is delivered in pulses.

pulse period [COMMUN] In telephony, time required for one opening and closing of the loop of a calling telephone; for example, the time required to open and close the dial pulse springs once. Also known as impulse period.

pulse-phase modulation *See* pulse-position modulation.

pulse-position modulation [COMMUN] Modulation of a pulse carrier wherein the value of each instantaneous sample of a modulating wave varies the position in time of a pulse relative to its unmodulated time of occurrence. Abbreviated PPM. Also known as pulse-phase modulation.

pulse pressure [PHYSIO] The difference between the systolic and diastolic blood pressure.

pulser [CHEM ENG] Device used to create a pulsating fluid flow through a process vessel, such as a liquid-liquid or vapor-liquid extraction tower; used to increase contact and mass transfer rates. [ELECTR] A generator used to produce high-voltage, short-duration pulses, as required by a pulsed microwave oscillator or a radar transmitter.

pulse radar [ENG] Radar in which the transmitter sends out high-power pulses that are spaced far apart in comparison with the duration of each pulse; the receiver is active for reception of echoes in the interval following each pulse.

pulse radiolysis [PHYS CHEM] A method of studying fast chemical reactions in which a sample is subjected to a pulse of ionizing radiation, and the products formed by the resulting reactions are studied spectroscopically.

pulse rate [PHYSIO] The number of pulsations of an artery per minute.

pulse-rate telemetering [ELECTR] Telemetering in which the number of pulses per unit time is proportional to the magnitude of the measured quantity.

pulse recurrence rate *See* pulse repetition rate.

pulse recurrence time [COMMUN] Time elapsing between the start of one transmitted pulse and the next pulse; the reciprocal of the pulse repetition rate.

pulse regeneration [ELECTR] The process of restoring pulses to their original relative timings, forms, and magnitudes.

pulse repeater [ELECTR] Device used for receiving pulses from one circuit and transmitting corresponding pulses into another circuit; it may also change the frequencies and waveforms of the pulses and perform other functions.

pulse repetition frequency *See* pulse repetition rate.

pulse repetition rate [ELECTR] The number of times per second that a pulse is transmitted. Abbreviated PRR. Also known as pulse recurrence rate; pulse repetition frequency (PRF).

pulse rise time [COMMUN] The interval of time required for the leading edge of a pulse to rise from 10% to 90% of the peak pulse amplitude.

pulse scaler [ELECTR] A scaler that produces an output signal when a prescribed number of input pulses has been received.

pulse selector [ELECTR] A circuit or device for selecting the proper pulse from a sequence of telemetering pulses.

pulse shaper [ELECTR] A transducer used for changing one or more characteristics of a pulse, such as a pulse regenerator or pulse stretcher.

pulse spacing [PHYS] Time between corresponding points of successive pulses. Also known as pulse interval.

pulse-spacing modulation [COMMUN] A form of pulse-time modulation in which the pulse spacing is varied. Also known as pulse-interval modulation.

pulse spectrum [PHYS] The frequency distribution of the sinusoidal components of a pulse in relative amplitude and in relative phase. Also known as pulse-frequency spectrum.

pulse stretcher [ELECTR] A pulse shaper that produces an output pulse whose duration is greater than that of the input pulse and whose amplitude is proportional to the peak amplitude of the input pulse.

pulse subcarrier [COMMUN] One of a number of frequency-modulation carriers modulating a radio-frequency carrier, each of which is in turn pulse-modulated.

pulse synthesizer [ELECTR] A circuit used to supply pulses that are missing from a sequence due to interference or other causes.

pulse-time-modulated radiosonde [ENG] A radiosonde which transmits the indications of the meteorological sensing elements in the form of pulses spaced in time; the meteorological data are evaluated from the intervals between the pulses. Also known as time-interval radiosonde.

pulse-time modulation [COMMUN] Modulation in which the time of occurrence of some characteristic of a pulse carrier is varied from the unmodulated value; examples include pulse-duration, pulse-interval, and pulse-position modulation. Abbreviated PTM.

pulse tracking system [ENG] Tracking system which uses a high-energy, short-duration pulse radiated toward the target from which the velocity, direction, and range are determined by the characteristics of the reflected pulse.

pulse train [PHYS] A series of regularly recurrent pulses having similar characteristics. Also known as pulse group.

pulse-train analysis [COMMUN] A Fourier analysis of a pulse train.

pulse transformer [ELECTR] A transformer capable of operating over a wide range of frequencies, used to transfer nonsinusoidal pulses without materially changing their waveforms.

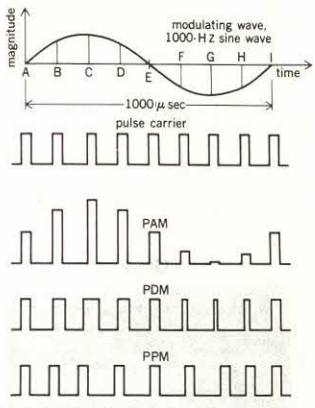
pulse transmitter [ELECTR] A pulse-modulated transmitter whose peak-power-output capabilities are usually large with respect to the average-power-output rating.

pulse-type altimeter *See* radar altimeter.

pulse-type telemetering [COMMUN] Signal transmission system with pulses as a function of time, but independent of electrical magnitude; in a pulse-counting system the number of pulses per unit time corresponds to the measured variable; in pulse-width or pulse-duration types, the length of the pulse is controlled by the measured variable.

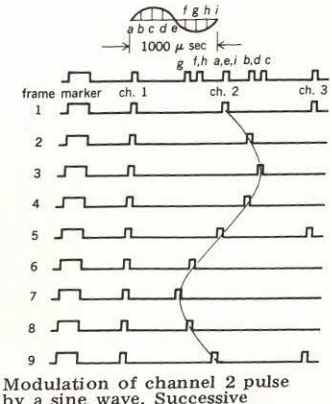
pulse voltage *See* impulse voltage.

PULSE MODULATION



Examples of pulse modulation. PAM = pulse-amplitude modulation, PDM = pulse-duration modulation, PPM = pulse-position modulation. *(From H. S. Black, Modulation Theory, Van Nostrand, 1953)*

PULSE-POSITION MODULATION



Modulation of channel 2 pulse by a sine wave. Successive diagrams show relative position in time of channel 2 pulse for nine successive samples, at phases of sine wave indicated by letters *a–i*. *(From H. S. Black, Modulation Theory, Van Nostrand, 1953)*

pulse wave [PHYSIO] A wave of increased pressure over the arterial system, started by contraction of septum and valves in the heart.

pulse width *See* pulse duration.

pulse-width discriminator [ELECTR] Device that measures the pulse length of video signals and passes only those whose time duration falls into some predetermined design tolerance.

pulse-width modulated static inverter [ELEC] A variation of the quasi-square-wave static inverter, operating at high frequency, in which the pulse width, and not the amplitude, of the square wave is adjusted to approximate the sine wave.

pulse-width modulation *See* pulse-duration modulation.

pulse-width modulation-frequency modulation *See* pulse-duration modulation-frequency modulation.

pulsing key [COMMUN] **1.** Method of passing voice frequency pulses over the line under control of a key at the original office; used with E and M supervision on intertoll dialing. **2.** System of signaling where numbered keys are depressed instead of using a dial.

pulsing transformer [ELEC] Transformer designed to supply pulses of voltage or current.

pulsometer [MECH ENG] A simple, lightweight pump in which steam forces water out of one of two chambers alternately.

pulverite [PETR] A sedimentary rock composed of silt- or clay-sized aggregates of nonclastic origin with a texture simulating a lutite of clastic origin.

pulverization *See* comminution.

pulverizer [MECH ENG] Device for breaking down of solid lumps into a fine material by cleavage along crystal faces.

pulvillus [INV ZOO] A small cushion or cushionlike pad, often covered with short hairs, on an insect's foot between the claws of the last segment.

pulvinus [BOT] A cushionlike enlargement of the base of a petiole which functions in turgor movements of leaves.

puma [VERT ZOO] *Felis concolor.* A large, tawny brown wild cat (family Felidae) once widespread over most of the Americas. Also known as American lion; catamount; cougar; mountain lion.

pumice [GEOL] A rock froth, formed by the extreme puffing up of liquid lava by expanding gases liberated from solution in the lava prior to and during solidification. Also known as foam; pumice stone; pumicite; volcanic foam.

pumice fall [GEOL] Pumice falling from a volcano eruption cloud.

pumiceous [GEOL] Pertaining to the texture of a pyroclastic rock, such as pumice, characterized by numerous small cavities presenting a spongy, frothy appearance.

pumice stone *See* pumice.

pumicite *See* pumice.

pumilith [GEOL] A lithified deposit of volcanic ash.

pump [ELECTR] Of a parametric device, the source of alternating-current power which causes the nonlinear reactor to behave as a time-varying reactance. [MECH ENG] A machine that draws a fluid into itself through an entrance port and forces the fluid out through an exhaust port.

pumpability [MATER] **1.** The property of a lubricating grease that causes it to flow under pressure through lines, nozzles, and fittings. **2.** The ability of any liquid, slurry, or suspension to be moved through a flow conduit by pressure from a pump.

pumpability test [ENG] Standard test to ascertain the lowest temperature at which a petroleum fuel oil may be pumped.

pumparound [CHEM ENG] A system or process vessel that moves liquid out of and back into the vessel at a new location; for example, in a bubble tower, the withdrawing of liquid from a plate or tray, followed by cooling, and returning to another plate to induce condensation of vapors.

pump bob [MECH ENG] A device such as a crank that converts rotary motion into reciprocating motion.

pump-down time [ENG] The length of time required to evacuate a leak-tested vessel.

pumped hydroelectric storage [ELEC] A method of energy storage in which excess electrical energy produced at times of low demand is used to pump water into a reservoir, and this water is released at times of high demand to operate hydroelectric generators.

pumped tube [ELECTR] An electron tube that is continuously connected to evacuating equipment during operation; large pool-cathode tubes are often operated in this manner.

pumpellyite [MINERAL] $Ca_2Al_3Si_3O_{12}(OH)$ A greenish epidotelike mineral that is probably related to clinozoisite. Also known as lotrite; zonochlorite.

pumpellyite-prehnite-quartz facies [PETR] A variety of low-temperature, moderate-pressure metamorphism.

pumphouse [CIV ENG] A building in which are housed pumps that supply an irrigation system, a power plant, a factory, a reservoir, a farm, a home, and so on.

pumping [FL MECH] Unsteadiness of the mercury in the barometer, caused by fluctuations of the air pressure produced by a gusty wind or due to the motion of a vessel. [PHYS] **1.** The application of optical, infrared, or microwave radiation of appropriate frequency to a laser or maser medium so that absorption of the radiation increases the population of atoms or molecules in higher energy states. Also known as electronic pumping. **2.** The removal of gases and vapors from a vacuum system.

pumping frequency [ELECTR] Frequency at which pumping is provided in a maser, quadrupole amplifier, or other amplifier requiring high-frequency excitation.

pumping loss [MECH ENG] Power consumed in purging a cylinder of exhaust gas and sucking in fresh air instead.

pumping pressure [PETRO ENG] Pressure required to inject (pump) water, gas, or acid into a pressurized petroleum reservoir.

pumping radiation [PHYS] Electromagnetic radiation applied to a laser or maser in the process of pumping.

pumping station [CIV ENG] A building in which two or more pumps operate to supply fluid flowing at adequate pressure to a distribution system.

pumping well [PETRO ENG] A producing oil well in which liquid products are recovered from the reservoir by means of a pump, rather than by gas lift.

pumpkin [BOT] Any of several prickly vines with large lobed leaves and yellow flowers in the genus Cucurbita of the order Violales; the fruit is orange-colored and large, with a firm rind.

pump off [PETRO ENG] In an oil well, to pump so rapidly that the oil level drops below the pump's standing valve.

pump oscillator [ELECTR] Alternating-current generator that supplies pumping energy for maser and parametric amplifiers; operates at twice or some higher multiple of the signal frequency.

puna [ECOL] An alpine biological community in the central portion of the Andes Mountains of South America characterized by low-growing, widely spaced plants that lack much green color most of the year.

punch [COMPUT SCI] **1.** A device for making holes representing information in a medium such as cards or paper tape, in response to signals sent to it. **2.** A hole in a medium such as a card or paper tape, generally made in an array with other holes (or lack of holes) to represent information. [MECH ENG] A tool that forces metal into a die for extrusion or similar operations.

punch card [COMPUT SCI] A medium by means of which data are fed into a computer in the form of rectangular holes punched in the card. Also known as punched card.

punched card *See* punch card.

punched-card accounting machines [COMPUT SCI] Machines and equipment, primarily electromechanical in operation, using punched cards as input/output media to record, sort, list, tabulate, select, merge, interpret, or total data.

punched-card equipment [COMPUT SCI] Data-processing equipment which is essentially card-oriented and is predominately electromechanical, such as encoders, key punchers, key tapes, mechanical sorters, collators, and tabulators.

punched-card field [COMPUT SCI] A set of columns fixed as to number and position into which the same item or items of data are regularly entered.

punched-card interpreter *See* interpreter.

punched-card reader *See* card reader.

punched-card reproducer *See* reproducer.

punched-card sorter *See* card sorter.

punched-plate screen [ENG] Flat, perforated plate with round, square, hexagonal, or elongated openings; used for screening (size classification) of crushed or pulverized solids.

punched tape *See* punch tape.

punched-tape reader *See* paper-tape reader.

punching [ENG] **1.** A piece removed from a sheet of metal or other material by a punch press. **2.** A method of extrusion, cold heading, hot forging, or stamping in a machine for which mating die sections determine the shape or contour of the work.

PUNA

Landscape of the puna in the Lake Titicaca area, Bolivia.

punching rate [COMPUT SCI] The number of cards, characters, blocks, fields, or words of information placed in the form of holes distributed on cards, or paper tape per unit of time.

punching station [COMPUT SCI] The position within a punched-card machine at which punching of the cards takes place.

punching track [COMPUT SCI] The metal plate along which a punch card moves through a card punch.

punch knife [COMPUT SCI] The part of the machinery of a card punch which cuts out a hole in a punch card.

punch position [COMPUT SCI] The location of the row in a columnated card; for example, in an 80-column card the rows or punch position may be 0 to 9 or X and Y corresponding to positions 11 and 12.

punch press [MECH ENG] **1.** A press consisting of a frame in which slides or rams move up and down, of a bed to which the die shoe or bolster plate is attached, and of a source of power to move the slide. Also known as drop press. **2.** Any mechanical press.

punch radius [DES ENG] The radius on the bottom end of the punch over which the metal sheet is bent in drawing.

punch tape [COMPUT SCI] A paper or plastic ribbon in which data may be represented by means of partially or completely punched holes; it generally has one row of small sprocket-feed holes and five, seven, or eight rows of larger data-representing holes. Also known as punched tape.

punch-tape code [COMPUT SCI] A code used to represent data on punch tape.

punch-through [ELECTR] An emitter-to-collector breakdown which can occur in a junction transistor with very narrow base region at sufficiently high collector voltage when the space-charge layer extends completely across the base region.

punctate [BIOL] Dotted; full of minute points.

punctuation bit [COMPUT SCI] A binary digit used to indicate the beginning or end of a variable-length record.

punctum remotum *See* far point.

puncture [ELEC] Disruptive discharge through insulation involving a sudden and large increase in current through the insulation due to complete failure under electrostatic stress. [SCI TECH] To pierce or indent.

puncture [ELEC] Disruptive discharge through insulation involving a sudden and large increase in current through the insulation due to complete failure under electrostatic stress. [SCI TECH] To pierce or indent.

puncture voltage [ELEC] The voltage at which a test specimen is electrically punctured.

punt [NAV ARCH] **1.** A heavily built boat of rectangular shape used by workmen employed in painting, cleaning, or repairing a ship's topsides when in sheltered waters. **2.** A square-ended boat used on shallow rivers and lakes, often propelled by poles.

pupa [INV ZOO] The quiescent, intermediate form assumed by an insect that undergoes complete metamorphosis; it follows the larva and precedes the adult stages and is enclosed in a hardened cuticle or a cocoon.

pupate [INV ZOO] **1.** To develop into a pupa. **2.** To pass through a pupal stage.

pupil [ANAT] The contractile opening in the iris of the vertebrate eye.

pupillary reflex [PHYSIO] **1.** Contraction of the pupil in response to stimulation of the retina by light. Also known as Whytt's reflex. **2.** Contraction of the pupil on accommodation for close vision, and dilation of the pupil on accommodation for distant vision. **3.** Contraction of the pupil on attempted closure of the eye. Also known as Westphal-Pilcz reflex; Westphal's pupillary reflex.

Pupin coil *See* loading coil.

Pupipara [INV ZOO] A section of cyclorrhaphous dipteran insects in the Schizophora series in which the young are born as mature maggots ready to become pupae.

pup jack *See* tip jack.

Puppis [ASTRON] A southern constellation; right ascension 8 hours, declination 40° south. Also known as Stern.

Purbeckian [GEOL] A stage of geologic time in Great Britain: uppermost Jurassic (above Bononian, below Cretaceous).

pure coal *See* vitrain.

pure culture [MICROBIO] A culture that contains cells of one kind, all progeny of a single cell.

pure forest [FOR] A forest in which one species makes up 80% or more of the total number of trees.

pure geometry [MATH] Geometry studied from the standpoint of its axioms and postulates rather than its objects.

pure imaginary number [MATH] A complex number $z = x + iy$, where $x = 0$.

pure mathematics [MATH] The intrinsic study of mathematical structures, with no consideration given as to the utility of the results for practical purposes.

pure procedure [COMPUT SCI] A procedure that never modifies any part of itself during execution.

pure projective geometry [MATH] The axiomatic study of geometric systems which exhibit invariance relative to a notion of projection.

pure research *See* basic research.

pure shear [MECH] A particular example of irrotational strain or flattening in which a body is elongated in one direction and shortened at right angles to it as a consequence of differential displacements on two sets of intersecting planes.

pure tone *See* simple tone.

pure Trojan group [ASTRON] The group of Trojan planets which lies near the Lagrangian point 60° behind Jupiter. Also known as Patroclus group.

purga [METEOROL] A severe storm similar to the blizzard and buran, which rages in the tundra regions of northern Siberia in winter.

purge date [COMPUT SCI] The date after which data are released and the storage area can be used for storing other data.

purge meter interlock [MECH ENG] A meter to maintain airflow through a boiler furnace at a specific level for a definite time interval; ensures that the proper air-fuel ratio is achieved prior to ignition.

purging [ENG] Replacing the atmosphere in a container by an inert substance to prevent formation of explosive mixtures. [MED] The condition in which there is rapid and continuous evacuation of the bowels. [SCI TECH] The act or process of cleaning and purifying.

purify [ENG] To remove unwanted constituents from a substance.

purine [BIOCHEM] A heterocyclic compound containing fused pyrimidine and imidazole rings; adenine and guanine are the purine components of nucleic acids and coenzymes.

purity [CHEM] The state of a chemical compound when no impurity can be detected by any experimental method; absolute purity is never reached in practice. [OPTICS] The degree to which a primary color is pure and not mixed with the other two primary colors.

purity coil [ELECTR] A coil mounted on the neck of a color picture tube, used to produce the magnetic field needed for adjusting color purity; the direct current through the coil is adjusted to a value that makes the magnetic field orient the three individual electron beams so each strikes only its assigned color of phosphor dots.

purity control [ELECTR] A potentiometer or rheostat used to adjust the direct current through the purity coil.

purity magnet [ELECTR] An adjustable arrangement of one or more permanent magnets used in place of a purity coil in a color television receiver.

purity of state [STAT MECH] Property of a system which is definitely in a certain quantum state, rather than having a certain probability of being in any of several quantum states.

Purkinje cell [HISTOL] Any of the cells of the cerebral cortex with large, flask-shaped bodies forming a single cell layer between the molecular and granular layers.

Purkinje effect [PHYSIO] When illumination is reduced to a low level, slowly enough to allow adaptation by the eye, the sensation produced by the longer-wave stimuli (red, orange) decreases more rapidly than that produced by shorter-wave stimuli (violet, blue). Also spelled Parkinje effect.

Purkinje fibers [HISTOL] Modified cardiac muscle fibers composing the terminal portion of the conducting system of the heart.

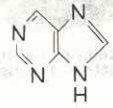
purl [HYD] A swirling or eddying stream or rill, moving swiftly around obstructions.

purlin [BUILD] A horizontal roof beam, perpendicular to the trusses or rafters; supports the roofing material or the common rafters.

puromycin [MICROBIO] $C_{22}H_{29}O_5N_7$ A colorless, crystalline broad-spectrum antibiotic produced by a strain of *Streptomyces*.

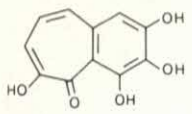
purple bacteria [MICROBIO] Any of various photosynthetic

PURINE



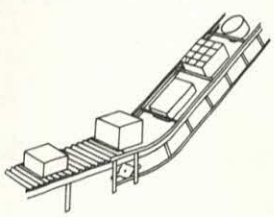
Structural formula of purine.

PURPUROGALLIN



Structural formula.

PUSH-BAR CONVEYOR

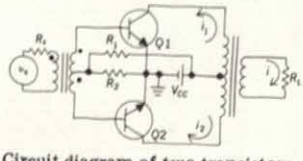


Push-bar conveyor, a basic type of chain conveyor.

PUSH-BUTTON DIALING

Desk-type telephone equipped for push-button dialing.

PUSH-PULL AMPLIFIER



Circuit diagram of two transistors, $Q1$ and $Q2$, in a push-pull arrangement. Here, v_s = source voltage, R_s = source resistance, R_L = load resistance, V_{CC} = collector supply voltage.

bacteria that contain bacteriochlorophyll, distinguished by purplish or reddish-brown pigments.

purple blende *See* kermesite.

purple blotch [PL PATH] A fungus disease of onions, garlic, and shallots caused by *Alternaria porri* and characterized by small white spots which become large purplish blotches.

purple boundary [OPTICS] A straight line connecting the ends of the spectrum locus on the chromaticity diagram.

purple lakes [MATER] A class of lake (pigment) used in printing inks; derived from a combination of such compounds as β-hydroxynaphthoic acid and 2-diazonaphthalene-1-sulfonic acid.

purple light [GEOPHYS] The faint purple glow observed on clear days over a large region of the western sky after sunset and over the eastern sky before sunrise.

purple nonsulfur bacteria [MICROBIO] Any of various purple photosynthetic bacteria, especially members of the family Athiorhodaceae, that utilize organic hydrogen donor compounds.

purple of Cassius *See* gold tin purple.

purple plague [ELECTR] A compound formed by intimate contact of gold and aluminum, which appears on silicon planar devices and integrated circuits using gold leads bonded to aluminum thin-film contacts and interconnections, and which seriously degrades the reliability of semiconductor devices.

purple salt *See* potassium permanganate.

purple sulfur bacteria [MICROBIO] Any of various anaerobic photosynthetic purple bacteria, especially in the family Thiorhodaceae, that utilize H_2S and other inorganic sulfur compounds as a source of hydrogen, while the carbon source can be carbon monoxide.

purple-top [PL PATH] A virus disease of potato plants characterized by purplish or chlorotic discoloration of the top shoots, swelling of axillary branches, and severe wilting.

purpura [MED] Spontaneous hemorrhages into tissues such as joints, skin, and mucosal surfaces.

purpurin [ORG CHEM] $C_{14}H_8O_5$ A compound crystallizing as long orange needles from dilute alcohol solutions; used in the manufacture of dyes, and as a reagent for the detection of boron. Also known as natural red; 1,2,4-trihydroxyanthraquinone.

purpurin red *See* anthrapurpurin.

purpurite [MINERAL] $(Mn,Fe)PO_4$ A dark-red or purple mineral composed of ferric-manganic phosphate; it is isomorphous with heterosite.

purpurogallin [ORG CHEM] $C_{11}H_8O_5$ A red, crystalline compound, the aglycone of several glycosides from nutgalls; decomposes at 274–275°C; soluble in boiling alcohol, methanol, and acetone; used as an antioxidant or to retard metal contamination in hydrocarbon fuels or lubricants.

purse seine [ENG] A net that can be dropped by two boats to encircle a school of fish, then pulled together at the bottom and raised, thereby catching the fish.

purse seiners [NAV ARCH] Fishing boats equipped to fish with a purse seine.

purulent [MED] Consisting of, containing, or forming pus.

purupuru *See* pinta.

pus [MED] A viscous, creamy, pale-yellow or yellow-green fluid produced by liquefaction necrosis in a neutrophil-rich exudate.

push-bar conveyor [MECH ENG] A type of chain conveyor in which two endless chains are cross-connected at intervals by push bars which propel the load along a stationary bed or trough of the conveyor.

push bench [MECH ENG] A machine used for drawing tubes of moderately heavy gage by cupping metal sheet and applying pressure to the inside bottom of the cup to force it through a die.

push-button dialing [ELECTR] Dialing a number by pushing buttons on the telephone rather than turning a circular wheel; each depressed button causes a transistor oscillator to oscillate simultaneously at two different frequencies, generating a pair of audio tones which are recognized by central-office (or PBX) switching equipment as digits of a telephone number. Also known as tone dialing; touch call.

push-button switch [ELEC] A master switch that is operated by finger pressure on the end of an operating button.

push-button tuner [ELECTR] A device that automatically tunes a radio receiver or other piece of equipment to a desired frequency when the button assigned to that frequency is pressed.

push development [GRAPHICS] The use of extended development times to improve the speed and detective quantum efficiency of a photographic plate.

push-down automaton [COMPUT SCI] A nondeterministic, finite automaton with an auxiliary tape having the form of a push-down storage.

push-down list [COMPUT SCI] An ordered set of data items so constructed that the next item to be retrieved is the item most recently stored; in other words, last-in, first-out (LIFO).

push-down storage [COMPUT SCI] A computer storage in which each new item is placed in the first location in the storage and all the other items are moved back one location; it thus follows the principle of a push-down list. Also known as cellar; nesting storage; running accumulator.

pusher grade *See* helper grade.

pusher tractor [MIN ENG] A bulldozer exerting pressure on the rear of a scraper-loader while the loader is digging and loading unconsolidated ground during opencast mining.

push fit [DES ENG] A hand-tight sliding fit between a shaft and a hole.

pushing [COMPUT SCI] The placing of a data element at the top of a stack. [ELEC] A change in the resonant frequency of a circuit due to changes in the applied voltages.

push moraine [GEOL] A broad, smooth, arc-shaped ridge consisting of material mechanically pushed or shoved along by an advancing glacier. Also known as push-ridge moraine; shoved moraine; thrust moraine; upsetted moraine.

push nipple [MECH ENG] A short length of pipe used to connect sections of cast iron boilers.

push-pull amplifier [ELECTR] A balanced amplifier employing two similar electron tubes or equivalent amplifying devices working in phase opposition.

push-pull currents *See* balanced currents.

push-pull electret transducer [ELECTR] A type of transducer in which a foil electret is sandwiched between two electrodes and is specially treated or arranged so that the electrodes exert forces in opposite directions on the diaphragm, and the net force is a linear function of the applied voltage.

push-pull magnetic amplifier [ELECTR] A realization of a push-pull amplifier using magnetic amplifiers.

push-pull oscillator [ELECTR] A balanced oscillator employing two similar electron tubes or equivalent amplifying devices in phase opposition.

push-pull sound track [ENG ACOUS] A sound track having two recordings so arranged that the modulation in one is 180° out of phase with that in the other.

push-pull transformer [ELECTR] An audio-frequency transformer having a center-tapped winding and designed for use in a push-pull amplifier.

push-pull transistor [ELECTR] **1.** A realization of a push-pull amplifier using transistors. **2.** A Darlington circuit in which the two transistors required for a push-pull amplifier exist in a single substrate.

push-pull voltages *See* balanced voltages.

push-push amplifier [ELECTR] An amplifier employing two similar electron tubes with grids connected in phase opposition and with anodes connected in parallel to a common load; usually used as a frequency multiplier to emphasize even-order harmonics; transistors may be used in place of tubes.

push-ridge moraine *See* push moraine.

push rod [MECH ENG] A rod, as in an internal combustion engine, which is actuated by the cam to open and close the valves.

push-to-talk circuit [ELEC] Simplex circuit in which changeover from the receive to transmit state is accomplished by depressing a single spring-return switch, and releasing the switch returns the circuit to the receive state; the push-to-talk switch is located on microphones and telephone handsets; it is most often applied to radio circuits.

push-up [ENG] Concave bottom contour of a plastic container; allows an even bearing surface on the outer edge and prevents the container from rocking.

push-up list [COMPUT SCI] An ordered set of data items so constructed that the next item to be retrieved will be the item that was inserted earliest in the list, resulting in a first-in, first-out (FIFO) structure.

push welding [MET] Spot or projection welding in which the force is applied manually by one electrode; the work takes the place of the other electrode. Also known as poke welding.

pustule [MED] A small, circumscribed, pus-filled elevation

on the skin. [PL PATH] A blisterlike mark on a leaf due to rupture of surface tissues overlying spore masses of a parasitic fungus.

Pustulosa [PALEON] An extinct suborder of echinoderms in the order Phanerozonida found in the Paleozoic.

pusule [INV ZOO] A noncontractile fluid-filled vacuole emptied by means of a duct; found in dinoflagellates.

putlog [CIV ENG] A crosspiece in a scaffold or formwork; supports the soffits and is supported by the ledgers.

putrefaction [BIOCHEM] Decomposition of organic matter, particularly the anaerobic breakdown of proteins by bacteria, with the production of foul-smelling compounds.

putty [MATER] A cement of dough consistency made of whiting and boiled linseed oil and used in fastening glass in sashes and sealing crevices in woodwork.

putty knife [DES ENG] A knife with a broad flexible blade, used to apply and smooth putty.

putty oil [MATER] Petroleum oil that is added to putty; serves to lubricate the putty and keep it soft after the linseed oil dries.

puy [GEOL] A small, remnant volcanic cone.

PVA *See* polyvinyl acetate; polyvinyl alcohol.

PVAc *See* polyvinyl acetate.

PVC *See* polyvinyl chloride.

PVDC *See* polyvinyl dichloride.

PVI *See* polyvinyl isobutyl ether.

PVM *See* polyvinyl methyl ether.

PVP *See* polyvinyl pyrrolidone.

pW *See* picowatt.

P wave *See* compressional wave.

PWI *See* proximity warning indicator.

PWR *See* pressurized water reactor.

pwt *See* pennyweight.

pyarthrosis [MED] Suppuration involving a joint.

pycnidiospore [MYCOL] A conidium produced by a pycnidium.

pycnidium [MYCOL] A cavity that bears pycnidiospores in certain fungi.

pycniospore [MYCOL] A haploid spore of a rust fungus that fuses with a haploid hypha of opposite sex to produce dikaryotic aeciospores.

pycnite [MINERAL] A variety of topaz occurring in massive columnar aggregations.

pycnium [MYCOL] A flask-shaped fruit body of a rust fungus formed in clusters just beneath the surface of a host tissue.

pycnocline [GEOPHYS] A change in density of ocean or lake water or rock with displacement in some direction, especially a rapid change in density with vertical displacement. [OCEAN] A region in the ocean where water density increases relatively rapidly with depth.

Pycnodontiformes [PALEON] An extinct order of specialized fishes characterized by a laterally compressed, disk-shaped body, long dorsal and anal fins, and an externally symmetrical tail.

Pycnogonida [INV ZOO] The sea spiders, a subphylum of marine arthropods in which the body is reduced to a series of cylindrical trunk somites supporting the appendage.

Pycnogonidae [INV ZOO] A family of the Pycnogonida lacking both chelifores and palpi and having six to nine jointed ovigers in the male only.

pycnometer [ENG] A container whose volume is precisely known, used to determine the density of a liquid by filling the container with the liquid and then weighing it. Also spelled pyknometer.

pycnometry [PHYS] The determination of liquid density by weighing the liquid in a container (pycnometer) of known volume.

pyelitis [MED] Inflammation of the renal pelvis.

pyelolithotomy [MED] Excision of a renal calculus through an incision in the renal pelvis.

pyelonephritis [MED] The disease process resulting from the effects of infections of the parenchyma and the pelvis of the kidney. Also known as interstitial nephritis.

pyemia [MED] A disease state due to the presence of pyogenic microorganisms in the blood and the formation, wherever these organisms lodge, of embolic or metastatic abscesses.

Pygasteridae [PALEON] The single family of the extinct order Pygasteroida.

Pygasteroida [PALEON] An order of extinct echinoderms in the superorder Diadematacea having four genital pores, noncrenulate tubercles, and simple ambulacral plates.

pygidium [INV ZOO] **1.** A caudal shield on the abdomen of some Arthropoda. **2.** The terminal body segment of many invertebrates.

Pygopodidae [VERT ZOO] The flap-footed lizards, a family of the suborder Sauria.

pyknometer *See* pycnometer.

pyknosis [PATH] The polymerization and contraction of the nuclear chromosomal components.

pylephlebitis [MED] Inflammation of the portal vein.

pylome [INV ZOO] An aperture for emission of pseudopodia and intake of food in some Sarcodina.

pylon [AERO ENG] A suspension device externally installed under the wing or fuselage of an aircraft; it is aerodynamically designed to fit the configuration of specific aircraft, thereby creating an insignificant amount of drag; it includes means of attaching to accommodate fuel tanks, bombs, rockets, torpedoes, rocket motors, or the like. [CIV ENG] **1.** A massive structure, such as a truncated pyramid, on either side of an entrance. **2.** A tower supporting a wire over a long span. **3.** A tower or other structure marking a route for an airplane.

pyloric caecum [INV ZOO] **1.** One of the tubular pouches that open into the ventriculus of an insect. **2.** One of the paired tubes having lateral glandular diverticula in each ray of a starfish. [VERT ZOO] One of the tubular pouches that open from the pyloric end of the stomach into the alimentary canal of most fishes.

pyloric sphincter [ANAT] The thickened ring of circular smooth muscle at the lower end of the pyloric canal of the stomach.

pyloric stenosis [MED] Obstruction of the pyloric opening of the stomach due to hypertrophy of the pyloric sphincter.

pylorospasm [MED] Spasm of the pylorus.

pylorus [ANAT] The orifice of the stomach communicating with the small intestine.

pyobacillosis [VET MED] A bacterial infection of sheep, swine, or rarely cattle caused by *Corynebacterium pyogenes;* usually marked by abscess formation, but in sheep takes the form of chronic purulent pneumonia.

pyocyanin [MICROBIO] $C_{13}H_{10}N_{20}$ An antibiotic substance forming blue crystals, produced by *Pseudomonas aeruginosa;* active against many bacteria and fungi.

pyoderma [MED] Any pus-producing skin lesion or lesions, used in reference to groups of furuncles, pustules, or even carbuncles.

pyogenesis [MED] The formation of pus.

pyonephritis [MED] Suppurative inflammation of a kidney.

pyonephrosis [MED] Replacement of renal tissue by abscesses.

pyorrhea [MED] A purulent discharge.

pyracarbolid [ORG CHEM] $C_{13}H_{15}NO_2$ A gray solid with a melting point of 106–107°C; used as a fungicide to treat seed and foliage to control diseases of cereals, ornamentals, coffee, tea, vegetables, and cotton. Also known as 2-methyl-5,6-dihydro-4*H*-pyran-3-carboxylic acid anilide.

pyracetic acid *See* pyroligneous acid.

Pyralidae [INV ZOO] The equivalent name for Pyralididae.

Pyralididae [INV ZOO] A large family of moths in the lepidopteran superfamily Pyralidoidea; the labial palpi are well developed, and the legs are usually long and slender.

Pyralidinae [INV ZOO] A subfamily of the Pyralididae.

Pyralidoidea [INV ZOO] A superfamily of the Lepidoptera belonging to the Heteroneura and including long-legged, slender-bodied moths with well-developed maxillary palpi.

pyramid [CRYSTAL] An open crystal having three, four, six, eight, or twelve nonparallel faces that meet at a point. [MATH] A polyhedron with one face a polygon and all other faces triangles with a common vertex.

pyramidal area *See* motor area.

pyramidal cleavage [CRYSTAL] A type of crystal cleavage that occurs parallel to the faces of a pyramid.

pyramidal horn [ENG] Horn whose sides form a pyramid.

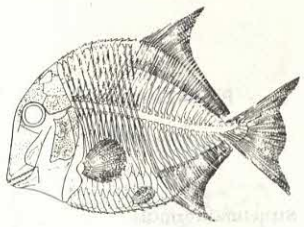
pyramidal iceberg *See* pinnacled iceberg.

pyramidal surface [MATH] A surface generated by a line passing through a fixed point and moving along a broken line in a plane not containing that point.

pyramidal system [ANAT] The corticospinal and corticobulbar tracts.

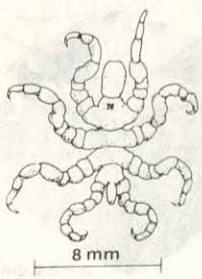
Pyramidellidae [INV ZOO] A family of gastropod mollusks in the order Tectibranchia; the operculum is present in this group.

PYCNODONTIFORMES



Coelodus costae Heckel, a pycnodont from Lower Cretaceous of Italy; length to 4 inches (10 centimeters). *(After A. S. Woodward)*

PYCNOGONIDA



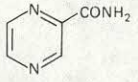
Pycnogonum stearnsi, a common littoral pycnogonid of the Pacific Coast.

PYRARGYRITE

2.5 cm

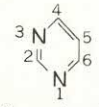
Pyrargyrite crystals, Harz Mountains, Germany. *(Specimen from Department of Geology, Bryn Mawr College)*

PYRAZINAMIDE



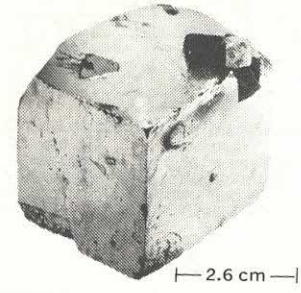
Structural formula.

PYRIMIDINE



Structural formula of pyrimidine.

PYRITE



2.6 cm

A pyrite crystal from Rio Marina, Elba, Italy. *(American Museum of Natural History Specimens)*

pyramid of numbers [ECOL] The concept that an organism making up the base of a food chain is numerically abundant while each succeeding member of the chain is represented by successively fewer individuals; uses feeding relationship as a basis for the quantitative analysis of an ecological system.

pyranometer [ENG] An instrument used to measure the combined intensity of incoming direct solar radiation and diffuse sky radiation; compares heating produced by the radiation on blackened metal strips with that produced by an electric current. Also known as solarimeter.

pyrargyrite [MINERAL] Ag_3SbS_3 A deep ruby-red to black mineral, crystallizing in the hexagonal system, occurring in massive form and in disseminated grains, and having an adamantine luster; hardness is 2.5 on Mohs scale, and specific gravity is 5.85; an important silver ore. Also known as dark-red silver ore; dark ruby silver.

Pyraustinae [INV ZOO] A large subfamily of the Pyralididae containing relatively large, economically important moths.

pyrazinamide [PHARM] $C_5H_5N_3O$ A crystalline compound with a melting point of 189–191°C; used as a drug in the treatment of tuberculosis. Also known as pyrazine carboxylamide; pyrazinoic acid amide.

pyrazine carboxylamide *See* pyrazinamide.

pyrazinoic acid amide *See* pyrazinamide.

pyrazolone dye [ORG CHEM] An acid dye containing both —N=N— and =C=C= chromophore groups, such as tartrazine; used for silk and wool.

pyrazon [ORG CHEM] $C_{10}H_8ClN_3O$ A tan solid with a melting point of 185–195°C; used as pre- and postemergence herbicide for weed control in sugarbeets, red beets, and fodder beets. Also known as 5-amino-4-chloro-2-phenyl-3(2*H*)-pyridazinone.

pyrazophos *See* 2-(*O,O*-diethyl thionophosphoryl)-5-methyl-6-carbethoxy-pyrazolo-(1,5*a*)pyrimidine.

Pyrenean orogeny [GEOL] A short-lived orogeny that occurred during the late Eocene, between the Bartonian and Ludian stages.

pyrenoid [BOT] A colorless body found within the chromatophore of certain algae; a center for starch formation and storage.

Pyrenolichenes [BOT] The equivalent name for Pyrenulales.

Pyrenulaceae [BOT] A family of the Pyrenulales; all species are crustose and most common on tree bark in the tropics.

Pyrenulales [BOT] An order of the class Ascolichenes including only those lichens with perithecia that contain true paraphyses and unitunicate asci.

pyrethrum [MATER] A toxicant obtained in the form of dried powdered flowers of the plant of the same name; mixed with petroleum distillates, it is used as an insecticide.

pyrexia [MED] Elevation of temperature above the normal; fever.

pyrgeometer [ENG] An instrument for measuring radiation from the surface of the earth into space.

Pyrgotidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalyptratae.

pyrheliometer [ENG] An instrument for measuring the total intensity of direct solar radiation received at the earth.

pyridine [ORG CHEM] C_5H_5N Organic base; flammable, toxic yellowish liquid, with penetrating aroma and burning taste; soluble in water, alcohol, ether, benzene, and fatty oils; boils at 116°C; used as an alcohol denaturant, solvent, in paints, medicine, and textile dyeing.

pyridine-4-carboxylic acid *See* isonicotinic acid.

2,3-pyridinedicarboxylic acid [BIOCHEM] $C_7H_5NO_4$ An odorless, crystalline compound with a melting point of 190°C; soluble in water; inhibits glucose synthesis. Also known as quinolinic acid.

pyridostigmine bromide [PHARM] $C_9H_{13}O_2NBr$ A white, crystalline powder with a melting point of 154–157°C; soluble in water, alcohol, and chloroform; used in medicine.

pyridoxal hydrochloride *See* pyridoxine hydrochloride.

pyridoxal phosphate *See* codecarboxylase.

pyridoxine hydrochloride [BIOCHEM] $C_8H_{11}NO_3 \cdot HCl$ A crystalline compound, decomposing at about 208°C; used in medicine in vitamin therapy. Also known as pyridoxal hydrochloride; vitamin B_6 hydrochloride.

pyrimidine [BIOCHEM] $C_4H_4N_2$ A heterocyclic organic compound containing nitrogen atoms at positions 1 and 3; naturally occurring derivatives are components of nucleic acids and coenzymes.

pyrite [MINERAL] FeS_2 A hard, brittle, brass-yellow mineral with metallic luster, crystallizing in the isometric system; hardness is 6–6.5 on Mohs scale, and specific gravity is 5.02. Also known as common pyrite; fool's gold; iron pyrite; mundic.

pyrite roasting [MIN ENG] Thermal processing of iron pyrite (FeS_2, iron disulfide) in the presence of air to produce iron oxide sinter (used in steel mills) and elemental sulfur.

pyritization [GEOL] A common process of hydrothermal alteration involving introduction of or replacement by pyrite.

pyritobitumen [GEOL] Any of various dark-colored, relatively hard, nonvolatile hydrocarbon substances often associated with mineral matter, which decompose upon heating to yield bitumens. Also known as pyrobitumen.

pyritohedron [CRYSTAL] A dodecahedral crystal with 12 irregular pentagonal faces; it is characteristic of pyrite. Also known as pentagonal dodecahedron; pyritoid; regular dodecahedron.

pyritoid *See* pyritohedron.

pyro- [CHEM] A chemical prefix for compounds formed by heat, such as pyrophosphoric acid, an inorganic acid formed by the loss of one water molecule from two molecules of an ortho acid.

pyroaurite [MINERAL] $Mg_6Fe_2(OH)_{16} \cdot CO_3 4H_2O$ A gold-like or brownish rhombohedral mineral composed of hydrous basic magnesium iron carbonate.

pyrobelonite [MINERAL] $PbMn(VO_4)(OH)$ A fire-red to deep brilliant-red mineral composed of basic vanadate of manganese and lead, occurring as crystal needles.

pyrobiolite [PETR] An organic rock containing organic remains that have been altered by volcanic action.

pyrobitumen *See* pyritobitumen.

pyroborate *See* borax.

pyrocarbonic acid diethyl ester *See* diethyl pyrocarbonate.

pyrocatechol [ORG CHEM] $C_6H_4(OH)_2$ Colorless crystals with a melting point of 104°C; used as a fungicide for potatoes in storage. Also known as *O*-dihydroxybenzene.

pyrocatechuic acid *See* catechol.

pyrocellulose [ORG CHEM] Highly nitrated cellulose; used to make explosives; originally called guncotton in the United States, cordite in England.

pyroceram [MATER] Hard, strong, opaque-white nucleated glass with nonporous crystalline structure; softens at 2460°F (1350°C); has high flexural strength and shock resistance; used for molded mechanical and electrical parts, heat-exchanger tubes, and coatings.

pyrochlore [MINERAL] $(Na,Ca)_2(Nb,Ta)_2—O_6(OH,F)$ Pale-yellow, reddish, brown, or black mineral, crystallizing in the isometric system, and occurring in pegmatites derived from alkalic igneous rocks. Also known as pyrrhite.

pyrochroite [MINERAL] $Mn(OH)_2$ A hexagonal mineral composed of naturally occurring manganese hydroxide; it is white when fresh, but darkens upon exposure.

pyroclast [GEOL] An individual pyroclastic fragment or clast.

pyroclastic flow [GEOL] Ash flow not involving high-temperature conditions.

pyroclastic ground surge [GEOL] The relatively thin mantle of rock found around a volcanic vent; the thickness is not uniform, the internal stratification is not parallel to the top and bottom of the layer, and the extent is a few kilometers from the source.

pyroclastic rock [PETR] A rock that is composed of fragmented volcanic products ejected from volcanoes in explosive events.

pyroconductivity [SOLID STATE] Electrical conductivity that develops in a material only at high temperature, chiefly at fusion, in solids that are practically nonconductive at atmospheric temperatures.

pyroelectric crystal [SOLID STATE] A crystal exhibiting pyroelectricity, such as tourmaline, lithium sulfate monohydrate, cane sugar, and ferroelectric barium titanate.

pyroelectricity [SOLID STATE] The property of certain crystals to produce a state of electrical polarity by a change of temperature.

pyrogallic acid [ORG CHEM] $C_6H_3(OH)_3$ Lustrous, light-sensitive white crystals, melting at 133°C; soluble in alcohol, ether, and water; used for photography, dyes, drugs, medicines,

and process engravings, and as an analytical reagent and protective colloid. Also known as pyrogallol; 1,2,3,-trihydroxybenzene.

pyrogallol *See* pyrogallic acid.

pyrogallolphthalein *See* gallein.

pyrogen [BIOCHEM] A group of substances thought to be polysaccharides of microbial origin that produce an increase in body temperature when injected into humans and some animals.

pyrogenesis [GEOL] The intrusion and extrusion of magma and its derivatives.

pyrogenetic mineral [MINERAL] An anhydrous mineral of an igneous rock, usually crystallized at high temperature in a magma containing relatively few volatile components.

pyrogenic distillation [CHEM ENG] A cracking process that runs at high temperatures, high pressures, or both, resulting in greater yields of the light hydrocarbon components of gasoline.

pyroligneous [CHEM ENG] Referring to a substance obtained by the destructive distillation of wood.

pyroligneous acid [ORG CHEM] An impure acetic acid derived from destructive distillation of wood or pine tar. Also known as pyracetic acid; wood vinegar.

pyrolithic acid [ORG CHEM] $HOC(NCOH)_2N \cdot 2H_2O$ Colorless monoclinic crystals, slightly soluble in water. Also known as cyanuric acid.

pyrolusite [MINERAL] MnO_2 An iron-black mineral that crystallizes in the tetragonal system and is the most important ore of manganese; hardness is 1-2 on Mohs scale, and specific gravity is 4.75.

pyrolysis [CHEM] The breaking apart of complex molecules into simpler units by the use of heat, as in the pyrolysis of heavy oil to make gasoline.

pyromagma [GEOL] A highly mobile lava, oversaturated with gases, that exists at shallower depths than hypomagma.

pyromania [PSYCH] A monomania for setting or watching fires.

pyromelane *See* brookite.

pyromellitic acid [ORG CHEM] $C_6H_2(COOH)_4$ A white powder with a melting point of 257–265°C; used as an intermediate for polyesters and polyamides. Abbreviated PMA. Also known as 1,2,3,4,5-benzenetetracarboxylic acid.

pyromellitic dianhydride [ORG CHEM] $C_6H_2(C_2O_3)_2$ A white powder with a melting point of 286°C; soluble in some organic solvents; used for curing epoxy resins. Abbreviated PMDA.

pyrometallurgy [MET] High-temperature process metallurgy.

pyrometamorphism [PETR] Contact metamorphism at temperatures near the melting points of the component minerals.

pyrometasomatism [PETR] Forming of contact-metamorphic mineral deposits at high temperatures by emanations from the intrusive rock, involving replacement of the enclosing rock with the addition of materials.

pyrometer [ENG] Any of a broad class of temperature-measuring devices; they were originally designed to measure high temperatures, but some are now used in any temperature range; includes radiation pyrometers, thermocouples, resistance pyrometers, and thermistors.

pyrometric cone *See* Seger cone.

Pyrometry [THERMO] The science and technology of measuring high temperatures.

pyromorphite [MINERAL] $Pb_5(PO_4)_3Cl$ A green, yellow, brown, gray, or white mineral of the apatite group, crystallizing in the hexagonal system; a minor ore of lead. Also known as green lead ore.

pyromucic acid *See* furoic acid.

pyron [PHYS] A unit of area-density of power, equal to the area-density of power resulting from a power of one international table calorie per minute acting uniformly over an area of 1 square centimeter; equal to 697.8 watts per square meter.

pyrone detector [ELECTR] Crystal detector in which rectification occurs between iron pyrites and copper or other metallic points.

Pyrope [MINERAL] $Mg_3Al_2(SiO_4)_3$ A mineral species of the garnet group characterized by a deep fiery-red color and occurring in basic and ultrabasic igneous rocks.

Pyrophane *See* fire opal.

Pyrophanite [MINERAL] $MnTiO_3$ A blood-red rhombohedral mineral consisting of manganese titanate; it is isomorphous with ilmenite.

pyrophobia [PSYCH] An abnormal fear of fires.

pyrophoric alloy [MET] **1.** An alloy such as ferrocerium that produces a spark when struck with metal (steel) at an angle; used for automatic cigarette lighters. **2.** An alloy in powder form that spontaneously oxidizes in air, reaching high temperatures.

pyrophoric propellant [MATER] A propellant combination of a liquid fuel and a fluid oxidizer (usually air) that will quickly react when brought into intimate contact and achieve ignition temperature.

pyrophosphatase [BIOCHEM] An enzyme catalyzing hydrolysis of esters containing two or more molecules of phosphoric acid to form a simpler phosphate ester.

pyrophosphoric acid [INORG CHEM] $H_4P_2O_7$ Water-soluble, syrupy liquid melting at 61°C; used as a catalyst and to make organic phosphate esters.

pyrophyllite [MINERAL] $AlSi_2O_5(OH)$ A white, greenish, gray, or brown phyllosilicate mineral that resembles talc and occurs in a foliated form or in compact masses in quartz veins, granites, and metamorphic rocks. Also known as pencil stone.

pyroretinite [MINERAL] A type of retinite found in the brown coals of Aussig (Usti and Labem), in Bohemian Czechoslovakia.

pyroschist [PETR] A schist or shale that has a sufficiently high carbon content to burn with a bright flame or to yield volatile hydrocarbons when heated.

pyrosin *See* tetraiodofluorescein.

pyrosmalite [MINERAL] $(Mn,Fe)_4Si_3O_7(OH,Cl)_6$ A colorless, pale-brown, gray, or gray-green mineral composed mainly of basic iron manganese silicate with chlorine.

Pyrosomida [INV ZOO] An order of pelagic tunicates in the class Thaliacea in which species form tubular swimming colonies and are often highly luminescent.

pyrosphere [GEOL] The zone of the earth below the lithosphere, consisting of magma. Also known as magmosphere.

pyrostat [ENG] **1.** A sensing device that automatically actuates a warning or extinguishing mechanism in case of fire. **2.** A high-temperature thermostat.

pyrostibite *See* kermesite.

pyrostilpnite [MINERAL] Ag_3SbS_3 A hyacinth-red mineral composed of silver antimony sulfide, occurring in monoclinic crystal tufts; it is polymorphous with pyrargerite.

pyrotechnic code [COMMUN] Significant arrangement of the various colors and patterns of fireworks, signal lights, or signal smokes used for communication between units or between ground and air.

pyrotechnic pistol [ENG] A single-shot device designed specifically for projecting pyrotechnic signals.

pyrotechnics [ENG] Art and science of preparing and using fireworks. [MATER] Items which are used for both military and nonmilitary purposes to produce a bright light for illumination, or colored lights or smoke for signaling, and which are consumed in the process.

pyrotechnic signal [COMMUN] Signal designed for military use to produce a colored light or smoke, for the purpose of transmitting information.

Pyrotheria [PALEON] An extinct monofamilial order of primitive, mastodonlike, herbivorous, hoofed mammals restricted to the Eocene and Oligocene deposits of South America.

Pyrotheriidae [PALEON] The single family of the Pyrotheria.

pyrouric acid *See* cyanuric acid.

pyroxene [MINERAL] A family of diverse and important rock-forming minerals having infinite (Si_2O_6) single inosilicate chains as their principal motif; colors range from white through yellow and green to brown and greenish black; hardness is 5.5-6 on Mohs scale, and specific gravity is 3.2–4.0.

pyroxene alkali syenite [GEOL] A quartz-poor (less than 20%) member of the charnockite series, characterized by the presence of microperthite.

pyroxene monzonite [GEOL] A quartz-poor (less than 20%) member of the charnockite series, containing approximately equal amounts of microperthite and plagioclase.

pyroxene syenite [GEOL] A quartz-poor (less than 20%) member of the charnockite series, containing more microperthite than plagioclase.

pyroxenite [PETR] A heavy, dark-colored, phaneritic igneous rock composed largely of pyroxene with smaller amounts of olivine and hornblende, and formed by crystallization of gabbraic magma.

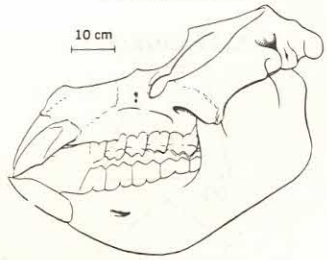
PYROMORPHITE

Pyromorphite with hexagonal crystals, from Nassau. *(Specimen from Department of Geology, Bryn Mawr College)*

PYROSOMIDA

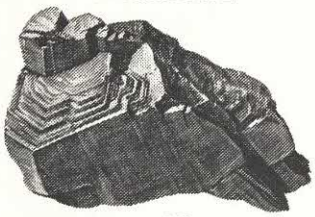
Colony of *Pyrosoma atlanticum*. *(From Metcalf and Hopkins, after Ritter)*

PYROTHERIA



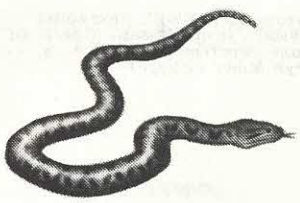
Skull and jaw of *Pyrotherium sorondi*, an early Oligocene pyrothere from South America. *(After F. Loomis, 1914)*

PYRRHOTITE



Pyrrhotite crystals from Chihuahua, Mexico. *(Specimen from Department of Geology, Bryn Mawr College)*

PYTHON



A python, which kills its prey by constriction.

pyroxenoids [MINERAL] A mineral group (including wollastonite and rhodonite) compositionally similar to pyroxene, but SiO_4 tetrahedrons are connected in rings rather than chains.

pyroxylin [ORG CHEM] $[C_{12}H_{16}O_6(NO_3)_4]_x$ Any member of the group of commercially available nitrocelluloses that are used for properties other than their combustibility; the term is commonly used to identify products that are principally made from nitrocellulose, such as pyroxylin plastic or pyroxylin lacquer. Also known as collodion cotton; soluble guncotton; soluble nitrocellulose.

pyroxylin cement [MATER] A solution of nitrocellulose in a chemical solvent, compounded with a resin, or plasticized with a gum or synthetic; dries by evaporation of the solvent.

pyrrhite *See* pyrochlore.

Pyrrhocoridae [INV ZOO] A family of hemipteran insects belonging to the superfamily Pyrrhocoroidea.

Pyrrhocoroidea [INV ZOO] A superfamily of the Pentatomorpha.

Pyrrhophyta [BOT] A small division of motile, generally unicellular flagellate algae characterized by the presence of yellowish-green to golden-brown plastids and by the general absence of cell walls.

pyrrhotite [MINERAL] $Fe_{1-x}S$ A common reddish-brown to brownish-bronze mineral that occurs as rounded grains to large masses, more rarely as tabular pseudohexagonal crystals and rosettes; hardness is 4 on Mohs scale, and specific gravity is 4.6 (for the composition Fe_7S_8).

pyrrobutamine phosphate [PHARM] $C_{20}H_{22}NCl \cdot 2H_3PO_4$ A cream-colored, water-soluble powder with a melting range of 127–131°C; used in medicine.

pyrrole [ORG CHEM] C_4H_5N Water-insoluble, yellowish oil, with pungent taste; soluble in alcohol, ether, and dilute acids; boils at 130°C; polymerizes in light; used to make drugs.

2-pyrrolidone [ORG CHEM] C_4H_7ON Combustible, light-yellow liquid, boiling at 245°C; soluble in ethyl alcohol, water, chloroform, and carbon disulfide; used as a plasticizer and polymer solvent, in insecticides and specialty inks, and as a nylon-4 precursor.

pyrrone [ORG CHEM] A polyimidazopyrrolone synthesized from dianhydrides and tetramines; soluble in sulfuric acid; resists temperatures to 600°C.

pyruric acid *See* cyanuric acid.

pyruvaldehyde bis(aminohydrazone) *See* methyl glyoxal bis(guanylhydrazone).

pyruvate [BIOCHEM] Salt of pyruvic acid, such as sodium pyruvate, $NaOOCCOCH_3$.

pyruvic acid [BIOCHEM] Important intermediate in protein and carbohydrate metabolism; liquid with acetic-acid aroma; melts at 11.8°C; miscible with alcohol, ether, and water; used in biochemical research. Also known as acetyl formic acid; α-ketopropionic acid; pyroracemic acid.

Pythagorean numbers [MATH] Positive integers x, y, and z which satisfy the equation $x^2 + y^2 = z^2$.

Pythagorean scale [ACOUS] A musical scale such that the frequency intervals are represented by the ratios of integral powers of the numbers 2 and 3.

Pythagorean theorem [MATH] In a right triangle the square of the length of the hypotenuse equals the sum of the squares of the lengths of the other two sides.

Pythidae [INV ZOO] An equivalent name for Salpingidae.

python [VERT ZOO] The common name for members of the reptilian subfamily Pythoninae.

Pythoninae [VERT ZOO] A subfamily of the reptilian family Boidae distinguished anatomically by the skull structure and the presence of a pair of vestigial hindlegs in the form of stout, movable spurs.

pyuria [MED] The presence of pus in the urine.

pyxidium [BOT] A capsular fruiting body dehiscing around its circumference, thus causing the upper part to fall off.

Pyxis [ASTRON] A southern constellation; right ascension 9 hours, declination 30° south. Also known as Malus.

pz *See* pièze.

PZT *See* lead zirconate titanate.

Q

Q [NUC PHYS] *See* disintegration energy. [PHYS] A measure of the ability of a system with periodic behavior to store energy equal to 2π times the average energy stored in the system divided by the energy dissipated per cycle. Also known as Q factor; quality factor; storage factor. [THERMO] A unit of heat energy, equal to 10^{18} British thermal units, or approximately 1.055×10^{21} joules.

Q band [ELECTROMAG] A radio-frequency band of 36 to 46 gigahertz.

QCD *See* quantum chromodynamics.

Q factor [ORD] A correction factor applied to a bombsight setting to help account for the differing winds between flight altitude and the ground; this factor corrects only for that component of the differential ballistic wind that is parallel to the actual wind at flight level. [PHYS] *See* Q.

Q fever [MED] An acute, febrile infectious disease of humans, characterized by sudden onset and patchy pneumonitis, and caused by a bacterialike organism, *Coxiella burneti*.

Q machine [PL PHYS] A device in which a highly ionized, magnetically confined plasma is created by contact ionization of atoms and thermionic emission of electrons.

Q-machine plasma [PLASMA PHYS] A plasma column in a magnetic field created by surface ionization of a cesium beam on a hot tungsten plate.

Q meter [ENG] A direct-reading instrument which measures the Q of an electric circuit at radio frequencies by determining the ratio of inductance to resistance, and which has also been developed to measure many other quantities. Also known as quality-factor meter.

Q multiplier [ELECTR] A filter that gives a sharp response peak or a deep rejection notch at a particular frequency, equivalent to boosting the Q of a tuned circuit at that frequency.

Q point [ENG] Data point describing the position and movement of a radar target, based on two or more radar observations.

QPRK *See* quadrature partial-response keying.

QPSK *See* quarternary phase-shift keying.

qr *See* quarter.

QRS complex [MED] The electrocardiographic deflection representing ventricular depolarization; the initial downward deflection is termed a Q wave; the initial upward deflection, an R wave; and the downward deflection following the R wave, an S wave. Also known as ventricular depolarization complex.

qr tr *See* quarter.

Q signal [COMMUN] A three-letter abbreviation starting with Q, used in the International List of Abbreviations for radiotelegraphy to represent complete sentences. [ELECTR] The quadrature component of the chrominance signal in color television, having a bandwidth of 0 to 0.5 megahertz; it consists of $+0.48(R-Y)$ and $+0.41(B-Y)$, where Y is the luminance signal, R is the red camera signal, and B is the blue camera signal.

QSO *See* quasar.

Q-switched laser [OPTICS] A laser whose Q factor is kept at a low value while an ion population inversion is built up, and then is suddenly switched to a high value just before instability occurs, resulting in a very high rate of stimulated emission. Also known as giant pulse laser.

qt *See* quart.

quad [ELEC] A series of four separately insulated conductors, generally twisted together in pairs. [ELECTR] A series-parallel combination of transistors; used to obtain increased reliability through double redundancy, because the failure of one transistor will not disable the entire circuit. [GRAPHICS] One of the small pieces of metal used in typesetting to space or to fill out a line of characters; used mostly to fill space when indenting the first line and to fill out the last line of type. [THERMO] A unit of heat energy, equal to 10^{15} British thermal units, or approximately 1.055×10^{18} joules.

quadded cable [ELEC] Cable in which at least some of the conductors are arranged in the form of quads.

quadded redundancy [COMPUT SCI] A form of redundancy in which each logic gate is quadruplicated, and the outputs of one stage are interconnected to the inputs of the succeeding stage by a connection pattern so that errors made in earlier stages are overridden in later stages, where the original correct signals are restored.

quad in-line [ELECTR] An integrated-circuit package that has two rows of staggered pins on each side, spaced closely enough together to permit 48 or more pins per package. Abbreviated QUIL.

quadrangle [CIV ENG] **1.** A four-cornered, four-sided courtyard, usually surrounded by buildings. **2.** The buildings surrounding such a courtyard. **3.** A four-cornered, four-sided building. [MAP] A four-sided tract of land, defined by parallels of latitude and meridians of longitude, used as an area unit in systematic mapping. [MATH] A geometric figure bounded by four straight-line segments called sides, each of which intersects each of two adjacent sides in points called vertices, but fails to intersect the opposite sides. Also known as quadrilateral.

quadrant [ANAT] One of the four regions into which the abdomen may be divided for purposes of physical diagnosis. [ELECTROMAG] *See* international henry. [ENG] **1.** An instrument for measuring altitudes, used, for example, in astronomy, surveying, and gunnery; employs a sight that can be moved through a graduated 90° arc. **2.** A lever that can move through a 90° arc. [MATH] **1.** A quarter of a circle; either an arc of 90° or the area bounded by such an arc and the two radii. **2.** Any of the four regions into which the plane is divided by a pair of coordinate axes. [MECH ENG] A device for converting horizontal reciprocating motion to vertical reciprocating motion. [NAV] One of the four areas between consecutive equisignal zones of a four course radio range station. [NAV ARCH] A casting, forging, or built-up frame in the shape of a sector of a circle attached to the rudder stock and through which the steering gear leads turn the rudder. [OPTICS] A double-reflecting instrument for measuring angles, used primarily for measuring altitudes of celestial bodies; the instrument was replaced by the sextant. [PHYSIO] A sector of one-fourth of the field of vision of one or both eyes.

quadrantal correctors [NAV] Masses of soft iron placed near a magnetic compass to correct for quadrantal deviation.

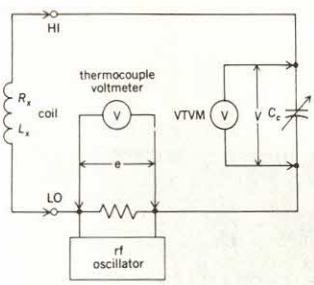
quadrantal deviation [NAV] Deviation which changes its sign (E or W) approximately each 90° change of heading; caused by induced magnetism in horizontal soft iron present near the compass.

quadrantal error [NAV] The angular error in a measured bearing that is due to the presence of metal in the vicinity of the direction-finding antenna, such as the metal structure and engines of an airplane or the hull of a ship.

quadrantal point *See* intercardinal point.

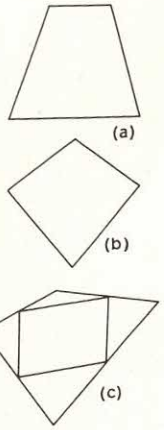
quadrantal spheres [NAV] Two hollow spheres of soft iron

Q METER



Simplified measurement circuit of a Q meter. Coil being measured, with inductance L_x and resistance R_x, is connected into the circuit by external terminals HI and LO. Calibrated capacitor C_c is tuned to bring the coil into resonance. An input voltage e is supplied by a radio-frequency oscillator and measured by a thermocouple voltmeter. A vacuum-tube voltmeter (VTVM) measures voltage V across calibrated capacitor. Q of coil is determined from the equation $V/e = (1 + Q^2)^{1/2}$.

QUADRANGLE



Quadrangles. *(a)* Isosceles trapezoid. *(b)* Kite. *(c)* Parallelogram in quadrangle.

placed near a magnetic compass to correct for quadrantal deviation.

quadrant angle of fall [MECH] The vertical acute angle at the level point, between the horizontal and the line of fall of a projectile.

quadrant electrometer [ENG] An instrument for measuring electric charge by the movement of a vane suspended on a wire between metal quadrants; the charge is introduced on the vane and quadrants in such a way that there is a proportional twist to the wire.

quadrant elevation [ORD] Vertical angle between the base and the axis of the bore of a gun which exists just prior to firing.

Quadrantids [ASTRON] A meteor shower whose radiant-right ascension of 15 hours and declination of $+48°$ is in the constellation Boötes; velocity is 43 kilometers per second, and the strength is medium.

quadrant mount [ORD] A device on a gun that holds the gunner's quadrant while the gun is being laid in elevation.

quadrant sight [ORD] Sighting instrument on a gun that is used in laying the gun in elevation; used in conjunction with a telescope, which lays the gun for direction.

quadraphonic sound system [ENG ACOUS] A system for reproducing sound by means of four loudspeakers properly situated in the listening room, usually at the four corners of a square, with each loudspeaker being fed its own identifiable segment of the program signal. Also known as four-channel sound system.

quadrate bone [VERT ZOO] A small element forming part of the upper jaw joint on each side of the head in vertebrates below mammals.

quadratic [MATH] Any second-degree expression.

quadratic equation [MATH] Any second-degree polynomial equation.

quadratic form [MATH] Any second-degree, homogeneous polynomial.

quadratic formula [MATH] A formula giving the roots of a quadratic equation in terms of the coefficients; for the equation $ax^2 + bx + c = 0$, the roots are $x = (-b \pm \sqrt{b^2 - 4ac})/2a$.

quadratic performance index [CONT SYS] A measure of system performance which is, in general, the sum of a quadratic function of the system state at fixed times, and the integral of a quadratic function of the system state and control inputs.

quadratic polynomial [MATH] A polynomial where the highest degree of any of its terms is 2.

quadratic programming [MATH] A body of techniques developed to find extremal points for systems of quadratic inequalities.

quadratic Stark effect [ATOM PHYS] A splitting of spectral lines of atoms in an electric field in which the energy levels shift by an amount proportional to the square of the electric field, and all levels shift to lower energies; observed in lines resulting from the lower energy states of many-electron atoms.

quadratic Zeeman effect [ATOM PHYS] A splitting of spectral lines of atoms in a magnetic field in which the energy levels shift by an amount proportional to the square of the magnetic field.

quadratojugal [VERT ZOO] A small bone connecting the quadrate and jugal bones on each side of the skull in many lower vertebrates.

quadrature [ASTRON] The right-angle physical alignment of the sun, moon, and earth. [MATH] The construction of a square whose area is equal to that of a given surface. [PHYS] State of being separated in phase by 90°, or one quarter-cycle. Also known as phase quadrature.

quadrature amplifier [ELECTR] An amplifier that shifts the phase of a signal 90°; used in a color television receiver to amplify the 3.58-megahertz chrominance subcarrier and shift its phase 90° for use in the Q demodulator.

quadrature component [ELEC] **1.** A vector representing an alternating quantity which is in quadrature (at 90°) with some reference vector. **2.** *See* reactive component.

quadrature current *See* reactive current.

quadrature modulation [COMMUN] Modulation of two carrier components 90° apart in phase by separate modulating functions.

quadrature partial-response keying [COMMUN] A modulation technique in which two orthogonally phased carriers are combined; each carrier is modulated by one of the digital bit streams to one of three levels, 0, $\sqrt{2}V$, and V; used to convey chrominance information in color television, and considered for use in terrestrial radio. Abbreviated QPRK.

quadric cone [MATH] A conical surface whose directrices are conic curves.

quadriceps [ANAT] Four-headed, as a muscle.

quadriceps femoris [ANAT] The large extensor muscle of the thigh, combining the rectus femoris and vastus muscles.

quadrics [MATH] Homogeneous, second-degree expressions.

quadric surface [MATH] A surface whose equation is a second-degree algebraic equation.

quadridentate ligand [CHEM] A group which forms a chelate and has four points of attachment.

quadrigeminal body *See* corpora quadrigemina.

Quadrijugatoridae [PALEON] A monomorphic family of extinct ostracods in the superfamily Hollinacea.

quadrilateral *See* quadrangle.

quadrille paper [MATER] A good-quality white ledger paper with light-blue lines ruled on it.

quadrillion [MATH] **1.** The number 10^{15}. **2.** In British and German usage, the number 10^{24}.

quadrinomial distribution [STAT] A multinomial distribution with four possible outcomes.

quadriplegia [MED] Paralysis affecting the four extremities of the body; may be spastic or flaccid.

quadripuntal [COMPUT SCI] Having four punches; specifically, having four random punches on an IBM or Hollerith-type punched card.

quadruped [VERT ZOO] An animal that has four legs.

quadruple-diversity system [COMMUN] Receiving system that simultaneously uses space diversity and frequency diversity techniques.

quadruple point [PHYS CHEM] Temperature at which four phases are in equilibrium, such as a saturated solution containing an excess of solute.

quadruple thread [DES ENG] A multiple thread having four separate helices equally spaced around the circumference of the threaded member; the lead is equal to four times the pitch of the thread.

quadruple vector product [MATH] **1.** For any four vectors, the dot product of two derived vectors, one of which is the cross product of two of the original vectors, and the other of which is the cross product of the other two. **2.** For any four vectors, the cross product of two derived vectors, one of which is the cross product of two of the original vectors, and the other of which is the cross product of the other two.

quadruplex circuit [ELEC] Telegraph circuit designed to carry two messages in each direction at the same time.

quadrupole [ELECTROMAG] A distribution of charge or magnetization which produces an electric or magnetic field equivalent to that produced by two electric or magnetic dipoles whose dipole moments have the same magnitude but point in opposite directions, and which are separated from each other by a small distance.

quadrupole amplifier [ELECTR] A low-noise parametric amplifier consisting of an electron-beam tube in which quadrupole fields act on the fast cyclotron wave of the electron beam to produce high amplification at frequencies in the range of 400–800 megahertz.

quadrupole field [ELECTROMAG] **1.** An electric or magnetic field equivalent to that produced by two electric or magnetic dipoles whose dipole moments have the same magnitude but point in opposite directions, and which are separated from each other by a small distance. **2.** The field produced by a quadrupole lens.

quadrupole lens [ELECTROMAG] A device for focusing beams of charged particles which has four electrodes or magnetic poles of alternating sign arranged in a circle about the beam; used in instruments such as electron microscopes and particle accelerators.

quadrupole moment [ELECTROMAG] A quantity characterizing a distribution of charge or magnetization; it is given by integrating the product of the charge density or divergence of magnetization density, the second power of the distance from the origin, and a spherical harmonic Y^*_{2m} over the charge or magnetization distribution.

quadrupole spectrometer [ANALY CHEM] A type of mass spectroscope in which ions pass along a line of symmetry between four parallel cylindrical rods; an alternating potential superimposed on a steady potential between pairs of rods filters

out all ions except those of a predetermined mass. Also known as Massenfilter.

quad word [COMPUT SCI] A word 16 bytes long.

quagmire *See* bog.

quail [VERT ZOO] Any of several migratory game birds in the family Phasianidae.

quake sheet [GEOL] A well-defined bed resembling a slump sheet but produced by an earthquake and resulting in the formation of a load cast without horizontal slip.

quaking bog [GEOL] A peat bog floating or growing over water-saturated land which shakes or trembles when walked on.

qualification test [ENG] A formally defined series of tests by which the functional, environmental, and reliability performance of a component or system may be evaluated in order to satisfy the engineer, contractor, or owner as to its satisfactory design and construction prior to final approval and acceptance.

qualified name [COMPUT SCI] A name that is further identified by associating it with additional names, usually the names of things that contain the thing being named.

qualifier [COMPUT SCI] A name that is associated with another name to give additional information about the latter and distinguish it from other things having the same name.

qualitative analysis [ANALY CHEM] The analysis of a gas, liquid, or solid sample or mixture to identify the elements, radicals, or compounds composing the sample.

quality analysis [IND ENG] Examination of the quality goals of a product or service.

quality assurance [IND ENG] Testing and inspecting all of or a portion of the final product to ensure that the desired quality level of product reaches the consumer.

quality control [IND ENG] Inspection, analysis, and action applied to a portion of the product in a manufacturing operation to estimate overall quality of the product and determine what, if any, changes must be made to achieve or maintain the required level of quality.

quality control chart [IND ENG] A control chart used to indicate and control the quality of a product.

quality factor [NUCLEO] The factor by which absorbed dose is to be multiplied to obtain a quantity that expresses on a common scale, for all ionizing radiations, the irradiation incurred by exposed persons. [PHYS] *See* Q.

quality-factor meter *See* Q meter.

quality of snow [METEOROL] The amount of ice in a snow sample expressed as a percent of the weight of the sample. Also known as thermal quality of snow.

quantal response [STAT] Response to treatment which has only two outcomes, all or none.

quantasome [CYTOL] One of the highly ordered array of units that has a "cobblestone" appearance in electron micrographs of the lamella of chloroplasts, and thought to be the most probable site of the light reaction in photosynthesis.

quantic [MATH] A homogeneous algebraic polynomial with more than one variable.

quantification [SCI TECH] The act of quantifying, that is, of giving a numerical value to a measurement of something, as in computer applications, psychology, or market research.

quantifier [MATH] Either of the phrases "for all" and "there exists"; these are symbolized respectively by an inverted A and a backward E.

quantitative analysis [ANALY CHEM] The analysis of a gas, liquid, or solid sample or mixture to determine the precise percentage composition of the sample in terms of elements, radicals, or compounds.

quantitative genetics [GEN] The study of continuously varying traits, such as those of the intellect and personality, which cannot be categorized as dichotomies.

quantitative geomorphology [GEOL] The assignment of dimensions of mass, length, and time to all descriptive parameters of landform geometry and geomorphic processes, followed by the derivation of empirical mathematical relationships and formulation of rational mathematical models relating these parameters.

quantitative inheritance [GEN] The acquisition of characteristics, such as height, weight, and intelligence, which show a quantitative and continuous type of variation.

quantity [COMPUT SCI] In computers, a positive or negative real number in the mathematical sense; the term quantity is preferred to the term number in referring to numerical data; the term number is used in the sense of natural number and reserved for "the number of digits," the "number of operations," and so forth. [MATH] Any expression which is concerned with value rather than relations.

quantity-distance tables [ORD] The regulations pertaining to the amounts and kinds of explosives that can be stored and the proximity of such storage to buildings, highways, railways, magazines, or other installations.

quantity meter [ENG] A type of fluid meter used to measure volume of flow.

quantity of electricity *See* charge.

quantization [COMMUN] Division of the range of values of a wave into a finite number of subranges, each of which is represented by an assigned or quantized value within the subrange. [QUANT MECH] **1.** The restriction of an observable quantity, such as energy or angular momentum, associated with a physical system, such as an atom, molecule, or elementary particle, to a discrete set of values. **2.** The transition from a description of a system of particles or fields in the classical approximation where canonically conjugate variables commute, to a description where these variables are treated as noncommuting operators; quantization (first definition) is a result of this procedure. [SCI TECH] The restriction of a variable to a discrete number of possible values; thus the age of a person is usually quantized as a whole number of years.

quantization distortion [COMMUN] Inherent distortion introduced in the process of quantization of a waveform. Also known as quantization noise; quantumization distortion; quantumization noise.

quantization level [COMMUN] Discrete value of the output designating a particular subrange of the input.

quantization noise *See* quantization distortion.

quantized frequency modulation [COMMUN] Frequency modulation that involves quantization; it uses time and frequency redundancy within a voice frequency channel during each transmitted symbol; used to combat distortion due to multipath, selection fading, and noise spikes.

quantized pulse modulation [COMMUN] Pulse modulation that involves quantization, such as pulse-numbers modulation and pulse-code modulation.

quantized spin wave *See* magnon.

quantized vortex [CRYO] A circular flow pattern observed in superfluid helium and type II superconductors, in which a superfluid flows about a normal (nonsuperfluid) cylindrical region or core which has the form of a thin line, and either the circulation or the magnetic flux is quantized.

quantizer [ELECTR] A device that measures the magnitude of a time-varying quantity in multiples of some fixed unit, at a specified instant or specified repetition rate, and delivers a proportional response that is usually in pulse code or digital form.

quantum [COMMUN] One of the subranges of possible values of a wave which is specified by quantization and represented by a particular value within the subrange. [QUANT MECH] **1.** For certain physical quantities, a unit such that the values of the quantity are restricted to integral multiples of this unit; for example, the quantum of angular momentum is Planck's constant divided by 2π. **2.** An entity resulting from quantization of a field or wave, having particlelike properties such as energy, mass, momentum and angular momentum; for example, the photon is the quantum of an electromagnetic field, and the phonon is the quantum of a lattice vibration.

quantum chemistry [PHYS CHEM] A branch of physical chemistry concerned with the explanation of chemical phenomena by means of the laws of quantum mechanics.

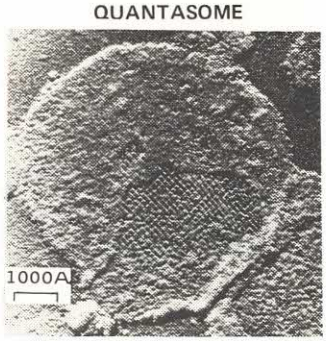
quantum chromodynamics [PARTIC PHYS] A gauge theory of the strong interactions among quarks; the mathematical structure of the theory resembles that of quantum electrodynamics, with color as the conserved charge. Abbreviated QCD.

quantum detector [PHYS] A detector of electromagnetic radiation which converts a quantum of the radiation into a proportionate signal by some process which is insensitive to quanta of less than a certain energy; examples include photographic emulsions, photoelectric cells, and Geiger counters.

quantum efficiency [ELECTR] The average number of electrons photoelectrically emitted from a photocathode per incident photon of a given wavelength in a phototube.

quantum electrodynamics [QUANT MECH] The quantum theory of electromagnetic radiation, synthesizing the wave and corpuscular pictures, and of the interaction of radiation with electrically charged matter, in particular with atoms and their

QUANTASOME



Membranes containing chlorophyll taken from a spinach chloroplast. This chromium-shadowed preparation shows that the membrane is composed of a highly ordered array of units, or quantasomes. *(After R. B. Park, courtesy of Science, 144(3621), 1964)*

constituent electrons. Also known as quantum theory of light; quantum theory of radiation.

quantum electronics [ELECTR] The branch of electronics associated with the various energy states of matter, motions within atoms or groups of atoms, and various phenomena in crystals; examples of practical applications include the atomic hydrogen maser and the cesium atomic-beam resonator.

quantum evolution [EVOL] A special but extreme case of phyletic evolution; the rapid evolution that takes place when relatively sudden and drastic change occurs in the environment or when organisms spread into new habitats where conditions differ from those to which they are adapted; the organisms must then adapt quickly to the new conditions if they are to survive.

quantum field theory [QUANT MECH] Quantum theory of physical systems possessing an infinite number of degrees of freedom, such as the electromagnetic field, gravitation field, or wave fields in a medium.

quantum gravity [PHYS] A yet-unrealized theory which is the quantum-mechanical version of the general theory of relativity.

quantum hydrodynamics [CRYO] The mechanics of a superfluid, such as helium II, investigating phenomena such as the fountain effect and second sound.

quantum hypothesis [QUANT MECH] A hypothesis that some physical quantity can assume only a certain discrete set of values; examples are Planck's law, and the condition in the Bohr-Sommerfeld theory that the action integral of a system must be an integral multiple of Planck's constant.

quantumization distortion *See* quantization distortion.

quantumization noise *See* quantization distortion.

quantum-mechanical operator [QUANT MECH] A linear, Hermitian operator associated with some physical quantity; for a physical system in any state, the expectation value of the physical quantity equals the integral over configuration space of $\psi^*(A\psi)$, where $A\psi$ is the result of the operator acting on the wave function of the system, and ψ^* is the complex conjugate of the wave function.

quantum mechanics [PHYS] The modern theory of matter, of electromagnetic radiation, and of the interaction between matter and radiation; it differs from classical physics, which it generalizes and supersedes, mainly in the realm of atomic and subatomic phenomena. Also known as quantum theory.

quantum number [QUANT MECH] One of the quantities, usually discrete with integer or half-integer values, needed to characterize a quantum state of a physical system; they are usually eigenvalues of quantum-mechanical operators or integers sequentially assigned to these eigenvalues.

quantum of action *See* Planck's constant.

quantum state [QUANT MECH] **1.** The condition of a physical system as described by a wave function; the function may be simultaneously an eigenfunction of one or more quantum-mechanical operators; the eigenvalues are then the quantum numbers that label the state. **2.** *See* energy state.

quantum statistics [STAT MECH] The statistical description of particles or systems of particles whose behavior must be described by quantum mechanics rather than classical mechanics.

quantum theory *See* quantum mechanics.

quantum theory of heat capacity [STAT MECH] Application of quantum statistics to calculate heat capacities of various substances; an important result of the theory is the decrease of specific heats at low temperatures to values smaller than their classical values as a result of energy quantization.

quantum theory of light *See* quantum electrodynamics.

quantum theory of radiation [QUANT MECH] **1.** The theory of heat radiation based on Planck's law; its principal result is the Planck radiation formula. **2.** *See* quantum electrodynamics.

quantum theory of spectra [QUANT MECH] The contemporary theory of spectra, based on the idea that an atom, molecule, or nucleus can exist only in certain allowed energy states, that it emits or absorbs energy as it changes from one state to another, and that the frequency of the associated electromagnetic radiation equals the difference in energies of two states divided by Planck's constant.

quantum theory of valence [PHYS CHEM] The theory of valence based on quantum mechanics; it accounts for many experimental facts, explains the stability of a chemical bond, and allows the correlation and prediction of many different properties of molecules not possible in earlier theories.

quantum-wave equation [QUANT MECH] A partial differential equation which relates the spatial and time dependences of the wave function of a system of one or more atomic or subatomic particles; examples are the Schrödinger equation in nonrelativistic quantum mechanics, and the Klein-Gordon, Dirac, Rarita-Schwinger and Proca equations in relativistic quantum mechanics.

quantum yield [PHYS CHEM] For a photochemical reaction, the number of moles of a stated reactant disappearing, or the number of moles of a stated product produced, per einstein of light of the stated wavelength absorbed.

quaquaversal [GEOL] Of strata and geologic structures, dipping outward in all directions away from a central point.

quarantine [MED] Limitation of freedom of movement of susceptible individuals who have been exposed to communicable disease, for a period of time equal to the incubation period of the disease.

quarantine anchorage [CIV ENG] An area where a vessel anchors when satisfying quarantine regulations.

quarantine buoy [NAV] A buoy marking the location of a quarantine anchorage.

quark [PARTIC PHYS] One of the hypothetical basic particles, having charges whose magnitudes are ⅓ or ⅔ of the electron charge, from which many of the elementary particles may, in theory, be built up; for example, nucleons may be formed from three quarks and mesons from quark-antiquark combinations; no experimental evidence for the actual existence of free quarks has been found.

quarry [ENG] An open or surface working or excavation for the extraction of building stone, ore, coal, gravel, or minerals.

quarry bar [ENG] A horizontal bar with legs at each end, used to carry machine drills.

quarry face [MIN ENG] The freshly split face of ashlar, squared off for the joints only and used for massive work.

quarrying [ENG] The surface exploitation and removal of stone or mineral deposits from the earth's crust. [GEOL] *See* plucking.

quarrying machine [MECH ENG] Any machine used to drill holes or cut tunnels in native rock, such as a gang drill or tunneling machine; most commonly, a small locomotive bearing rock-drilling equipment operating on a track.

quarry powder [MATER] Ammonium nitrate dynamites used in quarrying where blasts of several tons of explosives are needed.

quarry sap *See* quarry water.

quarry water [ENG] Subsurface water retained in freshly quarried rock. Also known as quarry sap.

quart [MECH] Abbreviated qt. **1.** A unit of volume used for measurement of liquid substances in the United States, equal to 2 pints, or ¼ gallon, or 57¾ cubic inches, or $9.46352946 \times 10^{-4}$ cubic meter. **2.** A unit of volume used for measurement of solid substances in the United States, equal to 2 dry pints, or ⅟₃₂ bushel, or 107,521/1,600 cubic inches, or approximately 1.10122×10^{-3} cubic meter. **3.** A unit of volume used for measurement of both liquid and solid substances, although mainly the former, in the United Kingdom, equal to 2 U.K. pints, or ¼ U.K. gallon, or approximately 1.13652×10^{-3} cubic meter.

quartation *See* inquartation.

quarter [MECH] **1.** A unit of mass in use in the United States, equal to ¼ short ton, or 500 pounds, or 226.796185 kilograms. **2.** A unit of mass used in troy measure, equal to ¼ troy hundredweight, or 25 troy pounds, or 9.33104304 kilograms. Abbreviated qr tr. **3.** A unit of mass used in the United Kingdom, equal to ¼ hundredweight, or 28 pounds, or 12.70058636 kilograms. Abbreviated qr. **4.** A unit of volume used in the United Kingdom for measurement of liquid and solid substances, equal to 8 bushels, or 64 gallons, or approximately 0.290950 cubic meter. [NAV ARCH] Portions of a vessel's sides about midway between the stem and the middle and between the middle and the stern.

quarter deck [NAV ARCH] The after portion of a weather deck.

quartering machine [MECH ENG] A machine that bores parallel holes simultaneously in such a way that the center lines of adjacent holes are 90° apart.

quartering sea [NAV] Waves moving in a direction approximately 45° from a vessel's heading, striking the vessel on the quarter.

quarternary phase-shift keying [ELECTR] Modulation of a microwave carrier with two parallel streams of nonreturn-to-

zero data in such a way that the data is transmitted as 90° phase shifts of the carrier; this gives twice the message channel capacity of binary phase-shift keying in the same bandwidth. Abbreviated QPSK.

quarter-phase *See* two-phase.

quarter-sawed [MATER] The grain pattern that is produced when hardwood is cut so that the annular rings are at an angle of 45° or less with the board's surface.

quarter-square multiplier [COMPUT SCI] A device used to carry out function multiplication in an analog computer by implementing the algebraic identity $xy = \frac{1}{4}[(x+y)^2 - (x-y)^2]$.

quarter-turn drive [MECH ENG] A belt drive connecting pulleys whose axes are at right angles.

quarter-wave [ELECTROMAG] Having an electrical length of one quarter-wavelength.

quarter-wave antenna [ELECTROMAG] An antenna whose electrical length is equal to one quarter-wavelength of the signal to be transmitted or received.

quarter-wave attenuator [ELECTROMAG] Arrangement of two wire gratings, spaced an odd number of quarter-wavelengths apart in a waveguide, used to attenuate waves traveling through in one direction.

quarter-wave line *See* quarter-wave stub.

quarter-wave matching section *See* quarter-wave transformer.

quarter-wave plate [OPTICS] A thin sheet of mica or other doubly refracting crystal material of such thickness as to introduce a phase difference of one quarter-cycle between the ordinary and the extraordinary components of light passing through; such a plate converts circularly polarized light into plane-polarized light.

quarter-wave stub [ELECTROMAG] A section of transmission line that is one quarter-wavelength long at the fundamental frequency being transmitted; when shorted at the far end, it has a high impedance at the fundamental frequency and all odd harmonics, and a low impedance for all even harmonics. Also known as quarter-wave line; quarter-wave transmission line.

quarter-wave termination [ELECTROMAG] Metal plate and a wire grating spaced about ¼ of a wavelength apart in a waveguide, with the plate serving as the termination of the guide; waves reflected from the metal plate are canceled by waves reflected from the grating so that all energy is absorbed (none is reflected) by the quarter-wave termination.

quarter-wave transformer [ELECTROMAG] A section of transmission line approximately one quarter-wavelength long, used for matching a transmission line to an antenna or load. Also known as quarter-wave matching section.

quarter-wave transmission line *See* quarter-wave stub.

quartic *See* biquadratic.

quartic equation [MATH] Any fourth-degree polynomial equation. Also known as biquadratic equation.

quartz [MINERAL] SiO_2 A colorless, transparent rock-forming mineral with vitreous luster, crystallizing in the trigonal trapezohedral class of the rhombohedral subsystem; hardness is 7 on Mohs scale, and specific gravity is 2.65; the most abundant and widespread of all minerals.

quartzarenite [PETR] A quartz-rich sandstone with framework grains separated predominantly by cement rather than matrix; essentially an orthoquartzite.

quartz basalt [PETR] An igneous rock with more than 5% quartz.

quartz-bearing diorite *See* quartz diorite.

quartz claim [MIN ENG] In the United States, a mining claim containing ore in veins or lodes, as contrasted with placer claims carrying mineral, usually gold, in alluvium.

quartz clock [HOROL] A clock using the piezoelectric property of a quartz crystal, in which the crystal is introduced into an oscillating electric circuit having a frequency nearly equal to the natural frequency of vibration of the crystal.

quartz crystal [ELECTR] A natural or artificially grown piezoelectric crystal composed of silicon dioxide, from which thin slabs or plates are carefully cut and ground to serve as a crystal plate. [MINERAL] *See* rock crystal.

quartz-crystal filter [ELECTR] A filter which utilizes a quartz crystal; it has a small bandwidth, a high rate of cutoff, and a higher unloaded Q than can be obtained in an ordinary resonator.

quartz-crystal resonator [ELECTR] A quartz plate whose natural frequency of vibration is used to control the frequency of an oscillator. Also known as quartz resonator.

quartz delay line [ELECTR] An acoustic delay line in which quartz is used as the medium of sound transmission.

quartz diorite [PETR] A group of plutonic rocks having the composition of diorite but with large amounts of quartz (greater than 20%). Also known as quartz-bearing diorite; tonalite.

quartz-fiber electroscope [ELECTR] Electroscope in which a gold-plated quartz fiber serves the same function as the gold leaf of a conventional electroscope.

quartz-flooded limestone [PETR] A limestone characterized by an abundance of quartz particles that had been imported suddenly from a nearby source by wind or water currents, but that gradually become sparser in an upward direction and completely disappear within a few centimeters.

quartz graywacke [PETR] A graywacke containing abundant grains of quartz and chert and less than 10% each of feldspars and rock fragments.

quartz horizontal magnetometer [ENG] A type of relative magnetometer used as a geomagnetic field instrument and as an observatory instrument for routine calibration of recording equipment.

quartz-iodine lamp [ELECTR] An electric lamp having a tungsten filament and a quartz envelope filled with iodine vapor.

quartzite [PETR] A granoblastic metamorphic rock consisting largely or entirely of quartz; most quartzites are formed by metamorphism of sandstone.

quartzitic sandstone [PETR] Sandstone consisting of 100% quartz grains cemented with silica.

quartz lamp [ELECTR] A mercury-vapor lamp having a transparent envelope made from quartz instead of glass; quartz resists heat, permitting higher currents, and passes ultraviolet rays that are absorbed by ordinary glass.

quartz lattice *See* rhyodacite.

quartz mine [MIN ENG] A mine in which a valuable constituent, such as gold, is found in veins rather than in placers; so named because quartz is the chief accessory mineral in such deposits.

quartz monzonite [PETR] Granitic rock in which 10–50% of the felsic constituents are quartz, and in which the ratio of alkali feldspar to total feldspar is between 35% and 65%. Also known as adamellite.

quartz oscillator [ELECTR] An oscillator in which the frequency of the output is determined by the natural frequency of vibration of a quartz crystal.

quartzose [GEOL] Referring to a substance which contains quartz as a principal constituent.

quartzose arkose [PETR] A sandstone containing 50–85% quartz, chert, and metamorphic quartzite, 15–25% feldspars and feldspathic crystalline rock fragments, and 0–25% micas and micaceous metamorphic rock fragments.

quartzose chert [PETR] A vitreous, sparkly, shiny chert, which under high magnification shows a heterogeneous mixture of pyramids, prisms, and faces of quartz, but also includes chert in which the secondary quartz is largely anhedral.

quartzose graywacke [PETR] **1.** A sandstone containing 50–85% quartz, chert, and metamorphic quartzite, 15–25% micas and micaceous metamorphic rock fragments, and 0–25% feldspars and feldspathic crystalline rock fragments. **2.** A graywacke that has lost its micaceous constituents through abrasion and thus tends to approach an orthoquartzite.

quartzose sandstone [PETR] Sandstone consisting of more than 95% clear quartz grains and less than 5% matrix. Also known as quartz sandstone.

quartzose shale [PETR] A green or gray shale composed predominantly of rounded quartz grains of silt size, commonly associated with highly mature sandstones (orthoquartzites), representing the reworking of residual clays as transgressive seas encroached on old land areas.

quartzose subgraywacke *See* protoquartzite.

quartz-pebble conglomerate *See* orthoquartzitic conglomerate.

quartz plate *See* crystal plate.

quartz porphyry [PETR] A porphyritic extrusive or hypabyssal rock containing quartz and alkali feldspar phenocrysts embedded in a microcrystalline or cryptocrystalline matrix. Also known as granite porphyry.

quartz pressure gage [ENG] A pressure gage that uses a highly stable quartz crystal resonator whose frequency changes directly with applied pressure.

quartz resonator *See* quartz-crystal resonator.

quartz resonator force transducer [ENG] A type of accel-

QUEBRACHO

Quebracho, branch with fruit.

erometer which measures the change in the resonant frequency of a small quartz plate with a longitudinal slot, forming a double-ended tuning fork, when a longitudinal force associated with acceleration is applied to the plate.

quartz sandstone *See* quartzose sandstone.

quartz schist [PETR] A schist whose foliation is due mainly to streaks and lenticles of nongranular quartz.

quartz strain gage [ELECTR] A device used to measure small deformations of a substance by determining the resulting voltage that develops in a quartz attached to it.

quartz syenite [PETR] A group of plutonic rocks having the characteristics of syenite but with a greater amount of quartz (5–20%).

quartz thermometer [ENG] A thermometer based on the sensitivity of the resonant frequency of a quartz crystal to changes in temperature.

quartz topaz *See* citrine.

quartz wedge [OPTICS] A very thin wedge of quartz cut parallel to an optic axis; used to determine the sign of double refraction of biaxial crystals, and in other applications involving polarized light and its interaction with matter.

quasar [ASTRON] Quasi-stellar astronomical object, often a radio source; all quasars have large red shifts; they have small optical diameter, but may have large radio diameter. Also known as quasi-stellar object (QSO).

quasi-atom [ATOM PHYS] A system formed by two colliding atoms whose nuclei approach each other so closely that, for a very short time, the atomic electrons arrange themselves as if they belonged to a single atom whose atomic number equals the sum of the atomic numbers of the colliding atoms.

quasi-cratonic [GEOL] Pertaining to a part of oceanic crust marginal to the continent which is considered to be former continental material that stretched and foundered during expansion. Also known as semicratonic.

quasi-equilibrium [GEOL] The state of balance or grade in a stream cross section, whereby conditions of approximate equilibrium tend to be established in a reach of the stream as soon as a rather smooth longitudinal profile has been established in that reach, even though downcutting may go on.

quasi-fission [NUC PHYS] A nuclear reaction induced by heavy ions in which the two product nuclei have kinetic energies typical of fission products, but have masses close to those of the target and projectile, individually. Also known as deep inelastic transfer; incomplete fusion; relaxed peak process; strongly damped collision.

quasi–F martingale [MATH] A stochastic process which is the sum of an F martingale and an F process having bounded variation on every finite time interval.

quasi-free-electron theory [SOLID STATE] A modification of the free-electron theory of metals to take into account the periodic variation of the potential acting on a conduction electron, in which these electrons are assigned an effective scalar mass which differs from their real mass.

quasi-hydrostatic approximation [METEOROL] The use of the hydrostatic equation as the vertical equation of motion, thus implying that the vertical accelerations are small without constraining them to be zero. Also known as quasi-hydrostatic assumption.

quasi-hydrostatic assumption *See* quasi-hydrostatic approximation.

quasi-instruction [COMPUT SCI] An expression in a source program which resembles an instruction in form, but which does not have a corresponding machine instruction in the object program, and is directed to the assembler or compiler. Also known as pseudoinstruction.

quasi-linear feedback control system [CONT SYS] Feedback control system in which the relationships between the pertinent measures of the system input and output signals are substantially linear despite the existence of nonlinear elements.

quasi-linear system [CONT SYS] A control system in which the relationships between the input and output signals are substantially linear despite the existence of nonlinear elements.

quasi-molecule [ATOM PHYS] The structure formed by two colliding atoms when their nuclei are close enough for the atoms to interact, but not so close as to form a quasi-atom.

quasi-parallel execution [COMPUT SCI] The execution of a collection of coroutines by a single processor that can work on only one coroutine at a time; the order of execution is arbitrary and each coroutine is executed independently of the rest.

quasi-particle [PHYS] An entity used in the description of a system of many interacting particles which has particlelike properties such as mass, energy, and momentum, but which does not exist as a free particle; examples are phonons and other elementary excitations in solids, and "dressed" helium-3 atoms in Landau's theory of liquid helium-3.

quasi-random code generator [COMMUN] High-speed pulse-code-modulation information source used in the design and evaluation of wide-band communications links by providing a means of closed loop testing.

quasi-reflection [OPTICS] A term applied to the very strong return of light produced by dust particles and other suspensoids whose diameters are large compared to the wavelength of the incident radiation.

quasi-square-wave static inverter [ELEC] A static inverter that generates two square waves superimposed on one another to approximate an ac sine wave, using a silicon-controlled rectifier bridge and control circuit to control the pulse width and amplitude of the resulting wave, thereby achieving regulation.

quasi-stable elementary particle [PARTIC PHYS] A term formerly (before the discovery of charmed particles) used for elementary particles that cannot decay into other particles through strong interactions and that have lifetimes longer than 10^{-20} second. Also known as semistable elementary particle.

quasi-static process *See* reversible process.

quasi-stationary front [METEOROL] A front which is stationary or nearly so; conventionally, a front which is moving at a speed less than about 5 knots (0.26 meter per second) is generally considered to be quasi-stationary. Commonly known as stationary front.

quasi-stellar object *See* quasar.

Quaternary [GEOL] The second period of the Cenozoic geologic era, following the Tertiary, and including the last 2–3 million years.

quaternary alloy [MET] An alloy containing four principal elements apart from accidental impurities.

quaternary ammonium base [ORG CHEM] Ammonium hydroxide (NH_4OH) with the ammonium hydrogens replaced by organic radicals, such as $(CH_3)_4NOH$.

quaternary ammonium salt [ORG CHEM] A nitrogen compound in which a central nitrogen atom is joined to four organic radicals and one acid radical, for example, hexamethonium chloride; used as an emulsifying agent, corrosion inhibitor, and antiseptic.

quaternary carbon atom [ORG CHEM] A carbon atom bonded to four other carbon atoms with single bonds.

quaternary phase equilibria [PHYS CHEM] The solubility relationships in any liquid system with four nonreactive components with varying degrees of mutual solubility.

quaternary signaling [COMMUN] An electrical communications mode in which information is passed by the presence and absence, or plus and minus variations of four discrete levels of one parameter of the signaling medium.

quaternary system [PHYS CHEM] An equilibrium relationship between a mixture of four (four phases, four components, and so on).

quaternion [MATH] The division algebra over the real numbers generated by elements i, j, k subject to the relations $i^2 = j^2 = k^2 = -1$ and $ij = -ji = k$, $jk = -kj = i$, and $ki = -ik = j$. Also known as hypercomplex number.

quay [CIV ENG] A solid embankment or structure parallel to a waterway; used for loading and unloading ships.

quebracho [BOT] Any of a number of South American trees in different genera in the order Sapindales, but all being a valuable source of wood, bark, and tannin. [MATER] A drilling-fluid additive used for thinning or dispersing in order to control viscosity and thixotropy; made from an extract of the quebracho tree and consisting essentially of tannic acid.

quebracho bark [BOT] Bark of the white quebracho tree *Aspidosperma quebracho* of Chile and Argentina; main components are aspidospermine, tannin, and quebrachine; used in medicine and tanning.

queen [INV ZOO] A mature, fertile female in a colony of ants, bees, or termites, whose function is to lay eggs.

queen post [CIV ENG] Either of two vertical members, one on each side of the apex of a triangular truss.

queenslandite *See* Darwin glass.

Queensland tick typhus [MED] A benign infectious disease of humans found in rural northeastern Australia, caused by the bacterialike microorganism *Rickettsia australis* and presumed to be carried by the tick *Ixodes holocyclus*.

queen's metal [MET] An alloy consisting principally of tin to which antimony, zinc, and lead or copper are added.

Queenston shale [GEOL] A red bed series from the Ordovician found in Niagara Gorge; it is composed of deltaic red shale.

queenstownite *See* Darwin glass.

quellung reaction [MICROBIO] Swelling of the capsule of a bacterial cell, caused by contact with serum containing antibodies capable of reacting with polysaccharide material in the capsule; applicable to *Pneumococcus, Klebsiella,* and *Hemophilus.*

quench aging [MET] Aging of metal induced by rapid cooling from solution heat-treatment temperatures.

quench annealing [MET] Annealing an austenitic ferrous alloy by heating followed by quenching from solution temperatures.

quench bath [ENG] A liquid medium, such as oil, fused salt, or water, into which a material is plunged for heat-treatment purposes.

quenched spark gap [ELEC] A spark gap having provisions for rapid deionization; one form consists of many small gaps between electrodes that have relatively large mass and are good radiators of heat; the electrodes serve to cool the gaps rapidly and thereby stop conduction.

quenched water [OCEANOGR] Ocean water which produces an abnormally large propagation loss in the sound passing through it; it is usually found in shallow water or near shores where there are strong currents accompanied by considerable turbulence.

quench frequency [ELECTR] Number of times per second that a circuit is caused to go in and out of oscillation.

quench hardening [MET] The hardening of a ferrous alloy by quenching from a temperature above the transformation range.

quenching [ATOM PHYS] Phenomenon in which a very strong electric field, such as a crystal field, causes the orbit of an electron in an atom to precess rapidly so that the average magnetic moment associated with its orbital angular momentum is reduced to zero. [ELECTR] **1.** The process of terminating a discharge in a gas-filled radiation-counter tube by inhibiting reignition. **2.** Reduction of the intensity of resonance radiation resulting from deexcitation of atoms, which would otherwise have emitted this radiation, in collisions with electrons or other atoms in a gas. [ENG] Shock cooling by immersing liquid or molten material into a cooling medium (liquid or gas); used in metallurgy, plastics forming, and petroleum refining. [IMMUNOL] An adaptation of immunofluorescence that uses two fluorochromes, one of which absorbs light emitted by the other; one fluorochrome labels that antigen, another the antibody, and the antigen-antibody complexes retain both; the initialy emitted light is absorbed and so quenched by the second compound. [MET] Rapid cooling from solution temperatures. [SOLID STATE] Reduction in the intensity of sensitized luminescence radiation when energy migrating through a crystal by resonant transfer is dissipated in crystal defects or impurities rather than being reemitted as radiation.

quenching oil [MET] Animal, vegetable, or mineral oil, such as fish oil, cottonseed oil, or lard, used in quenching baths for carbon and alloy steels; removes heat from the steel more slowly and uniformly than water.

quenching stress [MET] Internal stresses set up in a metal as a result of quenching.

quench oscillator [ELECTR] Circuit in a superregenerative receiver which produces the frequency signal.

quench-tank extrusion [ENG] Plastic-film or metal extrusion that is cooled in a quenching medium.

quench temperature [ENG] The temperature of the medium used for quenching.

quenite [PETR] A fine-grained, dark-colored hypabyssal rock composed of anorthite, chrome diopside, with less olivine and a small amount of bronzite.

quenselite [MINERAL] $PbMnO_2(OH)$ A pitch black mineral consisting of an oxide of lead and manganese; occurs in tabular form.

quenstedtite [MINERAL] $Fe_2(SO_4)_3 \cdot 10H_2O$ A pale violet to reddish-violet, triclinic mineral consisting of hydrated ferric sulfate; occurs in aggregates of crystals.

quercetin [BIOCHEM] $C_{15}H_5O_2(OH)_5$ A yellow, crystalline flavonol obtained from oak bark and Douglas fir bark; used as an antioxidant and absorber of ultraviolet rays, and in rubber, plastics, and vegetable oils.

quercimelin *See* quercitrin.

quercite *See* quercitol.

quercitol [PHARM] $C_6H_7(OH)_5$ Colorless, water-soluble, sweet-tasting crystals with a melting point of 234°C; used in medicine. Also known as acorn sugar; pentahydroxycyclohexane; quercite.

quercitrin [ORG CHEM] $C_{21}H_{20}O_{11}$ The 3-rhamnoside of quercitin, forming yellow crystals from dilute ethanol or methanol solution, melting at 176–179°C, soluble in alcohol; used as a textile dye. Also known as quercimelin; quercitroside.

quercitroside *See* quercitrin.

query [COMPUT SCI] A computer instruction to interrogate a data base.

query language [COMPUT SCI] A generalized computer language that is used to interrogate a data base.

query program [COMPUT SCI] A computer program that allows a user to retrieve information from a data base and have it displayed on a terminal or printed out.

question-answering system [COMPUT SCI] An information retrieval system in which a direct answer is expected in response to a submitted query, rather than a set of references that may contain the answers.

quetsch [TEXT] **1.** A vat containing rollers, in which chemical solutions are applied to yarns or fabrics. **2.** One of the rollers in such a vat.

queue [COMPUT SCI] Any space in main storage or secondry storage reserved to temporarily hold information. [IND ENG] *See* waiting line.

queuing [ENG] The movement of discrete units through channels, such as programs or data arriving at a computer, or movement on a highway of heavy traffic.

queuing theory [MATH] The area of stochastic processes emphasizing those processes modeled on the situation of individuals lining up for service.

Quevenne scale [CHEM] Arbitrary scale used with hydrometers or lactometers in the determination of the specific gravity of milk; degrees Quevenne = 1000 (specific gravity − 1).

quibinary [COMPUT SCI] A numeration system, used in data processing, in which each decimal digit is represented by seven binary digits, a group of five which are coefficients of 8, 6, 4, 2, and 0, and a group of two which are coefficients of 1 and 0.

quick [GEOL] **1.** Referring to a sediment that, when mixed with or absorbing water, becomes extremely soft, incoherent, or loose, and is capable of flowing easily under load or by force of gravity. **2.** Referring to a soil in which a decrease in effective stress allows water to flow upward with sufficient velocity to reduce significantly the soil's bearing capacity. **3.** Referring to a highly porous soil that readily absorbs heat. [MIN ENG] Referring to an economically valuable or productive mineral deposit.

quick-break fuse [ELEC] A fuse designed to draw out the arc and break the circuit rapidly when the fuse wire melts, generally by separating the broken ends with a spring.

quick-break switch [ELEC] A switch that breaks a circuit rapidly, independently of the rate at which the switch handle is moved, to minimize arcing.

quick-change gearbox [MECH ENG] A cluster of gears on a machine tool, the arrangement of which allows for the rapid change of gear ratios.

quick clay [GEOL] Clay that loses its shear strength after being disturbed.

quick flashing light [NAV] In marine operations, a light showing short flashes at the rate of not less than 60 per minute; it has a cautionary significance.

quicklime *See* calcium oxide.

quick-make switch [ELEC] Switch or circuit breaker which has a high contact-closing speed, independent of the operator.

quick malleable iron [MET] Malleable iron containing 2.2% carbon, 1.5% silicon, 0.30–0.60% manganese, and 0.75–1% copper.

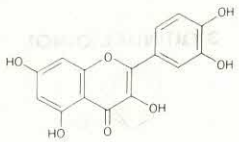
quickmatch [ENG] Fast-burning fuse made from a cord impregnated with black powder.

quickness [ORD] General term, expressing the mass rate of gas evolution of a propellant in a quantitative sense; basically a function of the propellant geometry.

quick return [MECH ENG] A device used in a reciprocating machine to make the return stroke faster than the power stroke.

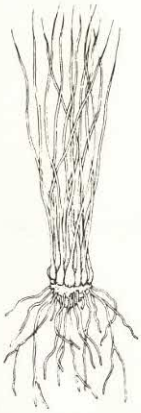
quicksand [GEOL] A highly mobile mass of fine sand consisting of smooth, rounded grains with little tendency to mutual adherence, usually thoroughly saturated with upward-flowing

QUERCETIN



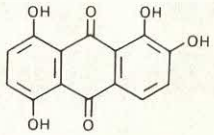
Structural formula.

QUILLWORT



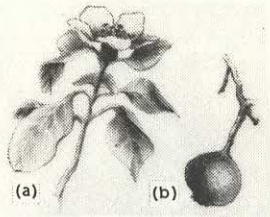
A quillwort *(Isoetes nuttallii). (From A. W. Haupt, Plant Morphology, McGraw-Hill, 1953)*

QUINALIZARIN



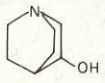
Structural formula.

QUINCE



Quince. *(a)* Flower is borne on wood of the same season, not from an autumn fruit bud. *(b)* Short shoots start from the winter buds, and the flowers and fruits are produced on the ends of these shoots.

3-QUINUCLIDINOL



Structural formula.

water; tends to yield under pressure and to readily swallow heavy objects on the surface. Also known as running sand. [MATER] A loose sand mixture with a high proportion of water, thus having a low bearing pressure.

quicksilver *See* mercury.

quicksilver vermilion *See* mercuric sulfide.

quickstone [PETR] A consolidated rock that flowed under the influence of gravity before lithification.

QUICKTRAN [COMPUT SCI] A time-sharing language developed by IBM for use on an IBM 1050 terminal connected to an IBM 7044 computer; as a programming system, it provides concurrent computer access to a maximum of 50 remotely located terminals from a centralized data-processing system having tape, drum, and disk storage.

quickwater [HYD] The part of a stream characterized by a strong current.

quiescent [ELECTR] Condition of a circuit element which has no input signal, so that it does not perform its active function. [ENG] State of a body at rest, or inactive, such as an undisturbed liquid in a storage or process vessel. [MED] Inactive, latent, or dormant, referring to a disease or pathological process.

quiescent-carrier telephony [COMMUN] A radiotelephony system in which the carrier is suppressed whenever there are no voice signals to be transmitted.

quiescent period [COMMUN] Resting period, or the period between pulse transmissions.

quiescent point [ELECTR] The point on the characteristic curve of an amplifier representing the conditions that exist when the input signal equals zero.

quiescent push-pull [ELECTR] Push-pull output stage so arranged in a radio receiver that practically no current flows when no signal is being received.

quiescent value [ELECTR] The voltage or current value for an electron-tube electrode when no signals are present.

quiet automatic volume control *See* delayed automatic gain control.

quiet battery [ELECTR] Source of energy of special design or with added filters which is sufficiently quiet and free from interference that it may be used for speech transmission. Also known as talking battery.

quieting sensitivity [ELECTR] Minimum signal input to a frequency-modulated receiver which is required to give a specified output signal-to-noise ratio under specified conditions.

quiet sun [ASTROPHYS] The sun when it is free from unusual radio wave or thermal radiation such as that associated with sunspots.

quiet sun noise [ASTROPHYS] Electromagnetic noise originating in the sun at a time when there is little or no sunspot activity.

quiet tuning [ELECTR] Circuit arrangement for silencing the output of a radio receiver, except when it is accurately tuned to an incoming carrier wave.

QUIL *See* quad in-line.

quill [DES ENG] A hollow shaft into which another shaft is inserted in mechanical devices. [TEXT] A shaft or spool on which filling yarn is wound before insertion into a shuttle. [VERT ZOO] The hollow, horny shaft of a large stiff wing or tail feather.

quill drive [MECH ENG] A drive in which the motor is mounted on a nonrotating hollow shaft surrounding the driving-wheel axle; pins on the armature mesh with spokes on the driving wheels, thereby transmitting motion to the wheels; used on electric locomotives.

quill gear [MECH ENG] A gear mounted on a hollow shaft.

quillwort [BOT] The common name for plants of the genus *Isoetes*.

quilted surface [GEOL] A land surface characterized by broad, rounded, uniformly convex hills separating valleys that are comparatively narrow.

quinacrine [PHARM] $C_{23}H_{30}ClN_3O$ Formerly an important antimalarial drug but now used in the treatment of giardiasis, tapeworm infections, amebiasis, and a variety of other conditions.

quinalbarbitone *See* secobarbital.

quinaldine [ORG CHEM] $C_9H_6NCH_3$ A colorless, oily liquid with a boiling point of 246–247°C; soluble in alcohol, chloroform, and ether; used in medicine as an antimalarial. Also known as chinaldine; α-methylquinoline.

quinalizarin [ORG CHEM] $C_{14}H_8O_6$ A red, crystalline compound, soluble in water solutions of alkalies, and in acetic and sulfuric acid; used to dye cottons.

quinaphthol [PHARM] $C_{40}H_{40}N_2O_{10}S_2$ A yellow, crystalline powder with a melting point of 185–186°C; used in medicine. Also known as quinine-β-naphthol α-sulfonate.

quinary code [COMPUT SCI] A code based on five possible combinations for representing digits.

quince [BOT] *Cydonia oblonga*. A deciduous tree of the order Rosales characterized by crooked branching, leaves that are densely hairy on the underside and solitary white or pale-pink flowers; fruit is an edible pear- or apple-shaped tomentose pome.

quinhydrone [ORG CHEM] $C_6H_4O_2 \cdot C_6H_4(OH)_2$ Green, water-soluble powder, subliming at 171°C; a compound of quinone and hydroquinone dissociating in solution.

quinhydrone electrode [ANALY CHEM] A platinum wire in a saturated solution of quinhydrone; used as a reversible electrode standard in pH determinations.

quinic acid [ORG CHEM] $C_6H_7(OH)_4COOH \cdot H_2O$ Ether-insoluble, white crystals with acid taste; melts at 162°C; soluble in alcohol, water, and glacial acetic acid; used in medicine. Also known as chinic acid; kinic acid.

quinidine [ORG CHEM] $C_{20}H_{24}N_2O_2$ A crystalline alkaloid that melts at 171.5°C and that may be derived from the bark of cinchona; used as the salt in medicine. Also known as chinidine; β-quinine.

quinine [ORG CHEM] $C_{20}H_{24}N_2O_2 \cdot 3H_2O$ White powder or crystals, soluble in alcohol, ether, carbon disulfide, chloroform, and glycerol; an alkaloid derived from cinchona bark; used as an antimalarial drug and in beverages.

β-quinine *See* quinidine.

quinine-β-naphthol α-sulfonate *See* quinaphthol.

quinoa [BOT] *Chenopodium quinoa*. An annual herb of the family Chenopodiaceae grown at high altitudes in South America for the highly nutritious seeds.

quinoidine [ORG CHEM] A brownish-black mass consisting of a mixture of alkaloids which remain in solution after extracting crystallized alkaloids from cinchona bark; soluble in dilute acids, alcohol, and chloroform; used in medicine. Also known as chinoidine.

quinol *See* hydroquinone.

quinoline [ORG CHEM] C_9H_7N Water-soluble, aromatic nitrogen compound; colorless, hygroscopic liquid; also soluble in alcohol, ether, and carbon disulfide; boils at 238°C; used in medicine and as a chemical intermediate. Also known as chinoline; leucoline; leukol.

quinoline blue *See* cyanine dye.

quinolinic acid *See* 2,3-pyradine dicarboxylic acid.

8-quinolinol *See* 8-hydroxyquinoline; oxine.

quinone [ORG CHEM] $CO(CHCH)_2CO$ Yellow crystalline compound with irritating aroma; melts at 116°C; soluble in alcohol, alkalies, and ether; used to make dyes and hydroquinone. Also known as benzoquinone; chinone.

quinoxaline [ORG CHEM] $C_8H_6N_2$ Bicyclic organic base; colorless powder, soluble in water and organic solvents; melts at 30°C; used in organic synthesis. Also known as 1,4-benzodiazine; benzo-*para*-diazine.

***N'*-2-quinoxalysulfanilimide** [ORG CHEM] $C_{14}H_{12}N_4SO_2$ Crystals with a melting point of 247°C; almost insoluble in water; used as a rodenticide. Also known as sulfaquinoxaline.

quinquefoliate [BOT] Of a leaf, having five leaflets.

quintal *See* hundredweight; metric centner.

quintic [MATH] A fifth-degree expression.

quintic equation [MATH] A fifth-degree polynomial equation.

quintillion [MATH] **1.** The number 10^{18}. **2.** In British and German usage, the number 10^{30}.

quintozene *See* pentachloronitrabenzene.

quintuplet [BIOL] One of five children who have been born at one birth.

3-quinuclidinol [PHARM] $C_7H_{13}NO$ A crystalline compound, used as a hypotensive agent in medicine. Also known as 3-hydroxyquinuclidine.

quire [MATER] Twenty-five sheets of paper, or one-twentieth of a 500-sheet ream.

quirk [BUILD] **1.** An indentation separating one element from another, as between moldings. **2.** A V groove in the finish-coat plaster where it abuts the return on a door or window.

quirk bead [BUILD] **1.** A bead with a quirk on one side only, as on the edge of a board. Also known as bead and quirk. **2.** A

bead that is flush with the adjoining surface and separated from it by a quirk on each side. Also known a bead and quirk; double-quirked bead; flush bead; recessed bead. **3.** A bead located at a corner with quirks at either side at right angles to each other. Also known as bead and quirk; return bead. **4.** A bead with a quirk on its face. Also known as bead and quirk.

quitclaim [MIN ENG] Legal release of a claim, right, title, or interest by one person or estate to another.

quitiqua *See* pinta.

Q unit [THERMO] A unit of energy, used in measuring the heat energy of fuel reserves, equal to 10^{18} British thermal units, or approximately 1.055×10^{21} joules.

quoin [BUILD] One of the members forming an outside corner or exterior angle of a building, and differentiated from the wall by color, texture, size, or projection. [GRAPHICS] One of the wedge-shaped devices made of steel, generally triangular, and less than type-high; used to lock type and plates in chases for the press.

quoin post [CIV ENG] The vertical member at the jointed end of a gate in a navigation lock.

quotient [MATH] The result of dividing one quantity by another.

quotient field [MATH] The smallest field containing a given integral domain; obtained by formally introducing all quotients of elements of the integral domain.

quotient group [MATH] A group G/H whose elements are the cosets gH of a given normal subgroup H of a given group G, and the group operation is defined as $g_1H \cdot g_2H \equiv (g_1 \cdot g_2)H$. Also known as factor group.

quotient ring [MATH] A ring R/I whose elements are the cosets rI of a given ideal I in a given ring R, where the additive and multiplicative operations have the form: $r_1I + r_2I \equiv (r_1 + r_2)I$ and $r_1I \cdot r_2I \equiv (r_1 \cdot r_2)I$. Also known as factor ring; residue class ring.

quotient set [MATH] The set of all the equivalence classes relative to a given equivalence relation on a given set.

quotient space [MATH] The topological space Y which is the set of equivalence classes relative to some given equivalence relation on a given topological space X; the topology of Y is canonically constructed from that of X.

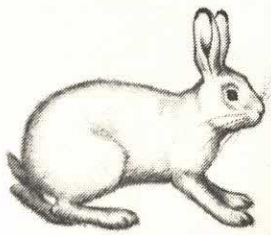
quotient topology [MATH] If X is a topological space, X/R the quotient space by some equivalence relation on X, the quotient topology on X/R is the smallest topology which makes the function which assigns to each element of X its equivalence class in X/R a continuous function.

Q value *See* disintegration energy.

R

r *See* roentgen.
R *See* roentgen.
Ra *See* radium.
R.A. *See* right ascension.
Raabe's convergence test [MATH] An infinite series with positive terms a_n where, for each n, $a_{n+1}/a_n = 1/(1 + b_n)$ will converge if, after a certain term, nb_n always exceeds a fixed number greater than 1 and will diverge if nb_n always is less than a fixed number less than or equal to 1.
rabal [METEOROL] A method of winds-aloft observation, that is, the determination of wind speeds and directions in the atmosphere above a station; it is accomplished by recording the elevation and azimuth angles of the balloon at specified time intervals while visually tracking a radiosonde balloon with the theodolite.
rabbet [ENG] **1.** A groove cut into a part. **2.** A strip applied to a part as, for example, a stop or seal. **3.** A joint formed by fitting one member into a groove, channel, or recess in the face or edge of a second member.
rabbet plane [DES ENG] A plane with the blade extending to the outer edge of one side that is open.
rabbit [NUCLEO] A small container that is propelled, usually pneumatically or hydraulically, through a tube into a nuclear reactor; used to expose samples to the radiation, especially neutron flux, then remove them rapidly for measurements of radioactive atoms having short half-lives. Also known as shuttle. [PETRO ENG] A small plug driven by pressure through a flow line to clean the line or to check that it is unobstructed. [VERT ZOO] Any of a large number of burrowing mammals in the family Leporidae.
rabbit ear [MET] A recess in the corner of a die allowing wrinkling or folding of the blank.
rabbling [ENG] Stirring a molten charge, as of metal or ore.
rabicide [ORG CHEM] $C_8H_2Cl_4O_2$ A colorless, crystalline compound with a melting point of 209–210°C; slightly soluble in water; used as a fungicide in rice crops. Also known as 4,5,6,7–tetrachlorophthalide.
rabies [VET MED] An acute, encephalitic viral infection transmitted to humans by the bite of a rabid animal. Also known as hydrophobia.
Racah coefficient [QUANT MECH] A coefficient that appears in the transformation between the modes of coupling eigenfunctions of three angular momenta; they differ only by, at most, a sign from the six-j coefficients. Also known as W coefficient.
raccoon [VERT ZOO] Any of 16 species of carnivorous nocturnal mammals belonging to the family Procyonidae; all are arboreal or semiarboreal and have a bushy, long ringed tail.
race [ANTHRO] **1.** A distinctive human type possessing characteristic traits that are transmissible by descent. **2.** Descendants of a common ancestor. [BIOL] **1.** An infraspecific taxonomic group of organisms, such as subspecies or microspecies. **2.** A fixed variety or breed. [DES ENG] Either of the concentric pair of steel rings of a ball bearing or roller bearing. [ENG] A channel transporting water to or away from hydraulic machinery, as in a power house. [OCEANOGR] A rapid current, or a constricted channel in which such a current flows; the term is usually used only in connection with a tidal current, which may be called a tide race.
race condition [ELEC] An ambiguous condition occurring in control counters when one flip-flop changes to its next state before a second one has had sufficient time to latch.
racemase [BIOCHEM] Any of a group of enzymes that catalyze racemization reactions.
raceme [BOT] An inflorescence on which flowers are borne on stalks of equal length on an unbranched main stalk that continues to grow during flowering.
racemic acid [ORG CHEM] $C_2H_4O_2(COOH)_2 \cdot H_2O$ Colorless crystals, melting at 205°C; soluble in water, slightly soluble in alcohol; used as a chemical intermediate. Also known as inactive tartaric acid.
racemic mixture [CHEM] A compound which is a mixture of equal quantities of dextrorotatory and levorotatory isomers of the same compound, and therefore is optically inactive.
racemic 1-phenyl-2-aminopropane *See* amphetamine.
racemose [ANAT] Of a gland, compound and shaped like a bunch of grapes, with freely branching ducts that terminate in acini. [BOT] Bearing, or occurring in the form of, a raceme.
race track [NUCLEO] An assembly of several Calutron isotope separators in the shape of a race track, having a common magnetic field. Also known as track.
raceway [ELEC] A channel used to hold and protect wires, cables, or busbars. Also known as electric raceway.
rachiglossate radula [INV ZOO] A radula of certain gastropod mollusks which has one or three longitudinal series of teeth, each of which may bear many cusps.
rachilla [BOT] The axis of a grass spikelet.
rachis [ANAT] The vertebral column. [BIOL] An axial structure such as the axis of an inflorescence, the central petiole of a compound leaf, or the central cord of an ovary in Nematoda.
rack [AERO ENG] A suspension device permanently fixed to an aircraft; it is designed for attaching, arming, and releasing one or more bombs; it may also be utilized to accommodate other items such as mines, rockets, torpedoes, fuel tanks, rescue equipment, sonobuoys, and flares. [CIV ENG] A fixed screen composed of parallel bars placed in a waterway to catch debris. [DES ENG] *See* relay rack. [ENG] A frame for holding or displaying articles. [MECH ENG] A bar containing teeth on one face for meshing with a gear. [MIN ENG] An inclined trough or table for washing or separating ore.
rack and snail [HOROL] A mechanism in a striking timepiece that permits the hands to be advanced without waiting for the striking to be completed.
racking [CIV ENG] Setting back the end of each course of brick or stone from the end of the preceding course. [MET] Suspending work from a frame that holds and conducts current to one or more electrodes for electroplating and other electrochemical operations. [PETRO ENG] During oil well drilling, placing stands of pipe in an orderly fashion in the derrick while hoisting pipe out of the well bore. [TEXT] Lateral movements of the needles or needle bed of a knitting machine in order to compact a fabric and enable it to hold its shape.
rack panel [ELECTR] A panel designed for mounting on a relay rack; its width is 19 inches (48.26 centimeters), height is a multiple of 1¾ inches (4.445 centimeters), and the mounting notches are standardized as to size and position.
rack railway [CIV ENG] A railway with a rack between the rails which engages a gear on the locomotive; used on steep grades.

RABBIT



The snowshoe hare *(Lepus americanus)* undergoes seasonal color changes, being white in the winter and brown in the summer. Ears are always black-tipped.

RACCOON

A semiarboreal raccoon which uses tree hollows for breeding and nesting.

RACHIGLOSSATE RADULA

Rachiglossate radula, from *Murex* (marine gastropod). *(From R. R. Shrock and W. H. Twenhofel, Principles of Invertebrate Paleontology, 2d ed., McGraw-Hill, 1953)*

racon *See* radar beacon.

rad [NUCLEO] The standard unit of absorbed dose, equal to energy absorption of 100 ergs per gram (0.01 joule per kilogram); supersedes the roentgen as the unit of dosage.

radappertization [FOOD ENG] The use of radiation for sterilizing foods.

radar [ENG] **1.** A system using beamed and reflected radio-frequency energy for detecting and locating objects, measuring distance or altitude, navigating, homing, bombing, and other purposes; in detecting and ranging, the time interval between transmission of the energy and reception of the reflected energy establishes the range of an object in the beam's path. Derived from radio detection and ranging. **2.** *See* radar set.

radar advisory [COMMUN] The term used to indicate that the provision of advice and information is based on radar observation.

radar altimeter [NAV] A radio altimeter, useful at altitudes much greater than the 5000-foot (1500 meter) limit of frequency-modulated radio altimeters, in which simple pulse-type radar equipment is used to send a pulse straight down from an aircraft and to measure its total time of travel to the surface and back to the aircraft. Also known as high-altitude radio altimeter; pulse-type altimeter.

radar altimetry area [NAV] A large and comparatively level terrain area with a defined elevation which can be used in determining the altitude of airborne equipment by the use of radar.

radar altitude [NAV] The altitude of an aircraft or spacecraft as determined by a radio altimeter; thus, the actual vertical distance from the terrain. Also known as radio altitude.

radar and television aid to navigation [NAV] Device which converts a circular scan radar presentation to a horizontally scanned television presentation; it provides a continuous bright display with target trails for course and speed indications of moving targets.

radar antenna [ELECTROMAG] A device which radiates radio-frequency energy in a radar system, concentrating the transmitted power in the direction of the target, and which provides a large area to collect the echo power of the returning wave.

radar antijamming [ELECTR] Measures taken to counteract radar jamming.

radar approach control [NAV] A facility providing radar approach control service by use of airport surveillance radar and precision approach radar equipment.

radar astronomy [ASTRON] The study of astronomical bodies and the earth's atmosphere by means of radar pulse techniques, including tracking of meteors and the reflection of radar pulses from the moon and the planets.

radar attenuation [ELECTROMAG] Ratio of the power delivered by the transmitter to the transmission line connecting it with the transmitting antenna, to the power reflected from the target which is delivered to the receiver by the transmission line connecting it with the receiving antenna.

radar beacon [NAV] A radar receiver-transmitter that transmits a strong coded radar signal whenever its radar receiver is triggered by an interrogating radar on an aircraft or ship; the coded beacon reply can be used by the navigator to determine his own position in terms of bearing and range from the beacon. Also known as racon; radar transponder.

radar beam [ELECTROMAG] The movable beam of radio-frequency energy produced by a radar transmitting antenna; its shape is commonly defined as the loci of all points at which the power has decreased to one-half of that at the center of the beam.

radar bearing [NAV] A bearing obtained by radar.

radar bombing [ORD] Bombing in which radar is used to locate the target or aiming point, to aid in positioning the bombing aircraft at the proper release point for bombing, or to release bombs automatically, especially under conditions of poor visibility.

radar bombsight [ENG] An airborne radar set used to sight the target, solve the bombing problem, and drop bombs.

radar buoy [NAV] A buoy having corner reflectors designed into the superstructure, but maintaining the characteristic shape of the buoy in order to differentiate a radar buoy from a buoy on which a corner reflector is mounted.

radar camera [OPTICS] A special manual or automatic camera used to photograph images on a radarscope. Also known as radarscope camera.

radar camouflage [ORD] The use of special coverings or surfaces that reduce the reflection of radio-frequency energy back to a radar set, to minimize chances for detection of the object by an enemy radar set.

radar cell [ELECTROMAG] Volume whose dimensions are one radar pulse length by one radar beam width.

radar chart [NAV] A special map used in radar navigation that emphasizes objects which give prominent radar echoes.

radar climatology [CLIMATOL] The statistics in time and space of radar weather echoes.

radar clutter *See* clutter.

radar command guidance [ENG] A missile guidance system in which radar equipment at the launching site determines the positions of both target and missile continuously, computes the missile course corrections required, and transmits these by radio to the missile as commands.

radar confusion reflector *See* confusion reflector.

radar conspicuous object [ELECTROMAG] An object which returns a strong radar echo.

radar constant [ELECTR] One of those terms of the radar equation or radar storm-detection equation which are functions of the particular radar to which the equations are applied; these include peak power, antenna gain or aperture, beam width, pulse length, pulse repetition frequency, wavelength, polarization, and noise level of the receiver.

radar contact [ENG] Recognition and identification of an echo on a radar screen; an aircraft is said to be on radar contact when its radar echo can be seen and identified on a PPI (plan-position indicator) display.

radar control [ELECTR] Guidance, direction, or employment exercised over an aircraft, guided missile, gun battery, or the like, by means of, or with the aid of, radar.

radar controller [NAV] An air-traffic controller or other responsible person proficient in the use and interpretation of radar and capable of performing one or more of the following functions: surveillance controller, traffic director, or final controller.

radar countermeasure [ELECTR] An electronic countermeasure used against enemy radar, such as jamming and confusion reflectors. Abbreviated RCM.

radar coverage [ENG] The limits within which objects can be detected by one or more radar stations.

radar coverage indicator [ENG] Device that shows how far a given aircraft should be tracked by a radar station, and also provides a reference (detection) range for quality control; takes into account aircraft size, altitude, screening angle, site elevation, type radar, antenna radiation pattern, and antenna tilt.

radar cross section *See* echo area.

radar data [NAV] Data originating from a radar facility as distinct from air-traffic control data facility or other source. [ORD] Either long-range or gap-filler radar information modified to a form which a computer can use; the two types of data are as follows: correlated, associated with a track; and uncorrelated, not associated with a track.

radar data filtering [ELECTR] Quality analysis process that causes the computer to reject certain radar data and to alert personnel of mapping and surveillance consoles to the rejection.

radar deception [ORD] Radiation, reradiation, alteration, absorption, or reflection of electromagnetic energy in a manner intended to mislead an enemy in interpretation or use of information received by his radar systems.

radar decoy [ORD] A reflecting object used in radar deception, having the same reflective characteristics as the target.

radar display [ELECTR] The pattern representing the output data of a radar set, generally produced on the screen of a cathode-ray tube. Also known as presentation; radar presentation.

radar distribution switchboard [ELECTR] Switching panel for connecting video, trigger, and bearing from any one of five systems, to any or all of 20 repeaters; also contains order lights, bearing cutouts, alarms, test equipment, and so forth.

radar dome [ENG] Weatherproof cover for a primary radiating element of a radar or radio device which is transparent to radio-frequency energy, and which permits active operation of the radiating element, including mechanical rotation or other movement as applicable.

radar echo *See* echo.

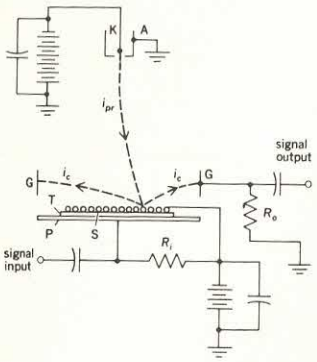
radar equation [ELECTROMAG] An equation that relates the transmitted and received powers and antenna gains of a primary radar system to the echo area and distance of the radar target.

radar fire [ORD] Gunfire aimed at a target which is tracked by radar.

radar fire control [ORD] Fire control by means of radar.

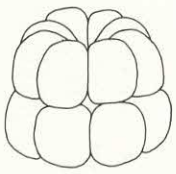
radar fix [NAV] A determination of position by means of radar.
radar frequency band [ELECTROMAG] A frequency band of microwave radiation in which radar operates.
radar gun-layer [ENG] A radar device which tracks a target and aims a gun or guns automatically.
radar homing [ENG] Homing in which a missile-borne radar locks onto a target and guides the missile to that target. [NAV] Homing on the source of a radar beam.
radar horizon [NAV] The distance to which a radar's operation is limited by the quasi-optical characteristics of the radio waves employed.
radar image [ELECTR] The image of an object which is produced on a radar screen.
radar indicator [ELECTR] A cathode-ray tube and associated equipment used to provide a visual indication of the echo signals picked up by a radar set.
radar intelligence [COMMUN] **1.** Intelligence concerning radar or intelligence derived from the use of radar equipment. **2.** Organization or activity that deals with such intelligence.
radar intelligence item [ELECTR] A feature which is radar significant but which cannot be identified exactly at the moment of its appearance as homogeneous.
radar jamming [ELECTR] Radiation, reradiation, or reflection of electromagnetic waves so as to impair the usefulness of radar used by the enemy.
radar line of position [NAV] A line of position determined by radar.
radar marker [ENG] A fixed facility which continuously emits a radar signal so that a bearing indication appears on a radar display.
radar meteorological observation [METEOROL] Evaluation of the echoes appearing on the indicator of a weather radar, in terms of orientation, coverage, intensity, tendency of intensity, height, movement, and unique characteristics of echoes, that may be indicative of certain types of severe storms (such as hurricanes, tornadoes, or thunderstorms) and of anomalous propagation. Also known as radar weather observation.
radar meteorology [METEOROL] The study of the scattering of radar waves by all types of atmospheric phenomena and the use of radar for making weather observations and forecasts.
radar mile [ELECTROMAG] The time for a radar pulse to travel from the radar to a target 1 mile (1.61 kilometers) distant and return, equal to 10.75 microseconds.
radar nautical mile [ELECTROMAG] The time interval of approximately 12.355 microseconds that is required for the radio-frequency energy of a radar pulse to travel 1 nautical mile (1852 meters) and return.
radar netting [ENG] The linking of several radars to a single center to provide integrated target information.
radar netting station [ENG] A center which can receive data from radar tracking stations and exchange these data among other radar tracking stations, thus forming a radar netting system.
radar netting unit [ELECTR] Optional electronic equipment that converts the operations central of certain air defense fire distribution systems to a radar netting station.
radar paint [MATER] A coating that absorbs radar waves.
radar photography [GRAPHICS] Making a photograph of a radar display.
radar picket [ENG] A ship or aircraft equipped with early-warning radar and operating at a distance from the area being protected, to extend the range of radar detection.
radar picket escort ship [NAV ARCH] Any of the escort ships modified to give an increased combat information center, electronic countermeasures, and electronic search facilities.
radar prediction [ENG] A graphic portrayal of the estimated radar intensity, persistence, and shape of the cultural and natural features of a specific area.
radar presentation *See* radar display.
radar pulse [ELECTROMAG] Radio-frequency radiation emitted with high power by a pulse radar installation for a period of time which is brief compared to the interval between such pulses.
radar range [ELECTROMAG] The maximum distance at which a radar set is ordinarily effective in detecting objects.
radar range equation [ELECTROMAG] An equation which expresses radar range in terms of transmitted power, minimum detectable signal, antenna gain, and the target's radar cross section.
radar range marker *See* distance marker.
radar receiver [ELECTR] A high-sensitivity radio receiver that is designed to amplify and demodulate radar echo signals and feed them to a radarscope or other indicator.
radar receiver-transmitter [ELECTR] A single component having the dual functions of generating electromagnetic energy for transmission, and of receiving, demodulating, and sometimes presenting intelligence from the reflected electromagnetic energy.
radar reconnaissance [ORD] Reconnaissance by means of radar to determine the location, disposition, and strength of enemy forces, and to determine the nature of the terrain.
radar reflection [ELECTROMAG] The return of electromagnetic waves, generated by a radar installation, from an object on which the waves are incident.
radar reflection interval [ELECTROMAG] The time required for a radar pulse to travel from the source to the target and return to the source, taking the velocity of radio propagation to be equal to the velocity of light.
radar reflectivity [ELECTROMAG] The fraction of electromagnetic energy generated by a radar installation which is reflected by an object.
radar reflector [ELECTROMAG] A device that reflects or deflects radar waves.
radar relay [ENG] **1.** Equipment for relaying the radar video and appropriate synchronizing signal to a remote location. **2.** Process or system by which radar echoes and synchronization data are transmitted from a search radar installation to a receiver at a remote point.
radar repeater [ELECTR] A cathode-ray indicator used to reproduce the visible intelligence of a radar display at a remote position; when used with a selector switch, the visible intelligence of any one of several radar systems can be reproduced.
radar report [METEOROL] The encoded and transmitted report of a radar meteorological observation; these reports usually give the azimuth, distance, altitude, intensity, shape and movement, and other characteristics of precipitation echoes observed by the radar. Also known as rain area report. Abbreviated RAREP.
radar return [NAV] The signal indication of an object which has reflected energy that was transmitted by a primary radar. Also known as radio echo.
radar scanning [ENG] The process or action of directing a radar beam through a space search pattern for the purpose of locating a target.
radarscope [ELECTR] Cathode-ray tube, serving as an oscilloscope, the face of which is the radar viewing screen. Also known as scope.
radarscope camera *See* radar camera.
radarscope overlay [ENG] A transparent overlay placed on a radarscope for comparison and identification of radar returns.
radar selector switch [ELECTR] Manual or motor-driven switch which transfers a plan-position indicator repeater from one system to another, switching video, trigger, and bearing data.
radar set [ENG] A complete assembly of radar equipment for detecting and ranging, consisting essentially of a transmitter, antenna, receiver, and indicator. Also known as radar.
radar shadow [ELECTROMAG] A region shielded from radar illumination by an intervening reflecting or absorbing medium such as a hill.
radar signal film [GRAPHICS] The film on which is recorded all the reflected signals acquired by a coherent radar, and which must be viewed or processed through an optical correlator to permit interpretation.
radar signal spectrograph [ELECTR] An electronic device in the form of a scanning filter which provides a frequency analysis of the amplitude-modulated back-scattered signal.
radar silence [ORD] A period of time during which radar transmission is stopped, generally for security reasons.
radarsonde [ENG] **1.** An electronic system for automatically measuring and transmitting high-altitude meteorological data from a balloon, kite, or rocket by pulse-modulated radio waves when triggered by a radar signal. **2.** A system in which radar techniques are used to determine the range, elevation, and azimuth of a radar target carried aloft by a radiosonde.
radar station [ENG] The place, position, or location from which, or at which, a radar set transmits or receives signals.
radar station pointer [NAV] A transparent plotting chart inscribed with radial lines from 0° to 360°; used to plot radar

RADECHON



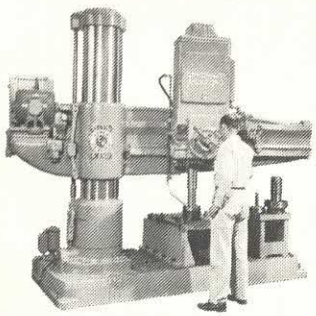
Circuit diagram of the Radechon, a signal-converter storage tube. T is mica sheet; P is metal backing plate; S is fine-mesh screen; i_{pr} is electron beam formed by electron gun with cathode K and anode A; G is collector that collects reading signal i_c; R_O is output resistor; R_i is input resistor.

RADIAL CLEAVAGE



Radial cleavage pattern found in invertebrates.

RADIAL DRILL



Large radial drilling machine set up for deep boring. *(Cincinnati Bickford)*

echoes to the scale of the chart in use; it is also used to assist in identifying radar responses with charted features.

radar storm detection [METEOROL] The detection of certain storms or stormy conditions by means of radar; liquid or frozen water drops within the storm reflect radar echoes.

radar storm-detection equation [METEOROL] The equation which relates the variables involved in the radar detection of precipitation.

radar surveying [ENG] Surveying in which airborne radar is used to measure accurately the distance between two ground radio beacons positioned along a baseline; this eliminates the need for measuring distance along the baseline in inaccessible or extremely rough terrain.

radar target [ELECTROMAG] An object belonging to a desired class which reflects back a signal sufficient to produce a fluorescent mark on the radar screen.

radar telescope [ENG] A large radar antenna and associated equipment used for radar astronomy.

radar theodolite [ENG] A theodolite that uses radar to obtain azimuth, elevation, and slant range to a reflecting target, for surveying or other purposes.

radar threshold limit [ENG] For a given radar and specified target, the point in space relative to the focal point of the antenna at which initial detection criteria can be satisfied.

radar tracking [ENG] Tracking a moving object by means of radar.

radar tracking information [NAV] Information issued to alert an aircraft to any radar targets observed on the controller's radar display which may be in a dangerous situation.

radar tracking station [ENG] A radar facility which has the capability of tracking moving targets.

radar transmitter [ELECTR] The transmitter portion of a radar set.

radar transponder *See* radar beacon.

radar triangulation [ENG] A radar system of locating targets, usually aircraft, in which two or more separate radars are employed to measure range only; the target is located by automatic trigonometric solution of the triangle composed of a pair of radars and the target in which all three sides are known.

radar upper band *See* upper bright band.

radar volume [ELECTROMAG] The volume in space that is irradiated by a given radar; for a continuous-wave radar it is equivalent to the antenna radiation pattern; for a pulse radar it is a function of the cross-section area of the beam of the antenna and the pulse length of the transmitted pulse.

radar weather observation *See* radar meteorological observation.

radar wind [METEOROL] Wind of which the movement, speed, and direction is observed or determined by a radar tracking of a balloon carrying a radiosonde, a radio transmitter, or a radar reflector.

radar wind system [ENG] Apparatus in which radar techniques are used to determine the range, elevation, and azimuth of a balloon-borne target, and hence to compute upper-air wind data.

radechon [ELECTR] A storage tube having a single electron gun and a dielectric storage medium consisting of a sheet of mica sandwiched between a continuous metal backing plate and a fine-mesh screen; used in simple delay schemes, signal-to-noise improvement, signal comparison, and conversion of signal-time bases. Also known as barrier-grid storage tube.

radiac [NUCLEO] Detection, identification, and measurement of the intensity of nuclear radiation in an area. Derived from radioactivity detection, identification, and computation.

radiac instrument *See* radiac set.

radiacmeter *See* radiac set.

radiac set [NUCLEO] A complete system for detecting, identifying, and measuring radioactivity. Also known as radiac instrument; radiacmeter.

radial [GRAPHICS] A line or direction from the center (principal point, isocenter, nadir point, or substitute center) to any point on a photograph. [NAV] One of a number of radial lines of position defined by an azimuthal radio navigation facility and identified in terms of the bearing (usually magnetic) of all points on that line from the facility. [SCI TECH] Directed or diverging from a center.

radial acceleration *See* centripetal acceleration.

radial artery [ANAT] A branch of the brachial artery in the forearm; principal branches are the radial recurrent and the main artery of the thumb.

radial assumption [MAP] The assumption, forming the basis of planimetric mapping by photogrammetric methods, that on a nearly vertical photograph all displacements resulting from tilt and relief are radial from the photograph's principal point.

radial band pressure [MECH] The pressure which is exerted on the rotating band by the walls of the gun tube, and hence against the projectile wall at the band seat, as a result of the engraving of the band by the gun rifling.

radial-beam tube [ELECTR] A vacuum tube in which a radial beam of electrons is rotated past circumferentially arranged anodes by an external rotating magnetic field; used chiefly as a high-speed switching tube or commutator.

radial bearing [MECH ENG] A bearing with rolling contact in which the direction of action of the load transmitted is radial to the axis of the shaft.

radial canal [INV ZOO] **1.** One of the numerous canals that radiate from the spongocoel in certain Porifera. **2.** Any of the canals extending from the coelenteron to the circular canal in the margin of the umbrella in jellyfishes. **3.** A canal radiating from the circumoral canal along each ambulacral area in many echinoderms.

radial chromatography [ANALY CHEM] A circular disk of absorbent paper which has a strip (wick) cut from edge to center to dip into a solvent; the solvent climbs the wick, touches the sample, and resolves it into concentric rings (the chromatogram). Also known as circular chromatography; radial-paper chromatography.

radial cleavage [EMBRYO] A cleavage pattern characterized by formation of a mass of cells that show radial symmetry.

radial displacement [GRAPHICS] On vertical photographs, the apparent "leaning out," or the apparent displacement of the top of any object having height in relation to its base.

radial distribution function [MATH] A function $F(r)$ equal to the average of a given function of the three coordinates over a sphere of radius r centered at the origin of the coordinate system. [PHYS CHEM] A function $\rho(r)$ equal to the average over all directions of the number density of molecules at distance r from a given molecule in a liquid.

radial Doppler effect [ELECTROMAG] The part of the optical Doppler effect which depends on the direction of the relative velocity of source and observer, and is analogous to the acoustical Doppler effect, in contrast to the transverse Doppler effect.

radial drainage pattern [GEOL] A drainage pattern characterized by radiating streams diverging from a high central area. Also known as centrifugal drainage pattern.

radial draw forming [MECH ENG] A metal-forming method in which tangential stretch and radial compression are applied gradually and simultaneously.

radial drill [MECH ENG] A drilling machine in which the drill spindle can be moved along a horizontal arm which itself can be rotated about a vertical pillar.

radial drilling [ENG] The drilling of several holes in one plane, all radiating from a common point.

radial engine [MECH ENG] An engine characterized by radially arranged cylinders at equiangular intervals around the crankshaft.

radial error [ORD] An error associated with delivery of munitions on a target; it is the distance between the desired point of impact and actual point of impact, both points projected and measured on an imaginary plane drawn perpendicular to the flight path of the munition.

radial faults [GEOL] Faults arranged like the spokes of a wheel, radiating from a central point.

radial-flow [ENG] Having the fluid working substance flowing along the radii of a rotating tank. [PETRO ENG] Pertaining to spokelike flow of reservoir fluids radially inward toward a wellbore focal area.

radial-flow turbine [MECH ENG] A turbine in which the gases flow primarily in a radial direction.

radial force [MECH ENG] In machining, the force acting on the cutting tool in a direction opposite to depth of cut.

radial gate *See* tainter gate.

radial grating [ELECTROMAG] Conformal wire grating consisting of wires arranged radially in a circular frame, like the spokes of a wagon wheel, and placed inside a circular waveguide to obstruct E waves of zero order while passing the corresponding H waves.

radial lead [ELEC] A wire lead coming from the side of a component rather than axially from the end.

radial load [MECH ENG] The load perpendicular to the bearing axis.

radial locating [MECH ENG] One of the three locating problems in tooling to maintain the desired relationship between the workpiece, the cutter, and the body of the machine tool; the other two locating problems are concentric and plane locating.

radial motion [MECH] Motion in which a body moves along a line connecting it with an observer or reference point; for example, the motion of stars which move toward or away from the earth without a change in apparent position.

radial nerve [ANAT] A large nerve that arises in the brachial plexus and branches to enervate the extensor muscles and skin of the posterior aspect of the arm, forearm, and hand.

radial-paper chromatography *See* radial chromatography.

radial-parallel search [NAV] Search by ship or aircraft on a series of radial course lines to a given line, beyond which parallel course lines are followed.

radial percussive coal cutter [MIN ENG] A heavy coal cutter having a percussive drill, with extension rods; used in headings and rooms in pillar methods of working and for drilling shot-firing holes.

radial-ply [DES ENG] Pertaining to the construction of a tire in which the cords run straight across the tire, and an additional layered belt of fabric is placed around the circumference between the plies and the tread.

radial rake [MECH ENG] The angle between the cutter tooth face and a radial line passing through the cutting edge in a plane perpendicular to the cutter axis.

radial saw [MECH ENG] A power saw that has a circular blade suspended from a transverse head mounted on a rotatable overarm.

radial search [NAV] Search by ship or aircraft on a series of radial course lines.

radial selector [COMPUT SCI] *See* private line arrangement. [ENG] *See* omnibearing selector.

radial shear interferometer [OPTICS] An interferometer in which a wavefront is interfered with by an expanded version of itself, resulting in fringes along which the radial slope of the wavefront is constant.

radial stress [MECH] Tangential stress at the periphery of an opening.

radial symmetry [SCI TECH] An arrangement of usually similar parts in a regular pattern around a central axis.

radial triangulation [MAP] A triangulation procedure in which radials of overlapping vertical or oblique photographs to control points imaged on the photographs are measured and used for horizontal-control extension by successive intersection and resection of such lines.

radial velocity [MECH] The component of the velocity of a body that is parallel to a line from an observer or reference point to the body; the radial velocities of stars are valuable in determining the structure and dynamics of the Galaxy. Also known as line-of-sight velocity.

radial wave equation [MECH] Solutions to wave equations with spherical symmetry can be found by separation of variables; the ordinary differential equation for the radial part of the wave function is called the radial wave equation.

radian [MATH] The central angle of a circle determined by two radii and an arc joining them, all of the same length.

radiance [OPTICS] The radiant flux per unit solid angle per unit of projected area of the source; the usual unit is the watt per steradian per square meter. Also known as steradiancy.

radiancy *See* radiant emittance.

radian frequency *See* angular frequency.

radian length [PHYS] Distance, in a sinusoidal wave, between phases differing by an angle of 1 radian; it is equal to the wavelength divided by 2π.

radiant [ASTRON] A point on the celestial sphere through which pass the backward extensions of the trail of a meteor as observed at various locations, or the backward extensions of trails of a number of meteors traveling parallel to each other. [PHYS] **1.** Pertaining to motion of particles or radiation along radii from a common point or a small region. **2.** A point, region, substance, or entity from which particles or radiations are emitted.

radiant density [PHYS] The instantaneous amount of radiant energy contained in a unit volume of propagation medium.

radiant efficiency [OPTICS] The ratio of the radiant flux emitted by a radiation source to the power consumed by the source.

radiant emittance [ELECTROMAG] The radiant flux per unit area that emerges from a surface. Also known as radiancy; radiant exitance.

radiant energy *See* radiation.

radiant-energy thermometer *See* radiation pyrometer.

radiant exitance *See* radiant emittance.

radiant exposure [OPTICS] A measure of the total radiant energy incident on a surface per unit area; equal to the integral over time of the radiant flux density. Also known as exposure.

radiant flux [OPTICS] The time rate of flow of radiant energy.

radiant flux density [ELECTROMAG] The amount of radiant power per unit area that flows across or onto a surface. Also known as irradiance.

radiant heating [ENG] Any system of space heating in which the heat-producing means is a surface that emits heat to the surroundings by radiation rather than by conduction or convection.

radiant intensity [ELECTROMAG] The energy emitted per unit time per unit solid angle about the direction considered; usually expressed in watts per steradian.

radiant power [ELECTROMAG] The energy carried across or onto a surface by electromagnetic radiation per unit time, or the total radiant energy emitted by a source of electromagnetic radiation per unit time.

radiant quantities [OPTICS] Physical quantities used in photometry, such as radiant flux and radiance, which are based on the energy carried by light, and are thus independent of the response of the human eye.

radiant reflectance [ELECTROMAG] Ratio of reflected radiant power to incident radiant power.

radiant superheater [MECH ENG] A superheater designed to transfer heat from the products of combustion to the steam primarily by radiation.

radiant transmittance [ELECTROMAG] Ratio of transmitted radiant power to incident radiant power.

radiant-type boiler [MECH ENG] A water-tube boiler in which boiler tubes form the boundary of the furnace.

Radiata [INV ZOO] Members of the Eumetazoa which have a primary radial symmetry; includes the Coelenterata and Ctenophora.

radiated interference [COMMUN] Interference which is transmitted through the atmosphere according to the laws of electromagnetic wave propagation; the term is generally considered to include the transfer of interfering energy in inductive or capacitive coupling.

radiated power [ELECTROMAG] The total power emitted by a transmitting antenna.

radiating curtain [ELECTROMAG] Array of dipoles in a vertical plane, positioned to reinforce each other; it is usually placed ¼ wavelength ahead of a reflecting curtain of corresponding half-wave reflecting antennas.

radiating element [ELECTROMAG] Basic subdivision of an antenna which in itself is capable of radiating or receiving radio-frequency energy.

radiating guide [ELECTROMAG] Waveguide designed to radiate energy into free space; the waves may emerge through slots or gaps in the guide, or through horns inserted in the wall of the guide.

radiating power *See* emittance.

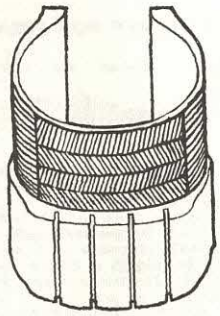
radiating scattering [PHYS] The diversion of radiation (thermal, electromagnetic, or nuclear) from its orginal path as a result of interactions or collisions with atoms, molecules, or larger particles in the atmosphere or other media between the source of radiation (for example, a nuclear explosion) and a point at some distance away.

radiation [ENG] A method of surveying in which points are located by knowledge of their distances and directions from a central point. [PHYS] **1.** The emission and propagation of waves transmitting energy through space or through some medium; for example, the emission and propagation of electromagnetic, sound, or elastic waves. **2.** The energy transmitted by waves through space or some medium; when unqualified, usually refers to electromagnetic radiation. Also known as radiant energy. **3.** A stream of particles, such as electrons, neutrons, protons, α-particles, or high-energy photons, or a mixture of these.

radiation accident [NUCLEO] Any accident resulting in the spread of radioactive materials or in the exposure of individuals to radiation.

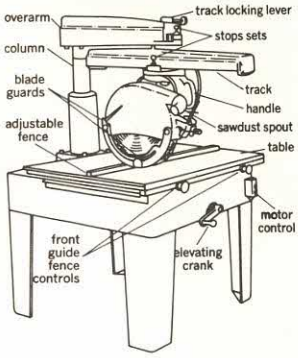
radiational cooling [METEOROL] The cooling of the earth's

RADIAL-PLY



Construction of a radial-ply tire. *(Goodyear Tire and Rubber Co.)*

RADIAL SAW



Radial saw allows wood to be clamped in position while it is being cut. *(Delta)*

surface and adjacent air, accomplished (mainly at night) whenever the earth's surface suffers a net loss of heat due to terrestrial radiation.

radiation angle [ELECTROMAG] The vertical angle between the line of radiation emitted by a directional antenna and the horizon.

radiation area [NUCLEO] Any accessible area in which the level of radiation is such that a major portion of an individual's body could receive in any 1 hour a dose in excess of 5 millirem or in any 5 consecutive days a dose in excess of 150 millirem.

radiation biochemistry [BIOCHEM] The study of the response of the constituents of living matter to radiation.

radiation biology *See* radiobiology.

radiation biophysics [BIOPHYS] The study of the response of organisms to ionizing radiations and to ultraviolet light.

radiation budget [GEOPHYS] A quantitative statement of the amounts of radiation entering and leaving a given region of the earth.

radiation burn [MED] A burn caused by overexposure to radiant energy.

radiation catalysis [CHEM] The use of radiation (such as gamma, neutron, proton, electron, or x-ray) to activate or speed up a chemical or physical change; for example, radiation alone can initiate polymerization without heat, pressure, or chemical catalysts.

radiation cataract *See* irradiation cataract.

radiation characteristic [COMMUN] One of the identifying features of a radiating signal, such as frequency and pulse width.

radiation chart [GEOPHYS] Any chart or diagram which permits graphical solution of the (generally unintegrable) flux integrals arising in problems of atmospheric infrared radiation transfer.

radiation chemistry [NUCLEO] The branch of chemistry that is concerned with the chemical effects, including decomposition, of energetic radiation or particles on matter.

radiation cooling [ELECTR] Cooling of an electrode resulting from its emission of heat radiation. [PHYS] The cooling of gases to very low temperatures by means of the resonant radiation pressure of intense laser light.

radiation correction *See* cooling correction.

radiation corrosion [MET] Accelerated corrosion of a metal caused by radiation.

radiation counter [NUCLEO] An instrument used for detecting or measuring nuclear radiation by counting the resultant ionizing events; examples include Geiger counters and scintillation counters. Also known as counter.

radiation counter tube *See* counter tube.

radiation cytology [CYTOL] An aspect of biology that deals with the effects of radiations on living cells.

radiation damage [NUCLEO] Harmful changes in the properties of liquids, gases, and solids caused by any type of radiation.

radiation damping [ELECTROMAG] Damping of a system which loses energy by electromagnetic radiation. [QUANT MECH] Damping which arises in quantum electrodynamics from the virtual interaction of a particle with its zero point field.

radiation decontamination [NUCLEO] The removal of unwanted radioactive material.

radiation dermatitis *See* radiodermatitis.

radiation detection instrument [NUCLEO] Any device that detects and records the characteristics of ionizing radiation.

radiation detector *See* particle detector.

radiation dose [NUCLEO] The total amount of ionizing radiation absorbed by material or tissues, in the sense of absorbed dose (expressed in rads), exposure dose (expressed in roentgens), or dose equivalent (expressed in rems).

radiation dose rate [NUCLEO] The radiation dosage absorbed per unit of time; a radiation dose rate can be set at some particular unit of time (for example, H-hour plus 1 hour) and would be called H-hour plus 1 radiation dose rate.

radiation dosimetry *See* dosimetry.

radiation effects [BIOL] The harmful effects of ionizing radiation on humans and other animals, such as production of cancers, cataracts, and radiation ulcers, loss of hair, reddening of skin, sterilization, nausea, vomiting, mucous or bloody diarrhea, purpura, epilation, and agranulocytic infections.

radiation efficiency [ELECTROMAG] Of an antenna, the ratio of the power radiated to the total power supplied to the antenna at a given frequency.

radiation era [ASTRON] The period in the early universe, lasting from roughly 20 seconds to 10^5 years after the big bang, when photons dominated the universe.

radiation field [ELECTROMAG] The electromagnetic field that breaks away from a transmitting antenna and radiates outward into space as electromagnetic waves; the other type of electromagnetic field associated with an energized antenna is the induction field.

radiation filter [ELECTROMAG] Selectively transparent body, which transmits only certain wavelength ranges.

radiation fog [METEOROL] A major type of fog, produced over a land area when radiational cooling reduces the air temperature to or below its dew point; thus, strictly, a nighttime occurrence, although the fog may begin to form by evening twilight and often does not dissipate until after sunrise.

radiation gage [NUCLEO] An instrument for measuring radiation quantity and intensity.

radiation genetics [GEN] The study of the genetic effects of radiation. Also known as radiogenetics.

radiation hardening [ENG] Improving the ability of a device or piece of equipment to withstand nuclear or other radiation; applies chiefly to dielectric and semiconductor materials.

radiation hazard [MED] Health hazard arising from exposure to ionizing radiation.

radiation impedance *See* radiation resistance.

radiation intensity [ELECTROMAG] The power radiated from an antenna per unit solid angle in a given direction. [NUCLEO] The quantity of radiant energy passing perpendicularly through a specified location of unit area in unit time; reported as a number of particles or photons per square centimeter per second, or in energy units such as ergs per square centimeter per second.

radiation ionization [PHYS] Ionization of the atoms or molecules of a gas or vapor by the action of electromagnetic radiation.

radiation laws [PHYS] **1.** The four physical laws which, together, fundamentally describe the behavior of blackbody radiation, Kirchhoff's law, Planck's law, Stefan-Boltzmann law, and Wien's law. **2.** All of the more inclusive assemblage of empirical and theoretical laws describing all manifestations of radiative phenomena.

radiation length [NUCLEO] The mean path length required to reduce the energy of relativistic charged particles by the factor $1/e$, or 0.368, as they pass through matter. Also known as cascade unit; radiation unit.

radiationless transition [PHYS] A transition of a system between two energy states in which energy is given to or taken up from another system or particle, rather than being emitted or absorbed in electromagnetic radiation; examples include internal conversion, the Auger effect, and excitation or deexcitation of atoms or molecules in collisions with other atoms or molecules.

radiation lobe *See* lobe.

radiation loss [MECH ENG] Boiler heat loss to the atmosphere by conduction, radiation, and convection.

radiation microbiology [MICROBIO] A field of basic and applied radiobiology concerned chiefly with the damaging effects of radiation on microorganisms.

radiation monitoring [NUCLEO] Continuous or periodic determination of the amount of radiation present in a given area.

radiation noise *See* electromagnetic noise.

radiation oscillator *See* Planck oscillator.

radiation oven [ENG] Heating chamber relying on tungsten-filament infrared lamps with reflectors to create temperatures up to 600°F (315°C); used to dry sheet and granular material and to bake surface coatings.

radiation pattern [ELECTROMAG] Directional dependence of the radiation of an antenna. Also known as antenna pattern; directional pattern; field pattern.

radiation physics [PHYS] The study of ionizing radiation and its effects on matter.

radiation preservation [FOOD ENG] Exposure of food products to ionizing radiation, such as electrons, x-rays, and γ-rays, in order to destroy microorganisms and thereby aid preservation.

radiation pressure [ACOUS] The average pressure exerted on a surface or interface between two media by a sound wave. [ELECTROMAG] The pressure exerted by electromagnetic radiation on objects on which it impinges.

radiation protection [NUCLEO] **1.** Legislation and regula-

tions to protect the public and laboratory or industrial workers against radiation. **2.** Measures to reduce exposure to radiation.

radiation protection guide [NUCLEO] The officially determined radiation doses which should not be exceeded without careful consideration of the reasons for doing so; these standards, established by the Federal Radiation Council, are equivalent to what was formerly called the maximum permissible dose or maximum permissible exposure.

radiation pyrometer [ENG] An instrument which measures the temperature of a hot object by focusing the thermal radiation emitted by the object and making some observation on it; examples include the total-radiation, optical, and ratio pyrometers. Also known as radiant-energy thermometer; radiation thermometer.

radiation quality [PHYS] The spectrum of radiant energy produced by a given radiation source with respect to its penetration or its suitability for a specific application.

radiation resistance [ACOUS] For a medium, the acoustic impedance of a plane wave in that medium. Also known as radiation impedance. [ELECTROMAG] The total radiated power of an antenna divided by the square of the effective antenna current measured at the point where power is supplied to the antenna.

radiation safety [NUCLEO] Protection of personnel against harmful effects of ionizing radiation by taking steps to ensure that people will not receive excessive doses of radiation and by monitoring all sources of radiation to which they may be exposed.

radiation scattering [PHYS] The diversion of radiation (thermal, electromagnetic, or nuclear) from its original path as a result of interactions or collisions with atoms, molecules, or larger particles in the atmosphere or other media.

radiation shelter *See* fallout shelter.

radiation shield [ENG] A shield or wall of material interposed between a source of radiation and a radiation-sensitive body, such as a person, radiation-detection instrument, or photographic film, to protect the latter.

radiation sickness [MED] **1.** Illness, usually manifested by nausea and vomiting, resulting from the effects of therapeutic doses of radiation. **2.** Radiation injury following exposure to excessive doses of radiation, such as the explosion of an atomic bomb.

radiation source [NUCLEO] Usually a sealed capsule containing an artificial radioisotope, used in teletherapy, radiography, as a power source for batteries, or in various types of industrial gages; machines such as accelerators, and radioisotopic generators and natural radionuclides may also be considered as sources.

radiation standards [NUCLEO] Exposure standards, permissible concentrations, rules for safe handling, regulations for transportation, regulations for industrial control of radiation, and control of radiation exposure by legislative means.

radiation sterilization [NUCLEO] Exposure of a material, object, or body to ionizing radiation in order to destroy microorganisms.

radiation survey meter [NUCLEO] Portable device to measure the intensity of nuclear radiations in a given region, in such applications as health physics (atomic radiation safety) or supervision of radioactively hot areas.

radiation therapy [MED] The use of ionizing radiation or radioactive substances to treat disease. Also known as actinotherapy; radiotherapy.

radiation thermocouple [ELEC] An infrared detector consisting of several thermocouples connected in series, arranged so that the radiation falls on half of the junctions, causing their temperature to increase so that a voltage is generated.

radiation thermometer *See* radiation pyrometer.

radiation unit *See* radiation length.

radiation vacuum gage [ENG] Vacuum (reduced-pressure) measurement device in which gas ionization from an α-source of radiation varies measurably with changes in the density (molecular concentration) of the gas being measured.

radiation warning symbol [NUCLEO] A standard symbol used on posters displayed in locations where radiation hazards exist; consists of a magenta trefoil printed on a yellow background.

radiation well logging *See* radioactive well logging.

radiation zone *See* Fraunhofer region.

radiative capture [NUC PHYS] A nuclear capture process whose prompt result is the emission of electromagnetic radiation only.

radiative collision [PHYS] A collision between two charged particles in which part of the kinetic energy of the particles is converted into electromagnetic radiation.

radiative correction [QUANT MECH] The change produced in the value of some physical quantity, such as the mass or charge of a particle, as the result of the particle's interactions with various fields.

radiative diffusivity [METEOROL] A characteristic property of a given layer of the atmosphere which governs the rate at which that layer will warm or cool as a result of the transfer, within it, of infrared radiation; the radiative diffusivity is dependent upon the temperature and water-vapor content of the layer of air and upon the pressure within the layer.

radiative equilibrium [ASTROPHYS] The energy transfer through a star by radiation, absorption, and reradiation at a rate such that each section of the star is maintained at the appropriate temperature.

radiative recombination [PHYS] Recombination of parts of an atom during which electromagnetic radiation is emitted.

radiative transfer [THERMO] The transmission of heat by electromagnetic radiation.

radiative transition [QUANT MECH] A change of a quantum-mechanical system from one energy state to another in which electromagnetic radiation is emitted.

radiator [ACOUS] A vibrating element of a transducer which radiates sound waves. [ELECTROMAG] **1.** The part of an antenna or transmission line that radiates electromagnetic waves either directly into space or against a reflector for focusing or directing. **2.** A body that emits radiant energy. [ENG] Any of numerous devices, units, or surfaces that emit heat, mainly by radiation, to objects in the space in which they are installed. [PHYS] **1.** In general, a body which emits particles or radiation in any form. **2.** A body placed in a beam of ionizing radiation which, as a result, emits radiation of another kind.

radiator temperature drop [MECH ENG] In internal combustion engines, the difference in temperature of the coolant liquid entering and leaving the radiator.

radiatus [METEOROL] A cloud variety whose elements are arranged in straight parallel bands; owing to the effect of perspective, these bands seem to converge toward a point on the horizon, or, when the bands cross the entire sky, toward two opposite points.

radical [BOT] **1.** Of, pertaining to, or proceeding from the root. **2.** Arising from the base of a stem or from an underground stem. [MATH] **1.** In a ring, the intersection of all maximal ideals. Also known as Jacobson radical. **2.** An indicated root of a quantity. Symbolized $\sqrt{\ }$. [ORG CHEM] *See* free radical.

radical axis [MATH] The line passing through the two points of intersection of a pair of circles.

radical equation *See* irrational equation.

radicidation [FOOD ENG] Destruction by radiation of microorganisms in food that are significant to public health; an example is *Salmonella* species.

radicle [BOT] The embryonic root of a flowering plant.

radicofunctional name [ORG CHEM] A name for an organic compound that uses two key words; the first word corresponds to the group or groups involved and the second word indicates the functional group—for example, alkyl halide.

radicotomy *See* rhizotomy.

radicular cyst [MED] A cyst arising from a granuloma of the root of a tooth. Also known as periapical cyst.

radiculitis [MED] Inflammation of a nerve root.

radiculoneuropathy [MED] Disease of the peripheral spinal nerves and their roots.

radio [COMMUN] The transmission of signals through space by means of electromagnetic waves; usually applied to the transmission of sound and code signals, although television and radar also depend on electromagnetic waves. [ELECTR] *See* radio receiver.

radio- [ELECTROMAG] A prefix denoting the use of radiant energy, particularly radio waves. [NUCLEO] Chemical prefix designating radiation or radioactivity; used to designate radioactive elements (such as radiocarbon) and substances containing them (such as radiochemicals, radiocolloids, or radio compounds).

radioacoustic position finding *See* radioacoustic ranging.

radioacoustic ranging [ENG] A method for finding the

RADIATION PYROMETER

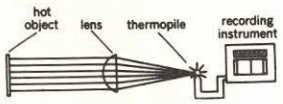


Diagram of an elementary radiation pyrometer. Lens focuses part of radiation emitted by hot object onto thermopile. Resulting heating of thermopile causes it to generate electrical signal which is displayed on recording instrument. *(From D. M. Considine, ed., Process Instruments and Controls Handbook, McGraw-Hill, 1957)*

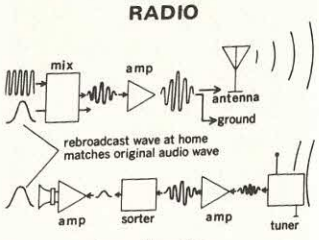
RADIO



Transmission of audio information by radio.

position of a vessel at sea; a bomb is exploded in the water, and the sound of the explosion transmitted through water is picked up by the vessel and by shore stations, other vessels, or buoys whose positions are known; the received sounds are transmitted instantaneously by radio to the surveying vessel, and the elapsed times are proportional to the distances to the known positions. Abbreviated RAR. Also known as radioacoustic position finding; radioacoustic sound ranging.

radioacoustics [COMMUN] Study of the production, transmission, and reproduction of sounds carried from one place to another by radiotelephony.

radioacoustic sound ranging *See* radioacoustic ranging.

radioactinium [NUC PHYS] Conventional name for the isotope of thorium which has mass number 227 and is in the actinium series. Symbolized RdAc.

radioactive [NUC PHYS] Exhibiting radioactivity or pertaining to radioactivity.

radioactive age determination *See* radiometric dating.

radioactive carbon dating *See* carbon-14 dating.

radioactive chain *See* radioactive series.

radioactive clock [NUC PHYS] A radioactive isotope such as potassium-40 which spontaneously decays to a stable end product at a constant rate, allowing absolute geologic age to be determined.

radioactive cloud [NUCLEO] A mass of air and vapor in the atmosphere carrying radioactive debris from a nuclear explosion.

radioactive cobalt [NUC PHYS] Radioactive form of cobalt, such as cobalt-60 with a half-life of 5.3 years.

radioactive contaminant [NUCLEO] A radioactive material which has spread to places where it may harm persons, spoil experiments, or make products or equipment unsuitable or unsafe for some specific purpose.

radioactive dating *See* radiometric dating.

radioactive debris [NUCLEO] Radioactive material which is carried through the air from the site of a nuclear explosion.

radioactive decay [NUC PHYS] The spontaneous transformation of a nuclide into one or more different nuclides, accompanied by either the emission of particles from the nucleus, nuclear capture or ejection of orbital electrons, or fission. Also known as decay; nuclear spontaneous reaction; radioactive disintegration; radioactive transformation; radioactivity.

radioactive decay constant *See* decay constant.

radioactive decay product *See* daughter.

radioactive decay series *See* radioactive series.

radioactive disintegration *See* radioactive decay.

radioactive displacement law [NUC PHYS] The statement of the changes in mass number A and atomic number Z that take place during various nuclear transformations. Also known as displacement law.

radioactive element [NUC PHYS] An element all of whose isotopes spontaneously transform into one or more different nuclides, giving off various types of radiation; examples include promethium, radium, thorium, and uranium.

radioactive emanation [NUC PHYS] A radioactive gas given off by certain radioactive elements; all of these gases are isotopes of the element radon. Also known as emanation.

radioactive equilibrium [NUC PHYS] In radioactivity, the condition of equilibrium in which the rate of decay of the parent isotope is exactly matched by the rate of decay of every intermediate daughter isotope.

radioactive fallout *See* fallout.

radioactive half-life *See* half-life.

radioactive heat [THERMO] Heat produced within a medium as a result of absorption of radiation from decay of radioisotopes in the medium, such as thorium-232, potassium-40, uranium-238, and uranium-235.

radioactive isotope *See* radioisotope.

radioactive material [NUCLEO] A material having one or more constituents that exhibit significant radioactivity.

radioactive metal [NUC PHYS] A luminous metallic element, such as actinium, radium, or uranium, that spontaneously and continuously emits radiation capable in some degree of penetrating matter impervious to ordinary light.

radioactive mineral [MINERAL] Any mineral species that contains uranium or thorium as an essential part of the chemical composition; examples are uraninite, pitchblende, carnotite, coffinite, and autunite.

radioactive paint [MATER] A luminous paint that gives off light without being activated.

radioactive salt [NUCLEO] A salt whose molecules have radioactive atoms, such as radium bromide or mesothorium bromide; used in trace amounts to energize self-luminous paints.

radioactive series [NUC PHYS] A succession of nuclides, each of which transforms by radioactive disintegration into the next until a stable nuclide results. Also known as decay chain; decay family; decay series; disintegration chain; disintegration family; disintegration series; radioactive chain; radioactive decay series; series decay; transformation series.

radioactive snow gage [ENG] A device which automatically and continuously records the water equivalent of snow on a given surface as a function of time; a small sample of a radioactive salt is placed in the ground in a lead-shielded collimator which directs a beam of radioactive particles vertically upward; a Geiger-Müller counting system (located above the snow level) measures the amount of depletion of radiation caused by the presence of the snow.

radioactive source [NUCLEO] Any quantity of radioactive material intended for use as a source of ionizing radiation.

radioactive standard [NUCLEO] A sample of radioactive material which contains a known number and type of radioactive atoms at some definite time; used to calibrate radiation measuring instruments.

radioactive thickness gage [NUCLEO] An instrument for measuring the thickness of the metal wall of a pipe or tank from one side, by directing a beam of γ-rays through the wall at an angle and measuring the amount of backscattering with a radiation detector.

radioactive tracer [NUCLEO] A radioactive isotope which, when attached to a chemically similar substance or injected into a biological or physical system, can be traced by radiation detection devices, permitting determination of the distribution or location of the substance to which it is attached. Also known as radiotracer.

radioactive transformation *See* radioactive decay.

radioactive waste [NUCLEO] Liquid, solid, or gaseous waste resulting from mining of radioactive ore, production of reactor fuel materials, reactor operation, processing of irradiated reactor fuels, and related operations, and from use of radioactive materials in research, industry, and medicine.

radioactive-waste disposal [NUCLEO] The disposal of waste radioactive materials and of equipment contaminated by radiation; the two basic disposal methods are concentration for burial underground or in the sea, and dilution for controlled dispersion; reprocessing of reactor fuel is a major source of radioactive waste.

radioactive well logging [ENG] The recording of the differences in radioactive content (natural or neutron-induced) of the various rock layers found down an oil well borehole; types include γ-ray, neutron, and photon logging. Also known as radiation well logging; radioactivity prospecting.

radioactivity [NUC PHYS] **1.** A particular type of radiation emitted by a radioactive substance, such as α-radioactivity. **2.** *See* radioactive decay. **3.** *See* activity.

radioactivity analysis *See* activation analysis.

radioactivity concentration guide [NUCLEO] The concentration of radioactive material in an environment which would result in doses equal, over a period of time, to those in the radiation protection guide; this Federal Radiation Council term replaces the former maximum permissible concentration.

radioactivity equilibrium [NUC PHYS] A condition which may arise in the decay of a radioactive parent with short-lived descendants, in which the ratio of the activity of a parent to that of a descendant remains constant.

radioactivity log [ENG] Record of radioactive well logging.

radioactivity prospecting *See* radioactive well logging.

radio aid to navigation [ELECTR] An aid to navigation which utilizes the propagation characteristics of radio waves to furnish navigation information.

radio altimeter [ENG] An absolute altimeter that depends on the reflection of radio waves from the earth for the determination of altitude, as in a frequency-modulated radio altimeter and a radar altimeter. Also known as electronic altimeter; reflection altimeter.

radio altitude *See* radar altitude.

radio and wire integration [COMMUN] The combining of wire circuits with radio facilities.

radio antenna *See* antenna.

radio approach aids [NAV] Equipment that uses radio or radar to furnish guidance to an aircraft with required accuracy

from the time it is in the vicinity of an airfield until it reaches a position from which a landing can be made.

radioassay [ANALY CHEM] An assay procedure involving the measurement of the radiation intensity of a radioactive sample.

radio astronomy [ASTRON] The study of celestial objects by measurement and analysis of their emitted electromagnetic radiation in the wavelength range from roughly 1 millimeter to 30 millimeters.

radio atmometer [ENG] An instrument designed to measure the effect of sunlight upon evaporation from plant foliage; consists of a porous-clay atmometer whose surface has been blackened so that it absorbs radiant energy.

radio attenuation [ELECTROMAG] For one-way propagation, the ratio of the power delivered by the transmitter to the transmission line connecting it with the transmitting antenna to the power delivered to the receiver by the transmission line connecting it with the receiving antenna.

radio aurora *See* artificial radio aurora.

radioautography *See* autoradiography.

radio autopilot coupler [ENG] Equipment providing means by which an electrical navigational signal operates an automatic pilot.

radio B battery [ELEC] A B-type battery used in a radio set, usually consisting of 15 to 30 permanently connected cells.

radio beacon [NAV] A nondirectional radio transmitting station in a fixed geographic location, emitting a characteristic signal from which bearing information can be obtained by a radio direction finder on a ship or aircraft. Also known as aerophare; radiophare.

radio-beacon buoy [NAV] A buoy equipped with a marker radio beacon; such a buoy is usually used to mark an important entrance to a channel; the beacon is of low power and provides a signal for a short range.

radio-beacon monitor station [COMMUN] A station which monitors the signal from one or more remotely located marine radio beacons.

radio beam [ELECTROMAG] A concentrated stream of radio-frequency energy as used in radio ranges, microwave relays, and radar.

radio bearing [NAV] The bearing of a radio transmitter from a receiver as determined by a radio direction finder.

radiobiology [BIOL] Study of the scientific principles, mechanisms, and effects of the interaction of ionizing radiation with living matter. Also known as radiation biology.

radio blackout [COMMUN] A fadeout that may last several hours or more at a particular frequency. Also known as blackout.

radio broadcasting [COMMUN] Radio transmission intended for general reception.

radiocarbon *See* carbon-14.

radiocarbon dating *See* carbon-14 dating.

radiocardiogram [MED] An x-ray recording of the variation with time of the concentration of a radioisotope in a heart chamber; usually the radioactive material is injected intravenously.

radiocesium *See* cesium-137.

radiochemical laboratory [CHEM] A specially equipped and shielded chemical laboratory designed for conducting radiochemical studies without danger to the laboratory personnel.

radiochemistry [CHEM] That area of chemistry concerned with the study of radioactive substances.

radiochronology [GEOL] An absolute-age dating method based on the existing ratio between radioactive parent elements (such as uranium-238) and their radiogenic daughter isotopes (such as lead-206).

radio climatology [CLIMATOL] The study of regional and seasonal variations in the manner of propagation of radio energy through the atmosphere.

radio command [ELECTR] A radio control signal to which a guided missile or other remote-controlled vehicle or device responds.

radio communication [COMMUN] Communication by means of radio waves, such as by radio facsimile, radiotelegraph, radiotelephone, and radioteletypewriter.

radio communications guard *See* radio guard.

radio compass *See* automatic direction finder.

radio control [ELECTR] The control of stationary or moving objects by means of signals transmitted through space by radio.

radio countermeasures [ELECTR] Electrical or other techniques depriving the enemy of the benefits which would ordinarily accrue to him through the use of any technique employing the radiation of radio waves; it includes benefits derived from radar and intercept services.

radio deception [COMMUN] The use of radio to deceive the enemy, as by sending false dispatches or using enemy call signs.

radiodermatitis [MED] Degenerative changes in the skin following excessive exposure to ionizing radiation. Also known as radiation dermatitis.

radio detection [ENG] The detection of the presence of an object by radiolocation without precise determination of its position.

radio detection and location [ENG] Use of an electronic system to detect, locate, and predict future positions of earth satellites.

radio detection and ranging *See* radar.

radio direction finder [NAV] A radio aid to navigation that uses a rotatable loop or other highly directional antenna arrangement to determine the direction of arrival of a radio signal. Abbreviated RDF. Also known as direction finder.

radio direction-finder station [COMMUN] A land-based radio station equipped with special apparatus for determining the direction of radio signals transmitted by ships and other stations.

radio direction finding [NAV] A procedure for determining the bearing at a receiving point of the source of a radio signal by observing the direction of arrival of the wave front.

radio Doppler [ENG] Direct determination of the radial component of the relative velocity of an object by an observed frequency change due to such velocity.

radio duct [GEOPHYS] An atmospheric layer, typically shallow and almost horizontal, in which radio waves propagate in an anomalous fashion; ducts occur when, due to sharp inversions of temperature or humidity, the vertical gradient of the radio index of refraction exceeds a critical value.

radio echo *See* radar return.

radio echo observation [ENG] A method of determining the distance of objects in the atmosphere or outer space, in which a radar pulse is directed at the object and the time that elapses from transmission of the pulse to reception of a reflected pulse is measured.

radioecology [ECOL] The interdisciplinary study of organisms, radionuclides, ionizing radiation, and the environment.

radioelectric meteorology *See* radio meteorology.

radio element [NUC PHYS] A radioactive isotope of an element, or a sample consisting of one or more radioactive isotopes of an element.

radio emission [ELECTROMAG] The emission of radio-frequency electromagnetic radiation by oscillating charges or currents.

radio energy [ELECTROMAG] The energy carried by radio-frequency electromagnetic radiation.

radio engineering [ENG] The field of engineering that deals with the generation, transmission, and reception of radio waves and with the design, manufacture, and testing of associated equipment.

radio facility chart *See* enroute chart.

radio-facsimile system [COMMUN] A facsimile system in which signals are transmitted by radio rather than by wire.

radio fadeout [COMMUN] Increased absorption of radio waves passing through the lower layers of the ionosphere due to a sudden and abnormal increase in ionization in these regions; signals as receivers then fade out or disappear. Also known as fadeout.

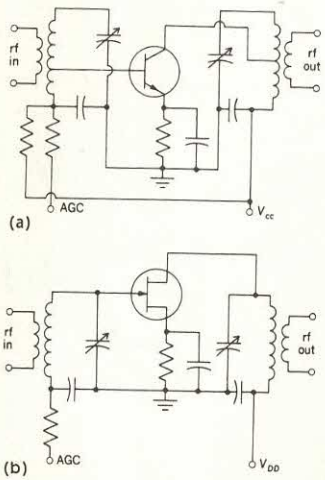
radio fan-marker beacon *See* fan-marker beacon.

radio field intensity [ELECTROMAG] Electric or magnetic field intensity at a given location associated with the passage of radio waves.

radio field-to-noise ratio [ELECTROMAG] Ratio, at a given location, of the radio field intensity of the desired wave to the noise field intensity.

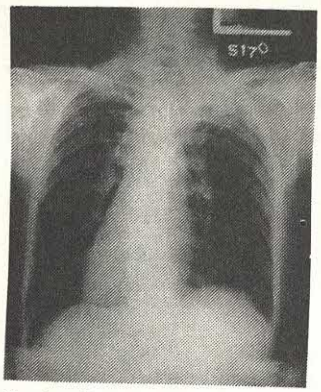
radio fix [COMMUN] Determination of the position of the source of radio signals by obtaining cross bearings on the transmitter with two or more radio direction finders in different locations, then computing the position by triangulation. [NAV] **1.** Determination of the position of a vessel or aircraft equipped with direction-finding equipment by ascertaining the direction of radio signals received from two or more transmitting stations of known location and then computing the position by triangulation. **2.** Determination of position of an aircraft in

RADIO-FREQUENCY AMPLIFIER



Typical radio-frequency amplifier circuits with *(a)* bipolar transistor and *(b)* field-effect transistor. AGC = automatic gain control; V_{CC} = collector supply voltage; V_{DD} = drain supply voltage.

RADIOGRAPH



Chest radiograph of foundry worker made with intense beam from rotating-target x-ray tube, showing nodules in lungs which are caused by silicosis, and shadows of skeleton, heart, and stomach.

flight by identification of a radio beacon or by locating the intersection of two radio beams.

radio fixing aid [NAV] Equipment making use of radio to assist in the determination of a geographical position.

radio frequency [ELECTROMAG] A frequency at which coherent electromagnetic radiation of energy is useful for communication purposes; roughly the range from 10 kilohertz to 100 gigahertz. Abbreviated rf.

radio-frequency alternator [ELEC] A rotating-type alternator designed to produce high power at frequencies above power-line values but generally lower than 100,000 hertz; used chiefly for high-frequency heating.

radio-frequency amplifier [ELECTR] An amplifier that amplifies the high-frequency signals commonly used in radio communications.

radio-frequency bandwidth [COMMUN] Band of frequencies comprising 99% of the total radiated power extended to include any discrete frequency on which the power is at least 0.25% of the total radiated power.

radio-frequency cable [ELECTROMAG] A cable having electric conductors separated from each other by a continuous homogeneous dielectric or by touching or interlocking spacer beads; designed primarily to conduct radio-frequency energy with low losses. Also known as RG line.

radio-frequency cavity preselector [ELECTROMAG] A turnable cavity resonator in an ultra-high-frequency circuit, which is similar in function to a tuned resonant circuit.

radio-frequency choke [ELEC] A coil designed and used specifically to block the flow of radio-frequency current while passing lower frequencies or direct current.

radio-frequency component [COMMUN] Portion of a signal or wave which consists only of the radio-frequency alternations, and not including its audio rate of change in amplitude frequency.

radio-frequency current [ELEC] Alternating current having a frequency higher than 10,000 hertz.

radio-frequency filter [ELECTR] An electric filter which enhances signals at certain radio frequencies or attenuates signals at undesired radio frequencies.

radio-frequency generator [ELECTR] A generator capable of supplying sufficient radio-frequency energy at the required frequency for induction or dielectric heating.

radio-frequency head [ENG] Unit consisting of a radar transmitter and part of a radar receiver, the two contained in a package for ready removal and installation.

radio-frequency heating *See* electronic heating.

radio-frequency interference [COMMUN] Interference from sources of energy outside a system or systems, as contrasted to electromagnetic interference generated inside systems. Abbreviated RFI.

radio-frequency line *See* radio-frequency transmission line.

radio-frequency measurement [ELECTR] The precise measurement of frequencies above the audible range by any of various techniques, such as a calibrated oscillator with some means of comparison with the unknown frequency, a digital counting or scaling device which measures the total number of events occurring during a given time interval, or an electronic circuit for producing a direct current proportional to the frequency of its input signal.

radio-frequency oscillator [ELECTR] An oscillator that generates alternating current at radio frequencies.

radio-frequency power supply [ELECTR] A high-voltage power supply in which the output of a radio-frequency oscillator is stepped up by an air-core transformer to the high voltage required for the second anode of a cathode-ray tube, then rectified to provide the required high direct-current voltage; used in some television receivers.

radio-frequency preheating [ENG] Preheating of plastics-molding materials by radio frequencies of 10–100 megahertz per second to facilitate the molding operation or to reduce the molding-cycle time. Abbreviated rf preheating.

radio-frequency pulse [COMMUN] A radio-frequency carrier that is amplitude-modulated by a pulse; the amplitude of the modulated carrier is zero before and after the pulse. Also known as radio pulse.

radio-frequency reactor [ELECTR] A reactor used in electronic circuits to pass direct current and offer high impedance at high frequencies.

radio-frequency resistance *See* high-frequency resistance.

radio-frequency shift *See* frequency shift.

radio-frequency signal generator [ELECTR] A test instrument that generates the various radio frequencies required for alignment and servicing of radio, television, and electronic equipment. Also known as service oscillator.

radio-frequency spectrometer [SPECT] An instrument which measures the intensity of radiation emitted or absorbed by atoms or molecules as a function of frequency at frequencies from 10^5 to 10^9 hertz; examples include the atomic-beam apparatus, and instruments for detecting magnetic resonance.

radio-frequency spectroscopy [SPECT] The branch of spectroscopy concerned with the measurement of the intervals between atomic or molecular energy levels that are separated by frequencies from about 10^5 to 10^9 hertz, as compared to the frequencies that separate optical energy levels of about 6×10^{14} hertz.

radio-frequency spectrum *See* radio spectrum.

radio-frequency SQUID [ELECTR] A type of SQUID which has only one Josephson junction in a superconducting loop; its state is determined from radio-frequency measurements of the impedance of the ring.

radio-frequency transformer [ELECTROMAG] A transformer having a tapped winding or two or more windings designed to furnish inductive reactance or to transfer radio-frequency energy from one circuit to another by means of a magnetic field; may have an air core or some form of ferrite core. Also known as radio transformer.

radio-frequency transmission line [ELECTROMAG] A transmission line designed primarily to conduct radio-frequency energy, consisting of two or more conductors supported in a fixed spatial relationship along their own length. Also known as radio-frequency line.

radio-frequency welding *See* high-frequency welding.

radio galaxy [ASTROPHYS] A galaxy that is emitting much energy in radio frequencies often from regions devoid of visible matter.

radiogenetics *See* radiation genetics.

radiogenic [NUC PHYS] Pertaining to a material produced by radioactive decay, as the production of lead from uranium decay.

radiogenic age determination *See* radiometric dating.

radiogenic argon [NUC PHYS] Argon occurring in rocks and minerals that is the result of in-place decay of potassium-40 since the formation of the earth.

radiogenic dating *See* radiometric dating.

radiogenic isotope [NUC PHYS] An isotope which was produced by the decay of a radioisotope, but which itself may or may not be radioactive.

radiogenic lead [NUC PHYS] Stable, end-product lead (Pb-206, Pb-207, and Pb-208) occurring in rocks and minerals that is the result of in-place decay of uranium and thorium since the formation of the earth.

radiogenic strontium [NUC PHYS] Strontium-87 occurring in rocks and minerals that is the direct result of in-place decay of rubidium-87 since the formation of the earth.

radiogeology [GEOCHEM] The study of the distribution patterns of radioactive elements in the earth's crust and the role of radioactive processes in geologic phenomena.

radiogoniometer [ELECTR] A goniometer used as part of a radio direction finder.

radiogoniometry [ENG] Science of locating a radio transmitter by means of taking bearings on the radio waves emitted by such a transmitter.

radiogram [COMMUN] A message transmitted by radio.

radiograph [GRAPHICS] The photographic image produced in radiography. Also known as shadowgraph.

radiographic equivalence factor [NUCLEO] The reciprocal of the thickness of a specified material having the same radiographic absorption as a unit thickness of a standard material.

radiographic film [GRAPHICS] The photographic film used in radiography, which must be properly selected for contrast, latitude, and sensitivity.

radiographic sensitivity [NUCLEO] A measure of radiographic quality whereby the minimum discontinuity that may be detected on the film is expressed as a percentage of the base thickness.

radiography [GRAPHICS] The technique of producing a photographic image of an opaque specimen by transmitting a beam of x-rays or γ-rays through it onto an adjacent photographic film; the image results from variations in thickness, density, and

chemical composition of the specimen; used in medicine and industry.

radio guard [COMMUN] Ship, aircraft, or radio station designed to listen for and record transmission, and to handle traffic on a designated frequency for a certain unit or units. Also known as radio communications guard.

radio guidance [ELECTR] Guidance of a flight-borne missile or other vehicle from a ground station by means of radio signals.

radio guided bomb [ORD] A bomb, such as the azon, guided by radio control from outside the missile.

radio hole [GEOPHYS] Strong fading of the radio signal at some position in space along an air-to-air or air-to-ground path; the effect is caused by the abnormal refraction of radio waves.

radio homing aid [NAV] Radio equipment which permits an aircraft to reach a way point or its destination by maintaining constant some parameter which is derived through the use of the equipment.

radio homing beacon *See* homing beacon.

radio horizon [COMMUN] The locus of points at which direct rays from a transmitter become tangential to the surface of the earth; the distance to the radio horizon is affected by atmospheric refraction.

radiohumeral index [ANTHRO] The ratio, multiplied by 100, of the length of the radius to the length of the humerus of the human arm.

radiohydrology [NUCLEO] The study of the hydrologic relationships of extraction, processing, and use (including use in hydrologic investigations) of radioactive materials and the disposal of associated waste products.

radioimmunoassay [IMMUNOL] A sensitive method for determining the concentration of an antigenic substance in a sample by comparing its inhibitory effect on the binding of a radioactivity-labeled antigen to a limited amount of a specific antibody with the inhibitory effect of known standards.

radio-inertial guidance system [ENG] A command type of missile guidance system consisting essentially of a radar tracking unit; a computer that accepts missile position and velocity information from the tracking system and furnishes to the command link appropriate signals to steer the missile; the command link, which consists of a transmitter on the ground and an antenna and receiver on the missile; and an inertial system for partial guidance in case of radio guidance failure.

radio intelligence [COMMUN] Information regarding the enemy obtained by interception and interpretation of enemy radio transmissions.

radio interception [COMMUN] Tuning in on a radio message not intended for the listener.

radio interference *See* interference.

radio interferometer [ENG] Radiotelescope or radiometer employing a separated receiving antenna to measure angular distances as small as 1 second of arc; records the result of interference between separate radio waves from celestial radio sources.

radioiodine [NUC PHYS] Any radioactive isotope of iodine, especially iodine-131; used as a tracer to determine the activity and size of the thyroid gland, and experimentally, to destroy the thyroid glands of animals.

radioisotope [NUC PHYS] An isotope which exhibits radioactivity. Also known as radioactive isotope; unstable isotope.

radioisotope assay [ANALY CHEM] An analytical technique including procedures for separating and reproducibly measuring a radioactive tracer.

radioisotope battery *See* nuclear battery.

radioisotope thermoelectric generator [NUCLEO] A device for converting nuclear energy to electrical energy in which the heat produced by radioactivity of a radioisotope is used to produce a voltage in a thermocouple circuit; chief use has been in space vehicles and in instruments left on the lunar surface. Abbreviated RTG.

radioisotopic generator *See* nuclear battery.

radio knife [MED] A surgical knife that uses a high-frequency electric arc at its tip to cut tissue and simultaneously sterilize the edges of the wound.

radio landing aid [NAV] Equipment using radio waves to assist aircraft in carrying out their actual landings.

radio landing beam [NAV] A radio beam used for vertical guidance of aircraft during descent to a landing surface.

Radiolaria [INV ZOO] A subclass of the protozoan class Actinopodea whose members are noted for their siliceous skeletons and characterized by a membranous capsule which separates the outer from the inner cytoplasm.

radiolarian chert [GEOL] A homogeneous cryptocrystalline radiolarite with a well-developed matrix.

radiolarian earth [GEOL] A porous, unconsolidated siliceous sediment formed from the opaline silica skeletal remains of Radiolaria; formed from radiolarian ooze.

radiolarian ooze [GEOL] A siliceous ooze containing the skeletal remains of the Radiolaria.

radiolarite [GEOL] **1.** A whitish, hard, consolidated equivalent of radiolarian earth. **2.** Radiolarian ooze that has been indurated.

radiole [INV ZOO] A spine on a sea urchin.

radio line of position [NAV] A line of position determined by any of a series of radio navigation aids.

radio link [COMMUN] A radio system used to provide a communication or control channel between two specific points.

radiolitic [PETR] **1.** Pertaining to the texture of an igneous rock, characterized by radial, fanlike groupings of acicular crystals, resembling sectors of spherulites. **2.** Referring to limestones in which the components radiate from central points, with the cement making up less than 50% of the total rock.

radiolocation [ENG] Determination of relative position of an object by means of equipment operating on the principle that propagation of radio waves is at a constant velocity and rectilinear.

radio log [COMMUN] A log of radio messages sent and received, together with other pertinent information, maintained by radio operators.

radiological [NUCLEO] Pertaining to nuclear radiation, radioactivity, and atomic weapons.

radiological agent [NUCLEO] Any of a family of substances that produce casualties by emitting radiation.

radiological defense [ORD] The methods, plans, and procedures involved in establishing and exercising defensive measures against the radiation effects of an attack by atomic weapons or radiological warfare agents.

radiological dose [NUCLEO] The total amount of ionizing radiation absorbed by an individual exposed to any radiating source.

radiological survey [NUCLEO] Determination of the distribution and dose rates of radiation in an area.

radiological warfare [ORD] The employment of agents or weapons to produce residual radioactive contamination, as distinguished from the initial effects of a nuclear explosion (blast, thermal, and initial nuclear radiation).

radiologist [MED] A physician who specializes in the use of radiant energy in the diagnosis and treatment of disease.

radiology [MED] The medical science concerned with radioactive substances, x-rays, and other ionizing radiations, and the application of the principles of this science to diagnosis and treatment of disease.

radiolucent [ELECTROMAG] Transparent to x-rays and radio waves.

radioluminescence [PHYS] Luminescence produced by x-rays or γ-rays, or by particles emitted in radioactive decay.

radiolysis [PHYS CHEM] The dissociation of molecules by radiation; for example, a small amount of water in a reactor core dissociates into hydrogen and oxygen during operation.

radio magnetic indicator [NAV] An aircraft instrument which presents a combined display of omnibearing vehicle heading and relative bearings of a radio station.

radio marker beacon station [NAV] Station marking a definite location on the ground as an aid to aircraft at altitude; the ICAO beacons operate at a single frequency of 75 megahertz.

radio mast [ENG] A tower, pole, or other structure for elevating an antenna.

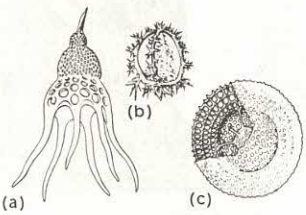
radio metal locator *See* metal detector.

radio meteor [ASTRON] A meteor which has been detected by the reflection of a radio signal from the meteor trail of relatively high ion density (ion column); such an ion column is left behind a meteoroid when it reaches the region of the upper atmosphere between about 80 and 120 kilometers, although occasionally radio meteors are detected at higher altitudes.

radio-meteorograph [COMMUN] A device for the automatic radio transmission of the indications of a set of meteorological instruments.

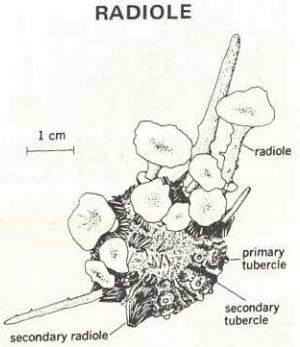
radio meteorology [METEOROL] That branch of the science of meteorology which embraces the propagation of radio energy through the atmosphere, and the use of radio and radar equip-

RADIOLARIA



Radiolaria. Skeletons representing *(a, b)* certain Monopylina (or Nasellina) and *(c)* certain Periphylina (or Spumellina). *(After Haeckel)*

RADIOLE



Morphological features of *Goniocidaris parasol* showing radioles.

ment in meteorology; this is the most general term and includes radar meteorology. Also known as radioelectric meteorology.

radiometer [ELECTR] A receiver for detecting microwave thermal radiation and similar weak wide-band signals that resemble noise and are obscured by receiver noise; examples include the Dicke radiometer, subtraction-type radiometer, and two-receiver radiometer. Also known as microwave radiometer; radiometer-type receiver. [ENG] An instrument for measuring radiant energy; examples include the bolometer, microradiometer, and thermopile.

radiometer-type receiver *See* radiometer.

radiometric age [GEOL] Geologic age expressed in years determined by quantitatively measuring radioactive elements and their decay products.

radiometric analysis [ANALY CHEM] Quantitative chemical analysis that is based on measurement of the absolute disintegration rate of a radioactive component having a known specific activity.

radiometric dating [NUCLEO] A technique for measuring the age of an object or sample of material by determining the ratio of the concentration of a radioisotope to that of a stable isotope in it; for example, the ratio of carbon-14 to carbon-12 reveals the approximate age of bones, pieces of wood, and other archeological specimens. Also known as isotopic age determination; nuclear age determination; radioactive age determination; radioactive dating; radiogenic age determination; radiogenic dating.

radiometric magnitude [ASTRON] A celestial body's magnitude as calculated from the total amount of radiant energy of all the wavelengths that reach the earth's surface.

radiometric titration [ANALY CHEM] Use of radioactive indicator to track the transfer of material between two liquid phases in equilibrium, such as titration of $Ag^{110}NO_3$ (silver nitrate, with the silver atom having mass number 110) against potassium chloride.

radiometry [PHYS] The detection and measurement of radiant electromagnetic energy, especially that associated with infrared radiation.

radiomicrometer *See* microradiometer.

radiomimetic activity [BIOL] The radiationlike effects of certain chemicals, such as nitrogen mustard, urethane, and fluorinated pyrimidines.

radiomimetic substances [CHEM] Chemical substances which cause biological effects similar to those caused by ionizing radiation.

radio mirage [ELECTROMAG] The detection of radar targets at phenomenally long range due to radio ducting.

radiomutation [GEN] A mutation which is the result of exposure of living-tissue chromosomes to ionizing radiation.

radio navigation [NAV] The use of apparatus operating at radio frequencies to determine parameters useful for navigation; it includes radio direction finding, radio ranges, radio compasses, radio homing beacons, and loran.

radio nebula [ASTROPHYS] A nebula that emits nonthermal radio-frequency radiation; derives its luminosity from collisions with the surrounding interstellar medium, or from processes associated with the magnetic fields presumably involved within the nebula; examples are the network nebulae in Cygnus and NGC 443.

radionecrosis [PATH] Destruction of living tissue by radiation.

radio net [COMMUN] System of radio stations operating with each other; a military net usually consists of a radio station of a superior unit and stations of all subordinate or supporting units.

radio noise [ELECTROMAG] Electromagnetic noise having radio frequencies.

radio-noise field strength [ELECTROMAG] A quantity which is proportional, or related in a known manner, to the field strength of electromagnetic waves of an interfering character at a point, such as a radio receiver. Also known as noise field strength.

radionuclide [NUC PHYS] A nuclide that exhibits radioactivity.

radiopaque [ELECTROMAG] Not appreciably penetrable by x-rays or other forms of radiation.

radiopaque agent [MED] A substance, such as barium sulfate, which is opaque to x-rays, administered orally to a patient to provide contrast in x-ray photographs of his gastrointestinal system.

radiopasteurization [ENG] Pasteurization by surface treatment with low-energy irradiation.

radiophare *See* radio beacon.

radiophone *See* radiotelephone.

radiophoto *See* facsimile.

radiophotoluminescence [PHYS] Luminescence exhibited by minerals such as fluorite and kunzite as a result of irradiation with β- and γ-rays followed by exposure to light.

radio pill [ELECTR] A device used in biotelemetry for monitoring the physiologic activity of an animal, such as pH values of stomach acid; an example is the Heidelberg capsule.

radio position finding [ENG] Process of locating a radio transmitter by plotting the intersection of its azimuth as determined by two or more radio direction finders.

radio-positioning land station [COMMUN] Station in the radiolocation service, other than a radio-navigation station, not intended for operation while in motion.

radio-positioning mobile station [COMMUN] Station in the radiolocation service, other than a radio-navigation station, intended to be used while in motion or during halts at unspecified points.

radio prospecting [ENG] Use of radio and electric equipment to locate mineral or oil deposits.

radio proximity fuse [ORD] A proximity fuse that contains a miniature radio transmitter and uses radio echoes from a target to trigger the fuse within predetermined limits of distance from the target.

radio pulse [COMMUN] *See* radio-frequency pulse. [ELECTROMAG] An intense burst of radio-frequency energy lasting for a fraction of a second.

radio range [COMMUN] A radio facility, usually land-based, that emits signals which when received by appropriate equipment provide navigational information. Also known as range.

radio range finding [NAV] Radiolocation in which the distance of an object is determined by measuring the time of arrival of its radio emissions, whether independent, reflected, or retransmitted on the same or other wavelength.

radio range station [NAV] Radio-navigation land station in the aeronautical, radio-navigation service providing radio equisignal zones.

radio receiver [ELECTR] A device that converts radio waves into intelligible sounds or other perceptible signals. Also known as radio; radio set; receiving set.

radio recognition [COMMUN] Determination by radio means of the friendly or enemy character, or the individuality, of another radio station.

radio relay satellite *See* communications satellite.

radio relay system [COMMUN] A radio transmission system in which intermediate radio stations or radio repeaters receive and retransmit radio signals. Also known as relay system.

radio repeater [COMMUN] A repeater that acts as an intermediate station in transmitting radio communications signals or radio programs from one fixed station to another; serves to extend the reliable range of the originating station; a microwave repeater is an example.

radioresistance [BIOL] The resistance of organisms or tissues to the harmful effects of various radiations.

radio scanner *See* scanning radio.

radio scattering *See* scattering.

radiosensitive [MATER] Sensitive to damage by radiant energy.

radio set *See* radio transmitter.

radio sextant [ELECTROMAG] An antenna with a high-resolution beam pattern that measures the angle between local direction references and an astronomical radio signal source such as an artificial satellite, the sun, the moon, or a radio star.

radio shielding [ELEC] Metallic covering over all electric wiring and ignition apparatus, which is grounded at frequent intervals for the purpose of eliminating electric interference with radio communications.

radio signal [COMMUN] A signal transmitted by radio.

radio-signal reporting code [COMMUN] A code for reporting the quality of radiotelephone or radiotelegraph transmission, consisting of a code word followed by a group of numbers rating various characteristics. Also known as signal reporting code.

radio silence [COMMUN] Period during which all or certain radio equipment capable of radiation is kept inoperative.

radiosonde [ENG] A balloon-borne instrument for the simultaneous measurement and transmission of meteorological

data; the instrument consists of transducers for the measurement of pressure, temperature, and humidity, a modulator for the conversion of the output of the transducers to a quantity which controls a property of the radio-frequency signal, a selector switch which determines the sequence in which the parameters are to be transmitted, and a transmitter which generates the radio-frequency carrier.

radiosonde balloon [AERO ENG] A balloon used to carry a radiosonde aloft; it is considerably larger than a pilot balloon or a ceiling balloon.

radiosonde commutator [ELECTR] A component of a radiosonde consisting of a series of alternate electrically conducting and insulating strips; as these are scanned by a contact, the radiosonde transmits temperature and humidity signals alternately.

radiosonde observation [METEOROL] An evaluation in terms of temperature, relative humidity, and pressure aloft, of radio signals received from a balloon-borne radiosonde; the height of each mandatory and significant pressure level of the observation is computed from these data. Also known as raob.

radiosonde-radio-wind system [ENG] An apparatus consisting of a standard radiosonde and radiosonde ground equipment to obtain upper-air data on pressure, temperature, and humidity, and a self-tracking radio direction finder to provide the elevation and azimuth angles of the radiosonde so that the wind vectors may be obtained.

radiosonde set [ENG] A complete set for automatically measuring and transmitting high-altitude meteorological data by radio from such carriers as a balloon or rocket.

radio sonobuoy *See* sonobuoy.

radio source [ASTROPHYS] A source of extragalactic or interstellar electromagnetic emission in radio wavelengths.

radio spectrum [COMMUN] The entire range of frequencies in which useful radio waves can be produced, extending from the audio range to about 300,000 megahertz. Also known as radio-frequency spectrum.

radio spectrum allocation [COMMUN] The specification of the frequencies of the radio spectrum which are available for use by the various radio services.

radio star [ASTROPHYS] A discrete celestial radio source.

radio station [COMMUN] A station equipped to engage in radio communication or radio broadcasting.

radio storm [ASTROPHYS] A prolonged period of disturbed emission or reception that lasts for periods of hours up to days.

radio sun [ASTROPHYS] The sun as defined by its electromagnetic radiation in the radio portion of the spectrum.

radiotelegraphy [COMMUN] Telegraphy involving the use of radio waves in place of wire lines.

radio telemetry [COMMUN] The presentation of data at a location remote from the source of the data, using radio-frequency electromagnetic radiation as the means of transmission.

radiotelephone [COMMUN] **1.** Pertaining to telephony over radio channels. **2.** A radio transmitter and radio receiver used together for two-way telephone communication by radio. Also known as radiophone.

radiotelephony [COMMUN] Two-way transmission of sounds by means of modulated radio waves, without interconnecting wires.

radio telescope [ENG] An astronomical instrument used to measure the amount of radio energy coming from various directions in the sky, consisting of a highly directional antenna and associated electronic equipment.

radioteletype [COMMUN] A teletypewriter and the associated equipment needed for operation over a radio channel rather than over wires. Abbreviated RTTY.

radioteletypewriter [COMMUN] A teletypewriter and the associated equipment needed for operation over a radio channel rather than over wires.

radiotherapy *See* radiation therapy.

radiothorium [NUC PHYS] Conventional name of the isotope of thorium which has mass number 228. Symbolized RdTh.

radio time signal [COMMUN] A time signal sent by radio broadcast.

radio tower [COMMUN] A tower, usually several hundred meters tall, either guyed or freestanding, on which a transmitting antenna is mounted to increase the range of radio transmission; in some cases, the tower itself may be the antenna.

radiotracer *See* radioactive tracer.

radio tracking [ENG] The process of keeping a radio or radar beam set on a target and determining the range of the target continuously.

radio transmission [COMMUN] The transmission of signals through space at radio frequencies by means of radiated electromagnetic waves.

radio transmitter [ELECTR] The equipment used for generating and amplifying a radio-frequency carrier signal, modulating the carrier signal with intelligence, and feeding the modulated carrier to an antenna for radiation into space as electromagnetic waves. Also known as radio set; transmitter.

radio transponder [ELECTR] A transponder which receives and transmits radio waves, in contrast to a sonar transponder, which receives and transmits acoustic waves.

radio tube *See* electron tube.

radio watch *See* watch.

radio wave [ELECTROMAG] An electromagnetic wave produced by reversal of current in a conductor at a frequency in the range from about 10 kilohertz to about 300,000 megahertz.

radio wavefront distortion [ELECTROMAG] Change in the direction of advance of a radio wave.

radio-wave propagation [ELECTROMAG] The transfer of energy through space by electromagnetic radiation at radio frequencies.

radio window [GEOPHYS] A band of frequencies extending from about 6 to 30,000 megahertz, in which radiation from the outer universe can enter and travel through the atmosphere of the earth.

radish [BOT] *Raphanus sativus*. **1.** An annual or biennial crucifer belonging to the order Capparales. **2.** The edible, thickened hypocotyl of the plant.

radist [NAV] Radio-navigation system in which the comparison of arrival times of transmitted pulses, at three or more ground stations, indicates the position of the vehicle.

radium [CHEM] A radioactive member of group IIA, symbol Ra, atomic number 88; the most abundant naturally occurring isotope has mass number 226 and a half-life of 1620 years. A highly toxic solid that forms water-soluble compounds; decays by emission of α, β, and γ-radiation; melts at 700°C, boils at 1140°C; turns black in air; used in medicine, in industrial radiography, and as a source of neutrons and radon.

radium age [NUCLEO] The age of a mineral as calculated from the numbers of radium atoms present originally, now, and when equilibrium is established with ionium.

radium bromide [INORG CHEM] $RaBr_2$ Water-soluble, poisonous, radioactive white powder, corrosive to skin or flesh; melts at 728°C; used in medicine, physical research, and luminous paint.

radium carbonate [INORG CHEM] $RaCO_3$ Water-insoluble, poisonous, radioactive, white powder; used in medicine.

radium cell [NUCLEO] A sealed thin-wall tube containing radium.

radium chloride [INORG CHEM] $RaCl_2$ Water- and alcohol-soluble, poisonous, radioactive, yellow-white crystals; corrosive effect on skin and flesh; melts at 1000°C; used in medicine, physical research, and luminous paint.

radium F *See* polonium-210.

radium needle [NUCLEO] A radium cell in the form of a needle, usually of platinum-iridium or gold alloy, designed primarily for insertion in tissue.

radium plaque [NUCLEO] A radium container in which the radium is distributed over a surface; the shielding is usually small in one direction so as to permit transmission of β-rays as well as γ-rays.

radium sulfate [INORG CHEM] $RaSO_4$ Water-insoluble, radioactive, poisonous, white crystals; used in medicine.

radium therapy [MED] Radiotherapy using the radiations from radium.

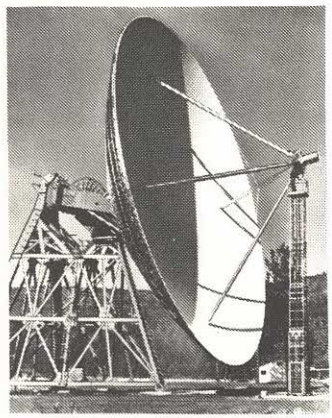
radius [ANAT] The outer of the two bones of the human forearm or of the corresponding part in vertebrates other than fish. [MATH] **1.** A line segment joining the center and a point of a circle or sphere. **2.** The length of such a line segment.

radius cutter [MECH ENG] A formed milling cutter with teeth ground to produce a radius on the workpiece.

radius of action [ENG] The maximum distance a ship, aircraft, or other vehicle can travel away from its base along a given course with normal load and return without refueling, but including the fuel required to perform those maneuvers made necessary by all safety and operating factors.

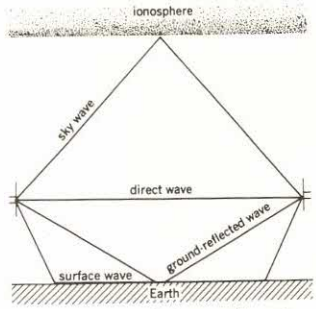
radius of convergence [MATH] The positive real number corresponding to a power series expansion about some number a

RADIO TELESCOPE



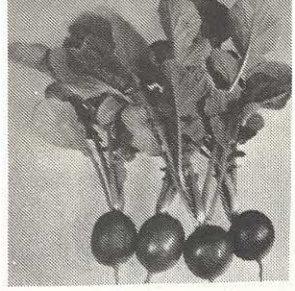
Installation of electronics at the focus of an 85-foot (26-meter) diameter radio telescope.

RADIO-WAVE PROPAGATION



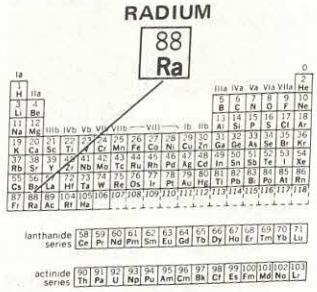
Possible transmission paths of electromagnetic radiation at radio frequencies.

RADISH



Radish (*Raphanus sativus*), cultivar Red Boy. (*Joseph Harris Co., Rochester, N.Y.*)

RADIUM



Periodic table of the chemical elements showing the position of radium.

with the property that if $x - a$ has absolute value less than this number the power series converges at x, and if $x - a$ has absolute value greater than this number the power series diverges at x.

radius of curvature [MATH] The radius of the circle of curvature at a point of a curve.

radius of damage [ORD] The distance from ground zero of a nuclear blast at which there is a 0.50 probability of achieving the desired damage.

radius of gyration [MATH] The square root of the ratio of the moment of inertia of a plane figure about a given axis to its area. [MECH] The square root of the ratio of the moment of inertia of a body about a given axis to its mass.

radius of protection [ENG] The radius of the circle within which a lightning discharge will not strike, due to the presence of an elevated lightning rod at the center.

radius of rupture [ORD] Greatest distance from the center of an underground explosive charge at which the explosion will be destructive.

radius of safety [ORD] The horizontal distance from ground area beyond which the weapon effects on friendly troops are acceptable.

radius of visibility [NAV] The radius of a circle limiting the area in which an objective can be seen under specified conditions.

radius ratio [PHYS CHEM] The ratio of the radius of a cation to the radius of an ion; relative ionic radii are pertinent to crystal lattice structure, particularly the determination of coordination number.

radius rod [ENG] A rod which restricts movement of a part to a given arc.

radius vector [ASTRON] A line joining the center of an orbiting body with the focus of its orbit located near its primary.

radix *See* base of a number system; root.

radix approximation [MATH] The approximation of a number by a number that can be expressed by a specified finite number of digits in radix notation.

radix complement [MATH] A numeral in positional notation that can be derived from another by subtracting the original numeral from the numeral of highest value with the same number of digits, and adding 1 to the difference. Also known as complement; true complement.

radix-minus-one complement [MATH] A numeral in positional notation of base (or radix) B derived from a given numeral by subtracting the latter from the highest numeral with the same number of digits, that is, from $B - 1$; it is 1 less than the radix complement.

radix notation [MATH] A positional notation in which the successive digits are interpreted as coefficients of successive integral powers of a number called the radix or base; the represented number is equal to the sum of this power series. Also known as base notation.

radix point [MATH] A dot written either on or slightly above the line, used to mark the point at which place values change from positive to negative powers of the radix in a number system; a decimal point is a radix point for radix 10.

radix transformation [COMPUT SCI] A method of transformation that involves changing the radix or base of the original key and either discarding excess high-order digits (that is, digits in excess of the number desired in the key) or extracting some part of the transformed number.

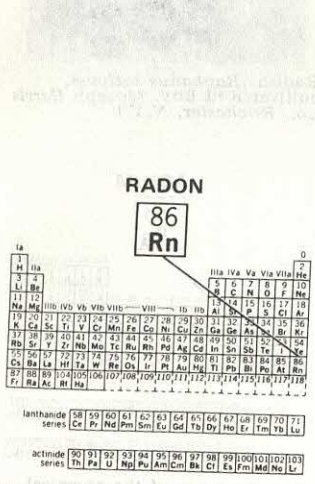
radome [ELECTROMAG] A strong, thin shell, made from a dielectric material that is transparent to radio-frequency radiation, and used to house a radar antenna, or a space communications antenna of similar structure.

radon [CHEM] A chemical element, symbol Rn, atomic number 86; all isotopes are radioactive, the longest half-life being 3.82 days for mass number 222; it is the heaviest element of the noble-gas group, produced as a gaseous emanation from the radioactive decay of radium. [NUC PHYS] The conventional name for radon-222. Symbolized Rn.

radon-220 [NUC PHYS] The isotope of radon having mass number 220, symbol ^{220}Ra, which is a radioactive member of the thorium series with a half-life of 56 seconds.

radon-222 [NUC PHYS] The isotope of radon having mass number 222, symbol ^{222}Ra, which is a radioactive member of the uranium series with a half-life of 3.82 days.

radon breath analysis [MED] Examination of exhaled air for the presence of radon to determine the presence and quantity of radium in the human body.



Periodic table of the chemical elements showing the position of radon.

Radstockian [GEOL] A European stage of geologic time forming the upper Upper Carboniferous, above Staffordian and below Stephanian, equivalent to uppermost Westphalian.

radula [INV ZOO] A filelike ribbon studded with horny or chitinous toothlike structures, found in the mouth of all classes of mollusks except Bivalvia.

radzimir [TEXT] A firm, lustrous fabric with embedded cross-ribs, woven of silk. Also spelled rhadzimer.

rafaelite [PETR] A nepheline-free orthoclase-bearing hypabyssal rock that also contains analcime and calcic plagioclase.

raffiche [METEOROL] In the Mediterranean region, gusts from the mountains; violent gusts of the bora.

raffinase [BIOCHEM] An enzyme that hydrolyzes raffinose, yielding fructose in the reaction.

raffinate [CHEM ENG] In solvent refining, that portion of the treated liquid mixture that remains undissolved and is not removed by the selective solvent. Also known as good oil to petroleum-refinery operators.

raffinose [BIOCHEM] $C_{18}H_{32}O_{16}\cdot 5H_2O$ A white, crystalline trisaccharide found in sugarbeets, cottonseed meal, and molasses; yields glucose, fructose, and galactose on complete hydrolysis. Also known as gossypose; melitose; melitriose.

Rafflesiales [BOT] A small order of dicotyledonous plants; members are highly specialized, nongreen, rootless parasites which grow from the roots of the host.

rafos [NAV] A long-range marine navigation system in which the ship measures the arrival times of sound waves from explosive charges released at fixed shore stations at known times.

raft [ENG] A quantity of timber or lumber secured together by means of ropes, chains, or rods and used for transportation by floating. [GEOL] **1.** A rock fragment caught up in a magma and drifting freely, more or less vertically. **2.** *See* float coal. [HYD] An accumulation or jam of floating logs, driftwood, dislodged trees, or other debris, formed naturally in a stream by caving of the banks.

rafted ice [OCEANOGR] A form of pressure ice composed of overlying pieces of ice floe.

rafter [BUILD] A roof-supporting member immediately beneath the roofing material.

rafter dam [CIV ENG] A dam made of horizontal timbers that meet in the center of the stream like rafters in a roof.

raft foundation [CIV ENG] A continuous footing that supports an entire structure, such as a floor. Also known as foundation mat.

rafting [GEOL] Transporting of rock by floating ice or floating organic materials (such as logs) to places not reached by water currents. [OCEANOGR] The process of forming rafted ice.

raft lake [HYD] A relatively short-lived body of water impounded along a stream by a raft.

raft tectonics *See* plate tectonics.

rag [PETR] Any of various hard, coarse, rubbly, or shell rocks that weather with a rough, irregular surface, such as a flaggy sandstone or limestone used as a building stone. Also known as ragstone.

rag bolt *See* barb bolt.

ragged ceiling *See* indefinite ceiling.

raggiatura [METEOROL] Land squalls descending with great force from ravines and valleys in high land in Italy; they extend only a short distance off the west coast.

raglanite [PETR] A nepheline syenite composed of oligoclase, nepheline, and corundum with minor amounts of mica, calcite, magnetite, and apatite.

rag papers [MATER] The most expensive papers, made wholly or partly from cotton or linen rags; rag content is expressed as 25, 50, 75, or 100%; pure rag papers are the strongest and most resistant to the discoloration and deterioration due to age.

ragstone *See* rag.

rail [ENG] **1.** A bar extending between posts or other supports as a barrier or guard. **2.** A steel bar resting on the crossties to provide track for railroad cars and other vehicles with flanged wheels. [MECH ENG] A high-pressure manifold in some fuel injection systems.

rail anchor [CIV ENG] A device that prevents tracks from moving longitudinally and maintains the proper gap between sections of rail.

rail bender [ENG] A portable appliance for bending rails for track or for straightening bent or curved rails.

rail capacity [CIV ENG] The maximum number of trains which can be planned to move in both directions over a specified section of track in a 24-hour period.

rail clip [CIV ENG] **1.** A plate that holds a rail at its base. **2.** A device used to fasten a derrick or crane to the rails of a track to prevent tipping. **3.** A support on a track rail, used for holding a detector bar.

rail crane *See* locomotive crane.

rail-fence jammer *See* continuous-wave jammer.

railhead [CIV ENG] **1.** The topmost part of a rail, supporting the wheels of railway vehicles. **2.** A point at which railroad traffic originates and terminates. **3.** The temporary ends of a railroad line under construction.

railing [CIV ENG] A barrier consisting of a rail and supports. [ELECTR] Radar pulse jamming at high recurrence rates (50 to 150 kilohertz); it results in an image on a radar indicator resembling fence railing.

rail joint [CIV ENG] A rigid connection of the ends of two sections of railway track.

Raillietiellidae [INV ZOO] A small family of parasitic arthropods in the order Cephalobaenida.

railroad [CIV ENG] A permanent line of rails forming a route for freight cars and passenger cars drawn by locomotives.

railroad engineering [CIV ENG] That part of transportation engineering involved in the planning, design, development, operation, construction, maintenance, use, or economics of facilities for transportation of goods and people in wheeled units of rolling stock running on, and guided by, rails normally supported on crossties and held to fixed alignment. Also known as railway engineering.

railroad ferry [NAV ARCH] A ship having a deck with railroad tracks, for carrying railroad cars between two ports.

railroad jack [MECH ENG] **1.** A hoist used for lifting locomotives. **2.** A portable jack for lifting heavy objects. **3.** A hydraulic jack, either powered or lever-operated.

railroad thermit [MET] Red thermit to which is added up to 16% nickel, manganese, and steel.

rail steel [MET] Steel used to make rail track.

railway artillery [ORD] Heavy artillery, given mobility by mounting on railway mounts or carriages; no longer in use by U.S. forces.

railway carriage *See* railway mount.

railway dry dock [CIV ENG] A railway dock consisting of tracks built on an incline on a strong foundation, and extending from a sufficient distance in shore to allow a vessel to be hauled out of the water.

railway end-loading ramp [CIV ENG] A sloping platform situated at the end of a track and rising to the level of the floor of the railcars (wagons).

railway engineering *See* railroad engineering.

railway mount [ORD] Mount for railway artillery; no longer in use by U.S. forces, but still of interest for possible future application. Also known as railway carriage.

rain [METEOROL] Precipitation in the form of liquid water drops with diameters greater than 0.5 millimeter, or if widely scattered the drops may be smaller; the only other form of liquid precipitation is drizzle.

rain and snow mixed [METEOROL] Precipitation consisting of a mixture of rain and wet snow; usually occurs when the temperature of the air layer near the ground is slightly above freezing.

rain area report *See* radar report.

rain attenuation [COMMUN] Attenuation of radio waves when passing through moisture-bearing cloud formations or areas in which rain is falling; increases with the density of the moisture in the transmission path.

rainbow [ELECTR] Technique which applies pulse-to-pulse frequency changing to identifying and discriminating against decoys and chaff. [OPTICS] Colored arc seen in the sky when the sun or moon is illuminating large numbers of falling raindrops. [PETRO ENG] Chromatic iridescence observed in drilling fluid that has been circulated in a well, indicating contamination or contact with fresh hydrocarbons.

rainbow granite [PETR] A type of granite having either a black or dark-green background with pink, yellowish, or reddish mottling, or a pink background with dark mottling.

rainbow roof [ARCH] A pitched roof with slightly arched slopes.

rain cloud [METEOROL] Any cloud from which rain falls; a popular term having no technical denotation.

rain crust [HYD] A type of snow crust, formed by refreezing after surface snow crystals have been melted and wetted by liquid precipitation; composed of individual ice particles such as firn.

rain desert [ECOL] A desert in which rainfall is sufficient to maintain a sparse general vegetation.

raindrop [METEOROL] A drop of water of diameter greater than 0.5 millimeter falling through the atmosphere.

raindrop impressions *See* rain prints.

raindrop imprints *See* rain prints.

Rainey's corpuscle [INV ZOO] The sickle-shaped spore of an encysted sarcosporidian.

rain factor [HYD] A coefficient designed to measure the combined effect of temperature and moisture on the formation of soil humus; it is obtained by dividing the annual rainfall (in millimeters) by the mean annual temperature (in degrees centigrade).

rainfall [METEOROL] The amount of precipitation of any type; usually taken as that amount which is measured by means of a rain gage (thus a small, varying amount of direct condensation is included).

rainfall frequency [CLIMATOL] The number of times, during a specified period of years, that precipitation of a certain magnitude or greater occurs or will occur at a station; numerically, the reciprocal of the frequency is usually given.

rainfall inversion *See* precipitation inversion.

rainfall penetration [HYD] The depth below the soil surface to which water from a given rainfall has been able to infiltrate.

rainfall regime [CLIMATOL] The character of the seasonal distribution of rainfall at any place; the chief rainfall regimes, as defined by W. G. Kendrew, are equatorial, tropical, monsoonal, oceanic and continental westerlies, and Mediterranean.

rainforest [ECOL] A forest of broad-leaved, mainly evergreen, trees found in continually moist climates in the tropics, subtropics, and some parts of the temperate zones.

rainforest climate *See* wet climate.

rain gage [ENG] An instrument designed to collect and measure the amount of rain that has fallen. Also known as ombrometer; pluviometer. Also known as statement; udometer.

rain-gage shield [ENG] A device which surrounds a rain gage and acts to maintain horizontal flow in the vicinity of the funnel so that the catch will not be influenced by eddies generated near the gage. Also known as wind shield.

rain gush *See* cloudburst.

rain gust *See* cloudburst.

raininess [METEOROL] Generally, the quantitative character of rainfall for a given place.

rain-intensity gage [ENG] An instrument which measures the instantaneous rate at which rain is falling on a given surface. Also known as rate-of-rainfall gage.

rainmaking [METEOROL] Popular term applied to all activities designed to increase, through any artificial means, the amount of precipitation released from a cloud.

rain pillar [GEOL] A minor landform consisting of a column of soil or soft rock capped and protected by pebbles or concretions, produced by the differential erosion from the impact of falling rain.

rain prints [GEOL] Small, shallow depressions formed in soft sediment or mud by the impact of falling raindrops. Also known as raindrop impressions; raindrop imprints.

rain rot [VET MED] Weeping dermatitis accompanied by swelling of the skin and loss of hair in sheep exposed to prolonged periods of rain.

rain shadow [METEOROL] An area of diminished precipitation on the lee side of mountains or other topographic obstacles.

rainsquall [METEOROL] A squall associated with heavy convective clouds, frequently the cumulonimbus type; usually sets in shortly before the thunderstorm rain, blowing outward from the storm and generally lasting only a short time. Also known as thundersquall.

rain stage [METEOROL] The thermodynamic process of condensation of water from moist air in an idealized saturation-adiabatic or pseudoadiabatic lifting, at temperatures above the freezing point; begins at the condensation level.

rainwash [GEOL] **1.** The washing away of loose surface material by rainwater after it has reached the ground but before it has been concentrated into definite streams. **2.** Material transported and accumulated, or washed away, by rainwater.

rainwater [HYD] Water that has fallen as rain and is quite soft, as it has not yet collected soluble matter from the soil.

RAIN

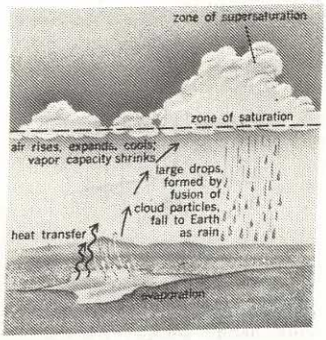


Diagram of the steps in the formation of rain. *(Based on photodisplay in Willetts Memorial Weather Exhibit, Hayden Planetarium, New York City)*

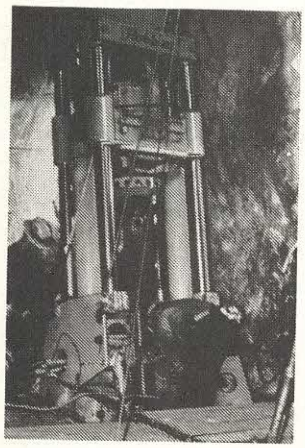
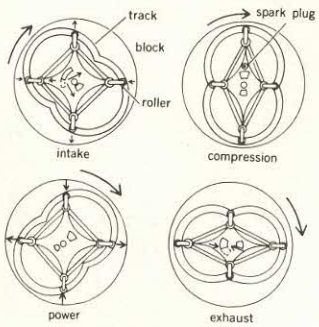
RAISE BORING MACHINE



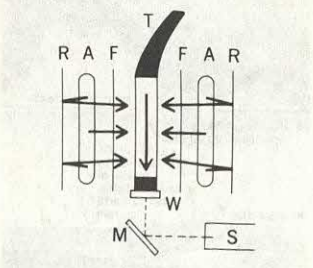
Raise boring machine to drill pilot holes between levels in Idaho silver-lead mine. *(Hecla Mining Co.)*

RAJAKARUNA ENGINE



Cross sections of the Rajakaruna engine, a type of revolving block rotary engine, showing the four stages of one combustion cycle.

RAMAN EFFECT



Arrangement for excitation of the Raman effect with a noncoherent source. Mercury vapor arcs A are surrounded by appropriate reflectors R to increase intensity of available radiation. Light from arcs passes through filters F which transmit one of several monochromatic frequencies of mercury radiation. Monochromatic radiation enters circular cylindrical tube T in which liquid or vapor is to be studied. Light scattered in direction of vertical arrow passes through window W and to the spectrograph S through optical system M.

rainy climate [CLIMATOL] In W. Koppen's climatic classification, any climate type other than the dry climates; however, it is generally understood that this refers principally to the tree climates and not the polar climates.

rainy season [CLIMATOL] In certain types of climate, an annually recurring period of one or more months during which precipitation is a maximum for that region. Also known as wet season.

raise [MIN ENG] A shaftlike mine opening, driven upward from a level to connect with a level above, or to the surface.

raise boring machine [MIN ENG] A machine that is used to drill pilot holes between levels in a mine, and to ream the pilot hole to the finished dimension of the raise.

raised beach [GEOL] An ancient beach raised to a level above the present shoreline by uplift or by lowering of the sea level; often bounded by inland cliffs.

raised bog [ECOL] An area of acid, peaty soil, especially that developed from moss, in which the center is relatively higher than the margins.

raise drill [MIN ENG] A circular raise driving machine which bores a pilot hole and reams it to finished raise diameter.

raise driller [MIN ENG] A person who works in a raise. Also known as raiseman.

raiseman *See* raise driller.

Rajakaruna engine [MECH ENG] A rotary engine that uses a combustion chamber whose sides are pin-jointed together at their ends.

Rajidae [VERT ZOO] The skates, a family of elasmobranchs included in the batoid group.

Rajiformes [VERT ZOO] The equivalent name for Batoidea.

rake [BUILD] The exterior finish and trim applied parallel to the sloping end walls of a gabled roof. [DES ENG] A hand tool consisting of a long handle with a row of projecting prongs at one end; for example, the tool used for gathering leaves or grass on the ground. [ENG] The angle between an inclined plane and the vertical. [GEOL] *See* plunge. [MECH ENG] The angle between the tooth face or a tangent to the tooth face of a cutting tool at a given point and a reference plane or line. [NAV ARCH] The angle between the vertical direction and a part of a ship, such as a mast, funnel, bow, stern, rudder, or sternpost. [ORD] To sweep a target, especially a ship or a column of troops, with gun or cannon fire.

raked joint [CIV ENG] A mortar, or masonry, joint from which the mortar has been scraped out to about ¾ inch (20 millimeters).

râle [MED] An abnormal sound accompanying the normal sounds of respiration within the air passages and heard on auscultation of the chest.

Rallidae [VERT ZOO] A large family of birds in the order Gruiformes comprising rails, gallinules, and coots.

ralstonite [MINERAL] $NaMgAl_5F_{12}(OH)_6 \cdot 3H_2O$ A colorless, white, or yellowish mineral composed of hydrous basic sodium magnesium aluminum fluoride, occurring in octahedral crystals.

ram [AERO ENG] The forward motion of an air scoop or air inlet through the air. [HYD] An underwater ledge or projection from an ice wall, ice front, iceberg, or floe, usually caused by the more intensive melting and erosion of the unsubmerged part. Also known as apron; spur. [MECH ENG] A plunger, weight, or other guided structure for exerting pressure or drawing something by impact. [MIN ENG] *See* barney. [VERT ZOO] A male sheep or goat.

Ram *See* Aries.

RAM *See* random-access memory.

Raman effect [OPTICS] A phenomenon observed in the scattering of light as it passes through a transparent medium; the light undergoes a change in frequency and a random alteration in phase due to a change in rotational or vibrational energy of the scattering molecules. Also known as Raman scattering.

Raman-Rayleigh ratio [OPTICS] The ratio of Raman scattering (of a light beam passing through a transparent medium) to Rayleigh scattering (of a light beam horizontal to the medium).

Raman scattering *See* Raman effect.

Raman spectrophotometry [SPECT] The study of spectral-line patterns on a photograph taken at right angles through a substance illuminated with a quartz mercury lamp.

Raman spectroscopy [SPECT] Analysis of the intensity of Raman scattering of monochromatic light as a function of frequency of the scattered light.

Raman spectrum [SPECT] A display, record, or graph of the intensity of Raman scattering of monochromatic light as a function of frequency of the scattered light.

Ramapithecinae [PALEON] A subfamily of Hominidae including the protohominids of the Miocene and Pliocene.

Ramapithecus [PALEON] The genus name given to a fossilized upper jaw fragment found in the Siwalik hills, India; closely related to the family of man.

ramark [NAV] A radio marker beacon which continuously transmits pulsed signals appearing as radial lines on a ship's PPI (plan position indicator); the line indicates the direction to the beacon.

ramate [BIOL] Having branches.

rambla [GEOL] A dry ravine, or the dry bed of an ephemeral stream.

ramdohrite [MINERAL] $Pb_3Ag_2Sb_6S_{13}$ A dark-gray mineral composed of a lead silver antimony sulfur compound.

ram effect [MECH ENG] The increased air pressure in a jet engine or in the manifold of a piston engine, due to ram.

ramentum [BOT] A thin brownish scale consisting of a single layer of cells and occurring on the leaves and young shoots of many ferns.

ramicolous [BOT] Living on twigs.

ramie [BOT] *Boehmeria nivea*. A shrub or half-shrub of the nettle family (Urticaceae) cultivated as a source of a tough, strong, durable, lustrous natural woody fiber resembling flax, obtained from the phloem of the plant; used for high-quality papers and fabrics. Also known as China grass; rhea.

ramjet engine [AERO ENG] A type of jet engine with no mechanical compressor, consisting of a specially shaped tube or duct open at both ends, the air necessary for combustion being shoved into the duct and compressed by the forward motion of the engine; the air passes through a diffuser and is mixed with fuel and burned, the exhaust gases issuing in a jet from the rear opening.

ramjet exhaust nozzle [AERO ENG] The discharge nozzle in a ramjet engine; hot gas is ejected rearward through this nozzle.

rammelsbergite [MINERAL] $NiAs_2$ A gray mineral composed of nickel diarsenide; it is dimorphous with pararammelsbergite. Also known as white nickel.

rammer [ORD] **1.** Device for driving a projectile into position in a gun; may be hand- or power-operated. **2.** Tool used to remove a live projectile from the bore of a gun.

ramming [ENG] Packing a powder metal or sand into a compact mass.

ramoff [MET] A defect in a casting due to improper ramming of the sand.

Ramon flocculation test [IMMUNOL] A method of standardizing antitoxins; a toxin-antitoxin flocculation that is a precipitin reaction in which the end point is the zone of optimal proportion; that is, the zone in which there is no uncombined antigen or antibody.

ramose [BIOL] Having lateral divisions or branches.

ramp [ENG] **1.** A uniformly sloping platform, walkway, or driveway. **2.** A stairway which gives access to the main door of an airplane. [HYD] An accumulation of snow forming an inclined plane between land or land ice and sea ice or shelf ice. Also known as drift ice foot. [MIN ENG] A slope between levels in open-pit mining.

rampart [GEOL] **1.** A narrow, wall-like ridge, 1–2 meters high, built up by waves along the seaward edge of a reef flat, and consisting of boulders, shingle, gravel, or reef rubble, commonly capped by dune sand. **2.** A wall-like ridge of unconsolidated material formed along a beach by the action of strong waves and current. **3.** A crescentic or ringlike deposit of pyroclastics around the top of a volcano.

rampart wall [GEOL] A rimming wall formed along the outer or seaward margin of a terrace, as on various high limestone Pacific islands.

ram penetrometer *See* ramsonde.

ramp generator [ELECTR] A circuit that generates a sweep voltage which increases linearly in value during one cycle of sweep, then returns to zero suddenly to start the next cycle.

Ramphastidae [VERT ZOO] The toucans, a family of birds with large, often colorful bills in the order Piciformes.

ramp mining [MIN ENG] The development of moderately inclined accessways from the surface to mining levels for haulage of ore, materials, waste, men, and equipment.

RAMPS *See* resource allocation in multiproject scheduling.

ramp sight [ORD] Type of metallic gun sight in which the

aperture is raised or lowered by moving it forward or backward on an inclined ramp.

ramp valley [GEOL] A trough between faults, forced downward by lateral pressure.

ramp weight [AERO ENG] The static weight of a mission aircraft determined by adding operating weight, payload, flight plan fuel load, and fuel required for ground turbine power unit, taxi, runup, and takeoff.

ram recovery *See* recovery.

ram rocket [AERO ENG] **1.** A rocket motor mounted coaxially in the open front end of a ramjet, used to provide thrust at low speeds and to ignite the ramjet fuel. **2.** The entire unit or power plant consisting of the ramjet and such a rocket.

Ramsauer effect [ATOM PHYS] The vanishing of the scattering cross section of electrons from atoms of a noble gas at some value of the electron energy, always below 25 electronvolts.

Ramsay-Shields-Eötvös equation [THERMO] An elaboration of the Eötvös rule which states that at temperatures not too near the critical temperature the molar surface energy of a liquid is proportional to $t_c - t - 6$ K, where t is the temperature and t_c is the critical temperature.

Ramsay-Young rule [THERMO] An empirical relationship which states that the ratio of the absolute temperatures at which two chemically similar liquids have the same vapor pressure is independent of this vapor pressure.

Ramsbottom coke test [ANALY CHEM] A laboratory test for carbon residue in petroleum products.

Ramsbottom safety valve [ENG] A steam safety valve with provision for manually checking the pressure adjustment.

ramsdellite [MINERAL] MnO_2 An orthorhombic mineral composed of manganese dioxide; it is dimorphous with pyrolusite.

Ramsden circle [OPTICS] A sharp, bright circle of light which appears on a sheet of white paper held near the eyepiece of a telescope focused for infinity and pointed at a bright sky. Also known as Ramsden disk.

Ramsden disk *See* Ramsden circle.

Ramsden eyepiece [OPTICS] An eyepiece consisting of two planoconvex lenses with their plane sides facing outward, having the same power and focal length, and separated by a distance equal to their common focal length.

Ramsey fringes [PHYS] Oscillations in the number of transitions in a molecular beam that passes through two separated radio-frequency fields, as a function of L/v, where L is the separation of the field and v is the speed of the beam.

ramsonde [ENG] A cone-tipped metal rod or tube that is driven downward into snow to measure its hardness. Also known as ram penetrometer.

ram travel [ENG] In injection or transfer molding, the distance moved by the injection ram when filling the mold.

ram-type turret lathe [MECH ENG] A horizontal turret lathe in which the turret is mounted on a ram or slide which rides on a saddle.

ramus [ANAT] A slender bone process branching from a large bone. [VERT ZOO] The barb of a feather. [ZOO] The branch of a structure such as a blood vessel, nerve, arthropod appendage, and so on.

Rancholabrean [GEOL] A stage of geologic time in southern California, in the upper Pleistocene, above the Irvingtonian.

randannite [MINERAL] An earthy form of opal.

randkluft [HYD] A crevasse at the head of a mountain glacier, separating the moving ice and snow from the surrounding rock wall of the valley, where no ice apron is present.

random access [COMPUT SCI] **1.** The ability to read or write information anywhere within a storage device in an amount of time that is constant regardless of the location of the information accessed and of the location of the information previously accessed. Also known as direct access. **2.** A process in which data are accessed in nonsequential order and possibly at irregular intervals of time. Also known as single reference.

random-access discrete address [COMMUN] Communications technique in which radio users share one wide band instead of each user getting an individual narrow band.

random-access disk file [COMPUT SCI] A file which is contained on a disk having one head per track and in which consecutive records are not necessarily in consecutive locations.

random-access input/output [COMPUT SCI] A technique which minimizes seek time and overlaps with processing.

random-access memory [COMPUT SCI] A data storage device having the property that the time required to access a randomly selected datum does not depend on the time of the last access or the location of the most recently accessed datum. Abbreviated RAM. Also known as direct-access memory; direct-access storage; random-access storage; random storage; uniformly accessible storage.

random-access programming [COMPUT SCI] Programming without regard for the time required for access to the storage positions called for in the program, in contrast to minimum-access programming.

random-access storage *See* random-access memory.

random coil [PHYS CHEM] Any of various irregularly coiled polymers that can occur in solution. Also known as cyclic coil.

random copolymer [ORG CHEM] Resin copolymer in which the molecules of each monomer are randomly arranged in the polymer backbone.

random diffusion chamber *See* reverberation chamber.

random error [STAT] An error that can be predicted only on a statistical basis.

random experiments [STAT] Experiments which do not always yield the same result when repeated under the same conditions.

random forecast [METEOROL] A forecast in which one of a set of meteorological contingencies is selected on the basis of chance; it is often used as a standard of comparison in determining the degree of skill of another forecast method.

random function [MATH] A function whose domain is an interval of the extended real numbers and has range in the set of random variables on some probability space; more precisely, a mapping of the cartesian product of an interval in the extended reals with a probability space to the extended reals so that each section is a random variable.

randomization [STAT] Assigning subjects to treatment groups by use of tables of random numbers.

randomized blocks [STAT] An experimental design in which the various treatments are reproduced in each of the blocks and are randomly assigned to the units within the blocks, permitting unbiased estimates of error to be made.

randomized jitter [ELECTR] Jitter by means of noise modulation.

randomized test [STAT] Acceptance or rejection of the null hypothesis by use of a random variable to decide whether an observation causes rejection or acceptance.

randomizing scheme [COMPUT SCI] A technique of distributing records among storage modules to ensure even distribution and seek time.

random line [ENG] A trial surveying line that is directed as closely as circumstances permit toward a fixed terminal point that cannot be seen from the initial point. Also known as random traverse.

random noise [MATH] A form of random stochastic process arising in control theory. [PHYS] Noise characterized by a large number of overlapping transient disturbances occurring at random, such as thermal noise and shot noise. Also known as fluctuation noise.

random number generator [COMPUT SCI] **1.** A mathematical program which generates a set of numbers which pass a randomness test. **2.** An analog device that generates a randomly fluctuating variable, and usually operates from an electrical noise source.

random numbers [MATH] A listing of numbers which is nonrepetitive and satisfies no algorithm.

random ordered sample [STAT] An ordered sample of size s drawn from a population of size N such that the probability of any particular ordered sample is the reciprocal of the number of permutations of N things taken s at a time.

random process *See* stochastic process.

random pulsing [COMMUN] Continuous, varying, pulse-repetition rate, accomplished by noise modulation or continuous frequency change.

random sampling [STAT] A sampling from some population where each entry has an equal chance of being drawn.

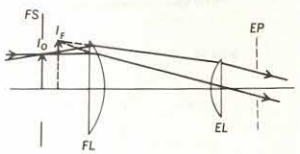
random-sampling voltmeter [ENG] A sampling voltmeter which takes samples of an input signal at random times instead of at a constant rate; the synchronizing portions of the instrument can then be simplified or eliminated.

random sequence [MET] A longitudinal sequence of weld beads deposited in random increments.

random storage *See* random-access memory.

random superimposed coding [COMPUT SCI] A system of coding in which a set of random numbers is assigned to each

RAMSDEN EYEPIECE



Ramsden eyepiece. FL = field lens; EL = eye lens; FS = field stop; EP = exit pupil or eye point; I_O = image formed by the preceding system; I_F = image formed by the preceding system and the field lens.

concept to be encoded; with punched cards, each number corresponds to some one hole to be punched in a given field.

random traverse *See* random line.

random variable [MATH] A measurable function on a probability space; usually real valued, but possibly with values in a general measurable space.

random vector *See* diverse vector.

random vibration [MECH] A varying force acting on a mechanical system which may be considered to be the sum of a large number of irregularly timed small shocks; induced typically by aerodynamic turbulence, airborne noise from rocket jets, and transportation over road surfaces.

random walk [MATH] A succession of movements along line segments where the direction and possibly the length of each move is randomly determined.

random winding [ELEC] A coil winding in which the turns are positioned haphazardly rather than in layers.

Raney nickel [MET] A nickel powder prepared from an alloy of nickel and aluminum in equal parts by preferentially dissolving the aluminum in a warm solution of sodium hydroxide.

rang [PETR] A unit of subdivision in the C.I.P.W. (Cross-Iddings-Pirsson-Washington) classification of igneous rocks.

range [CIV ENG] Any series of contiguous townships of the U.S. Public Land Survey system. [COMMUN] **1.** In printing telegraphy, that fraction of a perfect signal element through which the time of selection may be varied to occur earlier or later than the normal time of selection without causing errors while signals are being received; the range of a printing telegraph receiving device is commonly measured in percent of a perfect signal element by adjusting the indicator. **2.** Upper and lower limits through which the index arm of the range-finder mechanism of a teletypewriter may be moved and still receive correct copy. [ENG] **1.** The distance capability of an aircraft, missile, gun, radar, or radio transmitter. **2.** A line defined by two fixed landmarks, used for missile or vehicle testing and other test purposes. [MATH] The range of a function f from a set X to a set Y consists of those elements y in Y for which there is an x in X with $f(x) = y$. [MECH] The horizontal component of a projectile displacement at the instant it strikes the ground. [NAV] **1.** A line of bearing defined by a radio range. **2.** *See* radio range. [NUCLEO] The distance that a given ionizing particle can penetrate a given medium before its energy drops to the point that the particle no longer produces ionization. [PHYS] The greatest distance between two particles at which a given force between them is appreciable. [STAT] The difference between the maximums and minimums of a variable quantity.

range adjustment [ORD] Correction of firing data so that the impact or burst will be on the target with respect to range.

range-amplitude display [ELECTR] Radar display in which a time base provides the range scale from which echoes appear as deflections normal to the base.

range angle [ORD] Angle between the aircraft-target line and the vertical line from the aircraft to the ground at the instant a bomb is released. Also known as dropping angle.

range arithmetic *See* interval arithmetic.

range attenuation [ELECTROMAG] In radar terminology, the decrease in power density (flux density) caused by the divergence of the flux lines with distance, this decrease being in accordance with the inverse-square law.

range-bearing display *See* B display.

range calibration [ENG] Adjustment of a radar set so that when on target the set will indicate the correct range.

range calibrator [ELECTR] **1.** A device with which the operator of a transmitter calculates the distance over which the signal will extend intelligibly. **2.** A device for adjusting radar range indications by use of known range targets or delayed signals, so when on target the set will indicate the correct range.

range coding [ENG] Method of coding a radar transponder beacon response so that it appears as a series of illuminated bars on a radarscope; the coding provides identification.

range comprehension [ELECTR] In an FM sonar system, valves between the maximum and the minimum ranges.

range control [AERO ENG] The operation of an aircraft to obtain the optimum flying time.

range control chart [AERO ENG] A graph kept in flight on which actual fuel consumption is plotted against distance flown for comparison with planned fuel consumption.

range correction [ORD] Changes of firing data necessary to allow for deviations of range due to weather, material, or ammunition.

range correction board [ORD] Device with which the correction to be applied to a gun is computed mechanically; the correction obtained allows for all nonstandard conditions, such as variations in weather and ammunition.

range corrector setting [ENG] Degree to which the range scale of a position-finding apparatus must be adjusted before use.

range delay [ELECTROMAG] A control used in radars which permits the operator to present on the radarscope only those echoes from targets which lie beyond a certain distance from the radar; by using range delay, undesired echoes from nearby targets may be eliminated while the indicator range is increased.

range determination [ORD] Process of finding the distance between a gun and a target, usually by firing the gun, by estimating with the eye, by using a range-finding instrument, or by plotting.

range deviation [MECH] Distance by which a projectile strikes beyond, or short of, the target; the distance as measured along the gun-target line or along a line parallel to the gun-target line.

range discrimination *See* distance resolution.

range disk [ORD] Graduated disk, used for range setting, connected mechanically with the elevating mechanism of a gun.

range dispersion diagram [ORD] Chart indicating the expected percentage of shots fired with the same data which will fall into each of eight areas within the dispersion pattern for ranges.

range drum [ORD] Graduated indicator of cylinder type, connected mechanically with the elevating mechanism of a gun, used for range setting.

range error [ORD] Difference between the range to the point of impact of a particular projectile and the range to the center of impact of a group of shots fired with the same data.

range estimation [ORD] A rough estimate of the distance to a target or other object.

rangefinder [COMMUN] A movable, calibrated unit of the receiving mechanism of a teletypewriter by means of which the selecting interval may be moved with respect to the start signal. [ELECTR] A device which determines the distance to an object by measuring the time it takes for a radio wave to travel to the object and return. [ENG] *See* optical rangefinder.

range flag [ORD] Red flag displayed on or near a target range during firing practice as a warning that firing is being conducted.

range gate capture [ELECTR] Electronic countermeasure technique using a spoofer radar transmitter to produce a false target echo that can make a fire-control tracking radar move off the real target and follow the false one.

range gating [ELECTR] The process of selecting those radar echoes that lie within a small range interval.

range-height indicator [ENG] A scope which simultaneously indicates range and height of a radar target; this presentation is commonly used by height finders.

range-height indicator display [ELECTR] A radar display that presents visually the scalar distance between a reference point and a target, along with the vertical distance between a reference plane and the target. Abbreviated RHI display.

range ladder [ORD] A naval term used to describe a method of adjusting gunfire by firing successive volleys; starting with a range which is assuredly beyond or short and applying small uniform range corrections to the successive volleys until the target is crossed.

range lights [NAV] Two or more lights in the same horizontal direction, and installed as aids to nautical navigation, particularly those lights placed to mark any line of importance to vessels, as a channel.

range marker *See* distance marker.

range mark offset [ELECTR] Displacement of range mark on a type B indicator.

range of a loop [COMPUT SCI] The set of instructions contained between the opening and closing statements of a do loop.

range of motion [BIOPHYS] The degree of movement that can occur in a joint.

range of tide [OCEANOGR] The difference in height between consecutive high and low tides at a place.

range of visibility [NAV] The extreme distance at which an object or light can be seen.

range oil [MATER] Kerosine similar in properties to a No. 1 distillate heating oil; used for space heating.

range pole *See* range rod.

range probable error [ORD] Error in range that a gun or other weapon may be expected to exceed as often as not; given in the firing tables for the gun, and may be taken as an index of accuracy of the piece.

range rake [ORD] A T-shaped device with pegs set in the cross; the distance between pegs subtends a definite angle at the base of the T; by sighting with a range rake, a flank observer can get a quick angular measurement of range deviation.

range rate [ELECTR] The rate at which the distance from the measuring equipment to the target or signal source that is being tracked is changing with respect to time.

range recorder [ENG] An item which makes a permanent representation of distance, expressed as range, versus time. [ENG ACOUS] A display used in sonar in which a stylus sweeps across a paper moving at a constant rate and chemically treated so that it is darkened by an electrical signal from the stylus; the stylus starts each sweep as a sound pulse is emitted so that the distance along the trace at which the echo signal appears is a measure of the range to the target.

range resolution *See* distance resolution.

range ring [ELECTR] Accurate, adjustable, ranging mark on a plan position indicator corresponding to a range step on a type M indicator.

range rod [ENG] A long (6–8 feet or 1.8–2.4 meters) rod fitted with a sharp-pointed metal shoe and usualy painted in 1-foot (30-centimeter) bands of alternate red and white; used for sighting points and lines in surveying or for showing the position of a ground point. Also known as line rod; lining pole; range pole; ranging rod; sight rod.

Ranger program [AERO ENG] A series of nine spacecraft, launched in 1961–1965, designed to transmit photographs back to earth while on a collision course with the moon; the first six Rangers failed, but *Rangers 7, 8,* and *9* successfully transmitted high-resolution television pictures of the lunar surface up to the instant of impact.

range safety [ORD] On a rocket test range, the planning and execution of each test so as to ensure the maximum safety of all personnel and property within the range boundaries.

range scale [ORD] **1.** Scale on the arm of a plotting board where the observed range of a moving target is recorded in finding firing data. **2.** Graduated scale on the sight or mount of a gun, used to show the elevation of the gun. **3.** Table of firing data giving elevation settings corresponding to various ranges for the standard charges.

range selection [ELECTR] Control on a radar indicator for selection of range scale.

range sensing [ORD] Observing the location of the striking or bursting point of a projectile with respect to range, and reporting it as a hit, over, short, lost, or doubtful; range sensing does not include accurate determination of distances.

range spotting [ORD] Watching the burst or impact of shots to note their deviation beyond, or short of, the target.

range step [ELECTR] Vertical displacement on M-indicator sweep to measure range.

range strobe [ELECTROMAG] An index mark which may be displayed on various types of radar indicators to assist in the determination of the exact range of a target.

range surveillance [ENG] Surveillance of a missile range by means of electronic and other equipment.

range sweep [ELECTR] A sweep intended primarily for measurement of range.

range table [ORD] Prepared table that gives elevations corresponding to ranges for a gun or other weapon, under various conditions; part of a firing table.

range-tracking element [ELECTR] An element in a radar set which measures range and its time derivative; by means of the latter, a range gate is actuated slightly before the predicted instant of signal reception.

range unit [ELECTR] Radar system component used for control and indication (usually counters) of range measurements.

range wind [ORD] Horizontal component of true wind in the vertical plane through the line of fire of an artillery piece.

range zero [ELECTR] Alignment of start sweep trace with zero range.

range zone [GEOL] Formal biostratigraphic zone made up of a body of strata comprising the total horizontal (geographic) and vertical (stratigraphic) range of occurrence of a specified taxon of a group of taxa.

ranging [ORD] **1.** Wide-scale scouting, especially by aircraft, designed to search an area systematically. **2.** Locating an enemy gun by watching its flash, listening to its report, or other similar means.

ranging oscillator [ELECTR] Oscillator circuit containing an LC (inductor-capacitor) resonant combination in the cathode circuit, usually used in radar equipment to provide range marks.

ranging rod *See* range rod.

Ranidae [VERT ZOO] A family of frogs in the suborder Diplasiocoela including the large, widespread genus *Rana*.

rank [GEOL] **1.** A coal classification based on degree of metamorphism. **2.** *See* stack. [MATH] **1.** The rank of a matrix is its maximum number of linearly independent rows. **2.** The rank of a system of homogeneous linear equations equals the rank of the matrix of its coefficients. **3.** A tensor in an n-dimensional space is of rank r if it has n^r components.

rank correlation [STAT] A nonparametric test of statistical dependence for a random sample of paired observations.

Rankine body [FL MECH] A fluid flow pattern formed by combining a uniform stream with a source and a sink of equal strengths, with the line joining the source and sink along the stream direction.

Rankine cycle [THERMO] An ideal thermodynamic cycle consisting of heat addition at constant pressure, isentropic expansion, heat rejection at constant pressure, and isentropic compression; used as an ideal standard for the performance of heat-engine and heat-pump installations operating with a condensable vapor as the working fluid, such as a steam power plant. Also known as steam cycle.

Rankine efficiency [MECH ENG] The efficiency of an ideal engine operating on the Rankine cycle under specified conditions of steam temperature and pressure.

Rankine-Hugoniot equations [THERMO] Equations, derived from the laws of conservation of mass, momentum, and energy, which relate the velocity of a shock wave and the pressure, density, and enthalpy of the transmitting fluid before and after the shock wave passes.

Rankine temperature scale [THERMO] A scale of absolute temperature; the temperature in degrees Rankine (°R) is equal to ⅝ of the temperature in kelvins and to the temperature in degrees Fahrenheit plus 459.67.

Rankine vortex [FL MECH] A vortex with a vertical axis and circular motion, in which the motion is that of a rotating solid cylinder inside some fixed radius, and the circulation is constant outside this radius.

ranking method [IND ENG] A system of job evaluation wherein each job as a whole is given a rank with respect to all the other jobs, and no attempt is made to establish a measure of value.

rankinite [MINERAL] $Ca_3Si_2O_7$ A monoclinic mineral composed of calcium silicate.

rank of an observation [STAT] The number assigned to an observation if a collection of observations is ordered from smallest to largest and each observation is given the number corresponding to its place in the order.

rank tests [STAT] Tests which use the ranks of observations with respect to one another rather than the observations themselves.

Ranney oil-mining system [PETRO ENG] A method used to get oil from oil sands that involves driving mine galleries from shafts communicating to the surface in impermeable strata above and below the oil strata; holes drilled at short intervals along the galleries into the oil sands drain the oil or gas through pipes sealed in the drill holes into tanks from which the gas or oil is pumped to the surface.

Ranney well [CIV ENG] A well that has a center caisson with horizontal perforated pipes extending radially into an aquifer; particularly applicable to the development of thin aquifers at shallow depths.

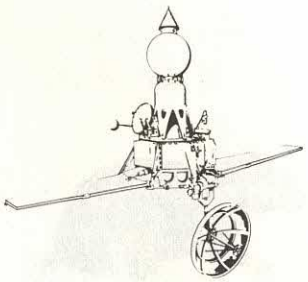
ransomite [MINERAL] $Cu(Fe,Al)_2(SO_4)_4 \cdot 7H_2O$ A sky-blue mineral composed of hydrous copper iron aluminum sulfate.

ranula [MED] A retention cyst of a salivary gland.

Ranunculaceae [BOT] A family of dicotyledonous herbs in the order Ranunculales distinguished by alternate leaves with net venation, two or more distinct carpels, and numerous stamens.

Ranunculales [BOT] An order of dicotyledons in the subclass Magnoliidae characterized by its mostly separate carpels, triaperturate pollen, herbaceous or only secondarily woody habit, and frequently numerous stamens.

RANGER PROGRAM



Drawing of space probe used in Ranger program.

RANNEY OIL-MINING SYSTEM

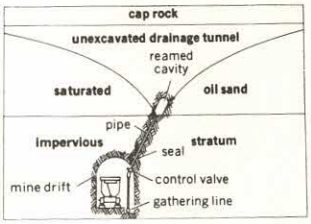


Diagram of unexcavated drainage tunnels in connection with the Ranney system of oil mining. *(After L. C. Uren, Petroleum Production Engineering: Oil Field Exploitation, 3d ed., McGraw-Hill, 1953)*

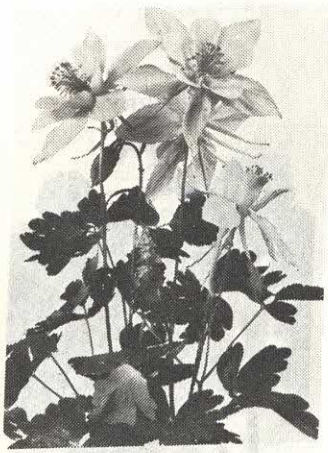
RANUNCULACEAE



Colorado columbine *(Aquilegia coerulea)* of family Ranunculaceae, order Ranunculales. Nectar is borne in long, hollow spur that projects from base of each petal. *(U.S. Forest Service photograph by C. A. Kutzleb)*

raob *See* radiosonde observation.

Raoult's law [PHYS CHEM] The law that the vapor pressure of a solution equals the product of the vapor pressure of the pure solvent and the mole fraction of solvent.

rapakivi [PETR] Granite or quartz monzonite characterized by orthoclase phenocrysts mantled with plagioclase. Also known as wiborgite.

rapakivi texture [PETR] An igneous and metamorphic rock texture in which spherical potassium feldspar crystals are surrounded by a rim of sodium feldspar, both within a finer-grained matrix.

rape [BOT] *Brassica napus*. A plant of the cabbage family in the order Capparales; the plant does not form a compact head, the leaves are bluish-green, deeply lobed, and curled, and the small flowers produce black seeds; grown for forage.

rape oil [MATER] A fatty, nondrying or semidrying, viscous, dark-brown to yellow oil with unpleasant taste and aroma, obtained from the seed of rape and turnip; soluble in ether, carbon disulfide, and chloroform; solidifies at -2 to $-10°C$; used to make lubricants and rubber substitutes, as an illuminant, and in steel heat treatment. Also known as colza oil; rape-seed oil.

rape-seed oil *See* rape oil.

raphania [MED] A disease thought to be due to chronic ingestion of the poison in seeds of the wild radish.

raphe [ANAT] A broad seamlike junction between two lateral halves of an organ or other body part. [BOT] **1.** The part of the funiculus attached along its full length to the integument of an anatropous ovule, between the chalaza and the attachment to the placenta. **2.** The longitudinal median line or slit on a diatom valve.

Raphidae [VERT ZOO] A family of birds in the order Columbiformes that included the dodo (*Raphus calcullatus*); completely extirpated during the 17th and early 18th centuries.

raphide [BOT] One of the long, needle-shaped crystals, usually consisting of calcium oxalate, occurring as a metabolic byproduct in certain plant cells.

rapid [HYD] A portion of a stream in swift, disturbed motion, but without cascade or waterfall; usually used in the plural.

rapid access loop [COMPUT SCI] A small section of storage, particularly in drum, tape, or disk storage units, which has much faster access than the remainder of the storage.

rapid-curing asphalt [MATER] A liquid asphalt composed of asphalt cement and a gasoline- or naphtha-type diluent. Abbreviated RC asphalt.

rapid-eye-movement sleep [PSYCH] That part of the sleep cycle during which the eyes move rapidly, accompanied by a loss of muscle tone and a low-amplitude encephalogram recording; most dreaming occurs during this stage of sleep. Abbreviated REM sleep.

rapid fire [ORD] Rate of firing small arms or automatic weapons, faster than slow fire, but slower than quick fire.

rapid flow [HYD] Water flow whose velocity exceeds the velocity of propagation of a long surface wave in still water. Also known as supercritical flow.

rapid memory *See* rapid storage.

rapid quenching [MET] Superfast cooling (1–5 x 10^6 K per second) of a molten metal to produce new and amorphous alloys and new crystalling material with improved properties.

rapid sand filter [CIV ENG] A system for purifying water, which is forced through layers of sand and gravel under pressure.

rapid selector [COMPUT SCI] A device which scans codes recorded on microfilm; microimages of the documents associated with the codes may also be recorded on the film.

rapid sequence camera [OPTICS] A conventional camera in most respects except that it is designed to permit a number of photographs to be obtained in rapid succession with one winding of the shutter.

rapid storage [COMPUT SCI] In computers, storage with a very short access time; rapid access is generally gained by limiting storage capacity. Also known as high-speed storage; rapid memory.

rapid traverse [MECH ENG] A machine tool mechanism which rapidly repositions the workpiece while no cutting takes place.

raptorial [ZOO] **1.** Living on prey. **2.** Adapted for snatching or seizing prey, as birds of prey.

rapture of the deep *See* nitrogen narcosis.

RASPBERRY

A red raspberry branch, Loudon variety. *(USDA)*

rare-earth alloy [MET] An alloy containing rare-earth materials.

rare-earth chelate laser *See* chelate laser.

rare-earth element [CHEM] The name given to any of the group of chemical elements with atomic numbers 58 to 71; the name is a misnomer since they are neither rare nor earths; examples are cerium, erbium, and gadolinium.

rare-earth garnet [MATER] A synthetic garnet having the general structure of grossularite, but with calcium replaced by a rare-earth metal, and aluminum and silicon replaced by iron; used for electronic applications.

rare-earth magnet [ELECTROMAG] Any of several types of magnets made with rare-earth elements, such as rare-earth-cobalt magnets, which have coercive forces up to ten times that of ordinary magnets; used for computers and signaling devices.

rare-earth mineral [MINERAL] A mineral having a high concentration of rare-earth elements; examples are monazite, xenotime, and bastnaesite.

rare-earth salts [INORG CHEM] Salts derived from monazite, and with rare earths in similar proportions as in monazite; contains La, Ce, Pr, Nd, Sm, Gd, and Y as acetates, carbonates, chlorides, fluorides, nitrates, sulfates, and so on.

rarefaction [ACOUS] The instantaneous, local reduction in density of a gas resulting from passage of a sound wave, or the region in which the density is reduced at some instant.

rarefaction wave [FL MECH] A pressure wave or rush of air or water induced by rarefaction; it travels in the opposite direction to that of a shock wave directly following an explosion. Also known as suction wave.

rarefied gas [FL MECH] A gas whose pressure is much less than atmospheric pressure.

rare gas *See* noble gas.

rare metal [MET] Any metal that is difficult to extract from ore and is rare and expensive commercially; includes masurium, alabamine, and virginium.

RAREP *See* radar report.

Rarita-Schwinger equation [QUANT MECH] A partial differential equation, similar in form to the Dirac equation, relating the spatial and time dependence of a 16-component wave function describing a free relativistic particle with intrinsic spin $\frac{3}{2}$, and its antiparticle.

Raschig process [CHEM ENG] A method for production of phenol that begins with a first-stage chlorination of benzene, using an air–hydrochloric acid mixture.

Raschig ring [CHEM ENG] A type of packing in the shape of a short pipe; used in columns for absorption operations, and to a limited extent for distillation operations.

rash [MED] A lay term for nearly any skin eruption, but more commonly for acute inflammatory dermatoses. [MIN ENG] Very impure coal, so mixed with waste material as to be unsalable.

rashing [MIN ENG] A soft, friable, and flaky or scaly rock (shale or clay) immediately beneath a coal seam, often containing much carbonaceous material and readily mixed with the coal in mining.

RA size [ENG] One of a series of sizes to which untrimmed paper is manufactured; for reels of paper, the standard sizes in millimeters are 430, 610, 860, and 1220; for sheets of paper, the sizes are RA0, 860 × 1220; RA1, 610 × 860; RA2, 430 × 610; RA sizes correspond to A sizes when trimmed.

rasorial [ZOO] Adapted for scratching for food; applied to birds.

rasorite *See* kernite.

rasp [DES ENG] A metallic tool with a rough surface of small points used for shaping and finishing metal, plaster, stone, and wood; designed in a number of useful curved shapes.

raspberry [BOT] Any of several species of upright shrubs of the genus *Rubus*, with perennial roots and prickly biennial stems, in the order Rosales; the edible black or red juicy berries are aggregate fruits, and when ripe they are easily separated from the fleshy receptacle.

raspite [MINERAL] $PbWO_4$ A yellow or brownish-yellow mineral composed of lead tungstate, occurring as monoclinic crystals.

raster [ELECTR] A predetermined pattern of scanning lines that provides substantially uniform coverage of an area; in television the raster is seen as closely spaced parallel lines, most evident when there is no picture.

raster graphics [COMPUT SCI] A computer graphics coding

technique which codes each picture element of the picture area in digital form.

raster scanning [ELECTR] Radar scan very similar to electron-beam scanning in an ordinary television set; horizontal sector scan that changes in elevation.

Rast method [ANALY CHEM] The melting-point depression method often used for the determination of the molecular weight of organic compounds.

rat [VERT ZOO] The name applied to over 650 species of mammals in several families of the order Rodentia; they differ from mice in being larger and in having teeth modified for gnawing.

RAT *See* rocket-assisted torpedo.

rataria larva [INV ZOO] The second, hourglass-shaped, free-swimming larva of the siphonophore *Velella*.

rat-bite fever [MED] Either of two diseases transmitted by the bite of a rat: spirillary rat-bite fiver and streptobacillary fever.

ratchet [DES ENG] A wheel, usually toothed, operating with a catch or a pawl so as to rotate in only a single direction.

ratchet coupling [MECH ENG] A coupling between two shafts that uses a ratchet to allow the driven shaft to be turned in one direction only, and also to permit the driven shaft to overrun the driving shaft.

ratchet jack [DES ENG] A jack operated by a ratchet mechanism.

ratchet tool [DES ENG] A tool in which torque or force is applied in one direction only by means of a ratchet.

rat distillate [CHEM ENG] A refinery designation for gasoline and other fuels as they come from the condenser, before undesirable substances are removed by further processing.

rate [SCI TECH] The amount of change of some quantity during a time interval divided by the length of the time interval.

rate action *See* derivative action.

Rateau formula [FL MECH] A formula, $m = A_2 p_1(16.367 - 0.96 \log p_1)/1000$, for determining the discharge m of saturated steam in pounds per second through a well-rounded convergent orifice; A_2 is the area of the orifice in square inches, and p_1 the reservoir pressure in pounds per square inch.

rate climb [AERO ENG] The climb of an aircraft to higher altitudes at a constant rate.

rate constant [PHYS CHEM] Numerical constant in a rate-of-reaction equation; for example, $r_A = kC_A{}^a C_B{}^b C_C{}^c$, where C_A, C_B, and C_C are reactant concentrations, k is the rate constant (specific reaction rate constant), and a, b, and c are empirical constants.

rate control [CONT SYS] A form of control in which the position of a controller determines the rate or velocity of motion of a controlled object. Also known as velocity control.

rated capacity [MECH ENG] The maximum capacity for which a boiler is designed, measured in pounds of steam per hour delivered at specified conditions of pressure and temperature.

rated engine speed [MECH ENG] The rotative speed of an engine specified as the allowable maximum for continuous reliable performance.

rate descent [AERO ENG] An aircraft descent from higher altitudes at a constant rate.

rated flow [ENG] **1.** Normal operating flow rate at which a fluid product is passed through a vessel or piping system. **2.** Flow rate for which a vessel or process system is designed.

rated horsepower [MECH ENG] The normal maximum, allowable, continuous power output of an engine, turbine motor, or other prime mover.

rated load [MECH ENG] The maximum load a machine is designed to carry.

rated relieving capacity [DES ENG] The measured relieving capacity for which the pressure relief device is rated in accordance with the applicable code or standard.

rate effect [ELECTR] The phenomenon of a *pnpn* device switching to a high-conduction mode when anode voltage is applied suddenly or when high-frequency transients exist.

rate feedback [ELECTR] The return of a signal, proportional to the rate of change of the output of a device, from the output to the input.

rate-grown transistor [ELECTR] A junction transistor in which both impurities (such as gallium and antimony) are placed in the melt at the same time and the temperature is suddenly raised and lowered to produce the alternate p-type and n-type layers of rate-grown junctions. Also known as graded-junction transistor.

rate gyroscope [MECH ENG] A gyroscope that is suspended in just one gimbal whose bearings form its output axis and which is restrained by a spring; rotation of the gyroscope frame about an axis perpendicular to both spin and output axes produces precession of the gimbal within the bearings proportional to the rate of rotation.

rate integrating gyroscope [MECH ENG] A single-degree-of-freedom gyro having primarily viscous restraint of its spin axis about the output axis; an output signal is produced by gimbal angular displacement, relative to the base, which is proportional to the integral of the angular rate of the base about the input axis.

rate meter *See* counting rate meter.

rate multiplier [COMPUT SCI] An integrator in which the quantity to be integrated is held in a register and is added to the number standing in an accumulator in response to pulses which arrive at a constant rate.

rate of approach [AERO ENG] The relative speed of two aircraft when the distance between them is decreasing.

rate of change *See* derivative.

rate-of-change map [GEOL] A derived stratigraphic map that shows the rate of change of structure, thickness, or composition of a given stratigraphic unit.

rate of change of acceleration [MECH] Time rate of change of acceleration; this rate is a factor in the design of some items of ammunition that undergo large accelerations.

rate of climb [AERO ENG] Ascent of aircraft per unit time, usually expressed as feet per minute.

rate-of-climb indicator [AERO ENG] A device used to indicate changes in the vertical position of an aircraft by comparing the actual outside air pressure to a reference volume that lags the outside pressure because a calibrated restrictor imposes a lag-time constant to the reference pressure volume. Also known as rate-of-descent indicator; vertical speed indicator.

rate of departure [AERO ENG] The relative speed of two aircraft when the distance between them is increasing.

rate-of-descent indicator *See* rate-of-climb indicator.

rate of detonation [ORD] Rate at which detonation of an explosive progresses; usually expressed in meters or yards per second.

rate of flow *See* flow rate.

rate-of-flow control valve *See* flow control valve.

rate-of-rainfall gage *See* rain-intensity gage.

rate of return [AERO ENG] Aircraft relative to its base, either fixed or moving.

rate of rise [ENG] The time rate of pressure increase during an isolation test for leaks.

rate of sedimentation [GEOL] The amount of sediment accumulated in an aquatic environment over a given period of time, usually expressed as thickness of accumulation per unit time. Also known as sedimentation rate.

rate of strain hardening [MET] Rate of change of true stress with respect to true strain in the plastic range. Also known as modulus of strain hardening.

rate receiver [ELECTROMAG] A guidance antenna that receives a signal from a launched missile as to its rate of speed.

rate response [ENG] Quantitative expression of the output rate of a control system as a function of its input signal.

rate servomechanism *See* velocity servomechanism.

rate test [COMPUT SCI] A test that verifies that the time constants of the integrators are correct; used in analog computers.

rate transmitter [ELECTR] A transmitter in a missile being launched, used with a ground receiver to indicate the rate of speed increase.

ratfish [VERT ZOO] The common name for members of the chondrichthyan order Chimaeriformes.

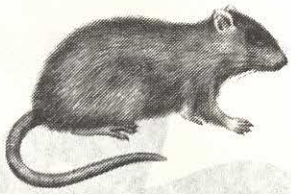
rat guard [NAV ARCH] A circular or conical metal shield placed on a mooring line to keep rats from boarding or leaving a vessel.

rathite [MINERAL] $Pb_{13}As_{18}S_{40}$ A dark-gray mineral with metallic luster composed of sulfide of lead and arsenic; occurs as orthorhombic crystals.

Rathke's pouch *See* craniobuccal pouch.

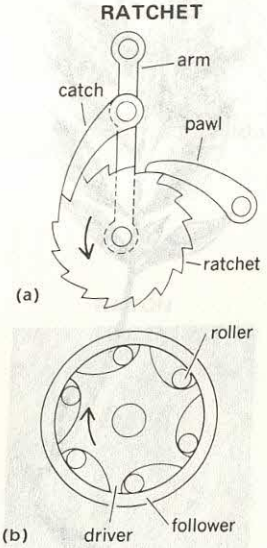
rathole [MIN ENG] A shallow, small-diameter, auxiliary hole alongside the main borehole, drilled at an angle to the main hole; after core drilling is completed, the rathole is reamed out

RAT



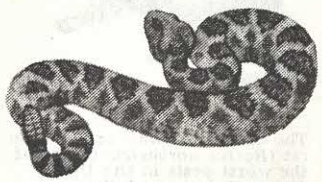
The brown Norway or common rat *(Rattus norvegicus)*. One of the worst pests in the United States, it destroys billions of dollars worth of farm products annually.

RATCHET



Ratchet mechanisms. *(a)* Toothed ratchet is driven in direction of arrow by catch when arm moves to left; pawl holds ratchet during return stroke of catch. *(b)* In roller ratchet, rollers become wedged between driver and follower when driver turns faster than follower in direction of arrow.

RATTLESNAKE



Rattlesnake (*Crotalus horridus*), one of the crotalid vipers.

RAUWOLFIA

Branch and root of *Rauwolfia serpentina*.

and the larger-size hole is advanced, usually by some noncoring method.

rating [ENG] A designation of an operating limit for a machine, apparatus, or device used under specified conditions.

rating curve [HYD] For a given point on a stream, a graph of discharge versus stage.

rating nut [HOROL] A nut used to vary the effective length of a pendulum in adjusting the rate of a clock.

ratio [MATH] A ratio of two quantities or mathematical objects A and B is their quotient or fraction A/B.

ratio arm circuit [ELEC] Two adjacent arms of a Wheatstone bridge, designed so they can be set to provide a variety of indicated resistance ratios.

ratio-balance relay *See* percentage differential relay.

ratio control system [CONT SYS] Control system in which two process variables are kept at a fixed ratio, regardless of the variation of either of the variables, as when flow rates in two separate fluid conduits are held at a fixed ratio.

ratio delay study *See* work sampling.

ratio detector [ELECTR] A frequency-modulation detector circuit that uses two diodes and requires no limiter at its input; the audio output is determined by the ratio of two developed intermediate-frequency voltages whose relative amplitudes are a function of frequency.

ratio deviation *See* modulation index.

ratio-differential relay *See* percentage differential relay.

ratio estimator [STAT] A ratio of two random variables that is used as an estimator.

ratio map [GEOL] A facies map that depicts the ratio of thicknesses between rock types in a given stratigraphic unit.

ratio meter [ENG] A meter that measures the quotient of two electrical quantities; the deflection of the meter pointer is proportional to the ratio of the currents flowing through two coils.

rational formula [HYD] The expression of peak discharge as equal to the product of rainfall, drainage area, and a runoff coefficient depending on drainage-basin characteristics.

rational function [MATH] A function which is a quotient of polynomials.

rational horizon *See* celestial horizon.

rationalization [PSYCH] A defense mechanism against difficult and unpleasant situations in which the individual attempts to use plausible means to justify or defend the unacceptable situations.

rationalized units [ELEC] A system of electrical units, such as occurs in the International System, in which the factor of 4π is removed from the field equations and appears instead in the explicit expressions for the fields of a point charge and current element.

rational number [MATH] A number which is the quotient of two integers.

ratio of expansion [MECH ENG] The ratio of the volume of steam in the cylinder of an engine when the piston is at the end of a stroke to that when the piston is in the cutoff position.

ratio of reduction [ENG] The ratio of the maximum size of the stone which will enter a crusher, to the size of its product.

ratio of rise [OCEANOGR] The ratio of the height of tide at two places.

ratio of specific heats [PHYS CHEM] The ratio of specific heat at constant pressure to specific heat at constant volume, $\gamma = C_p/C_v$.

ratio of transformation [ELEC] Ratio of the secondary voltage of a transformer to the primary voltage under no-load conditions, or the corresponding ratio of currents in a current transformer.

ratio of transformer [ELEC] Ratio of the number of turns in one winding of a transformer to the number of turns in the other, unless otherwise specified.

ratio print [GRAPHICS] A print the scale of which has been changed from that of the negative by photographic enlargement or reduction.

ratio resistor [ELEC] One of the resistors in a Wheatstone or Kelvin bridge whose resistances appear in a pair of ratios which are equal in a balanced bridge.

ratio scale [STAT] A rule or system for assigning numbers to objects which has all the properties of an interval scale and, in addition, has a natural origin, so that ratios of numbers assigned to different objects have meaning.

ratio test *See* Cauchy ratio test.

ratites [VERT ZOO] A group of flightless, mostly large, running birds comprising several orders and including the emus, cassowaries, kiwis, and ostriches.

rato [AERO ENG] A rocket system providing additional thrust for takeoff of an aircraft. Derived from rocket-assisted takeoff.

rat race [ELECTR] A particular type of radar waveguide configuration which allows the handling of greater power.

rattail [MET] A small irregular line marking a minor buckle on the surface of a casting.

rattail file [DES ENG] A round tapering file used for smoothing or enlarging holes.

rattan [BOT] Any of several long-stemmed, climbing palms, especially of the genera *Calanius* and *Daemonothops*; stem material is used to make walking sticks, wickerwork, and cordage.

rattlesnake [VERT ZOO] Any of a number of species of the genera *Sistrurus* or *Crotalus* distinguished by the characteristic rattle on the end of the tail.

rattlesnake ore [GEOL] A gray, black, and yellow mottled ore of carnotite and vanoxite; its spotted appearance resembles that of a rattlesnake.

rattle stone [GEOL] A concretion composed of concentric laminae of different compositions, in which the more soluble layers have been removed by solution, leaving the central part detached from the outer part, such as a concretion of iron oxide filled with loose sand that rattles on shaking. Also known as klapperstein.

rat typhus *See* murine typhus.

rauhaugite [PETR] A carbonatite that contains ankerite.

Raunkiaer system [BOT] A classification system for plant life-forms based on the position of perennating buds in relation to the soil surface.

Rauracian [GEOL] A substage of Upper Jurassic geologic time in Great Britain forming the middle Lusitanian, above the Argovian and below the Sequanian.

Rauschelback rotor [ENG] A free-turning S-shaped propeller used to measure ocean currents; the number of rotations per unit time is proportional to the flow.

Rauwolfia [BOT] A genus of mostly poisonous, tropical trees and shrubs of the dogbane family (Apocynaceae); certain species yield substances used as emetics and cathartics, while *R. serpentina* is a source of alkaloids used as tranquilizers.

ravelly ground [GEOL] Rock that breaks into small pieces when drilled and tends to cave or slough into the hole when the drill string is pulled, or binds the drill string by becoming wedged or locked between the drill rod and the borehole wall.

ravine [GEOGR] A small and narrow valley with steeply sloping sides.

ravinement [GEOL] **1.** The formation of a ravine or ravines. **2.** An irregular junction which marks a break in sedimentation, such as an erosion line occurring where shallow-water marine deposits have cut down into slightly eroded underlying beds.

raw [METEOROL] Colloquially descriptive of uncomfortably cold weather, usually meaning cold and damp, but sometimes cold and windy.

raw data [SCI TECH] Data that have not been processed; may be in machine-readable form.

rawhide [MATER] Untanned animal hide that has been dried or treated with a preservative.

raw humus *See* ectohumus.

rawin [METEOROL] A method of winds-aloft observation, that is, the determination of wind speeds and directions in the atmosphere above a station; accomplished by tracking a balloon-borne radar target, responder, or radiosonde transmitter with either radar or a radio direction finder.

rawinsonde [METEOROL] A method of upper-air observation consisting of an evaluation of the wind speed and direction, temperature, pressure, and relative humidity aloft by means of a balloon-borne radiosonde tracked by a radar or radio direction finder.

rawin target [ELECTROMAG] A special type of radar target tied beneath a free balloon, and designed to be an efficient reflector of radio energy; such targets usually consist of a corner reflector and are made of some reflecting material stretched over light wooden or metal struts.

raw map [GEOPHYS] A seismic map in which the z coordinate is time.

raw material [IND ENG] A crude, unprocessed or partially processed material used as feedstock for a processing operation; for example, crude petroleum is the raw material from which

naphtha is obtained; naphtha is the raw material from which benzene-toluene-xylene aromatics are obtained.

raw score [STAT] Any number as it originally appears in an experiment; for example, in evaluating test results the raw scores express the number of correct answers, uncorrected for position in the reference population.

raw sewage [CIV ENG] Untreated waste materials.

raw silk [TEXT] A stage in the production of silk from the cocoons of cultivated silkworms when the silk filament consists of 80% fibroin and 20% sericin.

raw sludge [CIV ENG] Sewage sludge preliminary to primary and secondary treatment processes.

raw water [CIV ENG] Water that has not been purified.

ray [ASTRON] One of the broad streaks that radiate from some craters on the moon, especially Copernicus and Tycho; they consist of material of high reflectivity and are seen from earth best at full moon. [MATH] A straight-line segment emanating from a point. Also known as half line. [OPTICS] A curve whose tangent at any point lies in the direction of propagation of a light wave. [PHYS] A moving particle or photon of ionizing radiation. [VERT ZOO] Any of about 350 species of the elasmobranch order Batoidea having flattened bodies with large pectoral fins attached to the side of the head, ventral gill slits, and long, spikelike tails.

ray acoustics [ACOUS] The study of the behavior of sound under the assumption that sound traversing a homogeneous medium travels along straight lines or rays. Also known as geometrical acoustics.

ray crater [ASTRON] A large, relatively young lunar crater with visible rays.

Raydist [NAV] A radio navigation system used in hydrographic and geophysical surveying and ships' trials which employs phase comparison techniques.

ray ellipsoid *See* Fresnel ellipsoid.

rayfin fish [VERT ZOO] The common name for members of the Actinopterygii.

ray flower [BOT] One of the small flowers with a strap-shaped corolla radiating from the margin of the head of a capitulum.

ray initial [BOT] One of the cells of the cambium which divide to produce new phloem and xylem ray cells.

Raykin fender [CIV ENG] Sandwich-type fender buffer to protect docks from the impact of mooring ships; made of a connected series of steel plates cemented to layers of rubber.

rayl [ACOUS] A unit of specific acoustical impedance, equal to a sound pressure of 1 dyne per square centimeter divided by a sound particle velocity of 1 centimeter per second. Also known as specific acoustical ohm (Ω_s); unit-area acoustical ohm.

rayleigh [OPTICS] A unit of brightness, used to measure the brightness of the night sky and aurorae, equal to $10^{10}/4\pi$ quanta per square meter per second per steradian.

Rayleigh atmosphere [METEOROL] An idealized atmosphere consisting of only those particles, such as molecules, that are smaller than about one-tenth of the wavelength of all radiation incident upon that atmosphere; in such an atmosphere, simple Rayleigh scattering would prevail.

Rayleigh balance [ELECTROMAG] An apparatus for assigning the value of the ampere in which the force exerted on a movable circular coil by larger circular coils above and below, but coaxial with, the movable coil is compared with the gravitational force on a known mass.

Rayleigh-Bénard convection [PHYS] Convection of a fluid heated from below, characterized by a regular array of usually hexagonal cells.

Rayleigh criterion [OPTICS] A criterion for the resolving power of an optical instrument which states that the images of two point objects are resolved when the principal maximum of the diffraction pattern of one falls exactly on the first minimum of the diffraction pattern of the other.

Rayleigh cycle [ELECTROMAG] A cycle of magnetization that does not extend beyond the initial portion of the magnetization curve, between zero and the upward bend.

Rayleigh disk [ACOUS] An acoustic radiometer, used to measure particle velocity, consisting of a thin disk set at an angle of 45° to a sound beam; the particle velocity is calculated from the resulting torque on the disk.

Rayleigh distribution [STAT] A normal distribution of two uncorrelated variates with the same variance.

Rayleigh flow [FL MECH] An idealized type of gas flow in which heat transfer may occur, satisfying the assumptions that the flow takes place in constant-area cross section and is frictionless and steady, that the gas is perfect and has constant specific heat, that the composition of the gas does not change, and that there are no devices in the system which deliver or receive mechanical work.

Rayleigh interferometer [OPTICS] An optical interferometer in which two rays of light, emanating from a single slit, are collimated by a lens, pass through separate slits and cells, and are brought to focus by a second lens so that interference fringes become visible. Also known as Rayleigh refractometer.

Rayleigh-Jeans law [STAT MECH] A law giving the intensity of radiation emitted by a blackbody within a narrow band of wavelengths; it states that this intensity is proportional to the temperature divided by the fourth power of the wavelength; it is a good approximation to the experimentally verified Planck radiation formula only at long wavelengths.

Rayleigh line [SPECT] Spectrum line in scattered radiation which has the same frequency as the corresponding incident radiation.

Rayleigh loop [ELECTROMAG] A parabolic approximation to a magnetic hysteresis loop.

Rayleigh number 1 [FL MECH] A dimensionless number used in studying the breakup of liquid jets, equal to Weber number 2. Symbolized N_{Ral}.

Rayleigh number 2 [THERMO] A dimensionless number used in studying free convection, equal to the product of the Grashof number and the Prandtl number. Symbolized R_2'.

Rayleigh number 3 [THERMO] A dimensionless number used in the study of combined free and forced convection in vertical tubes, equal to Rayleigh number 2 times the Nusselt number times the tube diameter divided by its entry length. Symbolized Ra_3.

Rayleigh prism [OPTICS] A system of prisms used to produce greater dispersion of light than would be produced by a single prism.

Rayleigh ratio [OPTICS] Light-scattering relationship defined by the ratio of intensities of incident and scattered light at a specified distance; used in photometric and refractometric analyses.

Rayleigh reciprocity theorem [ELECTROMAG] Reciprocal relationship for an antenna when it is transmitting or receiving; the effective heights, radiation resistance, and the radiation pattern are alike, whether the antenna is transmitting or receiving.

Rayleigh refractometer *See* Rayleigh interferometer.

Rayleigh-Ritz method [MATH] An approximation method for finding solutions of functional equations in terms of finite systems of equations.

Rayleigh scattering [ELECTROMAG] Scattering of electromagnetic radiation by independent particles which are much smaller than the wavelength of the radiation.

Rayleigh's dissipation function [MECH] A function which enters into the equations of motion of a system undergoing small oscillations and represents frictional forces which are proportional to velocities; given by a positive definite quadratic form in the time derivatives of the coordinates. Also known as dissipation function.

Rayleigh-Taylor instability [FL MECH] The instability of the interface separating two fluids having different densities when the lighter fluid is accelerated toward the heavier fluid.

Rayleigh wave [GEOPHYS] In seismology, a surface wave with a retrograde, elliptical motion at the free surface. Also known as R wave. [MECH] A wave which propagates on the surface of a solid; particle trajectories are ellipses in planes normal to the surface and parallel to the direction of propagation. Also known as surface wave.

Raymond concrete pile [CIV ENG] A pile made by driving a thin steel shell into the ground with a tapered mandrel and filling it with concrete.

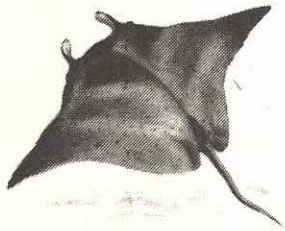
Raynaud's disease [MED] A usually bilateral disease of blood vessels, especially of the extremities; excited by cold or emotion, characterized by intermittent pallor, cyanosis, and redness, and generally accompanied by pain.

rayon [TEXT] A fiber made from regenerated cellulose by the viscose or cuprammonium process.

rayon coning oil [MATER] Lubricant oil used to reduce static in yarns being wound on cones; composed of low-viscosity mineral oils emulsifiable in water.

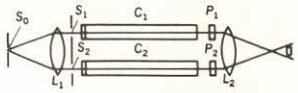
rayon staple [TEXT] Rayon fibers of spinnable lengths; con-

RAY



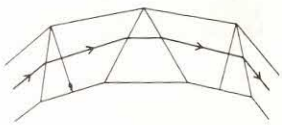
Devil ray, which is named for the anterior cephalic fins, extensions of the pectoral fins.

RAYLEIGH INTERFEROMETER



Schematic drawing of the Rayleigh interferometer. S_1, S_2 are slits illuminated with parallel light from lens L_1 whose focus is a single narrow slit S_0. Second lens L_2 brings the two beams to a focus, where interference fringes become visible. Cells (C_1, C_2) are placed in front of each slit; material of interest is placed in one cell and reference material in other. One of the plates of glass (P_1, P_2) is tilted until effect of cells on interference fringes is cancelled.

RAYLEIGH PRISM



Rayleigh prism system; the arrow shows the path of light through the prism.

RAYON

American Viscose rayon continuous filament is used in the construction of many different fabrics.

tinuous filaments from a number of spinnerets are collected into a loose, ropelike form and cut into suitable lengths.

rayon tow [TEXT] Large number of continuous rayon filaments that give the appearance of untwisted rope; when cut into suitable lengths, this material becomes rayon staple.

ray parameter [GEOPHYS] A function p that is constant along a given seismic ray, given by $p = rv^{-1} \sin i$, where r is the distance from the center O of the earth, v is the velocity, and i is the angle that the ray at a point P makes with the radius OP.

ray path [COMMUN] Straight, geometric path between the transmitting and receiving location. [PHYS] An imaginary path along which travels the energy associated with a point on a wavefront.

ray shake [BOT] A radial crack in wood caused by wounds in a tree along the barrier zone.

Raysistor [ELECTR] A device which contains a photosensitive semiconductor and a light source; light source can be used to control the conductivity of the semiconductor.

ray surface [OPTICS] The locus of points reached in a unit time in an anisotropic medium by an electromagnetic disturbance that starts from the origin.

ray system [ASTRON] The bright streaks radiating outward from a lunar crater.

ray tracing [OPTICS] Calculation of the paths followed by rays of light through an optical system, using Snell's law and trigonometrical formulas.

razon [ORD] A kind of glide bomb having movable control surfaces in the tail adjusted by radio signals to control the bomb in range and in azimuth.

razorback [GEOL] A sharp, narrow ridge.

razor stone *See* novaculite.

Rb *See* rubidium.

RBE *See* relative biological effectiveness.

RBS *See* Rutherford backscattering spectrometry.

R-C amplifier *See* resistance-capacitance coupled amplifer.

RC asphalt *See* rapid-curing asphalt.

R-C circuit *See* resistance-capacitance circuit.

R-C constant *See* resistance-capacitance constant.

R-C coupled amplifier *See* resistance-capacitance coupled amplifier.

R-C coupling *See* resistance coupling.

RCM *See* radar countermeasure.

R-C network *See* resistance-capacitance network.

R Coronae Borealis star [ASTROPHYS] A rare type of irregular variable star which has long periods of maximum brightness followed by a sudden, unpredictable reduction in brightness of several magnitudes, and a slower, sometimes erratic return to the original brightness.

R-C oscillator *See* resistance-capacitance oscillator.

rd *See* rutherford.

RdAc *See* radioactinium.

RDC extractor *See* rotary-disk contactor.

RDF *See* radio direction finder.

RDGE *See* resorcinol diglycidyl ether.

R display [ELECTR] Radar display, essentially an expanded A display, in which an echo can be expanded for more detailed examination.

RDS *See* respiratory distress syndrome of newborn.

RDX *See* cyclonite.

Re *See* rhenium.

reach [CIV ENG] A portion of a waterway between two locks or gages. [ENG] The length of a channel, uniform with respect to discharge, depth, area, and slope. [GEOGR] **1.** A continuous, unbroken surface of land or water. Also known as stretch. **2.** A bay, estuary, or other arm of the sea extending up into the land. [HYD] A straight, continuous, or extended part of a river, stream, or restricted waterway.

reach rod [MECH ENG] A rod motion in a link used to transmit motion from the reversing rod to the lifting shaft.

reactance [ELEC] The imaginary part of the impedance of an alternating-current circuit.

reactance amplifier *See* parametric amplifier.

reactance drop [ELEC] The component of the phasor representing the voltage drop across a component or conductor of an alternating-current circuit which is perpendicular to the current.

reactance frequency multiplier [ELECTR] Frequency multiplier whose essential element is a nonlinear reactor.

reactance grounded [ELEC] Grounded through a reactance.

reactance relay [ELEC] Form of impedance relay, the operation of which is a function of the reactance of a circuit.

reactance tube [ELECTR] Vacuum tube operated in a way that it presents almost a pure reactance to the circuit.

reactance-tube modulator [ELECTR] An electron-tube circuit, used to produce phase or frequency modulation, in which the reactance is varied in accordance with the instantaneous amplitude of the modulating voltage.

reactant ratio [AERO ENG] The ratio of the weight flow of oxidizer to fuel in a rocket engine.

reactants [CHEM] The molecules that act upon one another to produce a new set of molecules (products); for example, in the reaction $HCl + NaOH \rightarrow NaCl + H_2O$, the HCl and NaOH are the reactants.

reaction [CONT SYS] *See* positive feedback. [MECH] The equal and opposite force which results when a force is exerted on a body, according to Newton's third law of motion. [NUC PHYS] *See* nuclear reaction.

reaction border *See* reaction rim.

reaction boundary *See* reaction line.

reaction curve *See* reaction line.

reaction energy *See* disintegration energy.

reaction engine [AERO ENG] An engine that develops thrust by its reaction to a substance ejected from it; specifically, such an engine that ejects a jet or stream of gases created by the addition of energy to the gases in the engine. Also known as reaction motor.

reaction enthalpy number [PHYS CHEM] A dimensionless number used in the study of interphase transfer in chemical reactions, equal to the enthalpy of reaction per unit mass of a specified compound produced in a reaction, times the mass fraction of that compound, divided by the product of the specific heat at constant pressure and the temperature change during the reaction.

reaction fin [NAV ARCH] A multiple fin or stationary propeller installed ahead of a ship's propeller, with fins warped so that water flowing into the propeller rotates in the direction opposite, resulting in elimination of race rotation aft of the propeller, and thereby in increased efficiency.

reaction flux [MATER] Soldering flux which reacts chemically with the base metal and has a rapid fluxing action when heated.

reaction formation [PSYCH] A defense mechanism, characterized by the development of conscious, socially acceptable activity which is the antithesis of repressed or rejected unconscious desires.

reaction kinetics *See* chemical kinetics.

reaction line [PHYS CHEM] In a ternary system, a special case of the boundary line along which one of the two crystalline phases present reacts with the liquid, as the temperature is decreased, to form the other crystalline phase. Also known as reaction boundary; reaction curve.

reaction motor [AERO ENG] *See* reaction engine. [ELEC] A synchronous motor whose rotor contains salient poles but which has no windings and no permanent magnets.

reaction pair [MINERAL] Any two minerals, one of which is formed at the expense of the other by reaction with liquid.

reaction principle [MINERAL] The concept of a reaction series for the principal rock-forming minerals.

reaction propulsion [AERO ENG] Propulsion by means of reaction to a jet of gas or fluid projected rearward, as by a jet engine, rocket engine, or rocket motor.

reaction rim [PETR] A surficial rim around one mineral produced by the reaction of the core mineral with the surrounding magma. Also known as reaction border.

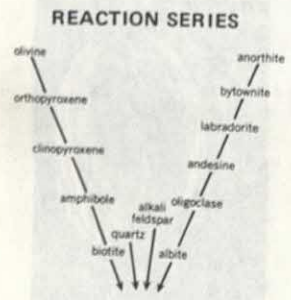
reaction series [MINERAL] Any series of minerals in which early formed varieties react with the melt to yield new minerals; two different types of reaction series exist, continuous and discontinuous.

reaction time [PHYSIO] The interval between application of a stimulus and the beginning of the response.

reaction turbine [MECH ENG] A power-generation prime mover utilizing the steady-flow principle of fluid acceleration, where nozzles are mounted on the moving element.

reaction wheel [MECH ENG] A device capable of storing angular momentum which may be used in a space ship to provide torque to effect or maintain a given orientation.

reaction wood [BOT] An abnormal development of a tree and therefore its wood as the result of unusual forces acting on it, such as an atypical gravitational pull.



Continuous reaction series showing the course of crystallization of the common magmas; early crystals are at top of diagram.

reaction zone [CHEM ENG] In a catalytic reactor vessel, the location or zone within the vessel where the bulk of the chemical reaction takes place.

reactive [ELEC] Pertaining to either inductive or capacitance reactance; a reactive circuit has a high value of reactance in comparison with resistance.

reactive bond [CHEM] A bond between atoms that is easily invaded (reacted to) by another atom or radical; for example, the double bond in $CH_2=CH_2$ (ethylene) is highly reactive to other ethylene molecules in the reaction known as polymerization to form polyethylene.

reactive component [ELEC] In the phasor representation of quantities in an alternating-current circuit, the component of current, voltage, or apparent power which does not contribute power, and which results from inductive or capacitive reactance in the circuit, namely, the reactive current, reactive voltage, or reactive power. Also known as idle component; quadrature component; wattless component.

reactive current [ELEC] In the phasor representation of alternating current, the component of the current perpendicular to the voltage, which contributes no power but increases the power losses of the system. Also known as idle current; quadrature current; wattless current.

reactive dye [MATER] Dye that reacts with the textile fiber to produce both a hydroxyl and an oxygen linkage, the chlorine combining with the hydroxyl to form a strong ether linkage; gives fast, brilliant colors.

reactive factor [ELEC] The ratio of reactive power to apparent power.

reactive fluid [PETRO ENG] Any fluid that alters the internal geometry of a reservoir's porosity; for example, water is a reactive fluid when it causes swelling of clays and consequent changes in porosity.

reactive ion etching [ELECTR] A directed chemical etching process used in integrated circuit fabrication in which chemically active ions are accelerated along electric field lines to meet a substrate perpendicular to its surface.

reactive load [ELEC] A load having inductive or capacitive reactance.

reactive muffler [ENG] A muffler that attenuates by reflecting sound back to the source. Also known as nondissipative muffler.

reactive power [ELEC] The power value obtained by multiplying together the effective value of current in amperes, the effective value of voltage in volts, and the sine of the angular phase difference between current and voltage. Also known as wattless power.

reactive voltage [ELEC] In the phasor representation of alternating current, the voltage component that is perpendicular to the current.

reactive volt-ampere *See* volt-ampere reactive.

reactive volt-ampere hour *See* var hour.

reactive volt-ampere meter *See* varmeter.

reactivity [CHEM] The relative capacity of an atom, molecule, or radical to combine chemically with another atom, molecule, or radical. [NUCLEO] A measure of the deviation of a nuclear reactor from the critical state at any instant of time such that positive and negative values correspond to reactors above and below critical, respectively; measured in percent k, millikays, dollars, or in-hours.

reactor [CHEM ENG] Device or process vessel in which chemical reactions (catalyzed or noncatalyzed) take place during a chemical conversion type of process. [ELEC] A device that introduces either inductive or capacitive reactance into a circuit, such as a coil or capacitor. Also known as electric reactor. [NUC PHYS] *See* nuclear reactor.

reactor fuel *See* nuclear fuel.

reactor fuel cycle [NUCLEO] The processes of preparing fuel elements and assemblies for use in a reactor, using these elements in reactor operation, recovering radioactive by-products from spent fuel, and reprocessing remaining fissionable material into new fuel elements. Also known as fuel cycle; nuclear fuel cycle.

reactor fuel element *See* nuclear fuel element.

reactor fuel pellet *See* nuclear fuel pellet.

reactor physics [NUCLEO] The science of the interaction of the elementary particles and radiations characteristic of nuclear reactors with matter in bulk.

reactor vessel [NUCLEO] A large tanklike structure built to prevent radioactive materials from escaping from the reactor and associated equipment.

read [COMPUT SCI] **1.** To acquire information, usually from some form of storage in a computer. **2.** To convert magnetic spots, characters, or punched holes into electrical impulses. [COMMUN] To understand clearly, as in radio communication. [ELECTR] To generate an output corresponding to the pattern stored in a charge storage tube.

read-around number *See* read-around ratio.

read-around ratio [COMPUT SCI] The number of times that a particular bit in electrostatic storage may be read without seriously affecting nearby bits. Also known as read-around number.

read-back check *See* echo check.

Read diode [ELECTR] A high-frequency semiconductor diode consisting of an avalanching *pn*-junction, biased to fields of several hundred thousand volts per centimeter, at one end of a high-resistance carrier serving as a drift space for the charge carriers.

reader [COMPUT SCI] A device that converts information from one form to another, as from punched paper tape to magnetic tape. [GRAPHICS] A projection device for viewing an enlarged microimage with the unaided eye.

reader-interpreter [COMPUT SCI] A service routine that reads an input string, stores programs and data on random-access storage for later processing, identifies the control information contained in the input string, and stores this control information separately in the appropriate control lists.

reader-punch equipment [COMPUT SCI] An input/output unit which can punch computer results on cards and read card data into the computer.

read error [COMPUT SCI] A condition in which the content of a storage device cannot be electronically identified.

read head [COMPUT SCI] A device that converts digital information stored on a magnetic tape, drum, or disk into electrical signals usable by the computer arithmetic unit.

read-in [COMPUT SCI] To sense information contained in some source and transmit this information to an internal storage.

readiness review [COMPUT SCI] An on-site examination of the adequacy of preparations for effective utilization upon installation of a computer, and to identify any necessary corrective actions.

readiness time [ENG] The length of time required to obtain a stabilized system ready to perform its intended function (readiness time includes warm-up time); the time is measured from the point when the system is unassembled or uninstalled to such time as it can be expected to perform as accurately as at any later time; maintenance time is excluded from readiness time.

reading [ENG] **1.** The indication shown by an instrument. **2.** Observation of the readings of one or more instruments. [MOL BIO] A linear process by which amino acid sequences are recognized by the protein-synthesizing system of a cell from messenger ribonucleic codes.

reading microscopes [OPTICS] A set of microscopes used to read the division circle of a transit circle in order to precisely determine the inclination of the telescope.

reading rate [COMPUT SCI] Number of characters, words, fields, blocks, or cards sensed by an input sensing device per unit of time.

reading station [COMPUT SCI] The position in a punched-card machine at which the data on the card are read, by sensing the positions of the holes, and converted into electrical impulses. Also known as sensing station.

read-in program [COMPUT SCI] Computer program that can be put into a computer in a simple binary form and allows other programs to be read into the computer in more complex forms.

read-only memory [COMPUT SCI] A device for storing data in permanent, or nonerasable, form; usually a static electronic or magnetic device allowing extremely rapid access to data. Abbreviated ROM. Also known as read-only storage.

read-only storage *See* read-only memory.

readout [COMPUT SCI] **1.** The presentation of output information by means of lights, printed or punched tape or cards, or other methods. **2.** To sense information contained in some computer internal storage and transmit this information to a storage external to the computer.

readout station [COMMUN] A recording or receiving radio station at which data are received, as the transmitter in a missile, probe, satellite, or other spacecraft reads the data out.

read-punch unit [COMPUT SCI] An input-output unit of a

REACTIVE POWER

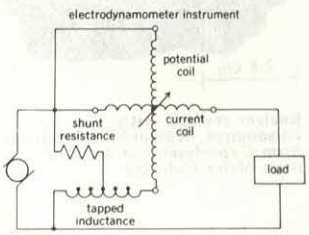


Diagram of a circuit for single-phase reactive power measurement which uses a tapped inductance. This inductance and shunt resistance are adjusted until currents in potential coil and current coil are in quadrature.

computing system which punches computed results into cards, reads input information into the system, and segregates output cards; the read-punch unit generally consists of a card feed, a read station, a punch station, another read station, and two output card stackers.

read screen [COMPUT SCI] In optical character recognition (OCR), the transparent component part of most character readers through which appears the input document to be recognized.

readthrough [GEN] Transcription beyond a termination sequence due to failure of ribonucleic acid polymerase to recognize the termination codon.

read time [COMPUT SCI] The time interval between the instant at which information is called for from storage and the instant at which delivery is completed in a computer.

read-while-writing [COMPUT SCI] The reading of a record or group of records into storage from tape at the same time another record or group of records is written from storage to tape.

read/write channel [COMPUT SCI] A path along which information is transmitted between the central processing unit of a computer and an input, output, or storage unit under the control of the computer.

read/write check indicator [COMPUT SCI] A device incorporated in certain computers to indicate upon interrogation whether or not an error was made in reading or writing; the machine can be made to stop, retry the operation, or follow a special subroutine, depending upon the result of the interrogation.

read/write comb [COMPUT SCI] The set of arms mounted with magnetic heads that reach between the disks of a disk storage device to read and record information.

read/write head [COMPUT SCI] A magnetic head that both senses and records data. Also known as combined head.

read/write memory [COMPUT SCI] A computer storage in which data may be stored or retrieved at comparable intervals.

read/write random-access memory [COMPUT SCI] A random access memory in which data can be written into memory as well as read out of memory.

ready [ORD] Of a weapon, aimed, loaded, and prepared to fire.

ready-mixed concrete [MATER] Concrete mixed away from the construction site and delivered in readiness for placing.

ready-to-receive signal [COMMUN] Signal sent back to a facsimile transmitter to indicate that a facsimile receiver is ready to accept the transmission.

reagent [ANALY CHEM] A substance, chemical, or solution used in the laboratory to detect, measure, or otherwise examine other substances, chemicals, or solutions; grades include ACS (American Chemical Society standards), reagent (for analytical reagents), CP (chemically pure), USP (U.S. Pharmacopeia standards), NF (National Formulary standards), and purified, technical (for industrial use). [CHEM] The compound that supplies the molecule, ion, or free radical which is arbitrarily considered as the attacking species in a chemical reaction.

reagent chemicals [ANALY CHEM] High-purity chemicals used for analytical reactions, for testing of new reactions where the effect of impurities are unknown, and, in general, for chemical work where impurities must either be absent or at a known concentration.

reagin [IMMUNOL] **1.** An antibody which occurs in human atopy, such as hay fever and asthma, and which readily sensitizes the skin. **2.** An antibody which reacts in various serologic tests for syphilis.

real axis [MATH] The horizontal axis of the cartesian coordinate system for the euclidean or complex plane.

real data type [COMPUT SCI] A scalar data type which contains a normalized fraction (mantissa) and an exponent (characteristic) and is used to represent floating-point data, usually decimal.

real fluid flow [FL MECH] The flow in which effects of tangential or shearing forces are taken into account; these forces give rise to fluid friction, because they oppose the sliding of one particle past another.

realgar [MINERAL] AsS A red to orange mineral crystallizing in the monoclinic system, having a resinous luster and found in short, vertical striated crystals; specific gravity is 3.48, and hardness is 1.5–2 on Mohs scale. Also known as red arsenic; red orpiment; sandarac.

real gas [THERMO] A gas, as considered from the viewpoint in which deviations from the ideal gas law, resulting from interactions of gas molecules, are taken into account. Also known as imperfect gas.

real image [OPTICS] An optical image such that all the light from a point on an object that passes through an optical system actually passes close to or through a point on the image.

reality principle [PSYCH] The concept that the pleasure principle is normally modified by the demands of the external environment and that the individual adjusts to these inescapable requirements so that he ultimately secures satisfaction of his instinctual wishes.

realizability [CONT SYS] Property of a transfer function that can be realized by a network that has only resistances, capacitances, inductances, and ideal transformers.

realization of a stochastic process [STAT] A probability space whose points are sample paths of the stochastic process and whose probability is obtained from the joint probability distributions of the random variables in the process.

real number [MATH] Any member of the unique (to within isomorphism) complete ordered field.

real orthogonal group [MATH] The group composed of orthogonal matrices having real number entries.

real part [MATH] The real part of a complex number $z = x + iy$ is the real number x.

real power [ELEC] The component of apparent power that represents true work; expressed in watts, it is equal to volt-amperes multiplied by the power factor.

real precession [NAV] In marine gyroscopes, that component of the total precession caused by bearing friction, torque unbalance, and other manufacturing or design defects. Also known as induced precession.

real source [ACOUS] A source of sound consisting of a macroscopic body that is composed of materials different from those of the medium in which the sound propagates and has sharply delineated physical extent, and which generates sound by executing complex motions while immersed in the medium.

real-time [COMPUT SCI] Pertaining to a data-processing system that controls an ongoing process and delivers its outputs (or controls its inputs) not later than the time when these are needed for effective control; for instance, airline reservations booking and chemical processes control.

real-time clock [COMPUT SCI] A pulse generator which operates at precise time intervals to determine time intervals between events and initiate specific elements of processing.

real-time control system [COMPUT SCI] A computer system which controls an operation in real time, such as a rocket flight.

real-time holographic interferometry [OPTICS] The study of the interference fringes generated when a hologram is made of an object and is later placed back into its original position relative to the object, now slightly deformed, so that there is interference between the object and its hologram.

real-time operation [COMPUT SCI] **1.** Of a computer or system, an operation or other response in which programmed responses to an event are essentially simultaneous with the event itself. **2.** An operation in which information obtained from a physical process is processed to influence or control the physical process.

real-time processing [COMPUT SCI] The handling of input data at a rate sufficient to ensure that the instructions generated by the computer will influence the operation under control at the required time.

real-time programming [COMPUT SCI] Programming for a situation in which results of computations will be used immediately to influence the course of ongoing physical events.

real unimodular group [MATH] The group of all square $n \times n$ matrices with real number entries and of determinant 1.

real variable [MATH] A variable that assumes real numbers for its values.

ream [ENG] To enlarge or clean out a hole. [MATER] **1.** A layer of nonhomogeneous material in flat glass. **2.** Five hundred sheets of paper; a printer's ream consists of 516 sheets.

reamed extrusion ingot [MET] A hollow extrusion ingot whose original inside surface has been removed by reaming.

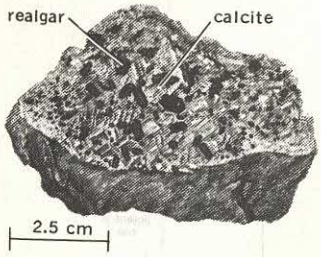
reamer [DES ENG] A tool used to enlarge, shape, smooth, or otherwise finish a hole.

reaming bit [DES ENG] A bit used to enlarge a borehole. Also known as broaching bit; pilot reaming bit.

rear area [ORD] The area in the rear of the combat and forward areas.

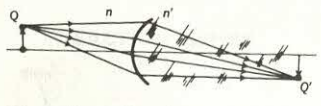
rearming [ORD] **1.** An operation that replenishes the pre-

REALGAR



Realgar crystals with calcite, Felsöbanya, Rumania. *(Specimen from Department of Geology, Bryn Mawr College)*

REAL IMAGE



Formation of real image. Rays leaving object point Q and passing through the refracting surface separating media n and n' are brought to a focus at the image point Q'. *(Modified from F. A. Jenkins and H. E. White, Fundamentals of Optics, 3d ed., McGraw-Hill, 1957)*

scribed stores of ammunition, bombs, and other armament items for an aircraft, naval ship, tank, or armored vehicle, including replacement of defective ordnance equipment, in order to make it ready for combat service. **2.** Resetting the fuse on a bomb, or on an artillery, mortar, or rocket projectile, so that it will detonate at the desired time.

rear-projection [ELECTR] Pertaining to television system in which the picture is projected on a ground-glass screen for viewing from the opposite side of the screen.

rearrangement reaction [NUC PHYS] A nuclear reaction in which nucleons are exchanged between nuclei.

rear response [ENG ACOUS] The maximum pressure within 60° of the rear of a transducer in decibels relative to the pressure on the acoustic axis.

rear sight [ORD] An item attached to the breech end and integral to a carbine, machine gun, pistol, rifle, or the like; it may be a fixed or adjustable cross blade with a U- or V-shaped notch or aperture, or it may have elevation and windage adjustment knobs, slides, and graduated scales and be provided with aperture disks.

Réaumur temperature scale [THERMO] Temperature scale where water freezes at 0°R and boils at 80°R.

rebat [METEOROL] The lake breeze of Lake Geneva, Switzerland; it blows from about 10 a.m. to 4 p.m.

rebecca [NAV] An electronic navigation system that has at least one radio transmitter and one radio receiver; the transmitter emits pulses which travel over a single path to a transponder and return to the interrogation receiver.

rebecca-eureka system [NAV] An aircraft radar homing system in which an airborne interrogator-responsor (rebecca) homes on a ground radar beacon (eureka) that has been dropped or set up in advance; the system can also give the distance from the rebecca radar to the eureka beacon.

reboiler [CHEM ENG] An auxiliary heating unit for a fractionating tower designed to supply additional heat to the lower portion of the tower; liquid withdrawn from the side or bottom of the tower is reheated by heat exchange, then reintroduced into the tower.

rebound [GEOL] The isostatic readjustment upward of a landmass depressed by glacial loading.

rebound clip [DES ENG] A clip surrounding the back and one or two other leaves of a leaf spring, to distribute the load during rebounds.

rebound leaf [DES ENG] In a leaf spring, a leaf placed over the master leaf to limit the rebound and help carry the load imposed by it.

reboyo [METEOROL] A persistent (day-long) storm from the southwest during the rainy season on the Brazilian coast.

rebreather [ENG] A closed-loop oxygen supply system consisting of gas supply and face mask.

rebroadcast [COMMUN] Repetition of a radio or television program at a later time.

rebuild [ENG] To restore to a condition comparable to new by disassembling the item to determine the condition of each of its component parts, and reassembling it, using serviceable, rebuilt, or new assemblies, subassemblies, and parts.

recalescence [MET] Brightening (reglowing) of iron on cooling through the γ- to α-phase transformation temperature caused by liberation of the latent heat of transformation.

recall [COMMUN] A flashing signal to the attendant's switchboard; the operator may be recalled by the subscriber operating the switch hook of the subscriber's set.

recall factor [COMPUT SCI] A measure of the efficiency of an information retrieval system, equal to the number of retrieved relevant documents divided by the total number of relevant documents in the file.

recapitulation theory [BIOL] The biological theory that an organism passes through developmental stages resembling various stages in the phylogeny of its group; ontogeny recapitulates phylogeny. Also known as biogenetic law; Haeckel's law.

recarburize [MET] **1.** To increase the carbon content of molten steel or cast iron. **2.** To carburize a metal part, making up for any loss of carbon during processing.

receding leg [ORD] That portion of the target's course line in which the slant range increases for successive target positions.

received power [ELECTROMAG] **1.** The total power received at an antenna from a signal, such as a radar target signal. **2.** In a mobile communications system, the root-mean-square value of power delivered to a load which properly terminates an isotropic reference antenna.

receive-only [COMMUN] A teleprinter which has no keyboard, and thus can receive but not transmit. Abbreviated RO.

receiver [CHEM ENG] Vessel, container, or tank used to receive and collect liquid material from a process unit, such as the distillate receiver from the overhead condenser of a distillation column. [ELECTR] The complete equipment required for receiving modulated radio waves and converting them into the original intelligence, such as into sounds or pictures, or converting to desired useful information as in a radar receiver. [MECH ENG] An apparatus placed near the compressor to equalize the pulsations of the air as it comes from the compressor to cause a more uniform flow of air through the pipeline and to collect moisture and oil carried in the air.

receiver bandwidth [ELECTR] Spread, in frequency, between the halfpower points on the receiver response curve.

receiver gating [ELECTR] Application of operating voltages to one or more stages of a receiver only during that part of a cycle of operation when reception is desired.

receiver incremental tuning [ELECTR] Control feature to permit receiver tuning (of a transceiver) up to 3 kilohertz to either side of the transmitter frequency.

receiver lockout system *See* lockout.

receiver noise threshold [ELECTR] External noise appearing at the front end of a receiver, plus the noise added by the receiver itself, determines a noise threshold that has to be exceeded by the minimum discernible signal.

receiver primary *See* display primary.

receiver radiation [ELECTROMAG] Radiation of interfering electromagnetic fields by the oscillator of a receiver.

receiver synchro *See* synchro receiver.

receiving antenna [ELECTROMAG] An antenna used to convert electromagnetic waves to modulated radio-frequency currents.

receiving area [ELECTROMAG] The factor by which the power density must be multiplied to obtain the received power of an antenna, equal to the gain of the antenna times the square of the wavelength divided by 4π.

receiving gage [ENG] A fixed gage designed to inspect a number of dimensions and also their reaction to each other.

receiving house [CHEM ENG] A building where liquid streams from petroleum-refining-process condensers are observed through a look box, and samples are taken for testing, and also where products are diverted to storage tanks or to other processing units.

receiving loop loss [COMMUN] In telephones, that part of the repetition equivalent assignable to the station set, subscriber line, and battery supply circuit that are on the receiving end.

receiving set *See* radio receiver.

receiving station [MECH ENG] The location or device on conveyor systems where bulk material is loaded or otherwise received onto the conveyor.

receiving tank *See* rundown tank.

receiving tube [ELECTR] A low-voltage and low-power vacuum tube used in radio receivers, computers, and sensitive control and measuring equipment.

recent [EVOL] Referring to taxa which still exist; the antonym of fossil.

Recent [GEOL] An epoch of geologic time (late Quaternary) following the Pleistocene; referred to as Holocene in several European countries.

receptacle *See* outlet.

reception [COMMUN] The conversion of modulated electromagnetic waves or electric signals, transmitted through the air or over wires or cables, into the original intelligence, or into desired useful information (as in radar), by means of antennas and electronic equipment.

receptive aphasia *See* sensory aphasia.

receptor [BIOCHEM] A site or structure in a cell which combines with a drug or other biological to produce a specific alteration of cell function. [PHYSIO] A sense organ.

recess [ENG] A surface groove or depression. [GEOL] **1.** An indentation occurring in a surface, bounded by a straight line. **2.** An area having the axial traces of folds concave toward the outer edge of the folded belt.

recessed bead *See* quirk bead.

recessed tube wall [MECH ENG] A boiler furnace wall which has openings to partially expose waterwall tubes to the radiant combustion gases.

recession [GEOL] **1.** The backward movement, or retreat, of an eroded escarpment. **2.** A continuing landward movement of a

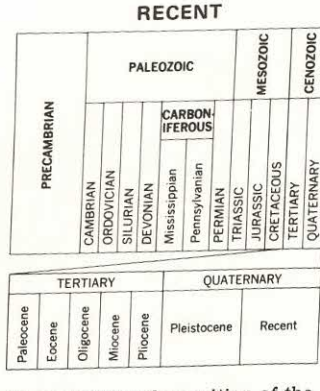


Chart showing the position of the Recent epoch in relation to the various periods of geologic time.

shoreline or beach undergoing erosion. Also known as retrogression. **3.** The withdrawal of a body of water (as a sea or lake), thereby exposing formerly submerged areas. [HYD] The gradual upstream retreat of a waterfall.

recessional moraine [GEOL] **1.** An end moraine formed during a temporary halt in the final retreat of a glacier. **2.** A moraine formed during a minor readvance of the ice front during a period of glacial recession. Also known as stadial moraine.

recession curve [HYD] A hydrograph showing the decrease of the runoff rate after rainfall or the melting of snow.

recession of galaxies [ASTROPHYS] The increase in the velocity of recession (red shift) of galaxies with distance from an observer on earth.

recessive [GEN] **1.** An allele that is not expressed phenotypically when present in the heterozygous condition. **2.** An organism homozygous for a recessive gene.

rechamber [ORD] To rebore or otherwise alter the chamber of a small arm, normally for the purpose of adapting it to cartridges for which not originally designed.

recharge [HYD] **1.** The processes involved in the replenishment of water to the zone of saturation. **2.** The amount of water added or absorbed. Also known as groundwater increment; groundwater recharge; groundwater replenishment; increment; intake.

rechargeable battery *See* storage battery.

recharge area [HYD] An area in which water is absorbed that eventually reaches the zone of saturation in one or more aquifers. Also known as intake area.

recharge basin [CIV ENG] A basin constructed in sandy material to collect water, as from storm drains, for the purpose of replenishing groundwater supply.

recharge well [HYD] A well used as a source of water in the process of artificial recharge. Also known as injection well.

reciprocal [MATH] The reciprocal of a number A is the number $1/A$.

reciprocal bearing *See* back bearing.

reciprocal differences [MATH] An interpolation technique using successive quotients of a function with its values so as to obtain a continued fraction expansion approximating the given function by a rational function.

reciprocal ellipsoid *See* index ellipsoid.

reciprocal ferrite switch [ELECTROMAG] A ferrite switch that can be inserted in a waveguide to switch an input signal to either of two output waveguides; switching is done by a Faraday rotator when acted on by an external magnetic field.

reciprocal impedance [ELEC] Two impedances Z_1 and Z_2 are said to be reciprocal impedances with respect to an impedance Z (invariably a resistance) if they are so related as to satisfy the equation $Z_1Z_2 = Z^2$.

reciprocal inhibition [PHYSIO] In muscular movement, the simultaneous relaxation of one muscle and the contraction of its antagonist. [PSYCH] The modification of a behavioral pattern by the conditioning of responses that are incompatible with the response to be eliminated.

reciprocal junction [ELECTROMAG] A waveguide junction in which the transmission coefficient from the ith port to the jth port is the same as that from the jth port to the ith port; that is, the S matrix is symmetrical.

reciprocal lattice [CRYSTAL] A lattice array of points formed by drawing perpendiculars to each plane *(hkl)* in a crystal lattice through a common point as origin; the distance from each point to the origin is inversely proportional to spacing of the specific lattice planes; the axes of the reciprocal lattice are perpendicular to those of the crystal lattice.

reciprocal laying [ORD] Method of making the planes of fire of two guns parallel by pointing the guns in parallel direction; in reciprocal laying, the two guns sight on each other, then swing out through supplementary angles to produce equal deflections from the base line connecting the two pieces.

reciprocal leveling [CIV ENG] A variant of straight differential leveling applied to long distances in which levels are taken on two points, and the average of the two elevation differences is the true difference.

reciprocal ohm *See* siemens.

reciprocal ohm centimeter *See* roc.

reciprocal ohm meter *See* rom.

reciprocal space *See* wave-vector space.

reciprocal spiral *See* hyperbolic spiral.

reciprocal strain ellipsoid [MECH] In elastic theory, an ellipsoid of certain shape and orientation which under homogeneous strain is transformed into a set of orthogonal diameters of the sphere.

reciprocal transducer [ELECTR] Transducer which satisfies the principle of reciprocity.

reciprocal translocation [CYTOL] The special case of translocation in which two segments exchange positions.

reciprocal vectors [CRYSTAL] For a set of three vectors forming the primitive translations of a lattice, the vectors that form the primitive translations of the reciprocal lattice.

reciprocal velocity region [NUC PHYS] The energy region in which the capture cross section for neutrons by a given element is inversely proportional to neutron velocity.

reciprocal wavelength *See* wave number.

reciprocating compressor [MECH ENG] A positive-displacement compressor having one or more cylinders, each fitted with a piston driven by a crankshaft through a connecting rod.

reciprocating drill *See* piston drill.

reciprocating engine *See* piston engine.

reciprocating flight conveyor [MECH ENG] A reciprocating beam or beams with hinged flights that advance materials along a conveyor trough.

reciprocating-plate column *See* reciprocating-plate extractor.

reciprocating-plate extractor [CHEM ENG] A liquid-liquid contactor in which equally spaced perforated plates (as in a distillation column) move up and down rapidly over a short distance to cause liquid agitation and mixing. Also known as reciprocating-plate column.

reciprocating-plate feeder [MECH ENG] A back-and-forth shaking tray used to feed abrasive materials, such as pulverized coal, into process units.

reciprocating pump *See* piston pump.

reciprocating screen [MECH ENG] Horizontal solids-separation screen (sieve) oscillated back and forth by an eccentric gear; used for solids classification.

reciprocation [ELECTR] In electronics, a process of deriving a reciprocal impedance from a given impedance, or finding a reciprocal network for a given network.

reciprocity calibration [ENG ACOUS] A measurement of the projector loss and hydrophone loss of a reversible transducer by means of the reciprocity theorem and comparisons with the known transmission loss of an electric network, without knowing the actual value of either the electric power or the acoustic power.

reciprocity law [GRAPHICS] The law that, with standard development, the optical density of an exposed emulsion is proportional to the exposure time and to the illumination.

reciprocity theorem Also known as principle of reciprocity. [ACOUS] The theorem that, in an acoustic system consisting of a fluid medium with boundary surfaces and subject to no impressed body forces, if p_1 and p_2 are the pressure fields produced respectively by the components of the fluid velocities V_1 and V_2 normal to the boundary surfaces, then the integral over the boundary surfaces of $p_1V_2 - p_2V_1$ vanishes. [ELEC] **1.** The electric potentials V_1 and V_2 produced at some arbitrary point, due to charge distributions having total charges of q_1 and q_2 respectively, are such that $q_1V_2 = q_2V_1$. **2.** In an electric network consisting of linear passive impedances, the ratio of the electromotive force introduced in any branch to the current in any other branch is equal in magnitude and phase to the ratio that results if the positions of electromotive force and current are exchanged. [ELECTROMAG] Given two loop antennas, a and b, then $I_{ab}/V_a = I_{ba}/V_b$, where I_{ab} denotes the current received in b when a is used as transmitter, and V_a denotes the voltage applied in a; I_{ba} and V_b are the corresponding quantities when b is the transmitter, a the receiver; it is assumed that the frequency and impedances remain unchanged. [ENG ACOUS] The sensitivity of a reversible electroacoustic transducer when used as a microphone divided by the sensitivity when used as a source of sound is independent of the type and construction of the transducer. [PHYS] In general, any theorem that expresses various reciprocal relations for the behavior of some physical systems, in which input and output can be interchanged without altering the response of the system to a given excitation.

recirculator [ENG] A self-contained underwater breathing apparatus that recirculates an oxygen supply (mix-gas or pure) to the diver until the oxygen is depleted.

reclaimed oil [MATER] Used lubricating oil that is collected, reprocessed, and sold for reuse. Also known as recovered oil.

reclaimed rubber [MATER] Scrap rubber (natural or synthetic) prepared for reuse; fragmented scrap is digested in hot

caustic solution to which reclaiming agents have been added; reclaimed rubber is used to blend with virgin rubber, or for low-grade rubber products.

reclaimer [COMPUT SCI] A device that performs dynamic storage allocation, periodically searching memory to locate cells whose contents are no longer useful for computation, and making them available for other uses.

reclaim rinse [MET] A nonflowing rinse used to recover dragout in electroplating operations.

reclamation [CIV ENG] **1.** The recovery of land or other natural resource that has been abandoned because of fire, water, or other cause. **2.** Reclaiming dry land by irrigation.

reclassify [ORD] To change the security classification of a document, piece of equipment, or the like.

reclined fold *See* recumbent fold.

reclosing relay [ELEC] Form of voltage, current, power, or other type of relay which functions to reclose a circuit.

recognition [COMPUT SCI] The act or process of identifying (or associating) an input with one of a set of possible known alternatives, as in character recognition and pattern recognition.

recognition gate [COMPUT SCI] A logic circuit used to select devices identified by a binary address code. Also known as decoding gate.

recognition differential [ACOUS] For a specified listener, the amount by which the signal level exceeds the noise level reaching the ear when there is a 50% probability of detection of the signal.

recoil *See* gun reaction.

recoil adapter [ORD] A device fastened between a gun, especially an aircraft machine gun, and its mount to adapt the gun for mounting and to absorb the recoil.

recoil booster [ORD] Component of a machine gun which traps some of the gas from the barrel and acts to ensure positive recoil action when the gun is fired at angles other than the usual horizontal.

recoil brake [ORD] That part of the recoil mechanism that actually absorbs the energy of recoil and stops the rearward movement of the recoiling parts.

recoil click [HOROL] A device in a timepiece that prevents a mainspring from being wound too tightly; uses a pawl that recoils after winding.

recoil electron [PHYS] An electron that has been set into motion by a collision.

recoil escapement *See* anchor escapement.

recoiling mass [ORD] The mass of the recoiling parts of a weapon.

recoiling parts [ORD] Those parts of a weapon which move in recoil, usually including the tube, breech housing, breechblock assembly, and parts of the recoil mechanism.

recoil ion spectroscopy [ATOM PHYS] A method of studying highly ionized and highly excited atomic states, in which relatively light atoms in a gaseous target are bombarded by highly ionized, fast, heavy projectiles, resulting in single collisions in which the target atoms are raised to very high states of ionization and excitation while incurring relatively small recoil velocities.

recoilless [ORD] Built so as to eliminate or cancel out recoil; most recoilless guns are designed to let part of the propellant gases escape to the rear.

recoilless ammunition [ORD] Ammunition intended for use in recoilless rifles; provision is made in the ammunition for release of propellant gases in the manner and quantity necessary to produce the recoilless action.

recoilless gun [ORD] A smooth-bore, open-breech, launcher-type artillery weapon constructed of lightweight metals and employing a muzzle-inserted propellant; it is designed with a firing mechanism activated electrically or mechanically by remote control.

recoilless rifle [ORD] A weapon consisting of a light artillery tube of the recoilless type and a very light mount.

recoil mechanism [ORD] A hydraulic-, pneumatic-, or spring-type shock absorber that decreases the energy of the recoil gradually and so avoids violent movement of the gun.

recoil milking [NUCLEO] A technique for detecting transmutation recoil atoms knocked out of a target by heavy-ion bombardment, in which the atoms come to rest in a stream of helium or other gas which carries them through an orifice to a rough vacuum where they are adsorbed on a surface and their radioactivity detected.

recoil oil [MATER] A neutral, constant-viscosity oil used in hydropneumatic and hydrospring recoil systems.

recoil particle [PHYS] A particle that has been set into motion by a collision or by a process involving the ejection of another particle.

recoil pit [ORD] Pit dug near the breech of a gun to provide space for the breech when it moves backward during recoil.

recoil velocity [ORD] Velocity in recoil of the recoiling parts of a gun.

recombination [GEN] **1.** The occurrence of gene combinations in the progeny that differ from those of the parents as a result of independent assortment, linkage, and crossing-over. **2.** The production of genetic information in which there are elements of one line of descent replaced by those of another line, or additional elements. [PHYS] The combination and resultant neutralization of particles or objects having unlike charges, such as a hole and an electron or a positive ion and a negative ion.

recombination coefficient [ELECTR] The rate of recombination of positive ions with electrons or negative ions in a gas, per unit volume, divided by the product of the number of positive ions per unit volume and the number of electrons or negative ions per unit volume.

recombination electroluminescence *See* injection electroluminescence.

recombination energy [PHYS] The energy released when two oppositely charged portions of an atom or molecule rejoin to form a neutral atom or molecule.

recombination mosaic [GEN] A mosaic produced as the result of somatic crossing-over.

recombination radiation [SOLID STATE] The radiation emitted in semiconductors when electrons in the conduction band recombine with holes in the valence band.

recombination velocity [ELECTR] On a semiconductor surface, the ratio of the normal component of the electron (or hole) current density at the surface to the excess electron (or hole) charge density at the surface.

recompletion [PETRO ENG] Redrilling an oil well to a new producing zone (new depth) when the current zone is depleted.

recomposed granite [PETR] An arkose composed of consolidated feldspathic residue that has been reworked and decomposed so slightly that upon cementation the rock resembles granite except that its grain is less even and it contains a greater percentage of quartz. Also known as reconstructed granite.

recomposed rock [PETR] A rock produced in place by the cementation of the fragmental products of surface weathering; for example, a recomposed granite.

recomputed point of turn [NAV] An altered dead-reckoning position of an aircraft at a turning point, determined after wind has been established by drift observations made before and after the turn.

recon [GEN] The smallest deoxyribonucleic acid unit capable of recombination.

reconditioned carrier reception [ELECTR] Method of reception in which the carrier is separated from the sidebands to eliminate amplitude variations and noise, and is then added at an increased level to the sideband, to obtain a relatively undistorted output.

reconditioning [ENG] Restoration of an object to a good condition.

reconnaissance [ENG] A mission to secure data concerning the meteorological, hydrographic, or geographic characteristics of a particular area. [ORD] A mission undertaken to obtain, by visual observation or other detection methods, information about the activities and resources of an enemy or potential enemy.

reconnaissance drone [AERO ENG] An unmanned aircraft guided by remote control, with photographic or electronic equipment for providing information about an enemy or potential enemy.

reconnaissance map [MAP] A map based on the information obtained in a reconnaissance survey.

reconnaissance spacecraft [AERO ENG] A satellite put into orbit about the earth and containing electronic equipment designed to pick up and transmit back to earth information pertaining to activities such as military.

reconnaissance survey [ENG] A preliminary survey, usually executed rapidly and at relatively low cost, prior to mapping in detail and with greater precision.

reconstituted mica [MATER] Mica sheets or shaped objects

made by breaking up scrap natural mica, combining with a binder, and pressing into forms suitable for use as electrical insulating material.

reconstitution [GEOL] The formation of new chemicals, minerals, or structures under the influence of metamorphism.

reconstructed coal [MATER] Coal formed from crushed or powdered, briquetted lignite or coal, waterproofed with a coating of pitch.

reconstructed granite *See* recomposed granite.

reconstructed stone [LAP] A gem material made by the fusing or sintering of small particles of the genuine stone.

reconstruction [SOLID STATE] A process in which atoms at the surface of a solid displace and form bands different from those existing in the bulk solid.

reconstructive processing [INORG CHEM] The spinning of an inorganic compound of an organic support or binder subsequently removed by oxidation or volatilization to form an inorganic polymer.

reconstructive transformation [CRYSTAL] A type of crystal transformation that involves the breaking of either first- or second-order coordination bonds.

recontrol time *See* deionization time.

record [COMPUT SCI] A group of adjacent data items in a computer system, manipulated as a unit. [SCI TECH] **1.** To preserve for later reproduction or reference. **2.** *See* recording.

record block *See* physical record.

record changer [ENG ACOUS] A record player that plays a number of records automatically in succession.

record density *See* bit density; character density.

recorder *See* recording instrument.

record gap [COMPUT SCI] An area in a storage medium, such as magnetic tape or disk, which is devoid of information; it delimits records, and, on tape, allows the tape to stop and start between records without loss of data. Also known as interrecord gap (IRG).

recording [SCI TECH] **1.** Any process for preserving signals, sounds, data, or other information for future reference or reproduction, such as disk recording, facsimile recording, ink-vapor recording, magnetic tape or wire recording, and photographic recording. **2.** The end product of a recording process, such as the recorded magnetic tape, disk, or record sheet. Also known as record.

recording balance [ANALY CHEM] An analytical balance equipped to record weight results by electromagnetic or servomotor-driven accessories.

recording-completing trunk [ELEC] Trunk for extending a connection from a local line to a toll operator, used for recording the call and for completing the toll connection.

recording head [ELECTR] A magnetic head used only for recording. Also known as record head. [ENG ACOUS] *See* cutter.

recording instrument [ENG] An instrument that makes a graphic or acoustic record of one or more variable quantities. Also known as recorder.

recording lamp [ELECTR] A lamp whose intensity can be varied at an audio-frequency rate, for exposing variable-density sound tracks on motion picture film and for exposing paper or film in photographic facsimile recording.

recording level [ELECTR] Amplifier output level required to secure a satisfactory recording.

recording noise [ELECTR] Noise that is introduced during a recording process.

recording optical tracking instrument [ENG] Optical system used for recording data in connection with missile flights.

recording rain gage [ENG] A rain gage which automatically records the amount of precipitation collected, as a function of time. Also known as pluviograph.

recording spot *See* picture element.

recording storage tube [ELECTR] Type of cathode-ray tube in which the electric equivalent of an image can be stored as an electrostatic charge pattern on a storage surface; there is no visual display, but the stored information can be read out at any later time as an electric output signal.

recording thermometer *See* thermograph.

recording trunk [ELEC] Trunk extending from a local central office or private branch exchange to a toll office, which is used only for communications with toll operators and not for completing toll connections.

record length [COMPUT SCI] The number of characters required for all the information in a record.

record mark [COMPUT SCI] A symbol that signals a record's beginning or end.

record observation [METEOROL] A type of aviation weather observation; the most complete of all such observations and usually taken at regularly specified and equal intervals (hourly, usually on the hour). Also known as hourly observation.

record player [ENG ACOUS] A motor-driven turntable used with a phonograph pickup to obtain audio-frequency signals from a phonograph record.

record storage mark [COMPUT SCI] A special character which appears only in the record storage unit of the card reader to limit the length of the record read into storage.

recoupling [QUANT MECH] A transformation between eigenfunctions of total angular momentum resulting from coupling eigenfunctions of three or more angular momenta in some order, and eigenfunctions of total angular momentum resulting from coupling of the same eigenfunctions in a different order.

recoverable shear [FL MECH] Measure of the elastic content of a fluid, related to elastic recovery (mechanicallike property of elastic recoil); found in unvulcanized, unfilled natural rubber, and certain polymer solutions, soap gels, and biological fluids.

recovered oil *See* reclaimed oil.

recovery [AERO ENG] **1.** The procedure or action that obtains when the whole of a satellite, or a section, instrumentation package, or other part of a rocket vehicle, is retrieved after a launch. **2.** The conversion of kinetic energy to potential energy, such as in the deceleration of air in the duct of a ramjet engine. Also known as ram recovery. **3.** In flying, the action of a lifting vehicle returning to an equilibrium attitude after a nonequilibrium maneuver. [HYD] The rise in static water level in a well, occurring upon the cessation of discharge from that well or a nearby well. [MET] **1.** The percentage of valuable material obtained from a processed ore. **2.** Reduction or elimination of work-hardening effects, usually by heat treatment. [MIN ENG] The proportion or percentage of coal or ore mined from the original seam or deposit. [PETRO ENG] The removal (recovery) of oil or gas from reservoir formations.

recovery area [AERO ENG] An area in which a satellite, satellite package, or spacecraft is recovered after reentry.

recovery capsule [AERO ENG] A space capsule designed to be recovered after reentry.

recovery factor [PETRO ENG] The ratio of recoverable oil reserves to the oil in place in a reservoir.

recovery interrupt [COMPUT SCI] A type of interruption of program execution which provides the computer with access to subroutines to handle an error and, if successful, to continue with the program execution.

recovery package [AERO ENG] A package attached to a reentry or other body designed for recovery, containing devices intended to locate the body after impact.

recovery party [ORD] A form of contact party whose purpose is the recovery of disabled ordnance materiel from predesignated collecting points, and the transportation of this materiel to the ordnance shops for repairs.

recovery room [MED] A hospital room in which surgical patients are kept during the period immediately following an operation for care and recovery from anesthesia.

recovery ship [NAV ARCH] A naval vessel designed to participate in the retrieval of a satellite, instrument package, or spaceship after it has reentered the atmosphere and landed in the ocean.

recovery system [COMPUT SCI] A system for recognizing a malfunction in a data-base management system, reporting it, reconstructing the damaged part of the data base, and resuming processing.

recovery temperature *See* adiabatic recovery temperature.

recovery time [ELECTR] **1.** The time required for the control electrode of a gas tube to regain control after anode-current interruption. **2.** The time required for a fired TR (transmit-receive) or pre-TR tube to deionize to such a level that the attenuation of a low-level radio-frequency signal transmitted through the tube is decreased to a specified value. **3.** The time required for a fired ATR (anti-transmit-receive) tube to deionize to such a level that the normalized conductance and susceptance of the tube in its mount are within specified ranges. **4.** The interval required, after a sudden decrease in input signal amplitude to a system or component, to attain a specified percentage (usually 63%) of the ultimate change in amplification or attenua-

tion due to this decrease. **5.** The time required for a radar receiver to recover to half sensitivity after the end of the transmitted pulse, so it can receive a return echo. [NUCLEO] The minimum time from the start of a counted pulse to the instant a succeeding pulse can attain a specific percentage of the maximum value of the counted pulse in a Geiger counter.

recovery vehicle [MECH ENG] A special-purpose vehicle equipped with winch, hoist, or boom for recovery of vehicles.

recruitment [PHYSIO] A serial discharge from neurons innervating groups of muscle fibers.

recrystallization [CHEM] Repeated crystallization of a material from fresh solvent to obtain an increasingly pure product. [CRYSTAL] A change in the structure of a crystal without a chemical alteration. [MET] A process which takes place in metals and alloys following distortion and fragmentation of constituent crystals by severe mechanical deformation, in which some fragments grow at the expense of others, so that larger, strain-free grains are formed; it progresses slowly at room temperature, but is greatly speeded by annealing. [PETR] The formation of new mineral grains in crystalline form in a rock under the influence of metamorphic processes.

recrystallization annealing [MET] Producing a new grain structure without phase change by annealing cold-worked metal.

recrystallization breccia *See* pseudobreccia.

recrystallization flow [GEOL] Flow in which there is molecular rearrangement by solution and redeposition, solid diffusion, or local melting.

recrystallization temperature [MET] The minimum temperature at which complete recrystallization occurs in an annealed cold-worked metal within a specified time.

rectangle [MATH] A plane quadrilateral having four interior right angles and opposite sides of equal length.

rectangular cartesian coordinate system *See* cartesian coordinate system.

rectangular cavity [ELECTROMAG] A resonant cavity having the shape of a rectangular parallelepiped.

rectangular chart [MAP] **1.** A chart in a rectangular shape. **2.** A chart on the rectangular map projection.

rectangular coordinates *See* cartesian coordinates.

rectangular cross ripple mark [GEOL] An oscillation cross ripple mark consisting of two sets of ripples which intersect at right angles, enclosing a rectangular pit.

rectangular distribution *See* uniform distribution.

rectangular drainage pattern [GEOL] A drainage pattern characterized by many right-angle bends in both the main streams and their tributaries. Also known as lattice drainage pattern.

rectangular game *See* matrix game.

rectangular hyperbola [MATH] A hyperbola whose major and minor axes are equal.

rectangular mesh [TEXT] Cloth with a different mesh count in the fill than in the warp. Also known as oblong mesh.

rectangular parallelepiped [MATH] A parallelepiped with bases as rectangles all perpendicular to its lateral faces. Also known as rectangular solid.

rectangular projection [MAP] A cylindrical map projection with uniform spacing of the parallels; used for the star chart in the Air Almanac.

rectangular pulse [ELECTR] A pulse in which the wave amplitude suddenly changes from zero to another value at which it remains constant for a short period of time, and then suddenly changes back to zero.

rectangular scanning [ELECTR] Two-dimensional sector scanning in which a slow sector scanning in one direction is superimposed on a rapid sector scanning in a perpendicular direction.

rectangular search [NAV] A search of three legs from a moving point, the first and third legs being perpendicular to the base course of the moving point, and the second leg being parallel to it.

rectangular solid *See* rectangular parallelepiped.

rectangular wave [ELECTR] A periodic wave that alternately and suddenly changes from one to the other of two fixed values. Also known as rectangular wave train.

rectangular waveguide [ELECTROMAG] A waveguide having a rectangular cross section.

rectangular wave train *See* rectangular wave.

rectangular weir [CIV ENG] A weir with a rectangular notch at top for measurement of water flow in open channels; it is simple, easy to make, accurate, and popular.

Rectenna [ELECTR] A device that converts microwave energy in direct-current power; consists of a number of small dipoles, each having its own diode rectifier network, which are connected to direct-current buses.

Recticornia [INV ZOO] A family of amphipod crustaceans in the superfamily Genuina containing forms in which the first antennae are straight, arise from the anterior margin of the head, and have few flagellar segments.

rectifiable curve [MATH] A curve whose length can be computed and is finite.

rectification [CIV ENG] A new alignment to correct a deviation of a stream channel or bank. [ELEC] The process of converting an alternating current to a unidirectional current. [GEOL] The simplification and straightening of the outline of an initially irregular and crenulate shoreline through the cutting back of headlands and offshore islands by marine erosion, and through deposition of waste from erosion or of sediment brought down by neighboring rivers. [GRAPHICS] The transformation of a photograph onto a horizontal plane so as to remove or correct displacements (distortions in perspective) by tilt.

rectification distillation [CHEM ENG] A distillation technique in which a rectifying column is used.

rectification factor [ELECTR] Quotient of the change in average current of an electrode by the change in amplitude of the alternating sinusoidal voltage applied to the same electrode, the direct voltages of this and other electrodes being maintained constant.

rectified value of an alternating quantity [ELEC] Average of all the positive (or negative) values of the quantity during an integral number of periods.

rectifier [ELEC] A nonlinear circuit component that allows more current to flow in one direction than the other; ideally, it allows current to flow in one direction unimpeded but allows no current to flow in the other direction.

rectifier filter [ELECTR] An electric filter used in smoothing out the voltage fluctuation of an electron tube rectifier, and generally placed between the rectifier's output and the load resistance.

rectifier instrument [ENG] Combination of an instrument sensitive to direct current and a rectifying device whereby alternating current (or voltages) may be rectified for measurement.

rectifier rating [ELECTR] A performance rating for a semiconductor rectifier, usually on the basis of the root-mean-square value of sinusoidal voltage that it can withstand in the reverse direction and the average current density that it will pass in the forward direction.

rectifier stack [ELECTR] A dry-disk rectifier made up of layers or stacks of disks of individual rectifiers, as in a selenium rectifier or copper-oxide rectifier.

rectifier transformer [ELECTR] Transformer whose secondary supplies energy to the main anodes of a rectifier.

rectifying column [CHEM ENG] Portion of a distillation column above the feed tray in which rising vapor is enriched by interaction with a countercurrent falling stream of condensed vapor; contrasted to the stripping column section below the column feed tray.

rectilinear [MATH] Consisting of or bounded by lines.

rectilinear generators [MATH] Straight lines which generate ruled surfaces.

rectilinear motion [MECH] A continuous change of position of a body so that every particle of the body follows a straight-line path. Also known as linear motion.

rectilinear scanning [ELECTR] Process of scanning an area in a predetermined sequence of narrow parallel strips.

rectilinear shoreline [GEOL] A long, relatively straight shoreline.

rectilinear system *See* orthoscopic system.

recto [GRAPHICS] A right-hand book page, which always bears an odd number.

rectocele [MED] Bulging or herniation of the rectum into the vagina. Also known as vaginal protocele.

rectorite [GEOL] A white clay-mineral mixture with a regular interstratification of two mica layers (pyrophyllite and vermiculite) and one or more water layers. Also known as allevardite.

rectrix [VERT ZOO] One of the stiff tail feathers used by birds to control direction of flight.

RECTANGLE

Shape of a rectangle.

RECTILINEAR MOTION

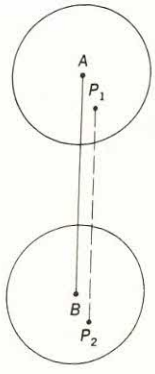

Diagram of rectilinear motion. Motion of center of mass of a body from A to B is along the straight line connecting these points. Path of any particle in the body is a straight line parallel to or coinciding with AB, such as the straight line connecting P_1 and P_2.

rectum [ANAT] The portion of the large intestine between the sigmoid flexure and the anus.

rectus [ANAT] Having a straight course, as certain muscles.

rectus abdominis [ANAT] The long flat muscle of the anterior abdominal wall which, as vertical fibers, arises from the pubic crest and symphysis, and is inserted into the cartilages of the fifth, sixth, and seventh ribs.

rectus femoris [ANAT] A division of the quadriceps femoris inserting in the patella and ultimately into the tubercle of the tibia.

rectus oculi [ANAT] Any of four muscles (superior, inferior, lateral, and medial) of the eyeball, running forward from the optic foramen and inserted into the sclerotic coat.

recumbent [BOT] Of or pertaining to a plant or plant part that tends to rest on the surface of the soil.

recumbent fold [GEOL] An overturned fold with a nearly horizontal axial surface. Also known as reclined fold.

recuperability [COMMUN] Ability to continue to operate after a partial or complete loss of the primary communications facility resulting from sabotage, enemy attack, or other disaster.

recuperative air heater [ENG] An air heater in which the heat-transferring metal parts are stationary and form a separating boundary between the heating and cooling fluids.

recuperator [ENG] An apparatus in which heat is conducted from the combustion products to incoming cooler air through a system of thin-walled ducts.

recurrence interval [HYD] The average time interval between occurrences of a hydrologic event, such as a flood, of a given or greater magnitude.

recurrence rate *See* repetition rate.

recurrent folding [GEOL] A type of folding due to periodic deformation or subsidence and characterized by thinning or possible disappearance of formations at the crest. Also known as revived folding.

recurrent nova [ASTRON] A star that has more than one novalike outburst.

recurring decimal *See* repeating decimal.

recurring demand [IND ENG] A request made periodically or anticipated to be repetitive by an authorized requisitioner for material for consumption or use, or for stock replenishment.

recurring issue [ORD] An issue made on a cyclic basis to replenish materiel consumed or worn out through fair wear and tear in operations, with each issue being made to a consignee eligible to request further replenishment when required, in the foreseeable future.

recursion [COMPUT SCI] A technique in which an apparently circular process is used to perform an iterative process.

recursion formula [MATH] An algorithm allowing computation of a succession of quantities. Also known as recursion relation.

recursion relation *See* recursion formula.

recursive functions [MATH] Functions that can be obtained by a finite number of operations, computations, or algorithms.

recursive macro call [COMPUT SCI] A call to a macroinstruction already called when used in conjunction with conditional assembly.

recursive procedure [COMPUT SCI] A method of calculating a function by deriving values of it which become more elementary at each step; recursive procedures are explicitly outlawed in most systems with the exception of a few which use languages such as ALGOL and LISP.

recursive subroutine [COMPUT SCI] A reentrant subroutine whose partial results are stacked, with a processor stack pointer advancing and retracting as the subroutine is called and completed.

recurvature [METEOROL] With respect to the motion of severe tropical cyclones (hurricanes and typhoons), the change in direction from westward and poleward to eastward and poleward; such recurvature of the path frequently occurs as the storm moves into middle latitudes.

recurved [SCI TECH] Curving inward to backward.

recurved spit [GEOGR] *See* hook.

recycle base [ORD] A base used by returning mission aircraft for servicing and maintenance, before the next mission launch.

recycle mixing [CHEM ENG] The mixing of a portion of a product stream (fluid or solid) from a processing unit with incoming raw feed.

recycle ratio [CHEM ENG] In a continuous chemical process, the ratio of recycle stock to fresh feed.

recycle stock [CHEM ENG] That portion of a feedstock that has passed through a processing unit and is recirculated (recycled) back through the process.

recycling [ELECTR] Returning to an original condition, as to 0 or 1 in a counting circuit. [ENG] The extraction and recovery of valuable materials from scrap or other discarded materials. [NUCLEO] Reuse of fissionable nuclear reactor fuel by chemical processing, reenriching, and refabricating into new fuel elements.

red [OPTICS] The hue evoked in an average observer by monochromatic radiation having a wavelength in the approximate range from 622 to 770 nanometers; however, the same sensation can be produced in a variety of other ways.

red acetate *See* mordant rouge.

red algae [BOT] The common name for members of the phylum Rhodophyta.

red antimony *See* kermesite.

red arsenic *See* realgar.

red azimuth tables [NAV] Popular title for Hydrographic Office Publication No. 260, "Azimuths of the Sun," used in navigation.

redbed [GEOL] Continentally deposited sediment composed principally of sandstone, siltsone, and shale; red in color due to the presence of ferric oxide (hematite). Also known as red rock.

red blood cell *See* erythrocyte.

red brass [MET] Brass containing 85% copper, 5% zinc, 5% tin, and 5% lead.

red charcoal [MATER] An impure charcoal made by heating wood to 300°C; much of the oxygen and hydrogen is retained.

red clay [GEOL] A fine-grained, reddish-brown pelagic deposit consisting of relatively large proportions of windblown particles, meteoric and volcanic dust, pumice, shark teeth, manganese nodules, and debris transported by ice. Also known as brown clay.

red cobalt *See* erythrite.

red copper ore *See* cuprite.

Reddish-Brown Lateritic soil [GEOL] One of a zonal, lateritic group of soils developed from a mottled red parent material and characterized by a reddish-brown surface horizon and underlying red clay.

Reddish-Brown soil [GEOL] A group of zonal soils having a reddish, light brown surface horizon overlying a heavier, more reddish horizon and a light-colored lime horizon.

red dwarf star [ASTRON] A red star of low luminosity, so designated by E. Hertzsprung; dwarf stars are commonly those main-sequence stars fainter than an absolute magnitude of +1, and red dwarfs are the faintest and coolest of the dwarfs.

red earth [GEOL] Leached, red, deep, clayey soil that is characteristic of a tropical climate. Also known as red loam.

redeposition [GEOL] Formation into a new accumulation, such as the deposition of sedimentary material that has been picked up and moved (reworked) from the place of its original deposition, or the solution and reprecipitation of mineral matter.

Redeye [ORD] A man-transportable guided missile, fired from the shoulder, designed to provide combat troops with the capability of destroying low-flying aircraft.

red giant star [ASTRON] A star whose evolution has progressed to the point where hydrogen core burning has been completed, the helium core has become denser and hotter than originally, and the envelope has expanded to perhaps 100 times its initial size.

red glass [MATER] Soda-zinc glass to which small amounts of cadmium and selenium are added.

red gum *See* eucalyptus gum.

red-hardness [MET] In reference to high-speed steel and other cutting tool materials, the property of being hard enough to cut metals even when heated to a dull-red color.

red hematite *See* hematite.

redia [INV ZOO] A larva produced within the miracidial sporocyst of certain digenetic trematodes which may give rise to daughter rediae or to cercariae.

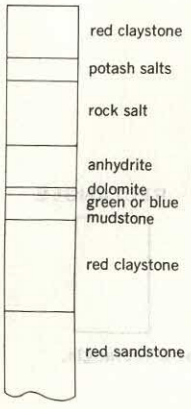
redifferentiation [PHYSIO] The return to a position of greater specialization in actual and potential functions, or the developing of new characteristics.

redingtonite [MINERAL] $(Fe,Mg,Ni)(Cr,Al)_2(SO_4)_4 \cdot 22H_2O$ A pale-purple mineral composed of a hydrous sulfate of iron, magnesium, nickel, chromium, and aluminum.

red iron ore *See* hematite.

redistribution [ELECTR] The alteration of charges on an area

REDBED



Sequence of redbeds with evaporites, characteristic of Permian formations in southwestern United States.

of a storage surface by secondary electrons from any other area of the surface in a charge storage tube or television camera tube.

red lake C pigment [MATER] An organic azo pigment; made by coupling the diazonium salt (barium or sodium) of *ortho*-chloro-*meta*-toluidine-*para*-sulfonic acid with β-naphthol; used to color inks, plastics, and rubbers.

red lead *See* lead tetroxide.

red lead ore *See* crocoite.

red leaf [PL PATH] Any of various nonparasitic plant diseases marked by red discoloration of the foliage.

Redler conveyor [MECH ENG] A conveyor in which material is dragged through a duct by skeletonized or U-shaped impellers which move the material in which they are submerged because the resistance to slip through the element is greater than the drag against the walls of the duct.

red liquor *See* mordant rouge.

red loam *See* red earth.

red magnetism [GEOPHYS] The magnetism of the north-seeking end of a freely suspended magnet; this is the magnetism of the earth's south magnetic pole.

red mercury sulfide *See* mercuric sulfide.

red metal [MET] A copper matte having a copper content of about 48%.

red mud [GEOL] A reddish terrigenous mud composed of up to 25% calcium carbonate and deriving its color from the presence of ferric oxide; found on the sea floor near deserts and near the mouths of large rivers. [MET] An iron oxide–rich residue obtained in purifying bauxite in the Bayer process.

red nitric acid [MATER] A type of liquid bipropellant with boiling point 104°F (40°C), freezing point −80°F (−62°C), and density 1.58 grams per milliliter; used to supply power for jet propulsion.

red nucleus [HISTOL] A mass of reticular fibers in the gray matter of the tegmentum of the mesencephalon of higher vertebrates; it receives fibers from the cerebellum of the opposite side and gives rise to rubrospinal tract fibers of the opposite side.

red ocher *See* ferric oxide; hematite.

red oil [MATER] **1.** Any intermediate-grade petroleum lubricating oil that is red in color by transmitted light; includes so-called red engine oils, bearing oils, and machinery oils. **2.** *See* oleic acid.

red orpiment *See* realgar.

redox cell [ELEC] Cell designed to convert the energy of reactants to electrical energy; an intermediate reductant, in the form of liquid electrolyte, reacts at the anode in a conventional manner; it is then regenerated by reaction with a primary fuel.

red oxide of zinc *See* zincite.

redoxomorphic stage [GEOCHEM] The earliest geochemical stage of diagenesis characterized by mineral changes primarily due to oxidation and reduction reactions.

redox potential [PHYS CHEM] Voltage difference at an inert electrode immersed in a reversible oxidation-reduction system; measurement of the state of oxidation of the system. Also known as oxidation-reduction potential.

redox potentiometry [ANALY CHEM] Use of neutral electrode probes to measure the solution potential developed as the result of an oxidation or reduction reaction.

redox system [CHEM] A chemical system in which reduction and oxidation (redox) reactions occur.

redox titration [ANALY CHEM] A titration characterized by the transfer of electrons from one substance to another (from the reductant to the oxidant) with the end point determined colorimetrically or potentiometrically.

red phosphorus [CHEM] An allotropic form of the element phosphorus; violet-red, amorphous powder subliming at 416°C, igniting at 260°; insoluble in all solvents; nonpoisonous.

red potassium chromate *See* potassium dichromate.

red potassium prussiate *See* potassium ferricyanide.

red precipitate *See* mercuric oxide.

red prussiate of potash *See* potassium ferricyanide.

red prussiate of soda *See* sodium ferricyanide.

red ring [PL PATH] A nematode disease of the coconut palm caused by *Aphelenchoides cocophilus* and marked by the appearance of red rings in the stem cross section.

red rock *See* redbed.

red rot [PL PATH] Any of several fungus diseases of plants characterized by red patches on stems or leaves; common in sugarcane, sisal, and various evergreen and deciduous trees.

red rust [PL PATH] An algal disease of certain subtropical plants, such as tea and citrus, caused by the green alga *Cephaleuros virescens* and characterized by a rusty appearance of the leaves or twigs.

redruthite *See* chalcocite.

Red Sea [GEOGR] A body of water that lies between Arabia and northeastern Africa, about 2000 kilometers long, 300 kilometers wide, and a maximum depth of about 2300 meters.

red sector [NAV] A sector of the circle of visibility of a navigational light in which a red light is exhibited; such sectors are designated by their limiting bearing, as observed at some point other than the light; red sectors are often located so that they warn of danger to vessels.

red shift [ASTROPHYS] A systematic displacement toward longer wavelengths of lines in the spectra of distant galaxies and also of the continuous portion of the spectrum; increases with distance from the observer. Also known as Hubble effect.

red snow [HYD] A snow surface of reddish color caused by the presence within it of certain microscopic algae or particles of red dust.

Red Spot [ASTRON] A semipermanent marking of the planet Jupiter; some fluctuations in visibility exist; it does not rotate uniformly with the planet, indicating that it is a disturbance of Jupiter's atmosphere.

red stele [PL PATH] A fatal fungus disease of strawberries caused by *Phytophthora fragariae* invading the roots, producing redness and rotting with consequent dwarfing and wilting of the plant.

redstone [PETR] **1.** Any reddish sedimentary rock, such as red-colored sandstone. **2.** A deep-red, clayey sandstone or siltstone representing a floodplain micaceous arkose.

Redstone [ORD] A U.S. Army surface-to-surface guided missile having inertial guidance and a range of about 350 miles (560 kilometers); can carry either conventional or nuclear warheads; used to extend and supplement the range and firepower of artillery.

red stripe [PL PATH] **1.** A fungus decay of timber caused by *Polyporus vaporarius* and characterized by reddish streaks. **2.** A bacterial disease of sugarcane caused by *Xanthomonas rubrilineans* and characterized by red streaks in the young leaves, followed by invasion of the vascular system.

red-tape operation *See* bookkeeping operation.

red tetrazolium *See* triphenyltetrazolium chloride.

red thermit [MET] Thermit made with red iron oxide.

red thread [PL PATH] A fungus disease of turf grasses caused by *Cortecium fuciforme* and characterized by the appearance of red stromata on the pinkish hyphal threads.

red tide [BIOL] A reddish discoloration of coastal surface waters due to concentrations of certain toxin-producing dinoflagellates. Also known as red water.

redtop grass [BOT] One of the bent grasses, *Agrostis alba* and its relatives, which grow on a wide variety of soils; it is a perennial, spreads slowly by rootstocks, and has top growth 2–3 feet (60–90 centimeters) tall.

reduce [ORD] To clear a stoppage in a weapon.

reduced Compton wavelength [QUANT MECH] The Compton wavelength of a particle divided by 2π.

reduced crude [MATER] In petroleum refining, a residual product remaining after removal by distillation or other means of an appreciable quantity of the more volatile components of crude oil.

reduced equation of state [PHYS] An equation relating the reduced pressure, reduced volume, and reduced temperature of a substance.

reduced form [MATH] A lambda expression that has no subexpressions of the form $(\lambda x MA)$, where M and A are lambda expressions, is said to be in reduced form.

reduced latitude [GEOD] The angle at the center of a sphere tangent to a reference ellipsoid along the equator, between the plane of the equator and a radius to the point intersected on the sphere by a straight line perpendicular to the plane of the equator. Also known as geometric latitude; parametric latitude.

reduced frequency *See* Strouhal number.

reduced mass [MECH] For a system of two particles with masses m_1 and m_2 exerting equal and opposite forces on each other and subject to no external forces, the reduced mass is the mass m such that the motion of either particle, with respect to the other as origin, is the same as the motion with respect to a fixed origin of a single particle with mass m acted on by the same force; it is given by $m = m_1 m_2/(m_1 + m_2)$.

reduced nickel [MET] Nickel obtained by the precipitation

RED SPOT

Appearance of Red Spot on Jupiter in 1933. *(After L. Rudaux)*

of nickel hydroxide or nickel carbonate onto kieselguhr, then reducing the precipitate by heating it with hydrogen.

reduced oil [MATER] **1.** Oil rerun in a vacuum or steam still from an oil that is already distilled. **2.** An oil made from the residue in the still after another product has been distilled from the crude oil.

reduced-order controller [CONT SYS] A control algorithm in which certain modes of the structure to be controlled are ignored, to enable control commands to be computed with sufficient rapidity.

reduced pressure [METEOROL] The calculated value of atmospheric pressure at mean sea level or some other specified level, as derived (reduced) from station pressure or actual pressure; thus, sea level pressure is nearly always a reduced pressure. [THERMO] The ratio of the pressure of a substance to its critical pressure.

reduced-pressure distillation *See* vacuum distillation.

reduced proper motion [ASTRON] The proper motion of a star expressed as a linear velocity.

reduced property *See* reduced value.

reduced telemetry [COMMUN] Raw telemetry data transformed into a usable form.

reduced temperature [THERMO] The ratio of the temperature of a substance to its critical temperature.

reduced value [THERMO] The actual value of a quantity divided by the value of that quantity at the critical point. Also known as reduced property.

reduced viscosity [ENG] In plastics processing, the ratio of the specific viscosity to concentration.

reduced volume [THERMO] The ratio of the specific volume of a substance to its critical volume.

reducer [BIOL] *See* decomposer. [CHEM] *See* reducing agent. [DES ENG] A fitting having a larger size at one end than at the other and threaded inside, unless specifically flanged or for some special joint. [GRAPHICS] A solution capable of dissolving silver; used to cut down the contrast or density of a negative or positive image.

reducible configuration [MATH] A graph such that the four-colorability of any planar graph containing the configuration can be deduced from the four-colorability of planar graphs with fewer vertices.

reducible polynomial [MATH] A polynomial relative to some field which can be written as the product of two polynomials of degree at least 1.

reducing agent [CHEM] Also known as reducer. **1.** A material that adds hydrogen to an element or compound. **2.** A material that adds an electron to an element or compound, that is, decreases the positiveness of its valence.

reducing atmosphere [CHEM] An atmosphere of hydrogen (or other substance that readily provides electrons) surrounding a chemical reaction or physical device; the effect is the opposite to that of an oxidizing atmosphere.

reducing coupling [ENG] A coupling used to connect a smaller pipe to a larger one.

reducing flame [CHEM] A flame having excess fuel and being capable of chemical reduction, such as extracting oxygen from a metallic oxide.

reducing glass [OPTICS] A double-concave lens that reduces the apparent size of objects viewed through it; used by illustrators and painters to create an artificial sense of distance from their work.

reducing sugar [ORG CHEM] Any of the sugars that because of their free or potentially free aldehyde or ketone groups, possess the property of readily reducing alkaline solutions of many metallic salts such as copper, silver, or bismuth; examples are the monosaccharides and most of the disaccharides, including maltose and lactose.

reductant [MET] Coal or other reducing materials introduced in a smelting process to remove oxygen from ores or concentrates.

reduction [CHEM] **1.** Reaction of hydrogen with another substance. **2.** Chemical reaction in which an element gains an electron (has a decrease in positive valence). [COMPUT SCI] Any process by which data are condensed, such as changing the encoding to eliminate redundancy, extracting significant details from the data and eliminating the rest, or choosing every second or third out of the totality of available points. [GEOL] The lowering of a land surface by erosion. [NAV] The process of substituting for an observed value one derived therefrom, as the calculation of the corresponding meridian altitude from an observation of a celestial body near the meridian, or the derivation from a celestial observation of the information needed for establishing a line of position.

reduction cell [CHEM] A vessel in which aqueous solutions of salts or fused salts are reduced electrolytically.

reduction gear [MECH ENG] A gear train which lowers the output speed.

reduction index [GEOL] The rate of wear of a sedimentary particle subject to abrasion, expressed as the difference between the mean weight of the particle before and after transport divided by the product of mean weight before transport and the distance traveled.

reduction of area [MET] In tensile testing, the percentage of decrease in cross-sectional area of a specimen at the point of rupture.

reduction of observations [SCI TECH] The mathematical analysis of data from observations to obtain the desired information.

reduction of star places [ASTRON] The computation of mean places of stars from observations of their apparent places.

reduction of tidal current [OCEANOGR] The processing of observed tidal current data to obtain mean values of tidal current constants.

reduction of tides [OCEANOGR] The processing of observed tidal data to obtain mean values of tidal constants.

reduction potential [PHYS CHEM] The potential drop involved in the reduction of a positively charged ion to a neutral form or to a less highly charged ion, or of a neutral atom to a negatively charged ion.

reduction ratio [ENG] Ratio of feed size to product size for a mill (crushing or grinding) operation; measured by lump and sieve sizes.

reduction roll [MET] A roller used to reduce the thickness of a piece of metal.

reduction rule [COMPUT SCI] The principal computation rule in the lambda calculus; it states that an operator-operand combination of the form $(\lambda x MA)$ may be transformed into the expression $S^x_A M$, obtained by substituting the lambda expression A for all instances of x in M, provided there are no conflicts of variable names. Also known as beta rule.

reduction sequence [MATH] A sequence of applications of the reduction rule to a lambda expression.

reduction sphere [GEOL] A white, leached, spheroidal mass produced in a reddish or brownish sandstone by a localized reducing environment, commonly surrounding an organic nucleus or a pebble and ranging in size from a poorly defined speck to a large, perfect sphere more than 25 centimeters in diameter.

reduction to sea level [ENG] The application of a correction to a measured horizontal length on the earth's surface, at any altitude, to reduce it to its projected or corresponding length at sea level.

reduction to the meridian [NAV] The process of applying a correction to an altitude observed when a body is near the celestial meridian of the observer, for the purpose of finding the altitude at meridian transit.

reduction to the sun [ASTRON] In the spectroscopic determination of a star's radial motion referred to the sun, the correction that is needed to be applied to the observed radial velocity of the star to compensate for the motion of the earth with respect to the sun.

reductive grammar [COMPUT SCI] A set of syntactic rules for the analysis of strings to determine whether the strings exist in a language.

redundancy [COMPUT SCI] Any deliberate duplication or partial duplication of circuitry or information to decrease the probability of a system or communication failure. [COMMUN] In the transmission of information, the fraction of the gross information content of a message which can be eliminated without loss of essential information. [GEN] **1.** Repetition of a specified deoxyribonucleic acid sequence in a nucleus. **2.** Multiplicity of codons for individual amino acids. [MATH] A repetitive statement. [MECH] A statically indeterminate structure.

redundancy bit [COMPUT SCI] A bit which carries no information but which is added to the information-carrying bits of a character or stream of characters to determine their accuracy.

redundancy check [COMPUT SCI] A forbidden-combination check that uses redundant digits called check digits to detect errors made by a computer.

redundant bombing [ORD] The bombing of targets which

have already been made inoperative or useless by attacks on other targets upon which the former are dependent for their operation.

redundant character [COMPUT SCI] A character specifically added to a group of characters to ensure conformity with certain rules which can be used to detect computer malfunction.

redundant code [COMMUN] A code which uses more signal elements than are needed to represent the information it transmits.

redundant digit [COMPUT SCI] Digit that is not necessary for an actual computation but serves to reveal a malfunction in a digital computer.

redundant system *See* duplexed system.

Reduviidae [INV ZOO] The single family of the hemipteran group Reduvioidea; nearly all have a stridulatory furrow on the prosternum, ocelli are generally present, and the beak is three-segmented.

Reduvioidea [INV ZOO] The assassin bugs or conenose bugs, a monofamilial group of hemipteran insects in the subdivision Geocorisae.

reduzate [GEOL] A sediment accumulated under reducing conditions and consequently rich in organic carbon and in iron sulfide minerals; examples are coal and black shale.

red water [BIOL] *See* red tide. [VET MED] **1.** A babesiasis of cattle characterized by hematuria following release of hemoglobin by destruction of erythrocytes. **2.** A chronic disease of cattle attributed to oxalic acid in the forage; hematuria results from escape of blood from lesions in the bladder. **3.** An acute febrile septicemia of cattle, and sometimes horses, sheep, and swine, caused by the bacterium *Clostridium hemolyticum* and characterized by hemoglobinuria and sometimes intestinal hemorrhages.

red white dwarf star [ASTRON] A star type that is considered an anomaly; these are objects 10,000 times fainter than the sun, with surface temperature below 4000 K so that surface radiation has cooled the star at an unexpectedly rapid rate.

redwood [BOT] *Sequoia sempervirens*. An evergreen tree of the pine family; it is the tallest tree in the Americas, attaining 350 feet (107 meters); its soft heartwood is a valuable building material.

Redwood viscometer [ENG] A standard British-type viscometer in which the viscosity is determined by the time, in seconds, required for a certain quantity of liquid to pass out through the orifice under given conditions; used for determining viscosities of petroleum oils.

Red-Yellow Podzolic soil [GEOL] Any of a group of acidic, zonal soils having a leached, light-colored surface layer and a subsoil containing clay and oxides of aluminum and iron, varying in color from red to yellowish red to a bright yellowish brown.

red zinc ore *See* zincite.

reed [BOT] Any tall grass characterized by a slender jointed stem. [ENG] A thin bar of metal, wood, or cane that is clamped at one end and set into transverse elastic vibration, usually by wind pressure; used to generate sound in musical instruments, and as a frequency standard, as in a vibrating-reed frequency meter. [TEXT] A comblike loom attachment that keeps the warp yarns apart and pushes the filling thread against the woven fabric.

reed frequency meter *See* vibrating-reed frequency meter.

Reed-Frost theory [MED] An epidemiological theory concerned with acute communicable diseases, based on an expression of the probable number of cases at time $T + 1$ in terms of known facts at time T.

reed horn [ENG ACOUS] A horn that produces sound by means of a steel reed vibrated by air under pressure.

reeding [ENG] Corrugating or serrating, as in coining or embossing.

reedmergnerite [MINERAL] $NaBSi_3O_8$ A colorless, triclinic borate mineral that represents the boron analog of albite.

reed pen [GRAPHICS] A short section of bamboo sharpened to a point at both ends and used for ink drawing.

reed relay [ELECTROMAG] A relay having contacts mounted on magnetic reeds scaled into a length of small glass tubing; an actuating coil is wound around the tubing or wound on an auxiliary ferrite-core structure, to provide the magnetic field required for relay operation.

Reed-Sternberg cell [PATH] An anaplastic reticuloendothelial cell constituting the characteristic microscopic feature of Hodgkin's disease.

reed switch [ELECTROMAG] A switch that has contacts mounted on ferromagnetic reeds sealed in a glass tube, designed for actuation by an external magnetic field. Also known as magnetic reed switch.

reef [GEOL] **1.** A ridge- or moundlike layered sedimentary rock structure built almost exclusively by organisms. **2.** An offshore chain or range of rock or sand at or near the surface of the water. [MIN ENG] A major ore trend or ore body.

reef breccia [PETR] A rock formed by the consolidation of limestone fragments broken off from a reef by the action of waves and tides.

reef cap [GEOL] A deposit of fossil-reef material overlying or covering an island or mountain.

reef cluster [GEOL] A group of reefs of wholly or partly contemporaneous growth, found within a circumscribed area or geologic province.

reef complex [GEOL] The solid reef core and the heterogeneous and contiguous fragmentary material derived from it by abrasion.

reef conglomerate *See* reef talus.

reef core [GEOL] The rock mass constructed in place, and within the rigid growth lattice formed by reef-building organisms.

reef debris *See* reef detritus.

reef detritus [GEOL] Fragmental material derived from the erosion of an organic reef. Also known as reef debris.

reef edge [GEOL] The seaward margin of the reef flat, commonly marked by surge channels.

reef flank [GEOL] The part of the reef that surrounds, interfingers with, and locally overlies the reef core, often indicated by massive or medium beds of reef talus dipping steeply away from the reef core.

reef flat [GEOL] A flat expanse of dead reef rock which is partly or entirely dry at low tide; shallow pools, potholes, gullies, and patches of coral debris and sand are features of the reef flat.

reef front [GEOL] The upper part of the outer or seaward slope of a reef, extending to the reef edge from above the dwindle point of abundant living coral and coralline algae.

reef-front terrace [GEOL] A shelflike or benchlike eroded surface, sometimes veneered with organic growth, sloping seaward to a depth of 8–15 fathoms (15–27 meters).

reef knoll [GEOL] **1.** A bioherm or fossil coral reef represented by a small, prominent, rounded hill, up to 100 meters high, consisting of resistant reef material, being either a local exhumation of an original reef feature or a feature produced by later erosion. **2.** A present-day reef in the form of a knoll; a small reef patch developed locally and built upward rather than outward.

reef limestone [PETR] Limestone composed of the remains of sedentary organisms such as sponges, and of sediment-binding organic constituents such as calcareous algae. Also known as coral rock.

reef milk [GEOL] A very-fine-grained matrix material of the back-reef facies, consisting of white, opaque microcrystalline calcite derived from abrasion of the reef core and reef flank.

reef patch [GEOL] A single large colony of coral formed independently on a shelf at depths less than 70 meters in the lagoon of a barrier reef or of an atoll. Also known as patch reef.

reef pinnacle [GEOL] A small, isolated spire of rock or coral, especially a small reef patch.

reef rock [PETR] A hard, unstratified rock composed of sand, shale, and the calcareous remains of sedentary organisms, cemented by calcium carbonate.

reef segment [GEOL] A part of an organic reef lying between passes, gaps, or channels.

reef slope [GEOL] The face of a reef rising from the sea floor.

reef talus [GEOL] Massive inclined strata composed of reef detritus deposited along the seaward margin of an organic reef. Also known as reef conglomerate.

reef tufa [GEOL] Drusy, prismatic, fibrous calcite deposited directly from supersaturated water upon the void-filling internal sediment of the calcite mudstone of a reef knoll.

reef wall [GEOL] A wall-like upgrowth of living coral and the skeletal remains of dead coral and other reef-building organisms, which reaches an intertidal level and acts as a partial barrier between adjacent environments.

reel [DES ENG] A revolving spool-shaped device used for storage of hose, rope, cable, wire, magnetic tape, and so on.

reel and bead *See* bead and reel.

REDWOOD

Leaves and cone of redwood (*Sequoia sempervirens*).

reeled silk [TEXT] The raw silk strand made by combining several filaments from separate cocoons.

reel locomotive [MIN ENG] A trolley locomotive with a wire-rope reel for drawing mining cars out of rooms.

reel number [COMPUT SCI] A number identifying a reel of magnetic tape in a file containing more than one reel and indicating the order in which the reel is to be used. Also known as reel sequence number.

reel sequence number *See* reel number.

reenterable [COMPUT SCI] The attribute that describes a program or routine which can be shared by several tasks concurrently.

reentrant [ENG] Having one or more sections directed inward, as in certain types of cavity resonators. [GEOL] A prominent, generally angular indentation into a coastline.

reentrant angle [CRYSTAL] The angle between two plane surfaces on a crystalline solid, in which the external angle is less than 180°.

reentrant program [COMPUT SCI] A subprogram in a time-sharing or multiprogramming system that can be shared by a number of users, and can therefore be applied to a given user program, interrupted and applied to some other user program, and then reentered at the point of interruption of the original user program.

reentrant winding [ELEC] Armature winding that returns to its starting point, thus forming a closed circuit.

reentry [AERO ENG] The event when a spacecraft or other object comes back into the sensible atmosphere after being in space.

reentry angle [AERO ENG] That angle of the reentry body trajectory and the sensible atmosphere at which the body reenters the atmosphere.

reentry body [AERO ENG] That part of a space vehicle that reenters the atmosphere after flight above the sensible atmosphere.

reentry nose cone [AERO ENG] A nose cone designed especially for reentry, consists of one or more chambers protected by a heat sink.

reentry system [COMPUT SCI] In character recognition, a system in which the input data to be read are printed by the computer with which the reader is associated. [ORD] That portion of a ballistic missile or spacecraft designed to place one or more reentry vehicles on terminal trajectories so as to arrive at selected targets; penetration aids, spacers, deployment modules, and associated programming, and control and sensing devices are included in the reentry system.

reentry trajectory [AERO ENG] That part of a rocket's trajectory that begins at reentry and ends at the target or at the surface.

reentry vehicle [AERO ENG] Any payload-carrying vehicle designed to leave the sensible atmosphere and then return through it to earth.

reentry window [AERO ENG] The area, at the limits of the earth's atmosphere, through which a spacecraft in a given trajectory can pass to accomplish a successful reentry for a landing in a desired region.

reepithelialization [MED] **1.** Regrowth of epithelial tissue over a denuded surface. **2.** Surgical placement of a graft of epithelium over a denuded surface.

reeve [NAV ARCH] **1.** To pass a rope through a hole or opening in a block, ringbolt, or similar device. **2.** To fasten something by passing a rope or line through or around it.

reevesite [MINERAL] $Ni_6Fe_2(OH)_{16}(CO_3)\cdot 4H_2O$ Hydrous oxide mineral known only in meteorites.

refer [ORD] To bring the gunsights on a chosen aiming point without moving an artillery piece which has been laid for direction.

reference acoustic pressure [ACOUS] Magnitude of any complex sound that will produce a sound-level meter reading equal to that produced by a sound pressure of 0.0002 dyne per square centimeter at 1000 hertz. Also known as reference sound level.

reference address *See* address constant.

reference angle [ELECTROMAG] Angle formed between the center line of a radar beam as it strikes a reflecting surface and the perpendicular drawn to that reflecting surface.

reference block [COMPUT SCI] A block within a computer program governing a numerically controlled machine which has enough data to allow resumption of the program following an interruption.

reference burst *See* color burst.

reference craft [NAV] A craft to which relative movement of other craft is referred; on a maneuvering board this first craft is placed at the center; it may be a reference ship, reference aircraft, or reference vehicle, depending upon the type of circumstances.

reference dimension [DES ENG] In dimensioning, a dimension without tolerance used for informational purposes only, and does not govern machining operations in any way; it is indicated on a drawing by writing the abbreviation REF directly following or under the dimension.

reference dipole [ELECTROMAG] Straight half-wave dipole tuned and matched for a given frequency, and used as a unit of comparison in antenna measurement work.

reference direction [NAV] A direction used as a basis for comparison of other directions.

reference electrode [PHYS CHEM] A nonpolarizable electrode that generates highly reproducible potentials; used for pH measurements and polarographic analyses; examples are the calomel electrode, silver-silver chloride electrode, and mercury pool.

reference ellipsoid [MAP] A reference surface used to represent the size and shape of the earth for cartography.

reference frame *See* frame of reference.

reference frequency [COMMUN] Frequency having a fixed and specified position with respect to the assigned frequency.

reference fuel [MATER] One of the standardized laboratory engine fuels, blends of which are used to determine the octane numbers of motor gasoline and the cetane numbers of diesel fuels.

reference level [ENG] *See* datum plane. [ENG ACOUS] The level used as a basis of comparison when designating the level of an audio-frequency signal in decibels or volume units. Also known as reference signal level. [OCEANOGR] **1.** Level of no motion. **2.** A level for which current is known; allows determination of absolute current from relative current.

reference line [NAV] A line from which angular or linear measurements are reckoned. Also known as datum line.

reference listing [COMPUT SCI] A list printed by a compiler showing the instructions in the machine language program which it generates.

reference locality [GEOL] A locality containing a reference section, established to supplement the type locality.

reference lot [IND ENG] A lot of select components, used as a standard.

reference mark [ELECTR] One of the marks used in a design of a printed circuit, giving scale dimensions and indicating the edges of the circuit board.

reference noise [ELECTR] The power level used as a basis of comparison when designating noise power expressed in decibels above reference noise (dBrn); the reference usually used is 10^{-12} watt (−90 decibels above 1 milliwatt; dBm) at 1000 hertz.

reference plane [ENG] *See* datum plane. [MECH ENG] The plane containing the axis and the cutting point of a cutter.

reference point [NAV] A point to which other points, lines, and so forth are referred, usually in terms of distance or direction, or both.

reference range [ENG] Range obtained from the radar coverage indicator for a given penetrating aircraft.

reference record [COMPUT SCI] Output of a compiler that lists the operations and their positions in the final specific routine and contains information describing the segmentation and storage allocation of the routine.

reference rounds [ORD] Ammunition rounds of known performance which are fired during ballistic tests of ammunition for comparative purposes.

reference section [GEOL] A rock section, or group of sections, designated to supplement the type section, or sometimes to supplant it (as where the type section is no longer exposed), and to afford a standard for correlation for a certain part of the geologic column.

reference seismometer [ENG] In seismic prospecting, a detector placed to record successive shots under similar conditions, to permit overall time comparisons.

reference signal level *See* reference level.

reference sound level *See* reference acoustic pressure.

reference spheroid [GEOD] An ellipsoid of revolution, chosen to approximate the geoid, on which geodetic triangulation measurements are computed.

reference station [OCEANOGR] **1.** A place for which independent daily predictions are given in the tide or current tables,

from which corresponding predictions are obtained for other stations by means of differences or factors. **2.** A place for which tidal or tidal current constants have been determined and which is used as a standard for the comparison of simultaneous observations at a second station. Also known as standard station.

reference supply [ELECTR] A source of stable and constant voltage, such as a Zener diode, used in analog computers, regulated power supplies, and a variety of other circuits for comparison with a varying voltage.

reference time [COMPUT SCI] The instant near the beginning of switching that is chosen as a reference for time measurements in a digital computer.

reference tone [ENG] Stable tone of known frequency continuously recorded on one track of multitrack signal recordings and intermittently recorded on signal track recordings by the collection equipment operators for subsequent use by the data analysts as a frequency reference.

reference vehicle [NAV] A vehicle serving as a reference craft.

reference voltage [ELEC] An alternating-current voltage used for comparison, usually to identify an in-phase or out-of-phase condition in an ac circuit.

reference volume [ACOUS] The audio volume level that gives a reading of 0 VU (volume units) on a standard volume indicator; the sensitivity of the volume indicator is adjusted so reference volume or 0 is read when the instrument is connected across a 600-ohm resistance to which is delivered a power of 1 milliwatt at 1000 hertz.

reference white level [ELECTR] In television, the level at the point of observation corresponding to the specified maximum excursion of the picture signal in the white direction.

referencing [ENG] The process of measuring the horizontal (or slope) distances and directions from a survey station to nearby landmarks, reference marks, and other permanent objects which can be used in the recovery or relocation of the station.

referred pain [MED] Pain felt in one area but originating in another area.

refine [ENG] To free from impurities, as the separation of petroleum, ores, or chemical mixtures into their component parts.

refined kerosine *See* deodorized kerosine.

refined lard [FOOD ENG] A purified lard, produced by removing with alkali the free fatty acids, coloring matter, and mucilaginous gums from rendered lard.

refined lecithin *See* lecithin.

refined oil [MATER] A class of petroleum oil used for home lighting and cooking purposes. Also known as burning oil.

refined paraffin wax [MATER] A grade of paraffin wax; a hard, crystalline hydrocarbon wax derived from mixed-base or paraffin-base crude oils.

refined tar [MATER] A tar from which water has been extracted by evaporation or distillation.

refinery [CHEM ENG] System of process units used to convert crude petroleum into fuels, lubricants, and other petroleum-derived products. [MET] System of process units used to convert nonferrous-metal ores into pure metals, such as copper or zinc.

refinery gas [MATER] Gas produced in petroleum refineries by cracking, reforming, and other processes; principally methane, ethane, ethylene, butanes, and butylenes.

refining temperature [MET] The temperature just above the transformation range employed in the heat treatment of steel in order to refine grain size.

reflectance [COMPUT SCI] In optical character recognition, the relative brightness of the inked area that forms the printed or handwritten character; distinguished from background reflectance and brightness. [ELEC] *See* reflection factor. [PHYS] *See* reflectivity.

reflectance spectrophotometry [SPECT] Measurement of the ratio of spectral radiant flux reflected from a light-diffusing specimen to that reflected from a light-diffusing standard substituted for the specimen.

reflected binary [COMPUT SCI] A particular form of gray code which is constructed according to the following rule: Let the first 2^N code patterns be given, for any N greater than 1; the next 2^N code patterns are derived by changing the $(N+1)$-th bit from the right from 0 to 1 and repeating the original 2^N patterns in reverse order in the N rightmost positions. Also known as reflected code.

reflected buried structure [GEOL] The distortion of surface beds that reflect a similar structural distortion of underlying formations.

reflected code *See* reflected binary.

reflected impedance [ELEC] **1.** Impedance value that appears to exist across the primary of a transformer due to current flowing in the secondary. **2.** Impedance which appears at the input terminals as a result of the characteristics of the impedance at the output terminals.

reflected pressure [PHYS] The pressure from an explosion (especially an airburst bomb), which is reflected back from a solid object or surface, rather than dissipated in the air.

reflected ray [PHYS] A ray extending outward from a point of reflection.

reflected resistance [ELEC] Resistance value that appears to exist across the primary of a transformer when a resistive load is across the secondary.

reflected signal indicator [ENG] Pen recorder which presents the radar signals within frequency gates; these recordings enable the operator to determine that an airborne object has penetrated the Doppler link and its direction of penetration.

reflected ultraviolet method [GRAPHICS] A method of ultraviolet photography in which an ultraviolet source is used and the camera is provided with a filter which permits only reflected ultraviolet light to reach the film.

reflected wave [PHYS] A wave reflected from a surface, discontinuity, or junction of two different media, such as the sky wave in radio, the echo wave from a target in radar, or the wave that travels back to the source end of a mismatched transmission line.

reflecting antenna [ELECTROMAG] An antenna used to achieve greater directivity or desired radiation patterns, in which a dipole, slot, or horn radiates toward a larger reflector which shapes the radiated wave to produce the desired pattern; the reflector may consist of one or two plane sheets, a parabolic or paraboloidal sheet, or a paraboloidal horn.

reflecting curtain [ELECTROMAG] A vertical array of half-wave reflecting antennas, generally used one quarter-wavelength behind a radiating curtain of dipoles to form a high-gain antenna.

reflecting electrode [ELECTR] Tabular outer electrode or the repeller plate in a microwave oscillator tube, corresponding in construction but not in function to the plate of an ordinary triode; used for generating extremely high frequencies.

reflecting galvanometer *See* mirror galvanometer.

reflecting grating [ELECTROMAG] Arrangement of wires placed in a waveguide to reflect one desired wave while allowing one or more other waves to pass freely.

reflecting microscope [OPTICS] A microscope whose objective is composed of two mirrors, one convex and the other concave; its imaging properties are independent of the wavelength of light, allowing it to be used even for infrared and ultraviolet radiation.

reflecting nephoscope *See* mirror nephoscope.

reflecting prism [OPTICS] A prism used in place of a mirror for deviating light, usually designed so that there is no dispersion of light; the light undergoes at least one internal reflection.

reflecting sign [CIV ENG] A road sign painted with reflective paint so as to be easily visible in the light of a headlamp.

reflecting spectrograph [OPTICS] A solar spectrograph in which the collimator and camera element are long-focus concave mirrors.

reflecting telescope [OPTICS] A telescope in which a concave parabolic mirror gathers light and forms a real image of an object. Also known as reflector telescope.

reflection [PHYS] The return of waves or particles from surfaces on which they are incident.

reflection altimeter *See* radio altimeter.

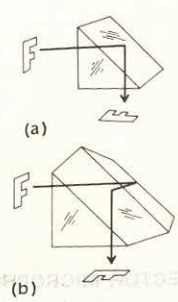
reflection angle *See* angle of reflection.

reflection coefficient [PHYS] The ratio of the amplitude of a wave reflected from a surface to the amplitude of the incident wave. Also known as coefficient of reflection.

reflection copy [GRAPHICS] Material for illustrations, such as photographs, which must be viewed or photographed by surface-reflected light.

reflection density [OPTICS] The common logarithm of the ratio of the luminance of a nonabsorbing perfect diffuser to that of the surface under consideration, when both are illuminated at

REFLECTING PRISM



Examples of reflecting prism. *(a)* Right-angle. *(b)* Amici roof prism.

an angle of 45° to the normal and the direction of measurement is perpendicular to the surface.

reflection diffraction [PHYS] Type of electron diffraction analysis in which the electron beam grazes the sample surface.

reflection factor [ELEC] Ratio of the load current that is delivered to a particular load when the impedances are mismatched to that delivered under conditions of matched impedances. Also known as mismatch factor; reflectance; transition factor.

reflection goniometer [ENG] A goniometer that measures the angles between crystal faces by reflection of a parallel beam of light from successive crystal faces.

reflection HEED [PHYS] A form of HEED (high-energy electron diffraction) in which electrons are incident at small angles (0.5–4°) to the surface, and are reflected from it. Abbreviated RHEED.

reflection law [PHYS] When a wave, such as electromagnetic radiation or sound, is reflected from a surface in a sharply defined direction, the reflected and incident waves travel in directions that make the same angle with a perpendicular to the surface and lie in a common plane with it. Also known as law of reflection.

reflection lobes [ELECTROMAG] Three-dimensional sections of the radiation pattern of a directional antenna, such as a radar antenna, which results from reflection of radiation from the earth's surface.

reflection loss [ELEC] **1.** Reciprocal of the ratio, expressed in decibels, of the scalar values of the volt-amperes delivered to the load to the volt-amperes that would be delivered to a load of the same impedance as the source. **2.** Apparent transmission loss of a line which results from a portion of the energy being reflected toward the source due to a discontinuity in the transmission line.

reflection nebula [ASTRON] A type of bright diffuse nebula composed mainly of cosmic dust; it is visible because of starlight from nearby stars or nebula stars that is scattered by the dust particles.

reflection plane *See* plane of mirror symmetry; plane of reflection.

reflection plotter [NAV] An attachment fitted to a radar plan position indicator which provides a plotting surface permitting plotting without parallax errors; any mark made on the plotting surface will be reflected on the radarscope directly below. Also known as plotting head.

reflection profile [ENG] A seismic profile obtained by designing the spread geometry in such a manner as to enhance reflected energy.

reflection rainbow [OPTICS] A rainbow formed by light rays which have been reflected from an extended water surface; not to be confused with a reflected rainbow whose image may be seen in a still body of water.

reflection seismology *See* reflection shooting.

reflection shooting [ENG] A procedure in seismic prospecting based on the measurement of the travel times of waves which, originating from an artificially produced disturbance, have been reflected to detectors from subsurface boundaries separating media of different elastic-wave velocities; used primarily for oil and gas exploration. Also known as reflection seismology.

reflection spectrum [PHYS] The spectrum seen when incident waves are selectively altered by a reflecting substance.

reflection survey [ENG] Study of the presence, depth, and configuration of underground formations; a ground-level explosive charge (shot) generates vibratory energy (seismic rays) that strike formation interfaces and are reflected back to ground-level sensors. Also known as seismic survey.

reflection twin [CRYSTAL] A crystal twin whose symmetry is formed by an apparent mirror image across a plane.

reflection x-ray microscopy [ENG] A technique for producing enlarged images in which a beam of x-rays is successively reflected at grazing incidence, from two crossed cylindrical surfaces; resolution is about 0.5–1 micrometer.

reflective coating *See* mirror coating.

reflective code *See* Gray code.

reflective insulation [MATER] An insulating material used to retard the flow of heat by reflecting heat radiation; usually made of aluminum foil or sheets, although coated steel sheets, aluminized paper, gold and silver surfaces, and refractory metals at higher temperatures are also used.

reflectivity [PHYS] The ratio of the energy carried by a wave which is reflected from a surface to the energy carried by the wave which is incident on the surface. Also known as reflectance.

reflectometer [ELECTROMAG] *See* microwave reflectometer. [ENG] A photoelectric instrument for measuring the optical reflectance of a reflecting surface.

reflector [ELECTR] *See* repeller. [ELECTROMAG] **1.** A single rod, system of rods, metal screen, or metal sheet used behind an antenna to increase its directivity. **2.** A metal sheet or screen used as a mirror to change the direction of a microwave radio beam. [GEOPHYS] A layer or horizon that reflects seismic waves. [NUCLEO] A layer of water, graphite, beryllium, or other scattering material placed around the core of a nuclear reactor to reduce the loss of neutrons. Also known as tamper.

reflector characteristic [ELECTR] A chart of power output and frequency deviation of a reflex klystron as a function of reflector voltage.

reflector compass [NAV] A magnetic compass in which the image of the compass card is viewed by direct reflection in a mirror adjacent to the helmsman's position.

reflector microphone [ENG ACOUS] A highly directional microphone which has a surface that reflects the rays of impinging sound from a given direction to a common point at which a microphone is located, and the sound waves in the speech-frequency range are in phase at the microphone.

reflector plate [OPTICS] A transparent mirror in a computing gunsight, or in some types of optical gunsights and bombsights, that reflects the reticle image or images to the eye.

reflector satellite [AERO ENG] Satellite so designed that radio or other waves bounce off its surface.

reflector telescope *See* reflecting telescope.

reflector voltage [ELECTR] Voltage between the reflector electrode and the cathode in a reflex klystron.

reflex [PHYSIO] An automatic response mediated by the nervous system.

reflex angle [MATH] An angle greater than 180° and less then 360°.

reflex arc [ANAT] A chain of neurons composing the anatomical substrate or pathway of the unconditioned reflex.

reflex baffle [ENG ACOUS] A loudspeaker baffle in which a portion of the radiation from the rear of the diaphragm is propagated forward after controlled shift of phase or other modification, to increase the overall radiation in some portion of the audio-frequency spectrum. Also known as vented baffle.

reflex bladder [MED] A urinary bladder controlled only by the simple reflex arc through the sacral part of the spinal cord.

reflex bunching [ELECTR] The bunching that occurs in an electron stream which has been made to reverse its direction in the drift space.

reflex camera [OPTICS] A camera in which a mirror is used to reflect a full-size image of a scene on a ground glass so that the composition and focus may be judged.

reflex circuit [ELECTR] A circuit in which the signal is amplified twice by the same amplifier tube or tubes, once as an intermediate-frequency signal before detection and once as an audio-frequency signal after detection.

reflexed [BOT] Turned abruptly backward.

reflex epilepsy [MED] Seizure brought on by specific sensory stimuli.

reflexive relation [MATH] A relation among the elements of a set such that every element stands in that relation to itself.

reflex klystron [ELECTR] A single-cavity klystron in which the electron beam is reflected back through the cavity resonator by a repelling electrode having a negative voltage; used as a microwave oscillator. Also known as reflex oscillator.

reflex oscillator *See* reflex klystron.

reflex printing [GRAPHICS] A method of copying in which a sensitized film or paper is placed face down on the material to be copied; light passes through the base of the sensitized material and is reflected from the light and dark portions of the original back to the emulsion.

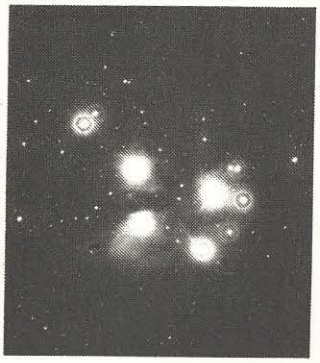
reflex sight [OPTICS] An optical or computing sight that reflects a reticle image or images onto a reflector plate for superimposition on the target by the eye.

reflex time [PHYSIO] The time required for the nerve impulse to travel in a reflex action.

reflowing [ENG] Melting and resolidifying an electrodeposited or other type coating.

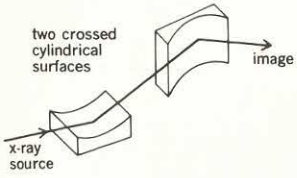
reflux [CHEM ENG] In a chemical process, that part of the

REFLECTION NEBULA



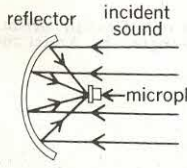
Reflection nebula associated with the Pleiades star cluster. Clouds with brushlike pattern are composed of small solid particles about 1 micrometer in diameter. Radiation pressure is probably responsible for streaked appearance of the clouds. Photographed with the Curtis-Schmidt telescope, University of Michigan.

REFLECTION X-RAY MICROSCOPY



Principle for reflection x-ray microscopy.

REFLECTOR MICROPHONE



Schematic view of a parabolic reflector microphone.

product stream that may be returned to the process to assist in giving increased conversion or recovery, as in distillation or liquid-liquid extraction.

reflux condenser [CHEM ENG] An auxiliary vessel for a distillation column that constantly condenses vapors and returns liquid to the column.

reflux ratio [CHEM ENG] The quantity of liquid reflux per unit quantity of product removed from the process unit, such as a distillation tower or extraction column.

refolding [GEOL] A process by which folds of one generation are subjected to and stressed by a force of different orientation.

refoliation [GEOL] A foliation that is subsequent to and oriented differently from an earlier foliation.

reforestation [FOR] Establishment of a new forest by seeding or planting seedlings on forest land that fails to restock naturally.

reformate [MATER] Product from a petroleum-refinery reforming process; types are thermal reformate (from thermal reforming), and cat or catalytic reformate (from catalytic reforming).

Reformatsky reaction [ORG CHEM] A condensation-type reaction between ketones and α-bromoaliphatic acids in the presence of zinc or magnesium, such as $R_2CO + BrCH_2 \cdot COOR + Zn \rightarrow (ZnO \cdot HBr) + R_2C(OH)CH_2COOR$.

reformed gas [MATER] A lower-thermal-value fuel gas made by pyrolysis and steam decomposition of high-thermal-value natural and refinery gases.

reformed gasoline [MATER] Gasoline made by a catalytic or thermal reforming process.

reforming [CHEM ENG] The thermal or catalytic conversion of petroleum naphtha into more volatile products of higher octane number; represents the total effect of numerous simultaneous reactions, such as cracking, polymerization, dehydrogenation and isomerization.

refracted ray [PHYS] A ray extending onward from the point of refraction.

refracted wave [PHYS] That portion of an incident wave which travels from one medium into a second medium. Also known as transmitted wave.

refracting sphere [OPTICS] A sphere made of a transparent material whose index of refraction differs from the medium surrounding it, so that it refracts light passing through it.

refracting telescope [OPTICS] A telescope in which a lens gathers light and forms a real image of an object. Also known as refractor telescope.

refraction [PHYS] The change of direction of propagation of any wave, such as an electromagnetic or sound wave, when it passes from one medium to another in which the wave velocity is different, or when there is a spatial variation in a medium's wave velocity.

refraction coefficient [OCEANOGR] The square root of the ratio of the spacing between orthogonals in deep water and in shallow water; it is a measure of the effect of refraction in diminishing wave height by increasing the length of the wave crest.

refraction diagram [OCEANOGR] A chart showing the position of the wave crests at a particular time, or the successive positions of a particular wave crest as it moves shoreward.

refraction error [NAV] An error due to refraction, particularly such an error in a sextant altitude, due to atmospheric refraction.

refraction loss [ELECTROMAG] Portion of the transmission loss that is due to refraction resulting from nonuniformity of the medium.

refraction process [ENG] Seismic (reflection) survey in which the distance between the explosive shot and the receivers (sensors) is large with respect to the depths to be mapped.

refraction profile [ENG] A seismic profile obtained by designing the spread geometry in such a manner as to enhance refracted energy.

refraction shooting [ENG] A type of seismic shooting based on the measurement of seismic energy as a function of time after the shot and of distance from the shot, by determining the arrival times of seismic waves which have traveled nearly parallel to the bedding in high-velocity layers, in order to map the depth of such layers.

refractive index *See* index of refraction.

refractive modulus *See* modified index of refraction.

refractivity [ELECTROMAG] **1.** Some quantitative measure of refraction, usually a measure of the index of refraction. **2.** The index of refraction minus 1.

refractometer [ENG] An instrument used to measure the index of refraction of a substance in any one of several ways, such as measurement of the refraction produced by a prism, measurement of the critical angle, observation of an interference pattern produced by passing light through the substance, and measurement of the substance's dielectric constant.

refractometry [OPTICS] The measurement of the index of refraction of a substance; it is an important tool in analytical chemistry.

refractor telescope *See* refracting telescope.

refractory [MATER] **1.** A material of high melting point. **2.** The property of resisting heat. [MED] Not readily yielding to treatment.

refractory cement [MATER] Any of a variety of mixtures, such as fireclay-silica-ganister mixture, or fireclay mixed with crushed brick, or fireclay and silica sand, with a refractory range of 2600–2800°F (1412–1523°C); used for furnace and oven linings and for fillers.

refractory clay [MATER] Clay with a melting point above 1600°C; used to make firebrick and linings for furnaces and reactors.

refractory coating [MATER] A coating composed of a refractory material.

refractory concrete [MATER] Heat-resistant concrete made with high-alumina or calcium-aluminate cement and a refractory aggregate.

refractory enamel [MATER] An enamel for coating and protecting metals against attack by hot gases.

refractory hard metals [CHEM] True chemical compounds composed of two or more metals in the crystalline form, and having a very high melting point and high hardness.

refractory-lined firebox boiler [MECH ENG] A horizontal fire-tube boiler with the front portion of the shell located over a refractory furnace; the rear of the shell contains the first-pass tubes, and the second-pass tubes are located in the upper part of the shell.

refractory metal [MET] A metal or alloy that is heat-resistant, having a high melting point.

refractory sand [MATER] Sand used for refractory which is capable of resisting high temperatures.

refracture index *See* index of refraction.

refrangible [PHYS] Capable of being refracted.

refrigerant [MATER] A substance that by undergoing a change in phase (liquid to gas, gas to liquid) releases or absorbs a large latent heat in relation to its volume, and thus effects a considerable cooling effect; examples are ammonia, sulfur dioxide, ethyl or methyl chloride (these are no longer widely used), and the fluorocarbons, such as Freon, Ucon, and Genetron.

refrigerant 23 *See* fluoroform.

refrigerated truck [MECH ENG] An insulated truck equipped and used as a refrigerator to transport fresh perishable or frozen products.

refrigeration [MECH ENG] The cooling of a space or substance below the environmental temperature.

refrigeration condenser [MECH ENG] A vapor condenser in a refrigeration system, where the refrigerant is liquefied and discharges its heat to the environment.

refrigeration cycle [THERMO] A sequence of thermodynamic processes whereby heat is withdrawn from a cold body and expelled to a hot body.

refrigeration oil [MATER] A mineral oil with all moisture and wax removed; used for lubricating refrigerating machinery.

refrigeration system [MECH ENG] A closed-flow system in which a refrigerant is compressed, condensed, and expanded to produce cooling at a lower temperature level and rejection of heat at a higher temperature level for the purpose of extracting heat from a controlled space.

refrigerator [MECH ENG] An insulated, cooled compartment.

refrigerator car [MECH ENG] An insulated freight car constructed and used as a refrigerator.

Refsum's disease [MED] A familial disorder characterized by visual disturbances, ataxia, neuritic changes, and cardiac damage, associated with high blood level of phytinic acid.

Refugian [GEOL] A North American stage of geologic time in the Eocene and Oligocene, above the Fresnian and below the Zemorrian.

refugium [ECOL] An area which has escaped the great changes which occurred in the region as a whole, often providing conditions in which relic colonies can survive; for example, a driftless area which has escaped the effects of glaciation because it projected above the ice.

reg [GEOL] An extensive, nearly level, low desert plain from which fine sand has been removed by wind, leaving a sheet of coarse, smoothly angular, wind-polished gravel and small stones lying on an alluvial soil, strongly cemented by mineralized solutions to form a broad desert pavement. Also known as gravel desert.

RE galaxy [ASTRON] A type of ring galaxy that consists of a single, relatively empty, ringlike structure, without any prominent condensation or nucleus.

regelation [HYD] Phenomenon in which ice melts at the bottom of droplets of highly concentrated saline solution that are trapped in ice which has frozen over polar waters, and freezes at the top of these droplets, so that the droplets move downward through the ice, leaving it hard and clear. [THERMO] Phenomenon in which ice (or any substance which expands upon freezing) melts under intense pressure and freezes again when this pressure is removed; accounts for phenomena such as the slippery nature of ice and the motion of glaciers.

regenerant [CHEM] A solution whose purpose is to restore the activity of an ion-exchange bed.

regenerate [CHEM ENG] To clean of impurities and make reusable as in regeneration of a catalytic cracking catalyst by burning off carbon residue, regeneration of clay adsorbent by washing free of adherents, or regeneration of a filtration system by cleaning off the filter media. [ELECTR] **1.** To restore pulses to their original shape. **2.** To restore stored information to its original form in a storage tube in order to counteract fading and disturbances.

regenerated cellulose [MATER] **1.** Rayon in which the raw cellulose is changed physically but not chemically, such as viscose, cuprammonium, and nitrocellulose rayons. **2.** A transparent cellulose plastic material made by mixing cellulose xanthate with a dilute sodium hydroxide solution to form a viscose.

regenerated fiber [TEXT] Textile fiber produced by dissolving a natural material (such as cellulose), then regenerating it by extrusion and precipitation, as with viscose.

regenerated flow control [HYD] Control of glacial drainage by modified morainal features, resulting from the readvance of a previously stagnant glacier.

regenerated glacier [HYD] A glacier that becomes active after a period of stagnation.

regeneration [BIOL] The replacement by an organism of tissues or organs which have been lost or severely injured. [CONT SYS] *See* positive feedback. [ELECTR] Replacement or restoration of charges in a charge storage tube to overcome decay effects, including loss of charge by reading. [NUCLEO] Restoration of contaminated nuclear fuel to a usable condition.

regenerative air heater [MECH ENG] An air heater in which the heat-transferring members are alternately exposed to heat-surrendering gases and to air.

regenerative amplifier [ELECTR] An amplifier that uses positive feedback to give increased gain and selectivity.

regenerative braking [ELEC] A system of dynamic braking in which the electric drive motors are used as generators and return the kinetic energy of the motor armature and load to the electric supply system.

regenerative chaff [ORD] An electronic countermeasure technique in which a missile or powered decoy sequentially ejects clouds of chaff.

regenerative clipper [ELECTR] A type of monostable multivibrator which is a modification of a Schmitt trigger; used for pulse generation.

regenerative cooling [ENG] A method of cooling gases in which compressed gas is cooled by allowing it to expand through a nozzle, and the cooled expanded gas then passes through a heat exchanger where it further cools the incoming compressed gas.

regenerative cycle [MECH ENG] *See* bleeding cycle. [THERMO] An engine cycle in which low-grade heat that would ordinarily be lost is used to improve the cyclic efficiency.

regenerative detector [ELECTR] A vacuum-tube detector circuit in which radio-frequency energy is fed back from the anode circuit to the grid circuit to give positive feedback at the carrier frequency, thereby increasing the amplification and sensitivity of the circuit.

regenerative divider [ELECTR] Frequency divider which employs modulation, amplification, and selective feedback to produce the output wave.

regenerative engine [AERO ENG] **1.** A jet or rocket engine that utilizes the heat of combustion to preheat air or fuel entering the combustion chamber. **2.** Specifically, to a type of rocket engine in which one of the propellants is used to cool the engine by passing through a jacket prior to combustion.

regenerative feedback *See* positive feedback.

regenerative fuel cell [ELEC] A fuel cell in which the reaction product is processed to regenerate the reactants.

regenerative pump [MECH ENG] Rotating-vane device that uses a combination of mechanical impulse and centrifugal force to produce high liquid heads at low volumes. Also known as turbine pump.

regenerative reactor [NUCLEO] A nuclear reactor that produces fissionable material in addition to energy; when loaded with fissionable uranium-235, and nonfissionable uranium-238 or thorium, it converts the uranium-238 or thorium into fissionable materials which are then used as fuel in the core of the reactor.

regenerative read [COMPUT SCI] A read operation in which the data are automatically written back into the locations from which they are taken.

regenerative receiver [ELECTR] A radio receiver that uses a regenerative detector.

regenerative repeater [COMMUN] A repeater that performs pulse regeneration to restore the original shape of a pulse signal used in teletypewriter and other code circuits.

regenerative storage [COMPUT SCI] A storage unit, such as a delay line or storage tube, in which the stored data must be constantly read and restored to prevent decay or loss.

regenerative track [COMPUT SCI] Track on a magnetic drum with interconnected reading and writing heads; information stored on these tracks is continuously read from the drum, transmitted round a closed circuit, and recorded back on the drum; consequently, access times to these data are short; operation is analogous to that of the acoustic delay line.

regenerator [CHEM ENG] Device or system used to return a system or a component of it to full strength in a chemical process; examples are a furnace to burn carbon from a catalyst, a tower to wash impurities from clay, and a flush system to clean off the surface of filter media. [MECH ENG] A device used with hot-air engines and gas-burning furnaces which transfers heat from effluent gases to incoming air or gas.

Reggeism [PARTIC PHYS] An attempt to account for and correlate hadron resonances and the asymptotic behavior of scattering amplitudes of hadrons at high energies in terms of Regge poles.

Regge pole [PARTIC PHYS] A pole singularity of a scattering amplitude in the complex angular momentum plane; the scattering amplitude is formed by continuing partial wave amplitudes from positive integer values of the angular momentum to the complex plane.

Regge recurrence [PARTIC PHYS] One of a sequence of hadrons, with successive hadrons increasing by one in spin and also increasing in mass, but with the same values of other quantum numbers, except for parity, charge parity and G parity, which alternate in sign; it is believed that they are rotationally excited states of a particle, and that they alternate between two Regge trajectories.

Regge trajectory [PARTIC PHYS] **1.** The path followed by a Regge pole in the complex angular momentum plane as the center-of-mass energy is varied. **2.** The relationship between the spin and mass of a sequence of hadrons, with successive hadrons increasing by 2 in spin and also increasing in mass, but with the same values of other quantum numbers; the hadrons are thought to correspond to energies at which a Regge pole passes near positive integers (or half integers).

regime [GEOL] The existence in a stream channel of a balance between erosion and deposition over a period of years.

regimen [HYD] **1.** The behavior characteristic of the total amount of water involved in a drainage basin. **2.** Analysis of the total volume of water involved with a lake, including water losses and gains, over a period of a year. **3.** The flow characteristics of a stream with respect to velocity, volume, form of and alterations in the channel, capacity to transport sediment, and the amount of material supplied for transportation.

region [COMPUT SCI] A group of machine addresses which refer to a base address. [MATH] *See* domain.

regional address [COMPUT SCI] An address of a machine instruction within a series of consecutive addresses; for example, R18 and R19 are specific addresses in an R region of N consecutive addresses, where all addresses must be named.

regional anatomy [ANAT] The detailed study of the anatomy of a part or region of the body of an animal.

regional anesthesia *See* regional block anesthesia.

regional block anesthesia [MED] Anesthesia limited to a part or region of the body by injecting an anesthetic around the nerves that supply the area to block conduction from the area. Also known as regional anesthesia.

regional center [COMMUN] A long-distance telephone office which has the highest rank in routing of telephone calls; there are 12 such offices in the United States and Canada.

regional dip [GEOL] The nearly uniform and generally low-angle inclination of strata over a wide area. Also known as normal dip.

regional enteritis [MED] Inflammation of isolated segments of the small intestine, with involved parts becoming thick-walled and rigid. Also known as regional enterocolitis; regional ileitis.

regional enterocolitis *See* regional enteritis.

regional forecast *See* area forecast.

regional geology [GEOL] The geology of a large region, treated from the viewpoint of the spatial distribution and position of stratigraphic units, structural features, and surface forms.

regional ileitis *See* regional enteritis.

regional metamorphism [GEOL] Geological metamorphism affecting an extensive area.

regional metasomatism [GEOL] Metasomatic processes affecting extensive areas whereby the introduced material may be derived from partial fusion of the rocks involved from deep-seated magmatic sources.

regional migration [PETRO ENG] Horizontal movement of gas or oil through a reservoir formation as a result of artificial pressure differences created by withdrawal of gas or oil at well sites.

regional slope [GEOL] The generally uniform dip of rock strata or land surface over a wide area.

regional slope deposit [GEOL] A sedimentary deposit widely distributed as a thin sheet over a regional slope.

regional snowline [HYD] The level above which, averaged over a large area, snow accumulation exceeds ablation year after year.

regional unconformity [GEOL] A continuous unconformity extending throughout a wide region that may be nearly continentwide, and usually represents a long period of time.

region of escape *See* exosphere.

regioselective [ORG CHEM] Pertaining to a chemical reaction which favors a single positional or structural isomer, leading to its yield being greater than that of the other products in the reaction. Sometimes known as regiospecific.

regiospecific [ORG CHEM] **1.** A term applied to a chemical reaction which has the potential of yielding two or more structural isomers, but actually produces only one. **2.** *See* regioselective.

register [COMPUT SCI] The computer hardware for storing one machine word. [COMMUN] Part of an automatic switching telephone system which receives and stores the dialing pulses which control the further operations necessary in establishing a telephone connection. [ENG] Also known as registration. **1.** The accurate matching or superimposition of two or more images, such as the three color images on the screen of a color television receiver, or the patterns on opposite sides of a printed circuit board, or the colors of a design on a printed sheet. **2.** The alignment of positions relative to a specified reference or coordinate, such as hole alignments in punched cards, or positioning of images in an optical character recognition device. [GRAPHICS] **1.** Exact agreement in the position of printed material on both sides of a sheet or on all pages of a book or pamphlet. **2.** Exact overprinting of colorplates, or other subsequent plates, so that all printed detail is correctly combined; proper color overprinting is checked by the exact superimposition of the register marks that are printed with each color run. **3.** In flat preparation, the exact agreement between color or complementary flats. [MECH ENG] The portion of a burner which directs the flow of air used in the combustion process. [ORD] **1.** To adjust fire on a visible point, called a check point, and compute accurate adjusted data so that firing data for later targets may be computed with reference to that check point. **2.** To adjust fire on several selected points in order that they may serve later as auxiliary targets.

register breadth [NAV ARCH] The breadth of beam dimension of a vessel; specifically, the breadth of the broadest part on the outside of the vessel.

register capacity [COMPUT SCI] The upper and lower limits of the numbers which may be processed in a register.

register circuit [ELECTR] A switching circuit with memory elements that can store from a few to millions of bits of coded information; when needed, the information can be taken from the circuit in the same code as the input, or in a different code.

register control [CONT SYS] Automatic control of the position of a printed design with respect to reference marks or some other part of the design, as in photoelectric register control.

register glass [GRAPHICS] In photography, a glass plate at the focal plane, against which the film is pressed during exposure.

register length [COMPUT SCI] The number of digits, characters, or bits, which a register can store.

register mark [ENG] A mark or line printed or otherwise impressed on a web of material for use as a reference to maintain register. [GRAPHICS] One of a set of marks, usually cross-shaped, placed on the margin of colored originals to be photographed for colorplates; the marks are used to register the images when the plates are printed.

register-sender [COMMUN] A unit that generates and recognizes the supervisory signals to make connection to a circuit switching unit.

register ton *See* ton.

register tonnage [NAV ARCH] The available gross tonnage of a ship for transport of freight or passengers.

registration *See* register.

registration fire [ORD] That artillery fire delivered to obtain corrections for increasing the accuracy of subsequent artillery.

registration mark [COMPUT SCI] In character recognition, a preprinted indication of the relative position and direction of various elements of the source document to be recognized.

regmagenesis [GEOL] Diastrophic production of regional strike-slip displacements.

regmaglypt [GEOL] Any of various small, well-defined, characteristic indentations or pits on the surface of meteorites, frequently resembling the imprints of fingertips in soft clay. Also known as pezograph; piezoglypt.

regolith [GEOL] The layer rock or blanket of unconsolidated rocky debris of any thickness that overlies bedrock and forms the surface of the land. Also known as mantle rock.

Regosol [GEOL] In early United States soil classification systems, one of an azonal group of soils that form from deep, unconsolidated deposits and have no definite genetic horizons.

regradation [GEOL] The formation by a stream of a new profile of equilibrium, as when the former profile, after gradation, became deformed by crustal movements.

regression [GEOL] The theory that some rivers have sources on the rainier sides of mountain ranges and gradually erode backward until the ranges are cut through. [OCEANOGR] Retreat of the sea from land areas, and the consequent evidence of such withdrawal. [PSYCH] A mental state and a mode of adjustment to difficult and unpleasant situations, characterized by behavior of a type that had been satisfying and appropriate at an earlier stage of development but which no longer befits the age and social status of the individual. [STAT] Given two stochastically dependent random variables, regression functions measure the mean expectation of one relative to the other.

regression conglomerate [GEOL] A coarse sedimentary deposit formed during a retreat (recession) of the sea.

regression of nodes [ASTRON] The westward movement of the nodes of the moon's orbit; one cycle is completed in about 18.6 years.

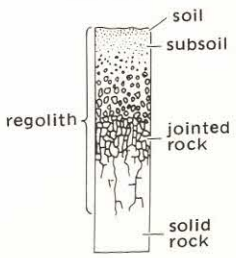
regressive overlap *See* offlap.

regressive reef [GEOL] One of a series of nearshore reefs or bioherms superimposed on basinal deposits during the rising of a landmass or the lowering of the sea level, and developed more or less parallel to the shore.

regressive ripple [GEOL] An asymmetric ripple mark formed by a current but oriented in a direction opposite to the general movement of current flow (steep side facing upcurrent).

regressive sediment [GEOL] A sediment deposited during

REGOLITH



Cross section through the regolith showing the components.

the retreat or withdrawal of water from a land area or during the emergence of the land, and characterized by an offlap arrangement.

regret criterion *See* Savage principle.

regula falsi [MATH] A method of calculating an unknown quantity by first making an estimate and then using this and the properties of the unknown to obtain it. Also known as rule of false position.

regular [BOT] Having radial symmetry, referring to a flower. [ELECTROMAG] In a definite direction; not diffused or scattered, when applied to reflection, refraction, or transmission.

regular connective tissue [HISTOL] Connective tissue in which the fibers are arranged in definite patterns.

regular dodecahedron [CRYSTAL] *See* pyritohedron. [MATH] A regular polyhedron of twelve faces.

regular element [IND ENG] An element that occurs with a fixed frequency in each work cycle. Also known as repetitive element.

regular expression [COMPUT SCI] A formal description of a language acceptable by a finite automaton or for the behavior of a sequential switching circuit.

regular function [MATH] An analytic function of one or more complex variables.

Regularia [INV ZOO] An assemblage of echinoids in which the anus and periproct lie within the apical system; not considered a valid taxon.

regular icosahedron [MATH] A 20-sided regular polyhedron, having five equilateral triangles meeting at each face.

regularization [QUANT MECH] A formal procedure used to eliminate ambiguities which arise in evaluating certain integrals in a quantized field theory; corresponds to adding extra fields whose masses are allowed to approach infinity.

regular lay [DES ENG] The lay of a wire rope in which the wires in the strand are twisted in directions opposite to the direction of the strands.

regular-lay left twist *See* left-laid.

regular motor oil [MATER] A petroleum lubricating oil suitable for use in internal combustion engines under normal operating conditions.

regular octahedron [MATH] A regular polyhedron of eight faces.

regular polygon [MATH] A polygon with congruent sides and congruent interior angles.

regular polyhedron [MATH] A polyhedron all of whose faces are regular polygons, and whose polyhedral angles are congruent.

regular reflection *See* specular reflection.

regular reflector *See* specular reflector.

regular representation [MATH] A regular representation of a finite group is an isomorphism of it with a group of permutations.

regular sampling [MIN ENG] The continuous or intermittent sampling of the same coal or coke received regularly at a given point.

regular tetrahedron [MATH] A regular polyhedron of four faces.

regular topological space [MATH] A topological space where any point and a closed set not containing it can be enclosed in disjoint open sets.

regular variable star [ASTRON] A variable star whose variation in brightness is repeated with a uniform period and light curve from one cycle to the next.

regular ventilating circuit [MIN ENG] All places in the mine through which there is a positive natural flow of air.

regulated item [ORD] An item requiring special control in handling distribution and use, because of its highly technical, costly, or hazardous nature, or because of some other specified concern.

regulated power supply [ELEC] A power supply containing means for maintaining essentially constant output voltage or output current under changing load conditions.

regulated split [MIN ENG] In mine ventilation, a split where it is necessary to control the volumes in certain low-resistance splits to cause air to flow into the splits of high resistance.

regulating reservoir [CIV ENG] A reservoir that regulates the flow in a water-distributing system.

regulating rod [NUCLEO] A control rod intended to accomplish rapid, fine, and sometimes continuous adjustment of the reactivity of a nuclear reactor; it usually can move much more rapidly than a shim rod but makes a smaller change in reactivity.

regulating station [ORD] A command agency established to control all movements of personnel and supplies into or out of a given area.

regulating system *See* automatic control system.

regulating transformer [ELEC] Transformer having one or more windings excited from the system circuit or a separate source and one or more windings connected in series with the system circuit for adjusting the voltage or the phase relation or both in steps, usually without interrupting the load.

regulating winding [ELEC] Of a transformer, a supplementary winding connected in series with one of the main windings to change the ratio of transformation or the phase relation, or both, between circuits.

regulation [CONT SYS] The process of holding constant a quantity such as speed, temperature, voltage, or position by means of an electronic or other system that automatically corrects errors by feeding back into the system the condition being regulated; regulation thus is based on feedback, whereas control is not. [ELEC] The change in output voltage that occurs between no load and full load in a transformer, generator, or other source. [ELECTR] The difference between the maximum and minimum tube voltage drops within a specified range of anode current in a gas tube.

regulation of constant-current transformer [ELEC] Maximum departure of the secondary current from its rated value expressed in percent of the rated secondary current, with rated primary voltage and frequency applied.

regulative egg [EMBRYO] An egg in which unfertilized fragments develop as complete, normal individuals.

regulator [CONT SYS] A device that maintains a desired quantity at a predetermined value or varies it according to a predetermined plan. [MIN ENG] An opening in a wall or door in the return airway of a district to increase its resistance and reduce the volume of air flowing.

regulator gene [GEN] A gene that controls the rate of transcription of one or more other genes.

regulator pin [HOROL] A pin in a watch to adjust the effective length of the hairspring and thereby adjust the speed of the watch.

regulator problem *See* linear regulator problem.

regulatory control function [CONT SYS] That level in the functional decomposition of a large-scale control system which interfaces with the plant to implement the decisions of the optimizing controller inputted in the form of set points, desired trajectories, or targets. Also known as direct control function.

regulon [GEN] In bacteria, a system of genes, formed by one or more operons, which regulate enzyme induction and whose activity is controlled by a single repressor substance.

regulus [MET] Impure metal formed beneath the slag during smelting or reduction of ores.

Regulus [ASTRON] A star of stellar magnitude 1.34, about 67 light-years from the sun, spectral classification B8, in the constellation Leo; the star α Leonis. Also known as Little Ruler. [ORD] A United States surface-to-surface, jet-powered guided missile; it is equipped with a nuclear warhead, and launched from a surfaced submarine or a cruiser.

regur [GEOL] One of a group of calcareous, intrazonal soils characterized by dark color and a high clay content. Also known as black cotton soil.

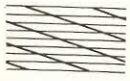
regurgitation [MED] Reverse circulation of blood in the heart due to defective functioning of the valves. [PHYSIO] Bringing back into the mouth undigested food from the stomach.

rehabilitation [MED] The restoration to a disabled individual of maximum independence commensurate with his limitations by developing his residual capacity.

rehabilitation engineering [ENG] The use of technology to make disabled persons as independent as possible by providing assistive devices to compensate for disability.

Rehbock weir formula [FL MECH] Probably the most accurate formula for the rate of flow of water over a rectangular suppressed weir; it includes a correction for the velocity of approach for normal, or fairly uniform, velocity distribution in the upstream channel; the formula is $Q = [3.234 + 5.347/(320h - 3) + 0.428h/d_0]lh^{3/2}$, where Q is the flow rate in cubic feet per second, l is the width of the weir in feet, h is the head of water above the crest of the weir in feet, and d_0 is the height of weir or depth of water at zero head in feet.

REGULAR LAY



Drawing of wire rope wound in regular lay showing position of the wires and strands.

reheating [THERMO] A process in which the gas or steam is reheated after a partial isentropic expansion to reduce moisture content. Also known as resuperheating.

Rehfuss tube [MED] A stomach tube designed for the removal of specimens of gastric contents for analysis after administration of a test meal.

Reichenbach's lamellae [GEOL] Thin, platy inclusions of foreign minerals (usually troilite, schreibersite, or chromite) occurring in iron meteorites.

Reichert-Meissl number [ANALY CHEM] An indicator of the measure of volatile soluble fatty acids.

Reichert's cartilage [EMBRYO] The cartilage of the hyoid arch in a human embryo.

Reich process [CHEM ENG] Process to purify carbon dioxide produced during fermentation; organic impurities in the gas are oxidized and absorbed, then the gas is dehydrated.

Reid equation [PETRO ENG] Relation of gas-well flow rate to pitot-tube readings for various impact pressures.

Reid vapor pressure [ENG] A measure in a test bomb of the vapor pressure in pounds pressure of a sample of gasoline at 100°F (37.8°C).

Reighardiidae [INV ZOO] A monotypic family of arthropods in the order Cephalobaenida; the posterior end of the organism is rounded, without lobes, and the cuticula is covered with minute spines.

reimbursed time [COMPUT SCI] The machine time which is loaned or rented to another office, agency, or organization, either on a reimbursable or reciprocal basis.

Reimer-Tiemann reaction [ORG CHEM] Formation of phenolic aldehydes by reaction of phenol with chloroform in the presence of an alkali.

Reinartz crystal oscillator [ELECTR] Crystal-controlled vacuum-tube oscillator in which the crystal current is kept low by placing a resonant circuit in the cathode lead tuned to half the crystal frequency; the resulting regeneration at the crystal frequency improves efficiency without the danger of uncontrollable oscillation at other frequencies.

reindeer [VERT ZOO] *Rangifer tarandus*. A migratory ruminant of the deer family (Cervidae) which inhabits the Arctic region and has a circumpolar distribution; characteristically, both sexes have antlers and are brown with yellow-white areas on the neck and chest.

Reinecke's salt [ANALY CHEM] $[(NH_3)_2Cr(SCN)_4]NH_4 \cdot H_2O$ A reagent to detect mercury (gives a red color or a precipitate), and to isolate organic bases (such as proline or histidine).

reinfection [MED] A second infection after recovery from an earlier infection with the same kind of organism.

reinforced beam [CIV ENG] A concrete beam provided with steel bars for longitudinal tension reinforcement and sometimes compression reinforcement and reinforcement against diagonal tension.

reinforced brickwork [CIV ENG] Brickwork strengthened by expanded metal, steel-wire mesh, hoop iron, or thin rods embedded in the bed joints.

reinforced column [CIV ENG] **1.** A long concrete column reinforced with longitudinal bars with ties or circular spirals. **2.** A composite column. **3.** A combination column.

reinforced concrete [CIV ENG] Concrete containing reinforcing steel rods or wire mesh.

reinforced molding compound [MATER] A compound containing polymer or resin and a reinforcing filler, supplied in the form of ready-to-use material as distinguished from premix.

reinforced plastic [MATER] High-strength filled plastic product used for mechanical, construction, and electrical products, automotive components, and ablative coatings; filling can be whiskers of glass, metal, boron, or other materials.

reinforcement [CIV ENG] Strengthening concrete, plaster, or mortar by embedding steel rods or wire mesh in it.

reinforcement conditioning *See* operant conditioning.

reinforcement of weld [MET] Weld metal that extends beyond the surface or plane of the weld joint.

reinforcing bars [CIV ENG] Steel rods that are embedded in building materials such as concrete for reinforcement.

Reinsch test [ANALY CHEM] A test for detecting small amounts of arsenic, silver, bismuth, and mercury.

reinserter *See* direct-current restorer.

reinsertion of carrier [ELECTR] Combining a locally generated carrier signal in a receiver with an incoming signal of the suppressed carrier type.

Reissner's membrane [ANAT] The anterior wall of the cochlear duct, which separates the cochlear duct from the scala vestibuli. Also known as vestibular membrane of Reissner.

Reiter's syndrome [MED] The triad of idiopathic nongonococcal urethritis, conjunctivitis, and subacute or chronic polyarthritis. Also known as arthritis urethritica; idiopathic arthritis; infectious uroarthritis.

rejected recharge [HYD] Water that infiltrates to the water table but then discharges because the aquifer is full and cannot accept it.

rejection band Also known as stop band. [ELECTROMAG] The band of frequencies below the cutoff frequency in a uniconductor waveguide. [PHYS] A frequency band within which electrical or electromagnetic signals are reduced or eliminated.

rejector *See* trap.

rejector circuit *See* band-stop filter.

rejector impedance *See* dynamic impedance.

rejuvenate [GEOL] The act of stimulating a stream to renewed erosive activity either by tectonic uplift or a drop in sea level.

rejuvenated fault scarp [GEOL] A fault scarp revived by renewed movement along an old fault line after partial dissection or erosion of the initial scarp. Also known as revived fault scarp.

rejuvenated stream [HYD] A mature stream that has reverted to the behavior and forms of a more youthful stage due to rejuvenation, usually as a result of uplift. Also known as revived stream.

rejuvenated water [HYD] Water returned to the terrestrial water supply as a result of compaction and metamorphism.

rejuvenation [GEOL] The restoration of youthful features to fluvial landscapes; the renewal of youthful vigor to low-gradient streams is usually caused by regional upwarping of broad areas formerly at or near base level. [HYD] **1.** The stimulation of a stream to renew erosive activity. **2.** The renewal of youthful vigor in a mature stream.

rejuvenation head *See* knickpoint.

rel [ELECTROMAG] Unit of reluctance equal to 1 ampere-turn per magnetic line of force.

relapsing fever [MED] An acute infectious disease caused by various species of the spirochete *Borrelia*, characterized by episodes of fever which subside spontaneously and recur over a period of weeks.

relation [MATH] A set of ordered pairs.

relational operator [COMPUT SCI] An operator that indicates whether one quantity is equal to, greater than, or less than another.

relational system [COMPUT SCI] A type of data-base management system in which data are represented as tables in which no entry contains more that one value.

relative [NAV] **1.** Related to a moving point; apparent, as relative wind, relative movement. **2.** Related to or measured from the heading, as relative bearing.

relative address [COMPUT SCI] The numerical difference between a desired address and a known reference address.

relative age [GEOL] The geologic age of a fossil organism, rock, or geologic feature or event defined relative to other organisms, rocks, or features or events rather than in terms of years.

relative attenuation [ELECTR] The ratio of the peak output voltage of an electric filter to the voltage at the frequency being considered.

relative azimuth [NAV] Azimuth relative to heading of a craft.

relative bandwidth [ELECTR] For an electric filter, the ratio of the bandwidth being considered to a specified reference bandwidth, such as the bandwidth between frequencies at which there is an attenuation of 3 decibels.

relative bearing [NAV] Bearing relative to heading or to the craft; the horizontal direction of a terrestrial point from a craft expressed as the angular difference between the heading and the direction.

relative biological effectiveness [NUCLEO] A factor used to compare the biological effectiveness of different types of ionizing radiation; it is the inverse ratio of the amount of absorbed radiation required to produce a given effect to a standard (or reference) radiation required to produce the same effect. Abbreviated RBE.

relative chronology [GEOL] Geochronology in which the

REINDEER

Reindeer do not display sexual dimorphism; males are larger than females, and reach a length of about 6 feet (1.8 meters) and a shoulder height of about 4 feet (1.2 meters).

time order is based on superposition or fossil content rather than on an age expressed in years.

relative coding [COMPUT SCI] A form of computer programming in which the address part of an instruction indicates not the desired address but the difference between the location of the instruction and the desired address.

relative compaction [ENG] The percentage ratio of the field density of soil to the maximum density as determined by standard compaction.

relative contour *See* thickness line.

relative coordinate system [PHYS] Any coordinate system which is moving with respect to an inertial coordinate system.

relative current [OCEANOGR] The current which is a function of the dynamic slope of an isobaric surface and which is determined from an assumed layer of no motion.

relative damping ratio *See* damping ratio.

relative dating [GEOL] The proper chronological placement of a feature, object, or happening in the geologic time scale without reference to its absolute age.

relative deflection *See* astrogeodetic deflection.

relative density *See* specific gravity.

relative-density bottle *See* specific-gravity bottle.

relative dielectric constant *See* dielectric constant.

relative direction [NAV] Horizontal direction expressed as angular distance from heading.

relative distance [NAV] Distance relative to a specified reference point, usually one in motion.

relative divergence *See* development index.

relative error [MATH] The absolute error in estimating a quantity divided by its true value.

relative erythrocytosis [MED] A form of erythrocytosis that occurs when the concentration of erythrocytes in the circulating blood increases through loss of plasma.

relative force [ENG] Ratio of the force of a test propellant to the force of a standard propellant, measured at the same initial temperature and loading density in the same closed chamber.

relative frequency [STAT] The ratio of the number of occurrences of a given type of event or the number of members of a population in a given class to the total number of events or the total number of members of the population.

relative fugacity [PHYS CHEM] The ratio of the fugacity in a given state to the fugacity in a defined standard state.

relative gain array [CONT SYS] An analytical device used in process control multivariable applications, based on the comparison of single-loop control to multivariable control; expressed as an array (for all possible input-output pairs) of the ratios of a measure of the single-loop behavior between an input-output variable pair, to a related measure of the behavior of the same input-output pair under some idealization of multivariable control.

relative gain of an antenna [ELECTROMAG] Gain of an antenna in a given direction when the reference antenna is a half-wave, loss-free dipole isolated in space whose equatorial plane contains the given direction.

relative geologic time [GEOL] Nonabsolute geological time in which events may be placed relatively to one another.

relative gravity instrument [ENG] Any device for measuring the differences in the gravity force or acceleration at two or more points.

relative humidity [METEOROL] The (dimensionless) ratio of the actual vapor pressure of the air to the saturation vapor pressure. Abbreviated RH.

relative hypsography *See* thickness pattern.

relative index of refraction [OPTICS] The ratio of the velocity of light in one medium to that in another medium.

relative interference effect [ENG ACOUS] Of a single-frequency electric wave in an electroacoustic system, the ratio, usually expressed in decibels, of the amplitude of a wave of specified reference frequency to that of the wave in question when the two waves are equal in interference effects.

relative ionospheric opacity meter *See* riometer.

relative isohypse *See* thickness line.

relative luminosity factor *See* luminosity function.

relatively closed set [MATH] A subset of a topological space is relatively closed if it is a closed set in some relative topology of a subset.

relatively compact set *See* conditionally compact set.

relatively open set [MATH] A subset of a topological space is relatively open if it is an open set in some relative topology of a subset.

relatively prime [MATH] Integers m and n are relatively prime if there are integers p and q so that $pm + qn = 1$; equivalently, if they have no common factors other than 1.

relative Mach number *See* Mach number.

relative magnetometer [ENG] Any magnetometer which must be calibrated by measuring the intensity of a field whose strength is accurately determined by other means; opposed to absolute magnetometer.

relative momentum [MECH] The momentum of a body in a reference frame in which another specified body is fixed.

relative motion [MECH] The continuous change of position of a body with respect to a second body or to a reference point that is fixed. Also known as apparent motion.

relative movement line [NAV] A line connecting successive positions of a maneuvering craft relative to a reference craft.

relative orbit [ASTRON] The closed path described by the apparent position of the fainter member of a binary system relative to the brighter member.

relative permeability [GEOL] Specific permeability of a porous rock formation to a particular phase (oil, water, gas) at a particular saturation and a particular saturation distribution; for example, ratio of effective permeability to a specified phase to the rock's absolute permeability.

relative permittivity *See* dielectric constant.

relative plot [NAV] A plot of the successive positions of a craft relative to a reference point, which is usually in motion.

relative position [NAV] A point defined with reference to another position, either fixed or moving; the coordinates of such a point are usually bearing, true or relative, and distance from an identified reference point.

relative power gain [ELECTROMAG] Of one transmitting or receiving antenna over another, the measured ratio of the signal power one produces at the receiver input terminals to that produced by the other, the transmitting power level remaining fixed.

relative pressure response [ENG ACOUS] The amount, in decibels, by which the acoustic pressure induced by a projector under some specified condition exceeds the pressure induced under a reference condition.

relative quickness [ORD] Ratio of the quickness of a test propellant to the quickness of a standard propellant, measured at the same initial temperature and loading density in the same closed chamber.

relative relief *See* local relief.

relative resistance [ELEC] The ratio of the resistance of a piece of a material to the resistance of a piece of specified material, such as annealed copper, having the same dimensions and temperature.

relative response [ELECTR] In a transducer, the amount (in decibels) by which the response under some particular condition exceeds the response under a reference condition.

relative roughness factor [FL MECH] Roughness of pipe-wall interior (distance from peaks to valleys) divided by pipe internal diameter; used to modify Reynolds number calculations for fluid flow through pipes.

relative scatter intensity [OPTICS] For scattering of radiation under any given set of physical conditions, the ratio of the radiant intensity scattered in any given direction to the radiant intensity scattered in the direction of the incident beam.

relative search [NAV] A search in which the area to be searched is defined relative to a point which is moving over the surface of the earth.

relative sector search [NAV] A search of three legs, the first and third being on courses such as to produce relative movement along radial lines of equal length from a moving point, and the middle leg connecting the other two.

relative square search [NAV] Search by a series of course lines such as to produce relative movement lines of increasing length, each change of course being such as to produce a change of 90° in the direction of relative movement, all changes being in the same direction (right or left), so that the pattern of the search is an expanding square relative to a moving point.

relative stability test [ANALY CHEM] A color test using methylene blue that indicates when the oxygen present in a sewage plant's effluent or polluted water is exhausted.

relative sunspot number [ASTRON] A measure of sunspot activity, computed from the formula $R = k(10g + f)$, where R is the relative sunspot number, f the number of individual spots, g the number of groups of spots, and k a factor that varies with the observer (his personal equation), the seeing, and the obser-

vatory (location and instrumentation). Also known as sunspot number; sunspot relative number; Wolf number; Wolf-Wolfer number; Zurich number.

relative time [GEOL] Geologic time determined by the placing of events in a chronologic order of occurrence, especially time as determined by organic evolution or superposition.

relative topography *See* thickness pattern.

relative topology [MATH] In a topological space X any subset A has a topology on it relative to the given one by intersecting the open sets of X with A to obtain open sets in A.

relative transmitting response [ENG ACOUS] In a sonar projector, the ratio of the transmitting response for a given bearing and frequency to the transmitting response for a specified bearing and frequency.

relative triple precision [COMPUT SCI] The retention of three times as many digits of a quantity as the computer normally handles; for example, a computer whose basic word consists of 10 decimal digits is called upon to handle 30 decimal digit quantities.

relative velocity [MECH] The velocity of a body with respect to a second body; that is, its velocity in a reference frame where the second body is fixed.

relative volatility [CHEM] The volatility of a standard material whose relative volatility is by definition equal to unity.

relative wind [NAV] The speed and relative direction from which the wind appears to blow with reference to a moving point. Also known as apparent wind.

relativistic beam [RELAT] A beam of particles traveling at a speed comparable with the speed of light.

relativistic electrodynamics [ELECTROMAG] The study of the interaction between charged particles and electric and magnetic fields when the velocities of the particles are comparable with that of light.

relativistic kinematics [RELAT] A description of the motion of particles compatible with the special theory of relativity, without reference to the causes of motion.

relativistic mass [RELAT] The mass of a particle moving at a velocity exceeding about one-tenth the velocity of light; it is significantly larger than the rest mass.

relativistic mechanics [RELAT] **1.** Any form of mechanics compatible with either the special or the general theory of relativity. **2.** The nonquantum mechanics of a system of particles or of a fluid interacting with an electromagnetic field, in the case when some of the velocities are comparable with the speed of light.

relativistic particle [RELAT] A particle moving at a speed comparable with the speed of light.

relativistic quantum theory [QUANT MECH] The quantum theory of particles which is consistent with the special theory of relativity, and thus can describe particles moving arbitrarily close to the speed of light.

relativistic theory [PHYS] Any theory which is consistent with the special or general theory of relativity.

relativity [PHYS] Theory of physics which recognizes the universal character of the propagation speed of light and the consequent dependence of space, time, and other mechanical measurements on the motion of the observer performing the measurements; it has two main divisions, the special theory and the general theory.

relaxation [GEOL] In experimental structural geology, the diminution of applied stress with time, as the result of any of various creep processes. [MATH] *See* relaxation method. [MECH] **1.** Relief of stress in a strained material due to creep. **2.** The lessening of elastic resistance in an elastic medium under an applied stress resulting in permanent deformation. [PHYS] A process in which a physical system approaches a steady state after conditions affecting it have been suddenly changed, and in which the presence of dissipative agents prevents the system from overshooting and then oscillating about this state.

relaxation circuit [ELECTR] Circuit arrangement, usually of vacuum tubes, reactances, and resistances, which has two states or conditions, one, both, or neither of which may be stable; the transient voltage produced by passing from one to the other, or the voltage in a state of rest, can be used in other circuits.

relaxation inverter [ELECTR] An inverter that uses a relaxation oscillator circuit to convert direct-current power to alternating-current.

relaxation method [MATH] A successive approximation method for solving systems of equations where the errors from an initial approximation are viewed as constraints to be minimized or relaxed within a toleration limit. Also known as relaxation.

relaxation oscillations [PHYS] Oscillations having a sawtooth waveform in which the displacement increases to a certain value and then drops back to zero, after which the cycle is repeated.

relaxation oscillator [ELECTR] An oscillator whose fundamental frequency is determined by the time of charging or discharging a capacitor or coil through a resistor, producing waveforms that may be rectangular or sawtooth.

relaxation test [ENG] A creep test in which the decrease of stress with time is measured while the total strain (elastic and plastic) is maintained constant.

relaxation time [PHYS] For many physical systems undergoing relaxation, a time τ such that the displacement of a quantity from its equilibrium value at any instant of time t is the exponential of $-t/\tau$. [SOLID STATE] The travel time of an electron in a metal before it is scattered and loses its momentum.

relaxed circular deoxyribonucleic acid [BIOCHEM] A form of circular deoxyribonucleic acid in which the circle of one strand is broken. Also known as open-circle deoxyribonucleic acid.

relaxed peak process *See* quasi-fission.

relaxin [BIOCHEM] A hormone found in the serum of humans and certain other animals during pregnancy; probably acting with progesterone and estrogen, it causes relaxation of pelvic ligaments in the guinea pig.

relay [COMMUN] A microwave or other radio system used for passing on a signal from one radio communication link to another. [ELEC] A device that is operated by a variation in the conditions in one electric circuit and serves to make or break one or more connections in the same or another electric circuit. Also known as electric relay.

relay center [COMMUN] A switching center in which messages are automatically routed according to data contained in the messages themselves.

relay contact [ELEC] One of the pair of contacts that are closed or opened by the movement of the armature of a relay.

relay control system [CONT SYS] A control system in which the error signal must reach a certain value before the controller reacts to it, so that the control action is discontinuous in amplitude.

relay haulage [MIN ENG] Single-track, high-speed mine haulage from one relay station to another. Also known as intermediate haulage.

relay intercropping [AGR] A form of intercropping in which two or more crops grow simultaneously during part of the life cycle of each; that is, a second crop is planted before the first crop matures.

relay rack [DES ENG] A standardized steel rack designed to hold 19-inch (48.26-centimeter) panels of various heights, on which are mounted radio receivers, amplifiers, and other units of electronic equipment. Also known as rack.

relay satellite *See* communications satellite.

relay selector [ELEC] Relay circuit associated with a selector, consisting of a magnetic impulse counter, for registering digits and holding a circuit.

relay station *See* repeater station.

relay system [COMMUN] *See* radio relay system. [ELEC] Dial switching equipment that does not use mechanical switches, but is made up principally of relays.

release [MECH ENG] A mechanical arrangment of parts for holding or freeing a device or mechanism as required.

release adiabat [MECH] A curve or locus of points which defines the succession of states through which a mass that has been shocked to a high-pressure state passes while monotonically returning to zero pressure.

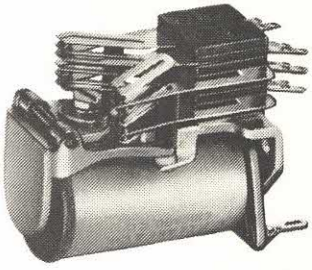
release agent [MATER] A lubricant, such as wax or silicone oil, used to coat a mold cavity to prevent the molded piece from sticking when removed. Also known as mold release; parting agent.

release altitude [AERO ENG] Altitude of an aircraft above the ground at the time of release of bombs, rockets, missiles, tow targets, and so forth.

released mineral [MINERAL] A mineral formed during the crystallization of a magma due to failure of an earlier phase to react with the liquid portion of the magma.

release fracture [GEOL] A fracture formed as a result of a decrease in the maximum principal stress.

RELAY

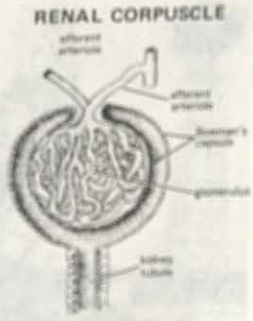


A multicontrol telphone-type auxiliary relay. When applied current or voltage in electric coil exceeds a threshold value, the coil activates an armature which opens or closes contacts. *(C. P. Clare and Co.)*

release joint *See* sheeting structure.
releaser stimulus [ZOO] A stimulus which affects an animal by initiating an instinctual behavior pattern.
reliability [ENG] The probability that a component part, equipment, or system will satisfactorily perform its intended function under given circumstances, such as environmental conditions, limitations as to operating time, and frequency and thoroughness of maintenance for a specified period of time. [STAT] **1.** The amount of credence placed in a result. **2.** The precision of a measurement, as measured by the variance of repeated measurements of the same object.
relic [GEOL.] **1.** A landform that remains intact after decay or disintegration or that remains after the disappearance of the major portion of its substance. **2.** A vestige of a particle in a sedimentary rock, such as a trace of a fossil fragment.
relict [BIOL.] A persistent, isolated remnant of a once-abundant species. [GEOL.] **1.** Referring to a topographic feature that remains after other parts of the feature have been removed or have disappeared. **2.** Pertaining to a mineral, structure, or feature of a rock which represents features of an earlier rock and which persists in spite of processes tending to destroy it, such as metamorphism.
relict dike [GEOL.] In a granitized mass, a tabular, crystalloblastic body that represents a dike which was emplaced prior to, and which was relatively resistant to, the granitization process.
relict glacier [HYD] A remnant of an older and larger glacier.
reliction [HYD] The slow and gradual withdrawal or recession of the water in a sea, a lake, or a stream, leaving the former bottom as permanently exposed and uncovered dry land.
relict lake [HYD] A lake that survives in an area formerly covered by the sea or a larger lake, or a lake that represents a remnant resulting from a partial extinction of the original body of water.
relict mineral [MINERAL] A mineral of a rock that persists from an earlier rock.
relict permafrost [GEOL] Permafrost formed in the past which persists in areas where it would not form today.
relict sediment [GEOL.] A sediment which was in equilibrium with its environment when first deposited but which is unrelated to its present environment even though it is not buried by later sediments, such as a shallow-marine sediment on the deep ocean floor.
relict soil [GEOL.] A soil formed on a preexisting landscape but not subsequently buried under younger sediments.
relict texture [GEOL.] In mineral deposits, an original texture that persists after partial replacement.
relief [CRYSTAL.] The apparent topography exhibited by minerals in thin section as a consequence of refractive index. [GEOD] The configuration of a part of the earth's surface, with reference to altitude and slope variations and to irregularities of the land surface. [MECH ENG] **1.** A passage made by cutting away one side of a tailstock center so that the facing or parting tool may be advanced to or almost to the center of the work. **2.** Clearance provided around the cutting edge by removal of tool material.
relief angle [MECH ENG] The angle between a relieved surface and a tangential plane at a cutting edge.
relief frame [MECH ENG] A frame placed between the slide valve of a steam engine and the steam chest cover; reduces pressure on the valve and thereby reduces friction.
relief hole [ENG] Any of the holes fired after the cut holes and before the lifter holes in breaking ground for tunneling or shaft sinking.
relief limonite [MINERAL] Indigenous limonite that is porous and cavernous in texture.
relief map [MAP] A map of an area showing the topographic relief.
relief model [MAP] A three-dimensional relief map.
relief press *See* letterpress.
relief printing [GRAPHICS] A method of printing in which the type or other images stand above the printing surface; even though the lower areas may have ink in them, they do not print because the paper does not contact them.
relief shading *See* hill shading.
relief valve *See* pressure relief valve.
relief well [CIV ENG] A well that drains a pervious stratum, to relieve waterlogging at the surface. [PETRO ENG] A directional well which is drilled to intersect a well that is blowing out, and down which heavy drilling fluid is pumped to kill the blowout well.
relieving [MECH ENG] Treating an embossed metal surface with an abrasive to reveal the base-metal color on the elevations or highlights of the surface.
relieving anode [ELECTR] Of a pool-cathode tube, an auxiliary anode which provides an alternative conducting path for reducing the current to another electrode.
relieving arch *See* discharging arch.
relieving platform [CIV ENG] A deck on the land side of a retaining wall to transfer loads vertically down to the wall.
relighter flame safety lamp [MIN ENG] A locked spirit-burning lamp fitted with an internal relighting device.
reline [ORD] To replace a worn liner of a gun to give it the ballistics of a new weapon.
relish [ENG] The shoulder of a tenon, used in a mortise and tenon system.
Relizean stage [GEOL.] A subdivision of the Miocene in the California-Oregon-Washington area.
reloadable control storage [COMPUT SCI] The control storage made up of unit control words necessary for channel multiplexing.
relocatable code [COMPUT SCI] A code generated by an assembler or compiler, and in which all memory references needing relocation are either specially marked or relative to the current program-counter reading.
relocatable emulator [COMPUT SCI] An emulator which does not require a stand-alone machine but executes in a multiprogramming environment.
relocatable program [COMPUT SCI] A program coded in such a way that it may be located and executed in any part of memory.
relocate [COMPUT SCI] To establish or change the location of a program routine while adjusting or modifying the address references within the instructions to correctly indicate the new locations.
relocating loader [COMPUT SCI] A loader in which some of the addresses in the program to be loaded are expressed relative to the start of the program rather than in absolute form.
relocation hardware [COMPUT SCI] Equipment in a multiprogramming system which allows a computer program to be run in any available space in memory.
relocation register [COMPUT SCI] A hardware element that holds a constant to be added to the address of each memory location in a computer program running in a multiprogramming system, as determined by the location of the area in memory assigned to the program.
relogging [FOR] An operation in which small trees are salvaged, often for pulpwood, after the large trees are logged.
reluctance [ELECTROMAG] A measure of the opposition presented to magnetic flux in a magnetic circuit, analogous to resistance in an electric circuit; it is equal to magnetomotive force divided by magnetic flux. Also known as magnetic reluctance.
reluctance microphone *See* magnetic microphone.
reluctance motor [ELEC] A synchronous motor, similar in construction to an induction motor, in which the member carrying the secondary circuit has salient poles but no direct-current excitation; it starts as an induction motor but operates normally at synchronous speed.
reluctance pickup *See* variable-reluctance pickup.
reluctance pressure transducer [ENG] Pressure-measurement transducer in which pressure changes activate equivalent magnetic-property changes.
reluctivity [PHYS] The reciprocal of magnetic permeability; the reluctivity of empty space is unity. Also known as magnetic reluctivity; specific reluctance.
rem [NUCLEO] A unit of ionizing radiation, equal to the amount that produces the same damage to humans as 1 roentgen of high-voltage x-rays. Derived from roentgen equivalent man.
remainder [MATH] **1.** The remaining integer when a division of an integer by another is performed; if $l = m \cdot p + r$, where l, m, p, and r are integers and r is less than p, then r is the remainder when l is divided by p. **2.** The remaining polynomial when division of a polynomial is performed; if $l = m \cdot p + r$, where l, m, p, and r are polynomials, and the degree of r is less than that of p, then r is the remainder when l is divided by p. **3.** The remaining part of a convergent infinite series after a computation, for some n, of the first n terms.
remainder formula [MATH] A formula by which the remainder resulting from an approximation of a function by a partial sum of a power series can be computed or analyzed.

remainder theorem [MATH] Dividing a polynomial $p(x)$ by $(x - a)$ gives a remainder equaling the number $p(a)$.
remaining velocity [MECH] Speed of a projectile at any point along its path of fire.
Remak's ganglion [ANAT] A ganglion near the junction of the coronary sinus and the right atrium.
remanence [ELECTROMAG] The magnetic flux density that remains in a magnetic circuit after the removal of an applied magnetomotive force; if the magnetic circuit has an air gap, the remanence will be less than the residual flux density.
remanent magnetization [GEOPHYS] That component of a rock's magnetization whose direction is fixed relative to the rock and which is independent of moderate, applied magnetic fields.
remedial maintenance *See* corrective maintenance.
remedial operation [CHEM ENG] In a chemical process operation, the revision of operating conditions so as to correct the overall operation and bring the product into desired rote or specification limits. Also known as corrective operation.
remember condition [ELECTR] Condition of a flip-flop circuit in which no change takes place between a given internal state and the next state.
remex *See* flight feather.
remodulator [ELECTR] A circuit that converts amplitude modulation to audio frequency-shift modulation for transmission of facsimile signals over a voice-frequency radio channel. Also known as converter.
remoistening adhesive [MATER] Any adhesive material, such as dextrin, animal glue, or gum arabic, which is reactivated with the application of water upon the adhesive surface.
remolded soil [GEOL] Soil that has had its natural internal structure modified or disturbed by manipulation so that it lacks shear strength and gains compressibility.
remolding index [GEOL] The ratio of the modulus of deformation of a soil in the undisturbed state to that of a soil in the remolded state.
remote batch computing [COMPUT SCI] The running of programs, usually during nonprime hours, or whenever the demands of real-time or time-sharing computing slacken sufficiently to allow less pressing programs to be run.
remote batch processing [COMPUT SCI] Batch processing in which an input device is located at a distance from the main installation and has access to a computer through a communication link.
remote calculator [COMPUT SCI] A keyboard device that can be connected to the central processing unit of a distant computer over an ordinary telephone channel, enabling the user to present programs to the computer.
remote computing system [COMPUT SCI] A data-processing system that has terminals distant from the central processing unit, from which users can communicate with the central processing unit and compile, debug, test, and execute programs.
remote computing system exchange [COMPUT SCI] A device that handles communications between the central processing unit and remote consoles of a remote computing system, and enables several remote consoles to operate at the same time without interfering with each other.
remote computing system language [COMPUT SCI] A computer language used for communications between the central processing unit and remote consoles of a remote computer system, generally incorporating a procedure-oriented language such as FORTRAN, but also containing operating statements, such as instructions to debug or execute programs.
remote computing system log [COMPUT SCI] A record of the volumes of data transmitted and of the frequency of various types of events during the operation of remote consoles in a remote computing system.
remote console [COMPUT SCI] A terminal in a remote computing system that has facilities for communicating with, and exerting control over, the central processing unit, and which may have devices for reading and punching cards or paper tape, any of various types of display units, printers, and a keyboard device for direct communication with the central processing unit.
remote control [CONT SYS] Control of a quantity which is separated by an appreciable distance from the controlling quantity; examples include master-slave manipulators, telemetering, telephone, and television.
remote-cutoff tube *See* variable-mu tube.
remote data station [COMPUT SCI] A terminal in a data-processing system at which data can be sent to or received from a central computer over telephone or telegraph circuits, but which exerts no direct operating control over the central computer. Also known as remote data terminal.
remote data terminal *See* remote data station.
remote debugging [COMPUT SCI] **1.** The testing and correction of computer programs at a remote console of a remote computing system. **2.** *See* remote testing.
remote gun control [ORD] Pointing a gun in azimuth and elevation by means of a remote control system, which automatically keeps the gun pointed according to the firing data.
remote-indicating compass [NAV] A compass equipped with one or more indicators to repeat at a distance the readings of the master compass.
remote indicator [ELECTR] **1.** An indicator located at a distance from the data-gathering sensing element, with data being transmitted to the indicator mechanically, electrically over wires, or by means of light, radio, or sound waves. **2.** *See* repeater.
remote inquiry [COMPUT SCI] Interrogation of the content of an automatic data-processing equipment storage unit from a device remotely displaced from the storage unit site.
remote job entry [COMPUT SCI] The submission of jobs to a central computer from a location at least a few hundred meters and sometimes many kilometers distant from the computer, requiring the use of a telephone or other common-carrier communications link. Abbreviated RJE.
remotely piloted vehicle [AERO ENG] A robot aircraft, controlled over a two-wave radio link from a ground station or mother aircraft that can be hundreds of miles away; elpctronic guidance is generally supplemented by remote control television cameras feeding monitor receivers at the control station. Abbreviated RPV.
remote manipulation [ENG] Use of mechanical equipment controlled from a distance to handle materials, such as radioactive materials.
remote manipulator [ENG] A mechanical, electromechanical, or hydromechanical device which enables a person to perform manual operations while separated from the site of the work.
remote metering *See* telemetering.
remote pickup [COMMUN] Picking up a radio or television program at a remote location and transmitting it to the studio or transmitter over wire lines or a shortwave or microwave radio link.
remote plan position indicator *See* plan position indicator repeater.
remote sensing [ELEC] Sensing, by a power supply, of voltage directly at the load, so that variations in the load lead drop do not affect load regulation. [ENG] The gathering and recording of information without actual contact with the object or area being investigated.
remote subscriber [COMMUN] Subscriber to a network that does not have direct access to the switching center, but has access to the circuit through a facility such as a base message center.
remote terminal [COMPUT SCI] A computer terminal which is located away from the central processing unit of a data-processing system, at a location convenient to a user of the system.
remote testing [COMPUT SCI] A method of testing and correcting computer programs; programmers do not go to the computer center but provide detailed instructions to be carried out by computer operators along with the programs and associated test data. Also known as remote debugging.
removable discontinuity [MATH] A point where a function is discontinuous, but it is possible to redefine the function at this point so that it will be continuous there.
removable plug board *See* detachable plug board.
REM sleep *See* rapid-eye-movement sleep.
renaissance lace [TEXT] A type of lace in which woven tape motifs are joined by a variety of flat stitches.
renal artery [ANAT] A branch of the abdominal or ventral aorta supplying the kidneys in vertebrates.
renal calculus [MED] A concretion in the kidney.
renal-cell carcinoma [MED] A malignant renal tumor composed principally of large, often hyalin, polygonal cells. Also known as clear-cell carcinoma; Grawitz's tumor; hypernephroma.
renal corpuscle [ANAT] The glomerulus together with its

RENAL CORPUSCLE



Drawing of renal corpuscle. (From C. K. Weichert, Anatomy of the Chordates, 4th ed., McGraw-Hill, 1970)

Bowman's capsule in the renal cortex. Also known as Malpighian corpuscle.

renal dwarfism [MED] Dwarfism due to any of various chronic diseases of the kidney in children.

renal failure [MED] Severe malfunction of the kidneys, producing uremia and the resulting constitutional symptoms.

renal papilla [ANAT] A fingerlike projection into the renal pelvis through which the collecting tubules discharge.

renal pyramid [ANAT] Any of the conical masses composing the medullary substance of the kidney. Also known as Malpighian pyramid.

renal rickets [MED] The metabolic bone disease due to increased bone resorption resulting from the acidosis and secondary hyperparathyroidism of renal insufficiency.

renal threshold [PHYSIO] A concentration of a substance within the blood which, when reached, causes the substance to appear in the urine.

renal tubular acidosis [MED] Defective hydrogen-ion excretion in the renal tubules, resulting in hyperchloremic acidosis and inadequate acidification of the urine.

renal tubule [ANAT] One of the glandular tubules which elaborate urine in the kidneys.

renal vein [ANAT] A vein which returns blood from the kidney to the vena cava.

renaming rule [MATH] A transformation rule in the lambda calculus that allows conflicts of variables to be eliminated; it states that a bound variable x in a lambda expression M may be uniformly replaced by some other bound variable y, provided y does not occur in M. Also known as alpha rule.

renardite [MINERAL] $Pb(UO_2)_4(PO_4)_2(OH)_4 \cdot 7H_2O$ A yellow mineral composed of hydrous basic lead uranyl phosphate.

renaturation [BIOCHEM] The process of restoring denatured proteins to their original condition.

rendezvous [AERO ENG] **1.** The event of two or more objects meeting with zero relative velocity at a preconceived time and place. **2.** The point in space at which such an event takes place, or is to take place.

Rendoll [GEOL] A suborder of the soil order Mollisol, formed in highly calcareous parent materials, mostly restricted to humid, temperate regions; the soil profile consists of a dark upper horizon grading to a pale lower horizon.

Rendzina [GEOL] One of an intrazonal, calcimorphic group of soils characterized by a brown to black, friable surface horizon and a light-gray or yellow, soft underlying horizon; found under grasses or forests in humid to semiarid climates.

renette [INV ZOO] An excretory cell found in certain nematodes.

reniform [SCI TECH] Bean- or kidney-shaped, as describing the structure of a crystal in which rounded masses occur at the ends of radiating crystals, or certain structures in animals and plants.

renin [BIOCHEM] A proteolytic enzyme produced in the afferent glomerular arteriole which reacts with the plasma component hypertensinogen to produce angiotensin II.

rennet [VERT ZOO] The lining of the stomach of certain animals, especially the fourth stomach in ruminants.

rennin [BIOCHEM] An enzyme found in the gastric juice of the fourth stomach of calfs; used for coagulating milk casein in cheesemaking. Also known as chymosin.

renninogen [BIOCHEM] The zymogen of rennin. Also known as prorennin.

Renn-Walz process [MET] A method of reclaiming iron and other metals from the waste materials produced in the smelting of zinc and lead ores; this material is brought up to 1000°C in the preheating zone of the kiln by the countercurrent gases, and the oxidized metal vapors are carried off in the flue gases, from which they are subsequently filtered.

renormalizability [QUANT MECH] The property of some quantum field theories whereby all infinite quantities can be absorbed into a renormalization of physical parameters such as mass and charge.

renormalization [QUANT MECH] In certain quantum field theories, a procedure in which nonphysical bare values of certain quantities such as mass and charge are eliminated and the corresponding physically observable quantities are introduced.

renormalization group methods [STAT MECH] Methods for treating the behavior of substances near critical points, in which the canonical ensemble is generalized by dividing a substance into cells of arbitrary size and forming an ensemble consisting of all microscopic configurations consistent with specified values of the thermodynamic variables in each of these cells.

renovation [ORD] **1.** Process of restoring materiel to, or nearly to, its original condition by cleaning, painting, or similar methods. **2.** Restoration of ammunition to serviceable condition by operations more extensive or hazardous than routine ammunition maintenance; normally involves replacement of components.

rensselaerite [PETR] A soft, compact, fibrous talc pseudomorphous after pyroxene and found in Canada and northern New York.

reorder cycle [IND ENG] The interval between successive reorder (procurement) actions.

reorder point [IND ENG] An arbitrary level of stock on hand plus stock due in, at or below which routine requisitions for replenishment purposes are submitted in accordance with established requisitioning schedules.

reovirus [VIROL] A group of ribonucleic acid–containing animal viruses, including agents of encephalitis and phlebotomus fever.

rep [NUCLEO] A unit of ionizing radiation, equal to the amount that causes absorption of 93 ergs per gram of soft tissue. Derived from roentgen equivalent physical. Also known as parker; tissue roentgen. [TEXT] A type of fabric characterized by distinct, round, padded ribs running from selvage to selvage.

repair [ENG] To restore that which is unserviceable to a serviceable condition by replacement of parts, components, or assemblies.

repair cycle [ENG] The period that elapses from the time the item is removed in a reparable condition to the time it is returned to stock in a serviceable condition.

repair dock [CIV ENG] A graving dock or floating dry dock built primarily for ship repair.

repair forecast [ENG] The quantity of items estimated to be repaired or rebuilt for issue during a stated future period.

repair kit [ENG] A group of parts and tools, not all having the same basic name, used for repair or replacement of the worn or broken parts of an item; it may include instruction sheets and material, such as sandpaper, tape, cement, gaskets, and the like.

repair parts list [ENG] List approved by designated authorities, indicating the total quantities of repair parts, tools, and equipment necessary for the maintenance of a specified number of end items for a definite period of time.

repair synthesis [MOL BIO] Enzymatic excision and replacement of regions of damaged deoxyribonucleic acid, as in repair of thymine dimers by ultraviolet irradiation.

repand [BOT] Having a margin that undulates slightly, referring to a leaf.

repeatability [NAV] In a navigation system, the measure of the accuracy with which the system permits the operator to return to a specific point as defined only in terms of the lattice peculiar to that system.

repeated load [MECH] A force applied repeatedly, causing variation in the magnitude and sometimes in the sense, of the internal forces.

repeated measurements model [STAT] A product model in which each factor is the same.

repeated reflection *See* multiple reflection.

repeated root *See* multiple root.

repeated twinning [CRYSTAL] Crystal twinning that involves more than two simple crystals.

repeater [ELEC] *See* repeating coil. [ELECTR] **1.** An amplifier or other device that receives weak signals and delivers corresponding stronger signals with or without reshaping of waveforms; may be either a one-way or two-way repeater. **2.** An indicator that shows the same information as is shown on a master indicator. Also known as remote indicator.

repeater compass *See* compass repeater.

repeater jammer [ELECTR] A jammer that intercepts an enemy radar signal and reradiates the signal after modifying it to incorporate erroneous data on azimuth, range, or number of targets.

repeater station [COMMUN] A station containing one or more repeaters. Also known as relay station.

repeat glass [OPTICS] Used by textile and wallpaper designers, a device consisting of four lenses formed in one piece of glass; when a single drawing or pattern is viewed, the subject matter is repeated four times.

REPEATER STATION

A typical TD-2 radio repeater station. *(American Telephone and Telegraph Co.)*

repeating coil [ELEC] A transformer used to provide inductive coupling between two sections of a telephone line when a direct connection is undesirable. Also known as repeater.

repeating-coil bridge cord [ELEC] In telephony, a method of connecting the common office battery to the cord circuits by connecting the battery to the midpoints of a repeating coil, bridged across the cord circuit.

repeating decimal [MATH] A decimal that is either finite or infinite with a finite block of digits repeating indefinitely. Also known as recurring decimal.

repeat operator [COMPUT SCI] A pseudo instruction using two arguments, a count p and an increment n: the word immediately following the instruction is repeated p times, with the values $0,n,2n,\ldots,(p-1)n$ added to the successive words.

repeat point *See* double-spot tuning.

repellency [CHEM] Ability to repel water, or being hydrophobic; opposite to water wettability.

repeller [ELECTR] An electrode whose primary function is to reverse the direction of an electron stream in an electron tube. Also known as reflector.

repent [BOT] Of a stem, creeping along the ground and rooting at the nodes.

reperforation [PETRO ENG] Creation of new perforations (holes) in oil well tubing opposite to oil-bearing reservoir zones; creates more opportunity for fluid to drain from the formation into the wellbore.

reperforator *See* tape reperforator.

reperforator switching center [COMMUN] Message-relaying center at which incoming messages are received on a reperforator which perforates a storage tape from which the message is retransmitted into the proper outgoing circuit.

reperforator/transmitter [COMMUN] A tape reperforator and a tape transmitter operating independently in a teletypewriter system; used in relaying, to establish compatibility between different rates of reception and transmission, and in temporary queuing.

repetition [GEOL] The duplication of certain stratigraphic beds at the surface or in any specified section owing to disruption and displacement of the beds by faulting or intense folding.

repetition equivalent [COMMUN] In a complete telephone connection, a measure of the grade of transmission experienced by the subscribers using the connection; it includes the combined effects of volume, distortion, noise, and all other subscriber reactions and usages.

repetition frequency *See* repetition rate.

repetition instruction [COMPUT SCI] An instruction that causes one or more other instructions to be repeated a specified number of times, usually with systematic address modification occurring between repetitions.

repetition rate [COMMUN] The rate at which recurrent signals are produced or transmitted by radar. Also known as recurrence rate; repetition frequency.

repetitive addressing [COMPUT SCI] A system used on some computers in which, under certain conditions, an instruction is written without giving the address of the operand, and the operand address is automatically that of the location addressed by the last previous instruction.

repetitive analog computer [COMPUT SCI] An analog computer which repeatedly carries out the solution of a problem at a rapid rate (10 to 60 times a second) while an operator may vary parameters in the problem.

repetitive element *See* regular element.

repetitive time method [IND ENG] A technique where the stopwatch is read and simultaneously returned to zero at each break point. Also known as snapback method.

repetitive unit [COMPUT SCI] A type of circuit which appears more than once in a computer.

Repettian [GEOL] A North American stage of lower Pliocene geologic time, above the Delmontian and below the Venturian.

repi [HYD] A lake, pond, or other standing water body associated with a sink or subsidence of land surface.

replacement [GEOL] Growth of a new or chemically different mineral in the body of an old mineral by simultaneous capillary solution and deposition. [PALEON] Substitution of inorganic matter for the original organic constituents of an organism during fossilization.

replacement bit *See* reset bit.

replacement demand [ENG] A demand representing replacement of items consumed or worn out.

replacement deposit [MINERAL] A mineral deposit formed by the in-position replacement of one mineral for another.

replacement dike [GEOL] A dike which is made by gradual transformation of wall rock by solutions along fractures or permeable zones.

replacement factor [ENG] The estimated percentage of equipment or repair parts in use that will require replacement during a given period.

replacement study [IND ENG] An economic analysis involving the comparison of an existing facility and a proposed replacement facility.

replacement texture [GEOL] The texture exhibited where one mineral has replaced another.

replacement transfusion *See* exchange transfusion.

replacement vein [GEOL] A mineral vein formed by the gradual transformation of an original vein by secondary fluids.

replenisher [ORD] A cylinder containing recoil oil and a spring-actuated piston, which allows for expansion of oil in the recoil system which has become heated during firing of the weapon; it also returns oil to the recoil system after firing, when the temperature (and volume) of the oil is down.

replenishment [GEOL] The stage in development of a cavern in which the presence of air in the passages allows the deposition of speleothems.

replica [ENG] A thin plastic or inorganic film which is formed on a surface and then removed from it for study in an electron microscope.

replica grating [OPTICS] A diffraction grating made by flowing a plastic solution over an original grating, evaporating the solvent, and removing the resulting film, which has the lines of the original grating impressed on it.

replica plating [MICROBIO] A method for the isolation of nutritional mutants in microorganisms; colonies are grown from a microorganism suspension previously exposed to a mutagenic agent, on a complete medium in a petri dish; a velour surface is used to transfer the impression of all these colonies to a petri dish containing a minimal medium; colonies that do not grow on the minimal medium are the mutants.

replicating fork [MOL BIO] The Y-shaped region of a chromosome that is a growing point in the replication of deoxyribonucleic acid.

replication [ANALY CHEM] The formation of a faithful mold or replica of a solid that is thin enough for penetration by an electron microscope beam; can use plastic (such as collodion) or vacuum deposition (such as of carbon or metals) to make the mold. [MOL BIO] Duplication, as of a nucleic acid, by copying from a molecular template. [VIROL] Multiplication of phage in a bacterial cell.

replicon [GEN] A genetic element characterized by possession of the structural gene that controls a specific initiator and receptor locus (replicator) for its action.

replum [BOT] A thin wall separating the two valves or chambers of certain fruits.

reply [COMMUN] A radio-frequency signal or combination of signals transmitted by a transponder in response to an interrogation. Also known as response.

report [ACOUS] Sharp explosive sound, as of a shot, bursting bomb, or projectile. [COMPUT SCI] An output document prepared by a data-processing system.

report generator [COMPUT SCI] A routine which produces a complete data-processing report, given only a description of the desired content and format, plus certain information concerning the input file.

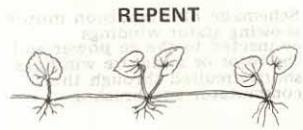
reporting point [NAV] **1.** A specified point in relation to which a craft reports its position. **2.** In air operations, a geographical point established for use by air-traffic control in the movement and separation of aircraft.

reporting time interval [COMMUN] The time for transmission of data or a report from the originating terminal to the end receiver.

report of survey [ORD] An official report prepared on a standardized form, which records the circumstance concerning the loss, damage, or destruction of property, and which serves as, or supports, a voucher for dropping the property from property records.

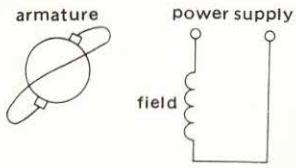
report program [COMPUT SCI] A program that prints out an analysis of a file of records, usually arranged by keys, each analysis or total being produced when a key change takes place.

report program generator [COMPUT SCI] A nonprocedural



Ground ivy showing repent type of stem.

REPULSION MOTOR



Schematic of a repulsion motor showing stator windings connected to the ac power and the rotor or armature windings short-circuited through the commutator and brushes.

programming language that provides a convenient method of producing a wide variety of reports. Abbreviated RPG.

repoussage [GRAPHICS] In etching, when a plate is repaired, scraped, and rubbed, there is a hollow left that will print a gray smudge; repoussage involves hammering out the hollow by putting the plate face down on a flat steel surface and tapping it gently from the back with a repoussage hammer.

repoussé [GRAPHICS] A method of producing a relief design on a thin sheet of metal or leather by hammering or otherwise working the reverse side.

Reppe process [CHEM ENG] A family of high-pressure, catalytic acetylene-reaction processes yielding (depending upon what the acetylene reacts with) butadiene, allyl alcohol, acrylonitrile, vinyl ethers and derivatives, acrylic acid esters, cyclooctatraene, and resins.

representation of groups [MATH] A representation of a group is given by a homomorphism of it onto some group either of matrices or unitary operators of a Hilbert space.

representation theory [MATH] **1.** The study of groups by the use of their representations. **2.** The determination of representations of specific groups. [QUANT MECH] Quantum-mechanical device in which one selects the common eigenfunctions of a complete set of quantum-mechanical operators as a basis of vectors in a Hilbert space, and expresses wave functions and operators in terms of column matrices and square matrices, respectively, which correspond to this basis.

representative calculating time [COMPUT SCI] The time required to perform a specified operation or series of operations.

representative fraction *See* natural scale.

representative sample [MIN ENG] In testing or valuation of a mineral deposit, a sample so large and average in composition as to be considered representative of a specified volume of the surrounding ore body.

repressing [MET] Applying pressure to a pressed and sintered compact to improve some physical property.

repression [PSYCH] A defense mechanism whereby ideas, feelings, or desires, in conflict with the individual's conscious self-image or motives, are unconsciously dismissed from consciousness.

repressor [BIOCHEM] An end product of metabolism which represses the synthesis of enzymes in the metabolic pathway. [GEN] The product of a regulator gene that acts to repress the transcription of another gene.

repressuring [PETRO ENG] Forcing gas or water under pressure into an oil reservoir with the intention of increasing the recovery of crude oil.

repro *See* reproduction proof.

reprocessed wool [TEXT] Yarn manufactured from previously processed fibers derived from an unused wool product, such as cloth cuttings.

reproduce head *See* playback head.

reproducer [COMPUT SCI] A punched-card machine that reads a punched card and duplicates part or all of its contents by punching another card. Also known as punched-card reproducer.

reproducing stylus *See* stylus.

reproducing system *See* sound-reproducing system.

reproducing unit [COMPUT SCI] An electromechanical device which will duplicate a deck of cards.

reproduction [BIOL] The mechanisms by which organisms give rise to other organisms of the same kind.

reproduction proof [GRAPHICS] A page proof made with great care on smooth paper and used for photographic reproduction; it smudges easily and must be handled with care. Also known as repro; slick paper proof.

reproduction speed [COMMUN] Area of copy recorded per unit time in facsimile transmission.

reproductive behavior [ZOO] The behavior patterns in different types of animals by means of which the sperm is brought to the egg and the parental care of the resulting young insured.

reproductive distribution [ECOL] The range of areas where conditions are favorable to maturation, spawning, and early development of marine animals.

reproductive system [ANAT] The structures concerned with the production of sex cells and perpetuation of the species.

Reptantia [INV ZOO] A suborder of the crustacean order Decapoda including all decapods other than shrimp.

reptile [VERT ZOO] Any member of the class Reptilia.

Reptilia [VERT ZOO] A class of terrestrial vertebrates composed of turtles, tuatara, lizards, snakes, and crocodileans; characteristically they lack hair, feathers, and mammary glands, the skin is covered with scales, they have a three-chambered heart, and the pleural and peritoneal cavities are continuous.

repulsion [MECH] A force which tends to increase the distance between two bodies having like electric charges, or the force between atoms or molecules at very short distances which keeps them apart. Also known as repulsive force.

repulsion-induction motor [ELEC] A repulsion motor that has a squirrel-cage winding in the rotor in addition to the repulsion-motor winding.

repulsion motor [ELEC] An alternating-current motor having stator windings connected directly to the source of ac power and rotor windings connected to a commutator; brushes on the commutator are short-circuited and are positioned to produce the rotating magnetic field required for starting and running.

repulsion-start induction motor [ELEC] An alternating-current motor that starts as a repulsion motor; at a predetermined speed the commutator bars are short-circuited to give the equivalent of a squirrel-cage winding for operation as an induction motor with constant-speed characteristics.

repulsive force *See* repulsion.

request/grant logic [COMPUT SCI] Logic circuitry which, in effect, selects the interrupt line with highest priority.

request repeat system [COMMUN] System using an error-detecting code, and so arranged that a signal detected as being in error automatically initiates a request for retransmission.

required thickness [DES ENG] The thickness calculated by recognized formulas for boiler or pressure vessel construction before corrosion allowance is added.

reradiation [COMMUN] Undesirable radiation of signals generated locally in a radio receiver, causing interference or revealing the location of the receiver.

rerailer [ENG] A small, lightweight Y-shaped device, used to retrack railroad cars and locomotives; as the car is pulled across the device, the derailed wheels are channeled back onto the tracks. Also known as retracker.

rering locked in [COMMUN] Universal cord circuit feature by which, on magnetic lines, the called or calling party may rering the operator, causing the supervisory lamps of the cord circuit to remain lighted until the operator answers.

rerun [COMPUT SCI] To run a program or a portion of it again on a computer. Also known as rollback. [COMMUN] To repeat a complete transmission.

rerunning [CHEM ENG] The distillation of a liquid material that has already been distilled; usually implies taking a large proportion of the charge stock overhead.

rerun point [COMPUT SCI] A location in a program from which the program may be started anew after an interruption of the computer run.

rerun routine [COMPUT SCI] A routine designed to be used in the wake of a computer malfunction or a coding or operating mistake to reconstitute a routine from the last previous rerun point.

RES *See* reticuloendothelial system.

resacetophenone *See* 2,4′-dihydroxyacetophenone.

resaw [ENG] To cut lumber to boards of final thickness.

resbenzophenone *See* benzoresorcinol.

rescap [ELEC] A capacitor and resistor assembly manufactured as a packaged encapsulated circuit. Also known as capacitor-resistor unit; capristor; packaged circuit; resistor-capacitor unit.

rescinnamine [PHARM] $C_{35}H_{42}N_2O_9$ A white to buff-colored, crystalline powder with a melting point of 238°C (in vacuum); soluble in acetic acid and chloroform; an alkaloid extracted from a few species of *Rauwolfia* and used in medicine.

rescue dump [COMPUT SCI] The copying of the entire contents of a computer memory into auxiliary storage devices, carried out periodically during the course of a computer program so that in case of a machine failure the program can be reconstituted at the last point at which this operation was executed.

resealing pressure [MECH ENG] The inlet pressure at which leakage stops after a pressure relief valve is closed.

research [SCI TECH] Scientific investigation aimed at discovering and applying new facts, techniques, and natural laws.

research method [ENG] A standard test to determine the research octane number (or rating) of fuels for use in spark-ignition engines.

research octane number [ENG] An expression for the antiknock rating of a motor gasoline as a guide to how vehicles will

operate under mild conditions associated with low engine speeds.

research reactor [NUCLEO] A reactor primarily designed to supply neutrons or other ionizing radiation for experimental purposes; it may also be used for training, materials testing, and production of radioisotopes. Also known as teaching reactor.

research rocket [AERO ENG] A rocket-propelled vehicle used to collect scientific data.

research ship [NAV ARCH] A ship used to carry out oceanographic research; conventional research ships carry on multidiscipline research, either on a single cruise or on successive cruises, while other research ships carry out special tasks, such as fisheries research ships, ships to tend and carry deep-submergence vehicles, and research drilling ships. Also known as oceanographic ship.

réseau [METEOROL] The term adopted by the World Meteorological Organization for the worldwide network of meteorological stations which have been chosen to represent the meteorology of the globe (*réseau mondial*).

resection [ENG] **1.** A method in surveying by which the horizontal position of an occupied point is determined by drawing lines from the point to two or more points of known position. **2.** A method of determining a plane-table position by orienting along a previously drawn foresight line and drawing one or more rays through the foresight from previously located stations. [MED] The surgical removal of a section or segment of an organ or other structure.

resectoscope [MED] A tubelike instrument containing an optical device and a sliding knife; permits excision of tissue in body cavities without an opening other than that made by the instrument itself.

Resedaceae [BOT] A family of dicotyledonous herbs in the order Capparales having irregular, hypogynous flowers.

resedimentation [GEOL] **1.** Sedimentation of material derived from a preexisting sedimentary rock, that is, redeposition of sedimentary material. **2.** Mechanical deposition of material in cavities of postdepositional age, such as the deposition of carbonate muds and silts by internal mechanical erosion or solution of a limestone. **3.** The general process of subaqueous, downslope movement of sediment under the influence of gravity, such as the formation of a turbidity-current deposit.

resequent [GEOL] Referring to a geologic or topographic feature that resembles or agrees with a consequent feature but that developed from the feature at a later date.

resequent fault-line scarp [GEOL] A fault-line scarp which faces in the same direction as the original fault scarp or in which the downthrown block is topographically lower than the upthrown block.

resequent stream [HYD] A stream whose direction follows an original consequent stream but is generally lower; resequent streams are generally tributary to a subsequent stream.

reserpine [PHARM] $C_{33}H_{40}N_2O_9$ An alkaloid extracted from certain species of *Rauwolfia* and used as a sedative and antihypertensive.

reserve [COMPUT SCI] To assign portions of a computer memory and of input/output and storage devices to a specific computer program in a multiprogramming system.

reserve aircraft [AERO ENG] Those aircraft which have been accumulated in excess of immediate needs for active aircraft and are retained in the inventory against possible future needs.

reserve battery [ELEC] A battery which is inert until an operation is performed which brings all the cell components into the proper state and location to become active.

reserve buoyancy [NAV ARCH] That part of the volume of a ship which is above the water surface and is watertight, so that it will increase buoyancy if the ships sinks deeper into the water.

reserve cell [HISTOL] **1.** One of the small, undifferentiated epithelial cells at the base of the stratified columnar lining of the bronchial tree. **2.** A chromophobe cell.

reserved minerals [MIN ENG] Economic minerals that belong to the state, which confers the right to prospect for and to mine them on any applicant.

reserved word [COMPUT SCI] A word which cannot be used in a programming language to represent an item of data because it has some particular significance to the compiler, or which can be used only in a particular context.

reserves [MIN ENG] The quantity of workable mineral or of gas or oil which is calculated to lie within given boundaries.

reserves-decline relationship [PETRO ENG] Relationship between production-rate decline over a period of time to the total remaining hydrocarbon reserves in a reservoir.

reservoir [CIV ENG] A pond or lake built for storage of water, usually by the construction of a dam across a river. [GEOL] A subsurface accumulation of crude oil or natural gas under adequate trap conditions.

reservoir cycling [PETRO ENG] Repressuring of an oil reservoir by reinjection of dry gas (gas with liquids stripped out) into the formation.

reservoir drive mechanism [PETRO ENG] The physical action by which hydrocarbons (gas or liquid) are moved through the porous reservoir structure; for example, gas drive or water drive. Also known as oil-well drive.

reservoir dynamics [PETRO ENG] Fluid-flow performance within an oil or gas reservoir.

reservoir fluid [GEOL] The subterranean fluid trapped by a reservoir formation; can include natural gas, liquid and vapor petroleum hydrocarbons, and interstitial water.

reservoir pressure [GEOL] **1.** The pressure on fluids (water, oil, gas)in a subsurface formation. **2.** The pressure under which fluids are confined in rocks.

reservoir rock [GEOL] Friable, porous sandstone containing deposits of oil or gas.

reset *See* clear.

reset action [CONT SYS] Floating action in which the final control element is moved at a speed proportional to the extent of proportional-position action.

reset bit [DES ENG] A diamond bit made by reusing diamonds salvaged from a used bit and setting them in the crown attached to a new bit blank. Also known as replacement bit.

reset condition [ELECTR] Condition of a flip-flop circuit in which the internal state of the flip-flop is reset to zero.

reset cycle [COMPUT SCI] To restore a cycle index counter to its initial value.

reset input [COMPUT SCI] The act of resetting the original conditions of a problem when running on an analog computer.

reset mode [COMPUT SCI] The phase of operation of an analog computer during which the required initial conditions are entered into the system and the computing units are inoperative. Also known as initial condition mode.

reset pulse [ELECTR] **1.** A drive pulse that tends to reset a magnetic cell in the storage section of a digital computer. **2.** A pulse used to reset an electronic counter to zero or to some predetermined position.

reset rate [ENG] The number of times per minute that the effect of the proportional-position action upon the final control element is repeated by the proportional-speed floating action.

resettability [ELECTR] The ability of the tuning element of an oscillator to retune the oscillator to the same operating frequency for the same set of input conditions.

reshabar [METEOROL] A strong, very turbulent, dry northeast wind of bora type which blows down mountain ranges in southern Kurdistan in Persia; it is dry and hot in summer and cold in winter.

resid *See* residual oil.

residence time [CHEM ENG] The average length of time a particle of reactant spends within a process vessel or in contact with a catalyst. [NUCLEO] The time during which radioactive material remains in the atmosphere following the detonation of a nuclear explosive; it is usually expressed as a half-time, since the time for all material to leave the atmosphere is not well known.

resident executive [COMPUT SCI] The portion of the executive program (sometimes called monitor system) which is permanently stored in core. Also known as resident monitor.

resident monitor *See* resident executive.

resident routine [COMPUT SCI] Any computer routine which is stored permanently in the memory, such as the resident executive.

residual [GEOL] **1.** Of a mineral deposit, formed by either mechanical or chemical concentration. **2.** Pertaining to a residue left in place after weathering of rock. **3.** Of a topographic feature, representing the remains of a formerly great mass or area and rising above the surrounding surface.

residual air *See* residual volume.

residual anticline [GEOL] In salt tectonics, a relative structural high resulting from the depression of two adjacent rim synclines. Also known as residual dome.

residual charge [ELEC] The charge remaining on the plates of a capacitor after initial discharge.

residual clay [GEOL] Very finely divided clay material formed in place by weathering of rock. Also known as primary clay.

residual compaction [GEOL] The difference between the amount of compaction that will ultimately occur for a given increase in applied stress, and that which has occurred at a specified time.

residual current [ELECTR] Current flowing through a thermionic diode when there is no anode voltage, due to the velocity of the electrons emitted by the heated cathode.

residual deviation [NAV] Deviation of a magnetic compass after adjustment or compensation.

residual dome *See* residual anticline.

residual elements [MET] Elements present in small amounts in a metal or alloy, not added intentionally.

residual error rate *See* undetected error rate.

residual error ratio [PHYS] The difference between an optimum result derived from experience or experiment and a supposedly exact result derived from theory.

residual field [ELECTROMAG] The magnetic field left in an iron core after excitation has been removed.

residual flux density [ELECTROMAG] The magnetic flux density at which the magnetizing force is zero when the material is in a symmetrically and cyclically magnetized condition. Also known as residual induction; residual magnetic induction; residual magnetism.

residual free gas [PETRO ENG] Free gas-cap gas in equilibrium with residual liquid hydrocarbons in a depleted reservoir, such as a reservoir at the end of its primary or economic producing life.

residual fuel oil [MATER] Topped crude petroleum or viscous residuums from refinery operations; commercial grades of burner oils Nos. 5 and 6 are residual oils, and include the bunker fuels.

residual induction *See* residual flux density.

residual ionization [PHYS] Ionization of air or other gas in a closed chamber, not accounted for by recognizable neighboring agencies; now attributed to cosmic rays.

residual kame [GEOL] A ridge or mound of sand or gravel formed by the denudation of glaciofluvial material that had been deposited in glacial lakes or on the flanks of hills of till.

residual liquid [GEOL] The volatile components of a magma that remain in the magma chamber after much crystallization has taken place.

residual liquor *See* rest magma.

residual magnetic induction *See* residual flux density.

residual magnetism *See* residual flux density.

residual map [GEOL] A stratigraphic map that displays the small-scale variations (such as local features in the sedimentary environment) of a given stratigraphic unit.

residual material [GEOL] Unconsolidated or partly weathered parent material of a soil, presumed to have developed in place (by weathering) from the consolidated rock on which it lies.

residual method [MET] Magnetic particle inspection in which particles are supplied to a specimen after the magnetizing force has been removed.

residual mineral [GEOL] A mineral that has been concentrated in place by weathering and leaching of rock.

residual mode [CONT SYS] A characteristic motion of a structure which is deliberately ignored in the control algorithm of an active control system for the structure in the process of model reduction.

residual modulation *See* carrier noise.

residual ochre [GEOL] An earthy, red, yellow, or brownish iron oxide powder of iron oxide (usually the mineral limonite) produced during chemical weathering.

residual oil [MATER] Petroleum-refinery term for combustible, viscous or semiliquid bottoms product from crude oil distillation; used in adhesives, roofing compounds, asphalt manufacture, low-grade fuel oils, and sealants. Also known as liquid asphalt; resid; residuum; tailings.

residual penetration [ORD] As pertains to shaped charge ammunition, penetration of the jet into a backing target of some standard material after passage through a thickness of target material under test; this penetration is a measure of the effectiveness of the tested material against the jet.

residual radiation [NUCLEO] Nuclear radiation emitted by radioactive material deposited after an atomic burst, including fission products, unfissioned nuclear material, and material in which radioactivity may have been induced by neutron bombardment. Also known as reststrahlen. [OPTICS] The nearly monochromatic radiation resulting from several reflections of light or other radiation from polished surfaces of certain substances such as quartz and rock salt, due to high reflectivity of these substances in certain bands of wavelengths.

residual resistance [SOLID STATE] The value to which the electrical resistance of a metal drops as the temperature is lowered to near absolute zero, caused by imperfections and impurities in the metal rather than by lattice vibrations.

residual sediment *See* resistate.

residual set [MATH] In a topological space, the complement of a set which is a countable union of nowhere dense sets.

residual spectrum [MATH] Those members λ of the spectrum of a linear operator A on a Banach space X for which $(A - \lambda I)^{-1}$, I the identity operator, is unbounded with domain not dense in X.

residual stress *See* internal stress.

residual stress field *See* ambient stress field.

residual swelling [GEOL] The difference between the original prefreezing level of the ground and the level reached by the settling after the ground is completely thawed.

residual tack *See* aftertack.

residual valley [GEOL] An intervening trough between uplifted mountains.

residual vibration *See* zero-point vibration.

residual voltage [ELEC] Vector sum of the voltages to ground of the several phase wires of an electric supply circuit.

residual volume [PHYSIO] Air remaining in the lungs after the most complete expiration possible; it is elevated in diffuse obstructive emphysema and during an attack of asthma. Also known as residual air.

residuary resistance [NAV ARCH] The sum of wavemaking resistance and eddy resistance opposing the motion of a ship through the water; the resistance which remains when frictional resistance is subtracted from total fluid resistance or drag.

residue [CHEM ENG] **1.** The substance left after distilling off all but the heaviest components from crude oil in petroleum refinery operations. Also known as bottoms; residuum. **2.** Solids deposited onto the filter medium during filtration. Also known as cake; discharged solids. [GEOL] The in-place accumulation of rock debris which remains after weathering has removed all but the least soluble constituent. [MATH] The residue of a complex function $f(z)$ at an isolated singularity z_0 is given by $(1/2\pi i) \int f(z)\, dz$ along a simple closed curve interior to an annulus about z_0; equivalently, the coefficient of the term $(z - z_0)^{-1}$ in the Laurent series expansion of $f(z)$ about z_0.

residue check *See* modulo N check.

residue class [MATH] A set of numbers satisfying a congruency relation.

residue class ring *See* quotient ring.

residue system [COMPUT SCI] A number system in which each digit position corresponds to a different radix, all pairs of radices are relatively prime, and the value of a digit with radix r for an integer A is equal to the remainder when A is divided by r.

residue theorem [MATH] The value of the integral of a complex function, taken along a simple closed curve enclosing at most a finite number of isolated singularities, is given by $2\pi i$ times the sum of the residues of the function at each of the singularities.

residuum *See* residual oil; residue.

resilience [MECH] **1.** Ability of a strained body, by virtue of high yield strength and low elastic modulus, to recover its size and form following deformation. **2.** The work done in deforming a body to some predetermined limit, such as its elastic limit or breaking point, divided by the body's volume.

resin [ORG CHEM] Any of a class of solid or semisolid organic products of natural or synthetic origin with no definite melting point, generally of high molecular weight; most resins are polymers.

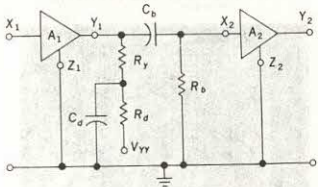
resin-anchored bolt [ENG] A bolt is anchored in the resin placed at the back of the hole in a glass cartridge, which ruptures when the bolt is inserted.

resin duct [BOT] A canal (intercellular space) lined with secretory cells that release resins into the canal; common in gymnosperms.

resin emulsion [MATER] Stable emulsion of a resin in a solvent carrier, such as the latex emulsions used in water-based latex paints.

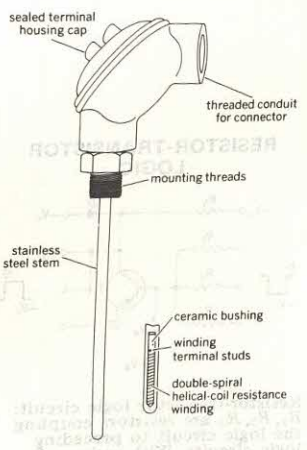
resin finish [TEXT] A synthetic-resin finish produced by impregnating the fiber with resin and then baking it.
resin-in-pulp ion exchange [CHEM ENG] Combination of coarse anion-exchange resin with a slurry of finely ground uranium ore in an acid-leach liquor.
resinite [GEOL] A variety of exinite composed of resinous compounds, often in elliptical or spindle-shaped bodies.
resin of copper *See* cuprous chloride.
resinography [CHEM] Science of resins, polymers, plastics, and their products; includes study of morphology, structure, and other characteristics relatable to composition or treatment.
resinoid [ORG CHEM] A thermosetting synthetic resin either in its initial (temporarily fusible) or in its final (infusible) state.
resinoid wheel [DES ENG] A grinding wheel bonded with a synthetic resin.
resinol [MATER] Heat- and oxidation-sensitive, benzene-soluble coal tar fraction containing phenols; insoluble in light petroleum.
resin opal [MINERAL] A wax-, honey-, or ocherous-yellow variety of common opal with a resinous luster or appearance.
resinous cement [MATER] An acid-proof cement with a base of synthetic resin.
resinous coal [GEOL] Coal in which large proportions of resinous material are contained in the attritus.
resinous luster [GEOL] The luster on the fractured surfaces of certain minerals (such as opal, sulfur, amber, and sphalerite) and rocks (such as pitchstone) that resemble the appearance of resin.
resin roof bolting [MIN ENG] The fixation of metal roof bolts in rock holes with a bonding resin.
resin tin *See* rosin tin.
resist [GRAPHICS] A protective layer applied to the image, or other parts of a plate, to protect that portion of the metal from the action of an etching bath or a sandblasting operation. [MATER] An acid-resistant nonconducting coating used to protect desired portions of a wiring pattern from the action of the etchant during manufacture of printed wiring boards. [MET] An insulating material, for example lacquer, applied to the surface of work to prevent electroplating or electrolytic action at the coated area. Also known as stopoff.
resistance [ACOUS] *See* acoustic resistance. [FL MECH] *See* fluid resistance. [ELEC] **1.** The opposition that a device or material offers to the flow of direct current, equal to the voltage drop across the element divided by the current through the element. Also known as electrical resistance. **2.** In an alternating-current circuit, the real part of the complex impedance. [MECH] In damped harmonic motion, the ratio of the frictional resistive force to the speed. Also known as damping coefficient; damping constant; mechanical resistance.
resistance box [ELEC] A box containing a number of precision resistors connected to panel terminals or contacts so that a desired resistance value can be obtained by withdrawing plugs (as in a post-office bridge) or by setting multicontact switches.
resistance brazing [MET] Brazing employing the heat developed by an electric current, the joint being part of the electric circuit.
resistance bridge *See* Wheatstone bridge.
resistance-capacitance circuit [ELEC] A circuit which has a resistance and a capacitance in series, and in which inductance is negligible. Abbreviated *R-C* circuit.
resistance-capacitance constant [ELEC] Time constant of a resistive-capacitive circuit; equal in seconds to the resistance value in ohms multiplied by the capacitance value in farads. Abbreviated *R-C* constant.
resistance-capacitance coupled amplifier [ELECTR] An amplifier in which a capacitor provides a path for signal currents from one stage to the next, with resistors connected from each side of the capacitor to the power supply or to ground; it can amplify alternating-current signals but cannot handle small changes in direct currents. Also known as *R-C* amplifier; *R-C* coupled amplifier; resistance-coupled amplifier.
resistance-capacitance network [ELEC] Circuit containing resistances and capacitances arranged in a particular manner to perform a specific function. Abbreviated *R-C* network.
resistance-capacitance oscillator [ELECTR] Oscillator in which the frequency is determined by resistance and capacitance elements. Abbreviated *R-C* oscillator.
resistance coefficient 1 [FL MECH] A dimensionless number used in the study of flow resistance, equal to the resistance force in flow divided by ½ the product of fluid density, the square of fluid velocity, and the square of a characteristic length. Symbolized c_f.
resistance coefficient 2 *See* Darcy number 1.
resistance commutation [ELEC] Commutation of an electric rotating machine in which brushes with relatively high resistance span at least one commutator segment, in order to achieve a linear variation of current with time, and thereby minimize self-inductive voltage in the coils.
resistance-coupled amplifier *See* resistance-capacitance coupled amplifier.
resistance coupling [ELECTR] Coupling in which resistors are used as the input and output impedances of the circuits being coupled; a coupling capacitor is generally used between the resistors to transfer the signal from one stage to the next. Also known as *R-C* coupling; resistance-capacitance coupling; resistive coupling.
resistance drop [ELEC] The voltage drop occurring between two points on a conductor due to the flow of current through the resistance of the conductor; multiplying the resistance in ohms by the current in amperes gives the voltage drop in volts. Also known as *IR* drop.
resistance element [ELEC] An element of resistive material in the form of a grid, ribbon, or wire, used singly or built into groups to form a resistor for heating purposes, as in an electric soldering iron.
resistance factor *See* R factor.
resistance furnace [ENG] An electric furnace in which the heat is developed by the passage of current through a suitable internal resistance that may be the charge itself, a resistor embedded in the charge, or a resistor surrounding the charge. Also known as electric resistance furnace.
resistance grounding [ELEC] Electrical grounding in which lines are connected to ground by a resistive (totally dissipative) impedance.
resistance heating [ELEC] The generation of heat by electric conductors carrying current; degree of heating is proportional to the electrical resistance of the conductor; used in electrical home appliances, home or space heating, and heating ovens and furnaces.
resistance lamp [ELEC] Electric lamp used to prevent the current in a circuit from exceeding a desired limit.
resistance loss [ELEC] Power loss due to current flowing through resistance; its value in watts is equal to the resistance in ohms multiplied by the square of the current in amperes.
resistance magnetometer [ENG] A magnetometer that depends for its operation on variations in the electrical resistance of a material immersed in the magnetic field to be measured.
resistance material [ELEC] Material having sufficiently high resistance per unit length or volume to permit its use in the construction of resistors.
resistance measurement [ELEC] The quantitative determination of that property of an electrically conductive material, component, or circuit called electrical resistance.
resistance meter [ENG] Any instrument which measures electrical resistance. Also known as electrical resistance meter.
resistance methanometer [ENG] A catalytic methanometer, with platinum used as the filament, which both heats the detecting element and acts as a resistance-type thermometer.
resistance noise *See* thermal noise.
resistance pyrometer *See* resistance thermometer.
resistance-rate flowmeter *See* resistive flowmeter.
resistance seam welding [MET] Resistance welding process which produces a series of individual spot welds, overlapping spot welds, or a continuous nugget weld made by circular or wheel-type electrodes.
resistance spot welding [MET] Resistance welding process in which the parts are lapped and held in place under pressure; the size and shape of the electrodes (usually circular) control the size and shape of the welds.
resistance-start motor [ELEC] A split-phase motor having a resistance connected in series with the auxiliary winding; the auxiliary circuit is opened when the motor attains a predetermined speed.
resistance strain gage [ELECTR] A strain gage consisting of a strip of material that is cemented to the part under test and that changes in resistance with elongation or compression.
resistance thermometer [ENG] A thermometer in which the sensing element is a resistor whose resistance is an accu-

RESISTANCE-CAPACITANCE COUPLED AMPLIFIER



Circuit diagram of resistance-capacitance coupled amplifier. Amplifier stages A_1 and A_2 have inputs X_1 and X_2 and outputs Y_1 and Y_2. Y_1 is coupled to X_2 by blocking capacitor C_b. For vacuum-tube amplifier, Z_1 and Z_2 = cathode of A_1 and A_2; R_b = grid-leak resistor; R_y = plate resistor; V_{YY} = plate supply voltage. Decoupling filter R_d and C_d is used for compensation.

RESISTANCE THERMOMETER



Industrial-type resistance thermometer. *(From D. M. Considine, ed., Process Instruments and Controls Handbook, McGraw-Hill, 1957)*

rately known function of temperature. Also known as electrical resistance thermometer; resistance pyrometer.

resistance transfer factor [GEN] A carrier of genetic information in bacteria which is considered to control the ability of self-replication and conjugal transfer of R factors. Abbreviated RTF.

resistance welding [MET] Joining metals together under pressure by making use of heat developed by an electric current, the work being part of the electrical circuit.

resistance wire [MET] Wire made from a metal or alloy having high resistance per unit length, such as Nichrome; used in wire-wound resistors and heating elements.

resistate [GEOL] A sediment consisting of minerals that are chemically resistant and are enriched in the residues of weathering processes. Also known as residual sediment.

resist-dyeing [TEXT] A cross-dyeing method in which a chemical is applied to certain yarns before weaving so that, when the material is dyed, only the untreated yarns take the dye, producing a colorful pattern; the chemical is later removed from the fabric.

resisting moment [MECH] A moment produced by internal tensile and compressive forces that balances the external bending moment on a beam.

resistive coupling *See* resistance coupling.

resistive flowmeter [ENG] Liquid flow-rate measurement device in which flowrates are read electrically as the result of the rise or fall of a conductive differential-pressure manometer fluid in contact with a resistance-rod assembly. Also known as resistance-rate flowmeter.

resistive load [ELEC] A load whose total reactance is zero, so that the alternating current is in phase with the terminal voltage. Also known as nonreactive load.

resistive unbalance [ELEC] Unequal resistance in the two wires of a transmission line.

resistivity *See* electrical resistivity.

resistivity factor *See* formation factor.

resistivity index [PETRO ENG] Ratio of the true electrical resistivity of a rock system at a specified water saturation, to the resistivity of the rock itself; used for calculation of electrical well-logging data.

resistivity method [ENG] Any electrical exploration method in which current is introduced in the ground by two contact electrodes and potential differences are measured between two or more other electrodes.

resistivity well logging [PETRO ENG] The measurement of subsurface electrical resistivities (normal and lateral to the borehole) during electrical logging of oil wells.

resistor [ELEC] A device designed to have a definite amount of resistance; used in circuits to limit current flow or to provide a voltage drop. Also known as electrical resistor.

resistor bulb [ENG] A temperature-measurement device inside of which is a resistance winding; changes in temperature cause corresponding changes in resistance, varying the current in the winding.

resistor-capacitor-transistor logic [ELECTR] A resistor-transistor logic with the addition of capacitors that are used to enhance switching speed.

resistor-capacitor unit *See* rescap.

resistor color code [ELEC] Code adopted by the Electronic Industries Association to mark the values of resistance on resistors in a readily recognizable manner; the first color represents the first significant figure of the resistor value, the second color the second significant figure, and the third color represents the number of zeros following the first two figures; a fourth color is sometimes added to indicate the tolerance of the resistor.

resistor core [ELEC] Insulating support on which a resistor element is wound or otherwise placed.

resistor element [ELEC] That portion of a resistor which possesses the property of electric resistance.

resistor furnace [ENG] An electric furnace in which heat is developed by the passage of current through distributed resistors (heating units) mounted apart from the charge.

resistor network [ELEC] An electrical network consisting entirely of resistances.

resistor oven [ENG] Heating chamber relying on an electrical-resistance element to create temperatures of up to 800°F (430°C); used for drying and baking.

resistor termination [ELECTR] A thick-film conductor pad overlapping and contacting a thick-film resistor area.

resistor-transistor logic [ELECTR] One of the simplest logic circuits, having several resistors, a transistor, and a diode. Abbreviated RTL.

resite *See* C-stage resin.

resitol *See* B-stage resin.

resnatron [ELECTR] A microwave-beam tetrode containing cavity resonators, used chiefly for generating large amounts of continuous power at high frequencies.

resolution [ELECTR] In television, the maximum number of lines that can be discerned on the screen at a distance equal to tube height; this ranges from 350 to 400 for most receivers. [ELECTROMAG] In radar, the minimum separation between two targets, in angle or range, at which they can be distinguished on a radar screen. Also known as resolving power. [PHYS] **1.** For a measurement of energy or momentum of a collection of particles, the difference between the highest and lowest energies at which the response of an instrument to a beam of monoenergetic particles is at least half its maximum value, divided by the energy of the particles. **2.** The procedure of breaking up a vectorial quantity into its components. [OPTICS] *See* resolving power. [SPECT] *See* resolving power.

resolution chart [COMMUN] *See* test pattern. [OPTICS] A device to test resolving power; usually alternate black and white lines of equal width arranged in groups of decreasing line width, identified as the number of line pairs per millimeter.

resolution error [COMPUT SCI] An error of an analog computing unit that results from its inability to respond to changes of less than a given magnitude.

resolution factor [COMPUT SCI] In information retrieval, the ratio obtained in dividing the total number of documents retrieved (whether relevant or not to the user's needs) by the total number of documents available in the file.

resolution in azimuth [ENG] The angle by which two targets must be separated in azimuth in order to be distinguished by a radar set when the targets are at the same range.

resolution in range [ENG] Distance by which two targets must be separated in range in order to be distinguished by a radar set when the targets are on the same azimuth line.

resolution of a vector [MATH] The determination of vectors parallel to specified (usually perpendicular) axes such that their sum equals a given vector.

resolution of the identity [MATH] A family of linear projection operators on a Banach space used in studying the spectra of linear operators.

resolution reading [OPTICS] A number indicating how many lines per millimeter are contained in the finest group which can be distinguished on a resolution chart.

resolution wedge [COMMUN] On a television test pattern, a group of gradually converging lines used to measure resolution.

resolvent kernel [MATH] A function appearing as an integrand in an integral representation for a solution of a linear integral equation which often completely determines the solutions.

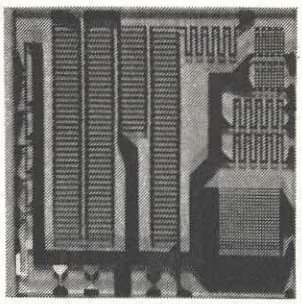
resolvent of an operator [MATH] The function, defined on the complement of the spectrum of a linear operator T of Banach spaces, given by $(T - \lambda I)^{-1}$ for each λ in this complement, where I is the identity operator; this enables a study of T relative to its eigenvalues.

resolvent set [MATH] Those scalars λ for which the operator $T - \lambda I$ has a bounded inverse, where T is some linear operator on a Banach space, and I is the identity operator.

resolver [ELEC] A synchro or other device whose rotor is mechanically driven to translate rotor angle into electrical information corresponding to the sine and cosine of rotor angle; used for interchanging rectangular and polar coordinates. Also known as sine-cosine generator; synchro resolver. [ELECTR] **1.** A synchro or other device whose input is the angular position of an object, such as the rotor of an electric machine, and whose output is electric signals, usually proportional to the sine and cosine of an angle, and often in digital form; used to interchange rectangular and polar coordinates, and in servomechanisms to report the orientation of controlled objects. Also known as angular resolver. **2.** A device that accepts a single vector-valued analog input and produces for output either analog or digital signals proportional to two or three orthogonal components of the vector. Also known as vector resolver.

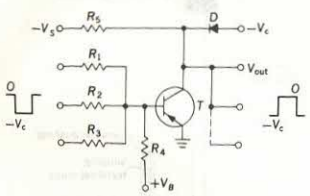
resolving cell [ELECTROMAG] In radar, volume in space whose diameter is the product of slant range and beam width, and whose length is the pulse length.

RESISTOR NETWORK



A thin-film resistor network. *(TRW Inc.)*

RESISTOR-TRANSISTOR LOGIC



Resistor-transistor logic circuit: R_1, R_2, R_3 are resistors coupling the logic circuit to preceding logic circuits. With resistor R_4 and positive supply voltage $+V_B$ they form the gate circuit. D is the diode and T the transistor. V_s = input signal voltage; V_c = collector voltage; V_{out} = output voltage.

resolving power [ELECTROMAG] **1.** The reciprocal of the beam width of a unidirectional antenna, measured in degrees. **2.** *See* resolution. [OPTICS] A quantitative measure of the ability of an optical instrument to produce separable images of different points on an object; usually, the smallest angular or linear separation of two object points for which they may be resolved according to the Rayleigh criterion. Also known as resolution. [PHYS] A measure of the ability of a mass spectroscope to separate particles of different masses, equal to the ratio of the average mass of two particles whose mass spectrum lines can just be completely separated, to the difference in their masses. [SPECT] A measure of the ability of a spectroscope or interferometer to separate spectral lines of nearly equal wavelength, equal to the average wavelength of two equally strong spectral lines whose images can barely be separated, divided by the difference in wavelengths; for spectroscopes, the lines must be resolved according to the Rayleigh criterion; for interferometers, the wavelengths at which the lines have half of maximum intensity must be equal. Also known as resolution.

resolving time [COMPUT SCI] In computers, the shortest permissible period between trigger pulses for reliable operation of a binary cell. [ENG] Minimum time interval, between events, that can be detected; resolving time may refer to an electronic circuit, to a mechanical recording device, or to a counter tube.

resonance [ELEC] A phenomenon exhibited by an alternating-current circuit in which there are relatively large currents near certain frequencies, and a relatively unimpeded oscillation of energy from a potential to a kinetic form; a special case of the physics definition. [PHYS] **1.** A phenomenon exhibited by a physical system acted upon by an external periodic driving force, in which the resulting amplitude of oscillation of the system becomes large when the frequency of the driving force approaches a natural free oscillation frequency of the system. **2.** In general, any phenomenon which is greatly enhanced at frequencies or energies that are at or very close to a given characteristic value. [QUANT MECH] *See* resonance absorption; resonance level.

resonance absorption [NUCLEO] The absorption of neutrons having a narrow range of energies corresponding to a nuclear resonance level of the absorber in a nuclear reactor. [QUANT MECH] The absorption of electromagnetic radiation by a quantum-mechanical system at a characteristic frequency satisfying the Bohr frequency condition. Also known as resonance.

resonance bridge [ELEC] A four-arm alternating-current bridge used to measure inductance, capacitance, or frequency; the inductor and the capacitor, which may be either in series or in parallel, are tuned to resonance at the frequency of the source before the bridge is balanced.

resonance capture [NUC PHYS] The combination of an incident particle and a nucleus in a resonance level of the resulting compound nucleus, characterized by having a large cross section at and very near the corresponding resonance energy.

resonance curve [ELEC] Graphical representation illustrating the manner in which a tuned circuit responds to the various frequencies in and near the resonant frequency.

resonance energy [PHYS] The characteistic energy at which, or very close to which, the amplitude of a resonance phenomenon is greatly enhanced.

resonance fluorescence [ATOM PHYS] *See* resonance radiation. [NUC PHYS] Resonant scattering from an atomic nucleus.

resonance frequency [PHYS] A frequency at which some measure of the response of a physical system to an external periodic driving force is a maximum; three types are defined, namely, phase resonance, amplitude resonance, and natural resonance, but they are nearly equal when dissipative effects are small. Also known as resonant frequency. [QUANT MECH] A characteristic frequency, satisfying the Bohr frequency condition, at which a quantum-mechanical system absorbs radiation.

resonance hybrid [CHEM] A molecule that may be considered an intermediate between two or more valence bond structures.

resonance ionization spectroscopy [SPECT] A technique capable of detecting single atoms or molecules of a given element or compound in a gas, in which an atom or molecule in its ground state is excited to a bound state when a photon is absorbed from a laser beam at a very well-controlled wavelength that is resonant with the excitation energy; a second photon removes the excited electron from the atom or molecule, and this electron is then accelerated by an electric field and collides with the gas molecules, creating additional ionization which is detected by a proportional counter. Abbreviated RIS.

resonance lamp [ATOM PHYS] An evacuated quartz bulb containing mercury, which acts as a source of radiation at the wavelength of the pure resonance line of mercury when irradiated by a mercury-arc lamp.

resonance level [QUANT MECH] An unstable state of a compound system capable of being formed in a collision between two particles, and associated with a peak in a graph of cross section versus energy for the scattering of the particles. Also known as resonance.

resonance luminescence *See* resonance radiation.

resonance method [ELEC] A method of determining the impedance of a circuit element, in which resonance frequency of a resonant circuit containing the element is measured. [ENG] In ultrasonic testing, a method of measuring the thickness of a metal by varying the frequency of the beam transmitted to excite a maximum amplitude of vibration.

resonance radiation [ATOM PHYS] The emission of radiation by a gas or vapor as a result of excitation of atoms to higher energy levels by incident photons at the resonance frequency of the gas or vapor; the radiation is characteristic of the particular gas or vapor atom but is not necessarily the same frequency as the absorbed radiation. Also known as resonance fluorescence; resonance luminescence.

resonance reaction [NUC PHYS] A nuclear reaction that takes place only when the energy of the incident particles is at or very close to a characteristic value.

resonance scattering [NUC PHYS] A peak in the cross section of a nucleus for elastic scattering of neutrons at energies near a resonance level, accompanied by an anomalous phase shift in the scattered neutrons.

resonance spectrum [SPECT] An emission spectrum resulting from illumination of a substance (usually a molecular gas) by radiation of a definite frequency or definite frequencies.

resonance structure [ORG CHEM] Any of two or more possible structures of the same compound that have identical geometry but different arrangements of their paired electrons; none of the structures has physical reality or adequately accounts for the properties of the compound, which exists as an intermediate form.

resonance transformer [ELEC] A high-voltage transformer in which the secondary circuit is tuned to the frequency of the power supply. [ELECTR] An electrostatic particle accelerator, used principally for acceleration of electrons, in which the high-voltage terminal oscillates between voltages which are equal in magnitude and opposite in sign.

resonance trough [METEOROL] A large-scale pressure trough which forms at an appropriate wavelength away from a dominant trough; for example, the mean trough over the Mediterranean in winter is often considered a resonance trough between the two more dynamically active troughs along the east coasts of North America and Asia.

resonance vibration [MECH] Forced vibration in which the frequency of the disturbing force is very close to the natural frequency of the system, so that the amplitude of vibration is very large.

resonant antenna [ELECTROMAG] An antenna for which there is a sharp peak in the power radiated or intercepted by the antenna at a certain frequency, at which electric currents in the antenna form a standing-wave pattern.

resonant capacitor [ELEC] A tubular capacitor that is wound to have inductance in series with its capacitance.

resonant cavity *See* cavity resonator.

resonant-cavity maser [PHYS] A maser in which the paramagnetic active material is placed in a cavity resonator.

resonant chamber *See* cavity resonator.

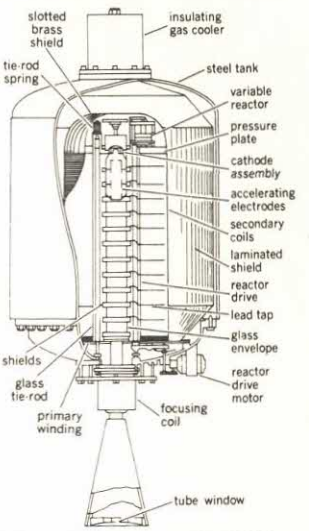
resonant-chamber switch [ELECTROMAG] Waveguide switch in which a tuned cavity in each waveguide branch serves the functions of switch contacts; detuning of a cavity blocks the flow of energy in the associated waveguide.

resonant circuit [ELEC] A circuit that contains inductance, capacitance, and resistance of such values as to give resonance at an operating frequency.

resonant coupling [ELEC] Coupling between two circuits that reaches a sharp peak at a certain frequency.

resonant detector [PHYS] A detector of electromagnetic ra-

RESONANCE TRANSFORMER



Schematic diagram of 1-MeV resonance transformer that is used as an electrostatic particle accelerator. *(General Electric Co.)*

diation which is responsive to radiation only at certain frequencies at which resonance is created in the detector.

resonant diaphragm [ELECTROMAG] Diaphragm, in waveguide technique, so proportioned as to introduce no reactive impedance at the design frequency.

resonant element *See* cavity resonator.

resonant frequency *See* resonance frequency.

resonant gate transistor [ELECTR] Surface field-effect transistor incorporating a cantilevered beam which resonates at a specific frequency to provide high-Q-frequency discrimination.

resonant helix [ELECTROMAG] An inner helical conductor in certain types of transmission lines and resonant cavities, which carries currents with the same frequency as the rest of the line or cavity.

resonant iris [ELECTROMAG] A resonant window in a circular waveguide; it resembles an optical iris.

resonant jet [AERO ENG] A pulsejet engine, exhibiting intensification of power under the rhythm of explosions and compression waves within the engine.

resonant line [ELECTROMAG] A transmission line having values of distributed inductance and distributed capacitance so as to make the line resonant at the frequency it is handling.

resonant line oscillator [ELECTR] Oscillator in which one or more sections of transmission lines are employed as resonant elements.

resonant-line tuner [ELECTR] A television tuner in which resonant lines are used to tune the antenna, radio-frequency amplifier, and radio-frequency oscillator circuits; tuning is achieved by moving shorting contacts that change the electrical lengths of the lines.

resonant-reed relay [ELEC] A reed relay in which the reed switch closes only when the required frequency is applied to the operating coil, to make one of the reeds vibrate until its amplitude is sufficient to make contact with the other reed; used in selective paging systems.

resonant resistance [ELEC] Resistance value to which a resonant circuit is equivalent.

resonant scattering [QUANT MECH] Scattering of a photon by a quantum-mechanical system (usually an atom or nucleus) in which the system first absorbs the photon by undergoing a transition from one of its energy states to one of higher energy, and subsequently reemits the photon by the exact inverse transition.

resonant voltage step-up [ELEC] Ability of an inductor and a capacitor in a series resonant circuit to deliver a voltage several times greater than the input voltage of the circuit.

resonant wavelength [ELECTROMAG] The wavelength in free space of electromagnetic radiation having a frequency equal to a natural resonance frequency of a cavity resonator.

resonant window [ELECTROMAG] A parallel combination of inductive and capacitive diaphragms, used in a waveguide structure to provide transmission at the resonant frequency and reflection at other frequencies.

resonate [ELEC] To bring to resonance, as by tuning.

resonating cavity [ELECTROMAG] Short piece of waveguide of adjustable length, terminated at either or both ends by a metal piston, an iris diaphragm, or some other wave-reflecting device; it is used as a filter, as a means of coupling between guides of different diameters, and as impedance networks corresponding to those used in radio circuits.

resonator [PHYS] A device that exhibits resonance at a particular frequency, such as an acoustic resonator or cavity resonator.

resonator grid [ELECTR] Grid that is attached to a cavity resonator in velocity-modulated tubes to provide coupling between the resonator and the electron beam.

resonator wavemeter [ELECTROMAG] Any resonant circuit used to determine wavelength, such as a cavity-resonator frequency meter.

resorbed reef [GEOL] A reef characterized by embayed margins and by the numerous isolated patches of reef that are closely distributed about the main mass.

resorcin *See* resorcinol.

resorcinol [ORG CHEM] $C_6H_4(OH)_2$ Sweet-tasting, white, toxic crystals; soluble in water, alcohol, ether, benzene, and glycerol; melts at 111°C; used for resins, dyes, pharmaceuticals, and adhesives, and as a chemical intermediate. Also known as *meta*-dihydroxybenzene; resorcin.

resorcinol acetate [ORG CHEM] $HOC_6H_4OCOCH_3$ A viscous, combustible, yellow to amber liquid with burning taste; soluble in alcohol and solvent; boils at 283°C; used in cosmetics and medicine. Also known as resorcinol monoacetate.

resorcinol diglycidyl ether [ORG CHEM] $C_{12}H_{14}O_2$ A straw yellow liquid with a boiling point of 172°C (at 0.8 mmHg, or 106.66 newtons per square meter); used for epoxy resins. Abbreviated RDGE.

resorcinol-formaldehyde resin [ORG CHEM] A phenol-formaldehyde resin, soluble in water, ketones, and alchol; used to make fast-curing adhesives for wood gluing.

resorcinol monoacetate *See* resorcinol acetate.

β-resorcylic acid [ORG CHEM] $(OH)_2C_6H_3COOH$ Combustible, white needles; soluble in alcohol and ether, very slightly soluble in water; decomposes at 220°C; used as a dyestuff and a pharmaceutical intermediate, and in the manufacture of fine chemicals. Also known as BRA; 4-carboxy-resorcinol; 2,4-dihydroxybenzene carboxylic acid; 2,4-dihydroxybenzoic acid; 4-hydroxysalicylic acid.

resorption [PETR] The process by which a magma redissolves previously crystallized minerals. [PHYS] Absorption or, less commonly, adsorption of material by a body or system from which the material was previously released.

resource [SCI TECH] A reserve source of supply, such as a material or mineral.

resource allocation in multiproject scheduling [IND ENG] A system that employs network analysis as an aid in making the best assignment of resources which must be stretched over a number of projects. Abbreviated RAMPS.

respiration [PHYSIO] **1.** The processes by which tissues and organisms exchange gases with their environment. **2.** The act of breathing with the lungs, consisting of inspiration and expiration.

respirator [ENG] A device for maintaining artificial respiration to protect the respiratory tract against irritating and poisonous gases, fumes, smoke, and dusts, with or without equipment supplying oxygen or air; some types have a fitting which covers the nose and mouth.

respiratory arrest [MED] Sudden cessation of spontaneous respiration due to failure of the respiratory center.

respiratory center [PHYSIO] A large area of the brain involved in regulation of respiration.

respiratory dead space [PHYSIO] That part of the respiratory system which has no alveoli and in which little or no exchange of gas between air and blood takes place.

respiratory distress syndrome of newborn [MED] A disease occurring during the first days of life, characterized by respiratory distress and cyanosis; a hyaline membrane lines the alveoli when the disease persists for more than several hours. Abbreviated RDS.

respiratory epithelium [HISTOL] The ciliated pseudostratified epithelium lining the respiratory tract.

respiratory minute volume [PHYSIO] The total amount of air which moves in and out of the lungs in a minute.

respiratory pigment [BIOCHEM] Any of various conjugated proteins that function in living organisms to transfer oxygen in cellular respiration.

respiratory quotient [PHYSIO] The ratio of volumes of carbon dioxide evolved and oxygen consumed during a given period of respiration. Abbreviated RQ.

respiratory system [ANAT] The structures and passages involved with the intake, expulsion, and exchange of oxygen and carbon dioxide in the vertebrate body.

respiratory tree [ANAT] The trachea, bronchi, and bronchioles. [INV ZOO] Either of a pair of branched tubular appendages of the cloaca in certain holothurians that is thought to have a respiratory function.

respirometer [ENG] **1.** An instrument for studying respiration. **2.** A diver's helmet containing a compressed air supply for replenishing oxygen used by the diver.

responder [ELECTR] The transmitter section of a radar beacon.

responder beacon [ELECTR] The radar beacon that serves to emit the signals of the responder in a transponder.

response [COMMUN] *See* reply. [CONT SYS] A quantitative expression of the output of a device or system as a function of the input. Also known as system response. [STAT] The value of some measurable quantity after a treatment has been applied.

response characteristic [CONT SYS] The response as a

function of an independent variable, such as direction or frequency, often presented in graphical form.

response time [COMPUT SCI] The delay experienced in time sharing between request and answer, a delay which increases when the number of users on the system increases. [CONT SYS] The time required for the output of a control system or element to reach a specified fraction of its new value after application of a step input or disturbance. [ELEC] The time it takes for the pointer of an electrical or electronic instrument to come to rest at a new value, after the quantity it measures has been abruptly changed.

responsor [ELECTR] The receiving section of an interrogator-responsor.

restart [COMPUT SCI] To go back to a specific planned point in a routine, usually in the case of machine malfunction, for the purpose of rerunning the portion of the routine in which the error occurred; the length of time between restart points in a given routine should be a function of the mean free error time of the machine itself. [AERO ENG] The act of firing a stage of a rocket after a previous powered flight.

rest density [RELAT] The density of a small portion of a fluid in a Lorentz frame in which that portion of the fluid is at rest.

rest energy [RELAT] The energy equivalent to the rest mass m_0 of a particle or body; that is, the quantity of m_0c^2, where c is the speed of light; often expressed in electronvolts.

rest frame [RELAT] The Lorentz frame in which the total momentum of a system equals zero; for an accelerated system, the rest frame varies from instant to instant.

rest hardening [GEOL] The increase of strength, with time, of a clay subsequent to its deposition, remolding, or modification by the application of shear stress.

restiform body *See* inferior cerebellar peduncle.

resting cell [CYTOL] An interphase cell.

resting frequency *See* carrier frequency.

resting potential [PHYSIO] The potential difference between the interior cytoplasm and the external aqueous medium of the living cell.

resting spore [BIOL] A spore that remains dormant for long periods before germination, withstanding adverse conditions; usually invested in a thickened cell wall.

Restionaceae [BOT] A large family of monocotyledonous plants in the order Restionales characterized by unisexual flowers, wholly cauline leaves, unilocular anthers, and a more or less open inflorescence.

Restionales [BOT] An order of monocotyledonous plants in the subclass Commelinidae having reduced flowers and a single, pendulous, orthotropous ovule in each of the one to three locules of the ovary.

restitution coefficient *See* coefficient of restitution.

rest magma [GEOL] The part of magma that remains after many minerals have crystallized from it during a long series of differentiations. Also known as residual liquor.

rest mass [RELAT] The mass of a particle in a Lorentz reference frame in which it is at rest.

restoration [ECOL] A conservation measure involving the correction of past abuses that have impaired the productivity of the resources base.

restore [COMPUT SCI] In computers, to regenerate, to return a cycle index or variable address to its initial value, or to store again. [ELECTR] Periodic charge regeneration of volatile computer storage systems.

restorer *See* direct-current restorer.

restorer pulses [ELECTR] In computers, pairs of complement pulses, applied to restore the coupling-capacitor charge in an alternating-current flip-flop.

rest potential [ELEC] Residual potential difference remaining between an electrode and an electrolyte after the electrode has become polarized.

restrainer [GRAPHICS] The ingredient of a developer which prevents too rapid development and chemical fog.

restraint of loads [ENG] The process of binding, lashing, and wedging items into one unit onto or into its transporter in a manner that will ensure immobility during transit.

restricted [GEOL] Referring to tectonic transport or movement in which elongation of particles is transverse to the direction of movement.

restricted adhesive [MATER] An adhesive which for any reason cannot satisfactorily pass its evaluation test; as a result, the maximum time required for curing, that is, its usable life, cannot be assigned; it cannot be used for structural bonding.

restricted air cargo [IND ENG] Cargo which is not highly dangerous under normal conditions, but which possesses certain qualities which require extra precautions in packing and handling.

restricted area [NAV] **1.** An airspace of defined dimensions identified by an area on the surface of the earth within which the flight of aircraft is subject to restrictions. **2.** An area within which vessels may be navigated subject to prohibitions with respect to anchoring, trawling, fishing, and so on.

restricted basin [GEOL] A depression in the floor of the ocean in which the water circulation is topographically restricted and therefore generally is oxygen-depleted. Also known as barred basin; silled basin.

restricted gate [ENG] Small opening between runner and cavity in an injection or transfer mold which breaks cleanly when the piece is ejected.

restricted internal rotation [PHYS CHEM] Restrictions on the rotational motion of molecules or parts of molecules in some substances, such as solid methane, at certain temperatures.

restricted proper motion [ASTRON] The rate of change of a star's apparent position relative to surrounding stars, corrected for precession, nutation, and aberration.

restricted waters [NAV] Areas which for navigational reasons, such as the presence of shoals or other dangers, confine the movements of shipping within narrow limits.

restricted work [IND ENG] Manual or machine work where the work pace is only partially under the control of the worker.

restriction of ego [PSYCH] A defense mechanism for escaping anxiety by avoiding situations consciously perceived as dangerous or uncomfortable.

rest stick *See* mahlstick.

reststrahlen *See* residual radiation.

resultant of forces [MECH] A system of at most a single force and a single couple whose external effects on a rigid body are identical with the effects of the several actual forces that act on that body.

resultant rake [MECH ENG] The angle between the face of a cutting tooth and an axial plane through the tooth point measured in a plane at right angles to the cutting edge.

resultant wind [CLIMATOL] The vectorial average of all wind directions and speeds for a given level at a given place for a certain period, such as a month.

resuperheating *See* reheating.

resupinate [BOT] Inverted, usually through 180°, so as to appear upside down or reversed.

resupply [IND ENG] The act of replenishing stocks in order to maintain required levels of supply.

resurgence [HYD] The point where an underground stream reappears at the surface to become a surface stream. Also known as emergence; exsurgence; rise.

resurgent [GEOL] Referring to magmatic water or gases that were derived from sources on the earth's surface, from its atmosphere, or from country rock of the magma.

resurgent cauldron [GEOL] A cauldron in which the cauldron block has been uplifted following subsidence, usually in the form of a structural dome.

resurrected [GEOL] Pertaining to a surface, landscape, or feature (such as a mountain, peneplain, or fault scarp) that has been restored by exhumation to its previous status in the existing relief. Also known as exhumed. [HYD] Pertaining to a stream that follows an earlier drainage system after a period of brief submergence has slightly masked the old course by a thin film of sediments. Also known a palingenetic.

resuscitation [MED] Restoration of consciousness or life functions after apparent death.

resuscitator [ENG] A device for supplying oxygen to and inducing breathing in asphyxiation victims.

ret [CHEM] The reduction or digestion of fibers (usually linen) by enzymes.

retained water [HYD] The water remaining in rock or soil after gravity groundwater has been drained out.

retainer [ENG] A device that holds a mechanical component in place.

retainer plate [ENG] The plate on which removable mold parts (such as a cavity or ejector pin) are mounted during molding.

retainer wall [ENG] A wall, usually earthen, around a storage tank or an area of storage tanks (tank farm); used to hold (retain) liquid in place if one or more tanks begin to leak.

retaining ring [DES ENG] **1.** A shoulder inside a reaming

shell that prevents the core lifter from entering the core barrel. **2.** A steel ring between the races of a ball bearing to maintain the correct distribution of the balls in the races.

retaining wall [CIV ENG] A wall designed to maintain differences in ground elevations by holding back a bank of material.

retard [CIV ENG] A permeable bank-protection structure, situated at and parallel to the toe of a slope and projecting into a stream channel, designed to check stream velocity and induce silting or accretion.

retardant *See* retarder.

retardation [MED] Slow mental or physical functioning. [NAV] The amount of delay in time or phase angle introduced by the resistivity of the surface over which the radio wave in radio navigation is passing. [OCEANOGR] The amount of time by which corresponding tidal phases grow later day by day, averaging approximately 50 minutes. [OPTICS] In interference microscopy, the difference in optical path between the light passing through the specimen and the light bypassing the specimen. Also known as optical-path difference.

retardation coil [ELECTROMAG] A high-inductance coil used in telephone circuits to permit passage of direct current or low-frequency ringing current while blocking the flow of audio-frequency currents.

retardation sheet *See* wave plate.

retardation theory [OPTICS] General methods of calculating the effect of one or more wave plates on light which is normally incident on the plates and which is initially polarized in some fashion.

retarded acid [PETRO ENG] Oil well acidizing solution whose reactivity is slowed by addition of artificial gums and thickening agents, so that the acid penetrates deeper into the formation before being spent.

retarded field [ELECTROMAG] An electric or magnetic field strength as found from the retarded potentials.

retarded potentials [ELECTROMAG] The electromagnetic potentials at an instant in time t and a point in space r as a function of the charges and currents that existed at earlier times at points on the past light cone of the event r,t.

retarder [MATER] A material that inhibits the action of another substance, such as flameproofing agents or substances added to cement to retard setting time. Also known as retardant. [MECH ENG] **1.** A braking device used to control the speed of railroad cars moving along the classification tracks in a hump yard. **2.** A strip inserted in a tube of a fire-tube boiler to increase agitation of the hot gases flowing therein.

retarding basin [CIV ENG] A basin designed and operated to provide temporary storage and thus reduce the peak flood flows of a stream.

retarding conveyor [MECH ENG] Any type of conveyor used to restrain the movement of bulk materials, packages, or objects where the incline is such that the conveyed material tends to propel the conveying medium.

retarding-field oscillator [ELECTR] An oscillator employing an electron tube in which the electrons oscillate back and forth through a grid that is maintained positive with respect to both the cathode and anode; the field in the region of the grid exerts a retarding effect through the grid in either direction. Also known as positive-grid oscillator.

retarding potential [PHYS] A potential which causes the speed of a moving particle to be reduced.

retard transmitter [ELECTRO] Transmitter in which a delay period is introduced between the time of actuation and the time of transmission.

rete cord [EMBRYO] One of the deep, anastomosing strands of cells of the medullary cords of the vertebrate embryo, that form the rete testis or the rete ovarii.

rete mirabile [VERT ZOO] A network of small blood vessels that are formed by the branching of a large vessel and that usually reunite into a single trunk; believed to have an oxygen-storing function in certain aquatic fauna.

retene [ORG CHEM] $C_{18}H_{18}$ A cyclic hydrocarbon, melting at 100.5–101°C, soluble in benzene and hot ethanol; used in organic syntheses. Also known as 7-isopropyl-1-methyl phenanthrene; methylisopropylphenanthrene.

retention cyst [MED] A cyst caused by obstructed outflow of secretion from a gland.

retention index [ANALY CHEM] In gas chromatography, the relationship of retention volume with arbitrarily assigned numbers to the compound being analyzed; used to indicate the volume retention behavior during analysis.

retention period [COMPUT SCI] The length of time that data must be kept on a reel of magnetic tape before it can be destroyed.

retention time [ANALY CHEM] In gas chromatography, the time at which the center, or maximum, of a symmetrical peak occurs on a gas chromatogram. [ELECTR] The maximum time between writing into a storage tube and obtaining an acceptable output by reading. Also known as storage time.

retention volume [ANALY CHEM] In gas chromatography, the product of retention time and flow rate.

retentivity [ELECTROMAG] The residual flux density corresponding to the saturation induction of a magnetic material.

rete ovarii [ANAT] Vestigial tubules or cords of cells near the hilus of the ovary, corresponding with the rete testis, but not connected with the mesonephric duct.

rete testis [ANAT] The network of anastomosing tubules in the mediastinum testis.

retgersite [MINERAL] $NiSO_4 \cdot 6H_2O$ A deep emerald green, tetragonal mineral consisting of a hydrated nickel sulfate.

Retgers' law [SOLID STATE] The law that the properties of crystalline mixtures of isomorphous substances are continuous functions of the percentage composition.

reticle [OPTICS] A series of intersecting fine lines, wires, or the like which are placed in the focus of the objective of an optical instrument to aid in measurement of angles or distances.

reticle image [OPTICS] A light image of the reticle in a computing gunsight or in certain types of optical gunsights and bombsights, cast on a reflector plate and superimposed on the target.

reticular *See* reticulate.

reticular cell *See* reticulocyte.

reticular degeneration [PATH] Rupture of epidermal cells with formation of multilocular bullae due to intracellular edema.

reticular density [MATH] The number of points per unit area in a two-dimensional lattice, such as the plane of a crystal lattice.

reticular fiber [HISTOL] Any of the delicate, branching argentophile fibers conspicuous in the connective tissue of lymphatic tissue, myeloid tissue, the red pulp of the spleen, and most basement membranes. Also known as argentaffin fiber; argyrophil lattice fiber; precollagenous fiber.

reticular formation [ANAT] The portion of the central nervous system which consists of small islands of gray matter separated by fine bundles of nerve fibers running in every direction.

Reticulariaceae [MYCOL] A family of plasmodial slime molds in the order Liceales.

reticular system *See* reticuloendothelial system.

reticular tissue [HISTOL] Connective tissue having reticular fibers as the principal element.

reticulate [BIOL] Having or resembling a network of fibers, veins, or lines. [GEOL] **1.** Referring to a vein or lode with netlike texture. **2.** Referring to rock texture in which crystals are partly altered to a secondary material, forming a network that encloses the remnants of the original mineral. Also known as mesh texture; reticular; reticulated. [GEN] Of or relating to evolutionary change resulting from genetic recombination between strains in an interbreeding population.

reticulated *See* reticulate.

reticulated bar [GEOL] One of a group of slightly submerged sandbars in two sets, both of which are diagonal to the shoreline, forming a crisscross pattern.

reticulated glass [MATER] Ornamental glassware containing interlacing sets of lines.

reticulation [GRAPHICS] The contraction or wrinkling of a film emulsion because of sudden changes of temperature during processing.

reticulin [BIOCHEM] A protein isolated from reticular fibers.

reticulocyte [HISTOL] Also known as reticular cell. **1.** A large, immature red blood cell, having a reticular appearance when stained due to retention of portions of the nucleus. **2.** A cell of reticular tissue.

reticuloendothelial granulomatosis [MED] A group of rare diseases characterized by generalized reticuloendothelial hyperplasia with or without intracellular lipid deposition.

reticuloendothelial system [ANAT] The macrophage system, including all phagocytic cells such as histiocytes, mac-

rophages, reticular cells, monocytes, and microglia, except the granular white blood cells. Abbreviated RES. Also known as reticular system; hematopoietic system.

reticulopodia [INV ZOO] Pseudopodia in the form of a branching network.

Reticulosa [PALEON] An order of Paleozoic hexactinellid sponges with a branching form in the subclass Hexasterophora.

reticulospinal tract [ANAT] Nerve fibers descending from large cells of the reticular formation of the pons and medulla into the spinal cord.

reticulum [BIOL] A fine network. [VERT ZOO] The second stomach in ruminants.

Reticulum [ASTRON] A southern constellation, right ascension 4 hours, declination 60° south. Also known as Net.

retina [COMPUT SCI] In optical character recognition, a scanning device. [ANAT] The photoreceptive layer and terminal expansion of the optic nerve in the dorsal aspect of the vertebrate eye.

retina character reader [COMPUT SCI] A character reader that operates in the manner of the human retina in recognizing identical letters in different type fonts.

retinaculum [INV ZOO] **1.** A clasp on the forewing of certain moths for retaining the frenulum of the hindwing. **2.** An appendage on the third abdominal somite of springtails that articulates with the furcula.

retinal [BIOCHEM] A carotenoid, produced as an intermediate in the bleaching of rhodopsin and decomposition to vitamin A. Also known as vitamin A aldehyde.

retinal astigmatism [MED] Astigmatism due to changes in the localization of the fixation point.

retinal illuminance [OPTICS] A psychophysiological quantity which is a measure of the brightness of a visual sensation; it is measured in trolands.

retinalite [MINERAL] A massive, honey-yellow or greenish serpentine mineral with a waxy or resinous luster; a variety of chrysolite.

retinal pigment *See* rhodopsin.

retinal retinitis *See* vascular retinopathy.

retinasphalt [MINERAL] A light-brown variety of retinite usually found with lignite.

retinene [BIOCHEM] A pigment extracted from the retina, which turns yellow by the action of light; the chief carotenoid of the retina.

retinite [MINERAL] A fossil resin, such as glessite, krantzite, muckite, and ambrite, composed of 6–15% oxygen, lacking succinic acid, and found in brown coals and peat.

retinitis [MED] Inflammation of the retina.

retinitis pigmentosa [MED] A hereditary affection inherited as a sex-linked recessive and characterized by slowly progressing atrophy of the retinal nerve layers, and clumping of retinal pigment, followed by attenuation of the retinal arterioles and waxy atrophy of the optic disks.

retinoblastoma [MED] A malignant tumor of the sensory layer of the retina.

retinochoroiditis [MED] Inflammation of the retina and choroid.

retinoid [BIOCHEM] The set of molecules composing vitamin A and its synthetic analogs, such as retinal or retinyl acetate.

retinol *See* vitamin A.

retinopathy [MED] Any pathologic condition involving the retina.

retinoschisis [MED] **1.** Separation with hole formation of the layers composing the retina. **2.** A congenital anomaly characterized by cleavage of the retina.

retinula [INV ZOO] The receptor element at the inner end of the ommatidium in a compound eye.

retire [NAV] To move a line of position back, parallel to itself, along a course line to obtain a line of position at an earlier time.

retired line of position [NAV] A line of position which has been moved backward along the course line to correspond with a time previous to that at which the line was established.

retort [CHEM ENG] **1.** A closed refractory chamber in which coal is carbonized for manufacture of coal gas. **2.** A vessel for the distillation or decomposition of a substance.

Retortamonadida [INV ZOO] An order of parasitic flagellate protozoans belonging to the class Zoomastigophorea, having two or four flagella and a complex blepharoplast-centrosome-axostyle apparatus.

retouch colors [GRAPHICS] Colors used to correct defects in black-and-white and color photographs; they adhere without crawling and can be used with brushes or airbrush on matte and glossy prints.

retrace *See* flyback.

retrace blanking [ELECTR] Blanking a television picture tube during vertical retrace intervals to prevent retrace lines from showing on the screen.

retrace line [ELECTR] The line traced by the electron beam in a cathode-ray tube in going from the end of one line or field to the start of the next line or field. Also known as return line.

retracker *See* rerailer.

retract [MATH] A subset R of a topological space X is a retract of X if there is a continuous map f from X to R, with $f(r) = r$ for all points r of R.

retractor [ANAT] A muscle that draws a limb or other body part toward the body. [MED] A clawlike instrument for holding tissues away from the surgical field.

retransmission unit [ELECTR] Control unit used at an intermediate station for feeding one radio receiver-transmitter unit for two-way communication.

retreat [MIN ENG] Workings in the opposite direction of advance work which, when completed, will permit the area to be abandoned as finished.

retreater [ENG] A defective maximum thermometer of the liquid-in-glass type in which the mercury flows too freely through the constriction; such a thermometer will indicate a maximum temperature that is too low.

retreat gun *See* evening gun.

retrievable inner barrel [ENG] The inner barrel assembly of a wire-line core barrel, designed for removing core from a borehole without pulling the rods.

retrieve [COMPUT SCI] To find and select specific information.

retroaction *See* positive feedback.

retroactive refit *See* retrofit.

retrocerebral gland [INV ZOO] Any of various endocrine glands located behind the brain in insects which function in postembryonic development and metamorphosis.

retrodirective mirror [OPTICS] **1.** An optical system consisting of two mutually perpendicular plane mirrors; it reflects any beam of light which lies in a plane perpendicular to the mirrors into a direction antiparallel to its original direction. **2.** An optical system consisting of three mutually perpendicular plane mirrors; it reflects any beam of light into a direction antiparallel to its original direction.

retrofire time [AERO ENG] The computed starting time and duration of firing of retrorockets to decrease the speed of a recovery capsule and make it reenter the earth's atmosphere at the correct point for a planned landing.

retrofit [ENG] A modification of equipment to incorporate changes made in later production of similar equipment; it may be done in the factory or field. Derived from retroactive refit.

retroflexion [ANAT] The state of being bent backward. [MED] A condition in which the uterus is bent backward on itself, producing a sharp angle in its longitudinal axis at the junction of the cervix and the fundus.

retrogradation [CHEM] **1.** Generally, a process of deterioration; a reversal or retrogression to a simpler physical form. **2.** A chemical reaction involving vegetable adhesives, which revert to a simpler molecular structure.

retrograde amnesia [MED] Loss of memory for events occurring prior to, but not after, the onset of a current disease or trauma.

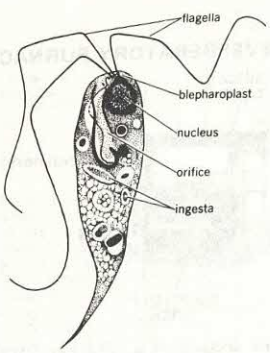
retrograde condensation [ORG CHEM] Phenomenon associated with the behavior of a hydrocarbon mixture in the critical region wherein, at constant temperature, the vapor phase in contact with the liquid may be condensed by a decrease in pressure; or at constant pressure, the vapor is condensed by an increase in temperature.

retrograde evaporation [ORG CHEM] Phenomenon associated with the behavior of a hydrocarbon mixture in the critical region wherein, at constant temperature, the liquid phase in contact with the vapor may be vaporized by an increase in pressure; or at constant pressure, the liquid is evaporated by a decrease in temperature.

retrograde gas-condensate reservoir *See* dew-point reservoir.

retrograde metamorphism [PETR] Formation of metamorphic minerals of a lower grade of metamorphism at the expense of minerals which are characteristic of a higher

RETORTAMONADIDA



Chilomastix aulastomi.

grade. Also known as diaphthoresis; retrogressive metamorphism.

retrograde motion [ASTRON] **1.** An apparent backward motion of a planet among the stars resulting from the observation of the planet from the planet earth which is also revolving about the sun at a different velocity. Also known as retrogression. **2.** *See* retrograde orbit.

retrograde orbit [ASTRON] Motion in an orbit opposite to the usual orbital direction of celestial bodies within a given system; specifically, of a satellite, motion in a direction opposite to the direction of rotation of the primary. Also known as retrograde motion.

retrograde reservoir [GEOL] Hydrocarbon reservoir in which hydrocarbons are initially in the vapor phase; as pressure is reduced, the bubble-point line is passed and liquids are formed; upon further pressure reduction, a vapor phase is again formed.

retrograde wave [METEOROL] An atmospheric wave which moves in a direction opposite to that of the flow in which the wave is embedded; retrogression of a particular wave on daily charts is rarely seen, but is frequently observed on 4-day or monthly mean charts.

retrograding shoreline [GEOL] A shoreline that is being moved landward by wave erosion.

retrogression [ASTRON] *See* retrograde motion. [GEOL] *See* recession. [MED] Going backward, as in degeneration or atrophy of tissues. [METEOROL] The motion of an atmospheric wave or pressure system in a direction opposite to that of the basic flow in which it is embedded. [PSYCH] Return to infantile behavior.

retrogressive metamorphism *See* retrograde metamorphism.

retrolental fibroplasia [MED] An oxygen-induced disease of the retina in premature infants characterized by formation of an opaque membrane behind the lens of the eye.

retroreflection [PHYS] Reflection wherein the reflected rays of radiation return along paths parallel to those of their corresponding incident rays.

retroreflector [PHYS] Any instrument used to cause reflected radiation to return along paths parallel to those of their corresponding incident rays; one type, the corner reflector, is an efficient radar target.

retrorocket [AERO ENG] A rocket fitted on or in a spacecraft, satellite, or the like to produce thrust opposed to forward motion. Also known as braking rocket.

retrorse [BIOL] Bent downward or backward.

retrostalsis [PHYSIO] Reverse peristalsis.

retroussage [GRAPHICS] The method of bringing ink up from incised lines in an intaglio plate; dragging a soft cloth across the ink-filled lines prior to printing makes the lines wider and renders certain passages darker and richer.

retroversion [ANAT] A turning back. [MED] A condition in which the uterus is tilted backward without any change in the angle of its longitudinal axis.

retry [COMPUT SCI] When a central processing unit error is detected during execution of an instruction, the computer will execute this instruction unless a register was altered by the operation.

retting [CHEM ENG] Soaking vegetable stalks to decompose the gummy material and release the fibers.

return [BUILD] The continuation of a molding, projection, member, cornice, or the like, in a different direction, usually at a right angle. [COMPUT SCI] **1.** To return control from a subroutine to the calling program. **2.** To go back to a planned point in a computer program and rerun a portion of the program, usually when an error is detected; rerun points are usually not more than 5 minutes apart. [ELECTR] *See* echo. [GEOPHYS] Any of those surface waves on the record of a large earthquake which have traveled around the earth's surface by the long (greater than 180°) arc between epicenter and station, or which have passed the station and returned after traveling the entire circumference of the earth.

return bead *See* quirk bead.

return bend [DES ENG] A pipe fitting, equal to two ells, used to connect parallel pipes so that fluid flowing into one will return in the opposite direction through the other.

return busy tone [COMMUN] An appropriate signal returned to the register-sender that, in turn, returns a busy indication to the calling station.

return connecting rod [MECH ENG] A connecting rod whose crankpin end is located on the same side of the crosshead as the cylinder.

return difference [CONT SYS] The difference between 1 and the loop transmittance.

return flow [HYD] Irrigation water not consumed by evapotranspiration but returned to its source or to another body of ground or surface water. Also known as return water.

return-flow burner [MECH ENG] A mechanical oil atomizer in a boiler furnace which regulates the amount of oil to be burned by the portion of oil recirculated to the point of storage.

return idler [MECH ENG] The idler or roller beneath the cover plates on which the conveyor belt rides after the load which it was carrying has been dumped.

return interval [ELECTR] Interval corresponding to the direction of sweep not used for delineation.

return jump [COMPUT SCI] A jump instruction in a subroutine which passes control to the first statement in the program which follows the instruction called the subroutine.

return line *See* retrace line.

return loss [COMMUN] **1.** The difference between the power incident upon a discontinuity in a transmission system and the power reflected from the discontinuity. **2.** The ratio in decibels of the power incident upon a discontinuity to the power reflected from the discontinuity.

return streamer [GEOPHYS] The intensely luminous streamer which propagates upward from earth to cloud base in the last phase of each lightning stroke of a cloud-to-ground discharge. Also known as main stroke; return stroke.

return stroke *See* return streamer.

return to zero mode [COMPUT SCI] Computer readout mode in which the signal returns to zero between each bit indication.

return trace *See* flyback.

return wall [BUILD] An interior wall of about the same height as the outside wall of a building; distinct from a partition or a low wall.

return water [HYD] *See* return flow. [PETRO ENG] In a water-injection operation (waterflood) for an oil reservoir, the reinjection of salt water that is produced along with the oil.

return wire [ELEC] The ground wire, common wire, or negative wire of a direct-current power circuit.

retuse [BOT] Having a rounded apex with a slight, central notch.

retzian [MINERAL] $Mn_2Y(AsO_4)(OH)_4$ A chocolate brown to chestnut brown, orthorhombic mineral consisting of a basic arsenate of calcium, rare earths, and manganese.

reusable [COMPUT SCI] Of a program, capable of being used by several tasks without having to be reloaded; it is a generic term, including reenterable and serially reusable.

reveal [BUILD] **1.** The side of an opening for a door or window, doorway, or the like, between the doorframe or window frame and the outer surface of the wall. **2.** The distance from the face of a door to the face of the frame on the pivot side.

reveille gun [ORD] The firing of a gun at the first note of reveille or at sunrise. Also known as morning gun.

revenue cutter [NAV ARCH] A ship used by the government mainly for enforcement of revenue laws and prevention of smuggling.

reverberation [ACOUS] The prolongation of sound at a given point after direct reception from the source has ceased, due to such causes as reflections from bounding surfaces, scattering from inhomogeneities in a medium, and vibrations excited by the original sound.

reverberation chamber [ACOUS] An enclosure with heavy surfaces which randomly reflect as great an amount of sound as possible; used in acoustic measurements. Also known as random diffusion chamber.

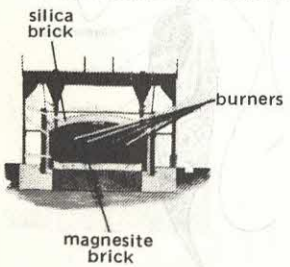
reverberation time [ACOUS] The time in seconds required for the average sound-energy density at a given frequency to reduce to one-millionth of its initial steady-state value after the sound source has been stopped; this corresponds to a decrease of 60 decibels.

reverberatory furnace [ENG] A furnace in which heat is supplied by burning of fuel in a space between the charge and the low roof.

reversal film [GRAPHICS] A type of film designed to yield a positive image directly when reversal processed.

reversal of dip [GEOL] Change in the dip direction of bedding near a fault such that the beds curve toward the fault surface in a direction exactly opposite that of the drag folds. Also known as dip reversal.

REVERBERATORY FURNACE



Cross section of a reverberatory furnace for smelting copper.

reversal process [GRAPHICS] A method in which a positive is produced from the plate or film exposed in a camera; the negative and positive stages are often produced from the same emulsion layer, with no separate printing material required; only one copy can be made at a time.

reversal spectrum [SPECT] A spectrum which may be observed in intense white light which has traversed luminous gas, in which there are dark lines where there were bright lines in the emission spectrum of the gas.

reversal speed [AERO ENG] The speed of an aircraft above which the aeroelastic loads will exceed the control surface loading of a given flight control system; the resultant load will act in the reverse direction from the control surface loading, causing the control system to act in a direction opposite to that desired.

reversal temperature [SPECT] The temperature of a blackbody source such that, when light from this source is passed through a luminous gas and analyzed in a spectroscope, a given spectral line of the gas disappears, whereas it appears as a bright line at lower blackbody temperatures, and a dark line at higher temperatures.

reverse bias [ELECTR] A bias voltage applied to a diode or a semiconductor junction with polarity such that little or no current flows; the opposite of forward bias.

reverse-blocking tetrode thyristor *See* silicon controlled switch.

reverse-blocking triode thyristor *See* silicon controlled rectifier.

reverse bonded-phase chromatography [ANALY CHEM] A technique of bonded-phase chromatography in which the stationary phase is nonpolar and the mobile phase is polar.

reverse Brayton cycle [THERMO] A refrigeration cycle using air as the refrigerant but with all system pressures above the ambient. Also known as dense-air refrigeration cycle.

reverse Carnot cycle [THERMO] An ideal thermodynamic cycle consisting of the processes of the Carnot cycle reversed and in reverse order, namely, isentropic expansion, isothermal expansion, isentropic compression, and isothermal compression.

reverse cell [METEOROL] A circulating fluid system in which the circulation in a vertical plane is thermally indirect; that is, cooler air rises relative to warmer air.

reverse circulation drilling [MIN ENG] **1.** A variation of the rotary drilling method in which the cuttings are pumped up and out of the drill pipe, an advantage in certain large diameter holes. **2.** Diamond core drilling in which the water is injected through a stuffing box into the annular space around the drill rods and thus forced up special large drill rods.

reverse code dictionary [COMPUT SCI] Alphabetic or alphanumeric arrangement of codes associated with their corresponding English words or terms.

reverse current [ELECTR] Small value of direct current that flows when a semiconductor diode has reverse bias.

reverse-current cleaning *See* anodic cleaning.

reverse-current protection [ELEC] A device which senses when there is a reversal in the normal direction of current in an electric power system, indicating an abnormal condition of the system, and which initiates appropriate action to prevent damage to the system.

reverse-current relay [ELEC] Relay that operates whenever current flows in the reverse direction.

reverse curve [MATH] An S-shaped curve, that is, one having two arcs with their centers on opposite sides of the curve. Also known as S curve.

reversed *See* overturned.

reversed air-blast process [CHEM ENG] A gasmaking process in which, after a short period of the ordinary blow, the air blast is reversed so as to enter the top of the superheater, and passes back to the top of the generator and down.

reversed arc [GEOL] A curved belt of islands which is concave toward the open ocean, the opposite of most island arcs.

reversed consequent stream [HYD] A consequent stream whose direction of flow is contrary to that normally consistent with the geologic structure.

reverse deionization [CHEM] A process in which an ion-exchange unit and a cation-exchange unit are used in sequence to remove all ions from a solution.

reversed image [GRAPHICS] **1.** A mirror image in which the right and left sides of the picture are interchanged. **2.** *See* negative. [OPTICS] *See* inverted image.

reverse direction *See* inverse direction.

reverse-direction flow [COMPUT SCI] A logical path that runs upward or to the left on a flowchart.

reversed-phase partition chromatography [ANALY CHEM] Paper chromatography in which the low-polarity phase (such as paraffin, paraffin jelly, or grease) is put onto the support (paper) and the high-polarity phase (such as water, acids, or organic solvents) is allowed to flow over it.

reversed polarity [GEOPHYS] Natural remanent magnetism opposite that of the present geomagnetic field.

reverse drawing [MET] Drawing for a second time, in a direction opposite to the original drawing.

reversed stream [HYD] A stream whose direction of flow has been reversed, as by glacial action, landsliding, gradual tilting of a region, or capture.

reversed tide [OCEANOGR] An oceanic tide that is out of phase with the apparent motions of the tide-producing body, so that low tide is directly under the tide-producing body and is accompanied by a low tide on the opposite side of the earth. Also known as inverted tide.

reverse fault *See* thrust fault.

reverse feedback *See* negative feedback.

reverse flange [ENG] A flange made by shrinking.

reverse-flowage fold [GEOL] A fold in which flow from deformation has thickened the anticlinal crests and thinned the synclinal troughs, contrary to the normal flow pattern of a flow fold.

reverse graft [BOT] A plant graft made by inserting the scion in an inverted position.

reverse key [ELEC] Key used in a circuit to reverse the polarity of that circuit.

reverse lay [DES ENG] The lay of a wire rope with strands alternating in a right and left lay.

reverse mutation [GEN] A mutation in a mutant allele which makes it capable of producing the nonmutant phenotype; may actually restore the original deoxyribonucleic-acid sequence of the gene or produce a new one which has a similar effect. Also known as back mutation.

reverse osmosis [CHEM ENG] A technique used in desalination and waste-water treatment; pressure is applied to the surface of a saline (or waste) solution, forcing pure water to pass from the solution through a membrane (hollow fibers of cellulose acetate or nylon) that will not pass sodium or chloride ions.

reverse passive anaphylaxis [IMMUNOL] Hypersensitivity produced when the antigen is injected first, then followed in several hours by the specific antibody, causing shock.

reverse pinocytosis *See* emiocytosis.

reverse pitch [MECH ENG] A pitch on a propeller blade producing thrust in the direction opposite to the normal one.

reverse polarity [MET] An arc-welding circuit in which the electrode is connected to the positive terminal.

reverse Polish notation [COMPUT SCI] The version of Polish notation, used in some calculators, in which operators follow the operators with which they are associated. Abbreviated RPN. Also known as postfix notation; suffix notation.

reverse-printout typewriter [ENG] An automatic typewriter that eliminates conventional carriage return by typing one line from left to right and the next line from right to left.

reverse process [GRAPHICS] The conversion of a negative to a positive image by chemical means.

reverse-roll coating [ENG] Substrate coating that is premetered between rolls and then wiped off on the web; amount of coating is controlled by the metering gap and the rotational speed of the roll.

reverse saddle [GEOL] A mineral deposit associated with the trough of a synclinal fold and following the bedding plane. Also known as trough reef.

reverse similar fold [GEOL] A fold whose strata are thickened on the limbs and thinned on the axes, contrary to the pattern of a similar fold.

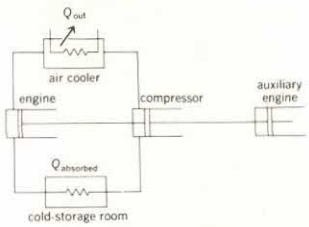
reverse slip fault *See* thrust fault.

reverse slope [GEOL] A hill descending away from a ridge.

reverse voltage [ELEC] In the case of two opposing voltages, voltage of that polarity which produces the smaller current.

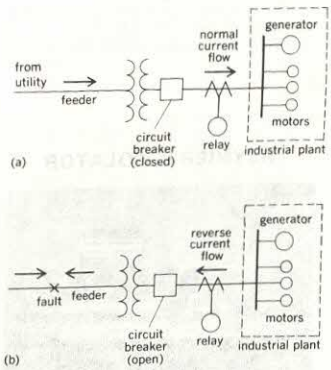
reversibility principle [OPTICS] The principle that if a beam of light is reflected back on itself, it will traverse the same path or paths as it did before reversal. [STAT MECH] *See* microscopic reversibility.

REVERSE BRAYTON CYCLE



Schematic arrangement of the reverse Brayton cycle; air undergoes isentropic compression followed by reversible constant-pressure cooling; high-pressure air next expands reversibly in engine and exhausts at low temperature; cooled air passes through the cold storage chamber, picks up heat at constant pressure, and then returns to suction side of compressor. Q = heat.

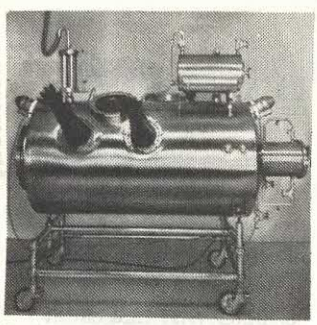
REVERSE-CURRENT PROTECTION



Example of reverse-current protection, in which utility supplies power to industrial plant having some generation of its own. *(a)* Normal load conditions. *(b)* Internal fault condition; relay trips circuit breaker under reverse-current condition, isolating plant from utility and preventing excessive burden on plant generator.

reversible booster [ELEC] Booster capable of adding to and subtracting from the voltage of a circuit.
reversible capacitance [ELECTR] Limit, as the amplitude of an applied sinusoidal capacitor voltage approaches zero, of the ratio of the amplitude of the resulting in-phase fundamental-frequency component of transferred charge to the amplitude of the applied voltage, for a given constant bias voltage superimposed on the sinusoidal voltage.
reversible chemical reaction [CHEM] A chemical reaction that can be made to proceed in either direction by suitable variations in the temperature, volume, pressure, or quantities of reactants or products.
reversible counter [COMPUT SCI] A counter which stores a number whose value can be decreased or increased in response to the appropriate control signal.
reversible electrode [PHYS CHEM] An electrode that owes its potential to unit charges of a reversible nature, in contrast to electrodes used in electroplating and destroyed during their use.
reversible engine [THERMO] An ideal engine which carries out a cycle of reversible processes.
reversible motor [ELEC] A motor in which the direction of rotation can be reversed by means of a switch that changes motor connections when the motor is stopped.
reversible path [THERMO] A path followed by a thermodynamic system such that its direction of motion can be reversed at any point by an infinitesimal change in external conditions; thus the system can be considered to be at equilibrium at all points along the path.
reversible-pitch propeller [MECH ENG] A type of controllable-pitch propeller; of either controllable or constant speed, it has provisions for reducing the pitch to and beyond the zero value, to the negative pitch range.
reversible process [THERMO] An ideal thermodynamic process which can be exactly reversed by making an indefinitely small change in the external conditions. Also known as quasistatic process.
reversible steering gear [MECH ENG] A steering gear for a vehicle which permits road shock and wheel deflections to come through the system and be felt in the steering control.
reversible tramway *See* jig back.
reversible transducer [ELECTR] Transducer whose loss is independent of transmission direction.
reversible transit circle [ENG] A transit circle that can be lifted out of its bearings and rotated through 180°, enabling systematic errors in both orientations to be determined.
reversing current [OCEANOGR] Any current that changes direction, with a period of slack water at each reversal of direction.
reversing dune [GEOL] A dune that tends to develop unusual height but migrates only a limited distance because seasonal shifts in dominant wind direction cause it to move alternately in nearly opposite directions.
reversing layer [ASTROPHYS] A layer of relatively cool gas forming the lower part of the sun's chromosphere, just above the photosphere, that gives rise to absorption lines in the sun's spectrum.
reversing mill [MET] A rolling mill in which the workpiece is passed forward and backward through a given pair of rolls.
reversing motor [ELEC] A motor for which the direction of rotation can be reversed by changing electric connections or by other means while the motor is running at full speed; the motor will then come to a stop, reverse, and attain full speed in the opposite direction.
reversing switch [ELEC] A switch intended to reverse the connections of one part of a circuit.
reversing thermometer [ENG] A mercury-in-glass thermometer which records temperature upon being inverted and thereafter retains its reading until returned to the first position.
reversing water bottle *See* Nansen bottle.
revet-crag [GEOL] One of a series of narrow, pointed outliers or ridges of eroded strata inclined like a revetment against a mountain spur.
revetment [CIV ENG] A facing made on a soil or rock embankment to prevent scour by weather or water. [ORD] A retaining wall with a facing such as concrete or stone, commonly used for fortifications or to protect against explosions.
revived fault scarp *See* rejuvenated fault scarp.
revived folding *See* recurrent folding.
revived stream *See* rejuvenated stream.
revolute [BOT] Rolled backward and downward.
revolution [GEOL] A little-used term to describe a time of profound crustal movements, on a continentwide or worldwide scale, which led to abrupt geographic, climatic, and environmental changes that were related to changes in forms of life. [MECH] The motion of a body around a closed orbit.
revolution counter [ENG] An instrument for registering the number of revolutions of a rotating machine. Also known as revolution indicator.
revolution indicator *See* revolution counter.
revolution per minute [MECH] A unit of angular velocity equal to the uniform angular velocity of a body which rotates through an angle of 360° (2π radians), so that every point in the body returns to its original position, in 1 minute. Abbreviated rpm.
revolution per second [MECH] A unit of angular velocity equal to the uniform angular velocity of a body which rotates through an angle of 360° (2π radians), so that every point in the body returns to its original position, in 1 second. Abbreviated rps.
revolution table [NAV ARCH] A table giving the number of shaft revolutions corresponding to various speeds of a vessel.
revolver [NAV] The pair of horizontal angles between three points, as observed at any place on the circle defined by the three points; this is the one situation in which such angles do not establish a fix. Also known as swinger. [ORD] A firearm with a cylinder of several chambers so arranged as to revolve on an axis and be discharged in succession by the same lock.
revolving-block engine [MECH ENG] Any of various engines which combine reciprocating piston motion with rotational motion of the entire engine block.
revolving door [BUILD] A door consisting of four leaves that revolve together on a central vertical axis within a circular vestibule.
revolving shovel [MECH ENG] A digging machine, mounted on crawlers or on rubber tires, that has the machinery deck and attachment on a vertical pivot so that it can swing freely.
revolving storm [METEOROL] A cyclonic storm, or one in which the wind revolves about a central low-pressure area.
rewind [ELECTR] **1.** The components on a magnetic tape recorder that serve to return the tape to the supply reel at high speed. **2.** To return a magnetic tape to its starting position.
rework [GEOL] Any geologic material that has been removed or displaced by natural agents from its origin and incorporated in a younger formation.
rewrite [COMPUT SCI] The process of restoring a storage device to its state prior to reading; used when the information-storing state may be destroyed by reading.
Rexforming [CHEM ENG] A proprietary petroleum-refinery process combining Platforming with aromatics extraction, wherein low-octane raffinate is recycled to the Platformer.
Reychler's acid *See* *d*-camphorsulfonic acid.
Reye's syndrome [MED] An uncommon liver disorder primarily occurring in infants and young children characterized by convulsions, hypoglycemia, and a liver showing diffuse microvacuolar fatty metamorphosis.
reyn [FL MECH] A unit of dynamic viscosity equal to the dynamic viscosity of a fluid in which there is a tangential force of 1 poundal per square foot resisting the flow of two parallel fluid layers past each other when their differential velocity is 1 foot per second per foot of separation; equal to approximately 14.8816 poise.
Reynier's isolator [ENG] A mechanical barrier made of steel that surrounds the area in which germ-free vertebrates and accessory equipment are housed; has electricity for light and power, an exit-entry opening with a steam barrier, a means for sterile air exchange, glass viewing port, and neoprene gloves which allow handling of the animals.
Reynolds analogy [CHEM ENG] Relationship showing the similarity between the transfer of mass, heat, and momentum.
Reynolds criterion [FL MECH] The principle that the type of fluid motion, that is, laminar flow or turbulent flow, in geometrically similar flow systems depends only on the Reynolds number; for example, in a pipe, laminar flow exists at Reynolds numbers less than 2000, turbulent flow at numbers above about 3000.
Reynolds effect [METEOROL] A process of drop growth in clouds which involves net evaporation from cloud drops warmer than others and net condensation on the cooler drops.
Reynolds equation [FL MECH] A form of the Navier-Stokes equation which is $\rho \partial u/\partial t = (\partial/\partial x)(p_{xx} - \rho u^2) + (\partial/\partial y)(p_{xy} -$

REYNIER'S ISOLATOR



Basic germ-free Reynier's isolator showing gloves used for working in the isolator.

$\rho uv) + (\partial/\partial z)(p_{xz} - \rho uw)$, where ρ is the fluid density, u, v, and w are the components of the fluid velocity, and p_{xx}, p_{xy}, and p_{xz} are normal and shearing stresses.

Reynolds model [OCEANOGR] A laboratory model of ocean currents in which inertial forces and frictional forces predominate, and in which the Reynolds number is used extensively in calculations.

Reynolds number [FL MECH] A dimensionless number which is significant in the design of a model of any system in which the effect of viscosity is important in controlling the velocities or the flow pattern of a fluid; equal to the density of a fluid, times its velocity, times a characteristic length, divided by the fluid viscosity. Symbolized N_{Re}. Also known as Damköhler number V (*DaV*).

Reynolds stress [FL MECH] The net transfer of momentum across a surface in a turbulent fluid because of fluctuations in fluid velocity. Also known as eddy stress.

Reynolds stress tensor [FL MECH] A tensor whose components are the components of the Reynolds stress across three mutually perpendicular surfaces.

rezbanyite [MINERAL] $Pb_3Cu_2Bi_{10}S_{19}$ A metallic-gray mineral composed of sulfide of lead, copper, and bismuth.

rf *See* radio frequency.

R factor [GEN] A self-replicating, infectionlike agent that carries genetic information and transmits drug resistance from bacterium to bacterium by conjugation of cell. Also known as resistance factor.

RFI *See* radio-frequency interference.

rf preheating *See* radio-frequency preheating.

RG line *See* radio-frequency cable.

RGU system [ASTRON] A system for obtaining a complete assessment of a star's magnitude, based on measurements of the star's brightness when viewed through red, green, and ultraviolet filters.

Rh *See* rhodium.

RH *See* relative humidity.

Rhabdiasoidea [INV ZOO] An order or superfamily of parasitic nematodes.

rhabdion [INV ZOO] One of the sclerotized segments lining the buccal cavity of nematodes.

rhabdite [INV ZOO] A small rodlike or fusiform body secreted by epidermal or parenchymal cells of certain turbellarians and trematodes. [MINERAL] *See* schreibersite.

Rhabditia [INV ZOO] A subclass of nematodes in the class Secernentea.

Rhabditidia [INV ZOO] An order of nematodes in the subclass Rhabditia including parasites of man and domestic animals.

Rhabditoidea [INV ZOO] A superfamily of small to moderate-sized nematodes in the order Rhabditidia with small, porelike, anteriorly located amphids, and esophagus with corpus, isthmus, and valvulated basal bulb.

Rhabdocoela [INV ZOO] Formerly an order of the Turbellaria, and now divided into three orders, Catenulida, Macrostomida, and Neorhabdocoela.

rhabdoglyph [PALEON] A trace fossil consisting of a presumable worm trail appearing on the undersurface of flysch beds (sandstones) as a nearly straight bulge with little or no branching.

rhabdolith [BOT] A minute coccolith having a shield surmounted by a long stem and found at all depths in the ocean, from the surface to the bottom.

rhabdome [INV ZOO] The central translucent cylinder in the retinula of a compound eye.

rhabdomyoblastoma *See* rhabdomyosarcoma.

rhabdomyoma [MED] A benign tumor of skeletal muscle.

rhabdomyosarcoma [MED] A malignant tumor of skeletal muscle in the extremities composed of anaplastic muscle cells. Also known as malignant rhabdomyoma; rhabdomyoblastoma.

rhabdophane [MINERAL] $(Ce,Y,La,Di)(PO_4)\cdot H_2O$ A brown, pinkish, or yellowish-white mineral consisting of a hydrated phosphate of cerium, yttrium, and rare earths.

Rhabdophorina [INV ZOO] A suborder of ciliates in the order Gymnostomatida.

rhabdosome [INV ZOO] A colonial graptolite that develops from a single individual.

rhabdovirus [VIROL] A group of ribonucleic acid–containing animal viruses, including rabies virus and certain infective agents of fish and insects.

rhabdus [INV ZOO] A uniaxial sponge spicule.

Rhachitomi [PALEON] A group of extinct amphibians in the order Temnospondyli in which pleurocentra were retained.

rhachitomous [VERT ZOO] Being, having, or pertaining to vertebrae with centra whose parts do not fuse.

Rhacophoridae [VERT ZOO] A family of arboreal frogs in the suborder Diplasiocoela.

Rhacopilaceae [BOT] A family of mosses in the order Isobryales generally having dimorphous leaves with smaller dorsal leaves and a capsule that is plicate when dry.

rhadzimer *See* radzimir.

Rhaetian [GEOL] A European stage of geologic time; the uppermost Triassic (above Norian, below Hettangian of Jurassic). Also known as Rhaetic.

Rhaetic *See* Rhaetian.

Rhagionidae [INV ZOO] The snipe flies, a family of predatory orthorrhaphous dipteran insects in the series Brachycera that are brownish or gray with spotted wings.

rhagon [INV ZOO] A pyramid-shaped, colonial sponge having an osculum at the apex and flagellated chambers in the upper wall only.

Rhamnaceae [BOT] A family of dicotyledonous plants in the order Rhamnales characterized by a solitary ovule in each locule, free stamens, simple leaves, and flowers that are hypogynous to perigynous or epigynous.

Rhamnales [BOT] An order of dicotyledonous plants in the subclass Rosidae having a single set of stamens, opposite the petals, usually a well-developed intrastamenal disk, and two or more locules in the ovary.

rhamnose [BIOCHEM] $C_6H_{12}O_5$ A deoxysugar occurring free in poison sumac, and in glycoside combination in many plants. Also known as isodulcitol.

rhamphoid [BIOL] Beak-shaped.

Rhamphorhynchoidea [PALEON] A Jurassic suborder of the Pterosauria characterized by long, slender tails with an expanded tip.

rhampotheca [VERT ZOO] The horny sheath covering a bird's beak.

Rh antigen *See* Rh factor.

Rh blocking serum [IMMUNOL] A serum that reacts with Rh-positive blood without causing agglutination, but which blocks the action of anti-Rh serums that are subsequently introduced.

Rh blocking test [IMMUNOL] A test for the detection of Rh antibody in plasma wherein erythrocytes having the Rh antigen are incubated in the patient's serum so that the antibodies may be adsorbed on these cells, which are then employed in the antiglobulin test. Also known as indirect Coombs test; indirect developing test.

Rh blood group [IMMUNOL] The extensive, genetically determined system of red blood cell antigens defined by the immune serum of rabbits injected with rhesus monkey erythrocytes, or by human antiserums. Also known as rhesus blood group.

rhe [FL MECH] **1.** A unit of dynamic fluidity, equal to the dynamic fluidity of a fluid whose dynamic viscosity is 1 centipoise. **2.** A unit of kinematic fluidity, equal to the kinematic fluidity of a fluid whose kinematic viscosity is 1 centistoke.

rhea [BOT] *See* ramie. [VERT ZOO] The common name for members of the avian order Rheiformes.

Rhea [ASTRON] A satellite of Saturn, estimated diameter is 1200 kilometers.

RHEED *See* reflection HEED.

rhegmagenesis [GEOL] Orogeny characterized by the development of large-scale strike-slip faults.

rheid [GEOL] A substance (below its melting point) which deforms by viscous flow during applied stress at an order of magnitude at least three times that of elastic deformation under similar circumstances.

Rheidae [VERT ZOO] The single family of the avian order Rheiformes.

rheid fold [GEOL] A fold whose strata deform by viscous flow as if they were fluid.

rheidity [GEOL] Relaxation time of a substance, divided by 1000.

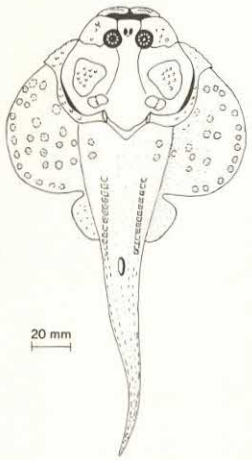
Rheiformes [VERT ZOO] The rheas, an order of South American running birds; called American ostriches, they differ from the true ostrich in their smaller size, feathered head and neck, three-toed feet, and other features.

Rheinberg illumination [OPTICS] An illumination tech-

RHAMPHORHYNCHOIDEA

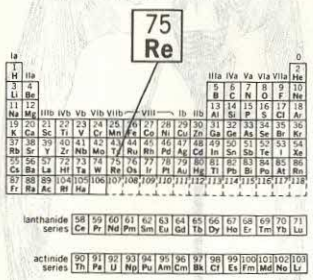
Restoration of Jurassic pterosaur skeleton of *Rhamphorhynchus* by S. W. Williston; length about 30 centimeters. *(After O. C. Marsh)*

RHENANIDA



Gemuendina stuertzi from the Lower Devonian of Germany; restoration in dorsal aspect. *(After Walter Gross)*

RHENIUM



Periodic table of the chemical elements showing the position of rhenium.

RHINOCEROS

Black rhinoceros *(Diceros bicornis)* with thick gray skin and a mobile upper lip shaped like a parrot beak.

nique used in optical microscopes that is a modification of the dark-field method; the central disk is transparent and colored; an annulus of a complementary color fills the remaining condenser aperture; the specimen is seen in the color of the annulus against the background of the central disk. Also known as optical staining.

Rhenanida [PALEON] An order of extinct marine fishes in the class Placodermi distinguished by mosaics of small bones between the large plates in the head shield.

rhenium [CHEM] A metallic element, symbol Re, atomic number 75, atomic weight 186.2; a transition element.

rhenium halide [INORG CHEM] Halogen compound of rhenium; examples are $ReCl_3$, $ReCl_4$, ReF_4, and ReF_6.

rheobase [PHYSIO] The intensity of the steady current just sufficient to excite a tissue when suddenly applied.

rheocasting [MET] A process in which a liquid metal is vigorously agitated during initial stages of solidification to produce a globular semisolid structure which remains highly fluid when more than 60% solidification has occurred.

rheoelectroencephalograph [MED] Electroencephalograph for measuring differential blood flow in both sides of the brain and in any other part of the body.

rheogoniometry [MECH] Rheological tests to determine the various stress and shear actions on Newtonian and non-Newtonian fluids.

rheoignimbrite [GEOL] An ignimbrite, on the slope of a volcanic crater, that has developed secondary flowage due to high temperatures.

rheology [MECH] The study of the deformation and flow of matter, especially non-Newtonian flow of liquids and plastic flow of solids.

rheomorphic intrusion [PETR] The injection of country rock that has become mobilized into the igneous intrusion that caused the rheomorphism.

rheomorphism [PETR] Mobilization of a rock by at least partial fusion accompanied by, and sometimes promoted by, addition of new material by diffusion.

rheopectic fluid [FL MECH] A fluid for which the structure builds up on shearing; this phenomenon is regarded as the reverse of thixotropy.

rheopexy [PHYS CHEM] A property of certain sols, having particles shaped like rods or plates, which set to gel form more quickly when mechanical means are used to hasten the orientation of the particles.

rheophile [ECOL] Living or thriving in running water.

rheophilous bog [ECOL] A bog which draws its source of water from drainage.

rheoplankton [ECOL] Plankton found in flowing water.

rheostat [ELEC] A resistor constructed so that its resistance value may be changed without interrupting the circuit to which it is connected. Also known as variable resistor.

rheostatic braking [ENG] A system of dynamic braking in which direct-current drive motors are used as generators and convert the kinetic energy of the motor rotor and connected load to electrical energy, which in turn is dissipated as heat in a braking rheostat connected to the armature.

rheostatic control [ELEC] A method of controlling the speed of electric motors that involves varying the resistance or reactance in the armature or field circuit; used in motors that drive elevators.

rheostriction *See* pinch effect.

rheotaxial growth [ENG] A chemical vapor deposition technique for producing silicon diodes and transistors on a fluid layer having high surface mobility.

rheotaxis [BIOL] Movement of a motile cell or organism in response to the direction of water currents.

rheotron *See* betatron.

rheotropic brittleness [MET] A low-temperature or high-strain-rate brittleness that may be eliminated by prestraining under milder conditions.

rheotropism [BIOL] Orientation response of an organism to the stimulus of a flowing fluid, as water.

rhesus blood group *See* Rh blood group.

rhesus factor *See* Rh factor.

rhesus macaque *See* rhesus monkey.

rhesus monkey [VERT ZOO] *Macaque mulatta*. An agile, gregarious primate found in southern Asia and having a short tail, short limbs of almost equal length, and a stocky build. Also known as rhesus macaque.

rheumatic arteritis [MED] A type of allergic arteritis associated with acute rheumatic fever.

rheumatic carditis [MED] Inflammation of the heart resulting from rheumatic fever.

rheumatic encephalopathy [MED] An inflammatory reaction of the brain and the smaller arteries of the cerebral cortex associated with rheumatic fever.

rheumatic endocarditis [MED] Inflammation of the endocardium in acute rheumatic fever, usually involving heart valves.

rheumatic fever [MED] A febrile disease occurring in childhood as a delayed sequel of infection by *Streptococcus hemolyticus*, group A; characterized by arthritis, carditis, nosebleeds, and chorea.

rheumatic pneumonia [MED] Pneumonia associated with acute rheumatic fever.

rheumatism [MED] Any combination of muscle or joint pain, stiffness, or discomfort arising from nonspecific disorders.

rheumatoid arthritis [MED] A chronic systemic inflammatory disease of connective tissue in which symptoms and changes predominate in articular and related structures. Also known as atrophic arthritis; chronic infectious arthritis; proliferative arthritis.

rheumatoid nodules [MED] Subcutaneous lateral foci of fibrinoid degeneration or necrosis surrounded by mononuclear cells in a regular palisade arrangement, occurring usually in association with rheumatoid arthritis or rheumatic fever.

rheumatoid spondylitis [MED] A chronic progressive arthritis of young men, affecting mainly the spine and sacroiliac joints, leading to fusion and deformity. Also known as Marie-Strümpell disease.

rheum emodin *See* emodin.

rhexistasy [GEOL] The mechanical breaking up and transport of old soils or other surface residual materials.

Rh factor [IMMUNOL] Any of several red blood cell antigens originally identified in the blood of rhesus monkeys. Also known as Rh antigen; rhesus factor.

RHI display *See* range-height indicator display.

Rhigonematidae [INV ZOO] A family of nematodes in the superfamily Oxyuroidea.

Rhincodontidae [VERT ZOO] The whale sharks, a family of essentially tropical galeoid elasmobranchs in the isurid line.

rhinencephalon [ANAT] The anterior olfactory portion of the vertebrate brain.

rhinestone [MATER] A clear, colorless imitation of diamond, made of glass, paste, or gem quartz, backed with metallic foil.

rhinitis [MED] Inflammation of the mucous membranes in the nose.

Rhinobatidae [VERT ZOO] The guitarfishes, a family of elasmobranchs in the batoid group.

Rhinoceratidae [VERT ZOO] A family of perissodactyl mammals in the superfamily Rhinoceratoidea, comprising the living rhinoceroses.

Rhinoceratoidea [VERT ZOO] A superfamily of perissodactyl mammals in the suborder Ceratomorpha including living and extinct rhinoceroses.

rhinoceros [VERT ZOO] The common name for the odd-toed ungulates composing the family Rhinoceratidae, characterized by massive, thick-skinned limbs and bodies, and one or two horns which are composed of a solid mass of hairs attached to the bony prominence of the skull.

Rhinochimaeridae [VERT ZOO] A family of ratfishes, order Chimaeriformes, distinguished by an extremely elongate rostrum.

Rhinocryptidae [VERT ZOO] The tapaculos, a family of ground-inhabiting suboscine birds in the suborder Tyranni characterized by a large, movable flap which covers the nostrils.

rhinogenous [MED] Originating in the nose.

rhinolaryngology [MED] The science of the anatomy, physiology, and pathology of the nose and larynx.

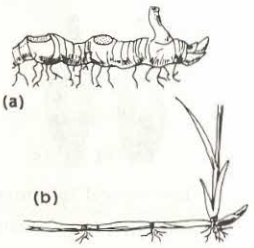
rhinolaryngoscope [MED] A scope containing a mirror and a light, used to examine the nose and larynx.

rhinology [MED] The science of the anatomy, functions, and diseases of the nose.

Rhinolophidae [VERT ZOO] The horseshoe bats, a family of insect-eating chiropterans widely distributed in the Eastern Hemisphere and distinguished by extremely complex, horseshoe-shaped nose leaves.

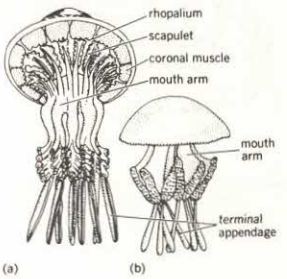
rhinopharyngitis [MED] Inflammation of the nose and pharynx or of the nasopharynx.
rhinophore [INV ZOO] An olfactoreceptor of certain land mollusks, usually borne on a tentacle.
rhinoplasty [MED] A plastic operation on the nose.
Rhinopomatidae [VERT ZOO] The mouse-tailed bats, a small family of insectivorous chiropterans found chiefly in arid regions of northern Africa and southern Asia and characterized by long, wirelike tails and rudimentary nose leaves.
Rhinopteridae [VERT ZOO] The cow-nosed rays, a family of batoid sharks having a fleshy pad at the front end of the head and a well-developed poison spine.
rhinorrhea [MED] **1.** A mucous discharge from the nose. **2.** Escape of cerebrospinal fluid through the nose.
rhinoscleroma [MED] A chronic infectious bacterial disease caused by *Klebsiella rhinoscleromatis* and characterized by hard nodules and plaques of inflamed tissue in the nose and adjacent areas.
rhinoscope [MED] An instrument for examining the nasal cavities.
Rhinotermitidae [INV ZOO] A family of lower termites of the order Isoptera.
rhinotheca [VERT ZOO] The horny sheath on the upper part of a bird's bill.
rhinovirus [VIROL] A subgroup of the picornavirus group including small, ribonucleic acid–containing forms which are not inactivated by ether.
Rhipiceridae [INV ZOO] The cedar beetles, a family of coleopteran insects in the superfamily Elateroidea.
Rhipidistia [VERT ZOO] The equivalent name for Osteolepiformes.
rhipidium [BOT] A fan-shaped inflorescence with cymose branching in which branches lie in the same plane and are suppressed alternately on each side.
Rhipiphoridae [INV ZOO] The wedge-shaped beetles, a family of coleopteran insects in the superfamily Meloidea.
rhizanthous [BOT] Producing flowers directly from the root.
rhizautoicous [BOT] Of mosses, having the antheridial branch and the archegonial branch connected by rhizoids.
rhizic water *See* soil water.
rhizine [BOT] The rhizoid of a lichen.
Rhizobiaceae [MICROBIO] A family of gram-negative, motile, aerobic rods; utilize carbohydrates and produce slime on carbohydrate media.
Rhizobium [MICROBIO] The type genus of the family Rhizobiaceae; cells stimulate the production of nodules on legume roots which fix molecular nitrogen.
rhizocarpous [BOT] Pertaining to perennial herbs having perennating underground parts from which stems and foliage arise annually.
Rhizocephala [INV ZOO] An order of crustaceans which parasitize other crustaceans; adults have a thin-walled sac enclosing the visceral mass and show no trace of segmentation, appendages, or sense organs.
Rhizochloridina [INV ZOO] A suborder of flagellate protozoans in the order Heterochlorida.
rhizoconcretion *See* root cast.
rhizoctol *See* methylarsinic sulfide.
Rhizodontidae [PALEON] An extinct family of lobefin fishes in the order Osteolepiformes.
rhizoid [BOT] A rootlike structure which helps to hold the plant to a substrate; found on fungi, liverworts, lichens, mosses, and ferns.
Rhizomastigida [INV ZOO] An order of the protozoan class Zoomastigophorea; all species are microscopic and ameboid, and have one or two flagella.
Rhizomastigina [INV ZOO] The equivalent name for Rhizomastigida.
rhizome [BOT] An underground horizontal stem, often thickened and tuber-shaped, and possessing buds, nodes, and scalelike leaves.
rhizomorph [BOT] A rootlike structure, characteristic of many basidiomycetes, consisting of a mass of densely packed and intertwined hyphae.
Rhizophagidae [INV ZOO] The root-eating beetles, a family of minute coleopteran insects in the superfamily Cucujoidea.
Rhizophoraceae [BOT] A family of dicolyledonous plants in the order Cornales distinguished by opposite, stipulate leaves, two ovules per locule, folded or convolute bud petals, and a berry fruit.
rhizophore [BOT] A leafless, downward-growing dichotomous *Selaginella* shoot that has tufts of adventitious roots at the apex.
rhizoplast [CYTOL] A delicate fiber or thread running between the nucleus and the blepharoplast in cells bearing flagella.
rhizopod [INV ZOO] An anastomosing rootlike pseudopodium.
Rhizopodea [INV ZOO] A class of the protozoan superclass Sarcodina in which pseudopodia may be filopodia, lobopodia, or reticulopodia, or may be absent.
rhizosphere [GEOL] The soil region subject to the influence of plant roots and characterized by a zone of increased microbiological activity.
Rhizostomeae [INV ZOO] An order of the class Scyphozoa having the umbrella generally higher than it is wide with the margin divided into many lappets but not provided with tentacles.
rhizotomy [MED] Surgical division of any root, as of a nerve. Also known as radicotomy.
RHM *See* roentgen-per-hour-at-one-meter.
rhodamine B [ORG CHEM] $C_{28}H_{31}ClN_2O_3$ Red, green, or reddish-violet powder, soluble in alcohol and water; forms bluish red, fluorescent solution in water; used as red dye for paper, wool, and silk, and as an analytical reagent and biological stain.
rhodamine toner [MATER] Rhodamine dye and phosphotungstic or phosphomolybdic acid; red to maroon; used in printing inks.
rhodanate *See* thiocyanate.
Rhodanian orogeny [GEOL] A short-lived orogeny that occurred at the end of the Miocene Period.
rhodanic acid *See* thiocyanic acid.
rhodanide *See* thiocyanate.
rhodanine [ORG CHEM] $C_3H_3NOS_2$ A pale-yellow crystalline compound that may decompose violently when heated, giving off toxic by-products; used in organic synthesis. Also known as 2-thioxo-4-thiazolidinone.
L-rhodeose *See* L-fucose.
Rhodesian man [PALEON] A type of fossil man inhabiting southern and central Africa during the late Pleistocene; the skull was large and low, marked by massive browridges, with a cranial capacity of 1300 cubic centimeters or less.
Rhodesian trypanosomiasis [MED] A fulminating form of African sleeping sickness caused by *Trypanosoma rhodesiense*, transmitted by the tsetse fly, and characterized by parasitemia, edema, lymphadenitis, and myocarditis. Also known as East African sleeping sickness.
Rhodininae [INV ZOO] A subfamily of limivorous worms in the family Maldanidae.
rhodinol [MATER] Colorless, combustible liquid mixture of terpene alcohols with rose scent; soluble in mineral oil and alcohol; derived from geranium oil; used in perfumes and flavors.
rhodinyl acetate [MATER] Terpene-alcohol-acetates mixture; colorless-to-yellow, combustible liquid with rose scent; soluble in mineral oil, alcohol, and glycerin; used in perfumes and flavors.
rhodite [MINERAL] A mineral consisting of a native alloy of rhodium (about 40%) and gold.
rhodium [CHEM] A chemical element, symbol Rh, atomic number 45, atomic weight 102.905. [MET] A silver-white metal in the platinum family; sometimes alloyed with platinum for thermocouples or used as a tarnish-resistant electrode posit.
rhodium chloride [INORG CHEM] $RhCl_3$ Water-insoluble, brown-red powder, soluble in cyanides and alkalies; decomposes at 450–500°C. Also known as rhodium trichloride.
rhodium trichloride *See* rhodium chloride.
rhodizite [MINERAL] $CsAl_4Be_4B_{11}O_{25}(OH)_4$ A white mineral composed of a basic borate of cesium, aluminum, and beryllium, occurring as isometric crystals.
Rhodobacteriineae [MICROBIO] Formerly a suborder of the order Pseudomonadales comprising all of the photosynthetic, or phototrophic, bacteria except those of the genus *Rhodomicrobium*.
rhodochrosite [MINERAL] $MnCO_3$ A rose-red to pink or gray mineral form of manganese carbonate with hexagonal symmetry but occurring in massive or columnar form; isomorphous with calcite and siderite, has a hardness of 3.5–4 on Mohs scale, and a specific gravity of 3.7; a minor ore of manganese.

RHIZOME



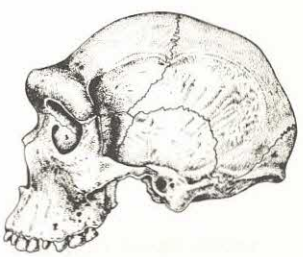
The underground stems of *(a)* Solomon's seal and *(b)* grass.

RHIZOSTOMEAE



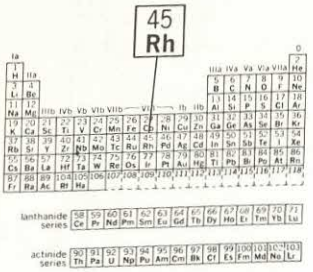
Rhizostomeae. *(a) Rhizostoma*; the bell may reach 2 feet (61 centimeters) in diameter. *(b) Mastigias. (From L. Hyman, The Invertebrates, vol. 1, McGraw-Hill, 1940)*

RHODESIAN MAN



Skull of Rhodesian man *(Homo erectus rhodesiensis)*, late Pleistocene. *(From M. F. Ashley Montagu, An Introduction to Physical Anthropology, 2d ed., Charles C. Thomas, 1951)*

RHODIUM



Periodic table of the chemical elements showing the position of rhodium.

rhodolite [MINERAL] A violet-red garnet species composed of a mixture of almandite and pyrope in about a 3:1 ratio.

Rhodomicrobium [MICROBIO] A genus of bacteria in the family Rhodospirillaceae; cells are ovoid, have peritrichous flagella, and contain bacteriochlorophyll *a*; reproduce by budding at hyphal tips.

rhodonite [MINERAL] $MnSiO_3$ A pink or brown mineral inosilicate crystallizing in the triclinic system and commonly found in cleavable to compact masses or in embedded grains; luster is vitreous, hardness is 5.5–6 on Mohs scale, and specific gravity is 3.4–3.7.

Rhodophyceae [BOT] A class of algae belonging to the division or subphylum Rhodophyta.

Rhodophyta [BOT] The red algae, a large diverse phylum or division of plants distinguished by having an abundance of the pigment phycoerythrin.

rhodoplast [BOT] A reddish chromatophore occurring in red algae.

Rhodopseudomonas [MICROBIO] A genus of bacteria in the family Rhodospirillaceae; cells are spherical, rod-shaped, or ovoid with polar flagella and contain bacteriochlorophyll *a* or *b*.

rhodopsin [BIOCHEM] A deep-red photosensitive pigment contained in the rods of the retina of marine fishes and most higher vertebrates. Also known as retinal pigment; visual purple.

Rhodospirillaceae [MICROBIO] A family of bacteria in the suborder Rhodospirillineae; cells are motile by flagella, multiplication is by budding or binary fission, and photosynthetic membranes are continuous with the cytoplasmic membrane.

Rhodospirillales [MICROBIO] The single order of the phototrophic bacteria; cells are spherical, rod-shaped, spiral, or vibrio-shaped, and all contain bacteriochlorophylls and carotenoid pigments.

Rhodospirillineae [MICROBIO] The purple bacteria, a suborder of the order Rhodospirillales; contain bacteriochlorophyll *a* or *b*, located on internal membranes.

Rhodospirillum [MICROBIO] A genus of bacteria in the family Rhodospirillaceae; cells are spiral-shaped with polar flagella and contain bacteriochlorophyll *a*.

rhodotorulic acid [ORG CHEM] A diketopiperazine composed of two molecules of N^{δ}-acetyl-N^{δ}-hydroxy-ornithine; a potent growth factor for microorganisms that require hemin or iron transport compounds, for example, *Arthrobacter* species.

rhodoxanthin [BIOCHEM] $C_{40}H_{50}O_2$ A xanthophyll carotenoid pigment.

rhohelos [ECOL] A stream-crossed, nonalluvial marsh typical of filled lake areas.

Rhoipteleaceae [BOT] A monotypic family of dicotyledonous plants in the order Juglandales having pinnately compound leaves, and flowers in triplets with four sepals and six stamens, and the lateral flowers female but sterile.

rhomb *See* rhombohedron.

rhombencephalon [EMBRYO] The most caudal of the primary brain vesicles in the vertebrate embryo. Also known as hindbrain.

rhombic antenna [ELECTROMAG] A horizontal antenna having four conductors forming a diamond or rhombus; usually fed at one apex and terminated with a resistance or impedance at the opposite apex. Also known as diamond antenna.

rhombic dodecahedron [CRYSTAL] A crystal form in the cubic system that is a dodecahedron whose faces are equal rhombuses.

rhombic lattice *See* orthorhombic lattice.

rhombic sulfur [CHEM] Crystalline sulfur with three unequal axes, all at right angles.

rhombic system *See* orthorhombic system.

Rhombifera [PALEON] An extinct order of Cystoidea in which the thecal canals crossed the sutures at the edges of the plates, so that one-half of any canal lay in one plate and the other half on an adjoining plate.

rhombochasm [GEOL] A parallel-sided gap in the sialic crust occupied by simatic crust, probably caused by spreading and separation.

rhomboclase [MINERAL] $HFe^{3+}(SO_4)_2 \cdot 4H_2O$ A colorless mineral composed of hydrous acid ferric sulfate, occurring in rhombic plates.

rhombogen [INV ZOO] A form of reproductive individual of the mesozoan order Dicyemida found in the sexually mature host which arises from nematogens and gives rise to free-swimming infusorigens.

rhombohedral [CRYSTAL] **1.** Of or pertaining to the rhombohedral system. **2.** Of or pertaining to crystal cleavage in or a centered lattice of the hexagonal system.

rhombohedral close packing *See* rhombohedral packing.

rhombohedral iron ore *See* hematite; siderite.

rhombohedral lattice [CRYSTAL] A crystal lattice in which the three axes of a unit cell are of equal length, and the three angles between axes are the same, and are not right angles. Also known as trigonal lattice.

rhombohedral packing [CRYSTAL] The tightest manner of systematic arrangement of uniform solid spheres in a clastic sediment or crystal lattice, characterized by a unit cell of six planes passed through eight sphere centers situated at the corners of a regular rhombohedron.

rhombohedral system [CRYSTAL] A division of the trigonal crystal system in which the rhombohedron is the basic unit cell.

rhombohedron [CRYSTAL] A trigonal crystal form that is a parallelepiped, the six identical faces being rhombs. Also known as rhomb. [MATH] A prism with six parallelogram faces.

rhomboid [MATH] A parallelogram whose adjacent sides are not equal.

rhomboidal prism [OPTICS] A prism with four parallel sides and two slanting, or oblique, parallel ends; it will divert the path of light entering its ends without changing the form of the light.

rhomboid ripple mark [GEOL] An aqueous current ripple mark characterized by a reticular arrangement of diamond-shaped tongues of sand, with each tongue having two acute angles, one pointing upcurrent and the other pointing downcurrent.

rhomboporoid cryptostome [PALEON] Any of a group of extinct bryozoans in the order Cryptostomata that built twiglike colonies with zooecia opening out in all directions from the central axis of each branch.

rhomb-porphyry [PETR] A porphyritic alkaline syenite composed of an alkali feldspar groundmass with augites having rhombohedral cross sections as the principal phenocryst minerals.

rhombus [MATH] A parallelogram with all sides equal.

rho meson [PARTIC PHYS] Collective name for vector meson resonances belonging to a charge multiplet with total isospin 1, hypercharge 0, negative charge conjugation parity, positive *g*-parity, mass of about 770 MeV, and width of about 146 MeV. Designated $\rho(770)$.

Rhopalidae [INV ZOO] A family of pentatomorphan hemipteran insects in the superfamily Coreoidea.

rhopalium [INV ZOO] A sense organ found on the margin of a discomedusan.

Rhopalocera [INV ZOO] Formerly a suborder of Lepidoptera comprising those forms with clubbed antennae.

rhopalocercous cercaria [INV ZOO] A free-swimming digenetic trematode larva distinguished by a very wide tail.

Rhopalodinidae [INV ZOO] A family of holothurian echinoderms in the order Dactylochirotida in which the body is flask-shaped, the mouth and anus lying together.

Rhopalosomatidae [INV ZOO] A family of hymenopteran insects in the superfamily Scolioidea.

rho-theta navigation *See* omnibearing-distance navigation.

rhourd [GEOL] A pyramid-shaped sand dune, formed by the intersection of other dunes.

rhubarb [BOT] *Rheum rhaponticum*. A herbaceous perennial of the order Polygoniales grown for its thick, edible petioles.

rhumbatron *See* cavity resonator.

rhumb bearing [NAV] The direction of a rhumb line through two terrestrial points, expressed as angular distance from a reference direction; usually measured from 000° at the reference direction clockwise through 360°. Also known as Mercator bearing.

rhumb direction *See* mercator direction.

rhumb line [MAP] A line on the surface of the earth making the same oblique angle with all meridians. Also known as loxodrome.

rhumb-line course [NAV] The direction of the rhumb line from the point of departure to the destination, expressed as the angular distance from a reference direction, usually north. Also known as Mercator course.

rhumb-line distance [NAV] Distance along a rhumb line, usually expressed in nautical miles.

rhumb-line error [NAV] An acceleration error, such as in a bubble sextant reading, due to an aircraft being in curved flight in space when proceeding along a rhumb line on the earth's surface.

rhumb-line sailing [NAV] Any method of solving the various problems involving course, distance, difference of latitude, difference of longitude, and departure, as they are related to a rhumb line.

rhyacolite *See* sanidine.

Rhynchobdellae [INV ZOO] An order of the class Hirudinea comprising leeches that possess an eversible proboscis and lack hemoglobin in the blood.

Rhynchocephalia [VERT ZOO] An order of lepidosaurian reptiles represented by a single living species, *Sphenodon punctatus*, and characterized by a diapsid skull, teeth fused to the edges of the jaws, and an overhanging beak formed by the upper jaw.

rhynchocoel [INV ZOO] A cavity that holds the inverted proboscis in nemertinean worms.

Rhynchocoela [INV ZOO] A phylum of bilaterally symmetrical, unsegmented, ribbonlike worms having an eversible proboscis and a complete digestive tract with an anus.

rhynchodaeum [INV ZOO] The part of the proboscis lying anterior to the brain in nemertinean worms.

Rhynchodina [INV ZOO] A suborder of ciliate protozoans in the order Thigmotrichida.

Rhynchonellida [INV ZOO] An order of articulate brachiopods; typical forms are dorsibiconvex, the posterior margin is curved, the dorsal interarea is absent, and the ventral one greatly reduced.

rhynchophorous [ZOO] Having a beak.

Rhynchosauridae [PALEON] An extinct family of generally large, stout, herbivorous lepidosaurian reptiles in the order Rhynchocephalea.

Rhynchotheriinae [PALEON] A subfamily of extinct elaphantoid mammals in the family Gomphotheriidae comprising the beak-jawed mastodonts.

Rhyniatae *See* Rhyniopsida

Rhyniophyta [PALEOBOT] A subkingdom of the Embryobionta including the relatively simple, uppermost Silurian-Devonian vascular plants.

Rhyniopsida [PALEOBOT] A class of extinct plants in the subkingdom Rhyniophyta characterized by leafless, usually dichotomously branched stems that bore terminal sporangia.

Rhynochetidae [VERT ZOO] A monotypic family of gruiform birds containing only the kagu of New Caledonia.

rhyodacite [PETR] A group of extrusive porphyritic igneous rocks containing quartz, plagioclase, and biotite phenocrysts in a fine-grained to glassy groundmass composed of alkali feldspar and silica minerals. Also known as dellenite; quartz lattice.

rhyolite [PETR] A light-colored, aphanitic volcanic rock composed largely of alkali feldspar and free silica with minor amounts of mafic minerals; the extrusive equivalent of granite.

rhyolitic glass [GEOL] Volcanic glass that is chemically equivalent to rhyolite.

rhyolitic lava [GEOL] A highly viscous, silica-rich lava.

rhyolitic magma [PETR] A type of magma formed by differentiation from basaltic magma in combination with assimilation of siliceous material, or by melting of portions of the earth's sialic layer.

rhyolitic tuff [GEOL] A tuff composed of fragments of rhyolitic lava.

Rhysodidae [INV ZOO] The wrinkled bark beetles, a family of coleopteran insects in the suborder Adephaga.

rhythmic accumulations [GEOL] Regular patterns of ripples and cusps in sediment on the beach or the sea floor, formed by currents and waves.

rhythmic crystallization [PETR] In igneous rocks, a phenomenon in which different minerals crystallize in concentric layers, giving rise to orbicular texture.

rhythmic driving [MIN ENG] Driving carried out between two shifts; that is, the drilling, loading, and blasting are carried out in one shift and the mucking and transportation in the following one.

rhythmic layering [GEOL] A type of layering in an igneous intrusion which is easily observable and in which there is repetition of zones of varying composition.

rhythmic sedimentation [GEOL] A repetitious, regular sequence of rock units formed by sedimentary succession and indicating a frequent, predictable recurrence of the same sequence of conditions.

rhythmic stratification [GEOL] The occurrence of sediment layers in repetitive patterns, such as a regular alternation of layers of lime and clay.

rhythmic succession [GEOL] A succession of rock units showing continual and repeated changes of lithology.

rhythmite [GEOL] An independent unit of a rhythmic succession or of beds that were developed by rhythmic sedimentation.

ria [GEOGR] **1.** Any broad, estuarine river mouth. **2.** A long, narrow coastal inlet, except a fjord, whose depth and width gradually and uniformly diminish inland.

RIAA curve [ENG ACOUS] **1.** Recording Industry Association of America curve representing standard recording characteristics for long-play records. **2.** The corresponding equalization curve for playback of long-play records.

ria coast [GEOGR] A coast with several parallel rias extending far inland and alternating with ridgelike promontories.

ria shoreline [GEOGR] A type of coastline developed along a drowning landmass in which numerous long and narrow arms of the sea extend inland parallel with one another and perpendicular to the coastline.

rib [AERO ENG] A transverse structural member that gives cross-sectional shape and strength to a portion of an airfoil. [ANAT] One of the long curved bones forming the wall of the thorax in vertebrates. [BOT] A primary vein in a leaf. [GEOL] A layer or dike of rock forming a small ridge on a steep mountainside. [MIN ENG] **1.** A solid pillar of coal or ore left for support. **2.** A thin stratum in a seam of coal. [TEXT] A straight, raised cord in a fabric, formed by a heavy thread in any direction.

rib-and-furrow [GEOL] The bedding-plane expression for micro-cross-bedding, consisting of sets of small, transverse arcuate markings confined to long, narrow, parallel grooves oriented parallel to the current flow and separated by narrow ridges.

riband jasper *See* ribbon jasper.

rib arch [CIV ENG] An arch consisting of ribs placed side by side and extending from the springings on one end to those on the other end.

ribbed-clamp coupling [DES ENG] A rigid coupling which is split longitudinally and bored to shaft diameter, with a shim separating the two halves.

ribbed moraine [GEOL] One of a group of irregularly subparallel, locally branching, generally smoothly rounded and arcuate ridges that are convex in the downstream direction of a glacier but that curve upstream adjacent to eskers.

ribble *See* ripple till.

ribbon [BUILD] A horizontal piece of wood nailed to the face of studs; usually used to support the floor joists. [MATH] The plane figure generated by a straight line which moves so that it is always perpendicular to the path traced by its middle point. [PETR] One of a set of parallel bands in a rock or mineral.

ribbon banding [PETR] A banding produced in the bedding of a sedimentary rock by thin strata of contrasting colors, giving the rock an appearance which suggests bands of ribbons.

ribbon bomb [GEOL] An elongate and flattened volcanic bomb derived from ropes of lava.

ribbon cable [ELEC] A cable made of normal, round, insulated wires arranged side by side and fastened together by a cohesion process to form a flexible ribbon.

ribbon conveyor [MECH ENG] A type of screw conveyor which has an open space between the shaft and a ribbon-shaped flight, used for wet or sticky materials which would otherwise build up on the spindle.

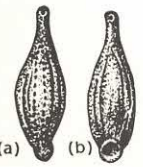
ribbon diagram [GEOL] A continuous geologic cross section that is drawn in perspective along a curved or sinuous line.

ribbon jasper [GEOL] Banded jasper with parallel, ribbonlike stripes of alternating colors or shades of color. Also known as riband jasper.

ribbon lightning [GEOPHYS] Ordinary streak lightning that appears to be spread horizontally into a ribbon of parallel luminous streaks when a very strong wind is blowing at right angles to the observer's line of sight; successive strokes of the lightning flash are then displaced by small angular amounts and may appear to the eye or camera as distinct paths. Also known as band lightning; fillet lightning.

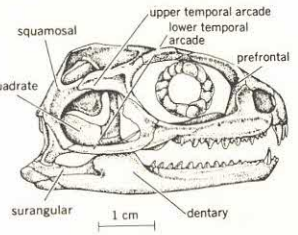
ribbon microphone [ENG ACOUS] A microphone whose electric output results from the motion of a thin metal ribbon

RHYNCHOBDELLAE



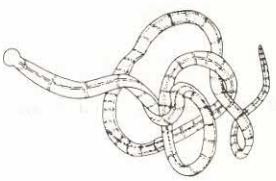
Examples of Rhynchobdellae. *(a) Glossiphonia complanata. (b) Placobdella parasitica.*

RHYNCHOCEPHALIA



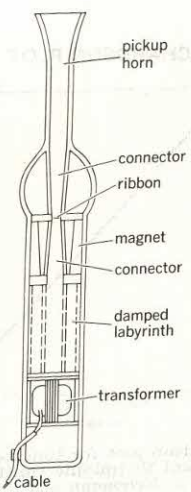
Skull of a living rhynchocephalian, *Sphenodon*, a typical diapsid. *(From A. S. Romer, Vertebrate Paleontology, 3d ed., University of Chicago Press, 1966)*

RHYNCHOCOELA



Tubulanus capistratus from the Pacific coast; size ranges from 5 to 30 millimeters. *(From L. H. Hyman, The Invertebrates, vol. 2, McGraw-Hill, 1951)*

RIBBON MICROPHONE



Sectional view of ribbon-type pressure microphone.

mounted between the poles of a permanent magnet and driven directly by sound waves; it is velocity-actuated if open to sound waves on both sides, and pressure-actuated if open to sound waves on only one side.

ribbon mixer [MECH ENG] Device for the mixing of particles, slurries, or pastes of solids by the revolution of an elongated helicoid (spiral) ribbon of metal.

ribbon parachute [AERO ENG] A type of parachute having a canopy consisting of an arrangement of closely spaced tapes; this parachute has high porosity with attendant stability and slight opening shock.

ribbon reef [GEOL] A linear reef within the Great Barrier Reef off the northeast coast of Australia, having inwardly curved extremities, and forming a festoon along the precipitous edge of the continental shelf.

ribbon rock [PETR] A rock showing a succession of thin layers of differing composition or appearance.

ribbon slate [PETR] Slate produced by incomplete metamorphism of clearly visible residual bedding planes that cut across the cleavage surface.

ribbon structure [GEOL] A succession of thin layers of different mineralogy and texture often contorted and deformed.

ribbon vein *See* banded vein.

ribbon windows [ARCH] Windows in a continuous horizontal band.

rib hole [MIN ENG] One of the final holes fired in blasting ground at the sides of a shaft or tunnel. Also known as trimmer.

ribitol *See* adonitol.

Riblet coupler *See* three-decibel coupler.

riboflavin [BIOCHEM] $C_{17}H_{20}N_4O_6$ A water-soluble, yellow-orange fluorescent pigment that is essential to human nutrition as a component of the coenzymes flavin mononucleotide and flavin adenine dinucleotide. Also known as lactoflavin; vitamin B_2; vitamin G.

riboflavin 5′-phosphate [BIOCHEM] $C_{17}H_{21}N_4O_9P$ The phosphoric acid ester of riboflavin. Also known as flavin phosphate; flavin mononucleotide; FMN; isoalloxazine mononucleotide; vitamin B_2 phosphate.

D-ribo-2-ketohexose *See* allulose.

D-riboketose *See* ribulose.

ribonuclease [BIOCHEM] $C_{587}H_{909}N_{171}O_{197}S_{12}$ An enzyme that catalyzes the depolymerization of ribonucleic acid.

ribonucleic acid [BIOCHEM] A long-chain, usually single-stranded nucleic acid consisting of repeating nucleotide units containing four kinds of heterocyclic, organic bases: adenine, cytosine, quanine, and uracil; they are conjugated to the pentose sugar ribose and held in sequence by phosphodiester bonds; involved intracellularly in protein synthesis. Abbreviated RNA.

ribonucleoprotein [BIOCHEM] Any of a large group of conjugated proteins in which molecules of ribonucleic acid are closely associated with molecules of protein.

ribose [BIOCHEM] $C_5H_{10}O_5$ A pentose sugar occurring as a component of various nucleotides, including ribonucleic acid.

riboside [BIOCHEM] Any glycoside containing ribose as the sugar component.

ribosomal ribonucleic acid [BIOCHEM] Any of three large types of ribonucleic acid found in ribosomes: 5S RNA, with molecular weight 40,000; 14–16S RNA, with molecular weight 600,000; and 18–22S RNA with molecular weight 1,200,000. Abbreviated r-RNA.

ribosome [CYTOL] One of the small, complex particles composed of various proteins and three molecules of ribonucleic acid which synthesize proteins within the living cell.

rib pillar [MIN ENG] A pillar whose length is large compared with its width.

rib rifling [ORD] Rifling of the bore of a gun in which the lands and grooves are of equal width.

ribulose [BIOCHEM] $C_5H_{10}O_5$ A pentose sugar that exists only as a syrup; synthesized from arabinose by isomerization with pyridine; important in carbohydrate metabolism. Also known as D-erythropentose; D-riboketose.

ribulose diphosphate [BIOCHEM] $C_5H_{12}O_{11}P_2$ The phosphate ester of ribulose.

ribut [METEOROL] Sharp, short squalls during comparatively calm winds from May to November in Malaya.

Riccati-Bessel functions [MATH] Solutions of a second-order differential equation in a complex variable which have the form $zf(z)$, where $f(z)$ is a function in terms of polynomials and $\cos(z)$, $\sin(z)$.

Riccati equation [MATH] **1.** A first-order differential equation having the form $y' = A_0(x) + A_1(x)y + A_2(x)y^2$; every second-order linear differential equation can be transformed into an equation of this form. **2.** A matrix equation of the form $dP(t)/dt + P(t)F(t) + F^T(t)P(t) - P(t)G(t)R^{-1}(t)G^T(t)P(t) + Q(t) = 0$, which frequently arises in control and estimation theory.

Ricci equations [MATH] Equations relating the components of the Ricci tensor, the curvature tensor, and an arbitrary tensor of a Riemann space. Also known as Ricci identities.

Ricci identities *See* Ricci equations.

Ricci tensor *See* contracted curvature tensor.

Ricci theorem [MATH] The covariant derivative vanishes for either of the fundamental tensors of a Riemann space.

rice [BOT] *Oryza sativa*. An annual cereal grass plant of the order Cyperales, cultivated as a source of human food for its carbohydrate-rich grain.

rice bran oil [MATER] Clear, combustible liquid, derived by solvent-extraction of oil from fresh rice bran; used to make soaps and animal feeds, salad and cooking oils, and hydrogenated shortening.

rice coal [GEOL] Anthracite that will pass through circular holes in a screen, the holes measuring 5/16 inch (7.9 millimeters), but not 3/16 inch (4.8 millimeters), in diameter.

rice glue [MATER] A paste made from ground rice boiled in soft water; used in molded objects such as statuary.

rice grains [ASTRON] Bright patches that stand out against the darker background of the surface of the sun; they are short-lived, and the pattern changes in a matter of minutes.

rice neutralization [ELECTR] Development of voltage in the grid circuit of a vacuum tube in order to nullify or cancel feedback through the tube.

rice neutralizing circuit [ELECTR] Radio-frequency amplifier circuit that neutralizes the grid-to-plate capacitance of an amplifier tube.

rice paper [MATER] **1.** A product, not a true paper and not made from rice, but manufactured from the pith of a tree grown in Taiwan; tissue-thin sheets of the pith are peeled away as a cylindrical section of the wood rotates against a knife. **2.** Any of various oriental papers used in block printing.

Rice's bromine solution [ANALY CHEM] Analytical reagent for the quantitative analysis of urea; has 12.5% bromine and sodium bromide in aqueous solution.

Richardson automatic scale [ENG] An automatic weighing and recording machine for flowable materials carried on a conveyor; weighs batches from 200 to 1000 pounds (90 to 450 kilograms).

Richardson-Dushman equation [ELECTR] An equation for the current density of electrons that leave a heated conductor in thermionic emission. Also known as Dushman equation.

Richardson effect *See* thermionic emission.

Richardson number [FL MECH] A dimensionless number used in studying the stratified flow of multilayer systems; equal to the acceleration of gravity times the density gradient of a fluid, divided by the product of the fluid's density and the square of its velocity gradient at a wall. Symbolized N_{Ri}.

Richardson plot [ELECTR] A graph of $\log (J/T^2)$ against $1/T$, where J is the current density of electrons leaving a heated conductor in thermionic emission, and T is the temperature of the conductor; according to the Richardson-Dushman equation, this is a straight line.

Richard's solder [MET] A yellow brass containing 3% aluminum and 3% phosphor tin.

rich concrete [MATER] Concrete with a high cement content.

richellite [MINERAL] $Ca_3Fe_{10}(PO_4)_8(OH,F)_{12}\cdot nH_2O$ A yellow mineral composed of hydrous basic iron calcium fluophosphate; occurs in masses.

rich mixture [CHEM] An air-fuel mixture that is high in its concentration of combustible component.

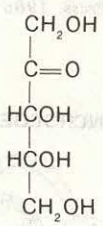
Richmondian [GEOL] A North American stage of geologic time: Upper Ordovician (above Maysvillian, below Lower Silurian).

rich oil [MATER] Natural-gasoline-plant absorption oil containing dissolved natural-gasoline fractions.

rich ore [MIN ENG] Relatively high grade ore.

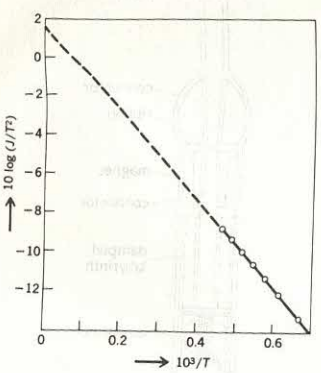
richterite [MINERAL] $(Na,K)_2(Mg,Mn,Ca)_6Si_8O_{22}(OH)_2$ A brown, yellow, or rose-red monoclinic mineral composed of basic silicate of sodium, potassium, magnesium, manganese, and calcium; a member of the amphibole group.

RIBULOSE



Structural formula of ribulose.

RICHARDSON PLOT



Richardson plot for tungsten, an important thermionic emitter. *(After G. Herrmann and S. Wagener, The Oxide-Coated Cathode, vol. 2, Chapman and Hall, 1951)*

Richter scale [GEOPHYS] A scale of numerical values of earthquake magnitude ranging from 1 to 9.

ricin [MATER] White, poisonous powder derived from pressed castor oil bran.

Ricinidae [INV ZOO] A family of bird lice, order Mallophaga, which occur on numerous land and water birds.

ricinoleic acid [ORG CHEM] $C_{18}H_{34}O_3$ Unsaturated fatty acid; a combustible, water-insoluble, viscous liquid; soluble in most organic solvents; boils at 226°C (10 mm Hg); used as a chemical intermediate, in soaps and Turkey red oils, and for textile finishing. Also known as castor oil acid; *cis*-12-hydroxyoctadec-9-enoic acid; 12-hydroxyoleic acid.

ricinoleyl alcohol [ORG CHEM] $C_{18}H_{36}O_2$ Fatty alcohol of ricinoleic acid; a combustible, colorless, nondrying liquid, boiling at 170–328°C; used as a chemical intermediate, in protective coatings, surface-active agents, pharmaceuticals, and plasticizers. Also known as 9-octadecen-1,12-diol.

Ricinuleida [INV ZOO] An order of rare, ticklike arachnids in which the two anterior pairs of appendages are chelate, and the terminal segments of the third legs of the male are modified as copulatory structures.

rickardite [MINERAL] Cu_4Te_3 A deep-purple mineral composed of copper telluride, occurring in masses.

rickets [MED] A disorder of calcium and phosphorus metabolism affecting bony structures, due to vitamin D deficiency.

Rickettsia [MICROBIO] A genus of the tribe Rickettsieae; short rods which grow in cytoplasm and sometimes in nuclei of vertebrate and arthropod cells.

Rickettsiaceae [MICROBIO] A family of the order Rickettsiales; small, rod-shaped, coccoid, or diplococcoid cells often found in arthropods; includes human and animal parasites and pathogens.

Rickettsiales [MICROBIO] An order of prokaryotic microorganisms; gram-negative, obligate, intracellular animal parasites (may be grown in tissue cultures); many cause disease in humans and animals.

rickettsialpox [MED] An acute febrile disease caused by the organism *Rickettsia akari* and transmitted from the mouse to humans by the mite *Allodermanyssus sanguineus;* characterized by rash, a primary ulcer, and often swelling of glands.

Rickettsieae [MICROBIO] A tribe of the family Rickettsiaceae; cells are occasionally filamentous; infect arthropods and some vertebrates and are pathogenic for humans, most frequently an incidental host.

Rickettsiella [MICROBIO] A genus of the tribe Wolbachieae; small rods, pathogenic for insect larva and certain other invertebrates.

rickettsiosis [MED] Any disease caused by rickettsiae.

ricolettaite [PETR] A dark-colored syenite-gabbro containing anorthite as the plagioclase, along with olivine and augite.

rictus [VERT ZOO] The mouth aperture in birds.

riddle [DES ENG] A sieve used for sizing or for removing foreign material from foundry sand or other granular materials.

rideau [GEOL] A small ridge or mound of earth, or a slightly elevated piece of ground.

rider [GRAPHICS] A piece of type that is raised higher than surrounding type, and tends to make a heavier impression on the paper. [MIN ENG] A steel or iron crossbeam which slides between the guides in a sinking shaft; it is carried by the hoppit and serves to guide and steady the hoppit during its movement up and down the shaft.

ridge [ARCH] The line on which the sides of a sloping roof meet. [GEOL] An elongate, narrow, steep-sided elevation of the earth's surface or the ocean floor. [METEOROL] An elongated area of relatively high atmospheric pressure, almost always associated with, and most clearly identified as, an area of maximum anticyclonic curvature of wind flow. Also known as wedge.

ridge aloft *See* upper-level ridge.

ridge board [BUILD] A horizontal board placed on edge at the apex of the roof.

ridge cap [BUILD] Wood or metal cap which is placed over the angle of the ridge.

ridged ice [OCEANOGR] Sea ice having readily observed surface features in the form of one or more pressure ridges.

ridge fault [GEOL] A fault structure that is a set of two faults bounding a horst.

ridge pole [BUILD] The horizontal supporting member placed along the ridge of a roof.

ridge regression analysis [STAT] A form of regression analysis in which damping factors are added to the diagonal of the correlation matrix prior to inversion, a procedure which tends to orthogonalize interrelated variables; study of the robustness of the regression coefficients with changes in the damping factors is then used to determine sets of variables that should be removed. Also known as damped regression analysis.

ridge-top trench [GEOL] A trench, occasionally found at or near the crest of high, steep-sided mountain ridges, formed by the creep displacement of a large slab of rock along shear surfaces more or less parallel with the side slope of the ridge.

ridge waveguide [ELECTROMAG] A circular or rectangular waveguide having one or more longitudinal internal ridges that serve primarily to increase transmission bandwidth by lowering the cutoff frequency.

ridging [OCEANOGR] A form of deformation of floating ice, caused by lateral pressure, whereby ice is forced or piled haphazardly to form ridged ice.

riding boom *See* boat boom.

riebeckite [MINERAL] $Na_2(Fe,Mg)_5Si_8O_{22}(OH)_2$ A blue or black monoclinic amphibole occurring as a primary constituent in some acid- or sodium-rich igneous rocks.

riebungsbreccia [GEOL] A breccia developed during folding.

Riecke's principle [MINERAL] The principle that solution of a mineral occurs most readily at points of greatest external pressure, and crystallization occurs most readily at points of least external pressure; applied to recrystallization in metamorphic rock.

Riedel's disease [MED] A form of chronic thyroiditis with irregular localized areas of stony, hard fibrosis.

riedenite [PETR] An igneous rock composed of large tabular biotite crystals in a granular groundmass of nosean, biotite, pyroxene, and small amounts of sphene and apatite.

Riefler clock [HOROL] A clock employing a pin escapement and a mercurial pendulum; used as a standard.

riegel [GEOL] A low, traverse ridge of bedrock on the floor of a glacial valley. Also known as rock bar; threshold; verrou.

Riegler's test [ANALY CHEM] Analytical technique for nitrous acid; uses sodium naphthionate and β-naphthol.

Rieke diagram [ELECTR] A chart showing contours of constant power output and constant frequency for a microwave oscillator, drawn on a Smith chart or other polar diagram whose coordinates represent the components of the complex reflection coefficient at the oscillator load.

Riemann-Christoffel tensor [MATH] The basic tensor used for the study of curvature of a Riemann space; it is a fourth-rank tensor, formed from Christoffel symbols and their derivatives, and its vanishing is a necessary condition for the space to be flat. Also known as curvature tensor.

Riemann function [MATH] A type of Green's function used in solving the Cauchy problem for a real hyperbolic partial differential equation.

Riemann hypothesis [MATH] The conjecture that the only zeros of the Riemann zeta function with positive real part must have their real part equal to ½.

Riemannian curvature [MATH] A general notion of space curvature at a point of a Riemann space which is directly obtained from orthonormal tangent vectors there.

Riemannian geometry *See* elliptic geometry.

Riemannian manifold [MATH] A differentiable manifold where the tangent vectors about each point have an inner product so defined as to allow a generalized study of distance and orthogonality.

Riemann integral [MATH] The Riemann integral of a real function $f(x)$ on an interval (a,b) is the unique limit (when it exists) of the sum of $f(a_i)(x_i - x_{i-1})$, $i = 1, \ldots, n$, taken over all partitions of (a,b), $a = x_0 < a_1 < x_1 < \ldots < a_n < x_n = b$, as the maximum distance between x_i and x_{i-1} tends to zero.

Riemann-Lebesgue lemma [MATH] If the absolute value of a function is integrable over the interval where it has a Fourier expansion, then its Fourier coefficients a_n tend to zero as n goes to infinity.

Riemann mapping theorem [MATH] Any simply connected domain in the plane with boundary containing more than one point can be conformally mapped onto the interior of the unit disk.

Riemann method [MATH] A method of solving the Cauchy problem for hyperbolic partial differential equations.

Riemann space [MATH] A Riemannian manifold or subset

of a euclidean space where tensors can be defined to allow a general study of distance, angle, and curvature.

Riemann sphere [MATH] The two-sphere whose points are identified with all complex numbers by a stereographic projection. Also known as complex sphere.

Riemann surfaces [MATH] Sheets or surfaces obtained by analyzing multiple-valued complex functions and the various choices of principal branches.

Riemann tensors [MATH] Various types of tensors used in the study of curvature for a Riemann space.

Riemann zeta function [MATH] The complex function $\zeta(z)$ defined by an infinite series with nth term $e^{-z \log n}$. Also known as zeta function.

Riesz-Fischer theorem [MATH] The vector space of all real- or complex-valued functions whose absolute value squared has a finite integral constitutes a complete inner product space.

rifampicin [MICROBIO] An antibacterial and antiviral antibiotic; action depends upon its preferential inhibition of bacterial ribonucleic acid polymerase over animal-cell RNA polymerase.

riffle [HYD] **1.** A shallows across a stream bed over which water flows swiftly and is broken into waves by submerged obstructions. **2.** Shallow water flowing over a riffle.

riffler [DES ENG] A small, curved rasp or file for filing interior surfaces or enlarging holes.

rifle [DES ENG] A drill core that has spiral grooves on its outside surface. [ENG] A borehole that is following a spiral course. [ORD] A firearm having spiral grooves upon the surface of its bore to impart rotary motion to a projectile, thereby stabilizing the projectile and ensuring greater accuracy of impact and longer range; it may fire projectiles automatically or semiautomatically, or successive rounds may be manually loaded.

rifle bracket [ORD] Metal clamp for holding the rifle in easy accessibility, usually on a motor vehicle.

rifle grenade [ORD] A grenade especially designed or adapted to be fired or launched from the muzzle of a rifle or carbine.

rifle grenade ogive [ORD] A hollow metallic item designed for attachment to the forward end of a practice rifle grenade; it cushions the impact and permits reuse of the grenade.

rifle range [ORD] Place for practice in shooting with a rifle.

rifling [MECH ENG] The technique of cutting helical grooves inside a rifle barrel to impart a spinning motion to a projectile around its long axis.

rift [GEOL] **1.** A narrow opening in a rock caused by cracking or splitting. **2.** A high, narrow passage in a cave.

rift-block mountain [GEOL] A mountain range which is a horst block bounded by normal faults.

rift-block valley [GEOL] A valley which occupies a graben.

rift lake *See* sag pond.

rift saw [DES ENG] **1.** A saw for cutting wood radially from the log. **2.** A circular saw divided into toothed arms for sawing flooring strips from cants.

rift valley [GEOL] A deep, central cleft with a mountainous floor in the crest of a midoceanic ridge. Also known as central valley; midocean rift.

Rift Valley fever [MED] A toxic generalized febrile virus disease of man and animals in South and East Africa, transmitted by a mosquito, and characterized by headache, photophobia, myalgia, and anorexia.

rift-valley lake *See* sag pond.

rig [MECH ENG] A tripod, derrick, or drill machine complete with auxiliary and accessory equipment needed to drill. [NAV ARCH] The method according to which spars and sails are designed and fitted.

Rigel [ASTRON] A multiple star of stellar magnitude 0.08, 650 light-years from the sun, spectral classification B8-Ia, in the constellation Orion; the star β Orionis.

rigging [AERO ENG] The shroud lines attached to a parachute. [NAV ARCH] Collectively, all the ropes and chains employed to support and work the masts, yards, booms, and sails of a vessel.

Righi experiment [OPTICS] An experiment in which a rotating Nicol prism, a Fresnel mirror, a quarter-wave plate, and a fixed Nicol prism are used to produce effects in light beams similar to beats between sounds with slightly different frequencies.

Righi-Leduc effect [PHYS] The phenomenon wherein, if a magnetic field is applied at right angles to the direction of a temperature gradient in a conductor, a new temperature gradient is produced perpendicular to both the direction of the original temperature gradient and to the magnetic field. Also known as Leduc effect.

right-and-left-hand chart [IND ENG] A graphic symbolic representation of the motions made by one hand in relation to those made by the other hand.

right angle [MATH] An angle of 90°.

right-angle prism [OPTICS] A type of prism used to turn a beam of light through a right angle (90°); it will invert (turn upside-down) or will revert (turn right for left), according to the position of the prism, any light reflected by it.

right ascension [ASTRON] A celestial coordinate; the angular distance taken along the celestial equator from the vernal equinox eastward to the hour circle of a given celestial body. Abbreviated R.A.

right astern *See* dead astern.

right bank [NAV] That bank of a stream or river on the right of the observer when he is facing in the direction of flow, or downstream.

right circular cylinder [MATH] A solid bounded by two parallel planes and by a cylindrical surface consisting of the straight lines perpendicular to the planes and passing through a circle in one of them.

right-cut tool [DES ENG] A single-point lathe tool which has the cutting edge on the right side when viewed face up from the point end.

right-hand cutting tool [DES ENG] A cutter whose flutes twist in a clockwise direction.

right-handed [CRYSTAL] Having a crystal structure with a mirror-image relationship to a left-handed structure. [DES ENG] **1.** Pertaining to screw threads that allow coupling only by turning in a clockwise direction. **2.** *See* right-laid.

right-handed coordinate system [MATH] **1.** A three-dimensional rectangular coordinate system such that when the thumb of the right hand extends in the positive direction of the first (or x) axis the fingers fold in the direction in which the second (or y) axis could be rotated about the first axis to coincide with the third (or z) axis. **2.** A Riemann space which has negative scalar density function.

right-hand helicity [QUANT MECH] Property of a particle whose spin is parallel to its momentum.

right-hand limit *See* limit on the right.

right-hand polarization [ELECTROMAG] In elementary particle discussions, circular or elliptical polarization of an electromagnetic wave in which the electric field vector at a fixed point in space rotates in the right-hand sense about the direction of propagation; in optics, the opposite convention is used; in facing the source of the beam, the electric vector is observed to rotate clockwise.

right-hand rule [ELECTROMAG] **1.** For a current-carrying wire, the rule that if the fingers of the right hand are placed around the wire so that the thumb points in the direction of current flow, the fingers will be pointing in the direction of the magnetic field produced by the wire. **2.** For a moving wire in a magnetic field, such as the wire on the armature of a generator, if the thumb, first, and second fingers of the right hand are extended at right angles to one another, with the first finger representing the direction of magnetic lines of force and the second finger representing the direction of current flow induced by the wire's motion, the thumb will be pointing in the direction of motion of the wire. Also known as Fleming's rule.

right-hand screw [DES ENG] A screw that advances when turned clockwise.

right-hand taper [ELEC] Taper in which there is greater resistance in the clockwise half of the operating range of a rheostat or potentiometer (looking from the shaft end) than in the counterclockwise half.

righting arm [NAV ARCH] The horizontal distance between the center of gravity and a vertical line through the center of buoyancy of a ship that is displaced from the upright position; knowledge of this quantity is necessary to determine the righting moment.

righting lever [FL MECH] The horizontal distance from the center of mass of a floating body, slightly displaced from the equilibrium position, to a vertical line passing through the center of buoyancy.

righting moment [NAV ARCH] The torque which tends to restore a vessel heeled over to its upright position; it is the product of the righting arm and the weight of the vessel.

right-justify [COMPUT SCI] To shift the contents of a register

so that the right or least significant digit is at some specified position. [GRAPHICS] To adjust the printing positions of characters on a page so that the right margin is lined up.

right-laid [DES ENG] Rope or cable construction in which strands are twisted counterclockwise. Also known as right-handed.

right lang lay [DES ENG] Rope or cable in which the individual wires or fibers and the strands are twisted to the right.

right-lateral fault *See* dextral fault.

right-lateral slip fault *See* dextral fault.

right-of-way [CIV ENG] **1.** Areas of land used for a road and along the side of the roadway. **2.** A thoroughfare or path established for public use. **3.** Land occupied and used by a railroad or a public utility.

right rudder [NAV] The operation of moving the rudder to starboard, and consequently turning the bow of the ship to the right.

right section [MATH] A right section of a surface is the plane section produced by a perpendicular plane.

right side up *See* right way up.

right-slip fault *See* dextral fault.

right sphere [ASTRON] The appearance of the celestial sphere as seen by an observer at the earth's equator.

right triangle [MATH] A triangle one of whose angles is a right angle.

right way up [GEOL] The state of strata where the present upward succession of layers is the original (normal) order of deposition. Also known as right side up.

rigid body [MECH] An idealized extended solid whose size and shape are definitely fixed and remain unaltered when forces are applied.

rigid-body dynamics [MECH] The study of the motions of a rigid body under the influence of forces and torques.

rigid copper coaxial line [ELECTROMAG] A coaxial cable in which the central conductor and outer conductor are formed by joining rigid pieces of copper.

rigid coupling [MECH ENG] A mechanical fastening of shafts connected with the axes directly in line.

rigid frame [BUILD] A steel skeleton frame in which the end connections of all members are rigid so that the angles they make with each other do not change.

rigid insulation [ELEC] Electrical insulation that is part of a rigid structure, and must provide mechanical strength and stability of form as well as a dielectric barrier; mica, glass, porcelain, and thermosetting resins are the principal materials used.

rigidity [MECH] The quality or state of resisting change in form.

rigidity modulus *See* modulus of elasticity in shear.

rigidizer [ENG] A supporting structure providing ridigity to an instrument that might otherwise be subject to undesirable vibrations.

rigid pavement [CIV ENG] A thick portland cement pavement on a gravel base and subbase, with steel reinforcement and often with transverse joints.

rigid PVC [MATER] Polyvinyl chloride or a polyvinyl chloride–acetate copolymer with a relatively high hardness; may be formulated with or without a small percentage of plasticizer; a rigid resin.

rigid resin [MATER] A resin with a modulus of 10,000 psi (6.895×10^7 newtons per square meter) or greater.

Rigil Kent *See* α Centauri.

Rigil Kentaurus *See* α Centauri.

rigor [MED] **1.** Stiffness. **2.** A chill associated with muscular contraction and tremor.

rigor mortis [PATH] Stiffening and rigidity of the musculature occurring after death, beginning within 5–10 hours, and disappearing after 3–4 days.

rill [ASTRON] A crooked, narrow crack on the moon's surface; may be a kilometer or more in width and a few to several hundred kilometers in length. Also spelled rille. [GEOL] A small, transient runnel. [HYD] A small brook or stream.

rill crater [ASTRON] A lunar crater that forms part of a rill.

rille *See* rill.

rillenstein [GEOL] A pattern of tiny solution grooves of about 1 millimeter or less in width, formed on the limestone surface of a karstic region.

rill erosion [GEOL] The formation of numerous, closely spaced rills due to the uneven removal of surface soil by streamlets of running water. Also known as rilling; rill wash; rillwork.

rill flow [HYD] Surface runoff flowing in small irregular channels too small to be considered rivulets.

rilling *See* rill erosion.

rill mark [GEOL] A small, dendritic channel formed on beach mud or sand by a rill, especially if on the lee side of a partially buried obstruction.

rillstone *See* ventifact.

rill wash *See* rill erosion.

rillwork *See* rill erosion.

rim [DES ENG] **1.** The outer part of a wheel, usually connected to the hub by spokes. **2.** An outer edge or border, sometimes raised or projecting.

rima [GEOL] A long, narrow aperature, cleft, or fissure.

rim blight [PL PATH] A fungus disease of tea caused by members of the genus *Cladosporium* and characterized by yellow discoloration of the leaf margins followed by browning.

rim cement [GEOL] A thin layer of calcium carbonate, hematite, or silica developed on the surface of detrital grains during diagenesis.

rim clutch [MECH ENG] A frictional contact clutch having surface elements that apply pressure to the rim either externally or internally.

rim drive [ENG ACOUS] A phonograph or sound recorder drive in which a rubber-covered drive wheel is in contact with the inside of the rim of the turntable.

rime [HYD] A white or milky and opaque granular deposit of ice formed by the rapid freezing of supercooled water drops as they impinge upon an exposed object; composed essentially of discrete ice granules, and has densities as low as 0.2–0.3 gram per cubic centimeter.

rime fog *See* ice fog.

rimfire [ORD] Of a cartridge, having the primer mixture in the rim of the cartridge case base.

rim gypsum [GEOCHEM] Gypsum in thin films between anhydrite crystals, believed to have been introduced in solution rather than produced by replacement.

rimless [ORD] Pertaining to a cartridge case in which the extracting groove is machined into the body of the case; that is, no part of the case extends beyond the body.

rimmed [ORD] Pertaining to a cartridge case in which an extractor rim projects beyond the body of the case.

rimmed kettle [GEOL] A morainal depression with raised edges.

rimmed solution pool [GEOL] A pool in rock with a hardened rim resulting from deposition of lime during evaporation at low tide.

rimmed steel [MET] Low-carbon steel, partially deoxidized, which on cooling continuously, evolves sufficient carbon monoxide to form a case or rim of metal virtually free of voids.

rimming wall [GEOL] A steep, ridgelike erosional remnant of continuous layers of porous, permeable, poorly cemented, detrital limestones, believed to form under tropical or subtropical conditions by surface-controlled secondary cementation of an original steep slope and followed by differential erosion that brings the cemented zone into relief.

rimpylite [MINERAL] A group name for several green and brown hornblendes with high contents of $(Al,Fe)_2O_3$.

rim ridge [GEOL] A minor ridge of till defining the edge of a moraine plateau.

rimrock [GEOL] A top layer of resistant rock on a plateau outcropping with vertical or near vertical walls.

rimstone [GEOL] A calcium-containing deposit ringing an overflowing basin such as a hot spring.

rim syncline [GEOL] In salt tectonics, a local depression that develops as a border around a salt dome, as the salt in the underlying strata is displaced toward the dome. Also known as peripheral sink.

rincon [GEOL] **1.** A small, secluded valley. **2.** A bend in a stream.

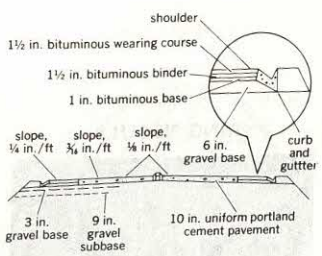
rind [BOT] **1.** The bark of a tree. **2.** The thick outer covering of certain fruits.

rinderpest [VET MED] An acute, contagious, and often fatal virus disease of cattle, sheep, and goats which is characterized by fever and the appearance of ulcers on the mucous membranes of the intestinal tract.

R indicator *See* R scope.

ring [COMPUT SCI] A cyclic arrangement of data elements, usually including a specified entry pointer. [DES ENG] A tie member or chain link; tension or compression applied through

RIGID PAVEMENT



Rigid main roadway with flexible shoulders. The design is for maximum loads of 9 tons (8 metric tons) per axle. 1 inch = 2.5 centimeters; ⅛ inch/foot = 1.0 centimeter/meter.

the center of the ring produces bending moment, shear, and normal force on radial sections. [MATH] **1.** An algebraic system with two operations called multiplication and addition; the system is a commutative group relative to addition, and multiplication is associative, and is distributive with respect to addition. **2.** A ring of sets is a collection of sets where the union and difference of any two members is also a member.

ring and ball test [CHEM ENG] A test for determining the melting point of asphalt, waxes, and paraffins in which a small ring is fitted with a test sample upon which a small ball is then placed; the melting point is that temperature at which the sample softens sufficiently to allow the ball to fall through the ring. Also known as ball and ring method.

ring-and-bead sight [ORD] Type of gunsight in which the front sight is a bead or post and the rear sight a ring.

ring and circle shear [DES ENG] A rotary shear designed for cutting circles and rings where the edge of the metal sheet cannot be used as a start.

ring-around [COMMUN] Improper routing of a call back through a switching center already trying to complete the same call, thus tying up the trunks by repeating the cycle.

ringbolt [DES ENG] An eyebolt with a ring passing through the eye.

ring bus [ELEC] A substation switching arrangement that may consist of four, six, or more breakers connected in a closed loop, with the same number of connection points.

ring canal [INV ZOO] In echinoderms, the circular tube of the water-vascular system that surrounds the esophagus.

ring circuit [ELECTROMAG] In waveguide practice, a hybrid T junction having the physical configuration of a ring with radial branches.

ring complex [GEOL] An association of two ring-shaped igneous intrusive forms, ring dikes and cone sheets.

ring counter [ELECTR] A loop of binary scalers or other bistable units so connected that only one scaler is in a specified state at any given time; as input signals are counted, the position of the one specified state moves in an ordered sequence around the loop.

ring crusher [MECH ENG] Solids-reduction device with a rotor having loose crushing rings held outwardly by centrifugal force, which crush the feed by impact with the surrounding shell.

ring current [GEOPHYS] A westward electric current which is believed to circle the earth at an altitude of several earth radii during the main phase of geomagnetic storms, resulting in a large worldwide decrease in the geomagnetic field horizontal component at low latitudes.

ring deoxyribonucleic acid *See* circular deoxyribonucleic acid.

ring depression [GEOL] The annular, structurally depressed area surrounding the central uplift of a cryptoexplosion structure; faulting and folding may be involved in its formation. Also known as peripheral depression; ring syncline.

ring dike [GEOL] A roughly circular dike that is vertical or inclined away from the center of the arc. Also known as ring-fracture intrusion.

ringdown [COMMUN] In telephone switching, that method of signaling an operator in which telephone ringing current is sent over the line to operate a drop or a self-locking relay and lamp.

ring-dyed fiber [TEXT] A synthetic fiber that is dipped in plastic to coat the surface fiber and to provide a surface on which the dye will adhere.

Ringelmann chart [ENG] A chart used in making subjective estimates of the amount of solid matter emitted by smoke stacks; the observer compares the grayness of the smoke with a series of shade diagrams formed by horizontal and vertical black lines on a white background.

ringent [BOT] Having widely separated, gaping lips. [ZOO] Gaping irregularly.

Ringer's solution [CHEM] A solution of 0.86 gram sodium chloride, 0.03 gram potassium chloride, and 0.033 gram calcium chloride in boiled, purified water, used topically as a physiological salt solution.

ring fault [GEOL] **1.** A fault that bounds a rift valley. **2.** A steep-sided fault pattern that is cylindrical in outline and associated with cauldron subsidence. Also known as ring fracture.

ring fissure [GEOL] A roughly circular desiccation crack formed on a playa around a point source (generally a phreatophyte).

ring fracture *See* ring fault.

ring-fracture intrusion *See* ring dike.

ring-fracture stoping [GEOL] Large-scale magmatic stoping that is associated with cauldron subsidence.

ring gage [DES ENG] A cylindrical ring of steel whose inside diameter is finished to gage tolerance and is used for checking the external diameter of a cylindrical object.

ring galaxy [ASTRON] A class of galaxy whose ringlike structure has clumps of ionized hydrogen clouds on its periphery, may have a nucleus of stars, and is usually accompanied by a small galaxy; probably formed when a small galaxy crashes through the disk of a spiral galaxy.

ring gate [CIV ENG] A type of gate used to regulate and control the discharge of a morning-glory spillway; like a drum gate, it offers a minimum of interference to the passage of ice or drift over the gate and requires no external power for operation.

ring gear [MECH ENG] The ring-shaped gear in an automobile differential that is driven by the propeller shaft pinion and transmits power through the differential to the line axle.

ring holes [MIN ENG] The group of boreholes radially drilled from a common-center setup.

ringing [COMMUN] The production of an audible or visible signal at a station or switchboard by means of an alternating or pulsating current. [CONT SYS] An oscillatory transient occurring in the output of a system as a result of a sudden change in input.

ringing circuit [ELECTR] A circuit which has a capacitance in parallel with a resistance and inductance, with the whole in parallel with a second resistance; it is highly underdamped and is supplied with a step or pulse input.

ringing time [ENG] In an ultrasonic testing unit, the length of time that the vibrations in a piezoelectric crystal remain after the generation of ultrasonic waves ceases.

ring isomerism [ORG CHEM] A type of geometrical isomerism in which bond lengths and bond angles prevent the existence of the trans structure if substituents are attached to alkenic carbons which are part of a cyclic system, the ring of which contains fewer than eight members; for example, 1,2-dichlorocyclohexene.

ring isomorphism [MATH] An isomorphism between rings.

ringite [GEOL] An igneous rock formed by the mixing of silicate and carbonatite magmas.

ring jewel [DES ENG] A type of jewel used as a pivot bearing in a time-keeping device, gyro, or instrument.

ring job [MECH ENG] Installation of new piston rings on a piston.

ring laser *See* laser gyro.

ring lifter *See* split-ring core lifter.

ring-lifter case *See* lifter case.

ringlock nail [DES ENG] A nail ringed with grooves to provide greater holding power.

ring micrometer [OPTICS] A flat, thin ring in the focal plane of a telescope; used to measure differences in right ascension and declination.

ring modulator [ELECTR] A modulator in which four diode elements are connected in series to form a ring around which current flows readily in one direction; input and output connections are made to the four nodal points of the ring; used as a balanced modulator, demodulator, or phase detector.

Ring Nebula [ASTRON] A nebula in the summer constellation Lyra; it is an example of the planetary type of gaseous nebulae.

ring network [COMMUN] A communications network in which the nodes can be considered to be on a circle, about which messages must be routed. Also known as loop network.

ring-oil [MECH ENG] To oil (a bearing) by conveying the oil to the point to be lubricated by means of a ring, which rests upon and turns with the journal, and dips into a reservoir containing the lubricant.

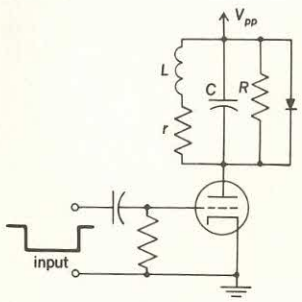
ring plain [ASTRON] A lunar crater of exceptionally large diameter and with a relatively smooth interior.

ring power transmission line [ELEC] A power transmission line that is closed upon itself to form a ring; provides two paths between the power station and any customer, and enables a faulty section of the line to be disconnected without interrupting service to customers.

ring-roller mill [MECH ENG] A grinding mill in which material is fed past spring-loaded rollers that apply force against the sides of a revolving bowl. Also known as roller mill.

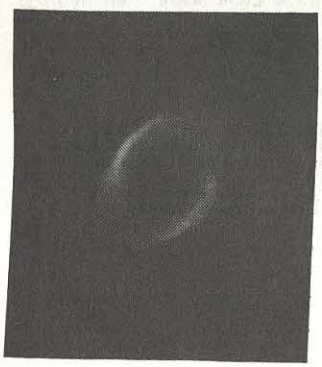
ring-rolling [MET] Producing a thin, large-diameter ring

RINGING CIRCUIT



Circuit diagram of a ringing circuit used as a trigger source. V_{pp} = plate supply voltage, L = inductance, C = capacitance, R, r = resistances.

RING NEBULA



Ring Nebula NGC 6720. *(U.S. Navy Electrograph made with 61-inch astrometric reflector at Flagstaff, Ariz.)*

from a thicker, smaller-diameter ring by placing the ring between two rotating rolls.

ring rot [PL PATH] **1.** A fungus disease of the sweet potato root caused by *Rhizopus stolonifer* and marked by rings of dry rot. **2.** A bacterial disease of potatoes caused by *Corynebacterium sepedonicum* and characterized by brown discoloration of the annular vascular tissue.

ring shift *See* cyclic shift.

ring sight [ORD] A sight, especially a gunsight, in the shape of a ring or concentric rings, through which aim is taken and range is estimated.

ring silicate *See* cyclosilicate.

rings of Saturn [ASTRON] Circular rings that encircle the planet Saturn at its equator; there are four main regions to the ring system; theory and observations indicate that the rings are composed of separate particles which move independently in the four series of circular coplanar orbits.

ring spinner [TEXT] A spinning machine in which a loop slides on a bobbin ring to control the twist of the yarn.

ring spot [PL PATH] Any of various virus and fungus diseases of plants characterized by the appearance of a discolored, annular lesion.

ring stress [MIN ENG] The zone of stress in rock surrounding all development excavations.

ring structure [COMPUT SCI] A chained file organization such that the end of the chain points to its beginning. [GEOL] A formation on the surface of the earth, moon, or a planet, having a ring-shaped trace in plan.

ring syncline *See* ring depression.

ring system [ORG CHEM] Arbitrary designation of certain compounds as closed, circular structures, as in the six-carbon benzene ring; common rings have four, five, and six members, either carbon or some combination of carbon, nitrogen, oxygen, sulfur, or other elements.

ringtail *See* cacomistle.

ring test [IMMUNOL] The simplest of the precipitin tests for antigen-antibody reaction; the solution containing antigen is layered on a solution containing antibody; a white disk or precipitate forms at the point where the two solutions diffuse until optimum concentration for precipitation is reached.

ring theory [MATH] The study of the structure of rings in algebra.

ring time [ELECTR] The length of time in microseconds required for a pulse of energy transmitted into an echo box to die out; a measurement of the performance of the radar.

ring vessel [INV ZOO] A part of the water-vascular system in echinoderms; it is the circular canal around the mouth into which the stone canal empties, and from which a radial water vessel traverses to each of five radii.

ring vortex *See* vortex ring.

ringwall structure [ASTRON] A lunar crater whose center lies on the wall, or on the line of the wall, of a larger crater.

ring whizzer [INORG CHEM] A fluxional molecule frequently encountered in organometallic chemistry in which rapid rearrangements occur by migrations about unsaturated organic rings.

ringworm [MED] A fungus infection of skin, hair, or nails producing annular lesions with elevated margins. Also known as tinea.

rinkite *See* mosandrite.

rinkolite *See* mosandrite.

rinneite [MINERAL] NaK_3FeCl_6 A colorless, pink, violet, or yellow mineral composed of sodium potassium iron chloride, occurring in granular masses.

rinse [GRAPHICS] To wash off; a liquid bath to remove foreign matter.

Riodininae [INV ZOO] A subfamily of the lepidopteran family Lycaenidae in which prothoracic legs are nonfunctional in the male.

riometer [ENG] An instrument that measures changes in ionospheric absorption of electromagnetic waves by determining and recording the level of extraterrestrial cosmic radio noise. Derived from relative ionospheric opacity meter.

riot-control agent [MATER] A chemical that produces temporary irritating or disabling effects when in contact with the eyes or when inhaled.

riot grenade [ORD] Grenade of plastic or other nonfragmenting material, containing a charge of tear gas and a detonating fuse with short delay; the gas is released by a bursting action.

riot gun [ORD] Any shotgun with a short barrel, especially a short-barreled shotgun used in guard duty or to scatter rioters; usually has a 20-inch (50.8-centimeter) cylinder barrel.

Rio Tinto process [MIN ENG] Heap leaching of curiferous sulfides that have been oxidized to sulfates by prolonged atmospheric weathering.

rip [ENG] To saw wood with the grain. [MIN ENG] To break down the roof in mine roadways to increase the headroom for haulage, traffic, and ventilation. [OCEANOGR] A turbulent agitation of water generally caused by the interaction of currents and wind.

riparian [BIOL] Living or located on a riverbank.

riparian water loss [HYD] Discharge of water through evapo-transpiration along a watercourse, especially water transpired by vegetation growing along the watercourse.

ripbit *See* detachable bit; jackbit.

rip channel [GEOL] A channel, often more than 2 meters (6.6 feet) deep, carved on the shore by a rip current.

rip current [OCEANOGR] The return flow of water piled up on shore by incoming waves and wind.

ripe [BOT] Of fruit, fully developed, having mature seed and so usable as food. [FOR] Of timber or a forest, ready to be cut. [GEOL] Referring to peat, in an advanced state of decay. [HYD] Descriptive of snow that is in a condition to discharge meltwater; ripe snow usually has a coarse crystalline structure, a snow density near 0.5, and a temperature near 32°F (0°C).

ripidolite [MINERAL] $(Mg,Fe^{2+})_9Al_6Si_5O_{20}(OH)_{16}$ A mineral of the chlorite group; consists of basic magnesium iron aluminum silicate. Also known as aphrosiderite.

rip panel [AERO ENG] A part of a manned free balloon; it is the panel to which the ripcord is attached and extends about ¼ to ⅓ of the circumference of the balloon along one of its meridians; it is torn open when the ripcord is pulled so that all the gas in the balloon escapes.

ripping bar [DES ENG] A steel bar with a chisel at one end and a curved claw for pulling nails at the other.

ripping face support [MIN ENG] A timber or steel support at the ripping lip.

ripping lip [MIN ENG] The end of the enlarged roadway section where work is proceeding.

ripping punch [DES ENG] A tool with a rectangular cutting edge, used in a punch press to crosscut metal plates.

ripple [ELEC] The alternating-current component in the output of a direct-current power supply, arising within the power supply from incomplete filtering or from commutator action in a dc generator. [FL MECH] *See* capillary wave. [GEOL] A very small ridge of sand resembling or suggesting a ripple of water and formed on the bedding surface of a sediment. [OCEANOGR] A small curling or undulating wave controlled to a significant degree by both surface tension and gravity.

ripple bedding [GEOL] A bedding surface characterized by ripple marks.

ripple biscuit [GEOL] A bedding structure produced by lenticular lamination of sand in a bay or lagoon.

ripple-carry adder [COMPUT SCI] A device for addition of two n-bit binary numbers, formed by connecting n full adders in cascade, with the carry output of each full adder feeding the carry input of the following full adder.

ripple drift [GEOL] A pattern of cross-lamination formed by sedimentary deposits on both sides of a migrating ripple.

ripple filter [ELECTR] A low-pass filter designed to reduce ripple while freely passing the direct current obtained from a rectifier or direct-current generator. Also known as smoothing circuit; smoothing filter.

ripple index [GEOL] On a rippled surface, the ratio of the crest-to-crest distance to the crest-to-trough distance.

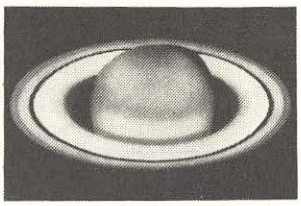
ripple lamina [GEOL] An internal sedimentary structure formed in sand or silt by currents or waves, as opposed to a ripple mark formed externally on a surface.

ripple load cast [GEOL] A load cast of a ripple mark showing evidence of penecontemporaneous deformation in the accumulation of its trough and crest and in the oversteepening of the component laminae.

ripple mark [GEOL] **1.** A surface pattern on incoherent sedimentary material, especially loose sand, consisting of alternating ridges and hollows formed by wind or water action. **2.** One of the ridges on a ripple-marked surface.

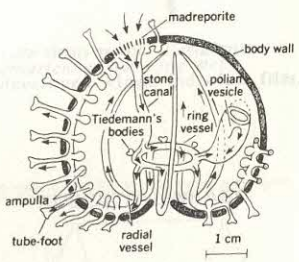
ripple quantity [PHYS] Alternating component of a pulsat-

RINGS OF SATURN



Telescopic appearance of Saturn at maximum inclination of ring system.

RING VESSEL



Schematic diagram of water-vascular system of an echinoid showing ring vessel in the lower center. Arrows show direction of water flow.

ing quantity when this component is small relative to the constant component.

ripple scour [GEOL] A shallow, linear trough with transverse ripple marks.

ripple symmetry index [GEOL] A measure of the degree of symmetry of a ripple mark, equal to the ratio of the length of the gentle (upcurrent) side to the steep (downcurrent) side.

ripple tank [PHYS] A shallow tray containing a liquid and equipped with means for generating surface waves; used to illustrate several types of wave phenomena, such as interference and diffraction.

ripple till [GEOL] A till sheet containing low, winding smooth-topped ridges lying at right angles to the direction of ice movement, and grouped into narrow belts up to 80 kilometers (48 miles) long that are generally parallel to the direction of ice movement. Also known as ribble.

ripple voltage [ELEC] The alternating component of the unidirectional voltage from a rectifier or generator used as a source of direct-current power.

riprap [CIV ENG] A foundation or revetment in water or on soft ground made of irregularly placed stones or pieces of boulders; used chiefly for river and harbor work, for roadway filling, and on embankments.

rips [OCEANOGR] A turbulent agitation of water, generally caused by the interaction of currents and wind; in nearshore regions they may be currents flowing swiftly over an irregular bottom; sometimes referred to erroneously as tide rips.

ripsaw [MECH ENG] A heavy-tooth power saw used for cutting wood with the grain.

RIS *See* resonance ionization spectroscopy.

risalin [ORG CHEM] $C_{12}H_{18}N_4O_6S$ An orange, crystalline compound with a melting point of 137–138°C; used as a preemergence herbicide for grasses. Also known as 3,5-dinitro-*N*,*N*-di(*n*-propyl)sulfanilamide.

rise [ASTRON] Of a celestial body, to cross the visible horizon while ascending. [GEOL] A long, broad elevation which rises gently from its surroundings, such as the sea floor. [HYD] *See* resurgence. [SCI TECH] The increase in the height or the value of something, such as a rise of tide or a rise of temperature.

rise of bottom *See* deadrise.

rise of floor *See* deadrise.

rise of tide [OCEANOGR] Vertical distance from the chart datum to a higher water datum.

rise pit [GEOL] A pit through which an underground stream rises to the surface with a calm and steady flow.

riser [CHEM ENG] That portion of a bubble-cap assembly in a distillation tower that channels the rising vapor and causes it to flow downward to pass through the liquid held on the bubble plate. [CIV ENG] **1.** A board placed vertically beneath the tread of a step in a staircase. **2.** A vertical steam, water, or gas pipe. [GEOL] A steplike topographic feature, such as a steep slope between terraces. [MET] *See* feedhead. [PETRO ENG] In an offshore drilling facility, a system of piping extending from the hole and terminating at the rig. [TEXT] A raised spot in a weaving pattern where the warp traverses the weft or the filling.

riser plate [CIV ENG] A plate used to support a tapering switch rail above the base of the rail; used with a railroad gage or tie plate to maintain minimum gage.

rise time [CONT SYS] The time it takes for the output of a system to change from a specified small percentage (usually 5 or 10%) of its steady-state increment to a specified large percentage (usually 90 or 95%). [ELEC] The time for the pointer of an electrical instrument to make 90% of the change to its final value when electric power suddenly is applied from a source whose impedance is high enough that it does not affect damping.

rising hinge [BUILD] A hinge that raises a door slightly as it is opened.

rising limb [HYD] The rising portion of the hydrograph resulting from runoff of rainfall or snowmelt.

rising-sun magnetron [ELECTR] A multicavity magnetron in which resonators having two different resonant frequencies are arranged alternately for the purpose of mode separation; the cavities appear as alternating long and short radial slots around the perimeter of the anode structure, resembling the rays of the sun.

rising tide [OCEANOGR] The portion of the tide cycle between low water and the following high water.

Risley prism system [OPTICS] A type of dispersing prism used to test ocular convergence in ophthalmology; consists of two thin prisms mounted so that they can be rotated simultaneously in opposite directions.

Riss [GEOL] **1.** A European stage of geologic time: Pleistocene (above Mindel, below Würm). **2.** The third stage of glaciation of the Pleistocene in the Alps.

Rissoacea [PALEON] An extinct superfamily of gastropod mollusks.

Riss-Würm [GEOL] The third interglacial stage of the Pleistocene in the Alps, following the Riss glaciation and preceding the Würm glaciation.

ristocetin [MICROBIO] The generic name for an antibiotic produced by *Nocardia lurida* that is effective in test-tube experiments against such microorganisms as *Diplococcus pneumoniae*, *Streptococcus hemolyticus*, and *Clostridium tetani*.

Ritchey-Chrétien optics [OPTICS] A modification of the Cassegrain optical system used in large optical telescopes; it has a hyperbolic image-forming primary mirror, no spherical aberration, and no coma; it has a larger usable field than either Newtonian or Cassegrain optical systems.

Ritchie wedge [OPTICS] A photometer in which a test source and a standard source of light illuminate two perpendicular white, diffusing surfaces which intersect in a movable wedge, and these surfaces are viewed from a direction perpendicular to a line connecting the sources.

Ritter reaction [ORG CHEM] A procedure for the preparation of amides by reacting alkenes or tertiary alcohols with nitriles in an acidic medium.

Rittinger's law [MECH ENG] The law that energy needed to reduce the size of a solid particle is directly proportional to the resultant increase in surface area.

Ritz formula [ATOM PHYS] A particular expansion of an equation used in studying the spectra of atoms.

Ritz method [MATH] A method of solving boundary value problems based upon reformulating the given problem as a minimization problem.

Ritz's combination principle [SPECT] The empirical rule that sums and differences of the frequencies of spectral lines often equal other observed frequencies. Also known as combination principle.

river [HYD] A large, natural freshwater surface stream having a permanent or seasonal flow and moving toward a sea, lake, or another river in a definite channel. [LAP] A pure-white diamond of very high grade.

river bar [GEOL] A ridgelike accumulation of alluvium in the channel, along the banks, or at the mouth of a river.

river basin [GEOL] The area drained by a river and all of its tributaries.

riverbed [GEOL] The channel which contains, or formerly contained, a river.

riverboat [NAV ARCH] A vessel used on a river, such as a shallow-draft passenger boat, barge, towboat, or rowboat.

river bottom [GEOL] The low-lying alluvial land along a river. Also known as river flat.

river breathing [HYD] Fluctuation of the water level of a river.

river buoy [NAV] A lightweight nun or can buoy especially designed to withstand strong currents.

river capture *See* capture.

river-delta marsh [EVOL] A brackish or fresh-water marsh bordering the mouth of a distributary stream.

river-deposition coast [GEOL] A deltaic coast characterized by lobate seaward bulges crossed by river distributaries and bordered by lowlands.

river drift [GEOL] Rock material deposited by a river in one place after having been moved from another.

river end [HYD] The lowest point of a river with no outlet to the sea, situated where its water disappears by percolation or evaporation.

river engineering [CIV ENG] A branch of transportation engineering consisting of the physical measures which are taken to improve a river and its banks.

river flat *See* river bottom.

river forecast [HYD] A forecast of the expected stage or discharge at a specified time, or of the total volume of flow within a specified time interval, at one or more points along a stream.

river gage [ENG] A device for measuring the river stage; types in common use include the staff gage, the water-stage recorder, and wire-weight gage. Also known as stream gage.

RISLEY PRISM SYSTEM

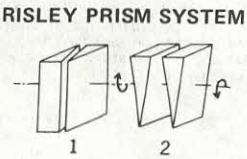


Diagram of Risley prism system. In orientation 1, combined deviation of prisms is zero; when both have been rotated 90° as in orientation 2, combined deviation is at a maximum.

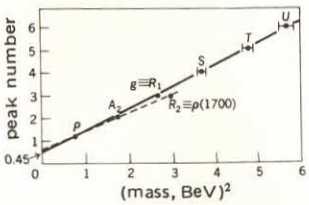
river ice [HYD] Any ice formed in or carried by a river.
river mining [MIN ENG] Mining or excavating beds of existing rivers after deflecting their course, or by dredging without changing the flow of water.
river morphology [GEOL] The study of the channel pattern and the channel geometry at several points along a river channel, including the network of tributaries within the drainage basin. Also known as channel morphology; fluviomorphology; stream morphology.
river piracy *See* capture.
river plain *See* alluvial plain.
River Po *See* Eridanus.
river radar [NAV] A marine set especially designed for river pilotage, generally characterized by a high degree of resolution and a wide selection of range scales.
river run gravel [GEOL] Natural gravel as found in deposits that have been subjected to the action of running water.
river system [HYD] The aggregate of stream channels draining a river basin.
river terrace *See* stream terrace.
river tide [HYD] A tide that occurs in rivers emptying directly into the sea, showing three characteristic modifications of ocean tides: the speed at which the tide travels upstream depends on the depth of the channel, the further upstream the longer the duration of the falling tide and shorter the duration of the rising tide, and the range of the tide decreases with distance upstream.
riverwash [GEOL] **1.** Soil material that has been transported and deposited by rivers. **2.** An alluvial deposit in a river bed or flood channel, subject to erosion and deposition during recurring flood periods.
river water [HYD] Water having carbonate, sulfate, and calcium as its main dissolved constituents; distinguished from seawater by its chloride and sodium content.
Rivest-Shamir-Aldleman algorithm [COMMUN] A public-key algorithm whose strength is based on the fact that factoring large composite prime numbers into their prime factors involves an overwhelming amount of computation. Abbreviated RSA algorithm.
rivet [DES ENG] A short rod with a head formed on one end; it is inserted through aligned holes in parts to be joined, and the protruding end is pressed or hammered to form a second head.
riveting [ENG] The permanent joining of two or more machine parts or structural members, usually plates, by means of rivets.
riveting hammer [MECH ENG] A hammer used for driving rivets.
riveting stake [HOROL] A block of steel with holes, used in watchmaking; arbors are inserted in the holes, and pinions or collets are placed on the edges of the holes for riveting.
rivet pitch [ENG] The center-to-center distance of adjacent rivets.
rivet weld [MET] A weld shaped like a countersunk rivet.
riving [GEOL] The splitting off, cracking, or fracturing of rock, especially by frost action.
rivulet [HYD] A small stream; a brook.
rivulose [BOT] Marked by irregular, narrow lines.
RJE *See* remote job entry.
RK galaxy [ASTRON] A type of ring galaxy which consists of a ringlike structure with a large, bright condensation or knot within the ring itself.
R meson [PARTIC PHYS] A meson resonance observed in missing mass experiments involving scattering of negative pions by protons; it has been resolved into three peaks labeled R_1, R_2, and R_3, having masses of 1640, 1700, and 1750 MeV respectively, and is believed to have a spin of 3.
R meter [NUCLEO] An ionization instrument calibrated to indicate the intensity of γ-rays, x-rays, and other ionizing radiation in roentgens.
R Monocerotis [ASTRON] An irregular variable star at the tip of the small fan-shaped emission nebula NGC 2261.
rms value *See* root-mean-square value.
Rn *See* radon.
RNA *See* ribonucleic acid.
RN galaxy [ASTRON] A type of ring galaxy which consists of a ringlike structure with a nucleus somewhere within it, the nucleus being somewhat like those seen in ordinary spiral galaxies but typically lying off the center of the ring.
RO *See* receive only.
roach [INV ZOO] An insect of the family Blattidae; the body is wide and flat, the anterior part of the thorax projects over the head, and antennae are long and filiform, with many segments. Also known as cockroach.
road [CIV ENG] An open way for travel and transportation. [GEOL] One of a series of erosional terraces in a glacial valley, formed as the water level dropped in an ice-dammed lake. [MIN ENG] Any mine passage or tunnel.
roadbed [CIV ENG] The earth foundation of a highway or a railroad.
road capacity [CIV ENG] The maximum traffic flow obtainable on a given roadway, using all available lanes, usually expressed in vehicles per hour or vehicles per day.
road grade [CIV ENG] The level and gradient of a road, measured along its center way.
road map [MAP] A map showing the roadways of a specified area.
road net [CIV ENG] The system of roads available within a particular locality or area.
road octane [ENG] A numerical value for automotive anti-knock properties of a gasoline; determined by operating a car over a stretch of level road or on a chassis dynamometer under conditions simulating those encountered on the highway.
road oil [MATER] A heavy residual petroleum oil, usually one of the slow-curing grades of liquid asphalt.
roadstead [GEOGR] An area near the shore, where vessels can anchor in safety; usually a shallow indentation in the coast.
road test [ENG] A motor-vehicle test conducted on the highway or on a chassis dynamometer to determine the performance of fuels or lubricants or the performance of the vehicle.
roadway [CIV ENG] The portion of the thoroughfare over which vehicular traffic passes.
roaring forties [METEOROL] A popular nautical term for the stormy ocean regions between 40° and 50° latitude; it usually refers to the Southern Hemisphere, where there is an almost completely uninterrupted belt of ocean with strong prevailing westerly winds.
roaring sand [GEOL] A sounding sand, found on a desert dune, that sets up a low roaring sound that sometimes can be heard for a distance of 400 meters (1200 feet).
roast [MET] To heat ore to effect some chemical change that will facilitate smelting.
roaster [ENG] Equipment for the heating of materials, such as in pyrite roasting; a furnace.
roasting regeneration [CHEM ENG] Regeneration of a processing (treating) clay by heating or burning it in contact with air to remove combustible impurities adsorbed onto the surface.
roast sintering *See* blast roasting.
rob [MIN ENG] To take out ore or coal from a mine with a view to immediate product, and not to subsequent working.
robber [MET] An extra cathode that reduces current density at local areas of the work being electroplated for the purpose of producing a more uniform thickness coating.
robbery *See* capture.
robbing pillars *See* pillaring.
Robertinacea [INV ZOO] A superfamily of marine, benthic foraminiferans in the suborder Rotaliina characterized by a trochospiral or modified test with a wall of radial aragonite, and having bilamellar septa.
Roberts evaporator *See* short-tube vertical evaporator.
Roberts' linkage [MECH ENG] A type of approximate straight-line mechanism which provided, early in the 19th century, a practical means of making straight metal guides for the slides in a metal planner.
Robin Hood's wind [METEOROL] In Great Britain, saturated air with temperatures near freezing; it is raw and penetrating.
Robin law [PHYS] The law that an increase in pressure on a system in chemical or physical equilibrium favors the system formed with a decrease in volume, and conversely, a change in pressure does not affect a system formed with no change in volume.
Robins-Messiter system [MECH ENG] A stacking conveyor system in which material arrives on a conveyor belt and is fed to one or two wing conveyors.
robinsonite [MINERAL] $Pb_7Sb_{12}S_{25}$ A mineral composed of lead antimony sulfide.
Robitzsch actinograph [ENG] A pyranometer whose design utilizes three bimetallic strips which are exposed horizontally at the center of a hemispherical glass bowl; the outer strips are white reflectors, and the center strip is a blackened absorber; the bimetals are joined in such a manner that the pen of the instrument deflects in proportion to the difference in tempera-

RIVET

Some types of standard rivet heads.

R MESON

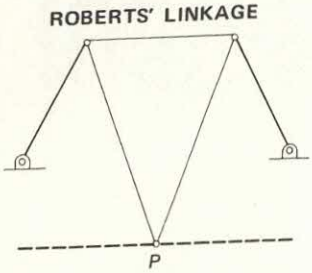


$(Mass)^2$ plot for the prominent mesonic (MM) peaks observed in the reaction $\pi^- p \rightarrow p$ (MM)$^-$ with the Missing Mass spectrometer at CERN (Geneva), against their order in this sequence. The straight-line fit has generally been interpreted as a Regge trajectory, the ordinate being identified with the spin J of the resonance state. The R-meson peak has been resolved into several peaks, and spin 3 is associated at least with the peak R_2 at 1700 MeV: a Regge trajectory associated with the ρ-meson (spin 1) would then be expected to pass through the point R_2, as shown by the dashed line.

ROACH

American roach *(Periplantea americana)* has long well-developed wings, and often flies.

ROBERTS' LINKAGE



Roberts' linkage, an example of straight-line mechanisms. Point P moves along a straight line.

ture between the black and white strips, and is thus proportional to the intensity of the received radiation; this instrument must be calibrated periodically.

robot [CONT SYS] A completely self-controlled electronic, electric, or mechanical device.

roc [ELEC] A unit of electrical conductivity equal to the conductivity of a material in which an electric field of 1 volt per centimeter gives rise to a current density of 1 ampere per square centimeter. Derived from reciprocal ohm centimeter.

Roccilaceae [BOT] A family of fruticose species of Hysterales that grow profusely on trees and rocks along the coastlines of Portugal, California, and western South America.

rocdrumlin *See* rock drumlin.

Rochalimaea [MICROBIO] A genus of the tribe Rickettsieae; short rods usually found as extracellular parasites in arthropods.

Rochelle salt *See* potassium sodium tartrate.

Roche lobes [MECH] **1.** Regions of space surrounding two massive bodies revolving around each other under their mutual gravitational attraction, such that the gravitational attraction of each body dominates the lobe surrounding it. **2.** In particular, the effective potential energy (referred to a system of coordinates rotating with the bodies) is equal to a constant V_0 over the surface of the lobes, and if a particle is inside one of the lobes and if the sum of its effective potential energy and its kinetic energy is less than V_0, it will remain inside the lobe.

roche moutonnée [GEOL] A small, elongate hillock of bedrock sculptured by a large glacier so that its long axis is oriented in the direction of ice movement; the upstream side is gently inclined, smoothly rounded, but striated, and the downstream side is steep, rough, and hackly.

Roche's limit [ASTROPHYS] The limiting distance below which a satellite orbiting a celestial body would be disrupted by the tidal forces generated by the gravitational attraction of the primary; the distance depends on the relative densities of the bodies and on the orbit of the satellite; it is computed by $R = 2.45(Lr)$, where L is a factor that depends on the relative densities of the satellite and the body, R is the radius of the satellite's orbit measured from the center of the primary body, and r is the radius of the primary body; if the satellite and the body have the same density, the relationship is $R = 2.45r$.

Rochon polarizing prism [OPTICS] A device for producing linearly polarized beams of light, consisting of two adjacent quartz wedges, the first of which has its optic axis parallel to the beam, while the second has its optic axis perpendicular to the beam; one of the beams (the ordinary ray) is undeviated, and is therefore not spread into a spectrum.

rock [PETR] **1.** A consolidated or unconsolidated aggregate of mineral grains consisting of one or more mineral species and having some degree of chemical and mineralogic constancy. **2.** In the popular sense, a hard, compact material with some coherence, derived from the earth.

rockair [AERO ENG] A high-altitude sounding system consisting of a small solid-propellant research rocket carried aloft by an aircraft; the rocket is fired while the aircraft is in vertical ascent.

rock asphalt *See* asphalt rock.

rock association [PETR] A group of igneous rocks within a petrographic province that are related chemically and petrographically, generally in a systematic manner such that chemical data for the rocks plot as smooth curves on variation diagrams. Also known as rock kindred.

rock awash [OCEANOGR] In U.S. Coast and Geodetic Survey terminology, a rock exposed at any stage of the tide between the datum of mean high water and the sounding datum, or one just bare at these data.

rock-a-well [PETRO ENG] The procedure of bleeding pressure alternately from the casing of a well and from the tubing until the well starts flowing.

rock bar *See* riegel.

rock-basin lake *See* paternoster lake.

rock bench *See* structural bench.

rock bit [ENG] Any one of many different types of roller bits used on rotary-type drills for drilling large-size holes in soft to medium-hard rocks.

rockbolt [ENG] A bar, usually constructed of steel, which is inserted into predrilled holes in rock and secured for the purpose of ground control.

rock bolting [ENG] A method of securing or strengthening closely jointed or highly fissured rocks in mine workings, tunnels, or rock abutments by inserting and firmly anchoring rock bolts oriented perpendicular to the rock face or mine opening.

rockbridgeite [MINERAL] $Fe^{2+}Fe_6^{3+}(PO_4)_4(OH)_8$ A basic phosphate mineral containing iron; isomorphous with frondelite.

rock-bulk compressibility [GEOL] One of three types of rock compressibility (matrix, bulk, and pore); the fractional change in volume of the bulk volume of the rock with a unit change in pressure.

rock bump [MIN ENG] The sudden release of the weight of the rocks over a coal seam or of enormous lateral stresses.

rockburst [MIN ENG] A sudden and violent rock failure around a mining excavation on a sufficiently large scale to be considered a hazard.

rock candy [FOOD ENG] Large, transparent, hydrated crystals of cane sugar.

rock cave *See* shelter cave.

rock channeler [MECH ENG] A machine used in quarrying for cutting an artificial seam in a mass of stone.

rock cleavage [PETR] The capacity of a rock to split along certain parallel surfaces more easily than along others.

rock control [GEOL] The influences of differences in earth materials on development of landforms.

rock cork *See* mountain cork.

rock creep [GEOL] A form of slow flowage in rock materials evident in the downhill bending of layers of bedded or foliated rock and in the slow downslope migration of large blocks of rock away from their parent outcrop.

rock crystal [MINERAL] A transparent, colorless form of quartz with low brilliance; used for lenses, wedges, and prisms in optical instruments. Also known as berg crystal; crystal; mountain crystal; pebble; quartz crystal.

rock cycle [GEOL] The interrelated sequence of events by which rocks are initially formed, altered, destroyed, and reformed as a result of magmatism, erosion, sedimentation, and metamorphism.

rock-defended terrace [GEOL] **1.** A river terrace having a ledge or outcrop of resistant rock at its base which serves as protection against undermining. **2.** A marine terrace having a mass of resistant rock at the base of the cliff which protects against wave erosion.

rock desert [GEOL] An upland desert in which bedrock is either exposed or is covered with a thin veneer of coarse rock fragments.

rock drill [MECH ENG] A machine for boring relatively short holes in rock for blasting purposes; motive power may be compressed air, steam, or electricity.

rock drum *See* rock drumlin.

rock drumlin [GEOL] A smooth, streamlined hill modeled by glacial erosion, which has a core of bedrock usually veneered with a layer of glacial till and which resembles a true drumlin in outline and form but is generally less symmetrical and less regularly shaped. Also known as drumlinoid; false drumlin; rocdrumlin; rock drum.

rock dust distributor *See* rock duster.

rock duster [MIN ENG] A machine that distributes rock dust over the interior surfaces of a coal mine by means of air to prevent coal dust explosions. Also known as rock dust distributor.

rock element [PETR] The coherent, intact piece of rock that is the basic constituent of the rock system and which has physical, mechanical, and petrographic properties that can be described or measured by laboratory tests.

rocker [CIV ENG] A support at the end of a truss or girder which permits rotation and horizontal movement to allow for expansion and contraction. [GRAPHICS] A type of chisel, with a sharp beveled edge, used in mezzotint engraving; it is set on the surface of a copper plate and rocked back and forth to produce a rough grain, which, when printed, produces a velvety black. [MIN ENG] A small digging bucket mounted on two rocker arms in which auriferous alluvial sands are agitated by oscillation, in water, to collect gold. [ORD] Movable, built-in support in a field gun carriage, between the trail and the cradle, that allows changes in elevation to be made without disturbing the angle of position setting.

rocker arm [MECH ENG] In an internal combustion engine, a lever that is pivoted near its center and operated by a pushrod at one end to raise and depress the valve stem at the other end.

rocker bearing [CIV ENG] A bridge support that is free to rotate but cannot move horizontally.

rocker bent [CIV ENG] A bent used on a bridge span; hinged at one or both ends to provide for the span's expansion and contraction.

rocker cam [MECH ENG] A cam that moves with a rocking motion.

rocker dump car [MIN ENG] A small-capacity mining car; the most popular and most widely used are the gravity dump types, designed so that the weight of the load tips the body when a locking latch is released by hand.

rocker panel [ENG] The part of the paneling on a passenger vehicle located below the passenger compartment doorsill.

rocker shovel [MIN ENG] A digging and loading machine consisting of a bucket attached to a pair of semicircular runners; lifts and dumps the bucket load into a car or another materials-transport unit behind the machine.

rocket [AERO ENG] **1.** Any kind of jet propulsion capable of operating independently of the atmosphere. **2.** A complete vehicle driven by such a propulsive system.

rocket airplane [AERO ENG] An airplane using a rocket or rockets for its chief or only propulsion.

rocket ammunition [ORD] Any type of ammunition incorporating rockets.

rocket antenna [ELECTROMAG] An antenna carried on a rocket, to receive signals controlling the rocket or to transmit measurements made by instruments aboard the rocket.

rocket assist [AERO ENG] An assist in thrust given an airplane or missile by use of a rocket motor or rocket engine during flight or during takeoff.

rocket-assisted takeoff *See* rato.

rocket-assisted torpedo [ORD] A torpedo designed to be fired into the air by rocket and to drop into the water by parachute; the torpedo then seeks its underwater target by a special homing device. Abbreviated RAT.

rocket astronomy [ASTRON] The discipline comprising measurements of the electromagnetic radiation from the sun, planets, stars, and other bodies, of wavelengths that are almost completely absorbed below the 250-kilometer level, by using a rocket to carry instruments above 250 kilometers to measure these phenomena.

rocket chamber [AERO ENG] A chamber for the combustion of fuel in a rocket; in particular, that section of the rocket engine in which combustion of propellants takes place.

rocket electrophoresis [IMMUNOL] A variant of crossed electrophoresis in which the medium contains only one antibody; test substances are driven directly into the medium that contains the antibody, forming rocket-shaped (inverted V) trails of precipitation.

rocket engine [AERO ENG] A reaction engine that contains within itself, or carries along with itself, all the substances necessary for its operation or for the consumption or combustion of its fuel, not requiring intake of any outside substance and hence capable of operation in outer space. Also known as rocket motor.

rocket fuel [MATER] Any of the substances or mixtures of substances that can burn rapidly with controlled combustion to produce large volumes of gas at high pressures and temperatures; includes monopropellants (hydrogen peroxide and hydrazine), liquid bipropellant fuels (organic fuel and oxidizer), and solid propellants (mixed oxidizer-fuel in a propellant grain).

rocket igniter [AERO ENG] An igniter for the propellant in a rocket.

rocket launcher [AERO ENG] A device for launching a rocket, wheel-mounted, motorized, or fixed for use on the ground, rocket launchers are mounted on aircraft, as under the wings, or are installed below or on the decks of ships.

rocket lightning [GEOPHYS] A rare form of lightning whose luminous channel seems to advance through the air with only the speed of a skyrocket.

rocket missile [ORD] A missile using rocket propulsion.

rocket motor *See* rocket engine.

rocket nose section [AERO ENG] The extreme forward portion of a rocket, designed to contain instrumentation, spotting charges, fusing or arming devices, and the like, but does not contain the payload.

rocket ogive [ORD] A hollow, conical, metallic shell covering for a rocket warhead, designed to reduce air resistance during flight.

rocket propellant [MATER] **1.** Any agent which is used for consumption or combustion in a rocket, and from which the rocket derives its thrust, such as a fuel, oxidizer, and additive. **2.** The ejected fluid in a nuclear rocket.

rocket propulsion [AERO ENG] Reaction propulsion by a rocket engine.

rocket ramjet [AERO ENG] A ramjet engine having a rocket mounted within the ramjet duct, the rocket being used to bring the ramjet up to the necessary operating speed. Also known as ducted rocket.

rocketry [AERO ENG] **1.** The science or study of rockets, embracing theory, research, development, and experimentation. **2.** The art and science of using rockets, especially rocket ammunition.

rocket sled [AERO ENG] A sled that runs on a rail or rails and is accelerated to high velocities by a rocket engine; the sled is used in determining g tolerances and for developing crash survival techniques.

rocket-sled testing [AERO ENG] A method of subjecting structures and devices to high accelerations or decelerations and aerodynamic flow phenomena under controlled conditions; the test object is mounted on a sled chassis running on precision steel rails and accelerated by rockets or decelerated by water scoops.

rocketsonde *See* meteorological rocket.

rocket staging [AERO ENG] The use of successive rocket sections or stages, each having its own engine or engines; each stage is a complete rocket vehicle in itself.

rocket station [ENG] A life-saving station equipped with line-carrying rocket apparatus.

rocket thrust [AERO ENG] The thrust of a rocket engine.

rocket tube [AERO ENG] **1.** A launching tube for rockets. **2.** A tube or nozzle through which rocket gases are ejected.
